Brooke's disease, tumor (brooks) [Henry Ambrose Grundy Brooke, English (Manchester) dermatologist, 1854–1919] see *adenoid basal cell carcinoma*, under *carcinoma*, see *keratosis follicularis contagiosa*, and see *trichoepithelioma*.

Brophy's operation (bro'fēz) [Truman William Brophy, American oral surgeon, 1848–1928] see under *operation*.

broth (broth) 1. a thin soup prepared by boiling meat or vegetables. 2. a liquid culture medium for the cultivation of microorganisms; see *Table of Culture Media* for specific broths.

broussaisism (broo-sa'izim) [after François Joseph Victor Broussais, French physician, 1772–1838] the obsolete opinion taught by Broussais, that irritability of the mucous membrane of the alimentary canal was a point of primary importance in the causation of disease.

brow (brow) the forehead, or either lateral half of it. **olymptic b.**, the overdeveloped forehead seen in congenital syphilis.

brown (brown) a dusky, reddish yellow color. **aniline b.**, **Bismarck b.**, a basic aniline dye, phenylene-diazo-metaphenylene-diamine, $C_6H_4[N_2C_6H_3(NH_2)_2]_2$, much used as a stain and counterstain in histology; called also *Manchester b.* and *phenylene b.* **Manchester b.**, **phenylene b.**, aniline b.

Brown's test (reaction) [Thomas Kenneth Brown, American gynecologist, 1898–1951] see under *tests*.

Brown-Séquard's injection, etc. (brown' sa-karz') [Charles Edouard Brown-Séquard, French physiologist, 1817–1894] see under *injection*, *paralysis*, *syndrome*, and *treatment*.

brownian movement (brown'ne-an) [Robert Brown, English botanist, 1773–1858] see under *movement*.

Browning's vein (brown'ingz) [William Browning, Brooklyn anatomist, 1855–1941] see under *vein*.

brownism (brown'izim) brunonianism.

Broxolin (brok'so-lin) trademark for a preparation of glycobio-arsol.

B.R.S. British Roentgen Society.

Bruce's septicemia (brōōs'ez) [Sir David Bruce, surgeon in British army, 1855–1931] brucellosis.

Bruce's tract (brōōs'ez) [Alexander Bruce, Edinburgh anatomist, 1854–1911] the septomarginal tract; see under *tract*.

Brucella (broo-sel'lah) [Sir David Bruce] a genus of microorganisms of the family Brucellaceae, order Eubacteriales, made up of nonmotile short, rod-shaped to coccoid, gram-negative encapsulated cells. It includes three species which may be differentiated on the basis of (1) the relative content of two antigens, A and M, (2) sensitivity to thionine and basic fuchsin, (3) production of hydrogen sulfide, and (4) the requirement for carbon dioxide on primary isolation. **B. abortus**, the commonest cause of brucellosis (undulant fever) in man; it is the causative agent of infectious abortion of cattle, which constitutes the animal reservoir of infection; called also *Bang's bacillus*. **B. bronchiseptica**, the causative agent of bronchopneumonia in guinea pigs and other rodents; formerly called *Bacillus bronchisepticus*, *Bordetella bronchiseptica*, and *Hemophilus bronchisepticus*. **B. canis**, a species causing epidemic abortion in beagles. **B. melitensis**, the causative agent of brucellosis (undulant fever), occurring primarily, although not exclusively, in goats as the reservoir of infection. **B. ovis**, the causative agent of an infectious disease in sheep. **B. rangiferi tarandi**, a species found in Eskimos in Canada and Alaska and in reindeer in northern Russia. **B. suis**, a species found primarily in swine, and which is capable of producing severe disease in man. **B. tularensis**, British name for *Pasteurella tularensis*.

brucella (broo-sel'ah) an individual organism of the genus *Brucella*.

Brucellaceae (broo'sel-la'se-e) a family of Schizomycetes, order Eubacteriales, occurring as small coccoid to rod-shaped cells, singly or in pairs, chains, or groups. It includes eight genera, *Actinobacillus*, *Bordetella*, *Brucella*, *Calymmatobacterium*, *Hemophilus*, *Moraxella*, *Noguchia*, and *Pasteurella*, some of which are parasitic on and pathogenic for warm-blooded animals, including man and birds.

brucellar (broo-sel'ar) pertaining to or caused by *Brucella*.

Brucellergen (broo-sel'er-jin) trademark for a suspensoid of nucleoproteins derived from *Brucella* (melitin from *B. melitensis* and abortin from *B. abortus*); used in a skin test for brucellosis.

brucelliiasis (broo'sel-li'ah-sis) brucellosis.

brucellin (broo-sel'in) a preparation from pooled cultures of the three species of *Brucella*, used in the diagnosis of brucellosis.

brucellosis (broo'sel-lo'sis) a generalized infection of man involving primarily the reticuloendothelial system, caused by species of *Brucella*, namely, *B. melitensis*, *B. abortus*, *B. suis*, and *B. canis*, derived from contact respectively with goats, cattle, pigs, and dogs. Its incubation is an average of three weeks, and symptoms include fever of varying pattern, malaise, and headache. It has been variously called *undulant fever*, *abortus fever*, *Malta* or *Maltese fever*, *Mediterranean fever* or *phthisis*, *Cyprus fever*, *goat fever*, *goat's milk fever*, *Gibraltar fever*, *mountain fever*, *Neapolitan fever*, *rock fever*, *febris melitensis*, *febris sudoralis*, *febris undulans*, *fièvre caprine*, *Bruce's septicemia*, *brucellemia*, *brucelliiasis*, *melitensis septicemia*, and *melitensis*.

Bruch's glands, membrane (layer) (brooks) [Karl Wilhelm Ludwig Bruch, German anatomist, 1819–1884] see under *gland*, and see *lamina basalis chorioideae*.

brucine (broo'sin) [from *Brucea*, a genus of shrubs named for J. Bruce, 1730–1794] chemical name: 2,3-dimethoxystrychnidin. A poisonous alkaloid, $C_{22}H_{28}N_2O_4$, from *Strychnos ignatii* and *S. nux-vomica*, which resembles strychnine in its action, but is less poisonous. One of the principal constituents of nux vomica and ignatia, it was formerly used in the same manner as strychnine (q.v.).

Bruck's disease (brooks) [Alfred Bruck, German physician, born 1865] see under *disease*.

Bruck's reaction, test (brooks) [Carl Bruck, German dermatologist, 1879–1944] see under *reaction* and *tests*.

Brücke's lines, etc. (bre'kez) [Ernst Wilhelm von Brücke, Austrian physiologist, 1819–1892] see under *line*, *muscle*, *reagent*, *test*, and *tunic*.

Brudzinski's sign (reflex) (brōōd-zin'skēz) [Józef Brudzinski, Polish physician, 1874–1917] see under *sign*.

Brugia (bruj'ē-ah) a genus of filarial worms once considered to be members of the genus *Wuchereria*. **B. malayi**, a species causing human filariasis and elephantiasis throughout Southeast Asia, the China Sea, and eastern India; it is similar to, and often found in association with, *Wuchereria bancrofti*. Called also *Wuchereria malayi* and *Brug's filaria*. **B. pahangi**, a species found in man, cats, tigers, and other wild and domestic animals in Malaya; in man, it may produce the symptoms of tropical eosinophilia.

bruise (brōōz) a superficial injury produced by impact without laceration; a contusion. **stone b.**, a painful bruise, especially of the bare feet of children.

bruissement (brwēs-maw') [Fr.] a purring tremor; see under *tremor*.

bruit (brwe, broot) [Fr.] a sound or murmur heard in auscultation, especially an abnormal one. **aneurysmal b.**, a blowing sound heard over an aneurysm. **b. d'airain** (brwe da-rā') [Fr. "sound of brass"], a clear ringing musical note sometimes heard on percussion over a pneumothorax cavity. **b. de bois** (brwe duh bwah') [Fr. "sound of wood"], a dull wooden nonmusical note sometimes heard on percussion over a pneumothorax cavity. **b. de canon** (brwe duh kah-naw') [Fr. "sound of cannon"], an abnormally loud first heart sound, heard intermittently in complete heart block. **b. de choc** (brwe duh shaw'k') [Fr. "sound of impact"], the second cardiac sound, accompanied by a sound of impact, such as is heard over an aneurysm of the aorta. **b. de clapotement** (brwe duh klah-pōt-maw') [Fr. "sound of rippling"], a splashing sound indicative of dilatation of the stomach when pressure is made on the wall of the abdomen. **b. de claquement** (brwe duh klak'maw') [Fr. "sound of clapping"], a snapping sound caused by the sudden contact of parts. **b. de craquement** (brwe duh krak-maw') [Fr. "a sound of crackling"], a crackling pericardial or pleural bruit. **b. de cuir neuf** (brwe duh kwēr nuf) [Fr. "sound of new leather"], a creaking noise; usually a sign of pericarditis or pleurisy. **b. de diable** (brwe duh de-ahbl') [Fr. "humming top"], a buzzing venous murmur in anemia; see *venous hum*, under *hum*. **b. de drapeau** (brwe duh drahpō') [Fr. "sound of a flag"], a flapping rustle heard in croup and laryngitis, and sometimes in nasal polyp. **b. de froissement** (brwe duh frwāhs-maw') [Fr. "sound of clashing"], a clashing noise of various origin. **b. de frolement** (brwe duh fro-l-maw') [Fr. "sound of rustling"], a rustling murmur from pericardial or pleural friction. **b. de frottement** (brwe duh fro-t-maw') [Fr. "sound of friction"], a rubbing sound of various origin. **b. de galop** (brwe duh gah-lo') [Fr. "sound of galloping"], triple heart sounds in gallop cadence. **b. de grelot** (brwe duh gruh-lo') [Fr. "sound of a rattle"], a rattling sound usually caused by the presence of a foreign body in the respiratory passages. **b. de Leudet** (brwe duh led-a'), Leudet's tinnitus. **b. de lime** (brwe duh lēm) [Fr. "sound of a file"], a filing cardiac sound. **b. de moulin** (brwe duh moo-lā') [Fr. "sound of a mill"], a splashing or waterwheel sound synchronous with systole, sometimes audible at some distance from the patient, variously attributed to cardiac, pericardial, or mediastinal causes. **b. de parchemin** (brwe duh parsh-maw') [Fr. "sound of parchment"], a sound as of two pieces of parchment rubbed together, of valvular cardiac origin. **b. de pialement** (brwe duh pyōl-maw') [Fr. "sound of whining"], a cardiac murmur like the mewling of a cat. **b. de pot fêlé** (brwe duh po fē-la') [Fr. "cracked-pot sound"], a sound heard in percussion over cavities of the chest. **b. de rape** (brwe duh rahp) [Fr. "sound of a grater"], a rasping, cardiac, valvular murmur. **b. de rappel** (brwe duh rah-pe'l') [Fr. "sound of drum beating to arms"], a sound as of a drum; a delayed mitral murmur. **b. de Roger** (brwe duh ro-zha'), a loud long systolic murmur heard in the third interspace to the left of the sternum, characteristic of a small ventricular septal defect. Called also *Roger's bruit* or *murmur*. **b. de scie** (brwe duh se) [Fr. "sound of a saw"], a cardiac murmur resembling the sound of a saw. **b. de soufflet** (brwe duh soo-fla') [Fr. "sound of a bellows"], see *souffle*. **b. de tabourka** (brwe duh tah-bōōr'kah), timbre métallique. **b. de tambour** (brwe duh tahm-bor') [Fr. "sound of drum"], a ringing sound heard in syphilitic aortic regurgitation. **false b.**, one due to pressure by the stethoscope, or derived from the circulation in the ear of the auscultator. **Leudet's b.**, see under *tinnitus*. **b. placentaire** (brwe pla'-sawn-tār') [Fr. "placental sound"], placental souffle. **Roger's b.**, b. de Roger. **b. skodique** (brwe skaw-dēk'), skodaic resonance. **systolic b.**, a noise (heard on auscultation) occurring with the systole of the heart. **Verstraeten's b.**, an abnormal sound heard in auscultation over the lower border of the liver in cachectic patients.

Brunn's membrane, epithelial nests (brōōnz) [Albert von Brunn, German anatomist, 1849-1895] see under *membrane* and *nest*.

Brunner's glands (brun'erz) [Johann Conrad Brunner, Swiss anatomist, 1653-1727] glandulae duodenales.

Brünninghausen's method (brin'ing-how'senz) [Herrmann J. Brünninghausen, German physician, 1761-1834] see under *method*.

brunonianism (broo-no'ne-an-izm') [John Brown, Scottish physician, 1735-1788] the obsolete doctrine that all disease is due to either excess (sthenia) or lack (asthenia) of stimulus; called also *brownism*.

Bruns' disease (brunz'ez) [John Dickson Bruns, New Orleans physician, 1836-1883] pneumopoludism.

Bruns' syndrome (sign) (brōōnz) [Ludwig Bruns, neurologist in Hanover, 1858-1916] see under *syndrome*.

Brunschwig's operation (brōōn'swigz) [Alexander Brunschwig, American surgeon, 1901-1969] pancreatoduodenectomy.

brush (brush) tufts of bristles, hair, or other flexible materials set into a handle. **Haidinger's b.**, two conical brushlike images with apexes touching, seen on looking through a Nicol prism; used in determining visual function. **b's of Ruffini**, a form

of nerve ending occurring in the papillae of the skin in the form of densely interlaced branches; called also *terminal cylinders* and *organ of Ruffini*. **stomach b.**, a brush used to cleanse and stimulate the mucous lining of the stomach.

bruxism (bruk'sizm) [Gr. *brychein* to gnash the teeth] rhythmic or spasmodic grinding of the teeth in other than chewing movements of the mandible, especially such movements performed during sleep. Dental malocclusion and tension-release factors are the usual inciting causes. Cf. *bruxomania* and *clenching*.

bruxomania (bruk'so-ma'ne-ah) grinding of the teeth occurring as a tension-release habit in the waking state; called also *brychomania*. Cf. *bruxism*.

Bryant's line (bri'ants) [Thomas Bryant, English surgeon, 1828-1914] see under *line*.

Bryce's test (bris'ez) [James Bryce, Scottish physician of the 19th century] see under *tests*.

Bryce-Teacher ovum [Thomas Hastie Bryce, Scottish anatomist, 1862-1946; John Hammond Teacher, Scottish pathologist, 1869-1930] see under *ovum*.

brychomania (bri'ko-ma'ne-ah) [Gr. *brychē* a gnashing of teeth + *mania*] bruxomania.

Bryobia (bri-o'be-a) a genus of spider mites. **B. praetio'sa**, the clover, or spinning, mite; a spider mite found on clover, which may greatly annoy man.

bryonia (bri-o'ne-ah) [L.; Gr. *bryōnia*] the air-dried root of *Bryonia alba* L. or other related species (Cucurbitaceae). It contains several glycosides, including bryonin and bryonidin. Formerly used both medically and in veterinary practice as a drastic and irritant purgative.

Bryson's sign (bri'sonz) [Alexander Bryson, English physician, 1802-1869] see under *sign*.

B.S. Bachelor of Surgery; Bachelor of Science; breath sounds; blood sugar.

BSA body surface area.

B-scan see *scan*, def. 2.

BSP Bromsulphalein.

B.T.U., B.Th.U British thermal unit.

buba (boo'bah) a native name in South American countries for mucocutaneous leishmaniasis.

bubo (bu'bo) [L. from Gr. *boubōn* groin] an enlarged and inflamed lymph node, particularly in the axilla or groin, due to such infections as plague, syphilis, gonorrhea, lymphogranuloma venereum, and tuberculosis. **bullet b.**, the characteristic hard bubo of primary syphilis. **chancroidal b.**, a suppurating form accompanying or following chancroid; called also *virulent b.* **climatic b.**, lymphogranuloma venereum. **Frei's b. (obs.)**, lymphogranuloma venereum. **gonorrheal b.**, a bubo following or accompanying gonorrhea. **indolent b.**, one that is hard and nearly painless, and shows little tendency to suppurate. **malignant b.**, the bubo of bubonic plague. **nonvenereal b.**, that associated with lymphogranuloma venereum. **pestilential b.**, that which is associated with plague. **primary b.**, a bubo which is due to venereal exposure but which is not preceded by any visible lesion; called also *bubon d'emblée*. **strumous b.**, lymphogranuloma venereum. **sympathetic b.**, one due to friction or injury. **syphilitic b.**, an indolent bubo following a hard chancre. **tropical b.**, lymphogranuloma venereum. **venereal b.**, one due to venereal disease. **virulent b.**, chancroidal b.

bubon (bu-baw') [Fr.] bubo. **b. d'emblée** (bu-baw'dah-bla') [Fr. "at the first onset"], primary bubo.

bubonalgia (bu'bo-nal'je-ah) [Gr. *boubōn* groin + *-algia*] pain in the groin.

bubonic (bu-bon'ik) [L. *bubonicus*] characterized by or pertaining to buboes; see also under *plague*.

bubonocoele (bu-bon'o-sēl) [Gr. *boubōn* groin + *kēlē* tumor] inguinal or femoral hernia forming a swelling in the groin.

bubonulus (bu-bon'u-lus) [L. "a small bubo"] a nodule or abscess along a lymphatic vessel, especially one on the dorsum of the penis (Nisbet's chancre).

bucainide maleate (bu-ka'nid) chemical name: 1-hexyl-4-[[[(methylpropyl) imino] phenylmethyl]-piperazine (Z)-2-butenedioate (1:2); a cardiac depressant with antiarrhythmic action, C₂₁H₃₅N₃·2C₄H₄O₄.

bucardia (bu-kar'de-ah) [Gr. *bous* ox + *kardia* heart] cor bovinum.

bucca (buk'ah) [L.] [NA] the fleshy portion of the side of the face; the cheek. Called also *mala* [NA alternative]. **b. ca'vi o'ris** [NA], the fleshy portion of the side of the oral cavity, which is continuous with the commissure of the lips.

buccal (buk'al) [L. *buccalis*, from *bucca* cheek] pertaining to or directed toward the cheek.

buccally (buk'al-le) toward the cheek.

buccinator (buk'si-na'tor) [L. "trumpeter"] see *Table of Musculi*.

bucco- (buk'ko) [L. *bucca* cheek] a combining form denoting relationship to the cheek.

buccoaxial (buk'ko-ak'se-al) pertaining to or formed by the buccal and axial walls of a tooth cavity.

buccoaxiocervical (buk'ko-ak'se-o-ser'vī-kal) buccoaxiogingival.

buccoaxiogingival (buk'ko-ak'se-o-jin'jī-val) pertaining to or formed by the buccal, axial, and gingival walls of a tooth cavity; called also *buccoaxiocervical*.

buccocervical (buk'ko-ser'vī-kal) 1. pertaining to the cheek and neck. 2. pertaining to the buccal surface of the neck of a posterior tooth. 3. buccogingival.

buccoclination (buk'ko-kli-na'shun) (*obs.*) buccoverision.

buccoclusal (buk'ko-kloo'sal) 1. pertaining to buccoclusion. 2. bucco-occlusal.

buccoclusion (buk'ko-kloo'zhun) malocclusion in which the dental arch or a quadrant or group of teeth is buccal to the normal.

buccodistal (buk'ko-dis'tal) pertaining to or formed by the buccal and distal surfaces of a tooth, or the buccal and distal walls of a tooth cavity.

buccogingival (buk'ko-jin'jī-val) 1. pertaining to the cheek and gingiva. 2. pertaining to or formed by the buccal and gingival walls of a tooth cavity.

buccoglossopharyngitis (buk'ko-glos'o-far'in-jī'tis) inflammation involving the cheek, tongue, and pharynx. **b. sic'ca**, inflammation and dryness of the buccal mucosa, tongue, and pharynx. Cf. *Sjögren's syndrome*, under *syndrome*.

buccolabial (buk'ko-la'be-al) pertaining to the cheek and lip.

buccolingual (buk'ko-ling'gwal) 1. pertaining to the cheek and tongue. 2. pertaining to the buccal and lingual surfaces of a posterior tooth.

buccolingually (buk'ko-ling'gwal-le) from the cheek toward the tongue.

buccomaxillary (buk'ko-mak'sī-ler'e) 1. pertaining to the cheek and maxilla. 2. communicating with the buccal cavity and the maxillary sinus, as a buccomaxillary fistula.

buccomesial (buk'ko-me'ze-al) pertaining to or formed by the buccal and mesial surfaces of a tooth, or the buccal and mesial walls of a tooth cavity.

bucco-occlusal (buk'ko-ō-kloo'zal) pertaining to or formed by the buccal and occlusal surfaces of a tooth.

buccopharyngeal (buk'ko-fah-rin'je-al) pertaining to the mouth and pharynx.

buccoplacement (buk'ko-plās'ment) displacement of a tooth toward the cheek.

buccopulpal (buk'ko-pul'pal) pertaining to or formed by the buccal and pulpal walls of a tooth cavity.

buccostomy (buk-kos'to-me) the surgical creation of permanent buccal fistulae to prevent wind-sucking in horses.

buccoverision (buk'ko-ver'zhun) the position of a tooth which lies buccally to the line of occlusion.

buccula (buk'ū-lah) [L. "a little cheek"] (*obs.*) a redundant fold under the chin, commonly called a double chin.

Bucephalus (bu-sef'ah-lus) a genus of trematodes. **B. papillo'sus**, a trematode parasitic in the stomach and intestines of fresh-water fish.

Buchner's bodies (book'nerz) [Hans Buchner, German bacteriologist, 1850-1902] see *defensive protein*, under *protein*.

buchu (bu'ku) the name of several species of *Barosma* (Rutaceae), which contain urinary antiseptic and diuretic volatile oils.

Buck's extension, fascia, operation (buks) [Gurdon Buck, American surgeon, 1807-1877] see under *extension, fascia, and operation*.

buckeye (buk'i) a popular designation for *Aesculus glabra* and other trees and shrubs of the same genus. The fruit of trees in this genus are toxic to livestock due to a glycoside, esculin.

buckling (buk'ling) the process or an instance of becoming crumpled or warped. **scleral b.**, a technique for repair of detachment of the retina, in which indentations or infoldings of the sclera are made over the tears in the retina so as to promote adherence of the retina to the choroid.

Bucky diaphragm, rays (buk'e) [Gustav P. Bucky, German roentgenologist in America, 1880-1963] see under *diaphragm*, and see *grenz rays*, under *ray*.

bucilazine hydrochloride (bu'kli-zēn) chemical name: 1-[(4-chlorophenyl)phenylmethyl]-4-[(4-(1,1-dimethylethyl)phenyl)methyl]piperazine dihydrochloride. An antihistamine, $C_{26}H_{33}Cl_2N_2 \cdot 2HCl$, used mainly as an antinauseant in the management of motion sickness; administered orally.

bucnemia (buk-ne'me-ah) [L., from Gr. *bous* ox + *knēmē* leg] ■ diffuse, tense, and inflammatory swelling of the leg.

bucrylate (bu'krī-lāt) chemical name: isobutyl 2-cyanoacrylate; a tissue adhesive, $C_8H_{11}NO_2$.

bud (bud) any small part of the embryo or adult metazoan more or less resembling the bud of a plant and presumed to have potential for growth and differentiation. **bronchial b.**, an

outgrowth from the stem bronchus giving rise to the air passages of its respective pulmonary lobe. **end b.**, the remnant of the primitive knot, from which arises the caudal portion of the trunk; called also *tail b.* **gustatory b.**, taste b. **limb b.**, a swelling on the trunk of the embryo that becomes a limb. **liver b.**, a diverticulum from the foregut that gives rise to the liver and its ducts. **lung b.**, an outgrowth from the foregut that gives rise to the trachea, bronchi, and all the branchings that form a tracheobronchial tree. **metanephric b.**, ureteric b. **periosteal b.**, vascular connective tissue from the periosteum growing through apertures in the periosteal bone collar into the cartilaginous matrix of the primary center of ossification. **tail b.**, 1. the primordium of the caudal appendage. 2. end bud. **taste b.**, one of the minute terminal organs of the gustatory nerve that contain the receptor surfaces for the sense of taste. See also *calculus gustatorius* [NA]. **tooth b.**, the knoblike primordium of a tooth. **ureteric b.**, an outgrowth of the mesonephric duct that gives rise to all but the nephrons of the permanent kidney; called also *metanephric b.* **b. of urethra**, bulbus penis. **vascular b.**, an outgrowth of an existing vessel from which a new blood vessel arises. **wing b.**, a swelling on the trunk of an avian embryo that gives rise to a wing.

Budd's cirrhosis (disease), jaundice (budz) [George Budd, London physician, 1808-1882] see under *cirrhosis* and see *acute yellow atrophy of liver*, under *atrophy*.

Budd-Chiari syndrome (disease) (bud'ke-ar'e) [George Budd; Hans Chiari, Austrian pathologist, 1851-1916] see under *syndrome*.

buddeized milk (boo'de-izd) [E. Budde, Danish sanitary engineer] see under *milk*.

budding (bud'ing) 1. gemmation; a form of asexual reproduction in which the body divides into two unequal parts, the larger part being considered the parent and the smaller one the bud. 2. the process by which a new blood vessel arises from a preexisting vessel.

Budge's center (bood'gēz) [Julius Ludwig Budge, German physiologist, 1811-1888] 1. the ciliospinal center. 2. the genital center.

budgerigar, budgie (buj'er-e-gar'; buj'e) [Australian name] a species of parakeet, *Melopsittacus undulatus*, used for experimental work in psittacosis, and also popular as cage pets; called also *shell parakeet*.

Budin's joint, rule (boo-daz') [Pierre-Constant Budin, Paris gynecologist, 1846-1907] see under *joint* and *rule*.

BUDR 5-bromodeoxyuridine.

Buerger's disease, symptom (ber'gerz) [Leo Buerger, physician in New York, 1879-1943] see under *disease* and *symptom*.

Buerger's theory (ber'gēz) [Emil Buerger, Swiss pharmacologist, born 1872] see under *theory*.

büffelseuche (bif'el-zoi'kē) [Ger.] pasteurellosis of the buffalo.

buffer (buf'er) 1. a chemical system that prevents change in the concentration of another chemical substance, e.g., proton donor and acceptor systems serve as buffers preventing marked changes in hydrogen ion concentration (pH). 2. a physical or physiological system that tends to maintain constancy, e.g., reflexes regulating blood pressure. **bicarbonate b.**, a buffer system composed of bicarbonate ions and dissolved carbon dioxide; in the body, this system is an important factor in determining the pH of the blood as the concentration of bicarbonate ions is regulated by the kidneys and of carbon dioxide by the respiratory system. **cacodylate b.**, one containing an organic arsenical salt, used in preparing fixatives for electron microscopy. **phosphate b.**, a buffer system composed of acid phosphate and sodium or potassium salts, e.g., monosodium and disodium acid phosphate; in the body, it is important in regulating the pH of the renal tubular fluids. **protein b.**, a buffer system involving proton donor and proton acceptor groups of the amino acid residues of proteins. **TRIS b.**, see *tromethamine*. **veronal b.**, a barbitol buffer commonly used in the preparation of fixatives for electron microscopy.

buffering (buf'er-ing) the action produced by a buffer.

bufilcon A (bu-fil'kon) chemical name: 2-hydroxyethyl methacrylate polymer with *N*-(1,1-dimethyl-3-oxobutyl)acrylamide and 2-ethyl-2-(hydroxymethyl)-1,3-propanediol trimethacrylate; a contact lens material (hydrophilic), $(C_6H_{10}O_3)_x(C_6H_{11}NO_2)_y(C_{16}H_{26}O_6)_z$.

bufin (bu'fin) a white secretion obtained by stimulating the parotid gland of certain species of toads by electricity; it has a physiologic action similar to that of digitalis but is not used in Western medicine.

Bufo (bu'fo) [L. "toad"] a genus of toads, species of which have been extensively studied by population geneticists.

buformin (bu-for'min) chemical name: *N*-butylimidocarbonimidic diamide; an oral hypoglycemic agent, $C_8H_{18}N_6$.

bufotalin (bu-fu-tal'in) a poisonous principal, $C_{26}H_{36}O_6$, present in the skin and saliva of the common European toad, *Bufo vulgaris*.

bufotenin (bu-fu'tē-nin) a specific basic pressor principle, 5-hydroxy indole ethyl dimethyl amine, $OH \cdot C_6H_4 \cdot N \cdot CH_2 \cdot CH_2 \cdot N$.

(CH₃)₂, prepared from the skin glands of the toad, *Bufo bufo bufo*. It is used as a hallucinogenic in experimental medicine.

bufotherapy (bu'fo-ther'ah-pe) [L. *bufo* toad + *therapy*] the use of toad toxins in the treatment of disease.

bufotoxin (bu'fo-tok'sin) any toxin derived from the skin of toads.

bug (bug) an insect of the order Hemiptera. **assassin b.**, see *Reduviidae*. **barley b.**, *Acarus hordei*. **blister b.**, *Lytta vesicatoria*. **blue b.**, *Argas persicus*. **cone-nose b.**, see *Reduviidae*. **croton b.**, *Blatta (Blatella) germanica*. **harvest b.**, chigger. **hematophagous b.**, a bug that lives on blood, such as the bedbug. **kissing b.**, see *Reduviidae*. **Malay b.**, see *Reduviidae*. **miana b.**, *Mianeh b.*, *Argas persicus*. **red b.**, chigger. **wheat b.**, *Pyemotes*.

Buhl's disease, desquamative pneumonia (bülz) [Ludwig von Buhl, German pathologist, 1816–1880] see under *disease* and *pneumonia*.

Buhl-Dittrich law (bül-dit-rik) [Ludwig von Buhl; Franz Dittrich, German pathologist, 1815–1859] see under *law*.

buiatrics [Gr. *bous* ox, cow + *iatrikos* surgery, medicine] the treatment of diseases of cattle.

Buist's method (büsts) [Robert C. Buist, Scotch obstetrician, 1860–1939] see *artificial respiration*, under *respiration*.

bulb (bulb) [L. *bulbus*; Gr. *bolbos*] 1. a rounded mass, or enlargement. 2. (obs.) *medulla oblongata*. **b. of aorta**, bulbus aortae. **auditory b.**, the membranous labyrinth and cochlea. **b. of corpus cavernosum**, bulbus penis. **duodenal b.**, pars superior duodeni. **end b.**, 1. an ovoid or spheroid body located at the termination of a nerve fiber, and dispersed in the skin, mucous membranes, muscles, joints, and connective tissue of the internal organs. End-bulbs show a wide diversity, from simple end knobs to complex sensory end organs with connective tissue sheaths. For descriptions of specific types, see under *corpusculum*. 2. one of the end-feet. **end b's of Krause**, corpuscula bulboidea; see under *corpusculum*. **b. of eye**, bulbus oculi. **gustatory b.**, taste bud (calculus gustatorius). **b. of hair**, the bulbous expansion at the proximal end of a hair in which the hair shaft is generated; called also *bulbus pili* [NA]. **b. of heart**, bulbus cordis. **b. of jugular vein, inferior**, bulbus venae jugularis inferior. **b. of jugular vein, superior**, bulbus venae jugularis superior. **b's of Krause**, corpuscula bulboidea; see under *corpusculum*. **olfactory b.**, bulbus olfactorius. **b. of ovary**, a bulb formed by the interweaving of veins with the bundles of involuntary muscle within the mesovarium; called also *Rouget's b.* **b. of penis**, bulbus penis. **b. of posterior horn**, bulbus cornus posterioris. **Rouget's b.**, b. of ovary. **sinovaginal b.**, one of paired sacculations of the urogenital sinus, forming the lowermost part of the vagina. **taste b.**, taste bud (calculus gustatorius). **terminal b's of Krause**, corpuscula bulboidea; see under *corpusculum*. **b. of urethra**, bulbus penis. **vaginal b.**, 1. a solid end of a paramesonephric duct in the embryo. 2. bulbus vestibuli vaginae. **b. of vestibule of vagina, vestibulovaginal b.**, bulbus vestibuli vaginae.

bulbar (bul'bar) pertaining to a bulb; pertaining to or involving the medulla oblongata, as bulbar paralysis.

bulbi (bul'bi) [L.] plural of *bulbus*.

bulbiform (bul'bi-form) bulb-shaped.

bulbitis (bul-bi'tis) inflammation of the bulb of the penis.

bulboatrial (bul'bo-a'tre-al) pertaining to the bulbus cordis and atrium.

bulbocapnine (bul'bo-kap'nin) an alkaloid, C₁₀H₉NO₄, derived from the roots of *Corydalis bulbosa* DC. or *C. cava* (L.) Schweigg. & Korte (Fumariaceae) (*Capnoides cavum*). It has an inhibitory effect on the reflex and motor activities of striated muscle, and has been used in the treatment of muscular tremors and vestibular nystagmus. See also under *experiment*.

bulbocavernosus (bul'bo-kav'er-no'sus) musculus bulbospongiosus.

bulbogastrophne (bul'bo-gas'trōn) a polypeptide secreted by the duodenal bulb when the bulb is acidified; it inhibits gastric acid secretion in dogs.

bulboid (bul'boid) bulb-shaped.

bulbonuclear (bul'bo-nu'kle-ar) (obs.) pertaining to the medulla oblongata and its nerve nuclei.

bulbopontine (bul'bo-pon'tin) a term once applied to that portion of the brain made up of the pons and the region of the medulla oblongata situated dorsad to it.

bulbospongiosus (bul'bo-spon'je-o'sus) see *Table of Musculi*.

bulbourethral (bul'bo-u-re'thral) pertaining to the bulb of the urethra (bulbus penis [NA]).

bulbous (bul'bus) having the form or nature of a bulb; bearing or arising from a bulb.

bulbus (bul'bus), pl. *bul'bi* [L.] a rounded mass, or enlargement. **b. aor'tae** [NA], bulb of aorta: the enlargement of the aorta at its point of origin from the heart, where the bulges of the aortic sinuses occur. **b. arterio'sus**, b. cordis. **b. carot'icus**, carotid sinus. **b. cor'dis**, the foremost of the three parts of the

primitive heart of the embryo; called also *bulb of heart* and *bulbus arteriosus*. **b. cor'nu posterio'ris ventric'uli latera'lis**, b. cornus posterioris. **b. cor'nus posterio'ris** [NA], bulb of posterior horn: an eminence produced in the posterior horn of the lateral ventricle by the splenial fibers of the corpus callosum as they pass posteriorly into the occipital lobe; called also *b. cornu posterioris ventriculi lateralis*. **b. oc'uli** [NA], the bulb, or globe, of the eye; called also *eyeball* and *bulb of eye*. See under *eye*.

b. olfacto'rius [NA], olfactory bulb; the bulblike expansion of the olfactory tract on the under surface of the frontal lobe of each cerebral hemisphere; the olfactory nerves enter it. Called also *Morgagni's tubercle*. **b. pe'nis** [NA], bulb of penis: the enlarged proximal part of the corpus spongiosum found between the two crura of the penis. Called also *b. urethrae*, *bulb of corpus cavernosum*, and *bulb of urethra*. **b. pi'li** [NA], bulb of hair: the bulbous expansion at the proximal end of a hair, in which the hair shaft is generated. **b. ure'thrae**, b. penis. **b. ve'nae jugula'ris infe'rior** [NA], inferior bulb of jugular vein: a dilatation of the internal jugular vein just before it joins the brachiocephalic vein. **b. ve'nae jugula'ris supe'rior** [NA], superior bulb of jugular vein: a dilatation at the beginning of the internal jugular vein; called also *Heister's diverticulum*. **b. vestib'uli vagi'nae** [NA], bulb of vestibule of vagina: a body consisting of paired elongated masses of erectile tissue, one on either side of the vaginal opening, united anteriorly in a thin strand that passes along the lower surface of the clitoris.

bulesis (bu-le'sis) [Gr. *boulēsis*] the will, or an act of the will.

bulimia (bu-lim'e-ah) [L.; Gr. *bous* ox + *limos* hunger] abnormal increase in the sensation of hunger; cynorexia. Cf. *polyphagia*.

bulimiac (bu-lim'e-ak) bulimic.

bulimic (bu-lim'ik) pertaining to or affected with bulimia.

Buliminae (bu-lim'i-ne) a subfamily of snails (family Hydrobiidae, order Mesogastropoda) that includes the medically important genera *Bulimus*, *Alocinma*, and *Parafossarulus*.

Bulimus (bu-li'mus) a genus of small fresh-water snails. **B. fuchsia'nus**, the chief intermediate host of the human liver flukes *Clonorchis* and *Opisthorchis*; it is commonly found in southern China. **B. leach'ii**, a species found in northern Europe and the northwestern United States, which ingests the eggs of *Opisthorchis felineus* and in whose body the eggs hatch.

Bulinus (bu-li'nus) a genus of snails, several species of which are the intermediate hosts of *Schistosoma haematobium* and *Opisthorchis*.

bulkage (bulk'ij) material that will increase the bulk of the intestinal contents and consequently stimulate peristalsis.

Bull abbreviation for L. *bul'liat*, let it boil.

bull (bul'ah), pl. *bul'lae* [L.] a large vesicle, usually 2 cm. or more in diameter. **emphysematous b.**, any space of more than 1 centimeter in diameter in distended areas of the emphysematous lung. **ethmoid b.**, see *b. ethmoidalis cavi nasi* and *b. ethmoidalis ossis ethmoidalis*. **b. ethmoida'lis ca'vi na'si** [NA], ethmoidal bulla of nasal cavity: the large ethmoid air cell lodged in the bulla ethmoidalis ossis ethmoidalis. **b. ethmoida'lis os'sis ethmoida'lis** [NA], ethmoidal bulla of ethmoidal bone: a rounded projection of the ethmoid bone into the lateral wall of the middle nasal meatus just below the middle nasal concha, enclosing a large ethmoid air cell; called also *antrum ethmoidale* and *ethmoid antrum*. **b. for'nicis**, b. of fornix, corpus mamillare. **b. mastoi'dea**, a large air cell in the mastoid of lower animals. **b. os'sea**, the dilated part of the bony external meatus of the ear.

bullae (bul'e) plural of *bull*.

bullate (bul'ät) [L. *bullatus*] 1. characterized by the presence of bullae. 2. inflated.

bullation (bul-la'shun) [L. *bullatio*] 1. the condition characterized by the presence of bullae. 2. the state of being inflated.

Buller's shield (bandage) (bul'erz) [Frank Buller, Canadian ophthalmologic surgeon, 1844–1905] see under *shield*.

bullosis (bul-lo'sis) the production of, or a condition characterized by, bullous lesions. **b. diabetico'rum**, a condition in which bullae appear spontaneously, usually on the ankles and feet, in some uncontrolled diabetics.

bullous (bul'us) pertaining to or characterized by bullae.

bumblefoot (bum'bel-foot) inflammation of the ball of the foot of fowls, usually caused by staphylococcus.

bumetanide (bu-met'ah-nid) chemical name: 3-(aminosulfonyl)-5-(butylamino)-phenoxybenzoic acid; a rapid-acting, potent diuretic, C₁₇H₂₀N₂O₅S.

Bumke's pupil (bōm'kez) [Oswald Conrad Edward Bumke, German neurologist, 1877–1950] see under *pupil*.

bumps (bumpz) a symptom of the primary form of coccidioidomycosis (q.v.); called also *desert* or *valley bumps*.

BUN blood urea nitrogen; see *urea nitrogen*.

bunamidine hydrochloride (bu-nah'mi-dēn) chemical name: N,N-dibutyl-4-(hexyloxy)-1-naphthamide monohydrochloride; an anthelmintic, C₂₂H₃₈N₂O·HCl.

bunamiodyl (bu'nah-mi'o-dil) chemical name: 2-[[2,4,6-triiodo-3-[(1-oxobutyl)amino]phenyl]methylene]butanoic acid mo-

nosodium salt. A radiopaque medium, $C_{15}H_{16}I_3NO_3$, used in roentgenography of the biliary tract. Called also *buniodyl*.

bundle (bun'd'l) a collection of fibers or strands, as of muscle fibers, or a fasciculus or band of nerve fibers. **aberrant b's**, collections of pyramidal fibers leaving the corticonuclear tract at successive levels of the brain stem, and giving off fibers to the motor nuclei of the cranial nerves. **atrioventricular b.**, **a-v. b.**, b. of His. **Bachmann's b.**, a transverse band of muscle fibers extending between the bases of the right and left auricles of the heart in dogs. **basis b's**, fasciculi proprii; see under *fasciculus*. **Bruce's b.**, cornucommissural b. **cornucommissural b.**, a name once given the fasciculus proprius on the surface of the posterior column and posterior commissure of the spinal cord. **forebrain b.**, **medial**, a complex group of fibers arising from the basal olfactory regions, the periamygdaloid region, and the septal nuclei, and passing to the lateral hypothalamus; some fibers continue into the midbrain tegmentum and are relayed to the autonomic and visceral nuclei of the brain stem. **fundamental b's**, **ground b's**, fasciculi proprii; see under *fasciculus*. **b. of Helweg**, olivospinal tract. **b. of His**, a small band of atypical cardiac muscle fibers that originates in the atrioventricular node in the interatrial septum, passes through the atrioventricular junction, and then runs beneath the endocardium of the right ventricle on the membranous part of the interventricular septum. It divides at the upper end of the muscular part of the interventricular septum into right and left branches which descend in the septal wall of the right and left ventricle, respectively, to be distributed to those two chambers. This bundle propagates the atrial contraction rhythm to the ventricles, and its interruption produces heart block. Called also *fasciculus atrioventricularis* [NA], *atrioventricular* or *a-v. b.*, *Kent-His b.*, *b. of Stanley Kent*, *His' band*, *Gaskell's bridge*, and *ventriculonector*. **Keith's b.**, a bundle of fibers in the wall of the right atrium, between the openings of the venae cavae; called also *sinoatrial b.* **Kent's b.**, a muscular bundle in the heart of several mammalian species (sometimes in man), forming a direct connection between the atrial and ventricular walls. **Kent-His b.**, b. of His. **longitudinal medial b.**, fasciculus longitudinalis medialis. **main b.**, the portion of the bundle of His between the atrioventricular node and the division into right and left branches; see *b. of His*. **medial forebrain b.**, a group of nerve fibers in the lateral area of the hypothalamus, connecting the midbrain tegmentum and elements of the limbic system. **Meynert's b.**, fasciculus retroflexus. **Monakow's b.**, tractus rubrospinalis. **muscle b.**, one of the primary longitudinal subdivisions of a muscle, made up of muscle fibers and separated from other bundles by fascial septa or perimysium. **olivocochlear b. of Rasmussen**, a bundle of fibers originating in the superior olivary complex and usually terminating in the cochlea of the opposite side; called also *b. of Oort* and *b. of Rasmussen*. **b. of Oort**, olivocochlear b. of Rasmussen. **posterior longitudinal b.**, fasciculus longitudinalis medialis. **predorsal b.** (*obs.*), tectospinal tract. **b. of Rasmussen**, olivocochlear b. of Rasmussen. **Schultze's b.**, interfascicular fasciculus. **Schutz's b.**, fasciculus longitudinalis dorsalis. **sinoatrial b.**, **Keith's b.** **solitary b.**, tractus solitarius medullae oblongatae. **b. of Stanley Kent**, b. of His. **thalamomamillary b.**, fasciculus mamillothalamicus. **Thorel's b.**, a bundle of muscle fibers in the human heart, connecting the sinoatrial and atrioventricular nodes, and passing around the mouth of the inferior vena cava. **transverse b's of palmar aponeurosis**, fasciculi transversi aponeurosis palmaris; see under *fasciculus*. **Türk's b.**, tractus temporopontinus. **b. of Vicq d'Azyr**, fasciculus mamillothalamicus. **Weissmann's b.**, the bundle of striated muscle fibers of a neuromuscular spindle.

bundle branch (bun'd'l branch) a branch of the bundle of His. **bungarotoxin** (bung'gah-ro-tok'sin) a strong neurotoxin from the venom of kraits (*Bungarus*); three electrophoretic fractions, α -, β -, and γ -bungarotoxin, have been identified. α -Bungarotoxin, the chief fraction, binds irreversibly with acetylcholine receptors, producing neuromuscular block.

Bungarus (bung'gah-rus) a genus of venomous elapid snakes found in India; the krait. See table accompanying *snake*.

Bunge's amputation (böong'gez) [Richard Bunge, German surgeon, born 1870] aperiosteal amputation.

Bunge's law (böong'gez) [Gustav von Bunge, physiologist at Basel, 1844-1920] see under *law*.

Bunge's spoon (böong'gez) [Paul Bunge, German ophthalmologist, 1853-1926] see under *spoon*.

bungeye (bung'i) a condition caused by infestation of the eye of horses with *Habronema*, and marked by small worm-containing granulomas in the conjunctiva; called also *blue-eye*.

Bünger's bands (*cell cordons*) (bing'nerz) [Otto von Bünger, German neurologist, 1858-1905] see under *band*.

bungpagga (bung-pag'gah) tropical pyomyositis.

buninoid (boo'ne-noid) [Gr. *bounos* hill + *eidos* form] having a rounded form; said of tumors.

buniodyl (bu-ni'o-dil) bunamiodyl.

union (bun'yun) [L. *bunio*; Gr. *bounion* turnip] abnormal prominence of the inner aspect of the first metatarsal head,

accompanied by bursal formation and resulting in a lateral or valgus displacement of the great toe. **tailor's b.**, **unionette**.

unionectomy (bun-yun-ek'to-me) [*bunion* + Gr. *ektomē* excision] excision of an abnormal prominence on the mesial aspect of the first metatarsal head.

unionette (bun-yun-et'f) enlargement of the lateral aspect of the fifth metatarsal head; called also *tailor's bunion*.

bunodont (bu'no-dont) [Gr. *bounos* hill + *odous* tooth] having cheek teeth with low rounded cusps on the occlusal surface of the crown, as in mammals with mixed diet, such as swine, many rodents, and man.

bunolol hydrochloride (bu'no-löl) chemical name: 5-[3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]-3-4-dihydro-1(2*H*)-naphthalenone hydrochloride; a beta-adrenergic blocking agent, $C_{17}H_{25}NO_3 \cdot HCl$, having the same actions as propranolol (q.v.).

bunolophodont (bu'no-lo'fo-dont) [Gr. *bounos* hill + *lophos* ridge + *odous* tooth] having cheek teeth with both rounded cusps and transverse ridges on the occlusal surface of the crown, as in some kangaroos.

bunoselenodont (bu'no-sē-le'no-dont) [Gr. *bounos* hill + *selēnē* moon + *odous* tooth] having cheek teeth with both rounded cusps and crescentic ridges on the occlusal surface of the crown.

Bunostomum (bü'no-sto'mum) a genus of hookworms of the family Ancylostomidae that parasitize cattle, sheep, and other ruminants; called also *Monodontus*.

Bunsen burner, coefficient (bun'sen) [Robert Wilhelm Eberhard von Bunsen, German chemist, 1811-1899] see under *burner*, and see *absorption coefficient* (def. 2.), under *coefficient*.

buphthalmia (büf-thal'me-ah) buphthalmos; hydrophthalmos.

buphthalmos (büf-thal'mos) [Gr. *bous* ox + *ophthalmos* eye] enlargement and distention of the fibrous coats of the eye; hydrophthalmos; infantile glaucoma. Called also *cornea globosa* and *megophthalmos*.

buphthalmus (büf-thal'mus) buphthalmos; hydrophthalmos.

bupicamide (bu-pik'o-mid) chemical name: 5-butyl-2-pyridine-carboxamide; an antihypertensive, $C_{10}H_{14}N_2O$.

bupivacaine hydrochloride (bu-piv'ah-kān) chemical name: *dl*-1-butyl-2'-6'-pipecoloxylidide hydrochloride. A local anesthetic, $C_{18}H_{28}N_2O \cdot HCl$, occurring as a white crystalline powder; used for peripheral nerve block, infiltration, and sympathetic, caudal, or epidural block.

buprenorphine hydrochloride (bu'pre-nor'fēn) chemical name: 17-(cyclopropylmethyl)- α -(1,1-dimethylethyl)-4,5 α -epoxy-18,19-dihydro-3-hydroxy-6-methoxy- α -methyl-6,14-ethenemorphinan-7 α (*S*)-methanol hydrochloride; a synthetic derivative of thebaine, $C_{29}H_{41}NO_4 \cdot HCl$, used as an analgesic.

bupropion hydrochloride (bu-pro'pe-on) chemical name: ($\pm$)-1-(3-chlorophenyl)-2-[(1,1-dimethylethyl) amino]-1-propanone hydrochloride; an antidepressant, $C_{13}H_{16}ClNO \cdot HCl$.

bur (ber) a form of drill used for creating openings in bone or similar hard substances. Such an instrument is used in dentistry, in the hand piece of a dental engine, for opening and preparing tooth cavities; called also *bur drill*. **carbide b.**, one in which the steel is alloyed with tungsten carbide to increase its hardness and cutting ability.

Burdach's columns, etc. (boor'daks) [Karl Friedrich Burdach, German physiologist, 1776-1847] see under *columns*, *fasciculus*, *fiber*, *fissure*, *nucleus*, and *tract*.

buret, **burette** (bu-ret') a graduated glass tube used in volumetric chemistry to deliver a measured amount of liquid.

Burghart's symptom (*sign*) (böörg'harts) [Hans Gerny Burghart, German physician, 1862-1932] see under *symptom*.

burimamide (bu-rim'ah-mid) an antagonist to histamine, competing for the histamine₂ receptor site on cells.

burn (bern) a lesion caused by the contact of heat or fire. Burns of the first degree show redness; of the second degree, vesication; of the third degree, necrosis through the entire skin. Burns of the first and second degree are known as partial thickness burns, those of the third degree as full-thickness burns. **brush b.**, a wound caused by violent rubbing or friction, as by a rope pulled through the hands; called also *friction b.* **cement b.**, **concrete b.**, a corrosive destruction of tissue caused by contact with cement or concrete. **chemical b.**, see *primary irritant dermatitis*, under *dermatitis*. **contact b.**, an electric burn produced by contact with electric current. **electric b.**, **electrical b.**, see *flash b.* and *contact b.* **flash b.**, a thermal lesion produced by a very brief exposure to radiant heat of high intensity, as in an explosion or a sudden discharge of electricity. **friction b.**, **brush b.** **Kangri b.**, a burn on the abdomen caused by the portable stove (Kangri) carried by natives of Kashmir; such a burn may be followed by cancer. **radiation b.**, a burn caused by exposure to x-ray, radium, sunlight, atomic, or any other type of radiant energy. **sun b.**, **sunburn**. **thermal b.**, injury due to contact with flame, hot objects, or hot liquids, as distinguished from chemical and electric burns. **x-ray b.**, a lesion caused by exposure to x-rays.

Burnam's test (bur'namz) [Curtis Field Burnam, Baltimore surgeon, 1877-1947] see under *tests*.

burner (ber'ner) the part of a lamp, stove, or furnace from which the flame issues. **Argand b.**, a burner for oil or gas, with an inner tube for supplying air to the flame. **Bunsen b.**, a gas burner in which the gas is mixed with air before ignition, in order to give complete oxidation.

Burnet (bur-net'), Sir Frank Macfarlane. Australian physician-virologist, born 1899; co-winner, with Peter B. Medawar, of the Nobel prize in medicine and physiology for 1960, for the theoretical solution to the problem of transplanting tissues and vital organs from one animal to another.

Burnett's disinfecting fluid, (solution) (bur'nets) [Sir William Burnett, English surgeon, 1779–1861] see under *fluid*.

burnisher (ber'nish-er) a smooth, rounded dental instrument for adapting, finishing and polishing metal dental restorations and dentures.

burnishing (ber'nish-ing) a dental procedure somewhat related to polishing and abrading.

Burns' amaurosis (bernz) [John Burns, Scottish physician, 1774–1850] postmarital amblyopia.

Burns' ligament, space (bernz) [Allan Burns, Scottish anatomist, 1781–1813] see *margo falciformis hiatus saphenus* and *fossa jugularis*, def. 1.

Burow's operation, solution, vein (bōr'ovz) [Karl August Burow, surgeon in Königsberg, 1809–1874] see under *operation* and *vein*, and see *aluminum acetate solution*, under *solution*.

burquism (burk'izm) [V. B. Burg, French neurologist, 1823–1884] a system of metallotherapy.

burr (bur) bur.

bursa (ber'sah), pl. *bur'sae* [L.; Gr. "a wine skin"] a sac or sac-like cavity filled with a viscid fluid and situated at places in the tissues at which friction would otherwise develop. **b. of Achilles (tendon)**, b. tendinis calcanei. **acromial b.**, b. subdeltoidea. **adventitious b.**, an abnormal cyst due to friction or some other mechanical cause, and containing synovial fluid; called also *supernumerary b.* **anconeal b.**, b. subcutanea olecrani. **anconeal b. of triceps muscle**, b. subtendinea musculi tricipitis brachii. **b. anseri'na** [NA], **anserine b.**, a bursa between the tendons of the sartorius, gracilis, and semitendinosus muscles, and the tibial collateral ligament; called also *anterior genual b.* **bicipital b.**, **bicipitofibular b.**, b. subtendinea musculi bicipitis femoris inferior. **bicipitoradial b.**, **b. bicipitoradialis** [NA], a bursa between the radial tuberosity and the biceps tendon; called also *b. mucosa radialis*. **Boyer's b.**, one situated beneath the hyoid bone. **Brodie's b.**, b. subtendinea musculi gastrocnemii lateralis. **calcaneal b.**, b. tendinis calcanei. **calcaneal b., subcutaneous b.** subcutanea calcanei. **b. of calcaneal tendon**, b. tendinis calcanei. **Calori's b.**, a bursa situated between the trachea and the arch of the aorta. **b. copula'trix**, an appendage at the posterior end of the male of certain nematodes. **coracobrachial b.**, b. musculi coracobrachialis. **coracoid b.**, b. subtendinea musculi subscapularis. **b. cubita'lis interossea** [NA], **cubitoradial b.**, a bursa between the ulna, the biceps tendon, and nearby muscles; called also *interosseous cubital b.* and *ulnoradial b.* **deltoid b.**, b. subacromialis. **b.-equivalent**, requiring interaction with human tissue analogous to the bursa of Fabricius in birds (*bursal equivalent tissue*). See *B-lymphocytes*, under *lymphocyte*. **b. of Fabricius**, an epithelial outgrowth of the cloaca in chick embryos, which develops in a manner similar to that of the thymus in mammals, atrophying after 5 or 6 months and persisting as a fibrous remnant in sexually mature birds. It contains lymphoid follicles, and before involution is a site of formation of lymphocytes associated with humoral immunity. See also *b.-equivalent*, and *bursal equivalent tissue*, under *tissue*. **fibular b.**, b. subtendinea musculi bicipitis femoris inferior. **Fleischmann's b.**, one beneath the tongue. **b. of flexor carpi radialis muscle**, vagina synovialis tendinis musculi flexoris carpi radialis. **gastrocnemio-semimembranous b.**, b. musculi semimembranosi. **genual b.**, anterior, b. anserina. **genual b., external inferior**, b. subtendinea musculi bicipitis femoris inferior. **genual bursae, internal superior**, bursae subtendineae musculi sartorii. **genual b., posterior**, b. musculi semimembranosi. **bur'sae glutaefomora'les** bursae intermusculares musculorum gluteorum. **gluteal b.**, one situated beneath the gluteus maximus muscle. **gluteal intermuscular bursae**, bursae intermusculares musculorum gluteorum. **gluteofascial bursae**, bursae intermusculares musculorum gluteorum. **gluteofemoral bursae**, bursae intermusculares musculorum gluteorum. **gluteotuberosal b.**, b. ischiadica musculi glutei maximi. **His's b.**, the dilatation at the end of the archenteron. **humeral b.**, 1. b. subacromialis. 2. b. subtendinea musculi gastrocnemii lateralis. **hyoid b.**, b. subcutanea prominentiae laryngeae. **iliac b., subtendinous b. ili'aca subtendin'ea**, b. subtendinea iliaca. **b. iliopectine'a** [NA], **iliopectineal b.**, a bursa between the iliopsoas tendon and the iliopectineal eminence; called also *subiliac b.* and *ileopubic vesicular b.* **b. of iliopsoas muscle**, b. subtendinea iliaca. **inferior b. of biceps femoris muscle**, b. subtendinea musculi bicipitis femoris inferior. **infracardiac b.**, the cranial

end of a celomic recess of the embryo, extending upward between the esophagus and right lung bud; frequently persisting in the adult. **infracardiac b., external**, recessus subpopliteus. **infraglenal b.**, infrapatellaris profunda. **infrahyoid b., b. infrahyoid'ea** [NA], a bursa sometimes present below the hyoid bone at the attachment of the sternohyoid muscle. **infrapatellar b.**, b. subtendinea prepatellaris. **infrapatellar b., deep**, b. infrapatellaris profunda. **infrapatellar b., subcutaneous**, b. subcutanea infrapatellaris. **infrapatellar b., superficial inferior**, b. subcutanea tuberositatis tibiae. **b. infrapatella'ris profun'da** [NA], a bursa between the patellar ligament and the tibia. Called also *deep infrapatellar b.*, *infraglenal b.*, *subpatellar b.*, *subligamentous b.*, and *subpatellar mucous b.* **b. infrapatella'ris subcuta'nea**, b. subcutanea infrapatellaris. **bur'sae intermuscula'les musculorum gluteorum** [NA], intermuscular gluteal bursae: several sacs that surround the tendon attaching the gluteus maximus to the femur; called also *bursae glutaefomora'les*, *gluteofascial bursae*, and *gluteofemoral bursae*. **interosseous cubital b.**, cubitalis interossea. **intertubercular b.**, vagina synovialis intertubercularis. **b. intratendin'ea olecrani** [NA], intratendinous bursa of olecranon: a bursa within the triceps tendon near its insertion; called also *intratendinous supra-anconeal b.* and *Monro's b.* **ischiad'ic b.**, b. ischiadica musculi obturatorii interni. **b. ischiad'ica mus'culi glutei max'imi** [NA], ischial bursa of gluteus maximus muscle: a bursa between the ischial tuberosity and the gluteus maximus; called also *gluteotuberosal b.* **b. ischiad'ica mus'culi obturato'rii inter'ni** [NA], ischial bursa of internal obturator muscle: a bursa between the tendon of the obturator internus muscle and the lesser sciatic notch; called also *ischiad'ic b.*, *b. musculi obturatoris interni*, *sciatic b. of obturator internus muscle*, and *tuberoischiad'ic b.* **ischial b. of gluteus maximus muscle**, b. ischiadica musculi glutei maximi. **ischial b. of internal obturator muscle**, b. ischiadica musculi obturatorii interni. **lateral b. of gastrocnemius muscle**, b. subtendinea musculi gastrocnemii lateralis. **b. of latissimus dorsi muscle**, subtendinea musculi latissimi dorsi. **Luschka's b.**, b. pharyngea. **medial b. of gastrocnemius muscle**, b. subtendinea musculi gastrocnemii medialis. **Monro's b.**, b. intratendinea olecrani. **b. muco'sa**, b. synovialis. **b. muco'sa patella'ris profun'da**, b. subtendinea prepatellaris. **b. muco'sa radia'lis**, b. bicipitoradialis. **b. muco'sa radia'lis inter'ni**, vagina synovialis tendinis musculi flexoris carpi radialis. **b. muco'sa subcuta'nea**, b. synovialis subcutanea. **b. muco'sa subfascia'lis**, b. synovialis subfascialis. **b. muco'sa submuscula'ris**, b. synovialis submuscularis. **b. muco'sa subtendin'ea**, b. synovialis subtendinea. **b. muco'sa superficial'is ge'nu**, Loder, b. subtendinea prepatellaris. **mucous b.**, b. synovialis. **mucous b., subpatellar b.** infrapatellaris profunda. **mucous b., supracondyloid, medial**, b. subtendinea musculi gastrocnemii medialis. **mucous b. of knee, superficial**, b. subtendinea prepatellaris. **multilocular b.**, one which is subdivided into several compartments. **b. mus'culi bicip'itis fem'oris inferior**, b. subtendinea musculi bicipitis femoris inferior. **b. mus'culi bicip'itis fem'oris supe'rior** [NA], superior bursa of biceps femoris muscle: a bursa between the long head of the biceps, the semitendinosus, the tendon of the semimembranosus, and the ischial tuberosity; called also *subtendinous b.* **b. mus'culi coracobrachia'lis** [NA], a bursa between the coracobrachialis and subscapularis muscles and the coracoid process; called also *coracobrachial b.* and *subcoracoid b.* **b. mus'culi extenso'ris car'pi radia'lis bre'vis** [NA], a bursa between the tendon and the base of the third metacarpal bone. **b. mus'culi flexo'ris car'pi radia'lis**, vagina synovialis tendinis musculi flexoris carpi radialis. **b. mus'culi gastrocnem'ii latera'lis**, b. subtendinea musculi gastrocnemii lateralis. **b. mus'culi gastrocnem'ii media'lis**, b. subtendinea musculi gastrocnemii medialis. **b. mus'culi infraspina'ti**, b. subtendinea musculi infraspinati. **b. mus'culi latis'simi dor'si**, b. subtendinea musculi latissimi dorsi. **b. mus'culi obturato'ris inter'ni**, see *b. ischiadica musculi obturatorii interni* and *b. subtendinea musculi obturatorii interni*. **b. mus'culi pirifo'r'mis** [NA], bursa of piriform muscle: a bursa between the piriformis tendon, the superior gemellus muscle, and the femur; called also *piriform b.* **b. mus'culi poplite'i**, recessus subpopliteus. **b. mus'culi sarto'rii pro'pria** see *bursae subtendineae musculi sartorii*. **b. mus'culi semimembrano'si** [NA], bursa of semimembranosus muscle: a bursa between the semimembranosus muscle and the medial head of the gastrocnemius. Called also *gastrocnemiosemimembranous b.*, *posterior genual b.*, *retrocondyloid b.*, *semimembranosagastrocnemial b.*, and *semimembranous b.* **b. mus'culi sternohyoi'dei**, see *b. intrahyoid'ea* and *b. retrohyoid'ea*. **b. mus'culi subscapula'ris**, b. subtendinea musculi subscapularis. **b. mus'culi tenso'ris ve'li palati'ni** [NA], bursa of tensor veli palatini muscle: a bursa between the hamular process of the sphenoid bone and the tendon of the tensor veli palatini. **b. mus'culi tere'tis majo'ris**, b. subtendinea musculi teretis majoris. **b. mus'culi thyreo'hyoi'dei**, a bursa under the thyrohyoid muscle. **b. mus'culi trochlea'ris**, vagina syno-

vialis muscoli obliqui superioris. **b. of olecranon**, b. subcutanea olecrani. **omental b.**, **b. omenta/lis** [NA], a serous peritoneal cavity situated behind the stomach, the lesser omentum, and part of the liver and in front of the pancreas and duodenum. It communicates with the general peritoneal cavity (greater sac) through the epiploic foramen and sometimes is continuous with the cavity of the greater omentum. Called also *lesser peritoneal cavity*. **ovarian b.**, **b. ova/rica**, the peritoneal fossa in which the ovary is situated. **patellar b.**, **deep**, b. subtendinea prepatellaris. **patellar b.**, **middle**, b. subfascialis prepatellaris. **patellar b.**, **prespinous**, b. subcutanea tuberositatis tibiae. **patellar b.**, **subcutaneous**, b. subcutanea prepatellaris. **peroneal b.**, **common**, vagina synovialis musculorum peroneorum communis. **b. pharyn/gea** [NA], **pharyngeal b.**, an inconstant blind sac located above the pharyngeal tonsil in the midline of the posterior wall of the nasopharynx; it represents persistence of an embryonic communication between the anterior tip of the notochord and the roof of the pharynx. Called also *Luschka's b.*, *Tornwaldt's b.* and *Tornwaldt's cyst*. **b. of piriform muscle**, b. musculus piriformis. **popliteal b.**, **b. of popliteal muscle**, recessus subpopliteus. **postcalcaneal b.**, b. subcutanea calcanea. **postcalcaneal b.**, **deep**, b. tendinis calcanei. **postgenual b.**, **external**, b. subtendinea muscoli gastrocnemii lateralis. **b. praepatella/ris subcuta/nea**, b. subcutanea prepatellaris. **b. praepatella/ris subfascia/lis**, b. subfascialis prepatellaris. **b. praepatella/ris subtendin/ea**, b. subtendinea prepatellaris. **prepatellar b.**, **middle**, b. subfascialis prepatellaris. **prepatellar b.**, **subcutaneous**, b. subcutanea prepatellaris. **prepatellar b.**, **subfascial**, b. subfascialis prepatellaris. **prepatellar b.**, **subtendinous**, b. subtendinea prepatellaris. **bur/sae prepatella/res**, see *b. subcutanea prepatellaris*, *b. subfascialis prepatellaris*, and *b. subtendinea prepatellaris*. **b. prepatella/ris profun/da**, **b. prepatella/ris subaponeurotica**, b. subtendinea prepatellaris. **pretibial b.**, b. subcutanea tuberositatis tibiae. **bur/sae pro/priae mus/culi sarto/rii**, bursae subtendineae muscoli sartorii. **pyriform b.**, b. musculus piriformis. **b. of quadratus femoris muscle**, b. subtendinea iliaca. **retrocondyloid b.**, b. musculus semimembranosus. **retroepicondylod b.**, **lateral**, **deep**, b. subtendinea muscoli gastrocnemii lateralis. **retrohyoid b.**, **b. retrohyoi/dea** [NA], a bursa sometimes present behind the hyoid bone at the attachment of the sternohyoid muscle. **retromammary b.**, a well defined loose areolar tissue between the deep layer of superficial fascia on the posterior aspect of the breast, and the deep fascia covering the pectoralis major and other muscles of the chest wall. **sciatic b. of obturator internus muscle**, b. ischiadica muscoli obturatorii interni. **semimembranosogastrocnemial b.**, **semimembranosus b.**, b. of semimembranosus muscle. **semitendinous b.**, b. musculus bicipitis femoris superior. **sternohyoid b.**, **b. sternohyoi/dea**, see *b. infrahyoidea* and *b. retrohyoidea*. **subachilleal b.**, b. tendinis calcanei. **subacromial b.**, **b. subacromia/lis** [NA], one between the acromion and the insertion of the supraspinatus muscle, extending between the deltoid and the greater tubercle of the humerus; called also *deltoid b.* and *humeral b.* **subcalcaneal b.**, b. subcutanea calcanea. **subclavian b.**, an inconstant bursa between the fibers of the rhomboid ligament. **subcoracoid b.**, 1. bursa muscoli coracobrachialis. 2. bursa subtendinea muscoli subscapularis. **subcrural b.**, b. suprapatellaris. **b. subcuta/nea acromia/lis** [NA], a bursa between the acromion and the overlying skin; called also *subcutaneous acromial b.* **b. subcuta/nea calca/nea** [NA], subcutaneous calcaneal bursa: a bursa between the calcaneus and the skin on the sole of the foot; called also *postcalcaneal b.* and *subcalcaneal b.* **b. subcuta/nea infrapatella/ris** [NA], subcutaneous intrapatellar bursa: a bursa between the upper end of the patellar ligament and the skin; called also *b. infrapatellaris subcutanea*, *subpatellar b.*, and *superficial b. of knee*. **b. subcuta/nea malleoli latera/lis** [NA], subcutaneous bursa of lateral malleolus: a bursa between the lateral malleolus and the skin. **b. subcuta/nea malleoli media/lis** [NA], subcutaneous bursa of medial malleolus: a bursa between the medial malleolus and the skin. **b. subcuta/nea olecra/ni** [NA], subcutaneous bursa of olecranon: a bursa between the olecranon process and the skin; called also *anconeal b.* and *superficial b. of olecranon*. **b. subcuta/nea prepatella/ris** [NA], subcutaneous prepatellar bursa: a bursa between the patella and the skin; called also *b. prepatellaris subcutanea*. **b. subcuta/nea prominenciae laryn/geae** [NA], subcutaneous bursa of prominence of larynx: a bursa over the anterior prominence of the thyroid cartilage of the larynx, under the skin; called also *hyoid b.*, *subhyoid b.*, and *thyrohyoid b.* **b. subcuta/nea tuberosita/tis tib/iae** [NA], subcutaneous bursa of tuberosity of tibia: a bursa between the tibial tuberosity and the skin; called also *patellar b.*, *prespinous b.*, *pretibial b.*, and *superficial inferior infrapatellar b.* **subcutaneous acromial b.**, b. subcutanea acromialis. **subcutaneous b. of lateral malleolus**, b. subcutanea malleoli lateralis. **subcutaneous b. of medial malleolus**, b. subcutanea malleoli medialis. **subcutaneous b. of olecranon**, b. subcutanea olecrani. **subcutaneous b. of prominence of**

larynx, b. subcutanea prominentiae laryngeae. **subcutaneous b. of tuberosity of tibia**, b. subcutanea tuberositatis tibiae. **subdeltoid b.**, **b. subdeltoid/dea** [NA], a bursa between the deltoid and the shoulder joint capsule, usually connected to the subacromial bursa; called also *acromial b.* **b. subfascia/lis prepatella/ris** [NA], subfascial prepatellar bursa: a bursa between the front of the patella and the investing fascia of the knee; called also *b. praepatellaris subfascialis*, *middle patellar* (or *prepatellar*) *b.* **subhyoid b.**, b. subcutanea prominentiae laryngeae. **subiliac b.**, 1. b. iliopectinea. 2. b. subtendinea iliaca. **subligamentous b.**, b. infrapatellaris profunda. **subpatellar b.**, 1. b. infrapatellaris profunda. 2. b. subcutanea infrapatellaris. **b. subtendin/ea ili/aca** [NA], subtendinous iliaca bursa: a bursa between the iliopsoas tendon and the lesser trochanter; called also *b. iliaca subtendinea*, *b. of quadratus femoris muscle*, *b. of iliopsoas muscle*, and *subiliac b.* **b. subtendin/ea mus/culi bicip/itis fem/oris infe/rior** [NA], inferior subtendinous bursa of bicipitis femoris muscle: a bursa between the tendon of the biceps femoris muscle and the fibular collateral ligament of the knee joint; called also *bicipital b.*, *bicipitofibular b.*, *fibular b.*, *external inferior genual b.*, and *b. muscoli bicipitis femoris inferior*. **b. subtendin/ea mus/culi gastrocnemii latera/lis** [NA], a bursa between the tendon of the lateral head of the gastrocnemius muscle and the joint capsule; called also *b. muscoli gastrocnemii lateralis*, *subtendinous b. of lateral head of gastrocnemius muscle*, *Brodie's b.*, *humeral b.*, *lateral b. of gastrocnemius muscle*, *external postgenual b.*, and *deep lateral retroepicondylod b.* **b. subtendin/ea mus/culi gastrocnemii media/lis** [NA], a bursa between the tendon of the medial head of the gastrocnemius, the condyle of the femur, and the joint capsule; called also *b. muscoli gastrocnemii medialis*, *subtendinous b. of medial head of gastrocnemius muscle*, *internal supracondylod b.*, *medial b. of gastrocnemius muscle*, and *medial supracondylod (mucous) b.* **b. subtendin/ea mus/culi infraspina/ti** [NA], subtendinous bursa of infraspinatus muscle: a bursa between the tendon of the infraspinatus and the joint capsule or the greater tubercle; called also *b. muscoli infraspinati*. **b. subtendin/ea mus/culi latis/simi dor/si** [NA], a bursa between the tendons of the latissimus dorsi and teres major muscles; called also *b. muscoli latissimi dorsi* and *b. of latissimus dorsi muscle*. **b. subtendin/ea mus/culi obturato/rii inter/ni** [NA], subtendinous bursa of internal obturator muscle: a bursa beneath the tendon of the obturator internus muscle; called also *b. muscoli obturatorii interni*. **bur/sae subtendin/ea mus/culi sarto/rii** [NA], subtendinous bursa of sartorius muscle: bursae between the tendons of the sartorius, semitendinosus, and gracilis muscles; called also *internal superior genual bursae*, *b. muscoli sartorii propria*, and *bursae propriae muscoli sartorii*. **b. subtendin/ea mus/culi subscapula/ris** [NA], subtendinous bursa of subscapularis muscle: a bursa between the tendon of the subscapularis muscle and the glenoid border of the scapula; called also *b. muscoli subscapularis*, *coracoid b.*, and *subcoracoid b.* **b. subtendin/ea mus/culi tere/tis majo/ris** [NA], subtendinous bursa of teres major muscle: a bursa deep to the tendon of insertion of the teres major muscle; called also *b. muscoli teretis majoris*. **b. subtendin/ea mus/culi tibia/lis anterio/ris** [NA], subtendinous bursa of anterior tibial muscle: a bursa between the tibialis anterior and the medial surface of the medial cuneiform bone. **b. subtendin/ea mus/culi tibia/lis posterio/ris** [NA], subtendinous bursa of posterior tibial muscle: a bursa between the tibialis posterior and the navicular bone. **b. subtendin/ea mus/culi trape/zii** [NA], a bursa between the trapezius and the medial end of the spine of the scapula. **b. subtendin/ea mus/culi tricip/itis bra/chii** [NA], **b. subtendin/ea olecra/ni**, an inconstant sac between the triceps tendon, the olecranon, and the dorsal ligament of the elbow; called also *anconeal b. of triceps muscle*. **b. subtendin/ea prepatella/ris** [NA], subtendinous prepatellar bursa: a bursa sometimes present between the quadriceps tendon and the patellar periosteum; called also *b. prepatellaris subtendinea*, *deep patellar b.*, *infrapatellar b.*, *b. mucosa superficialis* (Loder), *b. mucosa patellaris profunda*, *b. prepatellaris profunda* or *subaponeurotica*, *subcutaneous patellar b.*, and *superficial mucous b. of knee*. **subtendinous b. of anterior tibial muscle**, b. subtendinea muscoli tibialis anterioris. **subtendinous b. of biceps femoris muscle**, **inferior**, b. subtendinea muscoli bicipitis femoris inferior. **subtendinous b. of infraspinatus muscle**, b. subtendinea muscoli infraspinati. **subtendinous b. of internal obturator muscle**, b. subtendinea muscoli obturatorii interni. **subtendinous b. of lateral head of gastrocnemius muscle**, b. subtendinea muscoli gastrocnemii lateralis. **subtendinous b. of medial head of gastrocnemius muscle**, b. subtendinea muscoli gastrocnemii medialis. **subtendinous b. of obturator internus muscle**, b. subtendinea muscoli obturatorii interni. **subtendinous b. of posterior tibial muscle**, b. subtendinea muscoli tibialis posterioris. **subtendinous bursae of sartorius muscle**, bursae subtendineae muscoli sartorii. **subtendinous b. of subscapularis muscle**, b. subtendinea muscoli subscapularis. **subtendinous b. of teres major muscle**, b. subtendinea muscoli teretis majoris. **superficial b. of knee**, b. subcuta-

nea infrapatellaris. **superficial b. of olecranon**, b. subcutanea olecrani. **superior b. of biceps femoris muscle**, b. musculi bicipitis femoris superior. **supernumerary b.**, adventitious b. **supra-anconeal b.**, intratendinous, b. intratendinea olecrani. **supracondyloid b.**, internal, **supracondyloid b.**, medial, b. subtendinea musculi gastrocnemii medialis. **supragenual b.**, **suprapatellar b.**, b. suprapatellaris. **b. suprapatella'ris** [NA], suprapatellar bursa: a bursa between the distal end of the femur and the quadriceps tendon; called also *supragenual b.* and *subcrural b.* **synovial b.**, b. synovialis. **synovial b.**, **subcutaneous**, b. synovialis subcutanea. **synovial b. of trochlea**, b. synovialis trochlearis. **b. synovia'lis** [NA], synovial bursa: a closed synovial sac interposed between surfaces which glide upon each other; it may be simple or multilocular in structure, and subcutaneous, submuscular, subfascial, or subtendinous in location; called also *b. mucosa* and *mucous b.* **b. synovia'lis subcutanea** [NA], subcutaneous synovial bursa: a synovial sac found beneath the skin; called also *b. mucosa subcutanea*. **b. synovia'lis subfascia'lis** [NA], a synovial sac found beneath a fascial layer; called also *b. mucosa subfascialis*. **b. synovia'lis submuscula'ris** [NA], a synovial sac found beneath a muscle; called also *b. mucosa submuscularis*. **b. synovia'lis subtendine'ea** [NA], a synovial sac found beneath a tendon; called also *b. mucosa subtendinea*. **b. synovia'lis trochlea'ris** [NA], synovial bursa of trochlea: the synovial bursa that encloses the tendon of the superior oblique muscle as it passes through the trochlea. **b. ten'dinis Achil'is**, NA alternative for b. tendinis calcanei. **b. ten'dinis calca'nei** [NA], bursa of calcaneal tendon: a bursa between the calcaneal tendon and the back of the calcaneus; called also *b. of Achilles (tendon)*, *calcaneal b.*, *deep postcalcaneal b.*, *subachilleal b.*, and *b. tendinis Achillis* [NA alternative]. **b. of tendon of Achilles**, b. tendinis calcanei. **b. of tensor veli palatini muscle**, b. musculi tensoris veli palatini. **b. of testes**, scrotum. **thyrohyoid b.**, b. subcutanea promientiae laryngeae. **thyrohyoid b.**, anterior, see *b. infrahyoidea* and *b. retrohyoidea*. **Tornwaldt's b.**, b. pharyngea. **trochanteric b.**, **subcutaneous**, b. trochanterica subcutanea. **trochanteric b. of gluteus maximus muscle**, b. trochanterica musculi glutei maximi. **trochanteric bursae of gluteus medius muscle**, bursae trochantericae musculi glutei medii. **trochanteric b. of gluteus minimus muscle**, b. trochanterica musculi glutei minimi. **b. trochanter'ica mus'culi glu'taei me'dii ante'rior**, see *bursae trochantericae musculi glutei medii*. **b. trochanter'ica mus'culi glu'taei me'dii poste'rior**, see *bursae trochantericae musculi glutei medii*. **b. trochanter'ica mus'culi glu'tei max'imi** [NA], trochanteric bursa of gluteus maximus muscle: a bursa between the fascial tendon of the gluteus maximus, the posterolateral surface of the greater trochanter, and the vastus lateralis muscle. **bur'sae trochanter'icae mus'culi glu'tei me'dii** [NA], trochanteric bursae of gluteus medius muscle: bursae between the gluteus medius and the lateral surface of the greater trochanter, and sometimes between the tendons of the gluteus medius and the piriformis. **b. trochanter'ica mus'culi glu'tei min'imi** [NA], trochanteric bursa of gluteus minimus muscle: a bursa between the edge of the gluteus minimus and the greater trochanter. **b. trochanter'ica subcutanea** [NA], subcutaneous trochanteric bursa: a bursa between the greater trochanter of the femur and the skin. **tuberoischadic b.**, b. ischiadica musculi obturatorii interni. **ulnaradial b.**, b. cubitalis interossea. **vesicular b.**, **ileo-pubic**, b. iliopectinea. **vesicular b. of sternohyoideus muscle**, see *b. infrahyoidea* and *b. retrohyoidea*.

bursae (ber'se) [L.] plural of bursa.

bursal (ber'sal) [L. *bursalis*] of or pertaining to a bursa.

bursalogy (ber-sal'o-je) [*bursa* + *-logy*] the sum of knowledge regarding the bursae.

Bursata (ber-sa'tah) a term sometimes used to designate those Nematoda which have a bursa copulatrix.

bursatti, **bursatee** (ber-sat'e, ber-saw'te) cutaneous habronemiasis.

bursectomy (ber-sek'to-me) [*bursa* + Gr. *ektomē* excision] excision of a bursa.

bursicon (bur'si-kon) an insect hormone appearing in the blood after molting, which is required for the tanning and hardening of new cuticle.

bursitis (ber-si'tis) inflammation of a bursa, occasionally accompanied by a calcific deposit in the underlying supraspinatus tendon; the most common site is the subdeltoid bursa. **Achilles b.**, achillobursitis. **adhesive b.**, see under *capsulitis*. **calcific b.**, see under *tendinitis*. **Duplay's b. (obs.)**, inflammation of the subacromial or subdeltoid bursa; see *calcific tendinitis*, under *tendinitis*. **ischio-gluteal b.**, inflammation of the bursa over the ischial tuberosity, characterized by sudden onset of excruciating pain over the center of the buttock and down the back of the leg. **olecranon b.**, inflammation and enlargement of the bursa over the olecranon; called also *miners' elbow*. **omental b.**, peritonitis localized to the omental bursa (lesser sac). **pharyngeal b.**, Tornwaldt's b. **popliteal b.**, a swelling behind the knee, caused by escape of synovial fluid

which then becomes enclosed in a sac or membrane; called also *Baker's cyst* and *synovial cyst of the popliteal space*. **prepatellar b.**, inflammation of the bursa in front of the patella, with fluid accumulating within it; called also *housemaid's knee*. **radio-humeral b.**, tennis elbow. **retrocalcaneal b.**, achillobursitis. **scapulohumeral b.**, calcific tendinitis. **subacromial b.**, see *calcific tendinitis*, under *tendinitis*. **subdeltoid b.**, see *calcific tendinitis*, under *tendinitis*. **superficial calcaneal b.**, achillobursitis. **Thornwaldt's b.**, Tornwaldt's b., chronic inflammation of the pharyngeal bursa, attended with formation of a pus-containing cyst, and nasopharyngeal stenosis; called also *pharyngeal b.*, and *Tornwaldt's disease*.

bursolith (ber'so-lith) [*bursa* + Gr. *lithos* stone] a calculus or concretion in a bursa.

bursopathy (ber-sop'ah-the) [*bursa* + Gr. *pathos* disease] any disease of a bursa.

bursotomy (ber-sot'o-me) [*bursa* + Gr. *tomē* a cutting] incision of a bursa.

burst (berst) a sudden, intense increase or outbreak. **respiratory b.**, a sharply increased consumption of oxygen and production of superoxides and peroxide occurring in actively phagocytizing leukocytes.

bursula (ber'su-lah) [L.] a small bag or pouch.

Burton's line (sign) (ber'tunz) [Henry Burton, British physician, 1799-1849] see *lead line*, under *line*.

Bury's disease [Judson Sykes Bury, English physician, 1852-1944] erythema elevatum diutinum.

Buscaino's test (reaction) (bus-ki'nōz) [Vito Maria Buscaino, Italian neurologist, born 1887] see under *tests*.

Buschke's disease, **scleredema** (bōsh'kez) [Abraham Buschke, German dermatologist, 1868-1943] see *cryptococcosis* and *scleredema*.

Buschke-Löwenstein's tumor (bōsh'kēz-la'ven-stinz) [Abraham Buschke; Ludwig W. Löwenstein] see under *tumor*.

bushmaster (bush'mas-ter) a large venomous pit viper, *Lachesis muta*, of the Amazon region of South America. See table accompanying *snake*.

buspirone hydrochloride (bu-spi'rōn) chemical name: 8-[4-[4-(2-pyrimidinyl)-1-piperazinyl]butyl]-8-azaspiro[4,5]decane-7,9-dione; a tranquilizer, C₂₁H₃₁N₅O₂·HCl.

Busquet's disease (bōs-kāz') [P. Busquet, French physician] see under *disease*.

Busse-Buschke disease [Otto Busse, German physician, 1867-1922; Abraham Buschke, German dermatologist, 1868-1943] cryptococcosis.

busulfan (bu-sul'fan) [USP] chemical name: 1,4-butanediol dimethanesulfonate. An alkylating agent, C₆H₁₄O₆S₂, occurring as a white, crystalline powder; used as an antineoplastic, chiefly in the treatment of granulocytic (myelocytic) leukemia, administered orally.

But. abbreviation for *L. butyrum*, butter.

butabarbital sodium (bu-tah-bar'bi-tal) [USP] chemical name: 5-ethyl-5-(1-methylpropyl)-2,4,6(1*H*,3*H*,5*H*)pyrimidinetrione monosodium salt. A barbituric acid derivative, C₁₀H₁₃N₂NaO₃, occurring as a white powder; used as a sedative and hypnotic, administered orally.

butacaine sulfate (bu'tah-kān' sul'fāt) [USP] chemical name: 3-(dibutylamino)-1-propanol 4-aminobenzoate sulfate. A local anesthetic, (C₁₈H₃₀N₂O₂)₂·H₂SO₄, occurring as a white to practically white, crystalline powder; used to produce topical anesthesia in the eye or in the mouth.

butaclamol hydrochloride (bu'tah-kla'mōl) chemical name: (±)-3α-(1,1-dimethylethyl-2,3,4,4a,8,9,13b,14-octahydro-1*H*-benzo[6,7]cyclohepta[1,2,3-*d*]pyrido[2,1-*a*]isoquinolin hydrochloride; a tranquilizer, C₂₂H₃₁NO·HCl.

butadiazamide (bu'tah-di-az'ah-mīd) chemical name: *N*-(5-butyl-1,3,4-thiadiazol-2-yl)-*p*-chlorobenzenesulfonamide; a hypoglycemic agent, C₁₂H₁₄ClN₃O₂S₂.

butalbital (bu-tal'bi-tal) [USP] chemical name: 5-(2-methylpropyl)-5-(2-propenyl)-2,4,6(1*H*,3*H*,5*H*)pyrimidinetrione. An intermediate-acting barbiturate, occurring as a white, crystalline powder, C₁₁H₁₅N₂O₅; administered orally.

butallylonal (bu-tah-lil'o-nal) chemical name: 5-(2-bromo-2-propenyl)-5-(1-methylpropyl)-2,4,6(1*H*,3*H*,5*H*)pyrimidinetrione. An intermediate-acting barbiturate, C₁₁H₁₃BrN₂O₅, used as a hypnotic.

butamben (bu-tam'ben) [USP] chemical name: 4-aminobenzoic acid butyl ester. A local anesthetic, C₁₁H₁₅NO₂, occurring as a white, crystalline powder; applied topically in the treatment of painful skin conditions and pain associated with hemorrhoids or anal fissure. Called also *butyl aminobenzoate*.

butamirate citrate (bu'tah-mi'rāt) chemical name: α-ethyl-2-[2-(diethylamino)ethoxy]ethyl ester benzenecarboxylic acid 2-hydroxy-1,2,3-propanetricarboxylate (1:1); an antitussive, C₁₈H₂₉NO₃·C₆H₅O₇.

butamisol hydrochloride (bu-tam'i-sōl) chemical name: (-)-2-methyl-*N*-[3-(2,3,5,6-tetrahydroimidazo[2,1-*b*]thiazol-6-yl)-

phenyl]propanamide monohydrochloride; a veterinary anthelmintic, $C_{15}H_{19}N_3OS \cdot HCl$.

butamoxane hydrochloride (bu-tah-moks'ān) chemical name: *N*-butyl-1,4-benzodioxan-2-methylamine hydrochloride; a tranquilizer, $C_{13}H_{16}NO_2 \cdot HCl$.

butane (bu'tān) *n*-butane; an aliphatic hydrocarbon of the methane series, C_4H_{10} , from petroleum, occurring as a colorless flammable gas with a characteristic odor. **normal b.**, $CH_3-(CH_2)_2CH_3$.

butaperazine (bu-tah-per'ah-zēn) chemical name: 1-[10-[3-(4-methyl-1-piperazinyl)propyl]10*H*-phenothiazin-2-yl]-1-butanone. A phenothiazide derivative, $C_{24}H_{31}N_3OS$, used as an antipsychotic drug in the treatment of acute and chronic schizophrenia; administered orally. **b. maleate**, the maleate ester of butaperazine, $C_{24}H_{31}N_3OS \cdot 2C_4H_4O_4$, having the same actions and uses as the base.

Butazolidin (bu'tah-zol'i-din) trademark for preparations of phenylbutazone.

Butcher's saw (booch'erz) [Richard George Herbert *Butcher*, Irish surgeon, 1819-1891] see under *saw*.

Butesin (bu-te'sin) trademark for a preparation of butyl aminobenzoate.

butethal (bu'tē-thal) chemical name: 5-butyl-5-ethyl-2,4,6-(1*H*,3*H*,5*H*)pyrimidinetrione. An intermediate-acting barbiturate, $C_{10}H_{16}N_2O_3$, used as a sedative; administered orally.

butethamine hydrochloride (bu-teth'ah-mēn) chemical name: 2-[(2-methylpropyl)amino]ethanol 4-aminobenzoate (ester) hydrochloride. A local anesthetic, $C_{13}H_{20}N_2O_2 \cdot HCl$, occurring as small, white crystals or white, crystalline powder; used for nerve block anesthesia in dentistry.

Buthus (bu'thus) a genus of scorpions. **B. carolinia'nus**, a species occurring in the southern United States. **B. quinquestria'tus**, a dangerous species occurring in Egypt.

butirosin sulfate (bu-tēr'o-sin) an aminoglycoside antibiotic complex, $C_{21}H_{41}N_5O_{12} \cdot 2H_2SO_4 \cdot 2H_2O$, obtained from certain strains of *Bacillus circulans*, consisting of butirosins A and B; an antibacterial.

Butisol sodium (bu'tī-sol) trademark for preparations of sodium butabarbital.

butonate (bu'to-nāt) chemical name: butanoic acid 2,2,2-trichloro-1-(dimethoxyphosphinyl)ethyl ester; an insecticide and anthelmintic that is a potent cholinesterase inhibitor, $C_6H_{11}Cl_3O_5P$.

butopropine hydrochloride (bu'to-pro'zēn) chemical name: [4-[3-(diethylamino)propoxy]phenyl](2-ethyl-3-indoliziny)l-methanone monohydrochloride; an antiarrhythmic cardiac depressant and antianginal, $C_{28}H_{38}N_2O_2 \cdot HCl$.

butopyronoxyl (bu'to-pī'ro-nok'sil) chemical name: 3,4-dihydro-2,2-dimethyl-4-oxo-2*H*-pyran carboxylic acid butyl ester. An insect repellent effective against ticks, $C_{12}H_{18}O_4$, occurring as a yellow to pale reddish brown liquid.

butorphanol (bu-tor'fah-nōl) chemical name: 17-(cyclobutylmethyl)morphinan-3,14-diol; a synthetic opioid, $C_{21}H_{29}NO_2$, having analgesic and antitussive properties. **b. tartrate**, the tartrate salt of butorphanol, $C_{21}H_{29}NO_2 \cdot C_4H_6O_6$, administered intramuscularly as an analgesic.

butoxamine hydrochloride (bu-toks'ah-mēn) chemical name: α -[1-[(1,1-dimethylethyl)amino]ethyl]-2,5-dimethoxybenzenemethanol. A beta-adrenergic blocking agent, $C_{15}H_{25}NO_3 \cdot HCl$.

butriptyline hydrochloride (bu-trip'tī-lēn) chemical name: (+)-10,11-dihydro-*N,N*, β -trimethyl-5*H*-dibenzo[*a,d*]cycloheptene-5-propylamine hydrochloride; an antidepressant, $C_{21}H_{27}N \cdot HCl$.

Bütschli's nuclear spindle (bitsh'lēz) [Otto *Bütschli*, German zoologist, 1848-1920] see *spindle*, def. 1.

Bütschlia (bitsh'le-ah) a genus of ciliates, species of which have been found in the stomachs of cattle.

butt (but) to bring the surfaces of two distinct objects squarely or directly into contact with each other.

butter (bu'er) [L. *butyrum*; Gr. *boutyron*] the oily mass procured by churning cream. **b. of antimony**, antimony trichloride. **b. of arsenic**, arsenic trichloride. **cocoa b.**, *cocoa b.*, [NF], the fat obtained from the roasted seed of *Theobroma cacao*; used as a suppository base, and has been used for its emollient properties in cosmetics and is sometimes used to soften and protect the skin. Called also *theobroma oil*. **b. of tin**, stannic chloride. **b. of zinc**, zinc chloride.

butterfly (but'er-fli) 1. a mass of absorbent cotton with wing-shaped appendages, used mainly in uterine surgery. 2. a form of doubly wing-shaped skin flaps. 3. a small piece of adhesive tape with broad, wing-shaped ends by means of which the edges of a superficial wound may be approximated. 4. a pattern formed by a skin eruption across the nose and adjacent areas of the cheeks, as in systemic lupus erythematosus, seborrheic dermatitis, and rosacea.

buttock (but'ok) one of the gluteal prominences; called also *clunis* or *breech* and, in the plural, *nates*.

button (but'n) 1. a knoblike elevation or structure. 2. a small appliance shaped like a spool or disk and used in surgery for the construction of intestinal anastomosis. **Aleppo b.**, cutaneous leishmaniasis. **Bagdad b.**, **Biskra b.**, cutaneous leishmaniasis. **Boari b.**, a device analogous to the Murphy button for use in ureterocystostomy. **bromide b.**, a verrucous cutaneous lesion occurring as a result of sensitivity to bromides. **Chlumsky's b.**, a button for intestinal suture made of pure magnesium on the pattern of the Murphy button. **dog b.**, *nux vomica*. **iodide b.**, a verrucous cutaneous lesion occurring as a result of sensitivity to iodides. **Jaboulay b.**, a device for performing lateral intestinal anastomosis without the aid of sutures, consisting of two button-like cylinders of metal that are fitted together on the screw and key-ring principle through a small intestinal opening. **Lardennois's b.**, a modified form of Murphy button for intestinal anastomosis. **mescal b's**, transverse slices of the flowering heads of the Mexican dumpling cactus, *Lophophora williamsii* or mescal, whose major active principle is mescaline; used in divinatory and religious ceremonies by North American Indians. **Murphy's b.**, a device for joining the ends of a divided intestine so that union may take place. It consists of two short metal cylinders of different diameter, each having a collar at one end; the collars are sutured to the divided ends, and the narrower cylinder is locked into its mate. **oriental b.**, cutaneous leishmaniasis. **peritoneal b.**, a short flanged glass tube for insertion between the peritoneal cavity and a subcutaneous pocket through which peritoneal transudate may be drained. **quaker b.**, *nux vomica*. **terminal b's**, see *end-feet*. **Villard's b.**, a modified Murphy button.

buttonhole (but'n-hōl) a short straight incision into a cavity or organ; an abnormal narrowing of the caliber of a structure. **mitral b.**, an advanced state of stenosis of the mitral orifice of the heart, adhesion and shortening of the cusps having produced a narrow slit-like orifice.

butyl (bu'til) a hydrocarbon radical, C_4H_9 or $CH_3 \cdot CH_2 \cdot CH_2 \cdot CH_2 \cdot$. **b. acetate**, a liquid compound, $C_6H_{12}O_2$, used in the manufacture of lacquer, artificial leather, photographic film, plastics, and safety glass; it is an irritant which may cause conjunctivitis, and is narcotic in high concentrations. **b. aminobenzoate** [NF], chemical name, *n*-butyl *p*-aminobenzoate. A white, odorless, tasteless crystalline powder, $C_{11}H_{15}NO_2$, soluble in dilute acids, alcohol, ether, and chloroform; used as a local anesthetic. Called also *butamben*. **b. chloride**, chemical name: 1-chlorobutane. A clear colorless volatile liquid, C_4H_9Cl , miscible with dehydrated alcohol and with ether; used as a veterinary anthelmintic. **b. formate**, an industrial solvent, $CH_3(CH_2)_3COOH$, the vapors of which are powerfully lacrimatory and suffocating. **b. hydride**, a hydrocarbon, C_4H_{10} , from petroleum; its vapor is an unsafe anesthetic.

butylene (bu'ti-lēn) a gaseous hydrocarbon, C_4H_8 .

butylmercaptan (bu'til-mer-kap'tan) a thioalcohol, thiobutyl alcohol, $CH_3 \cdot CH_2 \cdot CH_2 \cdot CH_2SH$, the active principle of the odoriferous secretion of the skunk.

butylparaben (bu-til-par'ah-ben) [NF] chemical name: 4-hydroxybenzoic acid butyl ester. An antifungal agent, $C_{11}H_{14}O_3$, occurring as small, colorless crystals or white powder, used as a pharmaceutical preservative.

Butyn (bu'tin) trademark for a preparation of butacaine sulfate.

butyr (bu'tir) [L. *butyrum*; Gr. *boutyron* butter] a combining form denoting a relationship to butter.

butyraceous (bu'tī-ra'she-us) of a buttery consistency.

butyrase (bu'tī-rās) butyrylase.

butyrate (bu'tī-rāt) a salt of butyric acid.

Butyribacterium (bu-tī're-bak-te're-um) [Gr. *boutyron* butter + *baktērion* little rod] a genus of microorganisms of the family Propionibacteriaceae, order Eubacteriales, made up of non-spore-forming, anaerobic or microaerophilic gram-positive bacilli, nonpathogenic but occurring as parasites in the intestinal tract.

butyric (bu-tir'ik) derived from butter, as butyric acid.

butyrin (bu'tī-rin) a triglyceride of butyric acid existing in butter, $C_3H_5(C_4H_7O_2)_3$, a liquid fat with an acrid, bitter taste; called also *tributylin*.

butyrylase (bu'tī-rin-ās) an enzyme of the blood serum that is capable of catalyzing the hydrolysis of butyrin; called also *butyrase*.

butyryne (bu'tī-rin) an amino acid derivative of butyric acid; it is α -amino butyric acid.

butyroid (bu'tī-roid) [*butyr* + Gr. *eidos* form] resembling or having the consistency of butter.

butyromel (bu-tir'o-mel) fresh, unsalted butter, 2 parts, and honey, 1 part: a substitute for cod liver oil.

butyrometer (bu'tī-rom'ē-ter) [*butyr* + Gr. *metron* measure] an apparatus for estimating the proportion of butter fat in milk; called also *butyroscope*.

butyrophenone (bu'tī-ro-fe'nōn) a chemical class of major tranquilizers especially useful in the treatment of manic and moderate to severe agitated states and in the control of vocal utterances and tics of Gilles de la Tourette's syndrome.

butyroscope (bu-ti'ro-skōp) [*butyr-* + Gr. *skopein* to examine] butyrometer.

butyrous (bu'ti-rus) like butter; having a butter-like appearance.

bypass (bi'pas) an auxiliary flow; a shunt. **aortocoronary b.**, a section of saphenous vein or suitable substitute grafted between the aorta and a coronary artery distal to an obstructive lesion in the latter. Called also *coronary artery b.* **aortoiliac b.**, insertion of a vascular prosthesis from the abdominal aorta to the femoral artery to bypass intervening atherosclerotic segments. **aortorenal b.**, insertion of a section of saphenous vein, hypogastric artery, or suitable substitute between the aorta and renal artery to bypass occluded segments. **cardiopulmonary b.**, diversion of the flow of blood from the entrance of the right atrium directly to the aorta, usually via a pump oxygenator, avoiding both the heart and the lungs; a form of extracorporeal circulation used in heart surgery. **coronary b.**, **coronary artery b.**, aortocoronary b. **femoropopliteal b.**, insertion of a vascular prosthesis from the femoral to the popliteal artery to bypass occluded segments. **gastric b.**, gastrojejunostomy in which the stomach is transected high on the body, the proximal remnant being joined to a loop of jejunum in end-to-side anastomosis. **intestinal b.**, resection of the intestine, with anastomosis of the proximal to the distal portion, as in jejunioileostomy. **jejunal b.**, **jejunoileal b.**, surgical anastomosis of the proximal part of the jejunum to the distal part of the ileum so as to bypass much of the small intestine and reduce intestinal absorption. **left heart b.**, diversion of the flow of blood from the pulmonary veins directly to the aorta, avoiding the left atrium and the left ventricle. **partial b.**, the deviation of only a portion of blood flowing through an artery. **right heart b.**, diversion of the flow of

blood from the entrance of the right atrium directly to the pulmonary arteries, avoiding the right atrium and right ventricle.

by-product (bi-prod'ukt) a secondary product obtained during the manufacture of a primary product.

byssaceous (bis-sa'she-us) [Gr. *byssos* flax] composed of fine flaxlike threads.

byssinosis (bis'i-no'sis) [Gr. *byssos* flax + *-osis*] a pulmonary disease occurring among cotton textile workers and preparers of flax and soft hemp, due to inhalation of textile dust. The acute form is marked by tightness of the chest, wheezing, and cough on return to work after a brief absence (Monday dyspnea). The chronic form, occurring after years of exposure, is marked by permanent dyspnea. It is probably due to smooth muscle contraction resulting from histamine release induced by chemicals in the dust. Called also *brown lung*, *cotton-dust* or *stripper's asthma*, *cotton-mill fever*, and *Monday fever*.

byssinotic (bis'i-not'ik) 1. pertaining to byssinosis. 2. one affected with byssinosis.

byssocausis (bis'o-kaw'sis) [Gr. *byssos* flax + *kausis* burning] moxibustion; counterirritation produced by igniting a cone or cylinder of moxa placed on the skin.

byssoid (bis'oid) [Gr. *byssos* flax + *eidos* form] made up of a fringe, the filaments of which are unequal in length.

byssophthisis (bis'o-thi'sis) [Gr. *byssos* flax + *phthisis* consumption] (*obs.*) byssinosis.

byssus (bis'us) [L.; Gr. *byssos*] lint, charpie, or cotton.

Bythnia (bith'ne-ah) *Bithynia*.

bythus (bith'us) [Gr. *bythos* depth] (*obs.*) the lower portion of the abdomen.

C

C 1. chemical symbol for *carbon*. 2. in the electrocardiogram, C stands for chest (precordial) lead, CR for chest and right arm, CL for chest and left arm, CF for chest and left leg; see *precordial leads*, under *lead*². 3. symbol for *complement*.

C. cathode (or cathodal); Celsius or centigrade; congius (gallon); closure; contraction; color sense; cylinder; cervical (in vertebral formulas); clonus; clearance (in kidney function tests).

c. contact; curie.

C' former symbol for *complement*; replaced by *C*.

c' symbol for *coefficient of partage*.

C_{alb} albumin clearance; see *clearance*.

C_{cr} creatinine clearance; see *clearance*.

C_{in} inulin clearance; see *clearance*.

C_{T-1824} clearance of Evans blue, or T-1824.

CA chronological age; Croup-associated (virus); cardiac arrest; coronary artery.

Ca 1. chemical symbol for *calcium*. 2. abbreviation for *cathode*, *cathodal*, *cancer*.

ca. abbreviation for *L. circa* about.

cabinet (kab'i-net) a small closet, or place of enclosure. **Sauerbruch's c.** (*obs.*), a cabinet within which the air pressure can be increased or diminished; formerly used in operations on the chest, the patient's head being outside the cabinet, and his body and the surgeon within it.

Cabot's ring bodies (kab'ots) [Richard Clarke Cabot, Boston physician, 1868-1939] see under *body*.

Cabot's splint (kab'ots) [Arthur Tracy Cabot, Boston surgeon, 1852-1912] see under *splint*.

cabufocon A (kab'u-fo'kon) chemical name: cellulose acetate butanoate; a contact lens material (hydrophobic).

cac- see *caco-*.

cacaerometer (kak'a-er-om'ē-ter) [*cac-* + Gr. *aēr* air + *metron* measure] an instrument for measuring the impurity of air.

cacanthrax (kak-an'thraks) anthrax.

cacao (kah-ka'o) 1. cocoa. 2. *Theobroma cacao*. 3. the seeds of *T. cacao*.

cacation (kak-a'shun) defecation.

cacatory (kak'ah-to're) marked by severe diarrhea.

cacergasia (kak'er-gas'e-ah) [*cac-* + Gr. *ergon* work] (*obs.*) poor functioning, either bodily or mental.

cacesthenic (kak'es-then'ik) having defective sense organs.

cacesthesia (kak'es-the'ze-ah) [*cac-* + Gr. *aisthēsis* perception] any morbid sensation or any disorder of sensibility.

cachectic (kah-kek'tik) pertaining to or characterized by cachexia.

cachet (kah-sha') [Fr.] a disk-shaped wafer or capsule for enclosing a dose of medicine.

cachexia (kah-kek'se-ah) [*cac-* + Gr. *hexis* habit + *-ia*] a profound and marked state of constitutional disorder; general ill health and malnutrition. **cancerous c.**, the weak, emaciated condition seen in cases of malignant tumor. **c. exophthalmica**, Graves' disease. **fluoric c.**, that seen in fluorosis. **hypophyseal c.**, see *panhypopituitarism*. **c. hypophysiopri'va**, the train of symptoms resulting from total deprivation of function of the pituitary gland, including loss of sexual function, bradycardia, hypothermia, apathy, and coma. **lymphatic c.**, pseudoleukemia. **malarial c.**, a group of physical signs of a chronic nature that result from antecedent attacks of severe malaria; the principal signs are anemia, sallow skin, yellow sclera, splenomegaly, hepatomegaly, and, in children, retardation of body growth and puberty. **c. mercurialis**, that seen in chronic mercurial poisoning. **pachydermic c.**, myxedema. **pituitary c.**, see *panhypopituitarism*. **saturnine c.**, that seen in chronic lead poisoning. **c. strumipri'va**, myxedema resulting from deprivation of the function of the thyroid gland by surgery or irradiation; called also *c. thyroidectomica* and *c. thyreopriva*. **c. suprarena'lis**, Addison's disease. **c. thymopri'va**, cachexia due to loss of the thymus gland. **c. thyroidectom'ica**, *c. thyreopri'va*, *c. strumipri'va*. **thyroid c.**, Graves' disease. **tropical c.**, a general condition of ill health affecting residents in the tropics, frequently associated with disease of the liver or spleen. **uremic c.**, cachexia associated with other systemic symptoms of advanced renal failure. **verminous c.** (*obs.*), the condition of anemia and debility which accompanies infection with worms, especially *Ancylostoma*.

cachexy (kah-kek'se) cachexia.

cachinnation (kak'i-na'shun) [L. *cachinnare* to laugh aloud] excessive, hysterical laughter.

CaCl₂ calcium chloride.

CaCl(OCl) chlorinated lime.

CaCO₃ calcium carbonate.

CaC₂O₄ calcium oxalate.

caco-, cac- [Gr. *kakos* bad] a combining form meaning bad, or ill.

cacodemonomania (kak'o-de'mon-o-ma'ne-ah) a condition marked by delusions of being possessed by evil spirits.

cacodontia (kak'o-don'she-ah) [*cac-* + Gr. *odous* tooth] an obsolete term for unsound teeth.

cacodyl (kak'o-dil) [*caco-* + Gr. *ozein* to smell + *hylē* matter] tetramethylbismine, a colorless liquid, (CH₃)₂As—As(CH₃)₂, with an offensive odor; it gives off a poisonous vapor and is inflammable when exposed to air. **c. cyanide**, a white powder, (CH₃)₂As-CN, which, when exposed to the air, gives off an extremely poisonous vapor. **c. hydride**, a colorless liquid, (CH₃)₂AsH, with a strong, garlicky odor; on exposure to air, it gives off a poisonous vapor and ignites spontaneously. Symptoms of poisoning are the same as those of arsenic poisoning.

cacodylate (kak'o-dil-ät) a salt of cacodylic acid; the cacodylates were once used in skin diseases, tuberculosis, malaria, and other conditions.

cacoethes (kak'o-e'thēz) [Gr. *kakoēthēs* an ill habit or itch for doing a thing] (obs.) a bad habit.

cacoethic (kak'o-e'thik) ill-conditioned; malignant.

cacogenesis (kak'o-jen'ē-sis) [*caco-* + Gr. *genesis* production] defective development.

cacogenic (kak'o-jen'ik) 1. having a tendency toward racial deterioration through bad sexual selection. 2. pertaining to cacogenesis.

cacogenics (kak'o-jen'iks) [*caco-* + Gr. *gennan* to generate] deterioration of the physical and moral properties of a race resulting from the mating and propagation of inferior individuals.

cacogeusia (kak'o-gu'se-ah) [*caco-* + Gr. *geusis* taste] a bad taste; it may be a complaint in idiopathic epilepsy (uncinate fit) and of patients receiving neuroleptic agents or lithium, and a somatic delusion in psychoses.

cacomelia (kak'o-me'le-ah) [*caco-* + Gr. *melos* limb] congenital deformity of a limb.

cacomorphosis (kak'o-mor-fo'sis) [*caco-* + Gr. *morphē* form] malformation.

cacoplastic (kak'o-plas'tik) [*caco-* + Gr. *plastikos* forming] susceptible of only an imperfect formation.

cacorhythmic (kak'o-rith'mik) [*caco-* + Gr. *rhythmos* rhythm] marked by irregularity of rhythm.

cacosmia (kak-oz'me-ah) [*caco-* + Gr. *osmē* smell] a bad odor; stench.

cacostomia (kak'o-sto'me-ah) [*caco-* + Gr. *stoma* mouth] (obs.) a foul or gangrenous state of the mouth.

cacothenic (kak'o-then'ik) pertaining to cacothenics.

cacothenics (kak'o-then'iks) [Gr. *kakothēnein* to be in a bad state] deterioration of a race resulting from deleterious influences in the environment.

cacothymia (kak'o-thi'me-ah) a morbid condition caused by derangement of the thymus gland.

cacotrophy (kak-ot'ro-fe) [*caco-* + Gr. *trophē* nourishment] malnutrition; impaired or disordered nourishment.

actinomycin (kak'tin-o-mi'sin) a highly toxic antibiotic of the actinomycin group, actinomycin C, produced by *Streptomyces chrysomallus*, consisting of a mixture of actinomycins C₂ and C₃ and dactinomycin (actinomycin D); formerly used as an antineoplastic.

cacumen (kak-u'men), pl. *cacumina* [L. "summit"] (obs.) 1. the top or apex of an organ. 2. the top and uppermost branchlets of a plant. 3. culmen.

cacuminal (kak-u'mi-nal) pertaining to the cacumen.

cadaver (kah-dav'er) [L. from *cadere*, to fall, to perish] a dead body; generally applied to a human body preserved for anatomical study.

cadaveric (kah-dav'er-ik) of or pertaining to a cadaver.

cadaverine (kah-dav'er-in) [L. *cadaver* corpse] a nitrogenous base, pentamethylenediamine, NH₂·CH₂(CH₂)₃CH₂·NH₂, produced by decarboxylation of lysine. It is sometimes one of the products of *Vibrio proteus* and of *Vibrio cholerae* and occasionally occurs in the urine in cystinuria.

cadaverous (kah-dav'er-us) resembling a cadaver.

caddis (kad'is) see under *fly*.

caderas (kad-e'ras) mal de caderas.

cadmiosis (kad'me-o'sis) pneumoconiosis due to inhalation of and tissue reaction to cadmium dust.

cadmium (kad'me-um) [Gr. *kadmia* earth] a bivalent metal, not unlike tin in appearance and properties; symbol, Cd; atomic number, 48; atomic weight, 112.40. Its salts are poisonous. • **c. anthranilate**, a salt of anthranilic acid (o-aminobenzoic acid) used as an ascaricide in swine. **c. bromide**, a poisonous substance, CdBr₂, used in photography, process engraving, and lithography; when swallowed it causes increased salivation, choking, abdominal pain, diarrhea, and tenesmus. **c. iodide**, a compound, CdI₂, formerly used as a nematocide. **c. oleate**, a preparation formerly used in various skin diseases. **c. salicylate**, a salt, (C₆H₄(OH)CO₂)₂Cd + H₂O, in fine, white, tabular crystals, or in an amorphous powder, formerly used as an antiseptic. **c. sulfate**, a salt, CdSO₄, weak solutions of which were formerly used as astringents in eye, ear, and urethral inflammations. **c. sulfide**, a light yellow or orange powder, CdS, used in 1 per cent suspension in treatment of seborrheic dermatitis of the scalp.

caduca (kah-du'kah) the decidua (membranae deciduae [NA]).

caduceus (kah-du'se-us) the wand of Hermes or Mercury, the messenger of the gods. Used as a medical symbol and as the emblem of the Medical Corps, U.S. Army. The official symbol of the medical profession is the staff of Æsculapius.

caducous (kah-du'kus) [L. *cadere* to fall] falling off; deciduous.

cae- for words beginning thus, see also those beginning *ce-*.

caecitas (ses'y-tas) [L.] blindness.

caecum (se'kum) [L.] cecum.

caecus (se'kus) [L.] a blind pouch. **c. mi'nor ventric'uli**, the cardiac part of the stomach (pars cardiaca ventriculi [NA]).

Caelius Aurelianus (se'le-us aw-re'le-a'nus) (5th century A.D.) an outstanding physician and medical writer, whose most famous work, *De morbis acutis et chronicis*, although clearly influenced by Soranus, contains much fresh material and "conforms to the modern standard of what a medical work should be" (Major).

caelotherapy (se'lo-ther'ah-pe) [L. *caelum* heaven + *therapy*] the use of religion and religious symbols for therapeutic purposes.

caeno- see *ceno-*.

caesarean (se-za're-an) see *cesarean section*, under *section*.

caesium (se'ze-um) cesium.

CaF₂ -calcium fluoride.

cafard (kah-far') [Fr.] a severe form of mental depression.

caffea (kaf'e-ah) [L.] coffee.

caffeine (kah-fēn', kaf'fe-in) [L. *caffaina*] [USP] chemical name: 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione. An odorless, bitter, white powder, C₈H₁₀N₄O₂, one of the xanthines (q.v.), soluble in water and alcohol, and obtainable from coffee, tea, guarana, and maté. Caffeine stimulates the central nervous system, mainly affecting the cerebrum; has a diuretic effect on the kidneys; stimulates striated muscle; and has a group of effects on the cardiovascular system. It is used as a central and respiratory stimulant and for the relief of headache; administered orally. A combination of caffeine and sodium benzoate in water for injection is administered parenterally. Called also *guaranine* and *methyltheobromine*. See also *caffeism*. **c. borocitrate**, a white soluble powder having sedative and antiseptic effects; no longer used in medicine. **c. chloral**, a soluble crystalline combination of caffeine and chloral, C₈H₁₀N₄O₂—CCl₃COH, formerly used as an analgesic. **c. citrate**, **citrated c.**, a preparation of equal parts of caffeine and citric acid, used for the same purposes as caffeine; administered orally. **c. hydrobromide**, colorless, efflorescent crystals, formerly used as a diuretic. **c. nitrate**, a salt in yellowish, needle-like crystals. **c. phthalate**, a sedative and antiseptic; no longer used in medicine. **c. and sodium benzoate**, see *caffeine*. **c. triiodide**, a compound in dark-green prisms, (C₈H₁₀N₄O₂I₃·HI)₂ + 3H₂O, formerly used as an iodine substitute. **c. valerianate**, a former remedy for whooping cough and hysterical vomiting.

caffeinism (kaf'ēn-izm, kaf'e-in-izm") a morbid condition resulting from ingestion of excessive amounts of caffeine. The manifestations include insomnia, restlessness, excitement, tachycardia, tremors, and diuresis.

Caffey's disease (kaf'tēz) [John Caffey, American pediatrician, 1895–1966] infantile cortical hyperostosis.

cage (kāj) a box or enclosure. **population c.**, an enclosure in which populations of *Drosophila* can be isolated through many generations. **thoracic c.**, the bony structure enclosing the thorax, consisting of the ribs, vertebral column, and sternum.

CaH₂O₂ calcium hydroxide.

Cain complex (cān) see under *complex*.

caino- see *ceno-*.

Cajal's cells, interstitial nucleus, stain (ka-halz') [Santiago Ramón y Cajal, Spanish histologist, 1852–1934; co-winner, with Camillo Golgi, of the Nobel prize in medicine for 1906] see under *cell*, see *nucleus interstitialis*, under *nucleus*, and see *Table of Stains*.

cajuputol (kaj'e-pu-tol) eucalyptol.

Cal. large calorie.

cal. small calorie.

calage (kah-lahzh') [Fr.] propping with pillows to immobilize the viscera and thus relieve seasickness.

calamine (kal'ah-min) [USP] a mild astringent and protectant, consisting of zinc oxide with a small proportion of ferric oxide, and occurring as a fine, pink powder; applied topically in the treatment of skin diseases.

calamus (kal'ah-mus) [L.] 1. a reedlike structure. 2. the plant *Acorus calamus* L. (Araceae), and its aromatic rhizome; it is used as a flavoring agent and insect repellent, and was formerly used as a carminative and vermifuge. **c. scriptorius**, the lowest portion of the floor of the fourth ventricle, shaped like a pen and situated between the restiform bodies.

calcaneal (kal-ka'ne-al) pertaining to the calcaneus.

calcanean (kal-ka'ne-an) calcaneal.

calcaneitis (kal-ka'ne-i'tis) inflammation of the calcaneus.

calcaneoapophysitis (kal-ka'ne-o-ah-pof'ē-z'i'tis) an affection of the posterior part of the calcaneus marked by pain at the point of insertion of the Achilles tendon, with swelling of the soft parts.

calcaneoastragaloid (kal-ka'ne-o-ah-strag'ah-loid) pertaining to the calcaneus and astragalus.

calcaneocavus (kal-ka'ne-o-ka'vus) clubfoot in which talipes calcaneus is combined with talipes cavus.

calcaneocuboid (kal-ka-'ne-o-ku/'boid) pertaining to the calcaneus and cuboid bone.

calcaneodynia (kal-ka-'ne-o-din/'e-ah) pain in the heel, or calcaneus.

calcaneofibular (kal-ka-'ne-o-fib/'u-lar) pertaining to the calcaneus and the fibula.

calcaneonavicular (kal-ka-'ne-o-nah-vik/'u-lar) pertaining to the calcaneus and navicular bone.

calcaneopltar (kal-ka-'ne-o-plan/'tar) pertaining to the calcaneus and the sole of the foot.

calcaneoscaphoid (kal-ka-'ne-o-ska/'foid) calcaneonavicular.

calcaneotibial (kal-ka-'ne-o-tib/'e-al) pertaining to the calcaneus and the tibia.

calcaneovalgocavus (kal-ka-'ne-o-val/'go-ka/'vus) clubfoot in which talipes calcaneus, talipes valgus, and talipes cavus are combined.

calcaneum (kal-ka-'ne-um), pl. *calca'nea* [L.] calcaneus.

calcaneus (kal-ka-'ne-us), pl. *calca'nei* [L.] 1. [NA] the irregular quadrangular bone at the back of the tarsus; called also *calcaneal bone*, *calcaneum*, *heel bone*, *os calcis*, and *os tarsi fibulare*. 2. *talipes calcaneus*.

calcanodinia (kal/'kah-no-din/'e-ah) calcaneodynia.

calcar (kal/'kar) [L. "spur"] a spur, or a structure resembling a spur. **c. a'vis** [NA], the lower of two medial elevations in the posterior horn of the lateral cerebral ventricle, produced by the lateral extension of the calcarine sulcus. **c. femora'le**, the plate of strong tissue which strengthens the neck of the femur. **c. pe'dis**, the heel.

calcareia (kal-ka-'re-ah) [L.] calcium oxide or hydroxide. **c. chlora'ta**, chlorinated lime, a disinfectant and bleaching agent. **c. hy'drica**, a solution of calcium hydroxide; liquor calcis, or lime water. **c. phosphor'ica**, precipitated calcium phosphate. **c. us'ta**, quicklime or caustic lime; calcium oxide or unslaked lime.

calcareous (kal-ka-'re-us) [L. *calcaris*] pertaining to or containing lime or calcium; chalky.

calcarine (kal/'kar-in) [L. *calcarinus* spur-shaped] 1. spur-shaped. 2. pertaining to the calcar.

calcarioria (kal-ka-'re-u-'re-ah) [L. *calcaris* containing lime + Gr. *ouron* urine + *-ia*] the presence of lime salts in the urine.

calcaroid (kal/'kar-oid) resembling calcium; a term given to certain deposits in cerebral tissue which resemble calcification but do not give a specific reaction for calcium.

calcemia (kal-se'me-ah) [calcium + Gr. *haima* blood + *-ia*] hypercalcemia.

calcibilia (kal/'si-bil/'e-ah) the presence of calcium in the bile.

calcic (kal/'sik) of or pertaining to lime or to calcium.

calcicosis (kal/'si-ko-'sil/'i-ko/'sis) a variety of pneumococcosis due to the inhalation of mineral dust containing silica and lime.

calcicosis (kal/'si-ko/'sis) [L. *calx* lime] a morbid condition of the lung resulting from the inhalation of marble dust.

calcidol (kal/'si-di/'ol) 25-hydroxycholecalciferol.

calcifames (kal-sif/'ah-mēz) calcium hunger; see under *hunger*.

calcifiediol (kal-sif-'ē-di/'ōl) 25-hydroxycholecalciferol.

calciferol (kal-sif-'er-ol) 1. see *vitamin D*, under *vitamin*. 2. ergocalciferol.

calcific (kal-sif/'ik) forming lime.

calcification (kal/'si-fi-ka'shun) [calcium + L. *facere* to make] the process by which organic tissue becomes hardened by a deposit of calcium salts within its substance. **dystrophic c.**, the deposition of calcium in abnormal tissue, such as scar tissue or atherosclerotic plaques, but without abnormalities of blood calcium. **metastatic c.**, the deposition of calcium in tissues as a result of abnormalities in calcium and phosphate levels in the blood and tissue fluids. **Mönckeberg's c.**, see under *arteriosclerosis*.

calcigerous (kal-sij/'er-us) [calcium + L. *gerere* to bear] producing or carrying calcium salts.

Calcimar (kal/'si-mar) trademark for a preparation of salmon calcitonin, available for clinical use.

calcimeter (kal-sim/'ē-ter) [calcium + Gr. *metron* measure] an instrument for estimating the amount of calcium present, as in the blood.

calcination (kal/'si-na'shun) [L. *calcinare* to char] the process of reducing to a dry powder by heat.

calcine (kal/'sin) to reduce to a dry powder by heat.

calcinosia (kal/'si-no/'sis) a condition marked by the deposition of calcium salts in various tissues of the body; called also *exudative calcifying fasciitis* and *calcium gout*. **c. circumscrip'ta**, localized deposition of calcium in small nodules in subcutaneous tissues or muscle, usually in systemic scleroderma or dermatomyositis. **c. cu'tis**, a condition marked by deposits of calcium salts in the skin in the form of nodules or plaques. **c. interstitia'lis**, a disorder of calcium metabolism marked by abnormal deposits of calcium in the connective tissues. **c. intervertebra'lis**,

deposit of calcium in one or more intervertebral disks; called also *chondritis intervertebralis calcanea* and *Verse's disease*. **tumoral c.**, development of large periarticular masses about the shoulder, elbow, and hip, marked by symptoms such as sciatica due to pressure on adjacent nerves. It is of unknown etiology, with onset usually in the first or second decade of life. **c. univer'sa'lis**, widespread deposition of calcium salts in the dermis, panniculus, and muscles, in the form of nodules or plaques, most often in children, principally girls, with dermatomyositis.

calciokinesis (kal/'se-o-ki-ne/'sis) mobilization of calcium stored in the body.

calciokinetic (kal/'se-o-ki-net/'ik) pertaining to or causing calciokinesis.

calciorrhachia (kal/'se-o-ra'ke-ah) [calcium + Gr. *rhachis* spine + *-ia*] the presence of calcium in the spinal fluid.

calcitropism (kal/'se-ot/'ro-pizm) an exaggerated reaction of cells to the administration of calcium.

calcipectic (kal/'si-pek/'tik) pertaining to, characterized by, or causing calcipecty.

calcipenia (kal/'si-pe/'ne-ah) [calcium + Gr. *penia* poverty] deficiency of calcium.

calcipenic (kal/'si-pe/'nik) pertaining to or characterized by calcipenia.

calcipexic (kal/'si-pek/'sik) calcipectic.

calcipexis (kal/'si-pek/'sis) calcipecty.

calcipecty (kal/'si-pek/'se) [calcium + Gr. *pēxis* fixation] fixation of calcium in the tissues of the organism.

calciphilia (kal/'si-fil/'e-ah) [calcium + Gr. *philein* to love] a tendency to absorb lime salts from the blood and thus to become calcified.

calciphylactic (kal/'si-fi-lak/'tik) pertaining to or characterized by calciphylaxis.

calciphylaxis (kal/'si-fi-lak/'sis) the formation of calcified tissue in response to administration of a challenging agent subsequent to induction of a hypersensitive state. **systemic c.**, the generalized appearance of calcifications in internal organs or tissues, occurring in response to intravenous or intraperitoneal injection of the challenging agent. **topical s.**, the formation of a circumscribed area of calcification in response to subcutaneous injection of the challenging agent.

calciprivia (kal/'si-priv/'e-ah) [calcium + L. *privus* without + *-ia*] deprivation or loss of calcium.

calciprivic (kal/'si-priv/'ik) pertaining to or characterized by calciprivia.

calcipyelitis (kal/'si-pi-'ē-li/'tis) calculous pyelitis.

calcitonin (kal/'si-to/'nin) a polypeptide hormone elaborated by the parafollicular cells of the thyroid gland in response to hypercalcemia; it lowers plasma calcium and phosphate levels, inhibits bone resorption, and serves as an antagonist to parathyroid hormone. It is secreted in lower vertebrates by the ultimobranchial glands. It is used in the treatment of severe hypercalcemia and Paget's disease of bone. Called also *thyrocalcitonin*.

calcitriol (kal/'si-tri/'ol) 1,25-dihydroxycholecalciferol.

calcium (kal/'se-um), gen. *cal'cii* [L. *calx* lime] a silvery yellow metal, the basic element of lime. Symbol, Ca; atomic number, 20; atomic weight, 40.08. It is found in nearly all organized tissues, being the most abundant mineral in the body. In combination with phosphorus it forms calcium phosphate, the dense, hard material of the teeth and bones. It is an essential dietary element, a constant blood calcium level being essential for the maintenance of the normal heartbeat, and for the normal functioning of nerves and muscles. It also plays a role in multiple phases of blood coagulation (in which it is called *coagulation factor IV*) and in many enzymatic processes. **c. acetate**, a solvent, $\text{Ca}(\text{C}_2\text{H}_3\text{O}_2)_2$. **c. benzamidosalicylate**, benzoyl-pas calcium. **c. benzoate**, a compound, $\text{Ca}(\text{C}_6\text{H}_5\text{CO}_2)_2 + 3\text{H}_2\text{O}$, formerly used in nephritis. **c. bromide**, an odorless white deliquescent granular salt, CaBr_2 , formerly used as a sedative and anticonvulsant. **c. carbide**, grayish black lumps or crystals, CaC_2 , which yields acetylene on decomposition by water. **c. carbimide**, 1. c. cyanamide. 2. c. carbimide, citrated. **c. carbimide, citrated**, a mixture containing calcium cyanamide and citric acid; an antialcoholic. See also *c. cyanamide*. **c. carbonate**, a compound, CaCO_3 , occurring naturally in bones, shells, etc. It is used chiefly as an antacid in its native form, in a prepared form (see *prepared chalk*, under *chalk*), and in a precipitated form (see *c. carbonate, precipitated*). **c. carbonate, precipitated** [USP], an odorless, tasteless, fine white crystalline powder, CaCO_3 , used as an antacid; called also *precipitated chalk*. **c. caseinate**, a nutrient preparation of casein and calcium. **c. chloride** [USP], a salt, $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$, occurring as white, hard fragments or granules. It is used as a calcium replenisher, administered intravenously, and has been used as an acid-producing diuretic and urinary acidifier and to control bleeding in such conditions as purpura, intestinal bleeding, and small multiple hemorrhages. It is also a specific antidote for magnesium poisoning, administered intravenously. **c. creosotate**, a mixture of the calcium constituents of creosote, formerly used as a disinfectant and antiseptic. **c. cyanamide**, a compound, CaCN_2 , obtained by the in-

teraction of nitrogen and calcium carbide in an electric furnace, which inhibits one or more of the enzymes required for oxidation of acetaldehyde formed from alcohol; used as a fertilizer, defoliant, herbicide, pesticide, and anthelmintic for swine. Because the drinking of alcohol after inhalation or ingestion of calcium cyanamide produces very unpleasant symptoms (see *mal rouge*) it has been considered as a basis for treating alcoholism; a mixture of calcium cyanamide and citric acid (*citrated c. carbamide*) has been used for this purpose. Called also *c. carbimide* and, sometimes, *cyanamide*. **c. cyclamate**, cyclamate calcium. **c. disodium edathamil**, **c. disodium edetate**, edetate calcium disodium. **c. Disodium Versenate**, trademark for edetate calcium disodium. **c. EDTA**, edetate calcium disodium. **c. fluoride**, a compound, CaF_2 , occurring in the bones and teeth. **c. glubionate**, chemical name: (4-O- β -D-galactopyranosyl-D-glucuronato-O¹) (D-glucuronato-O¹) calcium monohydrate. A calcium replenisher, $\text{C}_{18}\text{H}_{32}\text{CaO}_{19}\text{H}_2\text{O}$, administered orally. **c. gluconate**, a calcium salt of gluconic acid, $\text{C}_{12}\text{H}_{22}\text{CaO}_{14}$, occurring as odorless, tasteless, white crystalline granules or powder. It is used as a calcium replenisher, administered intravenously or orally, and has been used to decrease capillary permeability in various conditions. It is an oral antidote for fluoride or oxalic acid poisoning. **c. glycerophosphate**, the calcium salt of glycerophosphoric acid, $\text{C}_3\text{H}_7\text{CaO}_5\text{P}$; it has been used as a calcium and phosphorus dietary supplement and as a pharmaceutical necessity. **c. hydroxide** [USP], a salt, $\text{Ca}(\text{OH})_2$, occurring as a white powder; used in solution as a topical astringent. **c. hypophosphite**, an odorless bitter compound, $\text{Ca}(\text{PH}_2\text{O})_2$, occurring in colorless, transparent, monoclinic prisms, as small lustrous scales, or as a white crystalline powder; formerly used in conditions of impaired nutrition or vigor. **c. iodate**, a compound, $\text{Ca}(\text{IO}_3)_2 + 6\text{H}_2\text{O}$, formerly used as an antiseptic. **c. iodide**, a hygroscopic compound, CaI_2 , formerly used as an expectorant. **c. iodobehenate**, a white or yellowish powder, $(\text{C}_{21}\text{H}_{41}\text{ICOO})_2\text{Ca}$, containing at least 23.5 per cent of iodine; formerly used as an antioitrogenic. **c. iodostearate**, a cream-colored odorless powder, $\text{C}_{36}\text{H}_{88}\text{CaIO}_4$, formerly used in the treatment of colloid goiter. **c. ipodate** [NF], chemical name: calcium 3-[(dimethylamino) methylene] amino]-2,4,6-triiodohydrocinamate. A white to off-white, odorless, fine crystalline powder, $\text{C}_{24}\text{H}_{24}\text{CaI}_6\text{N}_4\text{O}_4$, used as a diagnostic radiopaque medium in cholangiography and cholecystography. **c. lactate** [USP], chemical name: 2-hydroxypropanoic acid calcium salt. A calcium replenisher, $\text{C}_3\text{H}_7\text{O}_5\text{CaO}_6 \cdot x\text{H}_2\text{O}$, occurring as white granules or powder; administered orally in the treatment of calcium deficiency. **c. levulinate** [USP], chemical name: 4-oxo-pentanoic acid calcium salt. A calcium replenisher, $\text{C}_{10}\text{H}_{14}\text{CaO}_6 \cdot 2\text{H}_2\text{O}$, occurring as a white, crystalline or amorphous powder; administered parenterally in the treatment of calcium deficiency. **c. mandelate**, the calcium salt of mandelic acid, $\text{C}_{10}\text{H}_{14}\text{CaO}_6$, used orally as a urinary anti-infective. **c. oxalate**, a typical compound, CaC_2O_4 , occurring in the urine as crystals and in certain calculi. **c. oxide**, a corrosively alkaline and caustic earth, CaO , used for absorbing carbon dioxide from air, and industrially as a cheap alkali and as a base for mortar; called also *calcareous usta*, *calx*, *lime*, and *quicklime*. **c. pantothenate** [USP], chemical name: N-(2,4-dihydroxy-3,3-dimethyl-1-oxobutyl)- β -alanine calcium salt. The calcium salt of the dextrorotatory isomer of pantothenic acid, $\text{C}_{18}\text{H}_{32}\text{CaN}_2\text{O}_{10}$, the B-complex vitamin, occurring as a white powder; used, usually in combination with other B vitamins, as a nutritional supplement. See also *racemic c. pantothenate*. **c. pantothenate**, **racemic** [USP], a mixture of the calcium salts of the dextrorotatory and levorotatory isomers of pantothenic acid, with a physiological activity about half that of calcium pantothenate. **c. permanganate**, a crystalline salt, $\text{Ca}(\text{MnO}_4)_2 + 5\text{H}_2\text{O}$, formerly used as an antiseptic. **c. phenolsulfonate**, **c. sulfocarbolate**. **c. phosphate**, any of three salts containing calcium and the phosphate radical (PO_4); see *c. phosphate, dibasic, monobasic*, and *tribasic*. **c. phosphate, dibasic** [USP], an odorless, tasteless, white powder, $\text{CaHPO}_4 \cdot 2\text{H}_2\text{O}$, used as a calcium supplement and as a base in preparation of tablets; called also *dicalcium phosphate*. **c. phosphate, monobasic**, colorless shining scales or powder, $\text{CaH}_2(\text{PO}_4)_2$, used in fertilizers, baking powders, and wheat flours, and as a mineral supplement in foods and feeds. Called also *c. superphosphate*. **c. phosphate, tribasic** [NF], an odorless, tasteless, white powder, $\text{Ca}_3(\text{PO}_4)_2$, used as a calcium supplement; it is also used as an antacid and as a laxative. **c. polycarbophil**, a calcium salt of a loosely cross-linked, hydrophilic resin of the polycarboxylic type; a cathartic. **c. propionate**, the calcium salt of propionic acid, $\text{C}_6\text{H}_{10}\text{CaO}_4$, which has antifungal properties; used alone or in combination with sodium propionate or other agents as a preservative to inhibit mold production in bakery and milk products, other foods, tobacco, and pharmaceuticals and as a topical antifungal in the treatment of various mycoses. **radioactive c.**, radiocalcium. **c. stearate** [NF], chemical name: octadecanoic acid calcium salt. A compound of calcium with organic acids obtained from fats, $\text{C}_{38}\text{H}_{76}\text{CaO}_4$, occurring as a fine, white to yellow white, bulky powder; used as a tablet lubricant. **c. sulfate** [NF], an abundant natural product, CaO_4S , found in nature as anhydrite, and occurring in a hydrated form known as gypsum; when gypsum is calcined it forms *plaster of Paris*. Dried

calcium sulfate dihydrate is used as a tablet diluent. **c. sulfhydrate**, a preparation of sulfuretted calcium, once used as a depilatory. **c. sulfide**, a compound, CaS . **c. sulfite**, a compound, CaSO_3 , resulting from the extraction of sulfur dioxide, by calcium hydroxide, from air or flue gas. **c. sulfocarbolate**, a white crystalline substance, $\text{Ca}(\text{C}_6\text{H}_5\text{SO}_4)_2 + 6\text{H}_2\text{O}$, soluble in water. **c. superphosphate**, monobasic c. phosphate. **c. trisodium pentetate**, pentetate calcium trisodium.

calciumedetate sodium (kal'se-um-ed'ē-tāt) edetate calcium disodium.

calciuria (kal'sī-u're-ah) the presence of calcium in the urine.

calcoglobule (kal'ko-glob'ūl) one of the irregular shaped globules of calcium salts deposited in developing dentin and constituting the spherical type of calcification. See also *calcospherite*.

calcoglobulin (kal'ko-glob'u-lin) the form of globulin that occurs in calcifying tissue.

calcospherite (kal'ko-sfēr'it) one of the small globular bodies formed during the process of calcification, by chemical union between the calcium particles and the albuminous organic matter of the intercellular substance. These particles coalesce to form calcoglobulin.

calculary (kal'ku-la-re) pertaining to a calculus.

calculi (kal'ku-li) plural of *calculus*.

calculifragous (kal'ku-lif'rah-gus) [*claculus* + L. *frangere* to break] the crushing of a bladder stone; lithotriptic.

calculogenesis (kal'ku-lo-jen'ē-sis) the formation of calculi.

calculosis (kal'ku-lo'sis) lithiasis.

calculous (kal'ku-lus) pertaining to, of the nature of, or affected with calculus.

calculus (kal'ku-lus), pl. *cal'culi* [L. "pebble"] an abnormal concretion occurring within the animal body and usually composed of mineral salts. **alternating c.**, a urinary calculus made up of successive layers of different composition; called also *combination c.* **alvine c.**, a concretion in the intestine formed by hardening of portions of the fecal contents. **articular c.**, a deposit in a joint; it is usually composed of sodium urate, sometimes of calcium urate. Called also *joint c.*, *calculus concretion*, and *chalk stone*. **biliary calculi**, gallstones (cholelithiasis) composed almost entirely of the excessive blood pigment liberated by hemolysis, with calcium deposits in some. **bronchial c.**, lung c. **calcium oxalate c.**, a hard, rough calculus composed of calcium oxalate. **cardiac c.** (*obs.*), cardiolith. **cholesterol c.**, a calculus formed of cholesterol; called also *metabolic c.* and *metabolic stone*. **combination c.**, alternating c. **cystine c.**, a soft variety of urinary calculus composed of cystine. **decubitus c.**, a calculus formed in the urinary tract as a result of long immobilization. **dental c.**, calcium phosphate and carbonate, with organic matter, deposited upon the surfaces of the teeth; see *subgingival c.* and *supragingival c.* **encysted c.**, a urinary calculus enclosed in a sac developed from the wall of the bladder; called also *pocketed c.* **fibrin c.**, urinary calculi formed largely from fibrinogen in blood. **fusible c.**, a calculus formed of a mixture of calcium phosphate and triple phosphates which fuses to a black, enamel-like mass when tested under the blowpipe. **gastric c.**, gastrolith. **gonocystic c.**, calculus of a seminal vesicle. **hematogenic c.**, subgingival c. **hemic c.**, a calculus developed from a blood clot. **hemp seed c.**, a small, smooth, pale urinary calculus of calcium oxalate of the size and shape of a hemp seed. **hepatic c.**, a gallstone formed in the intrahepatic bile ducts. **indigo c.**, calculus formed by oxidation of the indican of the urine. **intestinal c.**, enterolith. **joint c.**, articular c. **lacrimal c.**, one in a lacrimal gland or duct; dacryolith. **lactical c.**, mammary c. **lung c.**, a concretion formed in the bronchi by accretion about an inorganic nucleus, or from calcified portions of lung tissue or adjacent lymph nodes; called also *lung stone* and *broncholith*. **mammary c.**, a concretion in one of the lactiferous ducts; called also *lactical c.* **matrix c.**, a yellowish white to light tan urinary calculus with the consistency of putty, containing calcium salts but composed chiefly of an organic matrix consisting of a mucoprotein and a sulfated mucopolysaccharide. **metabolic c.**, cholesterol c. **mulberry c.**, a hard, smooth urinary calculus of calcium oxalate, so called from its shape. **nasal c.**, rhinolith. **nephritic c.**, renal c. **ovarian c.** (*obs.*), an enlarged and calcified corpus luteum. **oxalate c.**, a hard urinary calculus of calcium oxalate. Some are covered with minute sharp spines that may abrade the renal pelvic epithelium; others are smooth (see *mulberry c.*). **pancreatic c.**, a concretion formed in the pancreatic duct from calcium carbonate with other salts and organic materials. **phosphate c.**, **phosphatic c.**, a renal calculus composed of calcium oxalate and ammonium urate; it may be hard, soft, or friable, and so large that it may fill the pelvis and calices. **pocketed c.**, encysted c. **preputial c.**, postolith. **prostatic c.**, a concretion formed in the prostate, chiefly of calcium carbonate and phosphate. **renal c.**, a calculus occurring in the kidney; called also *nephritic c.* **renal c.**, **primary**, one formed in an apparently healthy urinary tract, usually composed of oxalates or urates. **renal c.**, **secondary**, one associated with infection and obstruction, usually composed of ammonium magnesium phosphate. **salivary c.**, 1. a concretion occur-

ring in a salivary gland or duct; called also *salivary stone*. See *sialolithiasis*. 2. supragingival c. **serumal c.**, subgingival c., so called because it is supposed to result from exudation of serum. **shellac c.**, a gastrolith caused by drinking shellac varnish. **spermatic c.**, a concretion in a seminal vesicle. **staghorn c.**, a calculus of the renal pelvis usually extending into multiple calices. **stomachic c.**, a bezoar or other concretion in the stomach; a gastrolith. **struvite c.**, a urinary calculus composed of very pure ammoniomagnesium phosphate, forming the hard crystals known to mineralogists as struvite. **subgingival c.**, a calculus on the concealed surface of a tooth, that is, apical to the crest of the gingival margin; called also *hematogenic c.* and *serumal c.* **submorphous c.**, a calculus made up of molecules of a crystalline salt, together with molecules of the colloid matter in which the salt is contained. **supragingival c.**, a dental calculus on the exposed surface of a tooth, that is, coronal to the crest of the gingival margin; called also *salivary c.* **tonsillar c.**, a calcareous concretion in a tonsil. **urate c.**, a calculus composed of urates, usually smooth, round, and yellow-brown, occurring chiefly in newborn or young infants. **urethral c.**, calculus of the urethra with symptoms varying according to sex and the site of lodgment. **uric acid c.**, hard, yellow or reddish-yellow calculi formed from uric acid. **urinary c.**, a calculus in any part of the urinary tract; it is *vesical* when lodged in the bladder (stone, gravel), and *renal* when in the pelvis of the kidney. **urostealth c.**, a urinary calculus formed of fatty matter. **uterine c.**, an intrauterine concretion formed mainly by the calcification of a tumor; called also *womb stone*. **vesical c.**, a form found in the urinary bladder; called also *bladder stone* and *cystolith*. **vesicoprostatic c.**, a prostatic calculus extending into the bladder. **xanthic c.**, a urinary calculus composed mainly of xanthine.

Caldani's ligament (kal-dah'nēz) [Leopoldo Marcantonio *Caldani*, Italian anatomist, 1725–1813] see under *ligament*.

Caldwell-Luc operation (kald'wel-luk') [George W. *Caldwell*, American physician, 1834–1918; Henry *Luc*, French laryngologist, 1855–1925] see under *operation*.

Caldwell-Moloy classification [William Edgar *Caldwell*, American obstetrician, 1880–1943; Howard Carman *Moloy*, American obstetrician, 1903–1953] classification of female pelvis as gynecoid, android, anthropoid, and platypelloid; see under *classification*.

Calef. abbreviation for *L. calefactus*, warmed, or for *L. calefac*, make warm.

calefacient (kal'e-fa'shent) [*L. calidus* warm + *facere* to make] 1. warming; causing a sensation of warmth. 2. an agent that causes a sensation of warmth.

Calendula (kah-len'du-lah) [*L.*] a genus of composite-flowered plants. The dried florets of *C. officinalis*, pot marigold, are stimulant and resolvent, and were once used externally for inflammatory lesions of the skin and mucous membranes.

calentura (kal-en-too'rah) [Sp. "fever"] a name applied to various tropical fevers; sunstroke.

calenture (kal'en-tūr) [Sp. *calentura*] sunstroke, or thermic fever; the name is applied also to various tropical fevers.

calf (kaf) [*L. sura*] the fleshy mass formed chiefly by the gastrocnemius muscle at the back of the leg (below the knee). Called also *sura* [NA].

caliber (kal'i-ber) [Fr. *calibre* the bore of a gun] the diameter of a canal or tube.

calibration (kal'i-bra'shun) determination of the accuracy of an instrument, usually by measurement of its variation from a standard, to ascertain necessary correction factors.

calibrator (kal'i-bra-tor) an instrument for dilating a tubular structure, such as the urethra, or for determining the inner or outer diameter of such a passage.

caliceal (kal'i-se'al) pertaining to or affecting a calix.

calicectasis (kal'i-sek'tah-sis) dilatation of a calix of a kidney.

calicectomy (kal'i-sek'to-me) excision of a calix of a kidney.

calices (kal'i-sēz) plural of *calix*.

calicine (kal'i-sēn) related to or resembling a calix.

calicivirus (kal'i-sī-vi'rus) a subgroup of picornaviruses, including the virus of vesicular exanthem.

caliculi (kah-lik'u-li) plural of *caliculus*.

caliculus (kah-lik'u-lus), pl. *caliculi* [*L.*, dim. of *calix*] a small cup or cup-shaped structure. **c. gustato'rius** [NA], one of the minute, barrel-shaped terminal organs of the gustatory nerve, situated around the bases of the circumvallate papillae of the tongue, each consisting of a group of spindle-shaped cells made up of outer supporting cells and inner sense cells. Called also *taste bud* or *bulb*, *gustatory bud* or *bulb*, and *Schwalbe's corpuscle*. **c. ophthalmicus** [NA], an indentation of the distal wall of the optic vesicle, brought about by rapid marginal growth and producing a double-layered cup, attached to the diencephalon by a tubular stalk. Called also *ocular cup*, *ophthalmic cup*, and *optic cup*.

calicectasis (kal'i-ek'tah-sis) [*calix* + Gr. *ektasis* dilatation] calicectasis.

calicectomy (ka'li-ek'to-me) [*calix* + Gr. *ektomē* excision] calicectomy.

californium (kal'i-for'ne-um) [named from *California* (University and state), where it was first produced] chemical element of atomic number 98, atomic weight 249, symbol Cf, produced by irradiation of the isotope of curium of atomic weight 242 with helium ions; half-life 45 minutes.

caligation (kal'i-ga'shun) caligo.

caligo (kah-li'go) [*L.* "fog"] dimness of vision. **c. cor'neae**, obscurity of vision due to an opacity of the cornea. **c. len'tis**, obscurity of vision due to cataract. **c. pupil'lae**, dimness of vision due to contraction of the pupil.

calipers (kal'i-perz) [from *caliber*] compasses with bent or curved legs used for measuring the thickness or diameter of a solid. **skinfold c.**, an instrument designed for measuring the thickness of folds of skin gathered at various areas of the body; used in studies of nutritional status and of physical constitution.

calisthenics (kal'is-then'iks) [Gr. *kalos* beautiful + *sthenos* strength] a system of light gymnastics for promoting strength and grace of carriage.

calix (ka'liks), pl. *calices* [*L.*] a cup-shaped organ or cavity.

renal calices, calices renales. **renal calices**, greater, calices renales majores. **renal calices**, major, calices renales majores. **renal calices**, minor, calices renales minores.

cal'ices rena'les [NA], renal calices: any one of the recesses of the pelvis of the kidney which enclose the pyramids; called also *calyces renales* and *infundibula of kidney*.

cal'ices rena'les majo'res [NA], major renal calices: the two or more larger subdivisions of the renal pelvis, into which the minor calices open; called also *calyces renales majores* and *greater renal calices*.

cal'ices rena'les mino'res [NA], minor renal calices: a varying number of smaller subdivisions of the renal pelvis which enclose the pyramids, and open into the major calices; called also *calyces renales minores*.

Callander's amputation (kal'an-derz) [C. Latimer *Callander*, San Francisco surgeon, 1892–1947] see under *amputation*.

Callaway's test (kal'ah-wāz) [Thomas *Callaway*, English physician, 1791–1848] see under *tests*.

Calleja's islets (islands) (kal-ya'hahz) [Camilo *Calleja y Sanchez*, Spanish anatomist, died 1913] see under *islet*.

callicrein (kal'ik-re'in) kallikrein.

Callimastix (kal'i-mas'tiks) a genus of parasitic protozoa (order Polymastigida, class Zoomastigophora), characterized by the presence of 12 to 15 anterior flagella. *C. cyclops* is found in the body cavity of species of *Cyclops*. *C. frontalis* in the rumen of the cow, sheep, and goat, and *C. equi* in the colon and cecum of the horse.

Calliphora (kah-lif'o-rah) [Gr. *kallos* beauty + *phoros* bearing] a genus of scavenger flies of the family Calliphoridae, the blow flies or bluebottle flies, which deposit their eggs in decaying matter, on wounds, or in the openings of the body. **C. vomit-**

Calliphora vomitoria.

to'ria, the common blow fly or bluebottle fly, whose larvae may invade the nasal fossae or produce intestinal myiasis. Other species are *C. azurea*, *C. erythrocephala*, and *C. lionensis*.

Calliphoridae (kal'i-for'i-de) a family of medium-sized to large flies of the order Diptera, including the genera *Auchmomyia*, *Calliphora* (type genus), *Cordylobia*, *Cochliomyia*, *Chrysomya*, *Lucilia*, *Phaenicia*, and *Phormia*; all species may serve as vectors of pathogens and may also produce myiasis in man.

Callison's fluid (kal'i-sunz) [James S. *Callison*, American physician, born 1873] see under *fluid*.

Callitroga (kal'i-tro'gah) *Cochliomyia*.

callomania (kal'o-ma'ne-ah) [Gr. *kallos* beauty + *mania* madness] a condition marked by delusions of personal beauty; cf. *narcissism*.

callosal (kah-lo'sal) pertaining to the corpus callosum.

callositas (kah-lo'si-tas) [*L.*] a callus.

callosity (kah-lo'si-te) [*L. callositas*, from *callus*] a callus.

callosomarginal (kah-lo'so-mar'ji-nal) pertaining to the callosal and marginal gyri.

callosum (kah-lo'sum) corpus callosum.

callous (kal'us) hard; like callus.

callus (kal'us) [*L.*] 1. localized hyperplasia of the horny layer of

the epidermis due to pressure or friction; called also *callosity*. 2. an unorganized meshwork of woven bone developed on the pattern of the original fibrin clot, which is formed following fracture of a bone and is normally ultimately replaced by hard adult bone; called also *bony c.* 3. a mass of plant tissue formed over a wound or at the base of a cutting. **bony c.**, see *callus* (def. 2). **central c.**, a provisional callus formed within the medullary cavity of a fractured bone; it arises from the cells covering the endosteal and trabecular surfaces near the fracture. Called also *inner c.*, *medullary c.*, and *myelogenous c.* **definitive c.**, the exudate formed between the fractured ends of the bone, which is permanent and becomes changed into true bone; called also *intermediate c.* and *permanent c.* **ensheathing c.**, provisional callus forming a sheath about the ends of the fragments of a fractured bone. **external c.**, the collar of callus formed by the periosteum in a long bone. **inner c.**, *central c.* **intermediate c.**, *definitive c.* **internal c.**, *medullary c.*, **myelogenous c.**, *central c.* **permanent c.**, *definitive c.* **provisional c.**, callus formed within the medullary cavity and about the ends of a broken bone, and which is absorbed as the repair is completed. **temporary c.**, *provisional c.*

calmative (kal'mah-tiv, kahm'ah-tiv) 1. sedative; allaying excitement. 2. an agent that allays excitement or has a sedative effect.

Calmette's reaction (ophthalmoreaction, test), serum, tuberculin, vaccine (kal-metz') [Albert Léon Charles Calmette, French bacteriologist, 1863-1933] see *ophthalmic reaction*, under *reaction*; *antivenomous serum*, under *serum*; and *BCG vaccine*, under *vaccine*; and see under *tuberculin*.

Calobata (kah-lo'bah-tah) a genus of South American flies whose larvae sometimes occur in the human intestine.

calomel (kal'o-mel) [L. *calomelas*; Gr. *kalos* fair + *melas* black] chemical name: mercurous chloride. A heavy, white, odorless, impalpable powder, HgCl, insoluble in water, alcohol, ether, and cold dilute acids; rarely used today as a cathartic. **vegetable c.**, *podophyllum*.

calor (ka'lor) [L.] heat; one of the cardinal signs of inflammation. **c. febris**, the heat of fever. **c. fer'vens**, an intense heat. **c. inna'tus**, the normal or natural heat of the body. **c. inter'nus**, the heat of the interior of the body. **c. mor'dax**, *c. mor'dicans*, 1. biting or stinging heat. 2. the hot, burning, reddish-colored skin occurring in scarlet fever.

caloradiance (kal'o-ra'de-ans) the radiation or rays which lie between 250 and 55,000 millimicrons, such as the rays from the sun, carbon arcs, incandescent rods and filaments, and hot black bodies.

calorescence (kal'o-res'ens) the conversion of nonluminous into luminous heat rays.

Calori's bursa (kah-lo'rēz) [Luigi Calori, Italian anatomist, 1807-1896] see under *bursa*.

caloric (kah-lo'rik) pertaining to heat or to calories.

caloricity (kal'o-ris'i-te) the power of the animal body of developing and maintaining heat.

calorie (kal'o-re) [Fr.; L. *calor* heat] a unit of heat. The term is commonly used alone to designate the *small calorie* (abbreviated cal.). The calorie used in the study of metabolism is the *large calorie*, or *kilocalorie* (abbreviated Cal.). **gram c.**, *small c.* **I.T. c.**, *International Table c.*, a unit of heat, equivalent to 4.1868 joules. **large c.**, the calorie used in metabolic studies, being the amount of heat required to raise the temperature of 1 kilogram of water 1 degree Celsius (centigrade), specifically from 14.5° to 15.5° C. at a pressure of 1 atmosphere; abbreviated kg.-cal. Called also *kilocalorie*. Also used to express the fuel or energy value of food. **mean c.**, one one-hundredth of the amount of heat required to raise the temperature of 1 gram of water from 0 to 100° C. **small c.**, the amount of heat required to raise the temperature of 1 gram of water 1 degree Celsius (centigrade), specifically from 14.5° to 15.5° C. at a pressure of 1 atmosphere; abbreviated g.-cal. Called also *gram c.* and *standard c.* **standard c.**, *small c.* **thermochemical c.**, a unit of heat, equivalent to 4.184 joules.

calorifacient (kah-lor'i-fa'shent) [L. *calor* heat + *facere* to make] producing heat; said of certain foods.

calorific (kal'o-ri'fik) [L. *calor* heat + *facere* to make] producing heat.

calorigenic (kah-lor'i-jē-net'ik) calorigenic.

calorigenic (kah-lor'i-jen'ik) [L. *calor* heat + Gr. *gennan* to produce] producing heat or energy; increasing heat or energy production; increasing the consumption of oxygen.

calorimeter (kal'o-rim'ē-ter) [L. *calor* heat + Gr. *metron* measure] an instrument for measuring the amount of heat exchanged in any system. In physiology, an apparatus for measuring the amount of heat produced by an individual. **bomb c.**, an apparatus for measuring the potential energy of food, a weighed amount of the food being placed on a platinum dish inside a hollow steel container (bomb) filled with pure oxygen. The heat produced by its combustion is absorbed by a known quantity of water in which the container is immersed, permitting its measurement. **compensating c.**, an apparatus in which the object to be tested,

such as a developing chick in an egg, is placed at one junction of a thermocouple and an electrical resistance at the other. From the amount of current that must pass through the resistance to keep both junctions at the same temperature (as shown by lack of current in the thermocouple circuit), it is possible to calculate the amount of heat generated in the object being tested. **respiration c.**, an apparatus for the measurement of the gaseous exchange between a living organism and the atmosphere surrounding it and the simultaneous measurement of the amount of heat produced by that organism.

calorimetric (kah-lor'i-met'rik) pertaining to or performed by calorimetry.

calorimetry (kal'o-rim'ē-tre) [L. *calor* heat + Gr. *metron* measure] measurement of the amounts of heat absorbed or given out. **direct c.**, measurement of the amount of heat produced by a subject enclosed within a small chamber. **indirect c.**, measurement of the amount of heat produced by a subject by determination of the amount of oxygen consumed and the quantity of nitrogen and carbon dioxide eliminated.

caloripuncture (kal'o-ri-punk'tūr) [L. *calor* heat + *puncture*] puncture by the use of heat.

caloroscope (kah-lor'i-skōp) an instrument for showing the caloric values of mixtures for infant feedings.

caloritropic (kah-lor'i-trop'ik) [L. *calor* heat + Gr. *tropos* a turning] thermotropic.

calory (kal'o-re), pl. *calories*. Calorie.

Calot's operation, treatment, triangle (kal-ōz') [Jean-François Calot, French surgeon, 1861-1944] see under *operation*, *treatment*, and *triangle*.

calotte (kah-lot') [Fr. "cap"] a part shaped like a skull cap. In ophthalmology, a cap-shaped specimen removed from the eyeball for histopathologic examination.

calsequestrin (kal'sē-kwes'trin) [calcium + *sequester* + *-in* a chemical suffix] a calcium-binding protein rich in carboxylate side chains, occurring on the inner membrane surface of the sarcoplasmic reticulum; it serves to chelate and store calcium ions.

Calurin (kal'u-rin) trademark for a preparation of carbaspirin calcium.

calusterone (kal-u'ster-ōn) chemical name: (7β-17β)-17-hydroxy-7,17-dimethylandroster-4-en-3-one; an antineoplastic agent, C₂₁H₃₂O₂, used for palliation of inoperable or metastatic breast carcinoma in postmenopausal women.

calutron (kal'u-tron) an apparatus for separating the isotopes of uranium.

calvacin (kal'vah-sin) an antineoplastic substance derived from the fungus *Calvatia gigantea*.

calvaria (kal-va're-ah) [L.] [NA] the domelike superior portion of the cranium, composed of the superior portions of the frontal, parietal, and occipital bones; called also *calvarium*, *concha of cranium*, and *skullcap*.

calvarial (kal-va're-al) pertaining to the calvaria.

calvarium (kal-va're-um) the calvaria.

Calvatia (kal-va'she-ah) a genus of basidiomycetous fungi of the order Lycoperdales, series Gasteromycetes. **C. gigantea**, the giant puffball, the source of calvacin.

Calvé-Perthes disease (kal-va'per-tās) [Jacques Calvé, French orthopedist, 1875-1954; Georg Clemens Perthes, German surgeon, 1869-1927] osteochondrosis of the capitular epiphysis of the femur; see under *osteochondrosis*.

Calvert's test (kal'vertz) [E. G. B. Calvert, British physician] see under *tests*.

Calvin cycle (kal'vin) [Melvin Calvin, American chemist, born 1911; winner of the Nobel prize in chemistry for 1961 for development of techniques to determine the chemical reactions of plant carbon dioxide assimilation] see under *cycle*.

calvities (kal-vish'e-ēz) [L.] baldness; see *alopecia*.

calx (kalks) [L.] 1. lime or chalk. 2. [NA] the hindmost part of the foot; the heel. 3. any residue obtained by calcination. 4. lime or calcium oxide, CaO; quicklime: alkaline, caustic, and escharotic. **c. chlora'ta**, **c. chlorina'ta**, chlorinated lime. **c. sulfura'ta**, a mixture of at least 60 per cent of calcium sulfide with a variable proportion of calcium sulfate and carbon. It is used in skin and pustular diseases, and as a depilatory. Called also *sulfurated lime*.

calyceal (kal'i-se'al) caliceal.

calycectasis (kal'i-sek'tah-sis) calicectasis.

calycectomy (kal'i-sek'to-me) calicectomy.

calyces (kal'i-sēz) plural of *calyx*.

calycine (kal'i-sin) calicine.

calycle (kal'i-kl) a caliculus.

calyculi (kah-lik'u-li) [L.] caliculi.

calyculus (kah-lik'u-lus), pl. *calyc'uli* [L. "a little cup," from Gr. *kalyx* cup of a flower] caliculus. **c. gustato'rius**, caliculus gustatorius. **c. ophthal'micus**, caliculus ophthalmicus.

Calymmatobacterium (kah-lim'mah-to-bak-te're-um) [Gr. *kalymma* a hood or veil + *baktērion* a little staff] a genus of

microorganisms of the family Brucellaceae, order Eubacteriales, made up of pleomorphic nonmotile, gram-negative rods, which may or may not be encapsulated. **C. granulomatis**, a gram-negative, pleomorphic, rod-shaped microorganism that is not cultivable on non-viable media but grows in the yolk, yolk sac, and amniotic fluid of the chick embryo. It is serologically related to *Klebsiella pneumoniae* and coliform bacilli, and is grouped with *Pasteurella*, *Malleomyces*, and *Actinobacillus* by some workers. It is the causative agent of granuloma inguinale in man. Called also *Donovania granulomatis* and *Donovan body*.

calyx (ka'lyks), pl. *cal'yces* [Gr. *kalyx* cup of a flower] *calix*. **cal'yces rena'les**, calices renales; see under *calix*. **cal'yces rena'les majo'res**, calices renales majores; see under *calix*. **cal'yces rena'les mino'res**, calices renales minores; see under *calix*.

Camallanus (kam'ah-la'nus) a genus of nematodes of the order Spiraroidae, species of which are parasites in the intestines of fishes, reptiles, and amphibians.

Cambaroides (kam'bah-roi'dēz) a genus of crayfish which harbor the metacercariae of *Paragonimus*.

cambendazole (kam-ben'dah-zōl) chemical name: [2-(4-thiazolyl)-1*H*-benzimidazol-5-yl]cambaric acid; an antihelmintic, C₁₄H₁₄N₄O₂S.

cambium (kam'be-um) [L. "exchange"] 1. the loose cellular inner layer of the periosteal tissue in the intramembranous ossification of bone. 2. a layer of cells beneath the bark of woody plants.

cambogia (kam-bo'je-ah) [L.] gamboge.

cameloid (kam'ē-loid) possessing characteristics similar to those observed in a camel.

camelpox (kam'el-poks) an eruptive disease of camels due to a poxvirus.

camera (kam'er-ah), pl. *cameras* or *cam'erae* [L. "chamber"] 1. a box, chamber, or compartment. 2. any enclosed space or ventricle. **c. ante'rior bul'bi** [NA], anterior chamber of eye: that portion of the aqueous-containing space between the cornea and the lens which is bounded in front by the cornea and part of the sclera, and behind by the iris, part of the ciliary body, and that part of the lens which presents through the pupil. Called also *c. oculi anterior*. **c. lu'cida**, an optical device utilizing a prism or mirrors so arranged as to throw the reflected image of an object upon paper, thus permitting its outlines to be traced with a pencil. **c. obscu'ra**, a combined box, lens, and screen, used for viewing, tracing, or making photographs. **c. oc'uli**, either one of the chambers of the eye. **c. oc'uli ante'rior**, *c. anterior bulbi*. **c. oc'uli poste'rior**, *c. posterior bulbi*. **c. poste'rior bul'bi** [NA], posterior chamber of the eye: that portion of the aqueous-containing space between the cornea and the lens which is bounded in front by the iris, and behind by the lens and suspensory ligament; called also *c. oculi posterior*. **c. pul'pi**, the pulp cavity of a tooth. **recording c.**, photokymograph. **scintillation c.**, an electronic instrument that produces photographs or cathode-ray tube images of the gamma ray or positron emissions from organs containing tracer compounds. **c. sep'ti pel'lu'cidi** (obs.), *cavum septi pellucidi*. **c. vi'trea bul'bi** [NA], vitreous chamber.

camerae (kam'er-e) [L.] plural of *camera*.

Camerer's law (kam'er-erz) [Johann Friedrich Wilhelm Camerer, German pediatrician, 1842-1910] see under *law*.

camisole (kam'i-sōl) [Fr.] straitjacket.

Cammann's stethoscope (kam'an-z) [George Philip Cammann, American physician, 1804-1863] a binatural stethoscope.

Cambridge reaction (test) (kam'ij) [Percy John Cambridge, English physician born 1872] see *pancreatic reaction*, under *reaction*.

Camoquin (kam'o-kwin) trademark for a preparation of amodiaquine hydrochloride.

campanula (kam-pan'u-lah) [L. *campana* a bell] a bell-shaped organ or part. **c. hal'leri**, the swollen end of the falciform process in the eye of fish.

Campbell's ligament (kam'belz) [William Francis Campbell, American surgeon, 1867-1926] the suspensory ligament of the axilla.

campeachy, campechy (kam-pe'che) *Haematoxylon*.

Camper's angle, fascia, ligament, line (kam'perz) [Pieter Camper, Dutch physician, 1722-1789] see *facial angle* and *maxillary angle*, under *angle*; see *diaphragma urogenitale*; and see under *fascia* and *line*.

campesterol (kam-pes'ter-ol) a sterol, C₂₈H₄₈O, from rape seed oil, soy bean oil, and wheat germ oil; it is isomeric with ergosterol.

camphene (kam-fēn') chemical name: 2,2-dimethyl-3-methylenebicyclo[2.2.1]heptane. A terpene, C₁₀H₁₆, found in many essential oils or prepared synthetically from pinene in the process of producing synthetic camphor.

camphol (kam'fol) Borneo camphor.

camphor (kam'for, kam'fer) [L. *camphora*; Gr. *kamphora*] 1. [USP] chemical name: 1,7,7-trimethylbicyclo[2.2.1]heptane-2-one. A ketone, C₁₀H₁₆O, obtained from the wood of *Cinnamomum*

camphora, an evergreen tree native to eastern Asia, or produced synthetically (see *synthetic c.*), and occurring as colorless or white crystals, granules, or crystalline masses or as colorless to white, translucent, tough masses, with a penetrating characteristic odor and a pungent, aromatic taste. It is applied topically to the skin as an antipruritic and anti-infective and is used as a pharmaceutical necessity in certain pharmaceutical preparations. Called also *gum c.* 2. any compound having characteristics similar to those of camphor. **anise c.**, anethole. **artificial c.**, bornyl chloride. **Borneo c.**, 1. the dextrorotatory form of borneol. 2. borneol. **monobromated c.**, that in which one hydrogen atom has been replaced by one bromine atom; formerly used as a sedative. **peppermint c.**, natural menthol. **synthetic c.**, a camphor produced from pinene, the principal constituent of turpentine. **thyme c.**, thymol. **turpentine c.**, bornyl chloride.

camphora (kam-fo'rah) [L.] camphor.

camphoraceous (kam'fo-ra'shus) having characteristics resembling those of camphor.

camphorated (kam'fo-rāt'ed) [L. *camphoratus*] containing or tintured with camphor.

camphorism (kam'for-izm) poisoning by camphor; the condition is marked by convulsions, coma, and gastritis.

campimeter (kam-pim'ē-ter) [L. *campus* field + *metrum* measure] an apparatus for mapping the central portion of the visual field on a flat surface.

campimetry (kam-pim'ē-tre) the determination of the presence of defects in the central portion of the visual field by use of the campimeter.

campospasm (kam'po-spazm) [Gr. *kampē* a bending + *spasm*] camptocormia.

campotomy (kam-pot'o-mē) [L. *campi* fields (of Forel) + Gr. *tomē* a cutting] the stereotaxic surgical technique of producing a lesion in Forel's fields, beneath the thalamus, for correction of tremor in Parkinson's disease.

camptocormia (kam'p'to-kor'me-ah) [Gr. *kamptos* bent + *kormos* trunk + *-ia*] a static deformity consisting of forward flexion of the trunk; called also *camptospasm*.

camptocormy (kam'p'to-kor'mē) camptocormia.

camptodactylia (kam'p'to-dak'til'ē-ah) camptodactyly.

camptodactylism (kam'p'to-dak'til-izm) camptodactyly.

camptodactyly (kam'p'to-dak'ti-le) [Gr. *kamptos* bent + *daktylos* finger] permanent and irreducible flexion of one or more fingers (Landouzy).

camptomelia (kam'p'to-me'le-ah) [Gr. *kamptos* bent + *melos* limb + *-ia*] bending of the limbs, producing permanent bowing or curving of the affected part; see also *camptomelic syndrome*, under *syndrome*.

camptomelic (kam'p'to-me'lik) pertaining to camptomelia; see also under *syndrome*.

camptospasm (kam'p'to-spazm) camptocormia.

Campylobacter (kam'pi-lo-bak'ter) [Gr. *kampylos* curved + *bakterion* little rod] a genus of bacteria, family Spirillaceae, made up of gram-negative, non-spore-forming, motile, spirally curved rods, which are microaerophilic to anaerobic. The type species is *C. fetus*. **c. fe'tus**, the microaerophilic type species, occurring as three subspecies: *C. fetus* subspecies *fe'tus* causes abortion and infertility in cattle; *C. fetus* subspecies *intestinalis* causes abortion in sheep and sporadic abortion in cattle, as well as human infection; *C. fetus* subspecies *jeju'ni* causes an acute gastroenteritis of man. Called also *Vibrio fetus*.

campylognathia (kam'pi-lo-na'the-ah) [Gr. *kampylos* curved + *gnathos* jaw + *-ia*] harelip.

camsylate (kam'si-lāt). USAN contraction for camphorsulfonate.

Canada-Cronkhite syndrome (kan'ah-dah-krong'kit) [Wilma Jeanne Canada, American radiologist; Leonard W. Cronkhite, Jr., American internist, born 1919] see under *syndrome*.

canal (kah-nal') a relatively narrow tubular passage or channel; see also *canalis*. **abdominal c.**, *canalis inguinalis*. **accessory palatine c's**, *canales palatini minores*. **adductor c.**, *canalis adductorius*. **Alcock's c.**, *canalis pudendalis*. **alimentary c.**, that part of the digestive tract formed by the esophagus, stomach, and small and large intestines (*canalis alimentarius* [NA]). **alisphenoid c.**, a canal in the alisphenoid bone which in many animals transmits the internal carotid artery. **alveolar c's**, see *canalis mandibulae* and *canales alveolares maxillae*. **alveolar c., anterior**; **alveolar c. of maxilla**; **alveolar c., posterior**, see *canales alveolares maxillae*. **anal c.**, the terminal portion of the alimentary canal, extending from the rectum to its distal opening; called also *canalis analis* [NA]. **arachnoid c.** (obs.), *cisterna venae magnae cerebri*. **c. of Arantius**, *ductus venosus*. **archenteric c.**, *neurenteric c.* **archinephric c.**, *pronephric duct*. **Arnold's c.**, a channel in the petrous portion of the temporal bone for passage of the auricular branch of the vagus nerve. **arterial c.**, *ductus arteriosus*. **atrioventricular c.**, the common canal connecting the primitive atrium and ventricle. It sometimes persists as a congenital anomaly, as a result of failure of closure of the gap

between the interatrial and interventricular septa due to arrest in development of the endocardial cushions. **auditory c.**, external, meatus acusticus externus. **auditory c.**, internal, meatus acusticus internus. **basipharyngeal c.**, canalis vomerovaginalis. **Bichat's c.**, cisterna venae magnae cerebri. **biliary c's**, interlobular, ductuli interlobulares. **biliary c's**, intralobular, small passages for conducting the bile within the substance of the lobules of the liver (ductuli biliferi [NA]). **birth c.**, the canal through which the fetus passes in birth, comprising the cervix uteri, vagina, and vulva; called also **obstetric c.** and **parturient c.** **blastoporic c.**, neurenteric c. **blunderbuss c.**, a descriptive term used to denote an incompletely formed tooth root in which the apical third of the root canal possesses a wider diameter than the coronal two thirds. **bony c's of ear**, see entries beginning **canalis semicircularis**. **branching c.**, collateral pulp c. **Braun's c.**, neurenteric c. **Braune's c.** (obs.), the uterine cavity and vagina, after complete dilation of the os of the cervix in labor. **Breschet's c's**, canales diploici. **bullular c's**, spatia zonularia. **calciferous c's**, canals containing lime salts in cartilage that is undergoing calcification. **caroticotympanic c's**, canaliculi caroticotympanici. **carotid c.**, canalis caroticus. **carpal c.**, canalis carpi. **c's of cartilage**, canals in an ossifying cartilage during its stage of vascularization. **central c. of modiolus**, see **canales longitudinales modioli**. **central c. of spinal cord**, canalis centralis medullae spinalis. **central c. of Stilling**, **central c. of vitreous**, canalis hyaloideus. **cerebrospinal c.**, the primitive cavity of the brain and spinal cord. **cervical c. of uterus**, canalis cervicis uteri. **chordal c.**, notochordal c. **c. of chorda tympani**, canaliculus chordae tympani. **ciliary c's**, spatia anguli iridocornealis. **Civinini's c.**, canaliculus chordae tympani. **Cloquet's c.**, canalis hyaloideus. **cochlear c.**, ductus cochlearis. **collateral pulp c.**, a branch of a dental pulp canal that emerges from the root at a place other than the apex; called also **branching c.** **condylar c.**, **condyloid c.**, canalis condylaris. **condyloid c.**, anterior, canalis hypoglossi. **connecting c.**, the arched or coiled part of a uriniferous tubule, joining it to a collecting tubule. — **c. of Corti**, inner tunnel. **c. of Cotunnus**, the aqueductus vestibuli and canaliculus cochleae considered as a continuous passage. **craniopharyngeal c.**, an occasional passage through the sphenoid bone, opening into the sella turcica. **crural c.**, canalis femoralis. **crural c. of Henle**, canalis adductorius. **c. of Cuvier**, ductus venosus. **dental c.**, inferior, canalis mandibulae. **dental c's**, posterior, 1. see **canales alveolares maxillae**. 2. foramina alveolaria maxillae. **dental c's**, canaliculi dentales. **digestive c.**, canalis alimentarius. **diploic c's**, canales diploici. **Dorello's c.**, an opening sometimes found in the temporal bone through which the abducens nerve and inferior petrosal sinus together enter the cavernous sinus. **entodermal c.**, the primitive gut or alimentary canal (canalis alimentarius [NA]). **c. of epididymis**, ductus epididymidis. **ethmoid c.**, anterior, a passage in the frontal and ethmoid bones for the nasal branch of the ophthalmic nerve and anterior ethmoid vessels. **ethmoid c.**, posterior, foramen ethmoidale posterius. **eustachian c.**, tuba auditiva. **eustachian c.**, osseous, canalis musculotubarius. **facial c.**, c. for facial nerve, canalis facialis. **fallopian c.**, canalis facialis. **femoral c.**, canalis femoralis. **Ferrein's c.**, a canal said to be formed by the edges of the closed eyelids, which conducts the tears during sleep to the puncta lacrimalia. **flexor c.**, canalis carpi. **ganglionic c.**, canalis spiralis modioli. **Gartner's c.**, ductus epoophori longitudinalis. **genital c.**, any canal for the passage of ova or for copulatory use; called also **genital duct**. **gubernacular c's**, four small openings in young crania, one behind each incisor tooth. **c. of Guidi**, canalis pterygoideus. **gynecophoral c.**, **gynecophorous c.**, the ventral slot in which the male schistosome carries the female. **hair c.**, an epidermal canal through which a hair grows in order to erupt. **Hannover's c.**, a potential space existing between the anterior and posterior portions of the suspensory ligament of the lens. **haversian c.**, one of the freely anastomosing channels of the haversian system in compact bone. Called also **canalis nutriticus ossis** [NA], **haversian space**, **nutrient c. of bone**, and **plasmatic c.** **hedral c.**, the space within the hedral arch. **Henle's c's**, Henle's loops. **Hensen's c.**, ductus reuniens. **c's of Hering**, openings through which the bile canaliculi communicate with the terminal branches of the bile duct system, the cholangioles; distinguished by their walls, which consist of parenchymal liver cells on one side and cells of the ductules (cholangioles) on the other. **hernial c.**, the passage which transmits a hernia. **Hirschfeld's c's**, interdental c's. **His's c.**, ductus thyroglossus. **Holmgren-Golgi c's**, minute canals in the cytoplasm of cells, particularly of nerve cells, forming a complex apparatus throughout the cytoplasm; called also **intracytoplasmic c's**. **c. of Hovius**, one of a series of connections between the venae vorticosae in certain mammals. **Huguier's c.**, iter chordae arterius. **Hunter's c.**, canalis adductorius. **Huschke's c.**, a passage formed by union of the tubercles of the tympanic ring (anulus tympanicus); it commonly disappears during the years of childhood. **hyaloid c.**, canalis hyaloideus. **hypoglossal c.**, canalis hypoglossi. **iliac c.**, lacuna muscu-

lorum. **incisive c.**, canalis incisivus. **infraorbital c.**, canalis infraorbitalis. **inguinal c.**, canalis inguinalis. **intercellular c's**, interfacial c's. **interdental c's**, channels in the alveolar process of the mandible, between the roots of the medial and lateral incisors, for the passage of anastomosing blood vessels between the sublingual and inferior dental arteries; called also **Hirschfeld's c's**. **interfacial c's.**, a labyrinthine system of expanded intercellular spaces between desmosomes; called also **intercellular c's**. **intersacral c's**, foramina intervertebralia ossis sacri. **intestinal c.**, the intestine; that part of the alimentary canal which lies between the pylorus and the anus. **intracytoplasmic c's**, Holmgren-Golgi c's. **Jacobson's c.**, c. for Jacobson's nerve, canaliculus tympani. **Kovalevsky's c.**, neurenteric c. **lacrimal c.**, 1. canalis nasolacrimalis. 2. any passage for transmission of the secretion of the lacrimal glands. **lateral c.**, a lateral extension of the major root canal. **Laurer's c.**, a passage in trematode worms extending from the ovarian duct to the dorsal surface of the body. **longitudinal c's of modiolus**, canales longitudinales modioli. **Löwenberg's c.**, the part of the ductus cochlearis above the membrane of Corti. **mandibular c.**, canalis mandibulae. **maxillary c.**, superior, foramen rotundum ossis sphenoidalis. **medullary c.**, 1. canalis vertebralis. 2. cavum medullare ossium. **c's of modiolus**, see **canalis spiralis modioli** and **canales longitudinales modioli**. **Müller's c.**, ductus paramesonephricus. **musculotubal c.**, canalis musculotubarius. **nasal c.**, canalis nasolacrimalis. **nasolacrimal c.**, canalis nasolacrimalis. **nasopalatine c.**, canalis incisivus. **neural c.**, canalis vertebralis. **neurenteric c. (of Kovalevsky)**, a passage, in the embryo, from the posterior part of the neural tube into the archenteron; called also **Braun's c.**, **archenteric c.**, and **blastoporic c.** **notochordal c.**, a tunnel extending from the primitive pit into the notochordal process of the embryo; called also **chordal c.** **c. of Nuck**, processus vaginalis peritonei. **nutrient c. of bone**, haversian c., or canalis nutriticus ossis. **obstetric c.**, birth c. **oburator c.**, canalis oburatorius. **oburator c. of pubic bone**, sulcus oburatorius ossis pubis. **c. of Oken**, ductus mesonephricus. **olfactory c.**, the nasal fossae at an early stage of their embryonic development. **omphalomesenteric c.**, yolk stalk. **optic c.**, canalis opticus. **orbital c's**, foramina ethmoidalia. **orbital c.**, anterior internal, foramen ethmoidale anterius. **orbital c.**, posterior internal, foramen ethmoidale posterius. **palatine c's**, accessory, canales palatini minores. **palatine c.**, anterior, 1. canalis incisivus. 2. foramen incisivum. **palatine c's**, lesser, **palatine c's**, posterior, canales palatini minores. **palatamaxillary c.**, 1. canalis palatinus major. 2. see **foramen palatinum majus**. **palatovaginal c.**, canalis palatovaginalis. **parturient c.**, birth c. **pelvic c.**, the passage from the superior to the inferior strait of the pelvis. **perivascular c.**, a lymph space about a blood vessel. **persistent common atrioventricular c.**, atrioventricularis communis. **Petit's c.**, see **spatia zonularia**. **pharyngeal c.**, canalis palatovaginalis. **plasmatic c.**, haversian c. **pleural c's**, a pair of passages in the embryo, connecting the primitive pericardial and peritoneal cavities. **portal c.**, a space within the capsule of Glisson and liver substance, containing branches of the portal vein, of the hepatic artery, and of the hepatic duct. **pterygoid c.**, canalis pterygoideus. **pterygopalatine c.**, 1. canalis palatinus major. 2. canalis palatovaginalis. **pubdental c.**, canalis pudendalis. **pulmoaortic c.**, ductus arteriosus. **pulp c.**, root c. **pyloric c.**, canalis pyloricus. **c's of Recklinghausen**, small lymph spaces in the connective tissue. **recurrent c.**, canalis pterygoideus. **Reichert's c.**, ductus reuniens. **c's of Rivinus**, ductus sublinguales minores. **root c. (of tooth)**, that portion of the pulp cavity in the root of a tooth extending from the pulp chamber to the apical foramen; more than one canal may be present in a root, two commonly being present in the mesial root of the mandibular first molar. Called also **canalis radialis dentis** [NA] and **pulp c.** **root c.**, accessory, a lateral branching of the main root canal, usually occurring in the apical third of the root. **Rosenthal's c.**, canalis spiralis modioli. **ruffed c.**, see **spatia zonularia**. **sacculo-cochlear c.**, a passage connecting the sacculus and the cochlea. **sacculotricular c.**, ductus utriculosaccularis. **sacral c.**, canalis sacralis. **Santorini's c.**, ductus pancreaticus accessorius. **Schlemm's c.**, a branching, circumferential vessel lying in the internal scleral sulcus, a major component of the drainage pathway for aqueous humor; called also **sinus venosus sclerae** [NA]. **scleral c.**, **scleroticocoroidal c.**, the channel in the choroid and sclera of the eye through which the optic nerve passes; see also **lamina cribrosa sclerae**. **semicircular c's**, three long canals of the bony labyrinth of the ear. See **canales semicircularis ossis** [NA]. **semicircular c.**, anterior, canalis semicircularis anterior. **semicircular c.**, horizontal, canalis semicircularis lateralis. **semicircular c.**, lateral, canalis semicircularis lateralis. **semicircular c's**, membranous, see **ductus semicircularis anterior**, **ductus semicircularis lateralis**, and **ductus semicircularis posterior**. **semicircular c.**, posterior, canalis semicircularis posterior. **seminal c.**, a passage for the transmission of semen, or of spermatozoa. **serous c.**, a minute lymph space. **sheathing c.**, the passage from the perito-

neal cavity to the tunica vaginalis testis. **Sondermann's c's**, conical extensions of the lumen of Schlemm's canal sometimes observed in the inner wall of the canal. **spermatic c.**, the canalis inguinalis in the male, providing for passage of the spermatic cord. **sphenopalatine c.**, 1. canalis palatovaginalis. 2. canalis palatinus major. **sphenopharyngeal c.**, canalis palatovaginalis. **spinal c.**, canalis vertebralis. **spinal medullary c.** (*obs.*), canalis centralis medullae spinalis. **spiral c. of cochlea**, canalis spiralis cochleae. **spiral c. of modiolus**, canalis spiralis modiolus. **spiroid c.**, canalis facialis. **c. of Steno, Stensen's c.**, parotid duct (ductus parotideus [NA]). **c. of Stilling**, canalis hyaloideus. **subartorial c.**, canalis adductorius. **Sucquet-Hoyer c.**, Sucquet-Hoyer anastomosis. **supraciliary c.**, a small opening sometimes present near the supraorbital notch, which transmits a nutrient artery and a branch of the supraorbital nerve to the frontal sinus. **supraoptic c.**, a minute canal which is the anterior continuation of the optic recess above the optic chiasma. **supraorbital c.**, incisura frontalis. **tarsal c.**, sinus tarsi. **c. for tensor tympani muscle**, semicanalis musculi tensoris tympani. **Theile's c.**, a space formed by reflection of the pericardium on the aorta and the pulmonary artery. **Tourtual's c.**, canalis palatinus major. **tubal c.**, semicanalis tubae auditivae. **tubotympanic c.**, the inner division of the first branchial cleft in the fetus, from which the auditory tube and middle ear cavity are derived. **tympanic c. of cochlea**, scala tympani. **umbilical c.**, anulus umbilicalis. **urogenital c's**, that portion of the urogenital sinus used jointly by the müllerian and mesonephric ducts. **uterine c.**, the cavity of the uterus. **utero-cervical c.**, canalis cervicis uteri. **utriculosaccular c.**, ductus utriculosaccularis. **vaginal c.**, the space within the vagina; called also *vulvouterine c.* **Van Hoorne's c.**, thoracic duct (ductus thoracicus [NA]). **vector c.** (*obs.*), a channel for the passage of ova; an oviduct, *def. 1.* **ventricular c.**, canalis ventriculi. **Verneuil's c's**, collateral vessels of a venous trunk. **vertebral c.**, canalis vertebralis. **vestibular c.**, scala vestibuli. **vidian c.**, canalis pterygoideus. **Volk-mann's c's**, passages other than haversian canals, for the passage of blood vessels through bone. **vomerine c.**, canalis vomerovaginalis. **vomerobasilar c.**, lateral inferior, canalis palatovaginalis. **vomerobasilar c.**, lateral superior, canalis vomerovaginalis. **vomerovaginal c.**, canalis vomerovaginalis. **vulvar c.**, vestibulum vaginae. **vulvouterine c.**, vaginal c. **c. of Wirsung**, ductus pancreaticus. **zygomatofacial c.**, foramen zygomatofaciale. **zygomatocotemporal c.**, foramen zygomatocotemporale.

canales (kah-na'lēz) [L.] plural of *canalis*.

canalicular (kan'ah-lik'u-lar) resembling or pertaining to a canaliculus.

canaliculi (kan'ah-lik'u-li) [L.] plural of *canaliculus*.

canaliculization (kan'ah-lik'u-li-za'shun) the development of canaliculi, as in bone.

canaliculodacryocystostomy (kan'ah-lik'u-lo-dak're-o-sis-to'sto-me) correction of a congenitally blocked tear duct by excision of the blocked portion and anastomosis of the patent portion to the lacrimal sac.

canaliculorhinostomy (kan'ah-lik'u-lo-ri-nos'to-me) dacryocystorhinostomy.

canaliculus (kan'ah-lik'u-lus), pl. *canaliculi* [L. dim. of *canalis*] [NA] an extremely narrow tubular passage or channel; used as a general term in anatomical nomenclature for various small channels. **apical c.**, any of the numerous tubular invaginations arising from the clefts between the microvilli of the proximal convoluted tubule of the kidney and extending downward into the apical cytoplasm. **bile canaliculi**, biliary canaliculi, fine tubular canals running between liver cells, throughout the parenchyma, usually occurring singly between each adjacent pair of cells, and forming a three-dimensional network of polyhedral meshes, with a single cell in each mesh. Called also *bile capillaries*. **bone canaliculi**, branching tubular passages radiating like wheel spokes from each bone lacuna to connect with the canaliculi of adjacent lacunae, and with the haversian canal. **carotico-tympanic canaliculi**, canaliculi caroticotympanici [NA], caroticotympanic canals: tiny passages in the temporal bone interconnecting the carotid canal and the tympanic cavity, and carrying communicating twigs between the internal carotid and tympanic plexuses; called also *caroticotympanic foramina*. **c. of chorda tympani**, **c. chor'dae tym'pani** [NA], a small canal that opens off the facial canal just before its termination, transmitting the chorda tympani nerve into the tympanic cavity; called also *canal of chorda tympani*, *canalis chordae tympani*, and *Civinini's canal*. **c. of cochlea**, **c. coch'leae** [NA], a small canal in the petrous part of the temporal bone that interconnects the scala tympani of the inner ear with the subarachnoid cavity; it lodges the perilymphatic duct and a small vein. Called also *aqueduct of cochlea* and *aqueduct of Cotunnus*. **dental canaliculi**, canaliculi dentales [NA], dentinal canals: minute channels in dentin, extending from the pulp cavity to the cementum and enamel. Called also *dental* or *dentinal tubules*. **haversian c.**, any one of a system of minute channels in compact bone connected with each haversian canal. **incisor c.**,

ductus incisivus. **innominate c.**, **c. innomina'tus**, sulcus nervi petrosi minoris. **intercellular c.**, one located between adjacent cells, such as one of the secretory capillaries, or canaliculi, of the gastric parietal cells. **intracellular canaliculi of parietal cells**, a system of canaliculi that seem to be intracellular, but are formed by deep invaginations of the surface of the gastric parietal cells rather than extending into the cytoplasm of the cell. **c. lacrima'lis** [NA], the short passage in an eyelid, beginning at the punctum, that leads from the lacrimal lake to the lacrimal sac; called also *lacrimal duct* and *ductus lacrimalis*. **c. laqueifor'mis**, Henle's loops. **mastoid c.**, **mastoid c. for Arnold's nerve**, **c. mastoideus**. **c. mastoi'deus** [NA], a minute passage beginning in the lateral wall of the jugular fossa of the temporal bone and passing into the temporal bone. The tympanic branch of the vagus nerve passes through it to exit via the tympanomastoid fissure. Called also *mastoid c. (for Arnold's nerve)*. **c. petro'sus**, **petrous c.**, sulcus nervi petrosi minoris. **pseudobile c.**, one of the dark-staining columns of cells from the bile ducts seen in the portal area of the liver in cirrhosis. **secretory c.**, see under *capillary*. **Thiersch's c.**, one of the small channels in newly formed repair tissue through which the nutritive fluids circulate. **tympanic c.**, **tympanic c. for Jacobson's nerve**, **c. tympanicus**. **c. tympani'cus** [NA], a small opening on the inferior surface of the petrous part of the temporal bone in the floor of the petrosal fossa; it transmits the tympanic branch of the glossopharyngeal nerve and a small artery. Called also *Jacobson's canal*, *canal for Jacobson's nerve*, and *tympanic canaliculus (for Jacobson's nerve)*.

canalis (kah-na'lis), pl. *cana'les* [L.] [NA] a general term for a relatively narrow tubular passage or channel; called also *canal*. **c. adducto'rius** [NA], adductor canal: an intramuscular interval on the medial aspect of the middle third of the thigh, which contains the femoral vessels and the saphenous nerve. The lateral wall is formed by the vastus medialis, the posterior wall by the adductor longus and adductor magnus, the roof by a layer of fascia, and it is covered by the sartorius. Called also *crural canal of Henle*, *Hunter's canal*, *subartorial canal*, and *canalis subsartorius*. **c. alimenta'rius** [NA], alimentary canal: that part of the digestive tract formed by the esophagus, stomach, and small and large intestines; called also *alimentary tract*, *digestive canal*, *tract*, or *tube*, and *tubus digestorius*. **cana'les alveola'res**, see *canales alveolares maxillares* and *c. mandibulae*. **cana'les alveola'res maxil'lae** [NA], alveolar canals of maxilla: several canals in the maxilla for the passage of the posterior superior alveolar vessels and nerves, each canal beginning on the infratemporal surface of the maxilla at an alveolar foramen; called also *posterior dental canals*. **c. ana'lis** [NA], anal canal: the terminal portion of the alimentary canal, extending from the rectum to the anus; called also *pars analis recti*. **c. basipharyn'geus**, canalis vomerovaginalis. **c. carot'icus** [NA], carotid canal: a passage in the petrous portion of the temporal bone, beginning on the inferior surface just anterior to the jugular foramen, and running anteromedially for about 2 cm.; it is seen interiorly in the floor of the middle cranial fossa, where it meets the carotid sulcus on the body of the sphenoid bone. It lodges the internal carotid artery. **c. car'pi** [NA], carpal canal: an osseofibrous tunnel for passage of the tendons of the flexor muscles of the hand and digits, formed by the flexor retinaculum as it roofs over the concavity of the carpus on the palmar surface; called also *carpal tunnel* and *flexor canal*. **c. centra'lis medul'lae spina'lis** [NA], central canal of spinal cord: a small canal extending throughout the length of the spinal cord, lined by ependymal cells. Above, it continues into the medulla oblongata, where it opens into the fourth ventricle. **c. cervic'is u'teri** [NA], cervical canal of uterus: the part of the uterine cavity that lies within the cervix. **c. chor'dae tym'pani**, canaliculus chordae tympani. **c. condyla'ris** [NA], condylar canal: an opening sometimes present in the floor of the condylar fossa for the transmission of a vein from the transverse sinus; called also *c. condyloideus*, *condyloid canal*, and *posterior condyloid foramen*. **c. condyloi'deus**, canalis condylaris. **cana'les diplo'ici** [NA], diploic canals: bony canals in the cranial bones, located in the spongy bone between the compact tables and providing for passage of the veins of the diploë; called also *canales diploici* [Brescheti] and *Breschet's canals*. **c. facia'lis** [NA], **c. fascia'lis** [Fallop'ii], facial canal: a canal in the temporal bone for the facial nerve, beginning in the internal acoustic meatus and passing anterolaterally dorsal to the vestibule of the inner ear for about 2 mm. Turning sharply backward at the genu of the facial canal, it runs along the medial wall of the tympanic cavity, then turns inferiorly and reaches the exterior of the petrous part of the bone at the stylomastoid foramen. Called also *canal for facial nerve*, *fallopian aqueduct* or *canal*, *aqueduct of Fallopius*, and *spiroid canal*. **c. femora'lis** [NA], femoral canal: the cone-shaped medial part of the femoral sheath lateral to the base of the lacunar ligament; called also *crural canal*. **c. hyalo'i'deus** [NA], hyaloid canal: a passage running from in front of the optic disk to the lens of the eye; in the fetus it transmits the hyaloid artery. Called also *central canal of Stilling*, *central canal of vitreous*, and *Cloquet's canal*. **c. hypoglos'si** [NA], hypoglossal canal: an opening in the lateral part of the occipital bone at the base of the condyle, which transmits the hypoglossal nerve and a branch of the posterior

meningeal artery; called also *anterior condyloid canal*, and *anterior condyloid foramen*. **c. incisi/vus** [NA], incisive canal: one of the small canals opening into the incisive fossa of the hard palate, and transmitting small vessels and nerves from the floor of the nose into the front part of the roof of the mouth; called also *anterior palatine canal*, or *groove*, *nasopalatine canal*, and *foramen of Stensen*. **c. infraorbitalis** [NA], infraorbital canal: a passage beneath the orbital surface of the maxilla, continuous posteriorly with the infraorbital sulcus, and opening anteriorly on the anterior surface of the body of the maxilla in the infraorbital foramen. It contains the infraorbital vessels and nerve. **c. inguinalis** [NA], inguinal canal: the passage superficial to the deep inguinal ring for transmission of the spermatic cord in the male and the round ligament in the female; called also *abdominal canal*. **canales longitudinales modiolii** [NA], longitudinal canals of modiolus: short tunnels in the modiolus that transmit blood vessels and nerves. **c. mandibulæ** [NA], mandibular canal: a canal that traverses the ramus and body of the mandible between the mandibular and mental foramina, transmitting the inferior alveolar vessels and nerve; called also *inferior dental canal*. **c. musculotubarius** [NA], musculotubal canal: the combined canals of the auditory tube and the tensor tympani muscle in the temporal bone; called also *osseous eustachian canal*. **c. nasolacrimalis** [NA], nasolacrimal canal: a canal formed by the lacrimal sulcus of the maxilla, lacrimal bone, and inferior nasal concha; it contains the nasolacrimal duct. Called also *lacrimal canal*, and *nasal canal*. **c. nutricius ossis** [NA], one of the freely anastomosing channels of the haversian system of compact bone, which contain blood vessels, lymph vessels, and nerves; called also *haversian canal* and *haversian space*. **c. obturatorius** [NA], obturator canal: an opening within the obturator membrane for the passage of the obturator vessels and nerve; its boundaries are the edge of the obturator membrane, together with the obturator groove of the pubic bone. **c. opticus** [NA], optic canal: one of the paired openings in the sphenoid bone where the small wings are attached to the body of the bone at the apex of the orbit; each canal transmits one of the optic nerves and the ophthalmic artery of that side. Called also *foramen opticum ossis sphenoidalis* and *optic foramen of sphenoid bone*. **canales palatini**, canales palatini minores. **c. palatinus major** [NA], great palatine canal: a passage in the sphenoid and palatine bones for the greater palatine vessels and nerve; called also *c. pterygopalatinus*, *palatomaxillary canal*, *pterygopalatine canal*, *sphenopalatine canal*, and *Tourtual's canal*. **canales palatini minores** [NA], lesser palatine canals: openings in the palatine bone that branch off the great palatine canal to carry the lesser and middle palatine nerves and vessels to the roof of the mouth. Called also *canales palatini*, and *accessory or posterior palatine canals*. **c. palatovaginalis** [NA], palatovaginal canal: a narrow canal located in the roof of the nasal cavity between the inferior surface of the body of the sphenoid bone and the sphenoidal process of the palatine bone; it opens posteriorly into the nasal cavity and anteriorly into the pterygopalatine fossa. Called also *c. pharyngeus*, *pharyngeal canal*, *pterygopalatine canal*, *sphenopalatine canal*, *sphenopharyngeal canal*, and *lateral inferior vomerobasilar canal*. **c. pharyngeus**, canalis palatovaginalis. **c. pterygoideus** [NA], pterygoid canal: a horizontally running canal that passes forward through the base of the medial pterygoid plate of the sphenoid bone to open into the posterior wall of the pterygopalatine fossa just medial and inferior to the foramen rotundum; it transmits the pterygoid vessels and nerves. Called also *c. pterygoideus* [Vidui], *canal of Guidi*, *recurrent canal*, and *vidian canal*. **c. pterygopalatinus**, *c. palatinus major*. **c. pudendalis** [NA], pudendal canal: the tunnel in the special fascial sheath through which the pudendal vessels and nerve pass; it is intimately related to the obturator fascia. Called also *Alcock's canal*. **c. pyloricus** [NA], pyloric canal: the short narrow part of the stomach extending from the gastroduodenal junction to the pyloric antrum. **c. radialis dentis** [NA], that portion of the pulp cavity in the root of a tooth, extending from the pulp chamber to the apical foramen; called also *root canal (of tooth)* and *pulp canal*. **c. reuniens**, ductus reuniens. **c. sacralis** [NA], sacral canal: the continuation of the vertebral canal through the sacrum. **c. semicircularis anterior** [NA], anterior semicircular canal: the anterior of the osseous semicircular canals, lodging the ductus semicircularis anterior. Called also *c. semicircularis superior*. See *canales semicirculares ossei*. **c. semicircularis lateralis** [NA], lateral semicircular canal: the lateral of the semicircular canals, lodging the ductus semicircularis lateralis; called also *horizontal semicircular canal*. See *canales semicirculares ossei*. **canales semicirculares ossei** [NA], three long canals of the bony labyrinth of the ear (lateral, anterior, and posterior), forming loops and opening into the vestibule by five openings. They lodge the semicircular ducts (ductus semicirculares [NA]) of the membranous labyrinth. Called also *semicircular canals*. **c. semicircularis posterior** [NA], posterior semicircular canal: the posterior of the semicircular canals, lodging the ductus semicircularis posterior; see *canales semicirculares ossei*. **c. semicircularis superior**, *c. semicircularis anterior*. **c. spinalis**, *c. vertebralis*. **c. spiralis**

cochleæ [NA], spiral canal of cochlea: a winding tube that makes two and one-half turns about the modiolus of the cochlea; it is divided into two compartments, scala tympani and scala vestibuli, by the lamina spiralis. Called also *cochlear duct*. **c. spiralis modiolii** [NA], spiral canal of modiolus: a canal following the course of the bony spiral lamina of the cochlea and containing the spiral ganglion of the cochlear division of the vestibulocochlear nerve. Called also *ganglionic canal* and *Rosenthal's canal*. **c. subsartorius**, *c. adductorius*. **c. ventriculi** [NA], ventricular canal: the longitudinal grooved channel formed by the more or less regular ridges along the lesser curvature of the stomach; called also *magenstrasse*. **c. vertebralis** [NA], vertebral canal: the canal formed by the foramina in the successive vertebrae, which encloses the spinal cord and meninges; called also *c. spinalis*, *medullary canal*, *neural canal*, and *spinal canal*. **c. vomerovaginalis** [NA], vomerovaginal canal: an inconstant opening formed by the articulating margins of the ala of the vomer and the body of the sphenoid bone; called also *c. basipharyngeus*, *basipharyngeal canal*, *lateral superior vomerobasilar canal*, and *vomerine canal*.

canalization (kan'al-i-za'shun) 1. the formation of canals, natural or morbid. 2. the surgical establishment of canals for drainage. 3. the formation of new canals or paths, especially blood vessels, through an obstruction, such as a clot. 4. in psychology, the formation in the central nervous system of new pathways by the repeated passage of nerve impulses.

canaloplasty (kah-nal'o-plas'te) plastic reconstruction of a passage, as of the external auditory meatus.

canarypox (kah-nā're-poks) an eruptive disease of canaries due to a poxvirus.

Canavalia (kan'ah-val'i-ah) a genus of leguminous plants, the Jack bean, native to the West Indies but widely cultivated as a source of food for humans and livestock. *C. ensiformis* D.C. and other species are the source of canavalin and concanavalin.

canavalin (kan'ah-val'in) an antibacterial substance isolated from the meal of the Jack bean (*Canavalia ensiformis* D.C., and other species of *Canavalia*).

canavanase (kan-av'ah-nās) an enzyme from human liver that catalyzes the hydrolysis of canavanine into caveline and urea.

canavanine (kan-av'i-nin) 2-amino-4-(guanidino-oxy)-butyric acid isolated from soy bean meal; it is $\text{NH}_2 \cdot \text{C}(\text{NH}) \cdot \text{NH} \cdot \text{O} \cdot \text{CH}_2 \cdot \text{CH}_2 \cdot \text{CH}(\text{NH}_2) \cdot \text{COOH}$.

cancellated (kan'sel-lāt-ed) having a lattice-like structure.

cancelli (kan-sel'i) [L.] plural of *cancellus*.

cancellous (kan'sē-lus) of a reticular, spongy, or lattice-like structure; said mainly of bony tissue.

cancellus (kan-sel'us), pl. *cancelli* [L. "a lattice"] [NA] any structure arranged like a lattice.

cancer (kan'ser) [L. "crab"] a cellular tumor the natural course of which is fatal. Cancer cells, unlike benign tumor cells, exhibit the properties of invasion and metastasis and are highly anaplastic. Cancers are divided into two broad categories of carcinoma and sarcoma. **acinar c.**, **acinous c.**, alveolar adenocarcinoma. **adenoid c.**, a malignant tumor made up of or containing cylindrical tubes lined with epithelium. **c. à deux** [Fr. "cancer in two"], cancer attacking simultaneously or consecutively two persons who live together. **alveolar c.**, see under *adenocarcinoma*. **aniline c.**, cancer due to aniline dyes, occurring among those who work in dye factories and dyeing establishments. **apinoid c.**, scirrhus c. **c. aquaticus** (obs.), gangrenous stomatitis. **areolar c.** (obs.), mucinous carcinoma. **c. atrophicans**, scirrhus cancer surrounded by sclerosed and atrophied tissue. **betel c.**, buyo cheek c. **black c.**, malignant melanoma. **boring c.**, epithelioma of the skin of the face. **branchiogenus c.**, cancer originating in the superior cervical triangle, and supposed to be derived from a relic of an embryonal branchial cleft. **Butter's c.**, carcinoma of the hepatic flexure of the colon. **buyo cheek c.**, cancer of the cheek seen in natives of the Philippine Islands from chewing buyo leaf or betel; called also *betel c.* **cellular c.**, medullary carcinoma. **cerebriform c.**, medullary carcinoma. **chimney-sweeps' c.**, carcinoma of the scrotum due to soot poisoning; called also *soot c.* **chondroid c.**, scirrhus carcinoma with a cartilage-like texture. **claypipe c.**, carcinoma of the lip due to irritation caused by a pipe stem. **colloid c.**, mucinous carcinoma. **contact c.**, cancer developing in a part of the body in contact with a previously existing cancer. **corset c.**, cancer en cuirasse. **cystic c.**, carcinoma that has undergone cystic degeneration. **dendritic c.**, papillary carcinoma. **dermoid c.** (obs.), squamous cell carcinoma. **duct c.**, carcinoma arising from the epithelium of a duct. **dye workers' c.**, carcinoma of the urinary bladder frequently observed among workers in aniline dyes. **encephaloid c.**, medullary carcinoma. **c. en cuirasse**, a carcinoma about the skin of the thorax; called also *corset c.* and *jacket c.* **endothelial c.**, endothelioma. **epidermal c.**, malignant epithelioma of the skin. **epithelial c.**, carcinoma. **fungous c.** (obs.), fungus haematodes. **glandular c.**, adenocarcinoma. **green c.**, chloroma. **hard c.**, scirrhus carcinoma. **hematoid c.** (obs.), fungus haematodes. **c. in situ**, carcinoma in situ. **jacket c.**, *c. en cuirasse*.

kang c., kangri c., epithelioma in the thigh or abdomen affecting Indian and Chinese natives, and attributed to irritation from the kang (heated brick oven) or from the kangri (fire basket). **latent c.**, microscopic carcinomas of the prostate discovered, in the absence of any clinical manifestations, in the course of histological examination. **medullary c.**, see under *carcinoma*. **melanotic c.**, malignant melanoma. **mule-spinners' c.**, a form of epithelioma affecting mule spinners in the cotton-spinning industry. **occult c.**, a small prostatic carcinoma that gives rise to clinically evident distant metastases before it is itself clinically detectable. **paraffin c.**, a malignant growth occurring in those who work in paraffin. **pitch-workers' c.**, epithelioma of the face, neck, and scrotum seen in those who work in pitch. **retrograde c.**, a dormant atrophied malignant growth. **rodent c.**, rodent ulcer. **roentgenologist's c.**, cancer affecting the hands of those who work with roentgen rays. **scirrhus c.**, see under *carcinoma*. **soft c.**, medullary carcinoma. **solanoid c.**, (*obs.*) scirrhus carcinoma. **soot c.**, chimney-sweepers' c. **spindle cell c.**, a rare type of carcinoma affecting older persons, in which spindle-cell growth predominates, often associated with giant-cell cancer. These tumors may arise from any epithelial surface, but are most often found in sites that usually produce squamous or transitional cell carcinomas. **tar c.**, carcinoma caused by inflammatory irritation of fumes of tar or by the irritating effect of tar on the skin. **tubular c.**, an adenocarcinoma in which the cells are arranged in the form of tubules. **villous duct c.**, carcinoma with a villous growth pattern arising from the wall of a cyst. **water c.** (*obs.*), gangrenous stomatitis. **withering c.** (*obs.*), scirrhus carcinoma.

canceration (kan-ser-a'shun) (*obs.*) malignant or carcinomatous degeneration.

canceremia (kan'ser-e'me-ah) the presence of cancer cells in the blood.

cancericidal (kan'ser-i-si'dal) [*cancer* + *L. caedere* to kill] destructive to cancer or malignant cells.

cancerigenic (kan'ser-i-jen'ik) giving rise to a malignant tumor.

cancerin (kan'ser-in) a white crystalline ptomaine, $C_8H_5NO_3$, from the urine in carcinoma.

cancerism (kan'ser-izm) the cancerous diathesis, i.e., the tendency to the development of malignant disease.

cancerization (kan'ser-i-za'shun) canceration.

cancerocidal (kan'ser-o-si'dal) cancericidal.

cancerogenic (kan'ser-o-jen'ik) cancerigenic.

cancerology (kan'ser-ol'o-je) (*obs.*) oncology.

cancerophobia (kan'ser-o-f'o-be-ah) cancerphobia.

cancerous (kan'ser-us) of the nature of or pertaining to cancer.

cancerphobia (kan'ser-f'o-be-ah) 1. morbid dread of becoming affected with cancer. 2. delusion of being affected with cancer. Called also *carcinophobia*.

cancer-ulcer (kan'ser-ul'ser) carcinomatous ulceration.

canceriform (kang'kri-form) resembling a cancer.

canceroid (kang'kroid) [*cancer* + *Gr. eidos* form] 1. resembling cancer. 2. a skin cancer of a moderate degree of malignancy.

cancrology (kang-krol'o-je) [*cancer* + *-logy*] (*obs.*) oncology.

cancrum (kang'krum) [*L.*] canker. **c. na'si**, gangrenous rhinitis of children. **c. o'ris**, gangrenous stomatitis. **c. puden'di**, see *noma*.

candela (kan-del'ah) [*L. candēla* candle] the SI unit of luminous intensity equal to one-sixtieth of the luminous intensity per square centimeter of a blackbody radiating at the temperature of the freezing point of platinum. Called also *candle*, *new candle*, and *standard candle*. Abbreviated *cd*.

Candepatin (kan-dep'tin) trademark for preparations of candidin.

candidin (kan'di-si'din) [USP] an antifungal antibiotic produced by a strain of *Streptomyces griseus*; it is especially effective against *Candida albicans*, and is administered intravaginally in the treatment of vaginal candidiasis.

Candida (kan'di-dah) [*L. candidus* glowing white] a genus of yeastlike imperfect fungi of the family Cryptococcaceae, order Moniliales, characterized by producing yeast cells, mycelia, pseudomycelia, and blastospores. It is commonly part of the normal flora of the skin, mouth, intestinal tract, and vagina, but can cause a variety of infections, including candidiasis, onychomycosis, tinea corporis, tinea pedis, vaginitis, and thrush. *C. albicans* is the usual pathogen, but *C. tropicalis* may also cause infection. Other species are *C. guilliermondi* and *C. krusei*. Called also *Monilia* and *Oidium*, and, formerly, *Blastodendron*, and *Castellania*. **C. albicans**, the most frequent agent of candidiasis. **C. mesenterica**, a species which causes fermentation in fruit acids; called also *Saccharomyces mesentericus*. **C. parapsilosis**, a species of limited pathogenicity but particularly associated with endocarditis, paronychia, and otitis externa. **C. tropicalis**, a species that is an occasional cause of candidiasis. **C. vin'i**, a species from fermenting liquors and diabetic urine, in which it produces a slight fermentation seen as cylindrical, oval,

or elliptical cells, forming branched chains; called also *Saccharomyces mycoderma*.

candidal (kan'di-dal) pertaining to or caused by *Candida*.

candidemia (kan'di-de'me-ah) the presence in the blood of fungi of the genus *Candida*, usually resulting from candidal endocarditis or systemic candidiasis.

candidiasis (kan'di-di'ah-sis) infection with a fungus of the genus *Candida*. It is usually a superficial infection of the moist cutaneous areas of the body, and is generally caused by *C. albicans*; it most commonly involves the skin (dermatocandidiasis), oral mucous membranes (thrush, *def. 1*), respiratory tract (bronchocandidiasis), and vagina (vaginitis). Rarely there is a systemic infection or endocarditis. Called also *moniliasis*, *candidosis*, *oidomycosis*, and, formerly, *blastodendriosis*. **cutaneous c.**, candidiasis of the skin, which may be manifested as eczema-like lesions of the interdigital spaces, perlèche, or chronic paronychia; called also *dermatocandidiasis*. **endocardial c.**, mycotic endocarditis caused by various species of *Candida*.

candidid (kan'di-did) a secondary skin eruption that is the expression of hypersensitivity to infection with *Candida* elsewhere on the body; called also *moniliid*.

candidin (kan'di-din) a skin test antigen derived from *Candida albicans*, used in testing for the development of delayed-type hypersensitivity to constituents of the microorganism.

candidosis (kan'di-do'sis) candidiasis.

candiduria (kan'di-du're-ah) the presence of *Candida* organisms in the urine.

candiru (kan-di-roo') any of certain small catfishes of the Amazon River which are said to enter the urethra of men and the vulva of women who bathe in the river.

candle (kan'dl) 1. a mass of wax or similar substance, usually cylindrical in shape, with a wick for burning, to furnish illumination or heat. 2. a cylindrical mass of material used as a filter in microbiology. 3. *candela*. **foot c.**, see under *F. meter c.*, see *lux*. **new c.**, **standard c.**, *candela*.

candlefish (kan'dl fish) a marine fish, *Thaleichthys pacificus*, of the smelt family, yielding a fixed oil with properties similar to those of cod liver oil.

candol (kan'dol) a dry malt extract.

cane (kān) a wooden stick or metal rod used for support in walking. **adjustable c.**, a cane whose length can be easily altered. **English c.**, a supporting device consisting of a single upright with a hand rest at right angles to it; an extension piece above the hand rest, attached at an angle of about 125 degrees to the upright and bent away from the body, has a holder at the top which fits around the forearm, permitting the weight of the body to be supported on the hand and back of the forearms. **quadrupod c.**, one adapted for increased stability by forking to provide a four-legged rectangular base of support. **tripod c.**, one similar to a quadrupod cane except that it forks to provide a three-legged, triangular base of support.

canescent (kah-nes'ent) [*L. canus* gray] 1. becoming white or grayish. 2. in biology, having grayish or whitish hairs or down; hoary.

canine (ka'nin) [*L. canis* a dog, hound] 1. of, pertaining to, or like that which belongs to a dog. 2. a canine tooth; see under *tooth*.

caniniform (ka-nin'i-form) resembling a canine tooth.

caninus (ka-ni'nus) *musculus levator anguli oris*.

canities (kah-nish'e-ēz) [*L.*] grayness or whiteness of the scalp hair.

canker (kang'ker) 1. ulceration, chiefly of the mouth and lips; see *aphthous stomatitis*, under *stomatitis*. 2. disease of the keratogenous membrane in horses, beginning at the frog and extending to the sole and wall, marked by a loss of function of the horn-secreting cells and the discharge of a serous exudate in place of normal horn. 3. inflammation of the lining of the external ear in dogs and cats. Called also *cancrum*.

canna (kan'ah) [*L.*] a reed, or cane. **c. ma'jor**, the tibia. **c. mi'nor**, the fibula.

cannabidiol (kan'ah-bi-di'öl) a nonpsychoactive diphenol, $C_{21}H_{30}O_2$, isolated from cannabis.

cannabinoid (kan-ab'i-noid) any of the principles of *Cannabis*, including tetrahydrocannabinol, cannabinal, and cannabidiol.

cannabinal (kah-nab'i-nol) a nonpsychoactive constituent, $C_{21}H_{28}O_2$, of resinous exudates of *Cannabis sativa* L.; its tetrahydro derivatives are active principles.

cannabis (kan'ah-bis) [*Gr. kannabis* hemp] the dried flowering tops of hemp plants, *Cannabis sativa* L. (Cannabaceae), which contains the euphoric principles Δ^1 -3,4-*trans* and Δ^6 -3,4-*trans* tetrahydrocannabinol, as well as cannabinal and cannabidiol. It is classified as a hallucinogenic and is prepared as bhang, ganja, hashish, and marihuana. See also *cannabism*.

cannabism (kan'ah-bizm) a morbid state produced by misuse of cannabis; it is usually responsive to simple reassurance in its acute stage. The occurrence of a chronic brain syndrome as a result of frequent and prolonged use is unsubstantiated.

cannibalism (kan'fī-bal-izm) phagocytosis of one malignant cell by another.

Cannizzaro's reaction (kan'ē-zah'rōz) [Stanislao Cannizzaro, chemist in Rome, 1826–1910] see under *reaction*.

Cannon's ring (point) (kan'unz) [Walter Bradford Cannon, Boston physiologist, 1871–1945, the first to adapt x-ray techniques to the study of digestive function] see under *ring*.

cannula (kan'u-lah) [L. dim. of *canna* "reed"] a tube for insertion into a duct or cavity; during insertion its lumen is usually occupied by a trocar. **Bellocq's c.**, a curved cannula containing a stylet to which is attached a watch spring; used for plugging the posterior nares to control nosebleed. Called also *Bellocq's sound*. **Lindemann's c.**, a special needle for use with a syringe in the transfusion of unmodified blood. **perfusion c.**, a double tube for running a continuous flow of liquid into and out of an organ. **Strauss' c.**, see *Strauss needle*, under *needle*. **Trendelenburg's c.**, a cannula covered with a dilatible rubber bag, used for closing the trachea to prevent the entrance of blood after tracheotomy. **washout c.**, a cannula attached to a manometer and inserted into a blood vessel so that the connection between the artery and the manometer can be washed out in long observations.

cannulate (kan'u-lāt) to introduce a cannula, which may be left in place.

cannulation (kan'u-la'shun) the insertion of a cannula.

cannulization (kan'u-li-za'shun) cannulation.

Canomyces (ka'no-mī'sēz) a microorganism of the pleuropneumonia group found in dog distemper.

canon (kan'un) [L. "rule"] a working rule or formula for use in scientific procedure.

canrenoate potassium (kan-ren'o-āt) chemical name: 17-hydroxy-3-oxo-17 α -pregna-4,6-diene-21-carboxylic acid monopotassium salt; an aldosterone antagonist, C₂₂H₂₀KO₄.

canrenone (kan-ren'on) chemical name: 17-hydroxy-3-oxo-17 α -pregna-4,6-diene-21-carboxylic acid γ -lactone. An aldosterone antagonist, C₂₂H₂₄O₃; called also *phanurane*.

cant (kant) an inclination or slope. **c. of mandible**, the angle formed by the intersection of the mandibular (gonion-gnathion) plane with the sella-nasion or Frankfort plane.

Cantani's treatment (kahn-tah'nēz) [Arnaldo Cantani, Italian physician, 1837–1893] see under *treatment*.

canthal (kan'thal) pertaining to a canthus.

canthariasis (kan'thah-ri'ah-sis) [Gr. *kantharos* beetle] infection by beetles as endoparasites in the body of a mammal, following ingestion of larval or adult forms.

cantharidal (kan-thar'i-dal) containing or pertaining to cantharides.

cantharidate (kan-thar'i-dāt) any salt of cantharidic acid.

cantharides (kan-thar'i-dēz) [L.] the dried Spanish fly, *Lytta* (*Cantharis vesicatoria*, sometimes called "blister bug." Cantharides were once applied externally as a powerful rubefacient and blistering agent and given internally as a diuretic and aphrodisiac.

cantharidin (kan-thar'i-din) the most important active principle of cantharides; it is the lactone of cantharidic acid, C₁₀H₁₂O₄, occurs in crystalline form, has a bitter taste, and produces blistering of the skin.

cantharidism (kan-thar'i-dizm) a morbid condition resulting from the misuse of cantharides.

Cantharis (kan'thah-ris) [L.; Gr. *kantharos* beetle] = *Lytta*. **C. vesicato'ria**, *Lytta vesicatoria*.

canthectomy (kan-thek'to-me) [Gr. *kanthos* canthus + *ektomē* excision] surgical removal of a canthus.

canthi (kan'thi) [L.] plural of *canthus*.

canthitis (kan-thi'tis) inflammation of a canthus or of the canthi.

cantho- (kan'tho) [Gr. *kanthos*] a combining form denoting relationship to the canthus.

cantholysis (kan-thol'i-sis) [*cantho-* + *lysis* dissolution] surgical division of the canthus of an eye or of a canthal ligament.

canthoplasty (kan'tho-plas'te) [*cantho-* + Gr. *plassein* to form] plastic surgery of the medial and/or lateral canthus, especially section of the lateral canthus to lengthen the palpebral fissure; also the surgical restoration of a defective canthus. **provisional c.**, canthotomy performed as a temporary measure to enlarge the palpebral aperture.

canthorrhaphy (kan-thor'ah-fe) [*cantho-* + Gr. *rhaphe* suture] the suturing of the palpebral fissure at either canthus.

canthotomy (kan-thot'o-me) [*cantho-* + Gr. *temnein* to cut] surgical division of the outer canthus.

canthus (kan'thus), pl. *can'thi* [L.; Gr. *kanthos*] the angle at either end of the fissure between the eyelids; the canthi are distinguished as outer or temporal, inner or nasal.

Cantil (kan'til) trademark for a preparation of mepenzolate bromide.

Cantlie's foot tetter [Sir James Cantlie, British physician, 1851–1926] see under *tetter*.

Cantor tube (kan'tor) [Meyer D. Cantor, American physician, born 1907] see under *tube*.

cantus galli (kan'tus gal'li) [L. "cock-crowing"] laryngismus stridulus.

canula (kan'u-lah) cannula.

CaO calcium oxide.

Ca(OH)₂ calcium hydroxide.

caoutchouc (koo'chōok) [Fr.] gum-elastic or India rubber; the concrete juice of various trees and plants, such as *Siphonia elastica*. It is a hydrocarbon, C₂₀H₃₂, soluble in chloroform, ether, and carbon disulfide. Called also *elastica*.

C.A.P. College of American Pathologists.

Cap. abbreviation for *L. ca'piat*, let him take.

cap (kap) a protective covering for the head or for a similar structure. **acrosomal c.**, acrosome. **bishop's c.**, pars superior duodeni. **cradle c.**, crista lactea. **duodenal c.**, pars superior duodeni. **dutch c.**, a contraceptive cervical diaphragm. **enamel c.**, the enamel organ after it covers the top of the growing tooth papilla. **head c.**, the double-layered cap-like structure over the upper two-thirds of the acrosome of a spermatozoon, consisting of the collapsed acrosomal vesicle. **head c., anterior**, acrosome. **knee c.**, patella. **metanephric c's**, masses of metanephric blastema that adhere to the primordial pelvis of the kidney and to its ampullary dilations. **phrygian c.**, the cholecystographic appearance of the gallbladder showing kinking between the body and the fundus, in which the fundus is fixed and folded. **postnuclear c.**, a broad band encircling the postacrosomal region of the nucleus of a spermatozoon. **pyloric c.**, pars superior duodeni. **root c.**, a thimble-shaped group of cells forming a protective covering over the apical meristem in the tip of a plant root. **skull c.**, calvaria. **c. of Zinn**, a prominence of the pulmonary arc in the left upper portion of the cardiac silhouette, usually seen in posteroanterior roentgenograms in cases of patent ductus arteriosus, and representing the dilated pulmonary artery.

capacitance (kah-pas'i-tans) 1. the property of being able to store an electric charge. 2. the ratio of charge to potential in a conductor. **membrane c.**, the electrical capacitance of a cell membrane, as of an axon or muscle fiber.

capacitation (kah-pas'i-ta'shun) the process by which spermatozoa become capable of fertilizing an ovum after it reaches the ampullary portion of the uterine tube.

capacitor (kah-pas'i-tor) a device for holding and storing charges of electricity.

capacity (kah-pas'i-te) [L. *capacitas*, from *capere* to take] 1. power or ability to hold, retain, or contain, or the ability to absorb. 2. an expression of the measurement of material that may be held or contained. 3. in electricity, the property by which a given body will take and hold an electric charge. 4. mental ability to receive, accomplish, endure, or understand. **cranial c.**, an expression of the amount of space within the cranium. **functional residual c.**, the amount of air remaining at the end of normal quiet respiration; abbreviated FRC. See accompanying illustration. **heat c.**, thermal c. **inspiratory c.**, the volume of gas that can be taken into the lungs on a full inspiration, starting from the resting inspiratory position; it is equal to the tidal volume plus the inspiratory reserve volume. Abbreviated IC. See accompanying illustration. **maximal breathing c.**, the greatest volume of gas that can be breathed per minute by voluntary effort; abbreviated MBC. **maximal tubular excretory c.**, see *tubular maximum*, under *maximum*. **respiratory c.**, the ability of the blood to absorb oxygen from the lungs and carbon dioxide from the tissues. **thermal c.**, the amount of heat absorbed by a body in being raised from 15° to 16° C. in temperature; called also *heat c.* **total lung c.**, the volume of gas contained in the lungs at the end of a maximal inspiration; abbreviated TLC. See accompanying illustration. **virus neutralizing c.**, the ability of a serum to inhibit the infectivity of a virus. **vital c.**, the volume of gas that can be expelled from the lungs from a position of full inspiration, with no limit to the duration of expiration; it is equal to the inspiratory capacity plus the expiratory reserve volume. See diagram on following page.

Capastat (kap'ah-stat) trademark for a preparation of capreomycin sulfate.

capelet (kap'e-let) [L. *capelletum*] a swelling on the point of a horse's hock or on its elbow; called also *capulet*.

capeline (kap'ē-lin) [Fr.] a cap-shaped bandage for the head or for the stump of an amputated limb.

capiat (ka'pe-at) [L. "let it take"] (*obs.*) an instrument for removing foreign bodies from a cavity, as from the uterus.

capillarectasia (kap'i-lār'ek-ta'se-ah) [*capillary* + Gr. *ektasis* distention] dilatation of capillaries.

Capillaria (kap'i-la're-ah) a genus of nematodes of the superfamily Trichuroidea; called also *Hepaticola* and *Trichosoma*. **C. contort'ia**, a roundworm parasitic in domestic fowls; called also *Trichosoma contortum*. **C. hepatic'a**, a species parasitic in the liver tissue of rats and of a wide variety of other mammals; a few human infections have been reported. **C. philip-**

Subdivisions of total lung capacity: TLC = total lung capacity; V_T = tidal volume; IC = inspiratory capacity; FRC = functional residual capacity; ERV = expiratory reserve volume; VC = vital capacity; RV = residual volume. (Bates, Macklem, and Christie.)

pinen'sis, a parasite of the human intestine in Luzon, causing severe diarrhea, malabsorption, and high mortality.

capillariasis (kap'i-lah-ri'ah-sis) infection with nematodes of the genus *Capillaria*, especially *C. philippinensis*.

capillariomotor (kap'i-lär'e-o-mo'tor) pertaining to the functional activity of the capillaries.

capillarioscopy (kap'i-lär'os'ko-pe) capillaroscopy.

capillaritis (kap'i-lär-i'tis) inflammation of the capillaries.

capillarity (kap'i-lär'i-te) the action by which the surface of a liquid where it is in contact with a solid, as in capillary tubes, is elevated or depressed.

capillaropathy (kap'i-lär-op'ah-the) [capillary + Gr. *pathos* disease] any disease of the capillaries.

capillaroscopy (kap'i-lär-os'ko-pe) [capillary + Gr. *skopein* to examine] diagnostic examination of the capillaries with the microscope.

capillary (kap'i-lar'e) [L. *capillaris* hair-like] 1. pertaining to or resembling a hair. 2. any one of the minute vessels that connect the arterioles and venules, forming a network in nearly all parts of the body. Their walls act as semipermeable membranes for the interchange of various substances, including fluids, between the blood and tissue fluid; called also *vas capillare* [NA]. **arterial c's**, minute vessels lacking a continuous mus-

basal lamina, and by fine filaments and numerous pinocytotic vesicles. Cf. *fenestrated c's*. **erythrocytic c's**, capillaries of the bone marrow of early life which seem to produce erythrocytes. **fenestrated c's**, one of the two major types of capillaries, found in the intestinal mucosa, renal glomeruli, pancreas, endocrine glands, and other tissues, and characterized by the presence of circular fenestrae or pores that penetrate the endothelium; these pores may be closed by a very thin diaphragm. Cf. *continuous c's*. **glomerular c.**, any of the capillaries of a renal glomerulus. **lymph c.**, **lymphatic c.**, one of the most minute vessels of the lymphatic system, having a caliber slightly greater than that of a capillary of the blood circulatory system. **Meigs' c's**, capillaries in the myocardium. **secretory c's**, any of the extremely fine intercellular canaliculi situated between adjacent gland cells, such as the gastric parietal cells, and opening into the gland's lumen. **sheathed c's**, see under *artery*. **sinusoidal c's**, sinusoid, def. 2. **venous c's**, minute vessels lacking a muscular coat, intermediate in structure and location between venules and capillaries; called also *postcapillaries* and *postcapillary venules*.

capilli (kah-pil'i) [L.] plural of *capillus*.

capillitium (kap'i-lish'e-um) [L. "head of hair"] the interlacing, filamentous structure which, with the spores, fills the spore case of Myxobacteriales.

capillomotor (kap'i-lo-mo'tor) capillariomotor.

capillus (kah-pil'us), pl. *capilli* [L.] a hair; used in the plural, in anatomical terminology, especially to designate the aggregate of hair on the scalp.

capistration (kap'i-s-tra'shun) [L. *capistratus* masked] phimos-

sis.

capita (kap'i-tah) [L.] plural of *caput*.

capital (kap'i-tal) 1. of the highest importance; involving danger to life. 2. of or pertaining to the head of the femur.

capitate (kap'i-tāt) [L. *caput* head] head-shaped.

capitation (kap'i-ta'shun) the annual fee paid to a physician or group of physicians by each participant in a health plan.

capitatum (kap'i-ta'tum) [L. "having a head"] the capitae bone, or os capitatum [NA].

capitellum (kap'i-tel'um) [L. dim. of *caput* head] capitulum humeri.

capitonage (kap'i-to-nahzh') [Fr.] the surgical closure of a cyst cavity by applying sutures in such a way as to cause approximation of the opposing surfaces.

capitopedal (kap'i-to-ped'al) pertaining to the head and foot.

Capitol (kap'i-trol) trademark for a preparation of chloroxine.

capitula (kah-pit'u-lah) [L.] plural of *capitulum*.

capitular (kah-pit'u-lar) pertaining to a capitulum or head of a bone.

capitulum (kah-pit'u-lum), pl. *capitula* [L. dim. of *caput*] a general term for a little head, or a small eminence on a bone by which it articulates with another bone; in NA applied only to the distal end of the humerus, since that bone already possesses a head (*caput*). **c. cos'tae**, caput costae. **c. fib'ulae**, caput fibulae. **c. hu'meri** [NA], **c. of humerus**, an eminence on the distal end of the lateral epicondyle of the humerus for articulation with the head of the radius; called also *capitellum* and *little or radial head of humerus*. **c. mal'lei**, caput mallei. **c. os'sis metacar'palis**, caput ossis metacarpalis. **c. os'sis metatarsa'lis**, caput ossis metatarsalis. **c. [proces'sus condylo'i/dei] mandib'ulae**, caput mandibulae. **c. ra'dii**, caput radii. **c. sta'pedis**, caput stapedis. **c. ul'nae**, caput ulnae.

Capla (kap'lah) trademark for a preparation of mebutamate.

capno- [Gr. *kapnos* smoke] a combining form signifying a sooty or smoky appearance.

Capnocytophaga (kap'no-si-tof'ah-gah) [capno- + Gr. *kytos* cell + *phagein* to eat] a genus of anaerobic, gram-negative, rod-shaped bacteria that are implicated in the pathogenesis of periodontal disease; they closely resemble *Bacteroides ochraceus*.

capnohepatography (kap'no-hep'ah-tog'rah-fe) radiography of the liver after intravenous injection of carbon dioxide gas.

capnophilic (kap-no-fil'ik) [Gr. *kapnos* smoke + *philein* to love] growing best in the presence of carbon dioxide; said of bacteria.

Ca₃(PO₄)₂ tribasic calcium phosphate.

capobenate sodium (kap-o-ben'āt) chemical name: 6-[(3,4,5-trimethoxybenzoyl) amino]hexanoic acid monosodium salt. The monosodium salt of capobenenic acid, C₁₆H₂₂NNaO₆, having cardiac depressant activity; used as an antiarrhythmic.

capon (ka'pon) a castrated domestic fowl.

caponize (ka'pon-iz) to castrate, especially male domestic fowl.

capotement (kah-pōt-maw') [Fr.] a splashing sound heard in the dilated stomach.

cappie (kap'e) a disease of young sheep characterized by thinning of the bones of the scalp, possibly due to phosphorus-deficient diet.

capping (kap'ing) 1. the provision of a protective or obstructive covering. 2. the formation of a polar cap on the surface of a lymphoid cell concerned with immunologic responses, occurring as

Capillary bed: lighter areas indicate oxygenated blood.

cular coat, intermediate in structure and location between arterioles and capillaries; called also *precapillaries*, *precapillary arterioles*, and *metarterioles*. **bile c's**, 1. bile canaliculi. 2. a term sometimes used to designate the cholangioles. **continuous c's**, one of the two major types of capillaries found in muscle, skin, lung, central nervous system, and other tissues, characterized by the presence of an uninterrupted endothelium and a continuous

a result of movement of components on the cell surface into clusters or patches that coalesce to form the cap. The cap later undergoes endocytosis and disappears. The process is produced by reaction of antibody with the cell membrane, and appears to involve cross-linking of antigenic determinants. It is seen also in various other cells such as protozoa. **direct pulp c.**, a procedure in which an antiseptic, anodyne, or protective material is placed directly over the pulp at the site of exposure. **indirect pulp c.**, a procedure in which an antiseptic, anodyne, or protective material is placed over a thin partition of dentin at a site in which the pulp is nearly exposed. **pulp c.**, the covering of an exposed or nearly exposed dental pulp with some material, medicated or nonmedicated, to provide protection against external influences and to encourage healing.

caprate (kap'rāt) any salt of capric acid.

capreolary (kap're-o-la're) capreolate.

capreolate (kap're-o-lāt) tendril shaped, like the spermatic vessels.

capreomycin (kap're-o-mi'sin) a polypeptide antibiotic produced by *Streptomyces capreolus*, which is active against human strains of *Mycobacterium tuberculosis* and has four microbiologically active components. **c. sulfate, sterile** [USP], the disulfate salt of capreomycin, occurring as a white to practically white, amorphous powder; used as a tuberculostatic, administered intramuscularly.

caprillic (kah-pril'ik) [L. *capra* goat] goatlike; said of sounds resembling the bleating of a goat.

caprioloquism (kah-pril'o-kwizm) [L. *capra* goat + *loqui* to speak] egophony.

caprin (kap'rin) any one of the caprates of glycerin (glycerol) especially the glyceryl tricaprate, or tricaprin, $C_3H_5(CH_2(CH_2)_8COO)_3$, from ordinary butter.

caprine (kap'rin) [L. *capra* goat] 1. pertaining to or derived from a goat. 2. norleucine.

caprizant (kap'rī-zant) [L. *caprizans*, from *capra* a goat] leaping or bounding (like a goat); said of the pulse.

caproate (kap'ro-āt) 1. any salt of caproic acid. 2. USAN contraction for hexanoate.

caproin (kah-pro'in) any caproate of glycerin (glycerol) especially the tricaproate, $C_3H_5(C_6H_{13}O_2)_3$; it occurs in butter.

caprone (kap'rōn) a volatile oil, di-*n*-amylketone 6-undecanone, $CH_3(CH_2)_4 \cdot CO(CH_2)_4 \cdot CH_3$, from butter.

caproyl (kap-ro'il) the hydrocarbon radical, C_8H_{15} ; hexyl.

caproylamine (kap'ro-il-am'in) *n*-hexylamine.

caprylate (kap'rī-lāt) any salt of caprylic acid.

caprylin (kap'rī-lin) any caprylate of glycerin (glycerol) especially the tricaprylate, $C_3H_5(C_7H_{15}CO_2)_3$.

Capsebon (kap'se-bon) trademark for a suspension of cadmium sulfide.

Capsicum (kap'sī-kum) [L.] a genus of solanaceous plants of various species, including the cayenne or red pepper.

capsicum (kap'sī-kum) the dried fruit of various species of *Capsicum*, used as an irritant and carminative. It is known in commerce as African chillies (*C. frutescens*), tabasco pepper (*C. annum* var. *conoidis*), Louisiana long pepper (*C. annum* var. *longum*), and Louisiana sport pepper (a hybrid).

capsid (kap'sid) [L. *capsa* a box] the shell of protein that protects the nucleic acid of a virus; it may have helical or cubic symmetry and is composed of structural units, or capsomers. According to the number of subunits possessed by capsomers, they are called dimers (2), trimers (3), pentamers (5), or hexamers (6).

capsitis (kap-si'tis) inflammation of the capsule of the crystalline lens.

capsomer (kap'so-mer) [L. *capsa* a box + Gr. *meros* part] the morphological unit of the capsid of a virus.

capsomere (kap'so-mēr) capsomer.

capsotomy (kap-sot'o-me) capsulotomy.

Capsul. abbreviation for L. *capsula*, capsule.

capsula (kap'su-lah), pl. *cap'sulae* [L. "a small box"] [NA] a general term for a cartilaginous, fatty, fibrous, or membranous structure enveloping another structure, organ, or part; called also *capsule*. **c. adipo'sa**, a capsule consisting principally of fat. **c. adipo'sa re'nis** [NA], adipose capsule of kidney: the investment of perirenal fat surrounding the fibrous capsule of the kidney and continuous at the hilus with the fat in the renal sinus; called also *fatty capsule of kidney*. **articula'ris** [NA], articular capsule: the sac-like envelope which encloses the cavity of a synovial joint by attaching to the circumference of the articular end of each involved bone; it consists of a fibrous membrane and a synovial membrane. Called also *joint* or *synovial capsule*. **c. articula'ris acromioclavicula'ris** [NA], acromioclavicular articular capsule: a ligamentous sac surrounding the acromioclavicular joint. **c. articula'ris articulatio'nis tar'si trans-ver'sae** [NA], a ligamentous sac surrounding the transverse tarsal joint. **c. articula'ris articulatio'nis temporomandibula'ris** [NA], a ligamentous sac surrounding the temporomandibular joint; called also *c. articularis mandibulae* and *capsule*

of temporomandibular joint. **c. articula'ris articulatio'nis vertebra'rum** [NA], capsule of vertebral articulations: one of the bands of tissue, partly white fibrous and partly yellow elastic, that unite the articular processes of adjacent vertebrae. **c. articula'ris atlantoaxia'lis latera'lis** [NA], atlantoaxial articular capsule: a ligamentous sac surrounding the lateral atlantoaxial joint; called also (pl.) *capsulae articulares atlantoepistrophicae*. **cap'sulae articula'res atlantoepistrophicae**, see *c. articularis atlantoaxialis lateralis*. **c. articula'ris atlantooccipita'lis** [NA], capsule of atlantooccipital articulation: one of a pair of distinct ligamentous bands, each of which is attached at one end to the lateral mass of the atlas and at the other end to the margins of an occipital condyle. **c. articula'ris calcaneocuboi'dea** [NA], capsule of calcaneocuboidal joint: a ligamentous sac surrounding the calcaneocuboidal joint. **c. articula'ris capi'tis cos'tae** [NA], articular capsule of head of rib: a ligamentous sac surrounding the articulation of the head of a rib; called also *capsulae articulares capituli costae*. **cap'sulae articula'res capit'uli cos'tae**, see *c. articularis capitis costae*. **cap'sulae articula'res carpometacar'peae** [NA], capsules of carpometacarpal joints: ligamentous sacs surrounding the carpometacarpal joints; they are continuous with the capsules of the intercarpal joints. **c. articula'ris carpometacar'pea pol'licis** [NA], capsule of carpometacarpal articulation of thumb: a ligamentous sac surrounding the carpometacarpal joint of the thumb. **c. articula'ris costotransversa'ria** [NA], capsule of costotransverse joint: a ligamentous sac surrounding the costotransverse articulation. **c. articula'ris cox'ae** [NA], capsule of hip joint: a large, strong ligamentous sac surrounding the hip joint. **c. articula'ris cricoarytenoi'dea** [NA], cricoarytenoid articular capsule: the fibrous and synovial layers enclosing the cricoarytenoid joint; called also *c. articularis cricoarytaenoidea*. **c. articula'ris cricothyroi'dea** [NA], the capsule of the cricothyroid joint; called also *c. articularis cricothyreoidea*. **c. articula'ris cu'biti** [NA], articular capsule of elbow: the capsule formed around the cubital articulation by its various ligaments. **cap'sulae articula'res digito'rum man'us**, *capsulae articulares interphalangeorum manus*. **cap'sulae articula'res digito'rum pe'dis**, *capsulae articulares interphalangeorum pedis*. **c. articula'ris ge'nus** [NA], capsule of knee joint: the loose, thin, but strong sac enclosing the knee joint; called also *c. articularis genu*. **c. articula'ris hu'meri** [NA], articular capsule of humerus: a ligamentous sac surrounding the shoulder joint. **cap'sulae articula'res intermetacar'peae** [NA], capsules of intermetacarpal joints: ligamentous sacs that surround the intermetacarpal joints; they are continuous with the capsules of the carpometacarpal joints. **cap'sulae articula'res intermetatar'seae** [NA], capsules of intermetatarsal joints: the capsules around the four joints between the bases of the metatarsal bones. **cap'sulae articula'res interphalangea'rum man'us** [NA], capsules of interphalangeal joints of hand: incomplete ligamentous sacs surrounding the interphalangeal joints of the hand; called also *capsulae articulares digitorum manus*. **cap'sulae articula'res interphalangea'rum pe'dis** [NA], capsules of interphalangeal joints of foot: the capsules surrounding the interphalangeal articulations of the toes; called also *capsulae articulares digitorum pedis*. **c. articula'ris mandib'ulae**, *c. articularis articulationis temporomandibularis*. **c. articula'ris man'us** [NA], a loose ligamentous sac surrounding the radiocarpal joint and the intercarpal joints together; called also *capsule of radiocarpal joint*. **cap'sulae articula'res metacarpophalan'geae** [NA], capsules of metacarpophalangeal joints: ligamentous sacs that surround the metacarpophalangeal joints. **cap'sulae articula'res metatarso-phalan'geae** [NA], capsules of metatarsophalangeal joints: the five capsules surrounding the metatarsophalangeal articulations. **c. articula'ris os'sis pisi'for'mis** [NA], articular capsule of pisiform bone: a thin, loose ligamentous sac surrounding the joint of the pisiform bone. **c. articula'ris radioulna'ris dista'lis** [NA], distal radioulnar articular capsule: a loose ligamentous sac surrounding the distal radioulnar joint. **c. articula'ris sternoclavicula'ris** [NA], capsule of sternoclavicular joint: a ligamentous sac surrounding the sternoclavicular joint. **c. articula'ris sternocosta'lis** [NA], sternocostal articular capsule: the ligamentous sac that surrounds a sternocostal joint. **c. articula'ris talocalca'nea** [NA], a loose ligamentous sac surrounding the subtalar joint; called also *capsule of subtalar joint*. **c. articula'ris talocrura'lis** [NA], a thin ligamentous sac surrounding the ankle joint; called also *capsule of ankle joint*. **c. articula'ris talonavicular'is**, a capsule surrounding the talonavicular joint. **cap'sulae articula'res tarsometatar'seae** [NA], capsules of tarsometatarsal joints: the three capsules that surround the joints between the metatarsal and cuneiform bones. **c. articula'ris tibiofibula'ris** [NA], capsule of tibiofibular joint: a fibrous sac enclosing the tibiofibular articulation. **c. bul'bi**, see *vagina bulbi*. **c. cor'dis**, pericardium. **c. exter'na** [NA], the layer of white fibers which lies between the putamen and the claustrum; called also *c. externa nuclei lentiformis*, and *external capsule*. **c. exter'na nu'clei lentifor'mis**, *c. externa*. **c. extre'ma**, the

white matter between the claustrum and the cortex of the insula. **c. fibro'sa**, a capsule consisting largely of fibrous elements. **c. fibro'sa glan'dulae thyroi'deae** [NA], fibrous capsule of thyroid gland: a connective tissue coat intimately adherent to the underlying gland; called also **c. glandulae thyroideae**. **c. fibro'sa** [Glissoni], **c. fibro'sa hep'atis**, **c. fibrosa perivascularis**. **c. fibro'sa perivascularis** [NA], perivascular fibrous capsule: the connective tissue sheath that accompanies the vessels and ducts through the hepatic portal. It is continuous with the fibrous coat. Called also **c. fibrosa hepatis**, **fibrous capsule of liver**, **Glisson's capsule**, **hepatobiliary capsule**, and **c. fibrosa** [Glissoni]. **c. fibro'sa re'nis** [NA], fibrous capsule of kidney: the connective tissue investment of the kidney, which continues through the hilus to line the renal sinus; called also **tunica fibrosa renis**. **c. glan'dulae thyroi'deae**, **c. fibrosa glandulae thyroideae**. **c. glomer'uli** [NA], capsule of glomerulus: the double-walled globular dilatation that forms the beginning of a uriniferous tubule of the kidney and surrounds the glomerulus; it consists of an inner, or visceral, layer (**capsular epithelium**) and an outer, or parietal, layer (**glomerular epithelium**); called also **Bowman's, glomerular, malpighian**, and **müllerian capsule**. **c. inter'na** [NA], internal capsule: a fanlike mass of white fibers that separates the lentiform nucleus laterally from the head of the caudate nucleus, the dorsal thalamus, and the tail of the caudate nucleus medially; it consists of an anterior limb, a genu, a posterior limb, and retrolentiform and sublenticular parts, and carries both afferent and efferent fibers of the cerebral cortex. Called also **c. interna nuclei lentiformis**. **c. inter'na nu'clei lentifor'mis**, **c. interna**. **c. len'tis** [NA], capsule of lens: the elastic envelope covering the lens of the eye and fusing with the fibers of the ciliary zonule; called also **crystalline capsule**. **c. lien'is**, folliculi lymphatici lienales. **c. nu'clei denta'ti**, a layer formed by fibers passing to and from the dentate nucleus. **cap'sulae nu'clei lentifor'mis**, see **c. externa** and **c. interna**. **cap'sulae re'nis**, see **c. adiposa renis** and **c. fibrosa renis**. **c. sero'sa lie'nis**, tunica serosa lienis.

capsulae (kap'su-le) [L.] plural of **capsula**.

capsular (kap'su-lar) pertaining to a capsule.

capsulation (kap'su-la'shun) the enclosure of a medicine in a capsule.

capsule (kap'sül) [L. *capsula* a little box] 1. a structure in which something is enclosed, such as a hard or a soft, soluble container of a suitable substance, for enclosing a dose of medicine. 2. an anatomical structure enclosing an organ or body part; see **capsula**. **adherent c.**, an investing structure that is not readily separated from the organ or substance contained within it. **adipose c.**, one consisting largely of fat. **adrenal c.**, adrenal gland (**glandula suprarenalis** [NA]). **adrenal c's, accessory**, accessory adrenal glands (**glandulae suprarenales accessoriae** [NA]). **anthrax c.**, the capsule of *Bacillus anthracis*, which is capable of neutralizing the anthracidal substance of the host. **articular c.**, the sac-like envelope which encloses the cavity of a synovial joint; see **capsula articularis**, and for names of capsules of particular joints see other entries beginning **capsula articularis**, under **capsula**. Called also **joint c.** and **synovial c.** **articular c., fibrous**, **membrana fibrosa capsulae articularis**. **auditory c.**, the cartilaginous capsule of the embryo that develops into the bony labyrinth of the inner ear. **bacterial c.**, an envelope of gel surrounding a bacterial cell, usually polysaccharide but sometimes polypeptide in nature, which is associated with the virulence of pathogenic bacteria. **biopsy c.**, a device which may be passed into the intestine for the purpose of securing specimens of the mucosa for examination under the microscope. **Bonnet's c.**, see **vagina bulbi**. **Bowman's c.**, **capsula glomeruli**. **c's of the brain**, layers of white matter in the cerebrum; see **capsula externa** and **capsula interna**. **brood c's**, capsular projections from the internal membrane of hydatid cysts, from which the scoleces arise. **cartilage c.**, a basophilic zone of cartilage matrix bordering on a lacuna and its enclosed cartilage cell. **Crosby c.**, an instrument used to obtain intestinal material for biopsy, consisting of a cylindrical capsule containing a knife which is spring-activated and triggered by suction. **crystalline c.**, **capsula lentis**. **decavitamin c.** [USP], a capsule containing not less than 1.2 mg. of vitamin A, 10 µg. of vitamin D, 70 mg. of ascorbic acid, 10 mg. of calcium pantothenate, 1 µg. of cyanocobalamin, 50 µg. of folic acid, 20 mg. of niacinamide, 2 mg. of pyridoxine hydrochloride, 2 mg. of riboflavin, 2 mg. of thiamine hydrochloride or its equivalent as thiamine mononitrate, and a suitable form of alpha tocopherol. It is used as a dietary supplement. **dental c.**, periodontium. **external c.**, **capsula externa**. **extreme c.**, **capsula extrema**. **fatty c. of kidney**, **capsula adiposa renis**. **fibrous c.**, one composed chiefly of fibrous elements. **fibrous c. of corpora cavernosa of penis**, **fibrous c. of graafian follicle**, theca externa thecae folliculi. **fibrous c. of kidney**, **capsula fibrosa renis**. **fibrous c. of liver**, **capsula fibrosa perivascularis**. **fibrous c. of spleen**, **tunica fibrosa lienis**. **fibrous c. of testis**, **tunica albuginea testis**. **fibrous c. of thyroid gland**, **capsula fibrosa glandulae thyroideae**. **Gerota's c.**, the fascia surrounding the kidney. **Glisson's c.**, **capsula fibrosa perivascularis**. **glomerular c.**, **c. of glomerulus**, **capsula glomeruli**. **Hearson's**

c. (obs.), a thermostatic chamber for regulating the temperature in incubators. **c. of heart**, pericardium. **hepatobiliary c.**, **capsula fibrosa perivascularis**. **hexavitamin c.** [NF], a capsule containing not less than 1.5 mg. of vitamin A, 10 µg. of vitamin D, 75 mg. of ascorbic acid, 2 mg. of thiamine hydrochloride or an equivalent amount of thiamine mononitrate, 3 mg. of riboflavin, and 20 mg. of niacinamide; used as a dietary supplement. **internal c.**, **capsula interna**. **joint c.**, **articular c.**; see also under **capsula articularis**. **c. of lens**, **capsula lentis**. **malpighian c.**, **capsula glomeruli**. **Müller c.**, **müllerian c.**, **capsula glomeruli**. **ocular c.**, see **vagina bulbi**. **optic c.**, the embryonic structure from which the sclera is developed. **otic c.**, the skeletal element enclosing the inner ear mechanism. In the human embryo, it develops as cartilage at various ossification centers and becomes completely bony and unified at about the twenty-third week of fetal life. **pelvioprostatic c.**, **fascia prostatica**. **perinephric c.**, see **capsula adiposa renis** and **capsula fibrosa renis**. **periotic c.**, the tissue surrounding the otic sac in the embryo. **radiotelemetering c.**, **telemetering c.** **renal c.**, see **capsula adiposa renis** and **capsula fibrosa renis**. **serous c. of spleen**, **tunica serosa lienis**. **sodium iodide ¹³¹I c's**, capsules containing radioactive iodine as sodium iodide, used in tests of thyroid disease and in the suppression of thyroid function. **suprarenal c.**, adrenal gland (**glandula suprarenalis** [NA]). **synovial c.**, **articular c.** (**capsula articularis** [NA]). **telemetering c.**, a small radio transmitter encased in a capsule the size of an ordinary drug capsule that can be swallowed or otherwise inserted in the body to give information about conditions (pressure, temperature, pH, etc.) within an organ; called also **radio pill**. **Tenon's c.**, see **vagina bulbi**. **triasyn B c's**, capsules containing thiamine, riboflavin, and nicotinamide, used as a vitamin supplement.

capsulectomy (kap'su-lek'to-me) [L. *capsula* capsule + Gr. *ek-tomē* excision] excision of a capsule, especially a joint capsule or the capsule of the lens. **renal c.**, excision of the capsule of the kidney.

capsulitis (kap'su-li'tis) the inflammation of a capsule, as that of the lens. **adhesive c.**, adhesive inflammation between the joint capsule and the peripheral articular cartilage of the shoulder with obliteration of the subdeltoid bursa, characterized by painful shoulder of gradual onset, with increasing pain, stiffness, and limitation of motion. Called also **adhesive bursitis**, **peritendinitis**, or **tendinitis**, **frozen shoulder**, and **periarthrits of shoulder**. **hepatic c.**, **perihepatitis**.

capsulolenticular (kap'su-lo-len-tik'u-lar) pertaining to the lens of the eye and its capsule.

capsuloma (kap'su-lo'mah) a capsular or subcapsular tumor of the kidney.

capsuloplasty (kap'su-lo-plas'te) [*capsule* + Gr. *plassein* to form] a plastic operation on a joint capsule.

capsulorrhaphy (kap'su-lor'ah-fe) [*capsule* + Gr. *raphē* suture] suturing of a capsule, especially a joint capsule.

capsulotome (kap-su'lo-tōm) a cutting instrument used for incising the capsules of the lens.

capsulotomy (kap'su-lot'o-me) [*capsule* + Gr. *temnein* to cut] the incision of a capsule, especially of that of the eye, as in cataract operation; or that of a joint. **renal c.**, incision of a renal capsule.

captamine hydrochloride (kap'tah-mēn) chemical name: 2-(dimethylamino)ethanethiol hydrochloride; a depigmenting agent, C₄H₁₁NS·HCl.

captation (kap-ta'shun) [L. *captatio* seizure] (obs.) the first stage of hypnotism.

captodiamine hydrochloride (kap-to-di'am) ~ **captodiamine hydrochloride**.

captodiamine hydrochloride (kap'to-di'ah-mēn) chemical name: 2[[[4-(butylthio)phenyl]phenylmethyl]thio]-N,N-dimethylethamine hydrochloride. A tranquilizer and muscle relaxant, C₂₁H₂₉NS₂HCl, used as a sedative. Called also **captodiamine hydrochloride**.

captopril (kap'to-pril) a drug that inhibits the activity of angiotensin-converting enzymes, thus preventing the conversion of angiotensin I to the active form, angiotensin II.

capulet (kap'u-let) capelet.

capuride (kap'ur-id) chemical name: N-(aminocarbonyl)-2-ethylmethylpentamide; a hypnotic, C₈H₁₅N₂O₂.

Capuron's points [Joseph Capuron, French physician, 1767-1850] see under **point**.

caput (kap'ut), pl. **cap'ita** [L. "head"] [NA] 1. the superior extremity of the body, comprising the cranium and face, and containing the brain, the organs of special sense, and the first organs of the digestive system; the head. 2. a general term applied to the expanded or chief extremity of an organ or part. **c. angula're mus'culi quadra'ti la'bii superio'ris**, **musculus levator labii superioris alaeque nasi**. **c. bre've mus'culi bicip'itis bra'chii** [NA], the short head of the biceps brachii muscle, arising from the apex of the coracoid process; called also **medial head of biceps brachii muscle**, **short head of coracoradialis muscle**, and **coracoradialis**. **c. bre've**

mus'culi bicip'itis fem'oris [NA], the short head of the biceps femoris muscle, arising from the linea aspera femoris. **c. co/li**, cecum, def. 1. **c. cos'tae** [NA], head of rib: the posterior end of a rib, which articulates with the body of a vertebra; called also *capitulum costae*. **c. distor'tum**, torticollis. **c. epididym'idis** [NA], head of epididymis: the upper part of the epididymis, in which are found the straight and coiled portions of the efferent ductules of the testis; called also *globus major epididymidis*. **c. fem'oris** [NA], head of femur: the proximal end of the femur, articulating with the hip bone. **c. fib'ulae** [NA], head of fibula: the proximal extremity of the fibula; called also *capitulum fibulae*. **c. gallinag'inis** [L. "woodcock's head"], colliculus seminalis. **c. humera'le mus'culi flexo'ris car'pi ulna'ris** [NA], the humeral head of the flexor carpi ulnaris muscle, arising from the medial epicondyle of the humerus. **c. humera'le mus'culi flexo'ris digito'rum subli'mis**, c. humeroulnare musculus flexoris digitorum superficialis. **c. humera'le mus'culi pronato'ris tere'tis** [NA], the humeral head of the pronator teres muscle arising from the medial epicondyle of the humerus. **c. humera'lis**, c. humeri. **c. hu'meri** [NA], head of humerus: the proximal end of the humerus, which articulates with the glenoid cavity of the scapula; called also *c. humeralis*. **c. humeroulna're mus'culi flexo'ris digito'rum superficialis** [NA], the humeroulnar head of the flexor digitorum superficialis muscle, arising from the medial epicondyle of the humerus and coronoid process of ulna; called also *c. humerale musculus flexoris digitorum sublimis* and *humeral head of flexor digitorum sublimis muscle*. **c. incune'a'tum** (obs.), impaction of the fetal head during labor. **c. infraorbita'le mus'culi quadra'ti la'bii superio'ris**, musculus levator labii superioris. **c. latera'le mus'culi gastrocne'mii** [NA], the lateral head of the gastrocnemius muscle, arising from the lateral condyle and posterior surface of the femur, and the capsule of the knee joint; called also *lateral gastrocnemius muscle*. **c. latera'le mus'culi tricip'itis bra'chii** [NA], the lateral head of the triceps brachii muscle, arising from the posterior surface of the humerus, the lateral border of the humerus, and the lateral intermuscular septum; called also *great or second head of triceps brachii muscle*, and *lateral or short anconeus muscle*. **c. lie'nis**, extremitas posterior lienis. **c. lon'gum mus'culi bicip'itis bra'chii** [NA], the long head of the biceps brachii muscle, arising from the upper border of the glenoid cavity; called also *interarticular ligament of articulation of humerus*. **c. lon'gum mus'culi bicip'itis fem'oris** [NA], the long head of the biceps femoris muscle, arising from the ischial tuberosity. **c. lon'gum mus'culi tricip'itis bra'chii** [NA], the long head of the triceps brachii muscle, arising from the infraglenoid tubercle of the scapula; called also *first, middle, or scapular head of triceps brachii muscle*. **c. mal'lei** [NA], head of malleus: the upper portion of the malleus, which articulates with the incus; called also *capitulum mallei*. **c. mandib'ulae** [NA], head of mandible: the articular surface of the condyloid process of the mandible; called also *capitulum* [processus condyloidei] *mandibulae* and *head of condyloid process of mandible*. **c. media'le mus'culi gastrocne'mii** [NA], the medial head of the gastrocnemius muscle, arising from the medial condyle of the femur and the capsule of the knee joint; called also *medial gastrocnemius muscle*. **c. media'le mus'culi tricip'itis bra'chii** [NA], the medial head of the triceps brachii muscle, arising from the posterior surface of the humerus below the radial groove, the medial border of the humerus, and the medial intermuscular septum; called also *medial anconeus muscle* and *deep or short head of triceps brachii muscle*. **c. medu'sae**, Medusa's head: dilated cutaneous veins around the umbilicus, seen mainly in the newborn and in patients suffering with cirrhosis of the liver; so called because the veins resemble the head of the snake-haired Gorgon, Medusa. Called also *cirsomphalos*. **c. mus'culi** [NA], head of muscle: the end of a muscle at the site of its attachment to a bone or other fixed structure (origin). **c. natifor'me**, a head in rickets in which the eminences of the frontal and parietal bones form elevations separated by depressions which mark the lines of the cranial sutures; called also *hot cross bun head*. **c. nu'clei cauda'ti** [NA], head of caudate nucleus: the largest and most anterior part of the caudate nucleus, which bulges into the anterior horn of the lateral ventricle. **c. obli'quum mus'culi adducto'ris hal'lucis** [NA], the oblique head of the adductor hallucis muscle, originating from the bases of the second, third, and fourth metatarsal bones, and the sheath of the peroneus longus muscle; called also *great or long head of adductor hallucis muscle*. **c. obli'quum mus'culi adducto'ris pol'lucis** [NA], the oblique head of the adductor pollicis muscle, arising from the capitate and trapezoid bones and the base of the second metacarpals. **c. os'sis metacarpa'lis** [NA], head of metacarpal bone: the distal extremity of each metacarpal bone, which articulates with the base of a proximal phalanx; called also *capitulum ossis metacarpalis* and *condyle of metacarpal bone*. **c. os'sis metatarsa'lis** [NA], head of metatarsal bone: the distal part of each metatarsal bone, which articulates with the base of a proximal phalanx; called also *capitulum ossis metatarsalis* and *little head of metatarsal bone*. **c. pancre'atis** [NA], head of pancreas: the discoidal mass forming the enlarged right

extremity of the pancreas, lying in a flexure of the duodenum. **c. pe'nis**, glans penis. **c. phalan'gis digito'rum ma'nus** [NA], head of phalanx of fingers: the distal articular surface of each of the proximal and middle phalanges of the fingers; called also *trochlea phalangis digitorum manus*. **c. phalan'gis digito'rum pe'dis** [NA], head of phalanx of toes: the distal articular extremity of each of the proximal and middle phalanges of the toes; called also *trochlea phalangis digitorum pedis*. **c. pla'nium**, a flattened head occurring with osteochondritis deformans juvenilis. **c. proge'neum**, forward projection of the jaw (prognathism). **c. quadra'tum**, an abnormally shaped head, sometimes occurring with rickets. **c. radia'le mus'culi flexo'ris digito'rum superficialis** [NA], the radial head of the flexor digitorum superficialis muscle, arising from the oblique line and anterior border of the radius. **c. ra'dii** [NA], head of radius: the disk on the proximal end of the radius that articulates with the capitulum of the humerus and the radial notch of the ulna; called also *capitulum radii*. **c. stape'dis** [NA], the head of the stapes, which articulates with the incus; called also *capitulum stapedis*. **c. succeda'neum**, edema occurring in and under the fetal scalp during labor. **c. ta'li** [NA], head of talus: the rounded anterior end of the talus; called also *head of astragalus*. **c. transver'sum mus'culi adducto'ris hal'lucis** [NA], the transverse head of the adductor hallucis muscle, arising from the capsules of the metatarsophalangeal joints of the third, fourth, and fifth toes. **c. transver'sum mus'culi adducto'ris pol'lucis** [NA], the transverse head of the adductor pollicis muscle arising from the lower two thirds of the anterior surface of the third metacarpal. **c. ul'nae** [NA], head of ulna: the articular surface of the distal extremity of the ulna; called also *capitulum ulnae*. **c. ulna're mus'culi flexo'ris car'pi ulna'ris** [NA], the ulnar head of the flexor carpi ulnaris muscle, arising from the olecranon, and the adjacent part of the ulna. **c. ulna're mus'culi pronato'ris ter'etis** [NA], the ulnar head of the pronator teres muscle, arising from the coronoid process of the ulna; called also *coronoid head of pronator teres muscle*. **c. zygomat'icum mus'culi quadra'ti la'bii superio'ris**, musculus zygomatikus minor.

C.A.R. Canadian Association of Radiologists.

caraa'te (kah'rah-ah'ta) pinta.

Carabelli cusp (sign, tubercle) (kah-rah-bel'e) [Georg C. Carabelli, dentist in Vienna, 1787–1842] see under *cusp*.

caramel (kar'ah-mel, kahr'mel) [NF] a concentrated solution of the product obtained by heating sugar or glucose until the sweet taste is destroyed and a uniform dark brown mass results; used as a coloring agent for pharmaceuticals and foods.

caramiphen (kah-ram'i-fen) chemical name: 1-phenylcyclopentanecarboxylic acid 2-(dimethylamino)ethyl; an anticholinergic with actions similar to but weaker than those of atropine (q.v.). **c. edisylate**, **c. ethanedisulfonate**, an ester of caramiphen, $C_{20}H_{29}N_2O_6S_2$, with the anticholinergic effects of the base; used as an antitussive, administered orally. **c. hydrochloride**, an ester of caramiphen, $C_{18}H_{25}ClNO_2$, with the anticholinergic effects of the base; used mainly in the treatment of Parkinson's disease and parkinsonism, administered orally.

Carassini's spool (kar-ah-se'nēz) see under *spool*.

carat (kar'at) 1. a measure of the fineness of gold, pure gold being 24 carats. 2. a unit of weight of precious stones, being 205.5 milligrams or $\frac{3}{16}$ grains troy.

carate (kah-rah'ta) pinta.

caraway (kar'ah-wa) [NF] the dried ripe fruit of the umbelliferous plant *Carum carvi* of Europe and central and western Asia; its brown mericarps have an aromatic odor and taste and are used as a flavoring agent for pharmaceuticals.

carbachol (kar'bah-kol) [USP] chemical name: 2-[(aminocarbonyloxy)-N,N,N-trimethylethanaminium chloride. A cholinergic, $C_6H_{15}ClN_2O_2$, occurring as white or faintly yellow crystals or crystalline powder; applied topically to the conjunctiva in the treatment of glaucoma. Called also *carbamylcholine chloride* and *carbocholine*.

carbadox (kar'bah-doks) chemical name: 2-(2-quinoxalinylnmethylene)hydrazine carboxylic acid methyl ester N',N'-dioxide; an antibacterial, $C_{11}H_{10}N_4O_4$, used in veterinary medicine.

carbamate (kar'bah-māt) any ester of carbamic acid. **ethyl C.**, urethan.

carbamazepine (kar-bah-maz'ē-pēn) chemical name: 5H-dibenz[b,f]azepin-5-carboxamide. An anticonvulsant and analgesic, $C_{15}H_{12}N_2O$, occurring as a white to off-white powder; used in the treatment of pain associated with trigeminal neuralgia and in epilepsy manifested by certain types of seizures, administered orally.

carbamide (kar-bam'id) urea in anhydrous, lyophilized, sterile powder form; it is injected intravenously in dextrose or invert sugar solution to induce diuresis.

carbaminohemoglobin (kar-bam'i-no-he'mo-glo'bin) a chemical combination of carbon dioxide with hemoglobin, CO_2 -HHb, being one of the forms in which carbon dioxide exists in the blood.

carbamoyl (kar/bah-moil) the radical $\text{NH}_2\text{—CO—}$; see *carbamoyltransferase*. Called also *carbamylyl*.

carbamoyltransferase (kar/bah-moil-trans/fer-ās) an enzyme that catalyzes the transfer of carbamoyl, as from carbamoylphosphate to L-ornithine to form orthophosphate and citrulline in the synthesis of urea; called also *transcarbamoylase*.

carbamyl (kar/bah-mil) carbamoyl.

carbamylcholine chloride (kar/bah-mil-kō'lēn klo'rid) carbachol.

carbantel lauryl sulfate (kar/ban-tel) chemical name: *N*[[4-(4-chlorophenyl)amino]carbonyl]pentanimidamide compound with dodecyl hydrogen sulfate (1:1); an anthelmintic, $\text{C}_{12}\text{H}_{18}\text{ClN}_3\text{O}\cdot\text{C}_{12}\text{H}_{26}\text{O}_4\text{S}$.

carbaril (kar/bah-ril) chemical name: 1-naphthalenol methylcarbamate; an insecticide and parasiticide, $\text{C}_{12}\text{H}_{11}\text{NO}_2$. Called also *carbaryl*.

carbarsone (kar/bar-sōn) [USP] chemical name: [4-[(aminocarbonyl)amino]phenyl]arsonic acid. A pentavalent organic arsenical, $\text{C}_7\text{H}_9\text{AsN}_2\text{O}_4$, occurring as a white powder; used as an antimebic, administered orally or in a retention enema. It is also administered orally in the treatment of balantiasis and intravaginally in vaginitis due to *Trichomonas vaginalis*.

carbaryl (kar/bah-ril) carbaril.

carbaspirin calcium (kar-bas/pī-rin) chemical name: 2-(acetyloxy)benzoic acid calcium salt compound with urea (1:1); an analgesic, $\text{C}_{18}\text{H}_{18}\text{CaN}_2\text{O}_6$, which also has antipyretic properties, and has been used like aspirin.

carbasus (kar/bah-sus) [L.; Gr. *karpasos* cotton] an old name for lint, charpie, or cotton.

carbazine (kar/bah-zid) a urea derivative, carbodiazide, $\text{CO}(\text{N}_3)_2$, in which both the amide groups of urea have been replaced by hydrazine residues.

carbazochrome salicylate (kar-baz'o-krōm) chemical name: 2-hydroxybenzoic acid monosodium salt compound with 2-(1,2,3,5-tetrahydro-3-hydroxy-1-methyl-5-oxo-6*H*-indol-6-ylidene)-hydrazinecarboxamide (1:1). A complex of adrenochrome monosemicarbazone with sodium salicylate, $\text{C}_{17}\text{H}_{17}\text{N}_4\text{NaO}_6$, occurring as an orange-red crystallized powder; used as a hemostatic to control capillary bleeding and to prevent capillary permeability, administered orally or intramuscularly.

carbazocine (kar-bah'zo-sēn) chemical name: *cis*-14-(cyclopropylmethyl)-1,2,3,4,4a,5,6,11-octahydro-5,11b-iminoethano-11b-*H*-benzo[*a*]carbazole; an analgesic, $\text{C}_{22}\text{H}_{28}\text{N}_2$.

carbazotate (kar-baz'o-tāt) any salt of picric acid; a picrate.

carbenicillin (kar/ben-i-sil'in) chemical name: *N*-(2-carboxy-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-6-yl)-2-phenylmalonamic acid. A semisynthetic penicillin, $\text{C}_{17}\text{H}_{18}\text{N}_2\text{O}_6\text{S}$, effective against gram-negative bacteria, such as susceptible strains of *Pseudomonas aeruginosa*, indole-positive *Proteus* species, certain strains of *Escherichia coli*, and *Hemophilus influenzae*; it also inhibits the growth of some gram-positive pathogens. Called also *carfecillin*. **c. disodium**, the disodium salt of carbenicillin, $\text{C}_{17}\text{H}_{16}\text{N}_2\text{Na}_2\text{O}_6\text{S}$, occurring as a white to off-white, crystalline powder, and having the same actions as the base; administered intramuscularly or intravenously in severe systemic infections and septicemia, urinary and genitourinary tract infections, acute and chronic respiratory infections, and soft-tissue infections. A sterile preparation is prepared in conformance with USP standards. Called also *c. sodium*. **c. indanyl sodium** [USP], the sodium salt of the indanyl ester of carbenicillin disodium, $\text{C}_{26}\text{H}_{25}\text{N}_2\text{NaO}_6\text{S}$, having the same actions as the base; administered orally in the treatment of upper and lower urinary tract infections due to susceptible strains of *Pseudomonas* species, *Proteus* species, *Escherichia coli*, *Enterobacter*, and enterococci. Called also *carindacillin sodium*. **c. phenyl sodium**, the sodium salt of the phenyl ester of carbenicillin disodium, $\text{C}_{23}\text{H}_{22}\text{N}_2\text{NaO}_6\text{S}$, which has been used for the same purposes as carbenicillin indanyl sodium. Called also *carfecillin sodium*. **c. potassium**, the potassium salt of carbenicillin, $\text{C}_{17}\text{H}_{17}\text{KN}_2\text{O}_6\text{S}$. **c. sodium**, *c. disodium*.

carbenoxolone sodium (kar/ben-oks'o-lōn) chemical name: 3-(3-carboxy-1-oxopropoxy)-11-oxo-olean-12-en-29-oic acid disodium salt. A derivative of glycyrrhizin, $\text{C}_{34}\text{H}_{48}\text{Na}_2\text{O}_7$, having marked anti-inflammatory actions and aldosterone-like activity; used in the treatment of gastric ulcer.

carbetapentane citrate (kar-ba'tah-pen'tān) chemical name: 1-phenylcyclopentanecarboxylic acid 2-(2-diethylaminoethoxy)ethyl citrate. An antitussive agent, $\text{C}_{20}\text{H}_{31}\text{NO}_3\cdot\text{C}_6\text{H}_8\text{O}_7$, with mild atropine-like antisecretory activity; used in the treatment of cough associated with upper respiratory infections, administered orally.

carbethyl salicylate (kar-beth'il) chemical name: salicylic ethyl ester carbonate. It is used as an analgesic and antiarthritic.

carbhemoglobin (karb/he-mo-glo/bin) carbaminohemoglobin.

carbide (kar/bid) a compound of carbon with an element or radical. **metallic c.**, a compound of carbon with a transition metal, as in Fe_3C (as distinguished from a salt-like carbide, such as CaC_2).

carbido (kar/bi-do'pah) [USP] chemical name: (S)- α -hy-

drazino-3,4-dihydroxy- α -methylmonohydrate benzene propanoic acid. An inhibitor, $\text{C}_{10}\text{H}_{14}\text{N}_2\text{O}_4\cdot\text{H}_2\text{O}$, of the decarboxylation of peripheral levodopa to dopamine, which does not penetrate the central nervous system. When given with levodopa, carbido produces higher brain concentrations of dopamine with lower doses of levodopa, thus lessening the side effects seen with higher doses. It is used orally, in combination with levodopa, as an antiparkinsonian agent, and has been used in the treatment of Lesch-Nyhan syndrome and Gilles de la Tourette syndrome.

carbimazole (kar-bi'mah-zōl) chemical name: carbonothioic acid *O*-ethyl-S-(1-methyl-1*H*-imidazol-2-yl) ester. An inhibitor of thyroid hormone synthesis occurring as a white or creamy white, crystalline powder; administered orally in the treatment of hyperthyroidism.

carbinol (kar/bi-nol) 1. methanol. 2. any aromatic or fatty alcohol formed by substituting one, two, or three hydrocarbon groups for hydrogen in methanol. **acetylmethyl c.**, a ketoisomer of aldol, $\text{CH}_3\cdot\text{CHOH}\cdot\text{CO}\cdot\text{CH}_3$, which is formed from glucose by certain bacteria and which is detected in a broth culture of bacteria by the Voges-Proskauer reaction. **dimethyl c.**, isopropyl alcohol.

carbinoxamine maleate (kar/bin-ok'sah-mēn) [USP] chemical name: 2-[(4-chlorophenyl)-2-pyridinylmethoxy-*N,N*-dimethylethanamine (Z)-2-butenedioate. A potent antihistaminic, $\text{C}_{18}\text{H}_{19}\text{ClN}_2\text{O}\cdot\text{C}_4\text{H}_4\text{O}_4$, occurring as a white, crystalline powder; used in the treatment of allergic disorders, administered orally.

carbo (kar/bo) [L.] charcoal. **c. activa'tus**, activated charcoal. **c. anima'lis**, a variety prepared from bones and other animal matter; a decolorizing agent. **c. anima'lis purifica'tus**, purified animal charcoal. **c. lig'ni**, wood charcoal, a deodorant, adsorbent, and disinfectant.

Carbocaine (kar/bo-kān) trademark for preparations of mepivacaine hydrochloride.

carbocholine (kar/bo-kō'lēn) carbachol.

carbocromen hydrochloride (kar/bo-kro'mēn) chromonar hydrochloride.

carbocyclic (kar/bo-si'klik) having or pertaining to a closed chain or ring formation which includes only carbon atoms; said of chemical compounds.

carbocysteine (kar/bo-sis-te'in) chemical name: *S*-(carboxymethyl)cysteine; a mucolytic, $\text{C}_5\text{H}_9\text{NO}_3\text{S}$.

carbodiimide (kar/bo-di-im'id) a derivative of urea, $\text{NH}_2\text{C:NH}$.

carbogaseous (kar/bo-gas'e-us) charged with carbon dioxide gas.

carbogen (kar/bo-jen) a mixture of oxygen with 5 per cent carbon dioxide.

carbohemias (kar/bo-he'me-ah) [*carbon* dioxide + Gr. *haima* blood + *-ia*] the presence of carbon monoxide in the blood.

carbohemoglobin (kar/bo-he-mo-glo/bin) carbaminohemoglobin.

carbohydrase (kar/bo-hi'drās) any of a group of enzymes that catalyze the hydrolysis of higher carbohydrates to lower forms, each enzyme being usually specific for one substrate only.

carbohydrate (kar/bo-hi'drāt) an aldehyde or ketone derivative of a polyhydric alcohol, particularly of the pentahydric and hexahydric alcohols. They are so named because the hydrogen and oxygen are usually in the proportion to form water, $(\text{CH}_2\text{O})_n$. The most important carbohydrates are the starches, sugars, celluloses, and gums. They are classified into mono-, di-, tri-, poly- and heterosaccharides. **reserve c's**, carbohydrates that can be stored in the plant or animal in the form of high molecular weight, hydrolyzable compounds such as starch or glycogen.

carbohydraturia (kar/bo-hi'drah-tu're-ah) excess of carbohydrates in the urine.

carbohydrogenic (kar/bo-hi'dro-jen'ik) producing carbohydrates.

carbolate (kar/bo-lāt) 1. phenolate. 2. to charge with carbolic acid.

carbolfuchsin (kar/bol-fōōk'sin) see *Table of Stains*, and see under *solution*.

carboligase (kar/bol-i'gās) an enzyme found in both plant and animal tissues that catalyzes the linking up of carbon atoms and thus changes pyruvic acid to acetyl-methyl-carbinol.

carbolism (kar/bol-izm) phenol poisoning.

carbolize (kar/bol-iz) to treat with phenol.

carboluria (kar/bo-lu're-ah) [*carbolic* + Gr. *ouron* urine + *-ia*] the presence of phenol in the urine.

carbolyxylene (kar/bol-zil'ēn) a mixture of 1 part carbolic acid and 3 parts xylene, used for clearing microscopical sections.

carbomer, carbomer 934 P (kar/bo-mer) [NF] a polymer of acrylic acid, cross-linked with a polyfunctional agent; used as an emulsifying agent and as a suspending agent in pharmaceutical preparations.

carbometer (kar-bom'ē-ter) (obs.) carbonometer.

carbometry (kar-bom'ē-tre) (obs.) carbonometry.

carbomycin (kar/bo-mi'sin) a crystalline monobasic antibiotic isolated from the elaborated products of *Streptomyces halstedii* or

produced by other means; it is bacteriostatic for gram-positive organisms.

carbon (kar'bon) [L. *carbo*, coal, charcoal] 1. a nonmetallic tetrad element, found nearly pure in the diamond, and approximately pure in charcoal, graphite, and anthracite; symbol, C; atomic number, 6; atomic weight, 12.011. 2. an electrode made of carbon shell in which medicaments may be enclosed. ¹³C, a natural isotope of carbon, of atomic mass 13, used as a tracer in chemical reactions in living tissue. ¹⁴C, a radioactive isotope of carbon, of atomic mass 14, used in cancer and metabolic research.

c. dioxide, an odorless, colorless gas, CO₂, resulting from the oxidation of carbon. It is formed in the tissues and eliminated by the lungs. CO₂ and the carbonates assist in maintaining the neutrality of the tissues and fluids of the body. Inhalations of carbon dioxide, containing not less than 99 percent by volume of CO₂ [USP], mixed with air or oxygen, are used to stimulate respiration. Solid carbon dioxide (*Dry Ice* or *carbon dioxide snow*) has been used as an escharotic to destroy certain skin lesions. **c. disulfide**, a colorless, flammable, poisonous liquid, CS₂, used as a solvent; it is a counterirritant and has local anesthetic properties but is not used as such. **c. monoxide**, a colorless poisonous gas, CO, formed by burning carbon or organic fuels with a scanty supply of oxygen; it causes asphyxiation by combining irreversibly with the blood hemoglobin. **c. oxysulfide**, a colorless gas, COS, uniting with air to form an explosive mixture. **radioactive c.**, radiocarbon. **c. tetrachloride** [NF], a clear, colorless, volatile liquid, CCl₄, used as a solvent in pharmaceutical preparations. Inhalation of its vapors can depress central nervous system activity and cause degeneration of the liver and kidneys. Called also *perchlormethane* and *tetrachlormethane*. **c. trichloride**, a white solid, hexachlorethane, C₂Cl₆; it is a stimulant and has local anesthetic properties but is not used as such.

carbonate (kar'bon-āt) any salt of carbonic acid. **ferrous c.**, a compound, FeCO₃, used in iron deficiency anemia; called also *iron carbonate*.

carbonemia (kar'bon-e'me-ah) carbohememia.

carbonize (kar'bo-nīz) to char or to convert into charcoal.

carbonometer (kar'bo-nom'ē-ter) (*obs.*) an apparatus for performing carbonometry.

carbonometry (kar'bo-nom'ē-tre) [*carbon* + Gr. *metron* measure] (*obs.*) measurement of the amount of carbon dioxide exhaled with the breath.

carbonuria (kar'bo-nu're-ah) [*carbon* + Gr. *ouron* urine + *-ia*] the presence of carbon dioxide or other carbon compounds in the urine. **dysoxidative c.**, pathologic increase of carbon compounds in the urine due to deficient oxidation.

carbonyl (kar'bo-nīl) [*carbon* + Gr. *hylē* matter] the organic radical, C=O, occurring in compounds such as aldehydes, ketones, carboxylic acids, and esters. **c. chloride**, phosgene.

carbophilic (kar-bo-fil'ik) capnophilic.

carboprost (kar'bo-prost) chemical name: (5*z*)-9*α*,11*α*,15-trihydroxy-15*S*-methyl-prosta-5,13*E*-dien-1-oic acid. A synthetic 15-methyl analogue of dinoprost, a prostaglandin of the F type, C₂₁H₃₆O₅; it has been used as an oxytocic for termination of pregnancy and missed abortion, administered intramuscularly. **c. methyl**, the methyl ester of carboprost, C₂₂H₃₈O₅, having the same actions and similar uses as the base; administered in vaginal suppositories or in an intravaginal device. **c. tromethamine**, an oxytocic compound of carboprost and 2-amino-2-(hydroxymethyl)-1,3-propanediol (1:1), C₂₁H₃₆O₅·C₄H₁₁NO₃.

Carborundum (kar'bo-run'dum) trademark for a compound of carbon and silicon, silicon carbide, SiC, a substance which ranks next to the diamond in hardness; used as an abrasive and as a refractory.

Carbowax (kar'bo-waks) trademark for a series of polyethylene glycols; used in compounding water-soluble ointment vehicles.

carboxydismutase (kar-bok'se-dis'mu-tās) an enzyme employed in autotrophic fixation of carbon dioxide; it catalyzes the reaction in which CO₂ is fixed to ribulose-1,5-diphosphate with the formation of two molecules of 3-phosphoglyceric acid.

Carboxydomonas (kar-bok'se-do-mo'nas) a genus of microorganisms of the family Methanomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as chemoautotrophic rod-shaped cells capable of securing growth energy by oxidizing CO to CO₂. The type species is *C. oligocarbophila*.

γ-carboxyglutamate (kar-bok'se-gloo'tah-māt) a salt or dissociated form of carboxyglutamic acid; see *acid*.

carboxyhemoglobin (kar-bok'se-he'mo-glo'bin) hemoglobin combined with carbon monoxide, which occupies the sites on the hemoglobin molecule that normally bind with oxygen and which is not readily displaced from the molecule; exposure to carbon monoxide thus results in cellular anoxia.

carboxyhemoglobinemia (kar-bok'se-he'mo-glo'bin-e'me-ah) the presence of carboxyhemoglobin in the blood.

carboxyl (kar-bok'sil) the monovalent radical, —COOH, occurring in those organic acids termed carboxylic acids.

carboxylase (kar-bok'sī-lās) an enzyme that catalyzes the removal of carbon dioxide from the carboxyl group of alpha keto

acids. Decarboxylation of pyruvic acid is the essential step in alcoholic fermentation by which pyruvic acid is converted into acetaldehyde and carbon dioxide. **acetyl-CoA c.**, an enzyme that catalyzes the conversion of ATP, acetyl-CoA, CO₂, and water to ADP, orthophosphate, and malonyl-CoA. **amino acid c.**, an enzyme in many bacteria that catalyzes the removal of CO₂ from amino acids, thus producing amines. **methylcrotonoyl CoA c.**, an enzyme that catalyzes the conversion of ATP, 3-methylcrotonoyl-CoA, CO₂, and water to ADP, orthophosphate, and 3-methylglutaconyl-CoA. **phosphopyruvate c.**, an enzyme of the lyase class that catalyzes the conversion of GTP and oxaloacetate to phosphoenolpyruvate, CO₂, and GDP. **propionyl-CoA c.**, an enzyme that catalyzes the conversion of ATP, propionyl-CoA, CO₂, and water to ADP, orthophosphate, and methylmalonyl-CoA. **pyruvate c.**, an enzyme (biotin protein) that catalyzes the conversion of pyruvic acid to acetaldehyde and carbon dioxide.

carboxylation (kar-bok'sī-la'shun) the addition of a carboxyl group, as to pyruvate to form oxaloacetate.

carboxylesterase (kar-bok'sil-es'ter-ās) carboxylic-ester hydrolase: an enzyme that catalyzes the hydrolysis of the esters of carboxylic acids.

carboxyltransferase (kar-bok'sil-trans'fer-ās) an enzyme that catalyzes the transfer of a carboxyl group, as in the carboxylation of pyruvate to form oxaloacetate; called also *transcarboxylase*.

carboxy-lyase (kar-bok'se-li'ās) any of a group of lyases that catalyzes the removal of a carboxyl group; it includes the carboxylases and decarboxylases.

carboxymethylcellulose sodium (kar-bok'se-meth'il-sel'u-lōs) [USP] the sodium salt of a polycarboxymethyl ether of cellulose; used as a suspending agent, tablet excipient, and viscosity-increasing agent in pharmaceutical preparations, and administered orally as a cathartic.

carboxymyoglobin (kar-bok'se-mi'o-glo'bin) a compound formed from myoglobin on exposure to carbon monoxide, with formation of a covalent bond with oxygen and without change of the charge of the ferrous state.

carboxypeptidase (kar-bok'se-pep'tī-dās) an exopeptidase that acts on the peptide bond of terminal amino acids possessing a free carboxyl group. Carboxypeptidase A (peptidyl-L-amino-acid hydrolase) and B (peptidyl-L-lysine hydrolase) are zinc-proteins that occur in the pancreas. Yeast carboxypeptidase is peptidyl-glycine hydrolase.

carboxypolypeptidase (kar-bok'se-pol'e-pep'tī-dās) an exopeptidase that, in a polypeptide, attacks the peptide linkage of a terminal amino acid possessing a free carboxyl group, releasing a free amino acid.

carbromal (kar-bro'mal) chemical name: *N*-(aminocarbonyl)-2-bromo-2-ethylbutanamide. A sedative with weak hypnotic activity, C₇H₁₃BrN₂O, occurring as a white, crystalline powder; administered orally.

carbuncle (kar'bung-kl) [L. *carbunculus* little coal] a necrotizing infection of skin and subcutaneous tissue composed of a cluster of boils (furuncles), usually due to *Staphylococcus aureus*, with multiple formed or incipient drainage sinuses. **malignant c.**, anthrax in man. **renal c.**, a massive localized parenchymal suppuration consequent to bacterial metastasis, following localized vascular thrombosis or infarction of the kidney.

carbuncular (kar-bung'ku-lar) resembling or of the nature of a carbuncle.

carbunculoid (kar-bung'ku-loid) resembling a carbuncle.

carbunculosis (kar-bung'ku-lo'sis) a condition marked by the development of carbuncles.

carbutamide (kar-bu'tah-mīd) chemical name: 1-butyl-3-sulfamylurea; a hypoglycemic agent, C₁₁H₁₇N₃O₃S.

carbaterol hydrochloride (kar-bu'ter-ōl) chemical name: [5-[2-(1,1-dimethylethyl)amino]-1-hydroxyethyl]-2-hydroxyphenyl]urea monohydrochloride. An adrenergic, C₁₃H₂₁N₃O₃·HCl, which has been used as a bronchodilator, administered by inhalation.

carcass (kar'kas) [Fr. *carcasse*] a dead body; generally applied to other than a human body.

Carcassonne's ligament, perineal ligament (kar-kah-sonz') [Bernard Gauderic Carcassonne, French surgeon, born 1728] see *ligamentum puboprostaticum* and *ligamentum transversum perinei*.

carceag (kar'se-ag) a disease of sheep in the Balkan States caused by *Babesia (Piroplasma) ovis* and transmitted by the tick *Rhipicephalus bursa*.

carciag (kar'se-ag) carceag.

carcinectomy (kar'sin-ek'tō-me) [*carcinoma* + Gr. *ektomē* excision] excision of carcinoma.

carcinelcosis (kar'sin-el-kō'sis) [Gr. *karkinos* cancer + *helkōsis* ulceration] (*obs.*) malignant ulceration.

carcinemia (kar'sin-e'me-ah) [*carcinoma* + Gr. *haima* blood + *-ia*] cancerous cachexia.

carcino- [Gk. *karkinos* a crab] a combining form meaning relationship to carcinoma.

carcinoembryonic (kar/'sin-o-em/'bre-on/'ik) oncofetal; relating to carcinoma and to the embryonic state; see under *antigen*.

carcinogen (kar-sin/'o-jen) any cancer-producing substance.

carcinogenesis (kar/'si-no-jen/'ē-sis) [Gr. *karkinos* cancer + *genesis* production] the production of carcinoma.

carcinogenic (kar/'si-no-jen/'ik) producing carcinoma.

carcinogenicity (kar/'si-no-jē-nis/'i-te) the power, ability, or tendency to produce carcinoma.

carcinoid (kar/'si-noid) a yellow circumscribed tumor occurring in the small intestine, appendix, stomach, or colon; argentaffinoma (q.v.). See also under *syndrome*.

carcinology (kar/'si-nol/'o-je) (*obs.*) oncology.

carcinolysin (kar/'si-nol/'i-sin) [*carcinoma* + Gr. *lysis* dissolution] a ferment derived from a Chinese variety of pine called "hausung." It has been given subcutaneously or intramuscularly for cancer.

carcinolysis (kar/'si-nol/'i-sis) destruction of carcinoma cells, as by perfusion of an antineoplastic agent through the vessels of the body segment in which the growth occurs.

carcinolytic (kar/'si-no-lit/'ik) [*carcinoma* + Gr. *lytikos* destroying] pertaining to, characterized by, or causing carcinolysis.

carcinoma (kar/'si-no/'mah), pl. *carcinomas* or *carcino'mata* [Gr. *karkinos* from *karkinos* crab, cancer] a malignant new growth made up of epithelial cells tending to infiltrate the surrounding tissues and give rise to metastases. **acinar c.**, **acinous c.**, alveolar adenocarcinoma. **adenocystic c.**, adenoid cystic c. **adenoid cystic c.**, carcinoma characterized by bands or cylinders of hyalinized or mucinous stroma separating or surrounded by nests or cords of small epithelial cells. When the cylinders occur within masses of epithelial cells, they give the tissue a perforated, sievelike, or cribriform appearance. Such tumors occur in the mammary glands, the mucous glands of the upper and lower respiratory tract, and the salivary glands. They are malignant but slow-growing, and tend to spread locally via the nerves. Called also *adenocystic c.*, *adenomyoepithelioma*, *cribriform c.*, and *cylindroma*. NOTE: Certain unrelated tumors may have a cylindromatous or adenoid cystic pattern, e.g., cutaneous cylindroma, ameloblastoma, and a type of basal cell carcinoma of the skin. **c. adenomatousum**, adenocarcinoma. **c. of adrenal cortex**, malignant tumors of adrenal cortical cells that may cause endocrine disorders such as Cushing's syndrome and adrenogenital syndrome. **alveolar c.**, alveolar adenocarcinoma. **alveolar cell c.**, carcinoma of the lung marked clinically by severe cough with voluminous expectoration and histologically by distinctive, tall, columnar to cuboidal epithelial cells that line up along the alveolar septa, project into the alveolar spaces in numerous branching papillary formations, and may contain mucinous secretion; called also *bronchiolar c.*, *alveolar cell tumor*, and *pulmonary adenomatosis*. **basal cell c.**, **c. basocellula're**, an epithelial tumor that seldom metastasizes but has potentialities for local invasion and destruction. Clinically, it is divided into types: nodular, cicatricial, morphaic, and erythematoid (pagetoid). Called also *basaloma* or *basiloma*, and *hair matrix c.* **basaloid c.**, a rare transitional-cell carcinoma of the anus, resembling basal cell carcinoma of the skin. **basosquamous cell c.**, carcinoma that histologically exhibits both basal and squamous elements. **bronchioalveolar c.**, **bronchiolar c.**, alveolar cell c. **bronchiolar c.**, alveolar cell c. **bronchogenic c.**, carcinoma of the lung, so called because it arises from the epithelium of the bronchial tree. **cerebri-form c.**, medullary c. **cholangiocellular c.**, primary carcinoma of the liver originating in bile duct cells, called also *cholangioma* and *cholangiocarcinoma*. **chorionic c.**, chorio-carcinoma. **colloid c.**, mucinous c. **comedo c.**, comedocarcinoma. **corpus c.**, carcinoma of the body of the uterus. **cribriform c.**, adenoid cystic c. **c. en cuirasse**, a rare carcinoma infiltrating the entire skin of the anterior chest wall and frequently breaking it down. **c. cuta'neum**, malignant epithelioma of the skin. **cylindrical c.**, **cylindrical cell c.**, carcinoma in which the cells are cylindrical or nearly so. **duct c.**, carcinoma of any duct. **c. du'rūm** (*obs.*), scirrhous c. **embryonal c.**, 1. a highly malignant, primitive form of carcinoma, probably of germinal cell or teratomatous derivation, usually arising in a gonad and rarely in other sites. 2. (*obs.*) seminoma. **encephaloid c.** (*obs.*), medullary c. **epibulbar c.**, carcinoma that starts at the edge of the cornea and spreads over the cornea and conjunctiva. **epidermoid c.**, carcinoma in which the cells tend to differentiate in the same way that the cells of the epidermis do; that is, they tend to form prickle cells and undergo cornification. **c. epithelia'le adeno'i'des**, adenoid basal cell c. **exophytic c.**, a malignant epithelial neoplasm with marked outward growth like a wart or papilloma. **c. ex ul'cere** (*obs.*), carcinomatous degeneration of a benign ulcer. **c. fibro'sum**, scirrhous c. **gelatiniform c.**, mucinous c. **gelatinous c.**, colloid c. **giant cell c.**, carcinoma containing many giant cells. **c. gigantocellula're**, carcinoma containing many giant cells. **glandular c.**, adenocarcinoma. **granulosa cell c.**, see under *tumor*. **hair-matrix c.**, basal cell c. **hematoid c.** (*obs.*), a highly vascular carcinoma.

hepatocellular c., primary carcinoma of the liver cells; called also *hepatoma*, *malignant hepatoma*, and *hepatocarcinoma*. **Hürthle cell c.**, see under *tumor*. **hyaline c.** (*obs.*), mucinous c. **hypernephroid c.**, renal cell c. **infantile embryonal c.**, mesonephroma (type 2). **c. in si'tu**, a neoplastic entity wherein the tumor cells are confined to the epithelium of origin, without invasion of the basement membrane; popularly applied to such cells in the uterine cervix. Called also *cancer in situ* and *preinvasive c.* **intraepidermal c.**, carcinoma confined within the epidermis, the basal layer of the epidermis not being penetrated by the proliferating cells; Bowen's disease. **intraepithelial c.**, c. in situ. **Krompecher's c.**, rodent ulcer. **Kulchitzky-cell c.**, carcinoid tumor of the small or large intestine. **large-cell c.**, a bronchogenic tumor of undifferentiated (anaplastic) cells of large size. **lenticular c.**, **c. lenticularu're**, scirrhous carcinoma of the skin with the formation of flattened papules and nodules which run together, forming fungoid masses. **lipomatous c.**, (*obs.*), carcinoma with fatty degeneration. **lymphoepithelial c.**, lymphoepithelioma. **c. mastitoi'des** (*obs.*), medullary carcinoma of the breast. **c. medulla're**, **medullary c.**, carcinoma composed mainly of epithelial elements with little or no stroma. **c. melano'des**, **melanotic c.** (*obs.*), malignant melanoma. **c. mol'le**, medullary c. **mucinous c.**, adenocarcinoma producing mucin in significant amounts; sometimes erroneously called *colloid* or *gelatinous colloma*. **c. mucip'arum**, mucinous c. **c. mucocellula're**, Krukenberg's tumor. **mucopidermoid c.**, a malignant epithelial tumor of glandular tissue, especially the salivary glands, characterized by acini with mucus-producing cells and by the presence of malignant squamous elements. **c. muco'sum**, **mucous c.**, mucinous c. **c. myxomato'des**, carcinoma in which the stroma has undergone myxomatous degeneration. **nasopharyngeal c.**, a malignant tumor arising in the epithelial lining of the space behind the nose (the nasopharynx) and occurring at high frequency in southern China. The Epstein-Barr virus has been implicated as a causative agent. **c. ni'grum** (*obs.*), malignant melanoma. **oat cell c.**, a small-cell c. **c. ossif'icans**, **osteoid c.**, carcinoma in which there is osteoid or osseous metaplasia of the stroma. **papillary c.**, carcinoma in which there are papillary excrescences. **periportal c.**, carcinoma of the liver, extending along and around the portal vessels. **preinvasive c.**, c. in situ. **prickle cell c.**, squamous cell c. **pultaceous c.** (*obs.*), comedocarcinoma. **renal cell c. of kidney**, carcinoma of the renal parenchyma usually occurring in middle age or later and composed of tubular cells in varying arrangements; symptoms depend on extent of invasion. Called also *adenocarcinoma of kidney* and *hypernephroid carcinoma*. **reserve cell c.**, oat cell c. **c. sarcomato'des** (*obs.*), spindle cell c. **schneiderian c.**, a neoplasm of the mucosa of the nose and the paranasal sinuses. **scirrhous c.**, carcinoma with a hard structure owing to the formation of dense connective tissue in the stroma. **c. scro'ti**, carcinoma of the scrotum. **signet-ring cell c.**, a highly malignant, mucus-secreting tumor in which the mucus-secreting cells are anaplastic and appear rounded, with the nucleus displaced to one side by a globule of mucus in the cytoplasm. **c. sim'plex**, an undifferentiated carcinoma. **small-cell c.**, a radiosensitive tumor composed of small, oval, undifferentiated cells that are intensely hematoxyphilic and typically bronchogenic. Called also *oat-cell c.* **solanoid c.** (*obs.*), scirrhous c. **spheroidal cell c.**, c. simplex. **spindle cell c.**, squamous cell carcinoma marked by fusiform development of rapidly proliferating cells. **c. spongio'sum**, medullary c. **squamous c.**, **squamous cell c.**, carcinoma developed from squamous epithelium, and having cuboid cells. **string c.**, a carcinoma of the large intestine, most commonly the ascending or transverse colon, giving it the appearance of being bound tightly by a string. **c. telangiectat'icum**, **c. telangiecto'des**, carcinoma involving the cutaneous capillaries and producing telangiectatic changes. **transitional cell c.**, a malignant tumor arising from a transitional type of stratified epithelium, usually affecting the urinary bladder. **c. tubero'sum**, **tuberous c.**, scirrhous carcinoma of the skin with the formation of nodular projections. **verrucous c.**, a variety of epidermoid carcinoma that has a predilection for the buccal mucosa but also affects other oral soft tissue, the larynx, and the genitals. It is a slow-growing, somewhat invasive, exophytic neoplasm, either papillary or verrucous in appearance. **c. vil-lo'sum**, carcinoma in which the cells are arranged in a villous pattern.

carcinomata (kar/'si-no/'mah-tah) plural of *carcinoma*.

carcinomatoid (kar/'si-nom/'ah-toid) resembling carcinoma.

carcinomatophobia (kar/'si-no/'mah-to-fo/'be-ah) cancerphobia.

carcinomatosis (kar/'si-no-mah-to/'sis) the condition of widespread dissemination of cancer throughout the body; called also *carcinosis*.

carcinomatous (kar/'si-nom/'ah-tus) pertaining to or of the nature of cancer; malignant.

carcinomectomy (kar/'si-no-mek/'to-me) carcinectomy.

carcinomelcosis (kar/'sī-no-mel-ko'sis) [*carcinoma* + Gr. *helkōsis* ulceration] (*obs.*) an ulcerated carcinoma.

carcinophilia (kar/'sī-no-fil'e-ah) [*carcinoma* + Gr. *philein* to love] special affinity for cancerous tissue.

carcinophilic (kar/'sī-no-fil'ik) having an affinity for cancerous tissue.

carcinophobia (kar/'sī-no-fo'be-ah) [*carcinoma* + *phobia*] cancerphobia.

carcinosarcoma (kar/'sī-no-sar-ko'mah) a malignant tumor composed of carcinomatous and sarcomatous tissues. **embryonal c.**, Wilms' tumor.

carcinosis (kar/'sī-no'sis) carcinomatosis. **miliary c.**, carcinomatosis marked by development of numerous nodules resembling miliary tubercles. **c. pleu'rae**, secondary cancer of the pleura in which the membrane is studded with nodules. **pulmonary c.**, alveolar cell carcinoma.

carcinostatic (kar/'sī-no-stat'ik) tending to check the growth of carcinoma.

carcinous (kar/'sī-nus) carcinomatous.

card- see *cardio-*.

cardamom (kar'dah-mom) [L. *cardamomum*; Gr. *kardamōmon*] the fruit of *Elettaria cardamomum* of the ginger family, a perennial herb native to tropical Asia; its seed is used as a flavoring agent, and has been used as a carminative. Also, the fruit of herbs of the same family, e.g., that of *Amomum*.

Cardarelli's sign (symptom) (kar-dar-el'ēz) [Antonio Cardarelli, Italian physician, 1831-1927] see under *sign*.

cardelmycin (kar-del-mi'sin) novobiocin.

Carden's amputation (kar'denz) [Henry Douglas Carden, English surgeon, 19th century] see under *amputation*.

cardia (kar'de-ah) [Gr. *kardia* heart] 1. ostium cardiacum. 2. that part of the stomach surrounding the esophagogastric junction which contains cardiac glands but lacks acid (parietal) and pepsin (chief) cells. **c. of stomach**, **c. ventric'uli**, ostium cardiacum [NA].

cardiac (kar'de-ak) [L. *cardiacus*, from Gr. *kardiakos*] 1. pertaining to the heart. 2. a cordial, or restorative medicine. 3. a person with a heart disorder. 4. pertaining to the portion of the stomach close to the esophagus; see also *cardiac glands*, under *gland*.

cardiagra (kar-de-ag'rah) [*cardia* + Gr. *agra* seizure] (*obs.*) gout or pain of the heart.

cardialgia (kar'de-al'je-ah) [*cardia* + *-algia*] 1. (*obs.*) an uneasy or painful sensation in the anterior chest or upper abdomen; heartburn. 2. cardiodynia.

cardianesthesia (kar'de-an'es-the'ze-ah) [*cardia* + *anesthesia*] (*obs.*) absence of sensation in the heart.

cardianeuria (kar'de-ah-nu're-ah) [*cardia* + Gr. *aneuros* without nerves + *-ia*] (*obs.*) deficiency of tone in the heart.

cardiant (kar'de-ant) a drug or agent stimulating the heart.

cardiasthenia (kar'de-as-the'ne-ah) [*cardia* + Gr. *astheneia* weakness] neurocirculatory asthenia.

cardiasthma (kar-de-as'mah) cardiac asthma.

cardiataxia (kar'de-ah-tak'se-ah) [*cardia* + *ataxia*] (*obs.*) incoordination in the movements of the heart.

cardiectasis (kar'de-ek'tah-sis) [*cardia* + Gr. *ektasis* dilatation] dilatation of the heart.

cardiectomized (kar'de-ek'tō-mizd) having the heart removed, as a cardiectomized animal.

cardiectomy (kar'de-ek'tō-me) [*cardia* + Gr. *ektomē* excision] excision of the cardiac portion of the stomach.

Cardilate (kar'dī-lāt) trademark for a preparation of erythrityl tetranitrate.

cardinal (kar'dī-nal) [L. *cardinalis*, from *cardo* a hinge] of primary or preeminent importance.

cardio-, card- [Gr. *kardia* heart] a combining form denoting relationship to the heart or to the cardiac orifice or portion of the stomach.

cardioaccelerator (kar'de-o-ak-sel'er-a-tor) 1. quickening the heart action. 2. an agent that accelerates the heart action.

cardioactive (kar'de-o-ak'tiv) having an effect upon the heart.

cardioangiography (kar'de-o-an''je-og'rah-fe) angiocardiology.

cardioangiology (kar'de-o-an''je-ol'o-je) [*cardio* + Gr. *angeion* vessel + *-logy*] the medical specialty which deals with the heart and blood vessels.

cardioaortic (kar'de-o-a-or'tik) pertaining to the heart and the aorta.

cardioarterial (kar'de-o-ar-te're-al) pertaining to the heart and the arteries.

cardiocairograph (kar'de-o-ki'ro-graf) [*cardio* + Gr. *kairos* time + *graphein* to write.] a technique by means of which roentgenograms of the heart can be made at any chosen phase of its cycle.

cardiocele (kar'de-o-sē'l') [*cardio* + Gr. *kēlē* tumor] protrusion

of the heart through a fissure of the diaphragm or through a wound.

cardiocentesis (kar'de-o-sen-te'sis) [*cardio* + Gr. *kentēsis* puncture] surgical puncture or incision of the heart; called also *cardiopuncture*.

cardiochhalasia (kar'de-o-kah-la'ze-ah) [*cardio* + Gr. *chhalasis* relaxation + *-ia*] relaxation or incompetence of sphincter action of the cardiac orifice of the stomach.

cardiocinetic (kar'de-o-sī-net'ik) cardiokinetic.

cardiocirculatory (kar'de-o-ser'ku-lah-tor'e) pertaining to blood flow through the heart and vascular system.

cardiocirrhosis (kar'de-o-sir-ro'sis) [*cardio* + *cirrhosis*] cirrhosis of the liver complicating heart disease with recurrent intractable congestive heart failure; cardiac cirrhosis. See *Hutinel's disease*, under *disease*.

cardioclasis (kar'de-ok'lah-sis) [*cardio* + Gr. *klasis* break] (*obs.*) rupture of the heart.

cardiodiaphragmatic (kar'de-o-di'ah-frag-mat'ik) pertaining to the heart and diaphragm.

cardiodilator (kar'de-o-di'la-tor) an instrument for dilating the cardia in cardiospasm or stricture.

cardiodiosis (kar'de-o-di-o'sis) the dilatation of the cardiac end of the stomach.

cardiodynamics (kar'de-o-di-nam'iks) [*cardio* + *dynamics*] the science of the motions and forces involved in the heart's action.

cardiodynia (kar'de-o-din'e-ah) [*cardio* + Gr. *odynē* pain] pain in the heart.

cardioesophageal (kar'de-o-ē-sof'ah-je'al) pertaining to the cardia of the stomach and the esophagus, as the cardioesophageal junction or sphincter.

cardiogenesis (kar'de-o-jen'ē-sis) [*cardio* + Gr. *gennan* to produce] the development of the heart in the embryo.

cardiogenic (kar'de-o-jen'ik) [*cardio* + Gr. *gennan* to produce] 1. originating in the heart; caused by abnormal function of the heart. 2. pertaining to cardiogenesis.

Cardiografin (kar'de-o-gra'fin) trademark for meglumine diatrizoate injection.

cardiogram (kar'de-o-gram'') [*cardio* + Gr. *gramma* a writing] a tracing of a cardiac event made by means of the cardiograph. **apex c.**, a graphic record, in the form of a simple displacement curve, of the thrust of the apex of the heart as manifested on the surface of the body. **esophageal c.**, a tracing of the contractions of the left atrium made by registering the pulsations in the esophagus. **negative c.**, a cardiogram in which the curve falls below the abscissa instead of rising above it. **precordial c.**, kinetocardiogram. **vector c.**, vectorcardiogram.

cardiograph (kar'de-o-graf'') [*cardio* + Gr. *graphein* to write] an instrument designed to record some element of the heartbeat.

cardiographic (kar'de-o-graf'ik) pertaining to cardiography.

cardiography (kar'de-og'rah-fe) the technique of graphically recording some physical or functional aspects of the heart. See also *ballistocardiography*, *echocardiography*, *electrocardiography*, *electrokymography*, *kinetocardiography*, *phonocardiography*, *roentgen kymography*, *vibrocardiography*, etc. **apex c.**, the graphic recording of low-frequency pulsations at the anterior chest wall over the apex of the heart. **ultrasonic c.**, echocardiography. **vector c.**, vectorcardiography.

Cardio-Green (kar'de-o-grēn) trademark for a preparation of indocyanine green.

cardiohepatic (kar'de-o-hē-pat'ik) pertaining to the heart and the liver.

cardiohepatomegaly (kar'de-o-hep'ah-to-meg'ah-le) enlargement of the heart and liver.

cardioid (kar'de-oid) heartlike; resembling a heart.

cardioinhibitor (kar'de-o-in-hib'i-ter) an agent which restrains the heart's action.

cardioinhibitory (kar'de-o-in-hib'i-to-re) restraining or inhibiting the movements of the heart.

cardiokinetic (kar'de-o-ki-net'ik) 1. stimulating the action of the heart. 2. an agent that stimulates action of the heart.

cardiokymographic (kar'de-o-ki'mo-graf'ik) pertaining to cardiokymography.

cardiokymography (kar'de-o-ki-mog'rah-fe) the recording of the motion of the heart by means of the electrokymograph.

cardiolipin (kar'de-o-lip'in) [*cardio* + Gr. *lipos* fat] 1,3-diphosphatidylglycerol, a phospholipid synthesized in mitochondria and also abundant in bacterial cell membranes; it has immunologic properties and, when combined with lecithin and cholesterol, forms an antigen for use in flocculation and precipitation tests for syphilis. It combines with Wassermann antibody but not with the antibody responsible for treponema immobilization.

cardiolith (kar'de-o-lith'') [*cardio* + Gr. *lithos* stone] (*obs.*) a concretion or calculus within the heart.

cardiologist (kar-de-ol'o-jist) a physician skilled in the diagnosis and treatment of heart disease.

cardiology (kar-de-ol'o-je) [*cardio* + *-logy*] the study of the heart and its functions.

cardiolysin (kar'de-ol'i-sin) a lysin that acts on heart muscle.

cardiolysis (kar'de-ol'i-sis) [*cardio* + *Gr. lysis* loosening] an operation of freeing the heart and its adherent pericardium from its adhesion to the sternal periosteum in adhesive mediastinopericarditis; it is done by resecting the ribs and the sternum over the pericardium. See also *Brauer's operation*, under *operation*.

cardiomalacia (kar'de-o-mah-la'she-ah) [*cardio* + *Gr. malakia* softness] morbid softening of the muscular substance of the heart.

cardiomegalia (kar'de-o-mē-ga'le-ah) cardiomegaly. **c. glycogen'ica circumscripta**, glycogenic cardiomegaly. **c. glycogen'ica diffusa**, glycogen storage disease, type II; see under *disease*.

cardiomegaly (kar'de-o-meg'ah-le) [*cardio* + *Gr. megas* large] cardiac hypertrophy. **glycogenic c.**, a morbid condition characterized by enlargement of the heart, with localized deposits of glycogen in the heart muscle; called also *cardiomegalia glycogenica circumscripta*.

cardiomelanosis (kar'de-o-mel'ah-no'sis) melanosis of the heart.

cardiometer (kar'de-om'ē-ter) [*cardio* + *Gr. metron* measure] an instrument used in estimating the power of the heart's action.

cardiometry (kar'de-om'ē-tre) the estimation of the force of the heart's action.

cardiomotility (kar'de-o-mo-til'i-te) the movements of the heart; the motility of the heart.

cardiomyoliposis (kar'de-o-mi'o-li-po'sis) [*cardio* + *Gr. mys* muscle + *lipos* fat] fatty degeneration of the heart muscle.

cardiomyopathy (kar'de-o-mi-op'ah-the) [*cardio* + *Gr. mys* muscle + *pathos* disease] a general diagnostic term designating primary myocardial disease, often of obscure or unknown etiology. **alcoholic c.**, a congestive cardiomyopathy resulting in cardiac enlargement and low cardiac output, occurring in chronic alcoholics; the heart disease in beriberi (thiamine deficiency) is also associated with alcoholism. **congestive c.**, a syndrome characterized by cardiac enlargement, especially of the left ventricle, myocardial dysfunction, and congestive heart failure. **infiltrative c.**, myocardial disease resulting from deposition in the heart tissue of abnormal substances, as may occur in amyloidosis, hemochromatosis, etc. **peripartum c.**, cardiac enlargement and congestive heart failure of unknown cause beginning in the last month of gestation or the first few months after delivery. **postpartum c.**, cardiac enlargement and congestive heart failure of unknown cause occurring in a mother during the first few months after delivery of a child. **primary c.**, that in which the basic pathological process involves the myocardium itself and not other cardiac structures and in which the cause is unknown and not part of a disease affecting other organs. **restrictive c.**, a form in which the ventricular walls are excessively rigid, impeding ventricular filling; it is marked by abnormal diastolic function but by normal or nearly normal systolic function. **secondary c.**, any form that is due to another cardiovascular disorder (e.g., hypertension) or is a manifestation of systemic disease (e.g., sarcoidosis).

cardiomyopexy (kar'de-o-mi'o-pek'se) [*cardio* + *Gr. mys* muscle + *pēxis* fixation] surgical removal of the epicardium and application of a pedicled flap of adjacent muscle to the denuded myocardium and pericardium, as a means of supplying collateral circulation to the heart.

cardiomyotomy (kar'de-o-mi-ot'ō-me) [*cardio* + *Gr. mys* muscle + *tomē* a cutting] esophagogastromyotomy.

cardionecrosis (kar'de-o-nē-kro'sis) necrosis or gangrene of the heart.

cardionector (kar'de-o-nek'ter) [*cardio* + *L. nector* joiner] the structures that regulate the heart beat, comprising the sinoatrial node (atrionector), the bundle of His (ventriculonector), and the atrioventricular node.

cardionephric (kar'de-o-nef'rik) pertaining to the heart and the kidney.

cardioneural (kar'de-o-nu'ral) pertaining to the heart and nervous system.

cardioneurosis (kar'de-o-nu-ro'sis) [*cardio* + *neurosis*] neurocirculatory asthenia.

cardio-omentopexy (kar'de-o-o-men'to-pek'se) the operation of suturing a portion of the omentum to the heart, the omentum having been drawn through an incision in the diaphragm.

cardiopalmus (kar'de-o-pal'mus) [*cardio* + *Gr. palmos* palpitation] (*obs.*) palpitation of the heart.

cardiopalludism (kar'de-o-pal'u-dizm) heart disease due to malaria, marked by gallop rhythm in the tricuspid area, intermittent heart action, dilatation of the right heart, and reduplication of the diastolic sound.

cardiopath (kar'de-o-path) a person with heart disease.

cardiopathia (kar'de-o-path'e-ah) cardiopathy.

cardiopathic (kar'de-o-path'ik) pertaining to or marked by disease of the heart.

cardiopathy (kar'de-op'ah-the) [*cardio* + *Gr. pathos* disease] any disorder or disease of the heart. In addition to heart disease of inflammatory origin, there are *arteriosclerotic cardiopathy*, due to arteriosclerosis; *fatty cardiopathy*, due to growth of fatty tissue; *hypertensive cardiopathy*, due to high blood pressure; *nephropathic cardiopathy*, due to kidney disease; *thyrotoxic cardiopathy*, due to thyroid intoxication; *toxic cardiopathy*, due to the effect of some toxin; *valvular cardiopathy*, due to faulty valve action. **infarctoid c.**, a heart condition with symptoms resembling those of myocardial infarction.

cardiopericardiopexy (kar'de-o-per'i-kar'de-o-pek-se) [*cardio* + *pericardium* + *Gr. pēxis* fixation] the operative establishment of adhesive pericarditis, for the relief of coronary disease.

cardiopericarditis (kar'de-o-per'i-kar-di'tis) [*cardio* + *pericarditis*] inflammation of both the heart and the pericardium.

cardiophobia (kar'de-o-fo-be-ah) [*cardio* + *Gr. phobē* to be affrighted by + *-ia*] morbid dread of heart disease.

cardiophone (kar'de-o-fōn') [*cardio* + *Gr. phōnē* voice] (*obs.*) an instrument for recording the heart sounds.

cardiophrenia (kar'de-o-fre'ne-ah) (*obs.*) neurocirculatory asthenia.

cardioplasty (kar'de-o-plas'te) [*cardio* + *Gr. plassein* to form] esophagogastroplasty.

cardioplegia (kar'de-o-ple'je-ah) [*cardio* + *Gr. plēgē* stroke + *-ia*] arrest of contraction of the myocardium, as may be induced by the use of chemical compounds or of cold (cryocardioplegia) in the performance of surgery upon the heart.

cardioplegic (kar'de-o-plej'ik) pertaining to cardioplegia.

cardiopneumatic (kar'de-o-nu-mat'ik) [*cardio* + *Gr. pneuma* breath] of or pertaining to the heart and respiration.

cardiopneumograph (kar'de-o-nu'mo-graf) [*cardio* + *Gr. pneuma* breath + *graphein* to record] an apparatus that registers cardiopneumatic movements.

cardiopneumonopexy (kar'de-o-nu-mon'o-pek'se) an operation designed to provide collateral blood supply to the heart muscle by various methods of connecting the heart with the left lung, including production of vascular adhesions through the use of mechanical abrasion or chemical irritants.

cardiopsis (kar'de-o-to'se-ah) cardiopsis.

cardiopsis (kar'de-op'tō-sis) [*cardio* + *Gr. ptōsis* falling] downward displacement of the heart; called also *Rummo's disease* and *Wenckebach's disease*.

cardiopulmonary (kar'de-o-pul'mo-ner-e) pertaining to the heart and lungs.

cardiopuncture (kar'de-o-punk'cher) cardiocentesis.

cardiopyloric (kar'de-o-pi-lor'ik) pertaining to the cardia (ostium cardiacum [NA]) and the pylorus.

Cardioquin (kar'de-o-kwin') trademark for a preparation of quinidine polygalacturonate.

cardiorenal (kar'de-o-re'nal) pertaining to the heart and the kidney.

cardiorrhaphy (kar'de-or'ah-fe) [*cardio* + *Gr. raphē* suture] the operation of suturing the heart muscle.

cardiorrhexis (kar'de-o-rek'sis) [*cardio* + *Gr. rhēxis* rupture] rupture of the heart.

cardiosclerosis (kar'de-o-skle-ro'sis) [*cardio* + *Gr. sklēros* hard] fibrous induration of the heart.

cardioscope (kar'de-o-skōp') [*cardio* + *Gr. skopein* to examine] an instrument once used for inspecting the interior of the heart and for manipulation within the heart.

cardioselective (kar'de-o-sē-lek'tiv) having greater activity on heart tissue than on other tissue.

cardiospasm (kar'de-o-spazm') achalasia of the esophagus; see under *achalasia*. **tropical c.**, entalacão.

cardiosphygmogram (kar'de-o-sfig'mō-gram) a tracing made by the cardiosphygmograph.

cardiosphygmograph (kar'de-o-sfig'mō-graf) a combination of the cardiograph and sphygmograph for recording the movements of the heart and an arterial pulse.

cardiosplenopexy (kar'de-o-splen'o-pek'se) suture of splenic parenchyma to the denuded surface of the heart, as a method of revascularization of the myocardium.

cardiosymphysis (kar'de-o-sim'fi-sis) [*cardio* + *Gr. symphysis* growing together] (*obs.*) a condition in which the heart has become fixed to the chest by combined adhesion of the visceral and parietal pericardia to each other and by adhesion of the parietal pericardium to the mediastinal structures.

cardiotachometer (kar'de-o-tah-kom'ē-ter) [*cardio* + *Gr. tachos* speed + *metron* measure] the instrument used in cardiometry.

cardiotachometry (kar'de-o-tah-kom'ē-tre) continuous recording of the heart rate for long periods of time.

cardiotherapy (kar'de-o-ther'ah-pe) [*cardio* + *Gr. therapeia* treatment] the treatment of heart diseases.

cardiothyrotoxicosis (kar'de-o-thi'ro-tok'se-ko'sis) hyperthyroidism with cardiac involvement.

cardiotocograph (kar'de-o-to'ko-graf) the instrument used in cardiotocography.

cardiotocography (kar'de-o-to-kog'rah-fe) [*cardio* + Gr. *tokos* childbirth + *graphein* to write] the monitoring of the fetal heart rate and uterine contractions, as during delivery. Also spelled *cardiotokography*.

cardiotokography (kar'de-o-to-kog'rah-fe) cardiotocography.

cardiotomy (kar'de-ot'ō-me) [*cardio* + Gr. *tomē* a cutting] 1. surgical incision of the heart for repair of cardiac defects. 2. incision into the cardiac end of the stomach or the cardiac orifice.

cardiotonic (kar'de-o-ton'ik) 1. having a tonic effect on the heart. 2. an agent that has a tonic effect on the heart.

cardiotopometry (kar'de-o-to-pom'ē-tre) [*cardio* + Gr. *topos* place + *metron* measure] measurement of the area of cardiac dullness.

cardiotoxic (kar'de-o-tok'sik) having a poisonous or deleterious effect upon the heart.

cardiovalvular (kar'de-o-val'vu-lar) pertaining to the valves of the heart.

cardiovalvulitis (kar'de-o-val'vu-li'tis) inflammation of the valves of the heart.

cardiovalvulotome (kar'de-o-val'vu-lo-tōm") [*cardio* + L. *valvula* valve + Gr. *tomē* cut] an instrument for performing cardiovalvulotomy.

cardiovalvulotomy (kar'de-o-val'vu-lot'o-me) [*cardio* + L. *valvula* valve + Gr. *tomē* a cutting] the operation of incising a cardiac valve, or of excising a portion of it, done for the relief of stenosis.

cardiovascular (kar'de-o-vas'ku-lar) pertaining to the heart and blood vessels.

cardiovascular-renal (kar'de-o-vas'ku-lar-re'nal) pertaining to the heart, blood vessels, and kidney.

cardiovasology (kar'de-o-vas-ol'o-je) cardioangiography.

cardioversion (kar'de-o-ver'zhun) the restoration of normal rhythm of the heart by electrical shock.

cardioverter (kar'de-o-ver'ter) an energy-storage capacitor-discharge type of condenser which is discharged with an inductance; it delivers a direct-current shock which restores normal rhythm of the heart.

carditis (kar-di'tis) [*cardio* + *-itis*] inflammation of the heart. **rheumatic c.**, cardiac involvement in rheumatic fever, which when severe may be manifested by congestive heart failure, progressive cardiac enlargement, pericarditis, and significant murmurs. **streptococcal c.**, carditis occurring as a result of streptococcal sore throat. **verrucous c.**, a nonbacterial endocarditis marked by a continuous chain of wartlike vegetations near the line of closure of the cusps of the mitral and tricuspid valves; seen in lupus erythematosus and occasionally in scleroderma, thrombotic purpura, and other collagen diseases.

Cardrase (kar'drās) trademark for a preparation of ethoxzalamide.

carfacillin sodium (kar'fē-sil'in) carbenicillin phenyl sodium.

carfentanil citrate (kar-fen'tah-nil) chemical name: 4-[(1-oxo-propyl) phenyl amino]-1-(2-phenylethyl)-4-piperidine carboxylic acid methyl ester 2-hydroxy 1,2,3-propanetricarboxylate (1:1); an analgesic and narcotic, $C_{24}H_{30}N_2O_9 \cdot C_6H_8O_7$.

caricous (kar'i-kus) [L. *carica* fig] shaped like or resembling a fig.

caries (ka're-ēz, kar'ēz) [L. "rotteness"] 1. the molecular decay or death of a bone, in which it becomes softened, discolored, and porous. It produces a chronic inflammation of the periosteum and surrounding tissues, and forms a cold abscess filled with a cheesy, fetid, puslike liquid, which generally burrows through the soft parts until it opens externally by a sinus or fistula. 2. dental c. **backward c.**, dental caries that progresses backward from the dentinoenamel junction into the enamel; called also *internal c.* **cemental c.**, dental caries that involves the cementum of a tooth. **central c.**, a chronic abscess in the interior of a bone. **dental c.**, a disease of the calcified tissues of the teeth resulting from the action of microorganisms on carbohydrates, characterized by decalcification of the inorganic portions of the tooth and accompanied or followed by disintegration of the organic portion. Formerly classified by degree of severity: *c. of first degree* (enamel alone decalcified); *c. of second degree* (enamel and dentin affected); *c. of third degree* (pulp exposed); *c. of fourth degree* (putrefactive decomposition of pulp). Now classified as *enamel c.* (q.v.). See also *cavity*. **dental c.**, dental caries that involves the dentin of a tooth. **dry c.**, a form of tuberculous caries of the joints and ends of bones; called also *c. sicca*. **enamel c.**, dental caries that involves the enamel of a tooth. **c. fungo/sa**, a form of tuberculosis of a bone. **internal c.**, backward c. **lateral c.**, dental caries that extends laterally at the dentinoenamel junction. **necrotic c.**, a disease in which pieces of bone lie in a suppurating cavity. **primary c.**, dental caries that attacks either the pits and fissures, or the smooth surfaces of a previously uninvolved area of a tooth. **secondary c.**, dental caries recurring around or beneath a previously placed dental restoration. **c. sic'/ca**,

dry c. **spinal c.**, tuberculous osteitis of the vertebrae and of the intervertebral cartilages.

carina (kah-ri'nah), pl. *cari'nae* [L. "keel"] a ridgelike structure. **c. of fornix**, a ridge on the under surface of the fornix. **c. of trachea**, **c. tra'cheae** [NA], a projection of the lowest tracheal cartilage, forming a prominent semilunar ridge running anteroposteriorly between the orifices of the two bronchi. **urethral c. of vagina**, **c. urethra'lis vagi'nae** [NA], the column of rugae in the lower part of the anterior wall of the vagina, immediately beneath the urethra.

carinae (kah-ri'ne) [L.] plural of *carina*.

carinate (kar'i-nāt) [L. *carina* a keel] keel shaped; having a keel-like process.

carination (kar'i-na'shun) a ridged condition of a part.

carindacillin sodium (kar'in-dah-sil'in) carbenicillin indanyl sodium.

cariogenesis (kā'r'e-o-jen'ē-sis) development of caries.

cariogenic (kā'r'e-o-jen'ik) [*caries* + Gr. *gennan* to produce] conducive to caries.

cariogenicity (kā'r'e-o-jē-nis'i-te) the quality of being conducive to the production of caries.

cariology (kar'e-ol'o-je) 1. the study of the cell nucleus and of chromosomal activity within it. 2. the study of caries formation and prevention.

cariosity (kar'e-os'i-te) the quality of being carious.

carious (ka're-us) [L. *cariosus*] affected with or of the nature of caries.

carisoprodol (kar'i-so-pro'dol) chemical name: (1-methyl-ethyl)carbamic acid-2-[[aminocarbonyloxy]methyl]-2-methylpentyl ester. A centrally acting skeletal muscle relaxant, $C_{12}H_{24}N_2O_4$, occurring as a white, crystalline powder; used for the symptomatic management of acute, painful musculoskeletal disorders, administered orally. Called also *isopropyl meprobamate*.

Carleton's spots (kar'l-tonz) [Bukk G. Carleton, American physician, 1856-1914] see under *spot*.

carmalum (kar-mal'um) a stain composed of carmine, alum, and water.

carmantadine (kar-man'tah-dēn) chemical name: 1-tricyclo-[3.3.1.1^{3,7}]dec-1-yl-azetidinecarboxylic acid; an antiparkinsonian agent, $C_{14}H_{21}NO_2$.

Carmichael's crown (kar'mi-kel) [J. P. Carmichael, American dentist, 1856-1946] partial veneer crown; see under *crown*.

carminative (kar-min'ah-tiv) [L. *carminare* to card, to cleanse, from *carmen*, a card for wool] 1. relieving flatulence. 2. a medicine that relieves flatulence and assuages pain.

carmine (kar'min) a red coloring matter derived from cochineal by the addition of alum and used as a histologic stain; called also *carminum* and *coccinellin*. **alizarin c.**, alizarin red. **indigo c.**, indigotin disulfonate sodium. **lithium c.**, vital stain for macrophages. **Schneider's c.**, a saturated solution of carmine in concentrated acetic acid.

carminophil (kar-min'o-fil) [*carmine* + Gr. *philein* to love] 1. easily stainable with carmine. 2. a cell or other element that readily takes a stain from carmine. 3. one of the acidophils, or alpha cells (*mammotropes*), of the adenohypophysis staining readily with azocarmine; called also *epsilon acidophil*.

carminum (kar'mi-num) carmine.

carmustine (kar-mus'tēn) chemical name: *N,N'*-bis(2-chloro-ethyl)-*N*-nitrosourea (BCNU); a nitrosourea, $C_6H_8Cl_2N_2O_2$, used as an antineoplastic agent.

carneous (kar'ne-us) [L. *carneus*, from *caro* flesh] fleshy.

carnidazole (kar-nid'ah-zōl) chemical name: [2-(2-methyl-5-nitro-1*H*-imidazol-1-yl)ethyl]carbamothioic acid *O*-methyl ester; an antiprotozoal, $C_8H_{12}N_4O_3S$.

carnification (kar'nī-fi-ka'shun) [L. *caro* flesh + *facere* to make] the change of tissue, such as that of the lungs, into a substance resembling flesh.

carnitine (kar'nī-tin) a naturally occurring amino acid, $C_7H_{15}NO_3$, required for mitochondrial oxidation of long-chain fatty acids; it is a betaine derivative found in skeletal muscle and liver, which acts as a carrier of acyl groups (fatty acids) across the mitochondrial membrane to the matrix, where they combine with coenzyme A to form acyl CoA. It has been used as an investigational antithyroid and antiangina agent.

Carnivora (kar-niv'ō-rah) [L. *caro* flesh + *vorare* to devour] an order of mammals that are primarily carnivorous, with teeth adapted for flesh eating, a simple stomach, and a short intestine.

carnivore (kar'nī-vōr) an animal that eats flesh, especially members of the order Carnivora.

carnivorous (kar-niv'o-rus) eating or subsisting on flesh.

Carnochan's operation (kar'nok-anz) [John Murray Carnochan, American surgeon, 1817-1887] see under *operation*.

carnosinase (kar'no-sī-nās) an enzyme that hydrolyzes carnosine (amino-acyl-L-histidine) and other dipeptides containing L-histidine into their constituent amino acids.

carnosine (kar'no-sin) chemical name: β -alanylhistidine. A di-

peptide, $C_6H_{14}N_4O_2$, composed of beta-alanine and histidine, found in skeletal muscle of vertebrates.

carnosinemia (kar-'no-si-ne-me-ah) excessive amounts of carnosine in the blood; it has been associated with a progressive neurologic disease characterized by severe mental defect and myoclonic seizures, and is probably due to a genetic deficiency of carnosinase in the serum.

carnosinuria (kar-'no-si-nu-re-ah) an aminoaciduria characterized by excess of carnosine in the urine; occurs in carnosinemia or may be dietary in origin, especially in young children.

carnosity (kar-nos'i-te) [*L. carnositas* fleshiness] any abnormal fleshy excrescence.

Carnot's test (kar'nōz) [Paul Carnot, French physician, 1869-1957] see under *tests*.

carnutine (kar-nu'tin) a ptomaine found in muscle tissue.

caro (ka'ro), pl. *car'nes* [*L.*] flesh or muscular tissue. **c. quadrata ma'nus**, musculus palmaris brevis. **c. quadrata syl/vii**, musculus quadratus plantae.

carota (kah-ro'tah), pl. *caro'tae* [*L.*] carrot.

carotenase (kar-ot'ē-nās) an enzyme capable of converting carotene into vitamin A; called also *carotinase*.

carotene (kar'o-tēn) a yellow or red pigment found in carrots, sweet potatoes, leafy vegetables, milk fat, body fat, egg yolk, etc. It is a chromolipoid hydrocarbon and exists in several forms; alpha, beta, and gamma carotene are pro-vitamins and may be converted into vitamin A in the body. Called also *carotin*. **beta c.**, chemical name: β , β -carotene; an ultraviolet screen, $C_{40}H_{56}$.

carotenemia (kar'o-te-ne-me-ah) [*carotene* + *Gr. haima* blood + *-ia*] presence of excessive carotene in the blood; it sometimes occurs in sufficient quantities to produce yellowing of the skin resembling jaundice (carotenoderma).

carotenoderma (kar-ot'en-o-der'mah) carotenoderma.

carotenoderma (kah-rot'ē-no-der'me-ah) yellowness of the skin due to carotenemia.

carotenoid (kah-rot'ē-noid) 1. any member of a group of red, orange, or yellow pigmented polyisoprenoid lipids found in carrots, sweet potatoes, green leaves, and some animal tissues; examples are the carotenes, lycopene, and xanthophyll. In plants, blue-green algae, and photosynthetic bacteria, carotenoids absorb energy from light and transfer it to chlorophyll. 2. marked by yellow color. 3. lipochrome.

carotenosis (kar'o-te-no'sis) carotenemia.

carotic (kah-rot'ik) [*Gr. karos* deep sleep] pertaining to or of the nature of carus, or stupor.

caroticotympanic (kah-rot'i-ko-tim-pan'ik) pertaining to the carotid canal and the tympanum.

carotid (kah-rot'id) [*Gr. karōtis* from *karos* deep sleep] relating to the principal artery of the neck (arteria carotis communis); see also under *body*, *sinus*, etc.

carotidynia (kah-rot'i-din'e-ah) carotodynia.

carotin (kar'o-tin) carotene.

carotinase (kar'o-ti-nās) carotenase.

carotinemia (kar'o-tin-e-me-ah) carotenemia.

carotinosi (kar'o-ti-no'sis) carotenemia.

carotodynia (kah-rot'o-din'e-ah) [*carotid* + *Gr. odyne* pain] tenderness along the course of the common carotid artery.

caroxazone (kah-roks'ah-zōn) chemical name: 2-oxo-2H-1,3-benzoxazine-3(4H)-acetamide; an antidepressant, $C_{10}H_{10}N_2O_3$.

carp (karp) a fruiting body of a fungus.

carpal (kar'pal) [*L. carpalis*] of or pertaining to the carpus, or wrist.

carpale (kar-pa'le) a carpal bone.

carpectomy (kar-pek'to-me) [*carpus* + *Gr. ektomē* excision] excision of a carpal bone.

carpel (kar'pel) a one-celled pistil, or one of the members composing a compound pistil or seed vessel.

carphenazine maleate (kar-fen'ah-zēn) [USP] chemical name: 1-[10-[3-[4-(2-hydroxyethyl)-1-piperazinyl]propyl]-10H-phenothiazin-2-yl]-1-propanone(2Z)-2-butenedioate (1:2). A phenothiazine antipsychotic agent, $C_{24}H_{31}N_5O_2S \cdot 2C_4H_4O_4$, occurring as a yellow, finely divided powder; used in the treatment of acute or chronic schizophrenic reactions in hospitalized patients, administered orally.

carphologia (kar'fo-lo'je-ah) carphology.

carphology (kar-fol'o-je) [*Gr. karphologeîn* to pick bits of wool off a person's coat] the involuntary picking at the bedclothes seen in grave fevers and in conditions of great exhaustion; called also *carphologia* and *crocidismus*.

carpitis (kar-pi'tis) inflammation of the synovial membranes of the bones of the carpal joint of domestic animals, producing swelling, pain, and lameness.

carpocarpal (kar'po-kar'pal) pertaining to two parts of the carpus, especially to the articulations between carpal bones.

Carpoglyphus (kar'po-gli'fus) a genus of mites. **C. pas-**

sula'rum, a tyroglyphid mite that infests dried fruit, causing dermatitis in those who handle the infested fruit.

carpogonium (kar'po-go'ne-um) ascogonium; more specifically the female sex organ in members of the order Erysiphales, class Ascomycetes.

carpometaacarpal (kar'po-met'ah-kar'pal) pertaining to the carpus and metacarpus.

carpopedal (kar'po-pe'dal) [*carpus* + *L. pes, pedalis* foot] pertaining to or affecting the carpus and the foot, as carpopedal spasm.

carpophalangeal (kar'po-fah-lan'je-al) pertaining to the carpus and the phalanges.

carpopotosis (kar'pop-to'sis) [*carpus* + *ptosis*] wristdrop.

carpospore (kar'po-spōr) a diploid spore in the red algae which, by germination, produces tetraspores.

carprofen (kar-pro'fen) chemical name: (+)-6-chloro- α -methyl-carbazole-2-acetic acid; an anti-inflammatory, $C_{15}H_{12}ClNO_2$.

Carpue's operation, rhinoplasty (kar'pūz) [Joseph Constantine Carpue, English surgeon, 1764-1846] Indian rhinoplasty.

Carpule (kar'pūl) trademark for a glass, rubber-stoppered cartridge containing local anesthetic solutions, fitted in a special syringe for hypodermic injection.

carpus (kar'pus) [*L.*; *Gr. karpos*] [NA] the joint between the arm and hand, the wrist, made up of eight bones; see *ossa carpi*, and names of specific bones. Also, the part of the hand between the forearm and metacarpus. The term is also applied to the corresponding forelimb joint in quadrupeds. **c. cur'vus**, Madelung's deformity.

Carr-Price test [Francis Howard Carr, British chemist, born 1874; E. A. Price] see under *tests*.

carrageen, carragheen (kar'ah-gēn) the dried and bleached plant *Chondrus crispus* (L.) Stackhouse, or *Gigartina mamilliosa* (Goodenough and Woodward) J. Aghardt (Gigartinaceae). It contains a valuable polysaccharide widely used as a gel, thickening agent, and emulsifier. It also has demulcent properties.

carrageenan, carragheenin (kar'ah-ge'nan) a colloidal extractive derived from various species of red marine algae (*Chondrus*, *Eucheuma*, *Gigartina*, etc.), composed of a mixture of sodium, potassium, calcium, and magnesium salts of an acid sulfate of a galactose-containing polysaccharide. Used chiefly as a suspending agent in foods, pharmaceuticals, cosmetics, etc.

carreau (kar-ro') [*Fr.*] (*obs.*) enlargement and hardening of the abdomen caused by disease of the peritoneum and abdominal walls.

carrefour (kahr'uh-fōr') [*Fr.*] crossway; decussation.

Carrel's method, treatment, tube (kar-elz') [Alexis Carrel, French surgeon who spent many years in the United States, 1873-1944; winner of the Nobel prize for physiology and medicine in 1912] see under *method, treatment, and tube*.

Carrel-Dakin fluid, treatment [Alexis Carrel; Henry Drysdale Dakin, American chemist, 1880-1952] see *diluted sodium hypochlorite solution*, under *solution*, and see under *treatment*.

carrier (kar'e-er) 1. an individual who harbors in his body the specific organisms of a disease without manifest symptoms and thus acts as a carrier or distributor of the infection; the condition of such an individual is known as *carrier state*. 2. a substance in a cell which can accept one or two electrons and so be reduced and can then be re-oxidized. 3. an instrument or apparatus for carrying or transporting something. 4. a heterozygote, i.e., one who carries a recessive gene, either autosomal or sex-linked, together with its normal allele. 5. in radiology, a substance in appreciable amount, which when associated with a trace of another substance, will carry the trace through a chemical or physical process, especially a precipitation process. 6. a molecule to which a substance may be reversibly attached for transport, as across an intracellular membrane. 7. a macromolecular immunogen which when chemically coupled to a hapten may facilitate an immune response to the hapten. **amalgam c.**, a dental instrument for transporting portions of mixed amalgam, used as a restorative material, to a prepared tooth cavity. **electron c.**, see *carrier*, def. 2. **female c.**, a woman who is heterozygous for a recessive X-linked gene; half of the sons of a female carrier show the recessive X-chromosomal feature. **foil c.**, a dental instrument for transporting foil, used as a restorative material, from the annealer to a prepared tooth cavity. **gametocyte c.**, in malaria, a person who has gametocytes in his blood stream and so can infect *Anopheles* mosquitoes that feed on him. **hemophilia c.**, the female transmitter of classical sex-linked, recessive hemophilia who generally, but not always, demonstrates no overt manifestations of a hemorrhagic diathesis but in whom a coagulation factor deficiency may be detected by quantitative assay.

carrier-free (kar'e-er-fre) a term denoting a radioisotope of an element in pure form, i.e., essentially undiluted with a stable isotope carrier.

Carrión's disease (kar-e-onz') [Daniel A. Carrión, (1850-1885), a student in Peru who inoculated himself and died of the disease] see under *disease*.

carrot (kar'ut) [L. *carota*] the umbelliferous plant, *Daucus carota*; its seed is diuretic and stimulant.

carrotene (kar'o-tēn) carrotene.

cart (kart) a wheeled vehicle for conveying patients or equipment and supplies in a hospital. **crash c.**, resuscitation c. **dressings c.**, one containing all the supplies and equipment that may be necessary for changing dressings of surgical or injured patients. **resuscitation c.**, one containing all the equipment necessary for initiating emergency resuscitation.

cartazolate (kar-taz'o-lāt) chemical name: 4-(butylamino)-1-ethyl-1*H*-pyrazolo[3,4-*b*]pyridine-5-carboxylic acid ethyl ester; an antidepressant, C₁₅H₂₂N₄O₂.

carteolol hydrochloride (kar'te-o-lōl) chemical name: 5-[3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]-3,4-dihydro-2(1*H*)-quinolinone monohydrochloride; an antiadrenergic (β-receptor), C₁₆H₂₄N₂O₃·HCl.

Carter's operation, intranasal splint (kar'terz) [William Wesley Carter, New York rhinologist, born 1869] see under *operation* (2d def.) and *splint*.

cartilage (kar'ti-lij) [L. *cartilago*] a specialized, fibrous connective tissue, forming most of the temporary skeleton of the embryo, providing a model in which most of the bones develop, and constituting an important part of the growth mechanism of the organism. It exists in several types, the most important of which are hyaline cartilage, elastic cartilage, and fibrocartilage. Also used as a general term to designate a mass of such tissue in a particular site in the body. See *cartilago*. **accessory c's of nose**, cartilagine alares minores. **c. of acoustic meatus**, cartilago meatus acustici. **alar c.**, greater, cartilago alaris major. **alar c's, lesser**, cartilagine alares minores. **annular c.**, cartilago cricoidea. **aortic c.**, the second costal cartilage on the right side. **arthrodial c.**, articular c. **articular c.**, a thin layer of cartilage, usually hyaline, on the articular surface of bones in synovial joints. Called also *cartilago articularis* [NA], *arthrodial c.*, *diarthrodial c.*, *investing c.*, and *obducent c.* **arytenoid c.**, cartilago arytenoidea. **c. of auditory tube**, cartilago tubae auditivae. **c. of auricle, auricular c.**, cartilago auriculae. **branchial c.**, one of the rods of cartilage in the branchial arches of the embryo. **calcified c.**, cartilage in which granules of calcium phosphate and calcium carbonate have been deposited in the interstitial substance. **cariniform c.**, the cartilaginous prolongation at the anterior end of the sternum of a horse. **cellular c.**, a variety composed almost entirely of cells, with little interstitial substance; called also *parenchymatous c.* **central c.**, former term for an opacity in the center of the crystalline lens. **ciliary c's**, see *tarsus inferior palpebrae* and *tarsus superior palpebrae*. **circumferential c.**, labrum glenoidale. **conchal c.**, cartilago auriculae. **connecting c.**, cartilage connecting the surfaces of an immovable joint; called also *interosseous c.* **corniculate c.**, cartilago corniculata. **costal c.**, cartilago costalis. **costal c.**, interarticular, ligamentum sternocostale intraarticulare. **cricoid c.**, cartilago cricoidea. **cuneiform c.**, cartilago cuneiformis. **dental c.**, the substance remaining after the lime salts of dentin have been dissolved in an acid. **diarthrodial c.**, articular c. **elastic c.**, a substance that is more opaque, flexible, and elastic than hyaline cartilage, and is further distinguished by its yellow color. The interstitial substance is penetrated in all directions by frequently branching fibers which give all the reactions for elastin. Called also *reticular c.* and *yellow c.* **ensiform c.**, processus xiphoideus. **epactal c's**, cartilagine nasales accessoriae. **epiglottic c.**, cartilago epiglottica. **epiphyseal c.**, cartilago epiphysialis. **eustachian c.**, cartilago tubae auditivae. **falciform c's**, see *meniscus lateralis articulationis genus* and *meniscus medialis articulationis genus*. **floating c.**, a detached piece of cartilage, usually from the articular surface of the medial condyle and femur, but also from the patella or lateral condyle of the femur. **gingival c.**, the tissue covering the locus which contains an unerupted tooth. **guttural c.**, cartilago arytenoidea. **hyaline c.**, a flexible, somewhat elastic, semitransparent substance with an opalescent bluish tint, composed of a basophilic, fibril-containing interstitial substance with cavities in which the chondrocytes occur; called also *chondroid*. **inferior c. of nose**, cartilago alaris major. **innominate c.**, cartilago cricoidea. **interarticular c.**, 1. ligamentum longitudinale posterius. 2. an interarticular disk. **interarticular c. of the little head of rib**, ligamentum capitis costae intraarticulare. **interosseous c.**, connecting c. **intervertebral c's**, disci intervertebrales. **intrathyroid c.**, a cartilage connecting the alae of the thyroid cartilage in early life. **investing c.**, articular c. **Jacobson's c.**, cartilago vomeronasalis. **laryngeal c's**, cartilagine laryngis. **laryngeal c. of Luschka**, cartilago sesamoidea ligamenti vocalis. **lateral c's**, in the horse, the cartilages from the end of the third phalanx to the heel of the hoof. **lateral c. of nose**, cartilago nasi lateralis. **Luschka's c.**, cartilago sesamoidea ligamenti vocalis. **mandibular c.**, Meckel's c. **meatal c.**, cartilago meatus acustici. **Meckel's c.**, the cartilaginous bar (in the embryo) into which the mesenchymal core of the mandibular process of the first mandibular arch is converted; from it or its sheath, the sphenomandibular ligament, the anterior malleolar ligament, the

Hyaline cartilage: chondrocytes embedded in a gel-like matrix.

malleus, and the incus develop. Called also *mandibular c.*, *typanomandibular c.*, and *Meckel's rod*. **minor c's**, cartilagine nasales accessoriae. **mucronate c.**, processus xiphoideus. **nasal c's**, cartilagine nasi. **nasal c's, accessory**, cartilagine nasales accessoriae. **nasal c., lateral**, cartilago nasi lateralis. **c. of nasal septum**, cartilago septi nasi. **c's of nose**, cartilagine nasi. **obducent c.**, articular c. **ossifying c.**, temporary c. **palpebral c's**, see *tarsus inferior palpebrae* and *tarsus superior palpebrae*. **parachordal c's**, the two cartilages at the sides of the occipital part of the notochord of the embryo. **parenchymatous c.**, cellular c. **periotic c.**, an oval mass on the upper surface of the fetal chondrocranium investing the inner ear. **permanent c.**, cartilage that does not normally become ossified. **posterior cricoarytenoid c.**, ligamenta cricoarytenoideum posterius. **precursory c.**, temporary c. **pulmonary c.**, the third costal cartilage on the left side. **pyramidal c.**, cartilago arytenoidea. **Reichert's c's**, cartilaginous bars in the lateral side of the embryonic tympanum from which develop the styloid processes, the stylohyoid ligaments, and the lesser cornua of the hyoid bone. **reticular c.**, elastic c. **Santorini's c.**, cartilago corniculata. **scutiform c.**, cartilago thyroidea. **semilunar c. of knee joint**, external, meniscus lateralis articulationis genus. **semilunar c. of knee joint, internal**, meniscus medialis articulationis genus. **septal c. of nose**, cartilago septi nasi. **sesamoid c. of larynx**, cartilago triticea. **sesamoid c's of nose**, cartilagine nasales accessoriae. **sesamoid c. of vocal ligament**, cartilago sesamoidea ligamenti vocalis. **sigmoid c's**, see *meniscus lateralis articulationis genus* and *meniscus medialis articulationis genus*. **slipping rib c.**, loosening and deformity of the costal cartilages, causing painful symptoms. **sternal c.**, cartilago costalis. **stratified c.**, fibrocartilage. **subvomerine c's**, cartilago vomeronasalis. **supra-arytenoid c.**, cartilago corniculata. **tarsal c's**, see *tarsus inferior palpebrae* and *tarsus superior palpebrae*. **temporary c.**, any cartilage that is being replaced by bone or that is normally destined to be replaced by bone; called also *ossifying c.* and *precursory c.* **tendon c.**, a form of embryonic cartilage by which tendons and bones are united. **thyroid c.**, cartilago thyroidea. **tracheal c's**, cartilagine tracheales. **triangular c. of nose**, cartilago nasi lateralis. **triquetral c.**, triquetrous c., 1. cartilago arytenoidea. 2. discus articularis articulationis radioulnaris distalis. **triticeal c.**, triticeous c., cartilago triticea. **tubal c.**, cartilago tubae auditivae. **typanomandibular c.**, Meckel's c. **vomeroneasal c.**, cartilago vomeronasalis. **Weitbrecht's c.**, discus articularis articulationis acromioclavicularis. **Wrisberg's c.**, cartilago cuneiformis. **xiphoid c.**, processus xiphoideus. **Y c.**, a Y-shaped cartilage in the acetabulum, joining the ilium, ischium, and pubes. **yellow c.**, elastic c.

cartilagin (kar'ti-laj'in) a protein found in cartilage, which is changed by boiling into chondrin; called also *chondrigen*.

cartilagine (kar'ti-laj'i-nēz) [L.] plural of *cartilago*.

cartilagification (kar'ti-lah-jin'i-fi-ka'shun) conversion into cartilage.

cartilagiform (kar'ti-lah-jin'i-form) resembling cartilage; called also *cartilaginoid*.

cartilaginous (kar'ti-laj'i-noid) cartilagiform.

cartilaginous (kar'ti-laj'i-nus) consisting of or of the nature of cartilage.

cartilago (kar-ti-lah'go), pl. *cartilagines* [L.] a specialized, fibrous connective tissue; see *cartilage*. Used in anatomical nomenclature to designate a mass of such tissue in a particular site in the body. **c. alaris major** [NA], greater alar cartilage: either of two thin, curved cartilages, one on either side at the apex of the nose, each of which possesses a lateral and a medial crus; called also *inferior cartilage of nose*. **cartilagines alares minores** [NA], lesser alar cartilages: various small cartilages located in the fibrous tissue of the alae nasi; called also *accessory*

cartilages of nose. **c. articula'ris** [NA], articular cartilage: a thin layer of cartilage, usually hyaline, on the articular surface of bones in synovial joints; called also *arthrodial*, *diarthrodial*, *investing*, and *obducent cartilage*. **c. arytenoi'dea** [NA], arytenoid cartilage: one of the paired, pitcher-shaped cartilages of the back of the larynx at the upper border of the cricoid cartilage; called also *c. arytaenoidea* and *c. triquetra*, and *guttural*, *pyramidal*, *triquetral*, and *triquetrous cartilage*. **c. auric'ulae** [NA], cartilage of auricle: the internal plate of elastic cartilage which is found in the external ear; called also *auricular* and *conchal cartilage*. **c. cornicula'ta** [NA], corniculate cartilage: a small nodule of cartilage at the apex of each arytenoid cartilage; called also *c. corniculata* [Santorini], *c. santorini*, *Santorini's* and *supra-arytenoid cartilage*, *corniculum*, and *corpus santoriana*. **c. cornicula'ta** [Santorini], *c. corniculata*. **c. costa'lis** [NA], costal cartilage: a bar of hyaline cartilage by which the ventral extremity of a rib is attached to the sternum in the case of the true ribs, or to the superiorly adjacent ribs in the case of the upper false ribs; called also *sternal cartilage*. **c. cricoi'dea** [NA], cricoid cartilage: a ringlike cartilage forming the lower and back part of the larynx; called also *annular* or *innominate cartilage*. **c. cuneifor'mis** [NA], cuneiform cartilage: either of the paired cartilages, one on either side in the aryepiglottic fold; called also *c. cuneiformis* [Wrisberg], *c. wrisbergi*, and *Wrisberg's cartilage*. **c. cuneifor'mis** [Wrisberg], *c. cuneiformis*. **c. ensifor'mis**, processus xiphoideus. **c. epiglott'ica** [NA], epiglottic cartilage: the plate of cartilage that constitutes the central part of the epiglottis. **c. epiphysia'lis** [NA], epiphysal cartilage: cartilage interposed between the epiphysis and the shaft of the bone during the period of growth; by its growth the bone increases in length. Called also *epiphyseal synchondroses*, and *synchondrosis epiphyseos*. **cartilag'ines falca'tae**, see *meniscus lateralis articulationis genus* and *meniscus medialis articulationis genus*. **c. jacobso'ni**, *c. vomeronasalis*. **cartilag'ines laryn'gis** [NA], laryngeal cartilages: cartilages of the larynx, including the cricoid, thyroid, and epiglottic, and two each of arytenoid, corniculate, and cuneiform cartilages. **c. mea'tus acus'tici** [NA], cartilage of acoustic meatus: the trough-shaped cartilage of the cartilaginous part of the external acoustic meatus; called also *meatal cartilage*. **cartilag'ines nasa'les accesso'riae** [NA], accessory nasal cartilages: one or more small cartilages on either side of the nose between the greater alar and lateral nasal cartilages; called also *cartilagine sesamoideae nasi*, *epactal* or *minor cartilages*, and *sesamoid cartilages of nose*. **cartilag'ines na'si** [NA], nasal cartilages: the cartilages of the nose, including the lateral nasal, greater and lesser alar, nasal septal, vomeronasal, and the accessory nasal cartilages. **c. na'si latera'lis** [NA], lateral nasal cartilage: a lateral expansion of the septal cartilage on either side of the nose just inferior to the nasal bone; called also *lateral* or *triangular cartilage of nose*. **c. santori'ni**, *c. corniculata*. **c. sept'i na'si** [NA], cartilage of nasal septum: the hyaline cartilage forming the framework of the cartilaginous part of the nasal septum, and including the lateral nasal cartilages; called also *septal cartilage of nose*. **c. sesamoi'dea laryn'gis**, *Luschka*, *c. sesamoidea ligamenti vocalis*. **c. sesamoi'dea ligamen'ti voca'lis** [NA], sesamoid cartilage of vocal ligament: a small cartilage occasionally found within the vocal ligaments; called also *laryngeal cartilage of Luschka*, and *Luschka's cartilage*. **cartilag'ines sesamoi'deae na'si**, cartilagine nasales accesso'riae. **c. thyroi'dea** [NA], thyroid cartilage: the largest cartilage of the larynx, with two broad, posteriorly diverging laminae and two pairs of horns, superior and inferior, that extend from the posterior borders of the laminae; called also *c. thyreoidea* and *scutiform cartilage*. **cartilag'ines trachea'les** [NA], tracheal cartilages: the 16 to 20 incomplete rings which, held together and enclosed by a strong, elastic, fibrous membrane, constitute the wall of the trachea. **c. triquet'ra**, 1. cartilago arytenoidea. 2. discus articularis articulationis radioulnaris distalis. **c. tritic'ea** [NA], triticeal cartilage: a small cartilage in the thyrohyoid ligament. Called also *sesamoid cartilage*, *corpusculum triticeum*, and *corpus triticeum*. **c. tu'bae auditi'vae** [NA], cartilage of auditory tube: the cartilage on the inferomedial surface of the temporal bone that supports the walls of the cartilaginous portion of the auditory tube; called also *tubal* or *eustachian cartilage*. **c. vomeronasa'lis** [NA], vomeronasal cartilage: either of the two narrow, longitudinal strips of cartilage, one lying on either side of the anterior portion of the lower margin of the septal cartilage; called also *c. vomeronasalis* [Jacobsoni], *c. jacobsoni*, and *Jacobson's* or *subvomerine cartilage*. **c. vomeronasa'lis** [Jacobsoni], *c. vomeronasalis*. **c. wrisbergi**, *c. cuneiformis*.

cartilagetropic (kar'ti-lag-o-trop'ik) [L. *cartilago* cartilage + Gr. *tropos* a turning] having affinity for cartilage.

caruncle (kar'ung-kl) a small fleshy eminence, whether normal or abnormal; called also *caruncula* [NA]. **amniotic c's**, small epithelial amniotic growths occasionally found at the placental insertion of the umbilical cord, the fold of amnion, or Schultze's fold, carrying the vitelline duct. **hymenal c's**, carunculae hymenales. **lacrimal c.**, caruncula lacrimalis. **major c. of Santorini**, papilla duodeni major. **Morgagni's c.**, **morgagnian c.**, lobus medius prostatae. **myrti-**

form c's, carunculae hymenales. **sublingual c.**, caruncula sublingualis. **urethral c.**, a small, polypoid, deep red growth on the mucous membrane of the urinary meatus in women.

caruncula (kah-rung'ku-lah), pl. *carun'culae* [L. dim. of *caro* flesh] [NA] a small fleshy eminence; called also *caruncle*. **carun'culae hymena'les** [NA], hymenal caruncles: small elevations of the mucous membrane encircling the vaginal orifice, being relics of the torn hymen; called also *carunculae myrtiformis*. **c. lacrima'lis** [NA], lacrimal caruncle: the red eminence at the medial angle of the eye. **c. mammilla'ris** (obs.), trigonum olfactorium. **carun'culae myrtifor'mes**, carunculae hymenales. **c. saliva'ris**, *c. sublingualis*. **c. sublingua'lis** [NA], an eminence on each side of the frenulum of the tongue, at the apex of which are the openings of the major sublingual duct and the submandibular duct. Called also *c. salivaris* and *sublingual caruncle*.

carunculae (kah-rung'ku-le) [L.] plural of *caruncula*.

Carus' curve (circle) (kah'rus) [Karl Gustav Carus, German obstetrician, 1789-1869] see under *curve*.

carver (kar'ver) an instrument for producing and perfecting anatomical forms in artificial teeth and dental restorations.

carvone (kar'vön) chemical name: *p*-mentha-6,8-dien-2-one. A terpene ketone, C₁₀H₁₆O, found in many volatile oils, such as caraway oil, oil of dill, and spearmint oil.

caryo- (kar'e-o) [Gr. *karyon* nucleus, or nut] a combining form denoting relationship to a nucleus; see also words beginning *karyo-*.

Caryococcus (kar'e-o-kok'kus) [*caryo-* + Gr. *kokkos* berry] a genus of bacteria parasitic on protozoa.

Caryophanaceae (kar'e-o-fah-na'se-e) a family of the class Schizomycetes (order Caryophanales), made up of large motile or nonmotile trichomes and bacillary structures which do not form spores. It includes three genera, *Caryophanon*, *Lineola*, and *Simonsiella*, comprising nonpathogenic parasitic forms found in the oral cavity and in the intestinal content of ruminants.

Caryophanales (kar'e-o-fah-na'lēz) an order of the class Schizomycetes, made up of microorganisms that occur as cylindrical or discoidal cells enclosed in a continuous wall, forming long filaments or shorter structures which function as hormogonia; found in water and in decomposing organic materials, and in the intestines of arthropods and vertebrates. It includes three families, Arthromitaceae, Caryophanaceae, and Oscillospiraceae.

Caryophanon (ka're-o-fah-non) a genus of Schizomycetes of the order Caryophanales, family Caryophanaceae.

caryophil (kar'e-o-fil) staining easily with thiazinammonium stains.

Carysomyia (kar'i-so-mi'yah) *Chrysomyia*.

carzenide (kar'zē-nid) chemical name: *p*-sulfamoylbenzoic acid; a carbonic anhydrase inhibitor, C₇H₇NO₄S.

Casal's necklace (kah-salz') [Gaspar Casal, Spanish physician, 1679-1759] see under *necklace*.

casanthranol (kah-san'thran-nōl) a purified mixture of the anthranol glycosides derived from *Cascara sagrada*; a cathartic.

cascade (kas-kād') a series of steps or stages (as of a physiological process) which, once initiated continues to the final step by virtue of each step being triggered by the preceding one, sometimes with cumulative effect. **electron c.**, the passage of electrons during oxidative phosphorylation from a large negative (reducing) potential through a series of cytochromes to a positive (oxidizing) potential.

cascara (kas-kār'ah) [Sp.] bark. **c. amar'ga** [Sp. "bitter bark"], the bark of *Sweetia panamensis* Benth. (Leguminosae), a tree of tropical America; it is alterative and tonic. **c. sagra'da** [Sp. "sacred bark"] [USP], the dried bark of *Rhamnus purshiana* DC. (Rhamnaceae), a shrub of the Pacific states of the United States, used as a cathartic; called also *bearberry bark*, *chittam bark*, *dogwood bark*, *Persian bark*, and *Purshiana bark*. Its laxative principles are glycosidal anthraquinones, e.g., emodin and barbaloin.

case (kās) 1. a particular instance of disease, as a *case of leukemia*; sometimes used incorrectly to designate the patient with the disease. 2. a term sometimes used incorrectly in dentistry to designate a flask, denture, casting, or the like. **borderline c.**, an instance of a disease in which the symptoms resemble those of a recognized condition but are not typical of it. **custodial c.**, the case of an individual who requires supervision or removal from society because of mental disease, chronic illness, etc.; an offensive term which is to be avoided because it implies hopelessness and may result in the abandonment of rehabilitative or ameliorative measures. **index c.**, the case of the original patient (propositus, or proband), which provides the stimulus for study of other members of the family, to ascertain a possible genetic factor in causation of the presenting condition. In epidemiology of contagious disease, the first case of a disease, as opposed to subsequent cases. **trial c.**, a box containing convex and concave spherical, and convex and concave cylindrical lenses, arranged in pairs, a trial spectacle frame, and various other devices used in testing vision.

casease (ka'se-ās) [L. *caseus* cheese] a protease derived from bacterial cultures, capable of dissolving albumin and the casein of milk and cheese.

caseation (ka'se-a'shun) [L. *caseus* cheese] 1. the precipitation of casein. 2. a form of necrosis in which the tissue is changed into a dry, amorphous mass resembling cheese.

casebook (kās-book) a book in which a physician enters the records of his cases.

case history (kās his-to're) the collected data concerning an individual, his family, and environment, including his medical history and any other information that may be useful in analyzing and diagnosing his condition or for instructional purposes.

casein (ka'se-in, ka'sēn, ka-sēn) [L. *caseus* cheese] a phosphoprotein, the principal protein of milk, the basis of curd and of cheese. It is precipitated from milk as a white amorphous substance by dilute acids, and redissolves on the addition of alkalis or of excess acid. Rennin (and other milk-clotting enzymes) influence the hydrolysis of casein to soluble paracasein, which in the presence of calcium (Ca^{++}) is converted to an insoluble curd (insoluble paracasein or calcium paracaseinate). Casein, usually in the form of its calcium, potassium, or sodium salts, is added to other ingredients of the diet to increase its protein content. NOTE: In British nomenclature, casein is called *caseinogen*, and paracasein is called *casein*. **c-calcium**, calcium caseinate. **gluten c.**, a casein-like substance in the seeds of various cereal plants; gluten. **Panum's c.**, paraglobulin. **serum c.**, paraglobulin. **c.-sodium**, a nutrient preparation of casein and sodium hydroxide. **vegetable c.**, a protein resembling casein, e.g., wheat gluten.

caseinate (ka'se-ah-nāt', ka-se'nāt) 1. any salt of casein. 2. a combination of casein and a metal.

caseinogen (ka'se-in'o-jen) [*casein* + Gr. *gennan* to produce] the British term for casein.

caseinogenate (ka'se-in'o-jē-nāt) a salt of caseinogen.

caseogenous (ka'se-oj'ē-nus) producing caseation; conversion into cheese (casein).

caseoserum (ka'se-o-se'rūm) an antiserum produced by immunization with casein.

caseous (ka'se-us) resembling cheese or curd; cheesy.

caseum (ka'se-um) [L. "cheese"] cellular debris of a cheeselike consistency, produced as a result of caseation.

caseworm (kās'werm) echinococcus.

CaSO₄ calcium sulfate.

Casoni's intradermal test (reaction) (kah-so'nēz) [Tommaso Casoni, Italian physician, 1880-1933] see under *tests*.

casava (kah-sah'vah) [Sp. *casabe*] a shrub of the genus *Manihot*, especially *M. esculenta* Crantz (Euphorbiaceae), and their starchy root products. The roots contain hydrogen cyanide, which is removed during processing to obtain starch. The starch is used in foods (soups, breads, tapioca) and glues.

Casselberry's position (kas'el-ber-e) [William Evans Casselberry, American laryngologist, 1859-1916] see under *position*.

Casser's (Casserio's, Casserius') fontanelle, etc. (kah'serz) [Giulio Casserio, Italian anatomist, 1556-1616] see under *fontanelle*, *ligament*, and *muscle*.

casserian (kah-se're-an) named for Giulio Casserio, as casserian fontanelle.

cassette (kah-set') [Fr. "a little box"] 1. a lightproof housing for x-ray film, containing front and back intensifying screens between which the film is placed. 2. a magazine for film or magnetic tape.

Cassia (kash'e-ah) [L.; Gr. *kasia*] a genus of leguminous trees, shrubs, and herbs, found in the warmer regions of the world. *C. acutifolia* Del., native to Africa and cultivated in India, and *C. angustifolia* Vahl., native to Arabia, afford Alexandria senna and Tinnevely senna, respectively.

cast (kast) 1. a positive copy or likeness of an object, such as a mold of a hollow organ (a renal tubule, bronchiole, etc.), formed of effused plastic matter and extruded from the body, as a urinary cast. 2. a positive reproduction of the form of the tissues of the upper or lower jaw, which is made in an impression, and over which denture bases or other dental restorations may be fabricated. 3. to form an object in a mold. 4. a stiff dressing or casting made of bandage impregnated with plaster of Paris or other hardening material, used for immobilization of various parts of the body, in cases of fractures, dislocations, and infected wounds. 5. strabismus. **bacterial c.**, a urinary cast made up of bacteria or containing a large number of bacteria. **blood c.**, a urinary cast that bears blood cells on its surface. **coma c.**, a urinary cast containing strongly refracting granules; said to indicate oncoming coma in diabetes. Called also *Külz's c.* or *cylinder*. **decidual c.**, the mass of degenerating or necrotic decidua discharged from the uterus at the time of rupture of an ectopic pregnancy. **dental c.**, the facsimile of oral structures obtained by pouring plaster into an impression made of the mouth; see cast, def. 2. **diagnostic c.**, a facsimile of oral structures made for the specific purpose of study as a means of determining the proper method of treatment, usually made of plaster of Paris;

a. Squamous epithelium from urine; b. epithelial casts.

Hyaline casts.

Granular casts.

Waxy casts.

called also *preoperative c.* and *study c.* **epithelial c.**, a urinary cast made up of columnar renal epithelium or of round cells. **false c.**, pseudocast. **fatty c.**, any cast made up of material loaded with fat globules. **fibrinous c.**, a cast resembling a waxy cast, but having a distinctly yellow color like beeswax, often seen in acute nephritis. **gnathostatic c.**, a cast of the teeth trimmed so that the occlusal plane is in its normal position in the mouth when the cast is set on a plane surface; used in orthodontic diagnosis. **granular c.**, a dark colored urinary cast of granular or cell-like substance, it being a degenerated form of a hyaline or waxy cast. **hair c.**, 1. trichobezoar. 2. (usually pl.) discrete, white, shiny, freely movable tubular accretions 2 to 7 mm. long that encircle the hair shafts of the scalp and which may be mistaken for nits; called also *peripilar keratin c's* and *pseudonits*. **hanging c.**, one applied to the arm in fracture of the shaft of the humerus and suspended by a sling looped around the neck. **hemoglobin c.**, an irregular, dark, granular cast composed of disintegrated red blood corpuscles. **hyaline c.**, a nearly transparent urinary cast made up of homogeneous protein, but slightly refractive. **investment c.**, refractory c. **Külz's c.**, coma c. **leukocyte c.**, a hyaline cast in which leukocytes are incorporated; called also *pus c.* **master c.**, a facsimile of oral structures, including the prepared tooth surfaces, residual ridge areas, and/or other parts of the dental arch, reproduced from an impression. **mucous c.**, cylindroid, def. 2. **peripilar keratin c.**, hair c., def. 2. **preextraction c.**, **preoperative c.**, diagnostic c. **pus c.**, leukocyte cast. **quarter c.**, a cut in the quarter of a horse's hoof. **red cell c.**, hyaline cast in which red cells are incorporated. **refractory c.**, one made of material that will not disintegrate at the high temperatures used in casting and/or soldering; called also *investment c.* **renal c.**, urinary c. **spiral c.**, a urinary cast having a spiral or twisted shape. **spurious c.**, **spurious tube c.**, cylindroid, def. 2. **study c.**, diagnostic c. **tube c.**, urinary c. **urate c.**, an agglomeration of urates on a shred of fibrin or other substance. **urinary c.**, a cast formed from gelled protein precipitated in the renal tubules and molded to the tubular lumen; pieces of these casts break off and are washed out with the urine. Urinary casts may be classified as granular, hyaline, epithelial, etc. Called also *renal c.*, *tube c.*, and *urinary cylinder*. **waxy c.**, a urinary cast made up of a highly refractive, translucent, amyloid substance.

Castanea (kas-tā-ne-ah) [L.; Gr. *kastanea*] a genus of trees, the chestnuts. *C. dentata* (Marsh.) Borkh. (Fagaceae) is the American chestnut. Its wood and leaves contain 6-11 per cent tannin. It has been used as an astringent and in pertussis. The leaves and buds may be poisonous to livestock if consumed in sufficient quantities. The nut is edible.

Castellanella (kas'tel-ah-nel'ah) [Aldo Castellani] *Trypanosoma*. **C. castellan'i**, *Trypanosoma rhodesiense*. **C. gambien'se**, *Trypanosoma gambiense*.

Castellani's bronchitis (disease), mixture, paint, test (kas-tel-an'ēz) [Sir Aldo Castellani, Italian physician 1877-1971] see *bronchospirochetosis*, and see under *mixture*, *paint*, and *tests*.

Castellani-Low symptom [Aldo Castellani; George Carmichael Low, English physician, 1872-1952] see under *symptom*.

Castellania (kas-tel-a'ne-ah) [Aldo Castellani] (*obs.*) *Candida*.

casting (kast'ing) an object formed by the solidification of plastic material, such as molten metal or gypsum product, poured into an impression or mold, or the act of formation of such an object. **vacuum c.**, the pouring of plastic material into an impression or mold, under conditions of lowered atmospheric pressure.

Castle's factors (kas'elz) [William Bosworth Castle, American physician, born 1897] 1. intrinsic factor. 2. cyanocobalamin (extrinsic factor).

castrate (kas'trāt) 1. to deprive of the gonads, rendering the in-

dividual incapable of reproduction. In the male, to geld or emasculate; in the female, to spay. 2. an individual that has been rendered incapable of reproduction by removal or destruction of the gonads.

castration (kas-tra'shun) [L. *castratio*] removal of the gonads, or their destruction as by radiation or parasites. **female c.**, bilateral oophorectomy, or spaying. **male c.**, bilateral orchiectomy. **parasitic c.**, defective sexual development due to infestation with parasites in early life.

castroid (kas'troid) eunuchoid.

casual (kaz'u-al) [L. *casualis*] 1. pertaining to accidental injuries or to accidents. 2. an occupant of a casual bed in a hospital.

casualty (kaz'u-al-te) 1. an accident; an accidental wound; death or dismemberment from an accident; also the person so injured or killed. 2. in the armed forces, one missing from his unit as a result of death, injury, illness, capture, because his whereabouts are unknown, or other reasons.

casuistics (kaz'u-is'tiks) the recording and study of cases of disease.

CAT computerized axial tomography.

cat (kat) any member of the family Felidae (lions, leopards, wildcats, etc.), especially the domesticated cat, *Felis catus*. **calico c.**, a cat with fur of three colors: black, white, and orange. Most are female; affected males are sterile, having extra X chromosomes (XXY, XXXY, etc.). **tortoise-shell c.**, calico c.

cata- [Gr. *kata* down] a prefix signifying down, lower, under, against, along with, very; see also words beginning *kata-*.

catabasial (kat-ah-ba'ze-al) [*cata-* + *basion*] having the basion lower than the opisthion; said of certain skulls.

catabasis (kah-tab'ah-sis) [*cata-* + Gr. *bainein* to go] the stage of decline of a disease.

catabatic (kat-ah-bat'ik) pertaining to the decline of a disease; abating.

catabiosis (kat'ah-bi-o'sis) [Gr. *katabiōsis* a passing life] the normal senescence of cells.

catabiotic (kat'ah-bi-ot'ik) 1. pertaining to or characterized by catabiosis. 2. dissipated or used up in the performance of function; said of the energy obtained from food.

catabolergy (kat'ah-bol'er-je) [*catabolic* + Gr. *ergon* work] the energy consumed in a catabolic process.

catabolic (kat'ah-bol'ik) pertaining to or of the nature of catabolism; retrograde or destructive.

catabolin (kah-tab'o-lin) catabolite.

catabolism (kah-tab'o-lizm) [Gr. *katabolē* a throwing down] any destructive process by which complex substances are converted by living cells into more simple compounds. **antibody c.**, the rapid degradation (shortened half-life) of foreign gamma globulin in the body.

catabolite (kah-tab'o-lit) any product of catabolism, or of a destructive metabolic process.

catabolize (kah-tab'ō-liz) to subject to catabolism; to undergo catabolism.

catachronobiology (kat'ah-kron'o-bi-ol'o-je) a term suggested to denote the study of the deleterious effects of time on a living system. Cf. *anachronobiology*.

catacrotic (kat'ah-krot'ik) pertaining to or characterized by catacrotism.

catacrotism (kah-tak'ro-tizm) [*cata-* + Gr. *krotos* beat] an anomaly of the pulse evidenced by appearance of a small additional wave or notch in the descending limb of the pulse tracing.

catadicrotic (kat'ah-di-krot'ik) pertaining to or characterized by catadicrotism.

catadicrotism (kat'ah-di'kro-tizm) [*cata-* + Gr. *dis* twice + *krotos* beat] an anomaly of the pulse evidenced by appearance of two small additional waves or notches in the descending limb of the pulse tracing.

catadidymus (kat'ah-did'y-mus) katadidymus.

catadioptric (kat'ah-di-op'trik) deflecting and reflecting light at the same time.

catagen (kat'ah-jen) the brief portion of the hair growth cycle in which growth (anagen) stops and resting (telogen) starts.

catagenesis (kat'ah-jen'ē-sis) [*cata-* + Gr. *genesis* production] involution or retrogression.

catagenetic (kat'ah-jē-net'ik) pertaining to catagenesis.

catagmatic (kat'ag-mat'ik) [Gr. *katagma* fracture] having the power of consolidating a broken bone.

catalase (kat'ah-lās) hydrogen-peroxide:hydrogenperoxide oxidoreductase. A crystalline enzyme that specifically catalyzes the decomposition of hydrogen peroxide and that is found in practically all cells except certain anaerobic bacteria.

catalatic (kat'ah-lat'ik) pertaining to catalase.

cataplexy (kat'ah-lep'se) [Gr. *katalēpsis*] a condition of diminished responsiveness usually characterized by trance-like states and by a waxy rigidity of the muscles (*flexibilitas cerea*) so that the patient tends to remain in any position in which he is placed; it

occurs in organic and psychological disorders and under hypnosis. Called also *anochlesia*.

cataleptic (kat'ah-lep'tik) 1. pertaining to, characterized by, or inducing cataplexy. 2. a person affected with cataplexy.

cataleptiform (kat'ah-lep'ti-form) resembling cataplexy.

cataleptoid (kat'ah-lep'toid) cataleptiform.

catalogia (kat'ah-lo'je-ah) verberigation.

Catalpa (kah-tal'pah) a genus of bignoniaceous trees. *C. big-nonioides* Walt. and *C. speciosa* Warder., of the United States, afford seeds formerly used in asthma.

catalysis (kah-tal'i-sis) [Gr. *katalysis* dissolution] increase in the velocity of a chemical reaction or process produced by the presence of a substance that is not consumed in the net chemical reaction or process; *negative catalysis* denotes the slowing down or inhibition of a reaction or process by the presence of such a substance. **contact c.**, **heterogeneous c.**, catalysis produced by the adsorbing power of contact surfaces; e.g., catalysis caused by colloidal platinum. **surface c.**, catalysis in which the reacting substances are adsorbed onto the surface of the catalyst and there react. Cf. *contact c.*

catalyst (kat'ah-list) any substance that brings about catalysis; called also *accelerant*. **negative c.**, a catalyst that retards the velocity of a reaction.

catalytic (kat'ah-lit'ik) [Gr. *katalyein* to dissolve] 1. causing or pertaining to an alternative effect; causing catalysis. 2. an alternative or specific medicine.

catalyzator (kat'ah-lī-za'tor) catalyst.

catalyze (kat'ah-liz) to cause or produce catalysis.

catalyzer (kat'ah-liz'er) catalyst.

catamenia (kat'ah-me'ne-ah) [Gr. *katamēnia*] the monthly uterine discharge; menstruation, or the menses.

catamenial (kat'ah-me'ne-al) pertaining to the menses or to menstruation.

catamenogenic (kat'ah-men'o-jen'ik) inducing menstruation.

catamite (kat'ah-mīt) in psychiatric terminology, a boy who submits to pederasty.

catamnesis (kat'am-ne'sis) the follow-up history of a patient after he is discharged from treatment or a hospital.

catamnestic (kat'am-nes'tik) pertaining to catamnesis.

catapasm (kat'ah-pazm) [Gr. *katapasma*] a dusting powder applied to an injured surface.

cataphasia (kat'ah-fa'ze-ah) [*cata-* + Gr. *phasis* speech] a speech disorder in which the patient constantly or repeatedly utters the same word or phrase.

cataphora (kah-taf'o-rah) [Gr. *kataphora*] lethargy with intervals of imperfect waking; called also *coma somnolentium*.

cataphoresis (kat'ah-fo-re'sis) [*cata-* + Gr. *phōresis* bearing] the passage of charged particles toward the negative pole (cathode) in electrophoresis.

cataphoretic (kat'ah-fo-ret'ik) of, or pertaining to, cataphoresis.

cataphoria (kat'ah-fo're-ah) [*cata-* + Gr. *pherein* to bear] a permanent downward turning of the visual axes of both eyes after the visual fusional stimuli have been eliminated; double hypophoria.

cataphoric (kat'ah-for'ik) pertaining to cataphoresis or to cataphoria.

cataphrenia (kat'ah-fre'ne-ah) [*cata-* + Gr. *phrēn* mind] a state of mental debility of the dementia type that tends to eventuate in recovery.

cataphylaxis (kat'ah-fi-lak'sis) [*cata-* + Gr. *phylaxis* a guarding] 1. the movement of leukocytes and antibodies to the locality of an infection (Wright). 2. a breaking down of the body's natural defense to infection (Bullock and Cranmer).

cataplasia (kat'ah-pla'se-ah) [*cata-* + Gr. *plassein* to form] retrograde metamorphosis, a form of atrophy in which the tissues revert to earlier and more embryonic conditions.

cataplasia (kat-ap'lah-sis) cataplasia.

cataplasma (kat'ah-plazm) [L. *cataplasma*; Gr. *kataplasma*] a poultice or soft external application, often medicated. **kaolin c.**, a poultice prepared with kaolin, boric acid, and glycerin; called also *cataplasma kaolini*.

cataplasma (kat'ah-plaz'mah) [L.; Gr. *kataplasma*] cataplasma. **c. fermenti**, a poultice containing yeast. **c. kaoli'ni**, kaolin cataplasma.

cataplectic (kat'ah-plek'tik) 1. pertaining to or characterized by cataplexy. 2. coming on suddenly and overwhelmingly.

cataplexie (kat'ah-plek'se) [Fr.] cataplexy. **c. du réveil**, awakening of the psyche occurring before physical awakening.

cataplexis (kat'ah-plek'sis) [Gr.] cataplexy.

cataplexy (kat'ah-plek-se) a condition in which there are abrupt attacks of muscular weakness and hypotonia triggered by an emotional stimulus such as mirth, anger, fear, or surprise. It is often associated with narcolepsy.

catapophysis (kat'ah-pof'i-sis) a process, or projection, of bone or of brain matter.

Catapres (kat'ah-pres) trademark for a preparation of clonidine hydrochloride.

cataract (kat'ah-rakt) [L. *cataracta*, from Gr. *katarrhēgnynai* to break down] an opacity of the crystalline lens of the eye. **adherent c.**, a cataract with adhesions between the iris and the lens capsule. **adolescent c.**, cataract developing during puberty. **after-c.**, a recurrent capsular cataract; any membrane in the pupillary area after performance of a procedure for extraction or absorption of the lens. **anterior pyramidal c.**, an anterior capsular opacity projecting forward into the aqueous humor. **arborescent c.**, one in which the opacity has a branched appearance. **aridosilicose c.**, **aridosilicate c.**, silicose c. **atopic c.**, cataract occurring, most often in the second to third decade, in those with longstanding atopic dermatitis. **axial c.**, nuclear c. **axillary c.**, spindle c. **black c.**, a nuclear cataract with a dark colored opacity; called also *cataracta brunescens* and *cataracta nigra*. **blood c.**, blocking of the lens by a blood clot. **blue c.**, **blue dot c.**, a condition characterized by the presence of small blue punctate opacities scattered throughout the nucleus and cortex of the lens; vision is usually not interfered with, nor does the condition usually progress. Called also *cerulean c.* and *cataracta cerulea*. **bony c.**, *cataracta ossea*. **bottlemakers' c.**, glassblowers' c. **brown c.**, **brunescens c.**, senile cataract appearing as a brown opacity. **calcareous c.**, one containing a chalky calcific deposit. **capsular c.**, one that consists of an opacity in the capsule. **capsulolenticular c.**, one that is seated partly in the capsule and partly in the lens. **central c.**, opacity of the center of the eye lens. **cerulean c.**, blue c. **choroidal c.**, a brownish diffuse opacity of the lens nucleus associated with chronic choroidal disease. **complete c.**, one that involves the whole lens. **complicated c.**, cataract due to disease of other parts of the eye; called also *secondary c.* and *cataracta complicata*. **congenital c.**, one that originates before birth. **contusion c.**, one due to shock or to injury of the eyeball. **coralliform c.**, a cataract having the shape of coral. **coronary c.**, a congenital condition in which club-shaped opacities are arranged in a ring or crown around the lens, the center of the lens and the extreme periphery remaining clear. **cortical c.**, a stellate opacity in the cortical layers of the lens; called also *stellate c.* **cupuliform c.**, a senile cataract of the capsule and subcapsular cortical fibers at the posterior pole of the lens. **cystic c.**, a cataract showing cystic degeneration. **diabetic c.**, one that occurs as a complication of diabetes. **dry-shelled c.**, silicose c. **electric c.**, cataract attributed to the light formed in electric welding or to a flash of lightning; called also *cataracta electrica*. **embryonal nuclear c.**, an opacity confined to the embryonal nucleus of the lens. **fibroid c.**, a variety of capsular cataract that does not affect the lens. **floriform c.**, a cataract having the form of a rayed flower (sunflower). **fluid c.**, a hypermature cataract in which the lens has become a milky fluid; called also *lacteal* or *milky c.* **fusiform c.**, spindle c. **general c.**, a cataract in which the opacity affects both the cortex and nucleus of the lens; called also *mixed c.* **glassblowers' c.**, cataract in glassblowers, due to exposure to infrared heat and characterized by exfoliation of the lens capsule; called also *bottlemakers' c.* **glaucomatous c.**, an opacity that results from one or more attacks of glaucoma. **gray c.**, senile cortical cataract. **green c.**, a greenish opacity, sometimes glaucomatous and sometimes due to a slight lack of transparency in the mediums. **hard c.**, one with a hard nucleus. **heat-ray c.**, cataract due to long-continued exposure to high temperatures, e.g., glassblowers' c. **hedger's c.**, perforation of the cornea by a thorn, occurring in persons who trim hedges. **heterochromic c.**, cataract associated with heterochromia of the iris. **hypermature c.**, one in which the lens capsule is wrinkled and the contents have become either solid and shrunken or soft and liquid; called also *overripe c.* **immature c.**, an early opacity, or any cataract that affects only a part of the lens or capsule. **incipient c.**, any cataract in its early stages, or one that has sectors of opacity with clear spaces intervening. **infantile c.**, a lamellar cataract of early childhood, commonly associated with rickets or convulsions. **intumescent c.**, one in which the lens is swollen and opaque. **irradiation c.**, cataract caused by large doses of roentgen rays, radium, or similar energy. **juvenile c.**, a soft cataract in a young person. **lacteal c.**, fluid c. **lamellar c.**, an opacity that affects certain layers only between the cortex and nucleus of the lens; called also *zonular c.* **lenticular c.**, opacity of the lens not affecting the capsule. **lightning c.**, cataract caused by a stroke of lightning passing through the body. **mature c.**, one in which the lens is completely opaque; called also *ripe c.* **membranous c.**, a condition in which the lens substance has shrunk, leaving remnants of the capsule and fibrous tissue formation. **milky c.**, fluid c. **mixed c.**, general c. **morgagnian c.**, a hypermature cataract in which the cortex has become completely liquefied and the nucleus settles at the bottom of the capsule. **naphthalenic c.**, cataract caused by the injection of naphthalene. **nuclear c.**, one in which the opacity is seated in the central nucleus of the lens; called also *axial c.* **overripe c.**, hypermature c. **partial c.**, any cataract that affects only a

part of the lens; it may be central or peripheral. **perinuclear c.**, a disklike opacity around the nucleus of the lens. **peripheral c.**, a cataract in the periphery of the lens. **polar c.**, **anterior**, one seated at the center of the anterior capsule of the lens. **polar c.**, **posterior**, one seated at the center of the posterior capsule of the lens. **primary c.**, a cataract developing independently of any other disease. **progressive c.**, one in which the opacification advances and finally becomes total. **pud-dler's c.**, cataract in iron puddlers due to intense radiation from open-hearth furnaces. **punctate c.**, one made up of a collection of dotlike opacities. **pyramidal c.**, a conoid anterior polar cataract with its apex pointing forward. **reduplication c.**, a series of similar opacities situated at various levels in the lens, usually connected by opaque lines. **ripe c.**, mature cataract. **sanguineous c.**, former term for a blood clot in the prepupillary opening. **secondary c.**, 1. a cataract that forms after most of the opaque lens has been removed surgically. 2. complicated cataract. **sedimentary c.**, a soft cataract in which the denser parts have gravitated downward. **senile c.**, a hard opacity of the nucleus of the lens of the eye, occurring in the aged. **silicose c.**, **siliquose c.**, a cataract in which there is absorption of the lens, with calcareous deposit in the capsule, so that the atrophied lens resembles a siliqua; called also *dry-shelled c.*, *aridosilicose c.*, *aridosilicate c.*, and *cataracta aridosilicata*. **snowflake c.**, **snowstorm c.**, a cataract that has the appearance of numerous grayish or bluish-white flaky opacities, frequently seen in young diabetics. **Soem-mering's ring c.**, see under *ring*. **soft c.**, one with no hard nucleus. **spindle c.**, a cataract characterized by a spindle-shaped opacity reaching through the capsule in an anteroposterior direction; called also *axillary c.* and *fusiform c.* **stationary c.**, an opacity of the lens that does not increase in extent. **stellate c.**, cortical c. **subcapsular c.**, an opacity situated beneath the anterior or posterior capsule of the lens. **sun-flower c.**, a sunflower-shaped cataract caused by the presence of copper in the eye, as in Wilson's disease. Called also *chalcosis lentis*. **sutural c.**, a congenital opacity of the lens affecting the Y-shaped sutures of the fetal membrane. **total c.**, an opacity of all the fibers of the lens. **toxic c.**, that due to exposure to a toxic drug, e.g., naphthalene. **traumatic c.**, cataract following an injury. **tremulous c.**, one attended by a tremulous movement of the pupil and iris. **zonular c.**, 1. lamellar cataract. 2. one that involves the zonula.

cataracta (kat'ah-rak'tah) [L.] cataract. **c. accre'ta**, a condition in which the lens and the iris are fastened together as a result of iritis. **c. aridosiliqua'ta**, silicose cataract. **c. brunescens**, brown cataract. **c. ceru'lea**, blue cataract. **c. complica'ta**, complicated cataract. **c. congen'ita**, **membrana'cea**, congenital membranaceous cataract. **c. corona'ria**, a crown-shaped cataract. **c. elec'trica**, electric cataract. **c. membrana'cea accre'ta**, an after-cataract due to adhesions of the remains of the anterior capsule to the posterior capsule. **c. neurodermat'ica**, a type of cataract occurring as a complication of generalized dermatitis. **c. ni'gra**, black cataract. **c. os'sea**, bony cataract: a condition in which lens tissue has become ossified. **c. syndermot'ica**, cataract occurring as an accompaniment of a skin disease.

cataractogenic (kat'ah-rak'to-jen'ik) tending to induce the formation of cataracts.

cataractopiesis (kat'ah-rak'to-pi-e'sis) couching.

cataractous (kat'ah-rak'tus) of the nature of or affected with cataract.

cataria (kah-ta're-ah) [L. "catnip"] the leaves and tops of *Nepeta cataria* L. (Labi), or catnip, a labiate plant; used as a carminative and mild nerve stimulant. Feline species are attracted to and fondle the plant because of its aromatic oils, which contain nepetalactone.

catarrh (kah-tahr') [L. *catarrhus*, from Gr. *katarrhein* to flow down] inflammation of a mucous membrane, with a free discharge (Hippocrates); especially such inflammation of the air passages of the head and throat. **atrophic c.**, chronic rhinitis with wasting of mucous and submucous tissues. **autumnal c.**, hay fever. **Bostock's c.**, hay fever. **epidemic c.**, influenza or grip. **Fruehjahr c.**, vernal conjunctivitis. **hyper-trophic c.**, chronic catarrh that results in irregular, and sometimes papillary, thickening of the mucous and the submucous tissues. **Laennec's c.**, a kind of asthmatic bronchitis, with viscous, pearly expectoration. **malignant c. of cattle**, a virus disease of cattle characterized by exudative inflammation of the mucous membranes, corneal opacities, and enlargement of the lymphatic glands. **postnasal c.**, chronic rhinopharyngitis. **Russian c.**, influenza. **sinus c.**, a disorder of the lymph nodes characterized by dilatation of the sinuses accompanied by some proliferation of the littoral cells, which become swollen and detach themselves from the wall of the sinuses to lie free in the lumen. **spring c.**, vernal conjunctivitis. **suffocative c.**, asthma. **vernal c.**, allergic rhinitis and conjunctivitis attributed to spring pollens.

catarrhal (kah-tahr'al) of the nature of or pertaining to catarrh.

Catarrhina (kat'ah-ri'nah) [*cata-* + Gr. *rhis* nose] Cerco-pithecoidea.

catarrhine (kat'ah-rin) 1. pertaining to the superfamily Catarrhina. 2. characterized by nostrils that are close together and directed downward.

catastalsis (kat'ah-stal'sis) [*cata-* + Gr. *stalsis* contraction] (*obs.*) a downward moving wave of contraction without a preceding wave of inhibition occurring in the digestive tube.

catastaltic (kat'ah-stal'tik) [Gr. *katastaltikos*] 1. inhibitory; restraining. 2. an agent that tends to restrain or check any process.

catastate (kat'ah-stāt) [*cata-* + Gr. *histanai* to stand] a result of catabolism; any substance or condition resulting from a catabolic process.

catastatic (kat'ah-stat'ik) of the nature of or pertaining to a catastate.

catatasis (kah-tat'ah-sis) [Gr. *katatasis* a stretching] extension of a limb or part, applied for the reduction of a dislocation or fracture.

catathermometer (kat'ah-ther-mom'ē-ter) katathermometer.

catathymic (kat'ah-thi'mik) H. W. Maier's term for psychic disorders marked by perseveration, in the course of which a single depressive topic tends to be complex-determined.

catatonia (kat-ah-to'ne-ah) [*cata-* + Gr. *tonos* tension + *-ia*] catatonic schizophrenia.

catatonic (kat'ah-to'ne-ak) catatonic.

catatonic (kat'ah-ton'ik) 1. see under *schizophrenia*. 2. an individual affected with *catatonic schizophrenia*.

catatony (kah-tat'o-ne) catatonia.

catatricrotic (kat'ah-tri-krot'ik) pertaining to or characterized by catatricrotism.

catatricrotism (kat'ah-tri'kro-tizm) [*cata-* + Gr. *treis* three + *krotos* beat] an anomaly of the pulse evidenced by appearance of three small additional waves or notches in the descending limb of the pulse tracing.

catatropia (kat'ah-tro'pe-ah) [*cata-* + Gr. *trepein* to turn] a downward turning of the visual axis of both eyes in the presence of the visual fusional stimuli.

cataxia (kah-tak'se-ah) [Gr. *katagnymai* to break in pieces] (*obs.*) the separation or breaking up of bacterial associations; especially in those cases in which the association is pathogenic, but individual bacterial species are not.

catechin (kat'ē-kin) chemical name: *trans-2-(3,4-dihydroxyphenyl)-3,4-dihydro-2H-1-benzopyran-3,5,7-triol*. A crystalline astringent principle, $C_{15}H_{14}O_6 \cdot 4H_2O$, from catechu (e.g., *Acacia catechu* Willd., Leguminosae and gambier, *Uncaria gambier* [Hunter] Roxb., Rubiaceae). Called also *catechol* and *catechuic acid*.

catechol (kat'ē-kol) 1. catechin. 2. pyrocatechol.

catecholamine (kat'ē-kol'ah-mēn, kat'ē-kol'ah-min) one of a group of similar compounds having a sympathomimetic action, the aromatic portion of whose molecule is catechol, and the aliphatic portion an amine. Such compounds include dopamine, norepinephrine, and epinephrine.

catecholaminergic (kat'ē-kol-am'in-er'jik) activated by or secreting catecholamines.

catechu (kat'ē-ku) 1. a powerfully astringent extract from the heartwood of *Acacia catechu* Willd., Leguminosae, the chief constituents of which are catechin, quercetin, and catechutannic acid; formerly used as an antidiarrheal agent. Called also *black c.* 2. gambir. **pale c.**, gambir.

catelectrotonus (kat'e-lek-trot'o-nus) [*cata-* + *electrotonus*] increase of irritability of a nerve or muscle near the cathode during passage of an electric current.

Catenabacterium (kat'ē-nah-bak-te're-um) [L. *catena* chain + *bacterium*] a genus of microorganisms of the tribe Lactobacillaceae, family Lactobacillaceae, order Eubacteriales, made up of nonsporulating, anaerobic, gram-positive bacilli, found in the intestinal tract and occasionally associated with purulent infections.

catenating (kat'e-nāt'ing) [L. *catena* a chain] forming part of a chain or complex of symptoms.

catenoid (kat'e-noid) [L. *catena* chain] arranged like a chain or resembling a chain.

catenulate (kah-ten'u-lāt) catenoid.

catgut (kat'gut) an absorbable sterile strand obtained from collagen derived from healthy mammals, originally prepared from the submucous layer of the intestines of sheep; used as a surgical ligature. **chromic c.**, **chromicized c.**, catgut sterilized and impregnated with chromium trioxide to prolong its tensile strength in tissues. **formaldehyde c.**, catgut impregnated with a solution of formaldehyde by boiling in an alcohol-formaldehyde solution. **I.K.I. c.**, catgut treated with a solution of 1 part of iodine in 100 parts of a potassium iodide solution; called also *iodine c.* **iodine c.**, I.K.I. c. **iodochromic c.**, catgut treated with a solution of iodine, potassium, iodide, and potassium

dichromate. **silverized c.**, catgut impregnated with silver to give it increased strength and resisting qualities.

Cath. abbreviation for L. *catharticus*, cathartic.

Catha (kath'ah) a genus of plants. **C. edulis** Forsk. (Celastraceae), a shrub or tree native to tropical East Africa, whose leaves are chewed or brewed into a tea and consumed for its central nervous system stimulating properties. The active principle is D-norpseudoephedrine.

cathaeresis (kah-thēr'ē-sis) catheresis.

catharma (kah-thar'mah) [Gr. *katharma*] the refuse of sacrifice, used as remedies in Greek medicine.

catharmos (kah-thar'mos) [Gr. *katharmos* a cleansing] incantations (hymns) against disease.

catharometer (kath'ah-rom'ē-ter) an instrument for measuring the thermal conductivity of air by the rate of heat loss from a heated platinum wire.

catharsis (kah-thar'sis) [Gr. *katharsis* a cleansing] 1. a cleansing or purgation. 2. in psychiatry, the expression and discharge of repressed emotions and ideas; called also *psychocatharsis* and *Freud's cathartic method*.

cathartic (kah-thar'tik) [Gr. *kathartikos*] 1. causing evacuation of the bowels. 2. an agent that causes evacuation of the bowels by increasing bulk, stimulating peristaltic action, etc. Called also *purgative* (q.v.), *coprogonic*, and *ecoproptic*. 3. producing catharsis. **bulk c.**, one that stimulates evacuation of the bowel by increasing the bulk of the feces. **lubricant c.**, one that acts by softening the feces and reducing friction between them and the intestinal wall. **saline c.**, one that increases fluidity of the intestinal contents by retention of water by osmotic forces, and indirectly increases motor activity. **stimulant c.**, one that directly increases motor activity of the intestinal tract.

cathectic (kah-the'k'tik) pertaining to cathexis.

Cathelin's method, segregator (kat-laz') [Fernand Cathelin, Paris urologist, born 1873] see under *method* and *segregator*.

cathemoglobin (kath'em-o-glo'bin) a substance produced by oxidizing hemochromogen; it consists of oxidized heme and denatured globin.

cathepsin (kah-thep'sin) an endopeptidase found in most cells, which takes part in cell autolysis and in the self-digestion of tissues.

catheresis (kah-thēr'ē-sis) [Gr. *kathairesis* a reduction] 1. weakness caused by medicine. 2. a mild action.

catheretic (kath'ē-ret'ik) 1. mildly caustic. 2. weakening or prostrating.

catheter (kath'ē-ter) [Gr. *kathetēr*] a tubular, flexible, surgical instrument for withdrawing fluids from (or introducing fluids into) a cavity of the body, especially one for introduction into the bladder through the urethra for the withdrawal of urine.

acorn-tipped c., one used in ureteropyelography to occlude the ureteral orifice and prevent backflow from the ureter during and following the injection of an opaque medium. **angiographic c.**, a catheter through which a contrast medium is injected for visualization of the vascular system of an organ. Such catheters may have pre-formed ends to facilitate selective locating (as in a renal or coronary vessel) from a remote entry site. They may be named according to the site of entry and destination, as *femoral-renal*, *brachial-coronary*, etc. **bicoudate c.**, **c. bicoudé**, a twice-bent Mercier catheter. **Bozeman's c.**, **Bozeman-Fritsch c.**, a double-current uterine catheter; called also *Fritsch's c.* **Braasch bulb c.**, a bulb-tipped catheter used for dilatation and calibration. **cardiac c.**, a long, fine catheter especially designed for passage, usually through a peripheral blood vessel, into the chambers of the heart under roentgenologic control. **central venous c.**, a long, fine catheter introduced into a large (jugular, subclavian, etc.) vein for the purposes of administering parenteral fluids (as in hyperalimentation) or medications or for measurement of central venous pressure.

conical c., a catheter with a cone-shaped tip designed to dilate the ureter. **c. coudé**, an elbowed c. **c. à demeure**, a catheter that is held in position in the urethra. **de Pezzer c.**, a self-retaining catheter having a bulbous extremity. **double-current c.**, a catheter having two channels; one for injection and one for removal of fluid. **Drew-Smythe c.**, an instrument used for the artificial rupture of the amniotic membranes to induce labor. **elbowed c.**, one with a sharp bend near the beak; used principally in cases of enlarged prostate. Called also *c. coudé*. **eustachian c.**, an instrument for inflating the eustachian tube, used in treating some diseases of the middle ear.

faucial c., a eustachian catheter to be used through the fauces. **female c.**, a short catheter for passage through the female urethra. **filiform-tipped c's**, catheters used to dilate tight ureteral strictures and to bypass obstructions due to angulations or calculi in the ureter. **flexible c.**, Nélaton's c. **Foley c.**, an indwelling catheter retained in the bladder by a balloon which may be inflated with air or liquid. **Fritsch's c.**, Bozeman-Fritsch c. **Garceau c.**, conical c. **Gouley's c.**, a solid, curved steel instrument, grooved on its inferior surface so that it can be passed over a guide through a urethral stricture. **in-**

dwelling c., a catheter that is held in position in the urethra.

Itard's c., a variety of eustachian catheter. **lobster-tail c.**, one with three joints at the tip. **Malecot c.**, a two- or four-winged catheter for use in the female bladder. **Mercier's c.**, a flexible catheter elbowed at the end; used in hypertrophied prostate. **Nélaton's c.**, a catheter of soft India rubber; called also *flexible c.* and *soft c.* **Odman-Ledin c.**, a polyethylene thermoplastic radiopaque catheter used for percutaneous insertion in cardiac catheterization. **olive-tip c.**, a ureteral catheter with an olive-shaped end, used to dilate a constricted ureteral orifice; larger sizes are also utilized for dilating urethral strictures or for calibrating the diameter of such strictures. **Pezzer's c.**, see *de Pezzer c.* **Phillips' c.**, a urethral catheter with a woven filiform guide. **prosthetic c.**, a catheter having a short angular tip for passing an enlarged prostate. **railway c.**, a straight elastic catheter with an open end to be introduced with a filiform guide in cases of stricture. **Robinson c.**, a straight catheter with two to six openings to allow drainage, especially useful in the presence of blood clots which may occlude one or more openings. **Schrötter's c.**, a hard-rubber catheter of varying caliber, used for dilating laryngeal strictures. **self-retaining c.**, a catheter so constructed as to be retained at will and effect a drainage of the bladder. **Skene's c.**, a strong, self-retaining glass catheter for the female bladder. **soft c.**, Nélaton's c. **spiral-tip c.**, a catheter with an off-center filiform tip. **Squire's c.**, a vertebrated catheter. **Swan-Ganz c.**, a soft, flow-directed catheter with a balloon at the tip for measuring pulmonary arterial pressures; it is introduced into the basilic vein and is guided by blood flow into the subclavian vein, the superior vena cava, through the right atrium and ventricle, into the pulmonary artery. **tracheal c.**, an instrument for removing mucus from the trachea by application of suction. **two-way c.**, a form used in irrigation. **vertebrated c.**, a catheter made in small sections fitted together so as to be flexible; called also *Squire's c.* **whistle-tip c.**, a catheter with a terminal opening as well as a lateral one. **winged c.**, a catheter with two projections on the end to retain it in the bladder.

catheterization (kath'ē-ter-i-za'shun) the employment or passage of a catheter. **cardiac c.**, passage of a small catheter through a vein in an arm or leg or the neck and into the heart, permitting the securing of blood samples, determination of intracardiac pressure, and detection of cardiac anomalies. **hepatic vein c.**, passage of a cardiac catheter through an arm vein, right atrium, inferior vena cava, and hepatic vein, into a small hepatic venule, for recording of intrahepatic venous pressures. **laryngeal c.**, insertion of a catheter into the larynx, for the evacuation of secretions or introduction of a gas. **retrourethral c.**, passage through the urethra of a catheter first introduced through an incision into the bladder, and then passed through the internal urethral orifice.

catheterize (kath'ē-ter-iz) to introduce a catheter within a body cavity; usually used to designate the passage of a catheter into the bladder for the withdrawal of urine.

catheterostat (kath-e'ter-o-stat) a holder for containing and sterilizing catheters.

cathetometer (kath'ē-tom'ē-ter) an instrument for aiding in the reading of thermometers, burets, etc.

cathexis (kah-thek'sis) [Gr. *kathexis*] the charge or attachment of mental or emotional energy upon an idea or object.

cathisophobia (kath'i-so-fō-be-ah) [Gr. *kathizein* to sit down + *phobein* to be affrighted by + *ia*] akathisia.

cathode (kath'ōd) [Gr. *kata* down + *hodos* way] 1. the negative electrode from which electrons are emitted and to which positive ions are attracted. 2. the electrode through which a current leaves a nerve or other substance. Cf. *anode*.

cathodic (kah-thod'ik) pertaining to or emanating from a cathode.

catholicon (kah-thol'i-kon) [Gr. *katholikos* general] a panacea or universal medicine.

catholyte (kath'o-lit) that portion of an electrolyte that adjoins the cathode.

Cathomycin (kath'o-mi'sin) trademark for preparations of novobiocin.

cation (kat'i-on) [Gr. *kata* down + *iōn* going] an ion having a positive charge owing to the loss of one or more electrons, and hence being attracted by and traveling to the cathode, or negative pole, under the influence of an applied electric field.

cationic (kat'i-on'ik) pertaining to or containing a cation.

cationogen (kat'i-on'o-jen) a compound that may become or may liberate a cation in the body.

cativi (kah-te've) pinta.

catlin (kat'lin) a long, straight, sharp-pointed, double-edged knife used in amputations.

catling (kat'ling) catlin.

catoptric (kah-top'trik) [Gr. *katoptrikos* in a mirror] pertaining to a reflected image, or to reflected light.

catoptrics (kah-top'triks) that branch of physics which treats of reflected light.

catoproscope (kah-top'tro-skōp) [Gr. *katoptron* mirror + *sko-*

pein to examine] an instrument for examining objects by reflected light.

catotropia (kat'o-tro'pe-ah) cataphoria.

Cattani's serum (kah-tan'ez) [Giuseppina Cattani, Italian pathologist, 1859-1915] see under *serum*.

cauda (kaw'dah), pl. *cau'dae* [L.] [NA] a tail, or tail-like appendage; in anatomical nomenclature, a general term for a structure resembling such an appendage. **c. cerebel'li**, vermis cerebelli. **c. cor'poris stria'ti**, c. nuclei caudati. **c. epididym'idis** [NA], tail of epididymus: the lower part of the epididymis, where the ductus epididymidis is continuous with the ductus deferens; called also *globus minor epididymidis*. **c. equi'na** [NA], the collection of spinal roots that descend from the lower part of the spinal cord and occupy the vertebral canal below the cord; their appearance resembles the tail of a horse. **c. he'licis** [NA], the termination of the posterior margin of the cartilage of the helix. **c. lie'nis**, extremitas anterior lienis. **c. nu'clei cauda'ti** [NA], tail of caudate nucleus: the part of the caudate nucleus that tapers off from the body, curves around in the roof of the inferior horn of the lateral ventricle, and extends rostrally as far as the amygdaloid nucleus; called also *c. corporis striati*. **c. pancre'atis** [NA], tail of pancreas: the left extremity of the pancreas, usually in contact with the medial aspect of the spleen and the junction of the transverse and descending colon.

caudad (kaw'dad) directed toward the tail; opposite to cranial or cephalad.

caudae (kaw'de) [L.] plural of *cauda*.

caudal (kaw'dal) 1. pertaining to a cauda. 2. denoting a position more toward the cauda, or tail, than some specified point of reference; same as inferior, in human anatomy. See *caudalis*.

caudalis (kaw-da'lis) pertaining to the cauda (tail), or to the inferior end of the body; [NA] a term used to denote relationship to the caudal or inferior extremity of an organ or part.

caudalward (kaw'dal-ward) toward the caudal end; in a direction away from the head.

caudamoeba sinen'sis (kaw'dah-me'bah sin-en'sis) *Entamoeba histolytica*.

caudate (kaw'dāt) [L. *caudatus*] having a tail.

caudatolenticular (kaw-da'to-len-tik'u-lar) pertaining to the caudate and lenticular nuclei of the striatum.

caudatum (kaw-da'tum) [L.] the nucleus caudatus.

caudectomy (kaw-dek'to-me) the surgical removal of all or part of the tail, as of a dog.

caudex (kaw'deks), pl. *cau'dices* or *caudexes* [L.] (obs.) a stem or stemlike part. **c. cer'e'bri** (obs.), pedunculus cerebri.

caudocephalad (kaw-do-sef'ah-lad) [L. *cauda* tail + Gr. *kephale* head + L. *ad* toward] 1. proceeding in a direction from the tail toward the head. 2. in both a caudal and a cephalic direction.

caul (kaw) 1. a piece of amnion that sometimes envelops a child's head at birth; pileus. Called also *cowl*. 2. the omentum, usually used to designate the greater omentum.

Caulk's punch [John Roberts Caulk, St. Louis urologist, 1881-1938] see under *punch*.

Caulobacter (kaw'lo-bak'ter) [Gr. *kaulos* stalk + *baktron* a staff] a genus of microorganisms of the family Caulobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as stalked, curved, rod-shaped cells, the long axis of the cell coinciding with the long axis of the stalk. The type species is *C. vibrio'des*.

Caulobacteraceae (kaw'lo-bak'ter-a'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Pseudomonadineae), occurring as nonfilamentous rod-shaped bacteria singly or in pairs or short chains, in fresh or salt water. It includes five genera, *Caulobacter*, *Gallionella*, *Neusikia*, and *Siderophacus*.

Caulobacteriineae (kaw'lo-bak-te-re-in'e-e) a name formerly given a suborder of microorganisms now considered to constitute a family (Caulobacteraceae) of the suborder Pseudomonadineae, order Pseudomonadales.

caumesthesia (kaw'mes-the'ze-ah) [Gr. *kauma* burn + *aisthēsis* perception] a condition in which, with a low temperature, the patient experiences a sense of burning heat.

causal (kaw'zal) pertaining to a cause; directed against a cause.

causalgia (kaw-zal'je-ah) [Gr. *kaunos* heat + *-algia*] a burning pain, often accompanied by trophic skin changes, due to injury of a peripheral nerve.

causative (kawz'ah-tiv) effective or responsible as a cause or agent.

cause (kawz) [L. *causa*] that which brings about any condition or produces any effect. **constitutional c.**, one acting within the body that is not restricted to a specific site, but is systemic or has a genetic basis. **exciting c.**, one that leads directly to a specific condition. **immediate c.**, a cause that is operative at the beginning of the specific effect; called also *precipitating c.* **local c.**, one that is not general or constitutional, but is confined to the site where the effect is produced. **precipitating c.**, immediate c. **predisposing c.**, anything that renders a person more liable to a specific condition without actually producing

it. **primary c.**, the principal factor contributing to the production of a specific result. **proximate c.**, that which immediately precedes and produces an effect. **remote c.**, any cause that does not immediately precede and produce a specific condition; a predisposing, secondary, or ultimate cause. **secondary c.**, one that is supplemental to the primary cause. **specific c.**, one that produces a special or specific effect. **ultimate c.**, the earliest factor, in point of time, that has contributed to production of a specific result.

caustic (kaws'tik) [L. *causticus*; Gr. *kaustikos*] 1. burning or corrosive; destructive to living tissues. 2. having a burning taste. 3. an escharotic or corrosive agent. Called also *cauterant*. **Churchill's iodine c.**, a caustic solution of iodine and potassium iodide in water. **Filhos's c.**, 5 parts of potassium hydroxide and 1 part of calcium oxide. **Landolfi's c.**, a compound containing chlorides of antimony, bromine, gold, and zinc. **Lugol's c.**, 1 part each of iodine and potassium iodide dissolved in 2 parts of water. **lunar c.**, toughened silver nitrate. **mitigated c.**, silver nitrate diluted with potassium nitrate. **Plunket's c.**, a caustic paste made of 60 parts of arsenic, 100 of sulfur, and 480 each of *Ranunculus acris* and *R. flammula*. **Rousselot's c.**, a caustic containing red mercuric sulfide, burnt sponge, and arsenic trioxide. **Vienna c.**, caustic potash with lime. **zinc c.**, a mixture of 1 part of zinc chloride and 3 parts of flour.

causticize (kaws'ti-siz) to render caustic.

cauter (kaw'ter) [Gr. *kauter*] (*obs.*) a cautery iron.

cauterant (kaw'ter-ant) 1. any caustic material or application. 2. caustic.

cauterization (kaw'ter-i-za'shun) the destruction of tissue with a hot instrument, an electric current, or a caustic substance.

cautery (kaw'ter-e) [L. *cauterium*; Gr. *kautērion*] 1. the application of a caustic substance, a hot instrument, an electric current, or other agent to destroy tissue. 2. a caustic substance or hot instrument used in cauterization. **actual c.**, 1. a red-hot iron used as a cauterizing agent. 2. the application of an agent that actually burns tissue. **button c.**, an iron disk with a handle, used as a cautery. **chemical c.**, chemocautery. **cold c.**, cautery produced by the application of carbon dioxide; called also *cryocautery*. **Corrigan's c.**, a form of button cautery. **electric c.**, **galvanic c.**, see *galvanocautery*. **gas c.**, cauterization by means of a specially controlled jet of burning gas. **Paquelin's c.**, a platinum point for use in cauterization; it is hollow and filled with platinum sponge through which a heated hydrocarbon vapor is blown. **potential c.**, cauterization by an escharotic without applying heat; called also *virtual c.* **solar c.**, cauterization by using heat produced by concentrating the rays of the sun with a lens or mirror; called also *sun c.* **Souttar's c.**, a steam-heated cautery producing a constant temperature of about 100° C. **steam c.** (*obs.*), atmocautis. **sun c.**, solar c. **virtual c.**, potential c. **Ziegler c.**, a method of treating minor degrees of senile ectropion.

cava (ka'vah) [L.] 1. plural of *cavum*. 2. a vena cava.

caval (ka'val) pertaining to a vena cava.

cavascop (kav'ah-skōp) [L. *cavum* hollow + Gr. *skopein* to examine] an instrument for illuminating and examining a cavity.

cave (kāv) [L. *cavum*] a small enclosed space within the body or an organ; see under *cavity* and *cavum*.

caveola (ka-ve-o'lah), pl. *caveolae* [L.] a small pit, depression, or invagination, such as any of the minute pits or incupings of the cell membrane formed during pinocytosis, which close and then pinch off to form small, free, fluid-filled vesicles (pinosomes) in the cytoplasm. Called also *c. intracellularis* and *plasmalemmal vesicle*.

cavern (kav'ern) a pathologic cavity, such as occurs in the lung in tuberculosis. **c's of corpora cavernosa of penis**, cavernae corporum cavernosorum penis. **c's of corpus spongiosum**, cavernae corporis spongiosi. **Schnabel's c's**, pathologic spaces in the optic nerve in glaucoma.

caverna (ka-ver'nah), pl. *cavernae* [L.] [NA] a general term used to designate a cavity. **cavernae corporis spongiosi** [NA], caverns of corpus spongiosum; the dilatable spaces within the corpus spongiosum of the penis, which fill with blood and become distended with erection. **cavernae corporum cavernosorum penis** [NA], caverns of corpora cavernosa of the penis; the dilatable spaces within the corpora cavernosa of the penis, which fill with blood and become distended with erection.

caverniloquy (kav'er-ni'l'o-kwe) [L. *caverna* cavity + *loqui* to speak] the low-pitched pectoriloquy indicative of a pulmonary cavity.

cavernitis (kav'er-ni'tis) inflammation of the corpora cavernosa or corpus spongiosum of the penis. **fibrous c.**, Peyronie's disease.

cavernoma (kav'er-no'mah), pl. *cavernomas*, *cavernomata*. Hemangioma cavernosum. **c. lymphaticum**, lymphangioma cavernosum.

cavernoscope (kav'er-no-skōp') an instrument for viewing pulmonary cavities; it is pushed through an intercostal space and on into the cavity.

cavernoscopy (kav'er-nos'ko-pe) the inspection of pulmonary cavities by the aid of a cavernoscope.

cavernositis (kav'er-no-si'tis) cavernitis.

cavernostomy (kav'er-nos'to-me) operative drainage of a pulmonary abscess cavity.

cavernous (kav'er-nus) [L. *cavernosus*] containing caverns or hollow spaces.

Cavia (ka've-ah) a genus of small South American rodents. **C. coba'ya**, the guinea pig.

cavilla (kah-vil'ah) os sphenoidale.

cavitory (kav'i-ta're) 1. characterized by the presence of a cavity or cavities. 2. any entozoon with a body space or alimentary canal.

cavitas (kav'i-tas), pl. *cavitates* [L. from *cavus* hollow] a hollow space or depression; called also *cavity*. See also *cavum*. **c. den'tis**, pulp cavity (*cavum dentis* [NA]). **c. glenoida'lis** [NA], glenoid cavity: a depression in the lateral angle of the scapula for articulation with the humerus; called also *glenoid fossa of scapula*.

cavitates (kav'i-ta'tēz) [L.] plural of *cavitas*.

cavitation (kav'i-ta'shun) the formation of cavities, as in pulmonary tuberculosis. Also, a cavity.

Cavite fever (kah-ve'tah) [*Cavite*, a province and city in the Philippine Islands] see under *fever*.

cavitis (ka-vi'tis) inflammation of a vena cava.

cavity (kav'i-te) [L. *cavitas*] 1. a hollow place or space, or a potential space, within the body or in one of its organs; it may be normal or pathological. See also *cavitas* and *cavum*. 2. in dentistry, the lesion, or area of destruction in a tooth, produced by dental caries; classified as simple, compound, or complex, according to the number of surfaces involved. Also classified by Greene

BLACK'S CLASSIFICATION OF TOOTH CAVITIES

Class I. Cavities beginning as structural defects in pits and fissures.

Class II. Cavities in the proximal surfaces of bicusps and molars.

Class III. Cavities in the proximal surfaces of incisors and cuspids not requiring the removal of the incisal angle.

Class IV. Cavities in the proximal surfaces of incisors and cuspids which require the removal of the incisal angle.

Class V. Cavities in the gingival third of the labial, or lingual, or buccal surfaces.

[Class VI. Cavities in the incisal edge or occlusal cusps due to either abrasion, erosion, attrition, or developmental defect.]

Vardiman Black into five groups on the basis of similarity of treatment required. (See table for Black's Classification of Tooth Cavities, to which a sixth group is sometimes added.) **abdominal c.**, the cavity of the body, located between the diaphragm above and the pelvis below, which contains all the abdominal organs; called also *cavum abdominis* [NA]. See also *abdomen*. **absorption c's**, cavities in developing compact bone due to osteoclastic erosion, usually occurring in the areas laid down first. **alveolar c's**, see *alveoli dentales mandibulae* and *alveoli dentales maxillae*. **amniotic c.**, the closed sac between the embryo and the amnion, containing the amniotic fluid. **articular c.**, *cavum articulare*. **Baer's c.**, the cleavage cavity beneath the blastoderm. **body c.**, a visceral cavity, such as the thoracic, abdominal, or pelvic cavity. **bony c. of nose**, *cavum nasi osseum*. **buccal c.**, 1. that portion of the oral cavity bounded on one side by the teeth and gingivae (or the residual alveolar ridges), and on the other by the cheeks. 2. a carious lesion beginning on the buccal surface of a posterior tooth. **cleavage c.**, the cavity of the blastula; blastocoele. **complex c.**, a carious lesion that involves three or more surfaces of a tooth in its prepared state. **compound c.**, a carious lesion that involves two surfaces of a tooth in its prepared state. **c. of concha**, *cavum conchae*. **cotyloid c.**, acetabulum. **cranial c.**, the space enclosed by the bones of the cranium. **dental c.**, the defect (lesion) produced by destruction of enamel and dentin in a tooth affected by caries. **distal c.**, a carious lesion beginning on the distal surface of a tooth. **epidural c.**, *cavum epidurale*. **faucial c.**, *cavum pharyngis*. **fibrotic c's**, cavities of the lung in tuberculosis composed of tuberculous granulation tissue surrounded by scar tissue, often the source from which the disease spreads to other pulmonary segments. **fissure c.**, a carious lesion beginning in a fissure of a tooth. **gastrovascular c.**, the body cavity of a coelenterate, which opens to the outside at one end to form a mouth; called also *coelenteron*. **glandular c.**, a hollow sac formed by invagination of the epithelial sheath in the developing multicellular gland. **glenoid c.**, *cavitas glenoidalis*. **head c.**, modified somites that in lower vertebrates give rise to the extrinsic eye muscles. **hemal c.**, *hemocoelom*. **incisal c.**, a carious lesion beginning on the incisal surface of an anterior tooth. **infraglottic c.**, *cavum infraglotticum*. **ischioanal c.**, *fossa ischioanal*. **labial c.**, a carious lesion beginning on the labial surface of an anterior tooth. **laryngeal c.**, *cavum laryngis*. **laryngopharyngeal c.**, the laryngopharynx (*pars laryngea pharyngis* [NA]).

lingual c., a carious lesion beginning on the lingual surface of a tooth. **lymph c's**, the larger lymph spaces and cisterns of the body. **marrow c.**, *cavum medullare ossium*. **mastoid c.**, *antrum mastoideum*. **Meckel's c.**, *cavum trigeminale*. **mediastinal c.**, *anterior*, *mediastinum anterius*. **mediastinal c.**, *posterior*, *mediastinum posterius*. **medullary c. of bones**, *cavum medullare ossium*. **mesial c.**, a carious lesion beginning on the mesial surface of a tooth. **nasal c.**, *cavum nasi*. **nasal c.**, *bony*, *cavum nasi osseum*. **nerve c.**, *pulp c.* (*cavum dentis* [NA]). **occlusal c.**, a carious lesion beginning on the occlusal surface of a posterior tooth. **oral c.**, the cavity of the mouth; see *cavum oris* [NA]. **oral c.**, *external*, *vestibulum oris*. **oral c.**, *proper*, *cavum oris proprium*. **orbital c.**, *orbita*. **pectoral c.**, *thoracic c.* (*cavum thoracis* [NA]). **pelvic c.**, the space within the walls of the pelvis; called also *cavum pelvis*. **pericardial c.**, *cavum pericardii*. **peritoneal c.**, *greater*, *cavum peritonei*. **peritoneal c.**, *lesser*, *bursa omentalis*. **pharyngeal c.**, *cavum pharyngis*. **pharyngolaryngeal c.**, the laryngopharynx (pars laryngea pharyngis [NA]). **pharyngonasal c.**, the nasopharynx (pars nasalis pharyngis [NA]). **pharyngoral c.**, the oropharynx (pars oralis pharyngis [NA]). **c. of pharynx**, *cavum pharyngis*. **pit c.**, a carious lesion beginning in a pit of a tooth. **pleural c.**, *cavum pleurae*. **pleuro-peritoneal c.**, the temporarily continuous coelomic cavity in the embryo that will later be partitioned by the developing diaphragm. **popliteal c.**, *fossa poplitea*. **prepared c.**, one that is produced in a tooth to support and retain the filling material and protect the tooth structure remaining after removal of all carious tissue. **proximal c.**, a carious lesion beginning on a proximal (the mesial or distal) surface of a tooth. **pulp c.**, the pulp-filled central chamber in the crown of a tooth; called also *nerve c.*, *cavum dentis* [NA], *cavum pulpa*, and *cavitas dentis*. **rectoischadic c.**, *fossa ischioirectalis*. **Retzius's c.**, *spatium retropubicum*. **Rosenmüller's c.**, *recessus pharyngeus*. **segmentation c.**, the blastocoele. **c. of septum pellucidum**, *cavum septi pellucidi*. **serous c.**, a celomic cavity, like that enclosed by the pericardium, peritoneum, or pleura, not communicating with the outside of the body, and whose lining membrane secretes a serous fluid. **sigmoid c. of radius**, *incisura ulnaris radii*. **sigmoid c. of ulna**, *greater*, *incisura trochlearis ulnae*. **sigmoid c. of ulna**, *lesser*, *incisura radialis ulnae*. **simple c.**, a carious lesion that involves only one surface of a tooth in its preparation, designated according to the surface involved as buccal, distal, incisal, labial, lingual, mesial, or occlusal. **somatic c.**, the intraembryonic portion of the coelom. **somite c.**, *myocoele*. **splanchnic c.**, *visceral c.* **subarachnoid c.**, *cavum subaracnoideale*. **subdural c.**, *cavum subdurale*. **tension c's**, cavities of the lung in which the air pressure is greater than that of the atmosphere. Radiologically, they appear as large, spherical, thin-walled defects indicative of productive inflammatory reaction in the bronchus that drains the cavity or of partial stenosis due to peribronchial fibrosis. **thoracic c.**, the portion of the ventral body cavity situated between the neck and the respiratory diaphragm; called also *pectoral c.*, *cavum thoracis* [NA], and *cavum pectoris*. **trigeminal c.**, *cavum trigeminale*. **tympenic c.**, middle ear. **uterine c.**, *cavum uteri*. **visceral c.**, one of the cavities of the body containing organs, such as the thoracic, abdominal, or pelvic cavity; called also *splanchnic c.* **yolk c.**, the space between the germ disk and the yolk of the developing ovum of some animals; called also *subgerminal c.*

cavography (ka-vog'rah-fe) radiography of the vena cava.

cavosurface (ka'vo-sur'fis) the surface of a cavity, as of a tooth.

cavovagus (ka'vo-val'gus) see *talipes cavovagus*.

cavum (ka'vum), pl. *ca'va* [L.] [NA] a general term used to designate a cavity or space; see also *cavitas* and *cavity*. **c. abdom'inis** [NA], the cavity of the body, located between the diaphragm above and the pelvis below; called also *abdominal cavity*. See also *abdomen*. **c. articula're** [NA], articular cavity: the minute space of a synovial joint, enclosed by the synovial membrane and articular cartilages. **c. con'chae** [NA], cavity of concha: the inferior part of the concha of the auricle, which leads into the external acoustic meatus; called also *innominate fossa of auricle*. **c. corona'le** [NA], the crown portion of the *cavum dentis*. **c. den'tis** [NA], the pulp-filled chamber in the crown of a tooth. Called also *c. pulpa*, *cavitas dentis*, and *nerve or pulp cavity*. **c. doug'lasi**, *excavatio rectouterina*. **c. epidura'le** [NA], epidural cavity: the space between the dura mater and the walls of the vertebral canal, containing venous plexuses and fibrous and alveolar tissue; called also *epidural space*. **c. in-fraglot'ticum** [NA], infraglottic cavity: the most inferior part of the laryngeal cavity, extending from the rima glottidis above to the cavity of the trachea below. **c. laryn'gis** [NA], laryngeal cavity: the space enclosed by the walls of the larynx. **c. meck'elii**, *c. trigeminale*. **c. mediastina'le ante'rius**, *mediastinum anterius*. **c. mediastina'le poste'rius**, *mediastinum posterius*. **c. medulla're os'sium** [NA], the spacious cavity, containing marrow, in the diaphysis of a long bone; called also *medullary or marrow cavity*, and *medullary canal*. **c. na'si** [NA], nasal cavity: the proximal portion of the passages

of the respiratory system, extending from the nares to the pharynx. **c. na'si os'seum** [NA], bony nasal cavity: the space between the floor of the cranium and the roof of the mouth, extending between the pharynx posteriorly and the external nose anteriorly, and divided by a median septum; called also *bony cavity of nose*. **c. o'ris** [NA], oral cavity: the cavity of the mouth and the associated structures, including the cheek, palate, oral mucosa, the glands whose ducts open into the cavity, the teeth, and the tongue. **c. o'ris exter'num**, *vestibulum oris*. **c. o'ris pro'prium** [NA], oral cavity proper: the part of the oral cavity internal to the teeth. **c. pec'toris**, *c. thoracis*. **c. pel'vis** [NA], the pelvic cavity: the space within the walls of the pelvis. **c. pericar'dii** [NA], pericardial cavity: a potential space between the visceral portion (epicardium) and the parietal portion of the serous pericardium. **c. peritona'e'i**, *c. peritone'i* [NA], peritoneal cavity: the potential space between the parietal and visceral layers of the peritoneum; called also *greater peritoneal cavity*. **c. pharyn'gis** [NA], pharyngeal cavity: the space enclosed by the walls of the pharynx; called also *faucial cavity*, and *cavity of pharynx*. **c. pleu'rae** [NA], pleural cavity: the potential space between the parietal and visceral pleurae. **c. pul'pae**, *c. dentis*. **c. rectoischia'dicum**, *fossa ischioirectalis*. **c. ret'zii**, *spatium retropubicum*. **c. sep'ti pelli'cidi** [NA], the median cleft between the two laminae of the septum pellucidum; variously called *cavity of septum pellucidum*, *camera septi pellucidi*, *Duncan's ventricle*, *fifth ventricle*, *first ventricle of cerebrum*, *pseudocoele*, *rhomboid sinus*, *sinus rhomboideus cerebri*, *ventricle of Arantius*, *ventricle of Sylvius*, and *Viessens's ventricle*. **c. subarachnoidea'le** [NA], subarachnoid cavity: the space between the arachnoidea and the pia mater, containing cerebrospinal fluid and bridged by delicate trabeculae; called also *subarachnoid space*. **c. subdura'le**, subdural cavity: a narrow, fluid-containing space, often only a potential space, between the dura mater and arachnoid; called also *subdural space*. **c. thora'cis** [NA], the thoracic cavity: the portion of the body cavity situated between the neck and the respiratory diaphragm; called also *c. pectoris* and *pectoral c.* **c. trigemina'le** [NA], trigeminal cavity: the small outpocketing of the dura mater surrounding the ganglion and divisions of the trigeminal nerve, and located at the end of the petrous portion of the temporal bone, which contains the trigeminal ganglion; called also *c. meckelii* and *Meckel's cavity*. **c. tym'pani**, NA alternative for *auris media*. **c. u'teri** [NA], cavity of uterus: the flattened space within the uterus, communicating on either side with the uterine tubes and below with the vagina. **c. ver'gae**, *Verga's ventricle*.

cavus (kav'us) [L. "hollow"] see *talipes cavus*.

cavy (ka've) a small rodent of the family Caviidae, the best known representative of which is the guinea pig (*Cavia cobaya*).

Caytine (ka'tēn) trademark for a preparation of protokylol hydrochloride.

Cazenave's disease, vitiligo (kahz-nahvz') [Pierre Louis Alphonse Cazenave, French dermatologist, 1795-1877] see *pemphigus foliaceus* and *alopecia areata*.

Cb chemical symbol for *columbium*, now called *niobium*.

C.B. abbreviation for *L. Chirurgiae Baccalaureus*, Bachelor of Surgery.

c.b.c. complete blood count.

CBF cerebral blood flow.

CBG corticosteroid-binding globulin; see *transcortin*.

CBS chronic brain syndrome.

C.C. chief complaint.

cc. cubic centimeter.

CCA chimpanzee coryza agent (respiratory syncytial virus).

C. C. 914 a thioarsenite, *p*-carbamido-phenyl-bis (carboxymethyl-mercapto) arsine, used in treatment of intestinal amebiasis.

C. C. 1037 a thioarsenite, *p*-carbamido-phenyl-bis (2-carboxy-phenyl-mercapto) arsine, used in intestinal amebiasis.

CCC cathodal closure contraction.

CCCI cathodal closure clonus.

CCK cholecystokinin.

CCK-179 the methanesulfonate salts of equal parts of dihydroergocornine, dihydroergocristine, and dihydroergocryptine, used as an antihypertensive and as a vasodilator in the treatment of peripheral vascular diseases.

CCl₄ carbon tetrachloride.

CCl₃·CHO chloral.

CCl₃·CH(OH)₂ chloral hydrate.

c.cm. cubic centimeter.

CCNU code designation for lomustine.

CCTe cathodal closure tetanus.

C.D. abbreviation for *L. conjugata diagonalis*, the diagonal conjugate diameter of the pelvic inlet, and for *curative dose*.

C.D.₅₀ median curative dose; a dose that abolishes symptoms in 50 per cent of the test subjects.

Cd 1. chemical symbol for *cadmium*. 2. abbreviation for *caudal* or *coccygeal*; used in vertebral formulas.

cd candela.

CDC Center for Disease Control.

Ce chemical symbol for cerium.

ceasmic (se-as'mik) [Gr. *keasma* chip] characterized by the persistence after birth of embryonic fissures.

cebocephalus (se'bo-sef'ah-lus) a monster exhibiting cebocephaly.

cebocephaly (se'bo-sef'ah-le) [Gr. *kebos* monkey + *kephalē* head] a developmental anomaly characterized by a monkey-like head, the nose being defective and the eyes close together.

cecal (se'kal) [L. *caecalis*] 1. ending in a blind passage. 2. pertaining to the cecum. 3. pertaining to the blind spot in the field of vision.

cectomy (se-sek'to-me) [*cecum* + Gr. *ektomē* excision] surgical removal of the cecum.

Cecil-Culp urethroplasty [Arthur Bond Cecil, Los Angeles surgeon, born 1885; Ormond Skinner Culp, American surgeon, born 1910] see under *urethroplasty*.

cectitis (se-si'tis) inflammation of the cecum.

cecocele (se'ko-sēl) a hernia containing part of the cecum.

cecocentral (se'ko-sen'tral) centrocecal.

cecocolic (se'ko-kol'ik) pertaining to the cecum and the colon.

cecocolon (se'ko-kol'on) the cecum and colon considered as a unit.

cecocolopexy (se'ko-kol'o-pek'se) an operation for fixing the cecum and ascending colon.

cecocolostomy (se'ko-kol-os'to-me) the surgical creation of an anastomosis between the cecum and the colon; also, the anastomosis so constructed. Called also *colocecostomy*.

cecofixation (se'ko-fik-sa'shun) cecopexy.

cecoileostomy (se'ko-il'e-os'to-me) [*cecum* + *ileum* + Gr. *stomōn* to provide with a mouth, or opening] ileocecostomy.

Cecon (se'kon) trademark for preparations of ascorbic acid.

cecopexy (se'ko-pek'se) [*cecum* + Gr. *pēxis* fixation] fixation or suspension of the cecum to correct excessive mobility of the organ; called also *cecofixation*.

cecoplication (se'ko-pli-ka'shun) [*cecum* + L. *plica* fold] plication of the cecal wall to correct ptosis or dilatation of the organ.

cecoptosis (se'kop-to'sis) [*cecum* + Gr. *ptōsis* falling] (*obs.*) ptosis or downward displacement of the cecum.

cecorrhaphy (se-kor'ah-fe) [*cecum* + Gr. *rhaphe* suture.] suture or repair of the cecum.

cecosigmoidostomy (se'ko-sig'moi-dos'to-me) formation of an artificial opening between the cecum and sigmoid, usually by surgical procedure; also, the opening so constructed.

cecostomy (se-kos'to-me) [*cecum* + Gr. *stomōn* to provide with a mouth, or opening] the surgical creation of an artificial opening or fistula into the cecum; also, the opening so constructed.

cecotomy (se-kot'o-me) [*cecum* + Gr. *tomē* a cutting] the operation of cutting into the cecum.

cecum (se'kum) [L. *caecum* blind, blind gut] 1. the first part of the large intestine, forming a dilated pouch into which open the ileum, the colon, and the appendix vermiformis; called also *blindgut*, *caput coli*, *head of blind colon*, *blind intestine*, and *intestinum caecum*. 2. any blind pouch or cul-de-sac. **cupular c. of cochlear duct**, **c. cupula/re duc'tus cochleae/ris** [NA], the closed blind apical end of the cochlear duct. **high c.**, a cecum situated higher up in the abdomen than normal. **mobile c.**, **c. mo'bile**, abnormal mobility of the cecum and lower portion of the ascending colon, caused by incomplete rotation or faulty fixation of the cecum in embryonic development. **vestibular c. of cochlear duct**, **c. vestibula/re duc'tus cochleae/ris** [NA], a small blind outpouching at the vestibular end of the cochlear duct.

Cedilanid (se'dī-lan'id) trademark for a preparation of lanatoside C.

Cedilanid-D trademark for a preparation of deslanoside.

Cediopsylla (se'de-o-sil'ah) a genus of fleas, including some of the rabbit fleas.

cefaclor (sef'ah-klor) chemical name: [6R-[6α,7β(R*)]]-7-[[amino(phenylacetyl)amino]-3-chloro-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid; a semisynthetic cephalosporin antibiotic, C₁₅H₁₄ClN₂O₄S.

cefadroxil (sef'ah-droks'il) [USP] chemical name: [6R-[6α,7β(R*)]]-7-[[amino(4-hydroxyphenyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid; a semisynthetic cephalosporin antibiotic, C₁₈H₁₇N₃O₅S.

Cefadyl (sef'ah-dil) trademark for a preparation of cephalirin sodium.

cefamandole (sef'ah-man'dōl) chemical name: [6R-[6α,7β(R*)]]-7-[(hydroxyphenylacetyl)amino]-3-[[[1-methyl-1H-tetrazol-5-yl]thio]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid; a semisynthetic cephalosporin antibiotic, C₁₈H₁₈N₆O₅S₂. **c. nafate**, the monosodium salt of cefamandole, C₁₈H₁₇N₆NaO₅S₂.

cefaparoole (sef'ah-pah-rōl'') chemical name: [6R-[6α,7β(R*)]]-7-[[amino(4-hydroxyphenyl)acetyl]amino]-3-[[[5-methyl-1,3,4-thiadiazol-2-yl]thio]methyl]-8-oxo-5-thio-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid; a semisynthetic cephalosporin antibiotic, C₁₉H₁₆N₅O₅S₃.

cefatrizine (sef'ah-tri'zēn) chemical name: [6R-[6α,7β(R*)]]-7-[[amino(4-hydroxyphenyl)acetyl]amino]-8-oxo-3-[[[1H-1,2,3-triazol-4-ylthio]methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid; a semisynthetic cephalosporin antibiotic, C₁₈H₁₈N₆O₅S₂.

cefazafur sodium (sē-faz'ah-flor) chemical name: (6R-*trans*)-3-[[[1-methyl-1H-tetrazol-5-yl]thio]methyl]-8-oxo-7-[[[(trifluoromethyl)thio]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monosodium salt; a semisynthetic cephalosporin antibiotic, C₁₃H₁₂F₃N₆NaO₄S₃.

cefazolin (sē-faz'o-lin) chemical name: (6R-*trans*)-3-[[[5-methyl-1,3,4-thiadiazol-2-yl]thio]methyl]-8-oxo-7-[[[1H-tetrazol-1-yl)acetyl]-amino]-5-thia-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. A semisynthetic analogue, C₁₄H₁₄N₆O₄S₃, of the natural antibiotic cephalosporin C, effective against a wide range of gram-negative and gram-positive bacteria. **c. sodium**, the monosodium salt of cepazolin, C₁₄H₁₃N₆NaO₄S₃, having the same actions as the base; used in the treatment of infections of the respiratory tract, genitourinary tract, skin, soft tissues, bones, joints, and blood due to sensitive pathogens, administered intramuscularly and intravenously. It is available for therapeutic use as *sterile cefazolin sodium* [USP].

ceforanide (sē-for'ah-ni'd) chemical name: (6R-*trans*)-7-[[[2-(aminomethyl)phenyl]acetyl]amino]-3-[[[1-(carboxymethyl-1H-tetrazol-5-yl)thio]methyl]-8-oxo-5-thio-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid; an antibacterial, C₂₀H₂₁N₇O₆S₂.

cefoxitin (sē-foks'i-tin) chemical name: (6R-*cis*)-3-[[[aminocarbonyl]oxy]methyl]-7-methoxy-8-oxo-7-[(2-thienylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. A semisynthetic derivative of cephamycin C, an analogue of the cephalosporin antibiotic cephalothin, especially effective against gram-negative organisms, with strong resistance to degradation by β-lactamase.

Cel. Celsius (thermometric scale).

cel (sel) a unit of velocity, being the velocity of 1 cm. per second.

cel- see *celo-*.

celarium (sē-la're-um) mesothelium.

Celbenin (sel'bē-nin) trademark for preparations of sodium methicillin.

-cele (sēl) 1. [Gr. *kēlē* hernia] a word termination denoting relationship to a tumor or swelling. 2. [Gr. *koilia* cavity] a word termination denoting relationship to a cavity; see also words spelled *-coele*.

celectome (se-lek'tōm) [Gr. *kēlē* tumor + *ektomē* excision] an instrument for removing a segment of tumor for examination.

celenteron (se-len'ter-on) 1. archenteron. 2. gastrovascular cavity.

Celestone (se-les'tōn) trademark for preparations of betamethasone.

celiac (se'le-ak) [Gr. *koilia* belly] pertaining to the abdomen.

celiaca (se-li'ah-kah) (*obs.*) disease of the abdominal organs, especially celiac disease in children.

celialgia (se'le-al'je-ah) [*celio-* + *-algia*] (*obs.*) pain in the abdomen.

celiectomy (se'le-ek'to-me) [*celio-* + Gr. *ektomē* excision] 1. surgical removal of an abdominal organ. 2. excision of the celiac branches of the vagus nerve for the relief of essential hypertension.

celio- (se'le-o) [Gr. *koilia* belly] a combining form denoting relationship to the abdomen. For words beginning thus, see also words beginning *celo-* and *coelo-*.

celiocentesis (se'le-o-sen-te'sis) [*celio-* + Gr. *kentēsis* puncture] puncture into the abdominal cavity, usually for the withdrawal of fluid.

celiolcolpotomy (se'le-o-kol-pot'o-me) [*celio-* + Gr. *kolpos* vagina + *tomē* a cutting] incision into the abdomen through the vagina.

celiodynia (se'le-o-din'e-ah) (*obs.*) celiacgia.

celioelytrotomy (se'le-o-el'e-trot'o-me) [*celio-* + Gr. *elytron* sheath + *tomē* a cutting] (*obs.*) celiolcolpotomy.

celioenterotomy (se'le-o-en'ter-ot'o-me) [*celio-* + *enterotomy*] incision through the abdominal wall into the intestine.

celiogastrotomy (se'le-o-gas-trot'o-me) [*celio-* + *gastrotomy*] incision through the abdominal wall into the stomach.

celiohysterectomy (se'le-o-his'ter-ek'to-me) [*celio-* + *hysterectomy*] 1. excision of the uterus through an abdominal incision. 2. cesarean hysterectomy.

celioma (se-le-o'mah) [*celio-* + *-oma*] a tumor of the abdomen, especially mesothelioma of the peritoneum.

celiomyalgia (se'le-o-mi-al'je-ah) (*obs.*) myoceliacgia.

celiomyomectomy (se'le-o-mi'o-mek'to-me) [*celio-* + *myomec-tomy*] myomectomy by an abdominal incision.

celiomyotomy (se'/le-o-mi'o-mot/o-me) [*celio-* + *myotomy*] incision into a muscular organ or tumor through the abdominal wall.

celiomyositis (se'/le-o-mi'o-si'tis) [*celio-* + *myositis*] inflammation of the abdominal muscles.

celioncus (se'/le-on'kus) (*obs.*) celioma.

celioparacentesis (se'/le-o-par'ah-sen-te'sis) [*celio-* + *paracentesis*] paracentesis of the abdominal cavity, usually with a trocar or needle.

celiopathy (se'/le-op'ah-the) [*celio-* + *Gr. pathos* disease] any abdominal disease.

celiophyma (se'/le-o-fi'mah) (*obs.*) celioma.

celiopyosis (se'/le-o-pi-o'sis) [*celio-* + *pyosis*] (*obs.*) suppuration in the abdominal cavity.

celiorrhaphy (se'/le-or'ah-fe) [*celio-* + *Gr. rhapsē* suture] suture of the abdominal wall.

celiosalpingectomy (se'/le-o-sal'pin-jek'to-me) [*celio-* + *salpingectomy*] excision of a uterine tube through an abdominal incision.

celiosalpingotomy (se'/le-o-sal'pin-got'o-me) incision of a uterine tube through an incision in the abdominal wall.

celioscope (se'/le-o-skōp') [*celio-* + *Gr. skopein* to examine] an endoscope for examining the abdominal cavity.

celioscopy (se'/le-os'ko-pe) examination of the abdominal cavity through a celioscope.

celiothelioma (se'/le-o-the'le-o'mah) (*obs.*) mesothelioma of the peritoneum.

celiotomy (se'/le-ot'o-me) [*celio-* + *Gr. tomē* a cutting] surgical incision into the abdominal cavity. **vaginal c.**, incision into the abdominal cavity through the vagina. **ventral c.**, incision into the abdominal cavity through the abdominal wall.

celitis (se-li'tis) any abdominal inflammation.

cell (sel) [L. *cella* compartment] 1. any one of the minute protoplasmic masses that make up organized tissue, consisting of a nucleus which is surrounded by cytoplasm which contains the various organelles and is enclosed in the cell or plasma membrane. A cell is the fundamental, structural, and functional unit of living organisms. See Plates XI and XII. In some of the lower forms of life, e.g., bacteria, a morphological nucleus is absent, although nucleoproteins (and genes) are present. 2. a small, more or less closed space. **A c.**, alpha c. **Abbé-Zeiss counting c.**, see *Thoma-Zeiss counting chamber*, under *chamber*. **absorptive c.**, **intestinal**, one of the cells of the intestinal epithelium, having a brush border made up of many closely packed parallel microvilli, and believed to be associated with absorption, particularly of macromolecules. **accessory c's**, cells that cooperate with T- and B-lymphocytes in initiation of the immune response; they have macrophage functions and process antigen for presentation to antibody-forming cells. **acid c.**, parietal c. **acidophilic c.**, a cell having an affinity for acid dyes; called also *acidocyte*. See also *acidophil*. **acinar c.**, **acinous c.**, any of the cells lining an acinus, especially applied to the zymogen-secreting cells of the pancreatic acini. **acoustic hair c.**, any one of the cells provided with cilia that serve as sensory receptors in the organ of Corti; called also *auditory c.* **adelomorphous c.** (*obs.*), chief c. (def. 1). **adipose c.**, a fat cell. **adventitial c's**, macrophages that occur along the walls of blood vessels; called also *Marchand's c's* and *perithelial c's*. **agger nasi c's**, the cells of the anterior part of the ethmoid crest. **air c.**, one containing air, such as an alveolus of the lungs (alveolus pulmonis) or one of the air-containing cells of the auditory tube (cellulae pneumaticae tubae auditivae). **albuminous c.**, serous c. **algoid c's**, cells resembling algae, seen in cases of chronic diarrhea. **alkaline-manganese c.**, one similar to the Leclanché cell but containing a cell electrolyte of concentrated aqueous sodium hydroxide. **alpha c's**, 1. cells situated in the periphery of the islets of Langerhans, which secrete glucagon. 2. the acidophils of the adenohypophysis; see also *carminophil* and *orangeophil*. Called also *A c's*. **alveolar c.**, any cell of the walls of the pulmonary alveoli. Often restricted to the cells of the alveolar epithelium (type I and type II alveolar cells) and alveolar phagocytes. **alveolar c's, type I**, the flattened cells of the alveolar epithelium, distinguished by their greatly attenuated cytoplasm and paucity of organelles; called also *membranous pneumonocytes* and *squamous or small alveolar cells*. **alveolar c's, type II**, pleomorphic cells of the pulmonary alveolar epithelium that secrete surfactant and are distinguished by abundant cytoplasm containing numerous lipid-rich multilamellar bodies; called also *granular pneumonocytes* and *great or large alveolar cells*. **Alzheimer's c's**, 1. giant astrocytes with large prominent nuclei found in the brain in hepatolenticular degeneration and hepatic coma. 2. degenerated astrocytes. **amacrine c.**, see *amacrine*, def. 2. **ameboid c.**, any cell that is able to change its form and move about. See *migratory c.* and *wandering c.* **amine precursor uptake and decarboxylation (APUD) c's**, a group of apparently unrelated cells found in different organs which share a number of cytochemical and ultrastructural characteristics and which produce polypeptide hormones and neurotransmitters. Such cells contain amines,

concentrate the amino acid precursors of these amines, and decarboxylate them to their respective amines. The group includes basal granular cells of the intestine, parafollicular cells of the thyroid, pancreatic islet cells, and pituitary corticotrophs. **amphophilic c.**, one that stains readily with either acid or basic dyes; called also *amphocyte*, *amphophil*, *amphochromatophil*, and *amphochromaphil*. **Anichkov's (Anitschkow's) c.**, see *Anichkov's myocyte*, under *myocyte*. **antipodal c's**, a group of four cells in the early embryo. **apocrine c's**, see *apocrine*. **apolar c.**, a neuron with no processes or poles. **apotrophic c's**, hypothetical cells in the peripheral stump of a divided nerve, which attract young axons from the proximal stump to aid in regeneration. **APUD c's**, amine precursor uptake and decarboxylation c's. **argentaffin c's**, enterochromaffin cells (q.v.) whose granules stain readily with chromium and silver salts, located in the basilar portions of the glands of the gastrointestinal tract. Based upon their staining reactions with silver, these cells have been divided into two groups: those that reduce silver without pretreatment (*argentaffin c's*), and those that require prior exposure to a reducing substance (*argyrophilic c's*). See also *argentaffinoma*. **argyrophilic c's**, enterochromaffin cells that require exposure to a reducing substance before their granules will react with silver; they are located in the fundic and pyloric glands between the basement lamina and zymogenic cells. See also *argentaffin c's*. **Arias-Stella c's**, columnar cells in the endometrial epithelium which have hyperchromatic enlarged nuclei and which appear to be associated with chorionic tissue in an intrauterine or extrauterine site. **arkyochrome c.**, a neuron in which the Nissl bodies are arranged in a network. **Armanni-Ebstein c's**, epithelial cells in the terminal part of the first convoluted renal tubule containing deposits of glycogen: a lesion characteristic of diabetes. **Aschoff's c's**, a type of giant cell as seen in the rheumatic nodule in the myocardium. **auditory c's**, cells in the internal ear bearing the auditory hairs; called also *acoustic hair c.* **B c's**, 1. beta c's. 2. B-lymphocytes; see under *lymphocyte*. **balloon c's**, peculiar degenerated cells in the vesicles of herpes zoster and varicella. **band c.**, a late metamyelocyte in which the nucleus is in the form of a curved or coiled band, not having acquired the typical lobulate shape of the mature (segmented) neutrophil; called also *staffor stab cell*, and *band form*. **basal c.**, the name applied to the early keratinocyte, present in the basal layer of the epidermis; called also *foot c.* **basal granular c's**, a group of cells, including enterochromaffin cells (argentaffin and argyrophilic cells), and gastrin-secreting, L, and S cells, which have numerous cytoplasmic granules. They are found scattered throughout the gastrointestinal epithelium, the majority at the base of the epithelium, and because of the location of their granules in the basal cytoplasm, which suggests that they liberate their secretions into the extracellular space rather than into the lumen, they have been called *endocrine cells of the gut*. See also *amine precursor uptake and decarboxylation (APUD) c's*. **basket c.**, 1. a cell of the cerebellar cortex whose axon gives off brushes of fibrils, forming a basket-like nest in which the body of each Purkinje cell rests. 2. myoepithelial c's. Called also *basket*. **basophilic c.**, a cell staining readily with basic dyes; called also *basocyte* and *basophil*. **battery c.**, one of the chambers of a galvanic battery, containing its fluids and essential elements. **beaker c.**, goblet c. **Beale's ganglion c's**, bipolar cells with one process coiled around the other. **Bergmann's c's**, peculiar glial cells in the molecular layer of the cerebellar cortex having dendrites that extend outward through that layer. **berry c.**, a term applied to plasma cells and plasmacytoid reticulum cells whose cytoplasm contains numerous transparent bluish vesicles, most probably protein in nature; found in disorders associated with pronounced hypergammaglobulinemia. Called also *grape c.* and *morular c.* **beta c's**, 1. the cells composing the bulk of the islets of Langerhans and which secrete insulin. 2. the basophilic cells of the adenohypophysis; see also *gonadotrope* (def. 3) and *thyrotrope* (def. 2). Called also *B c's*. **Betz's c's**, large pyramidal ganglion cells forming one of the layers of the motor area of the gray matter of the brain; called also *giant pyramids* and *giant pyramidal c's*. **Bevan-Lewis c's**, certain pyramidal cells in the motor cortex of the brain. **bichromate c.**, **dichromate c.**, **Grenet c.** **bipolar c.**, a nerve cell with two processes. **bipolar retinal c's**, neurons of the inner plexiform layer of the retina which transmit signals from cones and rods to the ganglion cells. Bipolar retinal cells include *rod bipolar cells*, connecting to rod cells; *midget bipolar cells*, each synapsing with a single cone pedicle; and *diffuse bipolar cells*, connecting with many cone pedicles. Cf. *ganglion c.* (def. 2). **bladder c's**, swollen cells in the epidermis of the tips of the fingers and toes of the embryo. Called also *Zander's c's*. **blast c.**, the least differentiated blood cell without commitment as to its particular series. **bloated c.**, a swollen fattened astrocyte. **blood c's**, see under *corpuscle*. **bone c.**, a nucleated cell occupying each a separate lacuna of bone; called also *osseous c.* and *bone corpuscle*. **border c's**, 1. a row of columnar supporting cells that delimit the inner boundary of the organ of Corti. 2. parietal c's. **Böttcher's c's**, small groups of polyhedral cells interposed between Claudius' cells and the basilar membrane of the cochlea. **breviradiat c's**, neuroglial cells that have short prolonga-

tions. **bristle c's**, the hair cells associated with the cochlear nerve. **bronchic c.**, an air cell of the lungs. **brood c.**, mother cell. **burr c.**, a form of spiculed mature red blood cell, the echinocyte, having multiple small projections evenly spaced over the cell circumference; observed in azotemia, gastric carcinoma, and bleeding peptic ulcer. **C c's**, cells in the islands of Langerhans, especially in the guinea pig, which contain no granules. **Cajal c.**, 1. an astrocyte. 2. one of the neuroglial cells arranged horizontally in the stratum zonale of the cerebral cortex. **caliciform c.**, goblet c. **cameloid c.**, an elliptocyte. **capsule c.**, amphicyte. **cartilage c's**, cells embedded in the lacunae of the cartilages; called also *chondrocyte*. **caryochrome c's**, karyochrome c's. **Caspersson type B c's**, cells rich in nucleolar ribonucleic acid and relatively poor in nuclear deoxyribonucleic acid. **castration c's**, vacuolated basophil cells observed in the anterior pituitary gland after castration. **caudate c's**, neuroglial cells of the gray matter having several streaming prolongations like the tail of a comet; called also *cometal c's*. **caveolated c's**, epithelial cells with thick, short, apical microvilli containing bundles of filaments extending down into the cytoplasm and with irregular tubules (caveolae) passing as invaginations from the apical surface between microvilli; found rarely in the small intestine and respiratory tract, it has been suggested that they function as chemoreceptors. **central c.**, chief c's (def. 1). **centroacinar c's**, the intra-acinar beginnings of the intralobular duct system of the pancreas. **chalice c.**, goblet c. **chief c's**, 1. epithelial cells, either columnar or cuboidal, that line the lower portions of the gastric glands and secrete pepsin; called also *adelmorphous c's*, *central c's*, *Heidenhain's c's*, *peptic c's*, and *zymogenic c's*. 2. pinealocytes. 3. the most abundant cells (see also *oxyphil c's*) of the parathyroid glands, being polygonal epithelial cells with a granular cytoplasm and vesicular nuclei, arranged in plates or cords, and sometimes divided into clear, or light, and dark forms, both of which are rich in glycogen: the clear cells are more numerous and have relatively large nuclei and clear cytoplasm with few granules, while the dark cells are smaller with smaller and darker nuclei and finely granular cytoplasm with many granules. Intermediate forms also exist. Called also *principal c's*. 4. the principal chromaffin cells of the paraganglia, each of which is surrounded by supporting cells. 5. chromophobe c's. **chromaffin c's**, cells that stain readily with chromium salts, especially the cells of the adrenal medulla and similar cells occurring in widespread small accumulations (paraganglia) throughout the body in various organs, whose cytoplasm characteristically shows fine brown granules when stained with potassium bichromate. Cf. *argentaftin c's*. **chromophobe c's**, **chromophobic c's**, small, faintly staining cells with scanty cytoplasm found often in clusters in the center of the cell cords in the adenohypophysis; the cytoplasm of these cells was formerly thought to be nongranular, but electron micrographs reveal that relatively few have no specific granules. **ciliated c.**, any cell with cilia. **Clara c's**, unciliated cells occurring at the boundary where alveolar ducts branch from the bronchioles. **Clarke's c's**, pigmented cells in the thoracic nucleus of the spinal cord. **Claudius' c's**, cuboidal cells, which along with Böttcher's cells, form the floor of the external spiral sulcus, external to the organ of Corti. **clear c's**, cells with empty-appearing cytoplasm. **cleavage c.**, any one of the cells derived from the fertilized ovum by mitosis; a blastomere. **clump c's**, round, thick, pigmented cells seen in the sphincter muscle of the iris. **collenchyma c's**, elongated living cells with walls thickened in the corners, which compose the collenchyma of plants. Cf. *schlerenchyma c's*. **columnar c.**, an elongate epithelial cell. **cometal c's**, caudate c's. **commisural c's**, heteromeral c's. **committed c.**, a lymphocyte which, after contact with antigen, is obligated to follow an individual course of development leading to antibody synthesis or immunological memory. **compound granule c.**, microglia. **cone c's**, retinal cone. **connective tissue c's**, a general name for the cellular elements of the fibrous and nonfibrous components of the various forms of connective tissue. **contractile fiber c's**, the spindle-shaped and nucleated cells which, collected into bundles, make up unstriated or smooth muscle. **corneal c.**, a modified connective tissue cell occupying each corneal space. **c's of Corti**, the cells of the organ of Corti. **counting c.**, see under *chamber*. **cover c.**, any cell that covers and protects other cells, especially any long epithelial cell of the outer layer of the taste buds; called also *encasing c.* **crescent c's**, crescents of Giannuzzi. **cribrate c.**, a cell whose walls are perforated with numerous sieve-like pores. **Crooke's c's**, the basophils in Crooke's hyaline degeneration; see under *degeneration*. **cuboid c.**, an epithelial cell of which the transverse and vertical diameters are approximately equal. **Custer c's**, cells with long delicate protoplasmic processes replacing the lymphoid tissue of lymph nodes in reticuloendothelial disease. **cylindric c.**, columnar c. **D c's**, delta c's. **daughter c's**, any cell formed by the division of a mother cell. **Davidoff's c's**, Paneth's c's. **decidual c's**, connective-tissue cells of the uterine mucous membrane, enlarged and specialized during pregnancy. **Deiters' c's**, 1. the outer phalangeal cells of the organ of Corti; see under *supporting c's*. 2. neuroglial cells. **delomorphous c's** (*obs.*), parietal c's. **delta c's**, 1. cells in

the islets of Langerhans filled with small blue-staining secretory granules, which contain somatostatin. 2. gonadotropes. Called also *D c's*. **demilune c's**, crescents of Giannuzzi. **dendritic c's**, cells with long cytoplasmic processes in the lymph nodes and germinal centers of the spleen; such processes which extend along lymphoid cells retain antigen molecules for extended periods of time. **dentin c.**, odontoblast. **dome c's**, the large cells that compose the epitrachium of the fetus. **Dorothy Reed c's**, Reed-Sternberg c's. **Downey c's**, atypical lymphocytes of three types invariably present in infectious mononucleosis. Type I is a mature cell with a kidney-shaped or lobulated nucleus with vacuolated, basophilic foamy cytoplasm; type II cells contain plasmacytoid nuclei with less vacuolated and basophilic cytoplasm; type III has a finer chromatin pattern and one or two nucleoli. **dust c's**, alveolar macrophages. **effector c.**, any cell, such as an activated lymphocyte or plasma cell, which is instrumental in causing antigen disposal, accomplished by either a cell-mediated or a humoral immunological response. **electrochemical c.**, **electromotive force c.**, a device consisting of an anode, a cathode, and one or more electrolyte phases that exhibits an electromotive force or potential drop between the two electrodes. **elementary c's**, **embryonic c's**, blastomere. **emigrated c.**, a leukocyte that has passed through the wall of a blood vessel into the neighboring tissue. **enamel c.**, ameloblast. **encasing c.**, cover c. **endocrine c's of gut**, basal granular c's. **endothelioid c's**, large protoplasmic cells frequently seen in disease of the blood-making organs and believed by some to be derived from the endothelial lining of the blood vessels and lymph vessels. **enterochromaffin c's**, a group of basal granular cells (q.v.) whose granules stain readily with silver and chromium salts, and which are sites of synthesis and storage of serotonin (5-hydroxytryptamine); included in the group are *argentaftin cells* and *agryophilic cells*. **ependymal c's**, the cells of the ependyma; called also *ependymocytes*. **epidermic c's**, the cells of the epidermis. **epithelial c's**, cells that cover the surface of the body and line its cavities. **epithelioid c's**, 1. large polyhedral cells of connective tissue origin. 2. highly phagocytic, modified macrophages, resembling epithelial cells, having large, pale and vesicular nuclei with abundant, eosinophilic cytoplasm, which are characteristic of granulomatous inflammation; they may coalesce to form multinucleate giant cells. 3. pinealocytes. **erythroid c's**, blood cells of the erythrocytic series. **ethmoidal c's**, **bony**, **cellulae ethmoidales osseae**. **eukaryotic c.**, a cell with a true nucleus; see *eukaryote*. **fat c.**, a connective tissue cell specialized for the synthesis and storage of fat; such cells are bloated with globules of triglycerides, the nucleus being displaced to one side and the cytoplasm seen as a thin line around the fat droplet. Called also *adipose c.*, *adipocyte*, and *lipocyte*. **fat-storing c's of liver**, lipid-accumulating, stellate cells located in the perisinusoidal space of the liver. **fatty granule c.**, microglia containing fat. **ferment c.**, a cell that secretes an enzyme causing fermentation. **Ferrata's c.**, hemohistioblast. **fiber c.**, any elongated and linear cell. **flagellate c.**, any cell having a flagellum, usually motile. **flame c's**, flagellate cells at the termination of collecting tubules of the excretory system of flatworms and nemertans; so called because the beating of the flagella suggests a flickering flame. Called also *protonephridia* and *solanocytes*. **floor c's**, the cells of the floor of the arch of Corti. **foam c's**, 1. cells with a peculiar vacuolated appearance due to the presence of complex lipids; such cells are seen notably in xanthoma and have, therefore, been termed *xanthoma c's*. Called also *lattice c.* 2. Mikulicz's c's. **follicle c's**, **follicular c's**, cells located in the epithelium of follicles, e.g., the cells of the thyroid follicles and ovarian follicles. Called also *follicular epithelial c's*. **follicular epithelial c's**, follicle c's. **foot c's**, 1. basal cells. 2. Sertoli's cells. **foreign body giant c's**, giant cells, resembling Langhans' giant cells, having clusters of nuclei scattered in an irregular pattern throughout the cytoplasm, characteristic of granulomatous inflammation due to invasion of the tissue by a foreign body. **formative c.**, a cell of the inner cell mass of the conceptus, a blastomere destined to form a part of the embryo, as distinct from a trophoblast cell. **Foulis' c's**, large nucleated epithelial cells seen in fluids from malignant ovarian cysts. **Fuller c.**, electromotive force cell resembling the Grenet cell, but employing amalgamated zinc and copper electrodes. **fusiform c.**, spindle c. **G c's**, granular enterochromaffin cells in the mucosa of the pyloric part of the stomach, which are the source of gastrin. **gametoid c's**, carcinoma cells resembling reproductive cells (gametes). **gamma c's of hypophysis**, chromophobic c's. **ganglion c.**, 1. a form of large nerve cell characteristic of ganglia; called also *gangliocyte*. 2. any of the nerve cells of the ganglion cell layer of the retina with their dendrites in the inner plexiform layer and their axons forming the optic nerve fiber. Ganglion cells include *diffuse ganglion cells*, synapsing with different types of bipolar retinal cells, and *midget ganglion cells*, synapsing with a single midget bipolar retinal cell. Cf. *bipolar retinal c's*. **Gaucher's c.**, a large and distinctive cell characteristic of Gaucher's disease, with one or more eccentrically placed nuclei and with fine wavy keratin fibrils running parallel to the long axis of the cell, imparting a wrinkled, tissue-paper appearance to the gray or bluish opaque cytoplasm.

GOLGI
COMPLEX

Gegenbaur's c., osteoblast. **germ c's**, the cells of an organism whose function it is to reproduce the kind, i.e., an ovum or spermatozoon, or an immature stage of either, called also *initial c's* and *sexual c's*. **germ c.**, **primordial**, the earliest recognizable precursor in the embryo of an ovum or spermatozoon. **germinal c.**, a cell capable of dividing and differentiating. **ghost c.**, one that appears only as a shadowy outline; called also *shadow c.* **c's of Giannuzzi**, see under *crescent*. **giant c.**, 1. any very large cell, such as the megakaryocyte of bone marrow. 2. any of the very large, multinucleate, modified macrophages, which may be formed by coalescence of epithelioid cells or by nuclear division without cytoplasmic division of monocytes, e.g., those characteristic of granulomatous inflammation (*Langhans' giant c's*) and those that form around large foreign bodies (*foreign body giant c's*). **giant pyramidal c's**, Betz's c's. **Gierke's c's**, small, deeply staining nerve cells that constitute the chief cells of the substantia gelatinosa. **gitter c.**, microglia. **Gley's c's**, large glandular cells in the interstitial tissue of the testicle. **glia c.**, a cell of the neuroglia. **glitter c's**, polymorphonuclear leukocytes that stain a pale blue with gentian-violet-safranin and contain granules in the cytoplasm that exhibit brownian movement; their presence in urine may indicate pyelonephritis. **glomus c's**, the specific cells (type I) of the carotid body, which contain many dense-cored vesicles, and occur in clusters surrounded by other cells that have no cytoplasmic granules (type II). **goblet c.**, a unicellular mucous gland found in the epithelium of various mucous membranes, especially that of the respiratory passages and intestines. Droplets of mucigen collect in the upper part of the cell and distend it, while the basal end remains slender, and the cell assumes the shape of a goblet. Called also *beaker c.*, *caliciform c.*, and *chalice c.* See also *ptyocrinous*. **Golgi's c's**, see under *neuron*. **gonadotropic c.**, gonadotrope, def. 3. **Goormaghtigh c's**, juxtaglomerular c's. **granular c.**, the name applied to a keratinocyte in the stratum granulosum of the epidermis, when it has become flattened and rhomboidal in shape and contains a dense collection of variously sized darkly staining granules, before it dies and desquamates. **granule c's**, diminutive cells found in the granular layers of the cerebral and cerebellar cortices. **granulosa c's**, cells surrounding the vesicular ovarian follicle and forming the stratum granulosum and cumulus oophorus; after ovulation they are transformed to lutein cells. **granulosa-lutein c's**, lutein cells of the corpus luteum derived from granulosa cells. **grape c.**, berry c. **gravity c.**, an electromotive force cell like the Sieman and Halske, but the fluids are superimposed upon each other with no intervening diaphragm, being kept partly separate by the force of gravity; called also *Hill's c.* **Grenet c.**, an electromotive force cell with a carbon-collecting plate, the fluid and depolarizer being a solution of potassium dichromate; called also *bichromate c.* or *dichromate c.* **Grove c.**, a two-fluid galvanic cell charged with dilute sulfuric and nitric acids, employing zinc and platinum electrodes. **gustatory c's**, the taste cells. **gyrochrome c.**, see *gyrochrome*. **hair c's**, neuroepithelial cells with hairlike processes (kinocilia or stereocilia, or both) found in the organ of Corti, ampullar crest, and utricle and saccule of the inner ear; the hair cells receive afferent and efferent fibers of the cochlear nerve (organ of Corti) or the vestibular nerve. **hairy c.**, any of the abnormal large cells found in the blood in leukemic reticuloendotheliosis, having a round or oval nucleus, gray-blue cytoplasm, moderately clumped nuclear chromatin, small or not visible nucleoli, and numerous irregular cytoplasmic villi that give the cell a flagellated or hairy appearance. Called also *tricholeukocyte*. **Hammar's myoid c's**, myoid c's (def. 2). **Hargraves' c.**, LE c. **heart-disease c's**, **heart-failure c's**, **heart-lesion c's**, macrophages containing granules of iron, found in the pulmonary alveoli and sputum in congestive heart failure. **hecatomer c's**, cells of gray matter of the spinal cord whose axis cylinder processes divide and send one branch into the white substance of the same side of the cord and another into the anterolateral columns of the other side. **heckle c.**, prickle c. **Heidenhain's c's**, the chief cells and *parietal cells* of the gastric glands. **HeLa c's**, cells of the first continuously cultured carcinoma strain, descended from a human cervical carcinoma; used in the study of life processes, including viruses, at the cell level. **helmet c.**, an abnormal red cell form resembling a helmet, seen in hemolytic anemia. **helper c.**, a subtype of T-lymphocytes which cooperate with B-lymphocytes for the synthesis of antibody to many antigens; these cells play an integral role in immunoregulation. **Henle's c's** (*obs.*), large granular nucleated cells in the seminiferous tubules. **Hensen's c's**, tall supporting cells arranged in rows adjacent to the last row of outer phalangeal cells, constituting the outer border of the organ of Corti. **hepatic c's**, the polyhedral epithelial cells that constitute the substance of an acinus of the liver; called also *liver c's*. **heteromeral c's**, nerve cells of the gray matter of the spinal cord whose axon processes pass to the white matter of the opposite side; called also *commissural c's*. **Hill's c.**, gravity c. **hilus c's**, groups of large epithelioid cells closely associated with vascular spaces and unmyelinated nerve fibers in the hilus of the ovary and the adjacent mesovarium; they seem to be histologically and functionally related to the Leydig cells of the testis. **Hodgkin's c's**, Reed-Sternberg c's. **Hofbauer c's**, large chromo-

philic cells in the chorionic villi that are probably macrophages. **horizontal c's**, neurons whose axons run horizontally for long distances in the outer plexiform layer of the retina; their dendrites synapse at various points with the rods and cones. There are two physiologic classes: *luminosity horizontal cells* respond to illumination of the photoreceptors by hyperpolarization; *chromaticity horizontal cells* may hyperpolarize or depolarize, depending on the wavelength of the light stimulus. **horn c's**, 1. epithelial cells that have lost their protoplasm, have sharp edges, and look horny. 2. any ganglion cell of the horns of the spinal cord. **Hortega c.**, microglia. **Hürthle c's**, large eosinophilic cells sometimes found in the thyroid gland; they seem to be parathyroid rests included by chance in thyroid tissue. See also *Hürthle cell tumor*, under *tumor*. **hyperchromatic c.**, one that stains more intensely than is typical of its cell type. **I-c.**, see *mucopolipidosis II*. **immunologically competent c.**, immunocyte. **incasing c's**, a single layer of fusiform cells around the gustatory cells of the tongue. **indifferent c.**, a cell that has no characteristic structure, or that is not an essential part of the tissue in which it is found. **inflammatory c.**, a cell (neutrophil, macrophage, etc.) participating in the inflammatory response to a foreign substance. **initial c's**, germ c's. **integrator c.**, interneuron. **intercalary c's**, dark, rodlike structures between the other (secretory and nonsecretory) cells of the endosalpinx, which may be emptied secretory cells; called also *peg c's*. **intercapillary c's**, mesangial c's. **interdental c's**, cells found in the spiral limbus between the dentes acustici, which secrete the tectorial membrane of the cochlear duct. **interfollicular c's**, Hürthle c's. **interstitial c's**, 1. Leydig's c's. 2. masses of large epithelioid, lipid-containing cells in the ovarian stroma, believed to have a secretory function, derived from the theca interna of atretic ovarian follicles, and thus, in humans, more numerous during the first year of life when atresia is commonest. In women, they are either absent or poorly represented, but in some lower mammals, especially rodents, they are more prominent; see also *interstitial gland* (def. 2), under *gland*. 3. cells with elongated nuclei and long cytoplasmic processes, found in the perivascular areas and between the cords of pinealocytes in the pineal body, and regarded by some to be glial elements. 4. nerve cells with finely vacuolated protoplasm and short, branching processes that interlace with other processes to form an irregular feltwork in the enteric plexuses, submucosa, and interior of the villi of the intestinal tract. 5. fat-storing c's of liver. **islet c's**, cells composing the islets of Langerhans; see *islets of Langerhans*. **juvenile c.**, Schilling's name for a polymorphonuclear leukocyte in which the nuclear element is a single fragment no longer containing a definite nucleolus; called also *young form* and *metamyelocyte*. **juxtaglomerular c's**, specialized cells containing secretory granules, located in the tunica media of the afferent glomerular arterioles; they are receptors thought to stimulate secretion of the adrenal hormone aldosterone and to play a major role in renal autoregulation. Called also *apparatus of Goormaghtigh*, *Goormaghtigh c's*, *juxtaglomerular apparatus*, *sentinel c's*, *periarterial pad*, and *polkissen*. **K c's**, killer c's. **karyochrome c's**, cells of the chromatophil substance of neurons that contain much chromatin in the nucleus and a small amount of cytoplasm. **killer c's**, cells that are morphologically indistinguishable from small lymphocytes but which have cytotoxic activity against target cells coated with specific IgG antibody. They destroy foreign cells either by attacking them directly or by releasing nonspecific toxins. Killer cells have Fc receptors on their surfaces which combine with the Fc regions of IgG molecules bound through their Fab regions to cell surfaces. By this mechanism they bring about antibody-dependent cell-mediated cytotoxicity (ADCC), which can be measured *in vitro* by the release of ⁵¹Cr from target cells. Called also *K c's* and *killer lymphocytes*. **Kulchitsky's c's**, argentaffin cells situated between the cells that line the glands of Lieberkühn of the intestine. **Kupffer's c's**, large star-shaped or pyramidal cells with a large oval nucleus and a small prominent nucleolus. These intensely phagocytic cells line the walls of the sinusoids of the liver and form a part of the reticuloendothelial system (q.v.). Called also *stellate c's of liver* and *von Kupffer's c's*. **L c's**, 1. cells from a strain (C3H) of mouse fibroblasts grown in tissue culture for many years; employed for their ability to support replication of many types of viruses. 2. argyrophilic basal granular cells with large cytoplasmic granules in the mucosa of the upper intestine; because of the resemblance of their ultrastructure to that of the alpha cells of the islets of Langerhans, they are believed by some to synthesize and secrete a glucagon-like hyperglycemic substance, enteroglucagon; called also *large granule c's*. **lacrimoethmoid c's**, the ethmoid cells situated under the lacrimal bone. **lactotropic c.**, mammatrope. **lacunar c.**, a variant of the Reed-Sternberg cell, typically having a single nucleus surrounded by an ample, pale-staining cytoplasm enclosed in a sharply defined cell membrane; it is primarily associated with nodular sclerosing Hodgkin's disease. **Langerhans' c's**, 1. dendritic clear cells of the granular layer of the epidermis that resemble melanocytes but lack tyrosinase. 2. irregular wandering cells in the intercellular spaces of the cornea. Called also *Langerhans' stellate corpuscles*. **Langhans' c's**, 1. polyhedral epithelial cells constituting cytrophoblast (Langhans' layer). 2. Langhans' giant c's.

Langhans' giant c's, giant cells, resembling foreign body giant cells, having their nuclei arranged in a complete circle or in a horseshoe-shaped pattern at the periphery of the cells, characteristically seen in granulomatous inflammations, as occur in tuberculosis, syphilis, sarcoidosis, and deep fungal infections. **large granule c's**, L c's (def. 2). **LE c.**, a mature neutrophilic polymorphonuclear leukocyte, which has phagocytized a spherical, homogeneous-appearing inclusion, itself derived from another neutrophil; a characteristic of lupus erythematosus, but also found in analogous disorders of connective tissue. Called also *Hargraves' c.* **Lecianché c.**, an electromotive force cell employing a zinc cathode and an inert carbon anode and, as an electrolyte, a paste containing diamminedichlorozinc, ammonium chloride, manganese dioxide, and dimanganese trioxide monohydrate; the manganese dioxide acts as the depolarizer at the carbon anode. **Leishman's chrome c's**, basophil granular leukocytes occurring in black-water fever. **lepra c.**, a histiocyte in a leprosy nodule that has been converted by the action of lepra bacilli into a sac containing degenerated protoplasm and bacilli; called also *Virchow's c.* **Leydig's c's**, 1. clusters of epithelioid cells constituting the endocrine tissue of the testis, which elaborate androgens, chiefly testosterone; called also *interstitial c's* or *interstitial c's of Leydig*, and *interstitial glands*. 2. mucous cells that do not pour their secretion out over the surface of the epithelium. **light c's**, parafollicular c's. **littoral c's**, flattened cells lining the walls of lymph or blood sinuses. **liver c's**, hepatic c's. **Loeuit c. (obs.)**, erythroblast. **longiradiate c's**, neuroglial cells having long prolongations. **luteal c's**, **lutein c's**, the plump, pale-staining, polyhedral cells of the corpus luteum; they include the granulosa lutein cells and the theca lutein cells. **lymph c.**, lymphocyte. **lymphadenoma c's**, Reed-Sternberg c's. **lymphoid c.**, cells of the immune system that react specifically with antigen and elaborate specific cell products; they comprise the lymphocytes and plasma cells. **malpighian c.**, keratinocyte. **Marchand's c.**, adventitial c. **marginal c's**, crescents of Giannuzzi. **Marie-Davy c.**, an electromotive force cell with a carbon collecting plate, the fluid, depolarizer, and amalgamator being a paste of mercuric or mercurous sulfate and water. **marrow c.**, any one of the immature blood cells that develop in the bone marrow; called also *myeloid c.* **Martinotti's c's**, fusiform cells with ascending axon processes in the polymorphic layer of the cerebral cortex. **mast c.**, a connective tissue cell whose specific physiologic function remains unknown; capable of elaborating basophilic, metachromatic cytoplasmic granules that contain histamine, heparin, and, in certain species, such as the rat and mouse, serotonin; called also *mastocyte* and *labrocyte*. **mastoid c's**, cellulae mastoideae. **matrix c's**, flat cells found in the lobules of sebaceous glands; they undergo a rather abrupt transformation into the pale, foamy-looking, fat-containing cells of the alveoli. **Mauthner's c.**, a large cell in the metencephalon of fishes and amphibians that gives rise to Mauthner's fiber. **megaspore mother c.**, any of the diploid cells developed in the megasporangium of plants which divide by meiosis to produce four haploid daughter cells (megaspores), usually only one of which survives to become a megagametophyte, or female gametophyte. **memory c's**, T-lymphocytes; see under *lymphocyte*. **Merkel's c's**, **Merkel-Ranvier c's**, 1. clear cells in the basal layer of the epidermis that contain catecholamine granules and resemble melanocytes. 2. *menisci tactus*. **Merkel tactile c.**, *menisci tactus*. **mesangial c's**, cells found in the mesangium, the connective tissue stalk in the glomerular capsule of the kidney. **mesenchymal c's**, the pluripotential cells constituting the mesenchymae. **mesothelial c's**, flattened epithelial cells of mesenchymal origin that line the serous cavities. **metallophil c's**, cells in which the cytoplasm has a great affinity for metal salts; these are cells of the reticuloendothelial system, and also a series of related cells that are not selectively stained by vital staining. **Meynert's c's**, solitary pyramidal cells in the cerebral cortex about the calcarine fissure. **microspore mother c.**, any of the diploid cells with large nuclei developed in the microsporangium of plants which divide by meiosis to produce four haploid microspores. **migratory c's**, amoeboid cells found in blood and tissue spaces. See also *wandering c.* **Mikulicz's c's**, the cells in rhinoscleroma that contain the bacillus of the disease; called also *foam c's*. **mitral c's**, the pyramidal cells forming one of the layers of the olfactory bulb. **Mooser c.**, a large mononuclear (serosal) cell with numerous rickettsiae in the cytoplasm, observed in inflammatory exudate in murine typhus; called also *Neill-Mooser bodies*. **morular c.**, berry c. **mossy c.**, 1. protoplasmic astrocyte. 2. any of the cells of the oligodendroglia or of the microglia. **mother c.**, a cell that divides so as to form new or daughter cells; called also *brood c.* and *parent c.* **motor c.**, an efferent neuron, especially one of the cells of the spinal cord that has its axon continued into a motor nerve fiber. **Mott c.**, a plasma cell in which Russell bodies have formed in scleroma. **mouth c's**, squamous cells detached from the epithelium lining the oropharynx, found in the sputum. **mucoalbuminous c's**, **mucoserous c's**, trophochrome c's. **mucous c's**, cells that secrete mucus or mucin. **mucous neck c's**, cells found in the necks of gastric glands; they fill the spaces between the parietal cells and are filled with

pale transparent granules. **mulberry c.**, 1. a vacuolated plasma cell; see also *berry c.* 2. a rounded cell, with centrally placed nuclei and coarse cytoplasmic vacuoles near the outer border, developing at the periphery of a retrogressing corpus luteum. **c's of Müller**, see under *fiber*. **muscle c.**, any contractile cell peculiar to muscle. Smooth muscle cells are elongated spindle-shaped cells containing a single nucleus and longitudinally arranged myofibrils. For cardiac and skeletal muscle cells, see *muscle fiber*, under *fiber*. **myeloid c.**, marrow c. **myeloma c.**, a cell found in bone marrow and occasionally in peripheral blood of patients with multiple myeloma. In the more anaplastic forms, the cell is large, has abundant blue-staining cytoplasm with no perinuclear pallor, and has one or more moderately large and vesicular nuclei that may be centrally or eccentrically placed and may contain nucleoli. In better differentiated tumors, the cell is smaller and, except for the finer chromatic structure, greatly resembles a plasmacyte. **myoepithelial c's**, smooth muscle cells of epithelial origin occurring in certain glands such as the mammary gland, glands of the skin, glands of the eyelid, and salivary glands, which provide a contractile mechanism that may serve to narrow and empty the ducts; called also *basket c's*. **myoepithelioid c's**, juxtaglomerular c's; so called because they appear to be highly modified smooth muscle cells. **myoid c's**, 1. cells found in the seminiferous tubules of common laboratory rodents, which cytologically resemble smooth muscle and are presumed to be contractile and to be responsible for the rhythmic shallow contractions of the seminiferous tubules of these species; called also *peritubular contractile c's*. 2. striated muscles cells found in the thymus of nonmammalian vertebrates, especially reptiles and birds, and rarely in mammals; called also *Hammar's myoid c's*. **myointimal c.**, a smooth muscle cell occurring in the intima of an artery. **Nageotte's c's**, cells of the cerebrospinal fluid that become greatly increased in number in disease. **nerve c.**, a neuron, with its processes, collaterals, and terminations, regarded as a structural unit of the nervous system. See *neuron*. **Neumann's c's (obs.)**, nucleated red cells in the bone marrow developing into erythrocytes. **neuroepithelial c's**, neuroglial c's. **neuroglia c's**, **neuroglial c's**, the cells of the supportive tissue of the central nervous system (neuroglia); these non-neural cells are of three kinds: astrocytes (macroglia), oligodendrocytes, and microglia. Called also *Deiters' c's* and *neuroepithelial c's*. See Plate accompanying *nerve*. **neuromuscular c.**, a form of cell chiefly or always seen in the lower animals, of which the outer part receives stimuli and the inner part is contractile. **neutrophilic c.**, a cell, particularly a leukocyte, stainable by neutral dyes; called also *neutrophil*. **nevus c.**, a small oval or cuboidal cell with a deeply staining nucleus and scanty pale cytoplasm, sometimes containing melanin granules, possibly derived from Schwann cells or from embryonal neoblasts. Nevus cells are clustered in rounded masses (called *theques*) in the epidermis, and reach the dermis by a kind of centripetal extrusion (*abtropfung*). **niche c.**, septal c. **Niemann-Pick c's**, round, oval, or polyhedral cells present in the bone marrow and spleen in Niemann-Pick disease; they have foamy, lipid-containing cytoplasm, in the form of sphingomyelin, which gives a positive reaction with Sudan III and other fat stains. Called also *Pick's c's*. **NK c's**, natural killer cells; cells capable of mediating cytotoxic reactions without themselves being specifically sensitized against the target. **noble c's**, the differentiated cells of the organs and tissues of the body. **normal c.**, any cell found naturally in any part or organ free from disease. **nucleated c.**, any cell having a nucleus. **nucleated red c.**, **nucleated red blood c.**, any of the immature forms of a red blood cell, as a normoblast. **null c's**, lymphocytes that lack the surface antigens characteristic of B- and T-lymphocytes. Such cells are seen in active systemic lupus erythematosus and other disease states. Called also *null lymphocytes*. **nurse c's**, **nursing c's**, *Sertoli's c's*. **oat c's**, **oat-shaped c's**, cells shaped like oat grains, seen in some kinds of carcinoma; also a characteristic of erythrocytes in sickle cell anemia. **olfactory c's**, a set of specialized and nucleated fusiform cells of the mucous membrane of the nose embedded among the epithelial cells; called also *Schultze's c's*. **osseous c.**, a bone cell. **osteoprogenitor c's**, relatively undifferentiated cells found on or near all of the free surfaces of bone, which, under certain circumstances, undergo division and transform into osteoblasts or coalesce to give rise to osteoclasts. **owl's eye c's**, desquamated renal epithelial cells. **oxyntic c's**, parietal c's. **oxyphil c's**, **oxyphilic c's**, acidophilic cells found, along with the more numerous chief cells, in the parathyroid glands; they increase in number with age, have small dark nuclei and abundant finely granular cytoplasm, and are larger and have many more mitochondria than the chief cells. **packed human blood c's [USP]**, **packed red blood c's (human)**, whole blood from which plasma has been removed; used therapeutically in blood transfusions. **Paget's c's**, degenerating cells, swollen, rounded, and pigmented, found in the epidermis in Paget's disease of the nipple and in extramammary Paget's disease. **palatine c's**, those parts of ethmoid cells that are extended into the palatine bone. **palisade c's**, a compact layer of cylindrical chloroplast-bearing cells located in the mesophyll layer of a leaf, and so arranged that their long axes are

at right angles to the epidermal surface of the leaf. **Paneth's c's**, narrow, pyramidal, or columnar epithelial cells with a round or oval nucleus close to the base of the cell, occurring in the fundus of the crypts of Lieberkühn; they contain large secretory granules that may contain peptidase. Called also *Davidoff's c's*. **para-follicular c's**, ovoid cells with an irregular nucleus and many brown or black cytoplasmic granules, which are located along with the principal cells of the thyroid follicles, in the follicular epithelium and interfollicular spaces, and which elaborate the polypeptide hormone calcitonin. They arise during embryonic life from the fifth pharyngeal pouches and are incorporated in the thyroid gland in mammals, but form discrete epithelial cell masses (*ultimobranchial bodies*) in submammalian vertebrates. Called also *C c's* and *light c's*. **paraluteal c's**, **paralutein c's**, **theca-lutein c's**. **parenchymal hepatic c's**, **parenchymal liver c's**, hepatic c's. **parent c.**, mother c. **parietal c's**, large spheroidal or pyramidal cells that are the source of gastric hydrochloric acid and are the site of intrinsic factor production; they are found scattered along the walls of the gastric glands, with their tapered ends pushed between the chief cells. Called also *acid c's*, *border c's*, *Heidenhain's c's*, *oxyntic c's*, and *delomorphous c's*. **pathologic c.**, any cell that results from a disease process or that belongs to or arises from a pathogenic microorganism. **pavement c's**, the flat cells composing pavement epithelium. **pediculated c's**, neuroglial cells that possess a pedicle implanted into a capillary wall. **peg c's**, intercalary c's. **peptic c's**, a name sometimes given to the chief cells of the stomach. **pericapillary c's**, perithelium. **pericellular c's**, neuroglial cells that surround a neuron. **perithelial c.**, adventitial c. **peritubular contractile c's**, myoid c's, def. 1. **perivascular c's**, cells accumulated around the outside of small blood vessels. **pessary c.**, a markedly hypochromic erythrocyte in which the hemoglobin is present merely as a narrow circumferential rim. **phalangeal c's**, elongated supporting cells of the organ of Corti with bases that rest on the basilar membrane adjacent to the pillar cells; the *inner* ones are arranged in a row on the inner surface of the inner pillar cells and surround the inner hair cells; the *outer* ones (*c's of Deiters*) support the outer hair cells. **pheochrome c's**, cells of the medulla of the adrenal gland that stain dark with chromium salts. **photoautotrophic c's**, green plant cells. **photoreceptor c's**, visual c's. **physaliferous c's**, spheroidal nucleated cells, containing glycogen or mucin, characteristic of chordoma. **Pick's c's**, Niemann-Pick c's. **pigment c.**, any cell containing pigment granules. **pillar c's**, elongated supporting cells in a double row (*inner* and *outer pillar c's*) in the organ of Corti, having their heads joined and their bases resting on the basilar membrane widely separated so as to form a tunnel (*inner tunnel* or *canal of Corti*) that extends the length of the cochlea. Called also *Corti's rods*. **pineal c.**, pinealocyte. **plasma c.**, a spherical or ellipsoidal cell, with a single, eccentrically placed nucleus containing clumped chromatin, an area of perinuclear clearing (*hof*), and generally abundant, sometimes vacuolated cytoplasm; plasma cells result from differentiation of sensitized small B-lymphocytes, and are the most active of any cell type in secreting antibody. See also *plasmacytic series*, under *series*. **pneumatic c's**, the cell-like structures of the petrous bone. **polar c's**, polar bodies, def. 1. **polychromatic c's**, **polychromatophil c's**, immature erythrocytes staining with both acid and basic stains so that their color is a diffuse mixture of blue-gray and pink. **polyhedral c's**, cells having a polyhedral shape. **polyplastic c.**, a cell made up of various structural elements; also one that passes through various modifications of form. **pre-B c's**, lymphoid cells that are immature and contain cytoplasmic IgM; they develop into B-lymphocytes. **prefollicle c's**, cells encapsulating the germ cells in the fetal ovary. **pregnancy c.**, altered chromophobe cell observed in the anterior pituitary in pregnant women. **prickle c.**, a cell with delicate radiating processes that connect with similar cells; the name applied to one of the dividing keratinocytes present in the stratum germinativum of the epidermis. Called also *heckel c*. **primary c.**, an irreversible (non-rechargeable) electromotive force cell, e.g., the Leclanché cell. **primitive granulosa c's**, prefollicle c's. **primitive wandering c.**, a small mononuclear cell of the embryo that arises from the mesoderm and subsequently by differentiation gives rise to wandering cells of the body (Saxer, Maximow). **primordial germ c's**, the earliest germ cells, originating extragonadally but migrating early in embryonic development. **principal c's**, 1. chief c's, def. 3. 2. the fundamental cells of an organ, which usually have a specific function. **prokaryotic c.**, a cell without a true nucleus; see *prokaryote*. **prolactin c.**, mammatrope. **prop c's**, Purkinje c's. **psychic c's**, the cells of the cerebral cortex. **pulmonary epithelial c's**, extremely thin nonphagocytic squamous cells with flattened nuclei, constituting the outer layer of the alveolar wall in the lungs. **pulpal c's**, the typical cells of the spleen substance. **Purkinje's c's**, large branching neurons in the middle layer of the cortex cerebelli; called also *prop c's* and *Purkinje's corpuscles*. **pyramidal c.**, one of the large multipolar pyramid-shaped ganglion cells of the cerebral cortex which, with their attached fibers, constitute the pyramidal neurons. **radial c's of Müller**, Müller's fibers. **red c.**, red blood

c., one of the elements of the peripheral blood, an erythrocyte. Normally, in humans, the mature form is a non-nucleated, yellowish, biconcave disk, adapted, by virtue of its configuration and its hemoglobin content, to transport oxygen. **Reed c's**, **Reed-Sternberg c's**, giant histiocytic cells, typically multinucleate, most often binucleate with the two halves of the cell appearing as mirror-images of each other; the nuclei are enclosed in abundant amphophilic cytoplasm and contain prominent nucleoli. The presence of the cells is the common histiologic characteristic of Hodgkin's disease. A variant form is the lacunar cell (q.v.). Called also *Dorothy Reed's c's*, *Reed's c's*, *Sternberg-Reed c's*, *Hodgkin's c's*, *Sternberg's giant c's*, and *lymphadenoma c's*. **Renshaw c's**, interneurons in the ventromedial region of the ventral horn that make inhibitory connections with the motoneurons. **reserve c's**, cells of the basal or germinal layer of the bronchial epithelium. **residential c.**, a cell that does not wander, especially one of the cells of the substantia propria of the cornea. **resting c.**, a cell that is not undergoing karyokinesis. **resting wandering c.**, a fixed macrophage. **reticular c's**, the cells forming the reticular fibers of connective tissue; those forming the framework of lymph nodes, bone marrow, and spleen are part of the reticuloendothelial system and under appropriate stimulation may differentiate into macrophages. **reticuloendothelial c.**, see *reticuloendothelial system*, under *system*. **reticulum c.**, reticular c. **rhagiocrine c.**, macrophage. **Rieder's c.**, a myeloblast observed in acute leukemia, having a nucleus with several wide and deep indentations suggesting lobulation, which may represent asynchronism of nuclear and cytoplasmic maturation. **Rindfleisch's c's** (*obs.*), eosinophils. **rod c's**, 1. retinal rods. 2. microglia as observed in chronic diseases of the cerebral cortex and in dementia paralytica, in which the cells are markedly attenuated in form, their processes being confined mainly to the two extremities. 3. littoral c's. **Rohon-Beard c's**, giant ganglion cells in the spinal cord of some vertebrates. **Rolando's c's**, the ganglion cells of Rolando's gelatinous substance. **root c's**, cells of the nerve roots. **Rouget c's**, contractile cells found upon the walls of capillaries; see *pericyte*. **round c.**, any cell having a spherical shape, especially a lymphocyte. **S c's**, 1. mucoid cells of the adenohypophysis that contain a cysteine-rich protein. 2. basal granular cells found predominantly in the duodenum, which have cytoplasmic granules and which may be the source of secretin production; called also *small granule c's*. **Sala's c's**, star-shaped cells of connective tissue in the fibers that form the sensory nerve endings situated in the pericardium. **sarcogenic c's**, the cells that are developed into muscle fiber. **satellite c's**, 1. neurilemmal elements encapsulating a ganglion cell. 2. free nuclei that accumulate around cells in certain diseases. 3. elongated cells that are closely associated with a muscle fiber; they are either flattened against the fiber or occupy shallow depressions in its surface. **scavenger c.**, a cell which absorbs and removes irritant products. **Schultze's c's**, olfactory c's. **Schwann's c.**, any of the large nucleated cells whose cell membrane spirally wraps the axons of myelinated peripheral neurons and is the source of myelin; a single Schwann cell supplies the myelin sheath between two nodes of Ranvier. **sclerenchyma c's**, thick-walled, lignified, usually dead cells, which compose the sclerenchyma of plants. Cf. *collenchyma c's*. **segmented c.**, a mature granulocyte in which the nucleus is divided into definite lobes joined by a filamentous connection, as distinguished from a band cell. **seminal c's**, epithelial cells within the tubuli seminiferi. **seminoma c.**, a large, round to polygonal cell having a round, moderately large nucleus with clumped chromatin in the center of clear abundant cytoplasm and one or more nucleoli, occurring in fairly well-differentiated sheets or cords in classical seminoma of the testis. **sensory c.**, one of the neurons of the peripheral sense organs. **sentinel c's**, juxtaglomerular c's. **septal c.**, a name applied to alveolar cells occupying angular niches in the alveolar walls. **serous c.**, a cell concerned in the secretion of a watery fluid rich in protein, like the secretory cells of the parotid gland; called also *albuminous c*. **Sertoli's c's**, elongated cells in the tubules of the testes to which the spermatids become attached; they provide support, protection, and, apparently, nutrition until the spermatids become transformed into mature spermatozoa; called also *sustentacular c's*, *nurse or nursing c's*, *foot c's*, and *trophocytes*. **sexual c's**, germ c's. **Sézary c.**, a reticular lymphocyte characterized by a large convoluted or folded nucleus with a narrow rim of cytoplasm that may contain vacuoles; seen in many proliferative states of the reticuloendothelial system, and massively present in the skin and blood in the Sézary syndrome. **shadow c.**, ghost c. **sickle c.**, an erythrocyte shaped like a sickle or crescent, the abnormal shape caused by the presence of varying proportions of hemoglobin S; see *sickle cell anemia*, under *anemia*. **Siemens and Halske c.**, a battery cell with a copper anode and an anode electrolyte of aqueous copper sulfate that is separated from the anode compartment by a porous diaphragm with a papier-mâché packing. **signet-ring c.**, one in which the nucleus has been pressed to one side by an accumulation of intracytoplasmic mucin; see *Krukenberg's tumor* under *tumor*. **silver c's**, argentaffin c's. **skeletogenous c.**, an osteoblast. **small granule c's**, S c's, def. 2. **Smee c.**, an electromotive force cell consisting of a plate of zinc

and one of platinized silver in a dilute solution of sulfuric acid. **smudge c's**, a name applied to disrupted leukocytes appearing during the course of preparation of peripheral blood smears. **Snell c.**, a one-fluid electromotive force cell having a collecting plate of platinized silver; its fluid is dilute sulfuric acid. **somatic c's**, the cells of the somatoplasm; undifferentiated body cells. **somatotropic c.**, somatopetro. **sperm c.**, a spermatozoon. **spermatogenic c's**, cells that produce sperm; called also *androgones*. **spermatogonial c.**, spermatogonium. **sphenoid c's**, the two large cavities or sinuses of the sphenoid bone; see *sinus sphenoidalis*. **spider c.**, 1. an astrocyte, especially a fibrous astrocyte. 2. a cell occurring in rhabdomyosarcoma; its nucleus, with a narrow rim of cytoplasm, is located in what appears to be a large vacuole, with thread-like processes radiating to the outer cell wall. **spindle c.**, a spindle-shaped cell; called also *fusiform c.* **spur c.**, a form of spiculed mature red blood cell, whose prototype is the acanthocyte of congenital abetalipoproteinemia, characterized by five to ten spiny projections of varying length distributed irregularly over the cell surface. **squamous c.**, a flat, scalelike epithelial cell. **stab c.**, band c. **staff c.**, band c. **star c's**, cells with large vacuoles in their cytoplasm and cytoplasmic bridges; seen in ameloblastoma. **stave c's**, littoral c's. **stellate c.**, any star-shaped cell, such as a Kupffer cell or astrocyte, having a large number of filaments extending from it in all directions. **stellate c's of liver**, Kupffer's c's. **stem c.**, a generalized mother cell whose descendants specialize, often in different directions, such as an undifferentiated mesenchymal cell which may be considered to be a progenitor of the blood and fixed-tissue cells of the bone marrow. **Sternberg's giant c's**, Reed-Sternberg c's. **Sternberg-Reed c's**, Reed-Sternberg c's. **stipple c.**, a red blood cell containing granules of varying size and shape, taking a basic or bluish stain with Wright's stain, as in punctate basophilia. **supporting c's**, cells that serve to provide support and protection and perhaps contribute to the nutrition of principal or other cells of certain organs; such cells are found in the labyrinth of the inner ear, organ of Corti, olfactory epithelium, taste buds, and seminiferous tubules (Sertoli's cells). Called also *sustentacular c's*. **suppressor c's**, lymphoid cells, especially T-lymphocytes, that inhibit humoral and cell-mediated immune responses to antigen. These cells play an integral role in immunoregulation and are believed to be operative in various autoimmune and other immunological disease states. **sustentacular c's**, supporting c's. **sympathicotropic c's**, large epithelioid cells occurring in groups and connected with bundles of nonmyelinated nerve fibers in the hilus of the ovary. **sympathochromaffin c's**, small round cells in the fetal suprarenal gland, the forerunners of the sympathetic and medullary cells. **syncytial c.**, a cell whose cytoplasm is confluent with that of an adjacent cell. **synovial c's**, fibroblasts lying between the cartilaginous fibers in the synovial membrane of joints. **T c's**, T-lymphocytes; see under *lymphocyte*. **tactile c.**, corpuscula tactus. **tadpole c's**, cells with an elongated cytoplasmic tail. **target c.**, 1. an abnormally thin erythrocyte which, when stained, shows a dark center and a peripheral ring of hemoglobin, separated by a pale unstained ring containing less hemoglobin, as seen in certain congenital and acquired anemias, thalassemia, certain hemoglobinopathies, liver disease, especially obstructive jaundice, and other disorders, and the postsplenectomy state. Called also *target*, or "*Mexican hat*," erythrocyte. 2. any cell selectively affected by a particular agent, such as a hormone or drug. **tart c.**, a macrophage or monocytoïd reticuloendothelial cell that contains a phagocytized nucleus with well preserved nuclear structure; the phagocytized nucleus, as distinguished from an LE cell inclusion, shows an intact chromatin pattern, chromatin that is more dense and tends to become vacuolated, and is frequently smaller than that in a true LE cell. **taste c's**, the interior cells of a taste bud hidden by the cover cells; called also *gustatory c's* and *taste corpuscles*. **tautomeral c's**, cells of the gray matter of the spinal cord whose axons pass into the white substance of the same side of the cord. **tegmental c's**, cells that cover any delicate structure. **tendon c's**, flattened tissue cells of connective tissue occurring in rows between the primary bundles of the tendons. **theca c's**, theca-lutein c's. **theca-lutein c's**, lutein cells derived from the theca interna; called also *paraluteal* or *paralutein c's*. **Thoma-Zeiss counting c.**, see under *chamber*. **thyroidectomy c's**, altered basophilic cells occurring in the anterior pituitary gland after thyroidectomy. **thyrotropic c.**, thyrotrope, def. 2. **totipotent c.**, an embryonic cell that is capable of developing into any variety of body cells. **touch c.**, corpuscula tactus. **Touton giant c's**, large multinucleated cells containing lipid material found in the lesions of xanthoma and histiocytosis X. **trophochrome c's**, serous cells whose secretory granules give a staining reaction for mucus with mucicarmine; called also *mucoalbuminous c's* and *mucoserous c's*. **tubal air c's**, cellulae pneumaticae tubae auditivae. **Türk's c.**, a nongranular, mononuclear cell displaying morphologic characteristics of both an atypical lymphocyte and a plasma cell, observed in the peripheral blood during severe anemias, chronic infections, and leukemoid reactions; called also *Türk's irritation leukocyte*. **tympenic c's**, cellulae tympanicae. **type I c's**, alveolar c's, type I. **type II c's**, alveolar c's, type II.

Tzanck c., a degenerated epithelial cell caused by acantholysis, and found especially in pemphigus. **ultimobranchial c's**, parafollicular c's. **vacuolated c.**, a cell whose protoplasm contains vacuoles. **c's of van Gehuchten**, Golgi neurons of type II, i.e., neurons with short branching processes. **vasofactive c's**, vasoformative c's, cells that join with other cells to form blood vessels. **ventricular c.**, any of the columnar epithelial cells of the neural tube. **Virchow's c's**, embryonic connective tissue cells secreting myelin and associated with the formation of the axons of nerves in the fetus. **Virchow c's**, lepra c's. **visual c's**, the neuroepithelial elements of the retina, the outer specialized segments of which are the retinal rods and cones. **von Kupffer's c's**, Kupffer's c's. **wandering c's**, cells capable of amoeboid movement, such as free macrophages, lymphocytes, mast cells, and plasma cells. **Warthin-Finkel-dey c's**, the peculiar multinucleated giant cell present in tonsillar, nasopharyngeal, and appendiceal tissue in measles. **wasserhelle c's** [Ger.], water-clear c. **water-clear c.**, a large clear cell found in the parathyroid gland; these cells have a ballooned appearance and are especially numerous in adenoma of the gland. Called also *wasserhelle c.* **Wedl c's**, large swollen cells (bladder cells) formed by the capsular epithelium in cataract development. **white c.**, **white blood c.**, leukocyte. **wing c's**, cells in the corneal epithelium with convex anterior surfaces and concave posterior surfaces. **xanthoma c.**, foam c. **Zander's c's**, bladder c's. **zymogenic c's**, chief c's, def. 1.

cella (sel'ah), pl. *cel'lae* [L.] [NA] an enclosure, or compartment. **c. latera'lis ventric'uli latera'lis** (obs.), the lateral part of the lateral ventricle of the brain. **c. me'dia ventric'uli latera'lis** (obs.), the central part of the lateral ventricle of the brain; called also *pars centralis*.

cellaburate (sel-ah-bur'at) chemical name: cellulose acetate butanoate; a plastic filming agent.

cellae (sel'le) [L.] plural of *cella*.

cellase (sel'ās) an enzyme that acts upon cellulose.

Cellase 1000 (sel'ās) trademark for a preparation of cellulase, used as a digestant adjunct.

Cellfalcicula (sel'fal-sik'u-lah) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of short, rod- or spindle-shaped cells with pointed ends, containing metachromatic granules. It includes three species, *C. fus'ca*, *C. mucosa*, and *C. vi'ridis*.

Cellia (sel'e-ah) [Angelo Celli, Italian physician, 1857-1914] *Anopheles*.

cellicolous (sel-lik'ō-lus) [L. *cella* cell + *colere* to dwell] inhabiting cells.

celliferous (sel-lif'er-us) producing or bearing cells.

celliform (sel'i-form) cell-like.

cellifugal (sel-lif'u-gal) cellulifugal.

cellipetal (sel-lip'e-tal) cellulipetal.

cellobiase (sel'lo-bi'ās) β-glucosidase.

cellobiose (sel'lo-bi'ōs) a disaccharide, C₁₂H₂₂O₁₁, formed from cellulose by the action of cellulase; called also *cellose*.

cellohexose (sel'o-hek'sōs) a crystalline hexasaccharide, C₃₆H₆₂O₃₁, obtained by the hydrolysis of cellulose.

celloidin (sē-loi'din) a concentrated preparation of pyroxylin, employed in microscopy for embedding specimens for section cutting.

cellon (sel'on) tetrachlorethane.

cellophane (sel'o-fān) a transparent tissue of regenerated cellulose used as a dialysis membrane and for bandages, compresses, etc.

cellose (sel'ōs) cellobiose.

cellotetrose (sel'o-tet'rōs) a crystalline tetrasaccharide, C₂₄H₄₂O₂₁, obtained by the hydrolysis of cellulose.

cellotriose (sel'o-tri'ōs) a crystalline trisaccharide, C₁₈H₃₂O₁₆, obtained by the hydrolysis of cellulose.

cellula (sel'lu-lah), pl. *cel'lulae* [L.] a small cell; [NA] a general term for a small, more or less enclosed space. **cel'lulae ethmoida'les** [NA], ethmoidal cells: air-containing spaces in the ethmoid bone, communicating with the infundibulum ethmoidale and the bulla ethmoidalis; classified, on the basis of their openings, as *cellulae anteriores*, *mediae*, and *posteriores*, and collectively forming the sinus ethmoidalis. **cel'lulae mastoi'deae** [NA], mastoid cells: the air spaces of the mastoid process of the temporal bone. **cel'lulae pneumat'icae tu'bae auditiv'ae** [NA], air cells in the floor of the auditory tube close to the carotid canal, being similar to the air cells of the mastoid part of the temporal bone; called also *air cells of auditory tube*; *cellulae pneumaticae tubariae*, and *tubal air cells*. **cel'lulae pneumat'icae tuba'riae**, cellulae pneumaticae tubae auditivae. **cel'lulae tympan'icae** [NA], tympanic cells: spaces in the tympanic cavity between the bony projections from the floor, or jugular wall.

cellulae (sel'u-le) [L.] plural of *cellula*.

cellular (sel'u-lar) pertaining to, or made up of, cells.

cellularity (sel'u-lār'i-te) the state of a tissue or other mass as regards the number of constituent cells.

cellulase (sel'u-lās) 1. an enzyme that hydrolyzes cellulose to cellobiose; it is secreted by certain bacteria and by fungi that destroy wood. 2. a concentrate of such enzymes derived from *Aspergillus niger* and used as a digestive aid.

cellule (sel'ül) [L. *cellula*] a small cell; see also *cellula*. **c. claire**, clear cell.

cellulicidal (sel'u-lis'i-dal) [L. *cellula* cellule + *caedere* to kill] destroying cells.

cellulifugal (sel'u-lif'u-gal) [L. *cellula* cellule + *fugere* to flee] directed away from a cell body.

cellulipetal (sel'u-lip'ē-tal) [L. *cellula* cellule + *petere* to seek] directed toward a cell body.

cellulitis (sel'u-li'tis) diffuse inflammation of the soft or connective tissue due to infection, in which a thin, watery exudate spreads through the cleavage planes of interstitial and tissue spaces; it may lead to ulceration and abscess. Called also *phlegmon*. **anaerobic c.**, inflammation of the subcutaneous tissue in which the infecting bacteria, most commonly *Clostridium perfringens*, proliferate and produce gas in the tissue (but not in muscle, as in gas gangrene). The onset is gradual, pain is absent, and systemic symptoms are not severe. **clostridial c.**, anaerobic c. **dissecting c.**, cellulitis with suppuration spreading between the layers of the involved tissue, as of the scalp. **dissecting c. of scalp**, perifolliculitis capitis abscedens et suffodiens. **finger c.**, felon. **gangrenous c.**, that leading to the death of the tissue associated with bacterial invasion and putrefaction. **gaseous c.**, inflammation due to a gas-producing organism; see *anaerobic c.* **indurated c.**, phlebitic induration. **orbital c.**, inflammation of the cellular tissue within the orbit. **pelvic c.**, parametritis. **periurethral c.**, see under *phlegmon*. **phlegmonous c.**, an infectious inflammatory process spreading by continuity through the skin and subcutaneous tissues, or more deeply, without sharp margination or localization. **streptococcus c.**, cellulitis due to streptococcus infection and frequently manifested as erysipelas. **ulcerative c.**, see under *lymphangitis*.

cellulofibrous (sel'u-lo-fi'brus) partly cellular and partly fibrous.

celluloid (sel'u-loid) a substance composed largely of pyroxylin and camphor; used in the arts and in surgery, and formerly in dentistry.

Cellulomonas (sel'u-lo-mo'nas) [*cellulose* + Gr. *monas* a unit] a genus of microorganisms of the family Corynebacteriaceae, order Eubacteriales, made up of pleomorphic, gram-variable microorganisms found in soil.

celluloneuritis (sel'u-lo-nu-ri'tis) inflammation of neurons.

acute anterior c., Raymond's name for acute anterior poliomyelitis, polynneuritis, and Landry's paralysis, which he considered one disease.

cellulose (sel'u-lös) a carbohydrate, (C₆H₁₀O₅)_n the most abundant polysaccharide in nature, being a rigid, unbranched, long-chain polymer of glucose and forming the skeleton of most plant structures and of plant cells; it is a colorless, transparent solid, insoluble in water, alcohol, etc., but soluble in Schweitzer's reagent. **absorbable c.**, oxidized c. **c. acetate phthalate** [NF], a reduction product of phthalic anhydride and a partial acetate ester of cellulose; it is a free-flowing white powder used as a tablet-coating agent. **acid c.**, any combination of cellulose with carboxyl groups, such as pectinic acid; they are mostly gelatinous bodies. **microcrystalline c.** [NF], purified, partially depolymerized cellulose prepared by treating alpha cellulose, obtained as a pulp from fibrous plant material with mineral acids; used as a tablet and capsule diluent. **oxidized c.** [USP], cellulose partially oxidized and with a varying content of carboxylic acid groups, which confers some solubility in dilute alkali; it is insoluble in water. Dried in vacuum over phosphorus pentoxide, it is used as local hemostatic. Called also *absorbable c.* and *absorbable cotton*. **starch c.**, a nonlinear glucan polysaccharide obtained from waxy corn; not a true cellulose since it is not a β -glycoside; it is comparatively insoluble and said to be concentrated in the outer portion of starch grain. **tetrani-trate c.**, (C₁₂H₁₄N₄O₁₈)_n, the principle constituent of pyroxylin.

cellulosity (sel'u-lös'i-te) the condition of being composed of cells.

cellulotoxic (sel'u-lo-tok'sik) 1. toxic to cells. 2. produced by cell toxins.

cellulous (sel'u-lus) made up of cells.

Cellvibrio (sel-vib're-o) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of straight or slightly curved rods sometimes joined in long chains or bundles. It includes four species, *C. flaves-cens*, *C. fulvus*, *C. ochraceus*, and *C. vulgaris*.

celo-, cel- 1. [Gr. *kēlē* hernia] a combining form denoting relationship to a tumor or swelling. 2. [Gr. *koilia* cavity] a combining form denoting relationship to a cavity. See also words beginning *celio-* and *coelo-*.

celom (se'lom) coelom.

celomic (se-lom'ik) coelomic.

Celontin (se-lon'tin) trademark for a preparation of methsuximide.

celophlebitis (se'lo-fle-bi'tis) [*celo-* (2) + *phlebitis*] inflammation of a vena cava.

celoschisis (se-los'kī-sis) [*celo-* (2) + *schisis* cleft] congenital fissure of the abdominal wall.

celoscope (se'lō-skōp) celioscope.

celoscopy (se-los'kō-pe) celioscopy.

celosomia (se-lo-so'me-ah) [*celo-* (1) + Gr. *sōma* body] a developmental anomaly characterized by eventration, fissure, or absence of the sternum, with hernial protrusion of the viscera.

celosomus (se'lo-so'mus) a fetus exhibiting celosomia; called also *kelosomus*.

celothel (se'lō-thel) mesothelium.

celothelioma (se'lo-the-le-o'mah) mesothelioma.

celothelium (se'lō-the'le-um) mesothelium.

celotomy (se-lot'o-me) herniotomy.

celovirus (se'lō-vi'rus) CELO virus.

celozoic (se'lō-zō'ik) [*celo-* (2) + *zōon* animal] inhabiting the intestinal cavities of the body; said of parasites.

Celsius scale, thermometer (se'l-se-us) [Anders *Celsius*, Swedish astronomer, 1701-1744] see under *scale* and *thermometer*.

Celsus (se'l-sus), Aurelius Cornelius (1st century A.D.) a celebrated Roman medical encyclopedist—"the Cicero of medicine." Of his many writings, only his *De re medicina* (in eight books) survives; the four classical signs (*Celsus' quadrilateral*) of inflammation—*color* (heat), *dolor* (pain), *rubor* (redness), and *tumor* (swelling)—are mentioned in the third book of this work.

cement (se-ment') [L. *cemen'tum*] 1. a substance that serves to produce solid union between two surfaces. 2. a filling material, such as zinc phosphate, used in dentistry to assist in retaining gold castings in prepared teeth and to insulate the tooth pulp from metallic and other fillings. 3. cementum. **acrylic resin dental c.**, a dental cement, dispensed as a powder or liquid, that is mixed as any other cement. The powder contains polymethyl methacrylate, a filler, a plasticizer, and a polymerization initiator. The liquid monomer is methyl methacrylate, with an inhibitor and an activator. **germicidal dental c.**, usually a zinc phosphate cement to which has been added copper or silver salts to render it bactericidal. **intercellular c.**, a mucilaginous substance that holds cells, and especially epithelial cells, together. **interprismatic c.**, the material that binds together the enamel prisms. **muscle c.**, the myoglia. **nerve c.**, the neuroglia. **silicate c.**, a dental cement used for semipermanent restorations on the basis of good early color and translucency. **silicophosphate c.**, a combination of zinc phosphate and silicate cement that is less translucent than silicate and stronger than zinc phosphate cement. **zinc-eugenol c.** [USP], a temporary, topical dental protective prepared by mixing 10 parts of the powder (composed of zinc acetate, zinc stearate, zinc oxide, and rosin) with 1 part of the liquid (composed of eugenol and cottonseed oil) to a thick paste immediately before use; applied to the cleaned carious lesion. **zinc phosphate c.**, the general purpose dental cement. The powder is zinc oxide with a small amount of modifier. The liquid consists essentially of phosphoric acid, with metallic salts as buffers, and approximately one-third water.

cementation (se'men-ta'shun) the attachment of anything by the means of cement, such as the use of cement in attaching restorative material to a natural tooth.

cementicle (se-men'ti-kel) a small, discrete globular mass of cementum in the region of a tooth root; called also *cementoxostosis*. **adherent c.**, **attached c.**, one that is firmly connected with the cementum. **free c.**, **interstitial c.**, one that is completely surrounded by connective tissue of the periodontal membrane.

cementification (se-men'ti-fi-ka'shun) cementogenesis.

cementin (se-men'tin) the material that sometimes unites the margins of squamous endothelial cells.

cementitis (se'men-ti'tis) inflammation of the cementum of a tooth.

cementoblast (se-men'to-blast) [*cementum* + Gr. *blastos* germ] a large cuboidal cell with spheroid or ovoid nucleus, found on the surface of cementum, between the fibers, which is active in the formation of cementum.

cementoblastoma (se-men'to-blas-to'mah) an odontogenic fibroma in which the cells are developing into cementoblasts, and there is only a small proportion of calcified tissue; called also *cementifying fibroma*.

cementoclasia (se-men'to-kla'se-ah) [*cementum* + Gr. *klasis* breaking] disintegration of the cementum of a tooth.

cementocyte (se-men'to-sit) a cell found in lacunae of cellular cementum, frequently having long processes radiating from the cell body toward the periodontal surface of the cementum; called also *cement cell*.

cemento-exostosis (se-men'to-ek'sos-to'sis) cementicle.

cementogenesis (se-men'to-jen'ē-sis) [*cementum* + Gr. *genesis*

formation] the development of the cementum on the root dentin of a tooth; called also *cementification*.

cementoma (se'men-to'mah) a mass of cementum lying free at the apex of a tooth, probably a reaction to injury rather than a neoplasm.

cementopathia (se-men'to-path'e-ah) periodontitis or periodontosis resulting from disease or defect of the cementum.

cementoperiostitis (se-men'to-per'e-os-ti'tis) periodontitis.

cementosis (se'men-to'sis) a condition characterized by proliferation of cementum; called also *dental exostosis*.

cementum (se-men'tum) [L.] [NA] the bonelike connective tissue covering the root of a tooth and assisting in tooth support; the intercellular substance is calcified and arranged in layers (lamellae). Called also *crusta petrosa dentis* and *substantia ossea dentis*.

cenadelphus (se'nah-del'fus) [Gr. *koinos* common + *adelphos* brother] a twin monster in which the two components are equally developed.

cenencephalocele (se'nen-sef'ah-lo-sēl) an encephalocele or protrusion of the brain without cystic condition.

cenesthesia (se'nes-the'ze-ah) [Gr. *koinos* common + *aisthēsis* perception] the general feeling or sense of conscious existence; the sense of normal functioning of the organs of the body.

cenesthetic (se'nes-the'sik) pertaining to cenesthesia.

cenesthesiopathy (se'nes-the'ze-op'ah-the) [cenesthesia + Gr. *pathos* disease + *-ia*] any disturbance of cenesthesia. Cf. *para-cenesthesia*.

cenesthetic (se'nes-thet'ik) cenesthetic.

cenesthopathia (se'nes-tho-path'e-ah) cenesthesiopathy.

ceno- 1. [Gr. *kainos* new, fresh] a combining form denoting new; see also words beginning *caino-* and *kaino-*. 2. [Gr. *kenos* empty] a combining form denoting empty; see also words beginning *caeno-* and *keno-*. 3. [Gr. *koinos* shared in common] a combining form denoting relationship to a common feature or characteristic; see also words beginning *coeno-*, *coino-*, and *koino-*.

cenobium (se-no'be-um) [Gr. *koinobios* living in communion with others] a colony of independent cells or organisms held together by a common investment.

cenocyte (se'no-sit) [*ceno-*(3) + Gr. *kytos* hollow vessel] 1. a multinucleate plant cell enclosed within a hollow wall, examples of which are found within the fungi and algae. 2. a multinucleate bit of cytoplasm in which the nuclei are not separated by walls. 3. a multinucleate plant protoplast.

cenogenesis (se'no-jen'ē-sis) [*ceno-*(1) + Gr. *genesis* production] the appearance of new features in development, in adaptive response to environmental conditions. Cf. *palingenesis*, def. 2.

Cenolate (se'no-lāt) trademark for a preparation of ascorbic acid.

cenopsychic (se'no-si'kik) [*ceno-*(1) + Gr. *psychē* soul] of recent appearance in mental development.

cenosis (se-no'sis) [Gr. *kenōsis* an emptying, or emptiness] a morbid discharge.

cenosite (se'no-sit) coinsite.

cenotic (se-not'ik) pertaining to or characterized by cenosis.

cenotoxin (se'no-tok'sin) kenotoxin.

cenotype (se'nō-tip) [*ceno-*(3) + *type*] the original type from which all forms have arisen.

sensor (sen'sor) 1. a member of a committee on ethics or for critical examination and supervision of a medical or other society. 2. in freudian terminology, the psychic influence that prevents unconscious thoughts and wishes from coming into consciousness unless they are disguised so as to be unrecognizable; called also *freudian c.* and *psychic c.*

sensorship (sen'sor-ship) the operation of the sensor.

center (sen'ter) [Gr. *kentron*; L. *centrum*] 1. the middle point of a body. 2. a collection of neurons concerned with performance of a particular function; see also *area*. **accelerating c.**, a center in the brain stem involved in acceleration of the heart; called also *cardioaccelerating c.* **acoustic c.**, auditory c. **anospinal c's**, the centers for contracting the sphincter ani, for relaxing it (defecation center), and for the anal reflex; all are in the lumbar enlargement. **apneustic c.**, a nerve center in the brain stem controlling normal respiration. **auditory c.**, a center dealing with the interpretation of sounds, in the superior temporal gyrus. **auditory c.**, the center for hearing, in the more anterior of the transverse temporal gyri; called also *acoustic c.* **brain c.**, 1. an area of the cerebral cortex having a specialized structure or function. 2. a group of cells in the brain having a special function. See also *specific areas*, under *area*. **Broca's c.**, the speech center. **Budge's c.** 1. ciliospinal center. 2. genital center. **cardioaccelerating c.**, accelerating c. **cardioinhibitory c.**, a center in the medulla oblongata that exerts an inhibitory influence on the heart by way of the vagus. **cardiomotor c.**, Tawara's name for the atrioventricular node, on the theory that the heart's impulse arises there. **cell c.**, centrosome. **cheirokinesthetic c.**, the center in the posterior part of the left second frontal gyrus, controlling movements concerned in writing. **c's of chondrification**,

dense aggregations of embryonic mesenchymal cells at sites of future cartilage formation; called also *protochondral tissue*. **cilio-spinal c.**, a center in the lower cervical and upper dorsal portions of the spinal cord, connected with the dilatation of the pupil; called also *Budge's c.* **community health c.**, a health service delivery system providing a coordinated program of continuing mental health care to a specific population. **coordination c.**, a nerve center serving the function of coordination. **correlation c.**, a nerve center serving the function of correlation. **cortical c.**, any portion of the cerebral cortex that can be differentiated functionally from its neighbors; such a center is sometimes called area, field, or zone. **coughing c.**, a center in the medulla oblongata, situated above the respiratory center, which controls the act of coughing. **defecation c.**, see *anospinal c.* **deglutition c.**, a nerve center in the medulla oblongata that controls the function of swallowing. **dentary c.**, an ossification center of the mandible, giving origin to the lower border and outer plate. **C. for Disease Control (CDC)**, an agency of the U.S. Department of Health and Human Services which serves as a center for the control, prevention, and investigation of diseases. **dominating c.**, the principal or controlling center of a group having a common function. **ejaculation c.**, the center that controls the erection of the penis and the normal discharge of semen; it is in the lumbar region of the spinal cord, and is itself regulated from the oblongata. Called also *erection c.* **epiotic c.**, the center of ossification that forms the mastoid process. **epiphyseal c.**, secondary c. of ossification. **erection c.**, ejaculation c. **eupractic c.**, any cerebral center that controls the proper performance of any action or set of actions. **facial c.**, a center for face movements, located in the lower part of the ascending frontal convolution. **Flemming c.**, germinal c. **ganglionic c.**, any mass of gray matter between the lateral ventricles and the decussation of the anterior pyramids, including the thalami, striati, and other basal ganglia. **genital c.**, **genitospinal c.**, the ejaculation center of the male or the parturition center of the female; said to be in the cord, near the second lumbar vertebra. Called also *Budge's c.* **germinal c.**, the area in the center of a lymph nodule containing aggregations of actively proliferating lymphocytes (classically, antibody-forming B-cells); it appears as a spherical mass surrounded by a capsule of elongated cells that is partially invested by a crescentic cap of small lymphocytes. Called also *Flemming c.*, *noeud vital*, and *secondary nodule*. **glossokinesthetic c.**, the center in the posterior part of the left second frontal gyrus that controls movements concerned in articulate speech. **gustatory c.**, the cerebral center supposed to control taste, situated in the cortex of the uncinata convolution; called also *taste c.* **health c.**, 1. a community health organization for creating health work and coordinating the efforts of all health agencies. 2. an educational complex consisting of a medical school and various allied health professional schools. **heat-regulating c's**, thermoregulator c's. **inhibitory c.**, any nerve center that restrains any function or process or controls other centers. **kinetic c.**, the centrospheres of a fertilized ovum. **Kronecker's c.**, cardioinhibitory c. **Kupressoff's c.**, micturition c. **Lumsden's c.**, pneumotoxic c. **medullary c. of cerebellum**, corpus medullare cerebelli. **medullary respiratory c.**, a center in the medulla oblongata that coordinates respiratory movements. **micturition c.**, a center controlling the bladder and inhibiting the tension of the vesical sphincter, situated in the lumbar enlargement; called also *Kupressoff's c.* **motor c.**, any center that originates, controls, inhibits, or maintains a motor impulse. **nerve c.**, a collection of nerve cells in the central nervous system that are associated together in the performance of some particular function. **optic c.**, that point in a lens, or combination of lenses, where all rays that help to form a clear image cross the principal axis; in the eye, about 2 mm. back of the cornea (Fording). **ossification c.**, any point at which the process of ossification begins in a bone; in a long bone there is a *primary center* for the diaphysis and one *secondary center* for each epiphysis. **oval c.**, **greater (obs.)**, centrum semiovale. **panting c.**, polypneic c. **parenchymatous c.**, a nerve center situated in the substance of a viscus. **phrenic c.**, centrum tendineum. **pneumotoxic c.**, a center in the upper part of the pons that rhythmically inhibits inspiration independently of the vagi; called also *Lumsden's c.* **polypneic c.**, a center in the tuber cinereum that accelerates the rate of breathing. **pteriotic c.**, a center of ossification from which are developed the tegmen tympani and the covering of the lateral semicircular canal. **reaction c.**, germinal c. **rectovesical c.**, a cord reflex center for the rectum and bladder. **reflex c.**, any center in the brain or cord in which a sensory impression is changed into a motor impulse; the reflex centers already discovered are numerous. **respiratory c's**, a series of centers in the medulla and pons which coordinate respiratory movements; they include the pneumotoxic center, apneustic center, and the medullary respiratory center. **rotation c.**, the point or axis about which a body rotates. **semioval c.**, centrum semiovale. **sensory c.**, a center that receives or appreciates a sensory impulse. **Setchenow's (Sechenoff's) c's**, reflex inhibitory centers in the cord and oblongata. **sex-behavior c.**, the ventromedial nucleus of hypothalamus; see under *nucleus*. **soma-**

tic c., the pituitary gland; so called from the belief that it influences the growth of the whole body. **speech c.**, a center in the left (or right) inferior frontal gyrus; called also *Broca's c.* **sphenotic c.**, a center of ossification in the sphenoid bone for the lingula. **spenial c.**, one of the ossification centers of the mandible, forming a part of its inner plate. **sudorific c's**, **sweat c's**, centers in the spinal cord controlling diaphoresis, with a dominant center in the oblongata. **swallowing c.**, deglutition c. **taste c.**, the gustatory center. **tendinous c.**, centrum tendineum. **thermoregulatory c's**, hypothalamic centers regulating the conservation and dissipation of heat. **vasoconstrictor c.**, a center in the medulla oblongata that controls contraction of the blood vessels. **vasodilator c.**, a center in the medulla oblongata for dilating the blood vessels. **vasomotor c's**, centers in the tuber cinereum, oblongata, and cord, believed to regulate the caliber of the blood vessels and to cause their contraction and dilatation. **vesical c.**, **vesicospinal c.**, the micturition center or rectovesical center. **vomiting c.**, a center in the lower central region of the medulla oblongata; its stimulation causes vomiting. **Wernicke's c.**, the central speech center; see under *area*. **word c.**, **auditory**, a center in the left superior transverse temporal gyrus that controls the perception of words that are heard. **word c.**, **visual**, one in the posterior part of the left parietal lobe; it appears to govern the perception of printed or written words.

centesimal (sen-'tes/i-mal) [L. *centesimus* hundredth] divided into hundredths or based upon divisions into hundredths.

centesis (sen-'te/sis) [Gr. *kentēsis*] perforation or tapping, as with an aspirator, trocar, or needle. Used also as a word termination, affixed to a root indicating the part on which the operation is performed, as *abdominocentesis*, *thoracocentesis*, and the like.

centi- (sen-'ti) [L. *centrum* a hundred] a combining form denoting (1) one hundredth of the unit designated by the root with which it is combined, as in centimeter, or (2) one hundred, as in centipede.

centibar (sen-'ti-bar) a unit of atmospheric pressure, being one-hundredth part of a bar, or 10^{-2} bar.

centigrade (sen-'ti-grād) [L. *centum* hundred + *gradus* a step] consisting of or having 100 gradations (steps or degrees); abbreviated C. See *Celsius (centigrade) scale*, under *scale*.

centigram (sen-'ti-gram) one hundredth part of a gram (10^{-2} gram), or the equivalent of 0.1543 grain (Troy); abbreviated cg. or cgm.

centiliter (sen-'ti-le-'ter) one hundredth part of a liter (10^{-2} l.), or the equivalent of 0.33815 of a fluid ounce; abbreviated cl.

centimeter (sen-'ti-me-'ter) [Fr. *centimètre*] a unit of linear measure of the metric system, being one hundredth part of a meter (10^{-2} m.), or approximately 0.3937 inch; abbreviated cm. **cubic c.**, a unit of capacity, being that of a cube each side of which measures 1 cm.; abbreviated cc., cm.³, or cu. cm.

centinem (sen-'ti-nem) (*obs.*) Pirquet's term for one one-hundredth of a nem.

centinormal (sen-'ti-nor'mal) [L. *centum* hundred + *norma* rule] having a hundredth part of the standard strength.

centipede (sen-'ti-pēd) an elongated arthropod of the class Chilopoda characterized by having one pair of legs to each body segment; they may have 15 to 173 pairs of legs. Centipedes paralyze and kill insects and small animals with their poison claws, which are modified legs of the first body segment. A few species are capable of penetrating the skin of man, causing painful bites. See *Scolopendra*.

centipoise (sen-'ti-poiz) one one-hundredth of a poise.

centistoke (sen-'ti-stok) one one-hundredth of a stoke.

centiunit (sen-'te-u-'nit) one one-hundredth of the conventional unit.

centra (sen-'trah) [L.] plural of *centrum*.

centrad (sen-'trad) 1. toward the center or a center, especially toward the center of the body. 2. a measure of an angle of deviation, being 0.57 degree, or one one-hundredth part of a portion of the arc of a circle equal in length to the radius of the circle; called also *prism degree*.

centrage (sen-'trāj) the condition in which the centers of the various refracting surfaces of the eye are in the same straight line.

central (sen-'tral) situated at or pertaining to a center; not peripheral.

centralis (sen-'tra-'lis) [NA] a general term denoting a centrally located structure.

centraphose (sen-'trah-fōz) any aphose, or sensation of darkness, originating in the optic or visual centers.

centration (sen-'tra'shun) the inability to pay attention to more than one salient feature at a time; it is a normal stage in human intellectual development.

centraxonal (sen-'trak-so-'ne-al) having the axis in a central median line.

centre (sen-'ter) center.

centrencephalic (sen-'tren-sē-'fal'ik) pertaining to the center of the encephalon; see under *system*.

centric (sen-'trik) in orthodontics, pertaining to the bilaterally balanced position of the mandibular condyles and articular disks, with the two articular eminences, the articular capsular structures and ligaments, and with the controlling musculature. This state may occur anywhere along the path of closure from open mouth to full tooth contact or habitual occlusion.

centriciput (sen-'tris'i-put) [*center* + L. *caput* head] the central part of the upper surface of the head, located between the occiput and sinciput.

centrifugal (sen-'trif'u-gal) [*center* + L. *fugere* to flee] moving away from a center; moving away from the cerebral cortex; efferent or exodic.

centrifugalization (sen-'trif'u-gal-i-'za'shun) centrifugation.

centrifugate (sen-'trif'u-gāt) material subjected to centrifugation.

centrifugation (sen-'trif'u-ga'shun) the process of separating the lighter portions of a solution, mixture, or suspension from the heavier portions by centrifugal force; called also *centrifugalization*. **density gradient c.**, ultracentrifugation in a liquid, such as cesium chloride solution, the density of which increases along the lines of centrifugal force, the substances under test seeking their level of density. **differential c.**, that based on the sedimentation coefficient of the substances under investigation; applied to homogenates to derive various subcellular fractions. **isopyknic c.**, that in which the solvent is of the same density as the substance to be isolated.

centrifuge (sen-'trī-fūj) [*center* + L. *fugere* to flee] 1. a machine by which centrifugation is effected. 2. to subject to centrifugation. **microscope c.**, a high-speed centrifuge with a built-in microscope, permitting a specimen to be viewed under centrifugal force.

centrilobular (sen-'trī-lob'u-lar) pertaining to the central portion of a lobule.

centriole (sen-'trī-ōl) either of the two cylindrical organelles located in the centrosome and containing nine triplets of microtubules arrayed around their edges; centrioles migrate to opposite poles of the cell during cell division and serve to organize the spindles. They are capable of independent replication and of migrating to form basal bodies. **anterior c.**, proximal c. **distal c.**, that centriole of a spermatozoon which, after migrating to the cell surface and giving rise to a slender flagellum, returns to a position just caudal to the proximal centriole; called also *posterior c.* **posterior c.**, distal c. **proximal c.**, that centriole of a spermatozoon which migrates to a position in a depression in the wall of the posterior portion of the nucleus, with its axis at right angles to the main axis of the spermatozoon, and from which the axoneme extends; called also *anterior c.* **ring c.**, a dark annular structure at the posterior end of the middle piece of a spermatozoon; it is not a true centriole. Called also *annulus of spermatozoon*.

centripetal (sen-'trip'e-tal) [*center* + L. *petere* to seek] moving toward a center; moving toward the cerebral cortex; afferent or esodic.

centro- (sen-'tro) [Gr. *kentron*; L. *centrum*] a combining form denoting relationship to a center, or to a central location.

centrocecal (sen-'tro-se-'kal) pertaining to the central macular area and the blind spot; called also *cecocentral*.

Centrocestus (sen-'tro-ses'tus) a genus of flukes. **C. cuspidatus**, a fluke occurring in the Egyptian kite. **C. cuspidatus** var. *canina* is reported from dogs in Taiwan; it may be the same as *Stamnosoma formosanum*.

centrocinesia (sen-'tro-si-ne'se-ah) centrokinesia.

centrocinetic (sen-'tro-si-net'ik) centroknetic.

centrodesmose (sen-'tro-des'mōs) centrodesmus.

centrodesmus (sen-'tro-des'mus) [*centro-* + Gr. *desmos* a band] the matter connecting the centrosomes of a cell and forming the beginning of the central spindle.

centrokinesia (sen-'tro-ki-ne'se-ah) [*center* + Gr. *kinēsis* movement] movement originating from central stimulation.

centroknetic (sen-'tro-ki-net'ik) pertaining to, characterized by, or promoting centrokinesia.

centrolecithal (sen-'tro-le's'i-thal) [*centro-* + Gr. *lekithos* yolk] having the yolk centrally located; see under *ovum*.

centrolobular (sen-'tro-lob'u-lar) centrilobular.

centromere (sen-'tro-mēr) the clear constricted portion of the chromosome at which the chromatids are joined and by which the chromosome is attached to the spindle during cell division. According to its location, a centromere is said to be metacentric (central), submetacentric (off center), or acrocentric (near one end). Called also *kinetochore* and *primary constriction*.

centromeric (sen-'tro-mer'ik) pertaining to or resembling a centromere.

centron (sen-'tron) a postulated preexistent spherical stromal structure in the lymph node cortex; cortical follicles result from the grouping of lymphoid cells in relation to the centron during antigen stimulation.

centronucleus (sen-'tro-nu'kle-us) amphinucleus.

centro-osteosclerosis (sen'tro-os'te-o-skle-ro'sis) centrosclerosis.

centrophose (sen'tro-fōz) any phose, or sensation of light, originating in the visual centers.

centroplasm (sen'tro-plazm) the substance of the centrosome.

centrosclerosis (sen'tro-skle-ro'sis) [*center* + *osteosclerosis*] the filling of the marrow cavity of a bone with osseous material.

centrosome (sen'tro-sōm) [*centro-* + Gr. *sōma* body] the cell center; the centrosphere together with the two centrioles.

centrosphere (sen'tro-sfēr) [*centro-* + Gr. *sphaira* sphere] 1. a specialized area of condensed cytoplasm that contains the centrioles and plays an important part in mitosis; called also *cyto-centrum*, *microcentrum*, *attractin sphere*, and *paranuclear body*. 2. centrosome.

centrostaltic (sen'tro-stal'tik) [*centro-* + Gr. *stallein* to send] pertaining to a center of motion.

centrotherapy (sen'tro-ther'ah-pe) externally applied treatment designed to act upon the nerve centers.

centrum (sen'trum), pl. *cen'tra* [L.; Gr. *kentron*] 1. [NA] a center. 2. the body of a vertebra. **c. media'num**, nucleus medialis centralis thalami. **c. ova'le ma'jus** (obs.), c. semiovale. **c. semiova'le**, semioval center: the white matter of the cerebral hemispheres which underlies the cerebral cortex and which, in horizontal sections superior to the corpus callosum, has a semioval shape; it contains projection, commissural, and association fibers; called also *greater oval center*. **c. tendin'eum** [NA], **c. tendin'eum (diaphrag'matis)**, the trefoil-shaped aponeurosis, immediately below the pericardium, onto which the diaphragmatic fibers converge to insert; called also *central tendon of diaphragm*, *phrenic center*, and *tendinous center*. **c. tendin'eum perine'i** [NA], the fibromuscular mass in the median plane of the perineum where converge and attach the bulbospongiosus and sphincter ani externus muscles, the two levatores ani, and the two deep and the two superficial transverse perineal muscles; called also *perineal body* and *central tendon of perineum*. **c. ver'tebrae**, corpus vertebrae.

Centruroides (sen'tro-ro'i'dēz) a genus of subtropical and tropical American scorpions, some of which are poisonous.

Cenurus (sen-u'rus) *Coenurus*. **C. cerebra'lis**, *Coenurus cerebralis*.

cephacetrile sodium (sef'ah-sē-tril) chemical name: 7-(2-cyanoacetamido-3-(hydroxymethyl)-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid acetate (ester) monosodium salt. An antibiotic, $C_{13}H_{12}N_2NaO_6S$, effective against a wide range of gram-positive and gram-negative bacteria.

Cephaelis (sef'ah-e'lis) a genus of tropical shrubs and trees. *C. acuminata* and *C. ipecacuanha* are sources of *ipecac* (q.v.).

cephal- see *cephalo-*.

cephalad (sef'ah-lad) [Gr. *kephalē* head] toward the head; opposite to caudad.

cephalalgia (sef'ah-lal'je-ah) [Gr. *kephalalgia*] pain in the head; headache. Called also *cephalgia* and *cephalodynia*. **histamine c.**, former name for migrainous neuralgia. **pharyngotympanic c.**, Legal's disease. **quadrantal c.**, headache affecting one quadrant of the head.

cephaledema (sef'al-ē-de'mah) [*cephal-* + Gr. *oidēma* swelling] edema of the head.

cephalematocoele (sef'al-ē-mat'o-sēl) cephalhematocoele.

cephalematoma (sef'al-em'ah-to'mah) cephalhematoma.

cephalexin (sef'ah-lek'sin) [USP] chemical name: [6R-[6a,-8β(R*)]]-7-[(aminophenylacetyl)amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monohydrate. A semisynthetic analogue, $C_{16}H_{17}N_3O_4S \cdot H_2O$, of the natural antibiotic cephalosporin C, occurring as a white to off-white, crystalline powder, effective against a wide range of gram-negative and gram-positive bacteria; used in the treatment of infections of the urinary and respiratory tracts and of skin and soft tissues due to sensitive pathogens, administered orally.

cephalgia (sē-fal'je-ah) cephalgia.

cephalhematocoele (sef'al-he-mat'o-sēl) [*cephal-* + Gr. *haima* blood + *kele* tumor] a bloody tumor under the pericranium, communicating with one or more sinuses of the dura through the cranial bones. **Stromeyer's c.**, a subperiosteal cephalhematocoele which communicates with veins and becomes filled with blood during strong expiratory efforts.

cephalhematoma (sef'al-he'mah-to'mah) [*cephal-* + *hematoma*] a subperiosteal hemorrhage limited to the surface of one cranial bone, a usually benign condition seen frequently in the newborn as a result of bone trauma. Called also *cephalohematoma*. **c. defor'mans**, a bulging of the anterior part of the skull due to hyperostosis, osteoporosis, and cavity formation in the bone.

cephalhydrocele (sef'al-hi'dro-sēl) [*cephal-* + *hydrocele*] a serous or watery accumulation under the pericranium. **c. traumat'ica**, Billroth's disease, def. 1.

cephalic (sē-fal'ik) [L. *cephalicus*; Gr. *kephalikos*] pertaining to the head, or to the head end of the body.

cephalin (sef'ah-lin) [Gr. *kephalē* head] any of a group of phos-

phoglycerides in which phosphatidic acid is linked to ethanolamine (phosphatidyl ethanolamine) or to serine (phosphatidyl serine); the cephalins are found particularly in brain and nervous tissue and have blood-coagulating properties.

cephalitis (sef'ah-li'tis) encephalitis.

cephalization (sef'al-i-za'shun) [Gr. *kephalē* head] the concentration or initiation of the growth tendency at the head end of the embryo.

cephalo-, cephal- [Gr. *kephalē* head] a combining form denoting relationship to the head.

cephalocathartic (sef'ah-lo-kah-thar'tik) [*cephalo-* + Gr. *kathartikos* purgative] cleansing or clearing the head.

cephalocaudad (sef'ah-lo-kaw'dad) 1. proceeding in a direction from the head toward the tail; caudad. 2. in both a cephalic and caudal direction.

cephalocaudal (sef'ah-lo-kaw'dal) [*cephalo-* + L. *cauda* tail] pertaining to the long axis of the body, in a direction from head to tail.

cephalocele (se-fal'o-sēl) [*cephalo-* + Gr. *kēlē* hernia] a protrusion of a part of the cranial contents. **orbital c.**, protrusion of the cranial contents through a defect in the orbital wall, named according to its contents as meningocele, encephalocele, etc.

cephalocentesis (sef'ah-lo-sen-te'sis) [*cephalo-* + Gr. *kentēsis* puncture] the surgical puncture of the head.

cephalocercal (sef'ah-lo-ser'kal) [*cephalo-* + Gr. *kerkos* tail] (obs.) cephalocaudal.

cephalochord (sef'ah-lo-kord') [*cephalo-* + Gr. *chordē* cord] the intracranial portion of the embryonic notochord.

Cephalochordata (sef'ah-lo-kor-da'tah) a subphylum of primitive, small, fishlike chordates in which the notochord extends the entire length of the body; it includes the genus *Amphioxus*.

cephalochordate (sef'ah-lo-kor'dāt) any member of the Cephalochordata.

cephalocyst (sef'ah-lo-sist') a larval cestode, such as a hydatid cyst.

cephalodactyly (sef'ah-lo-dak'tī-le) [*cephalo-* + Gr. *daktylos* a finger or toe] malformation of the head and digits. **Vogt's c.**, Apert-Crouzon disease.

cephalodiprosopus (sef'ah-lo-di-pros'o-pus) [*cephalo-* + Gr. *di-* twice + *prosopus* face] a monster with a partially incomplete head attached to the head proper.

cephalodymia (sef'ah-lo-dim'e-ah) the condition of a cephalodymus.

cephalodymus (sef'ah-lod'i-mus) [*cephalo-* + Gr. *didymos* twin] a twin monster with a single or united head.

cephalodynia (sef'ah-lo-din'e-ah) [*cephalo-* + Gr. *odynē* pain] cephalalgia.

cephalogenesis (sef'ah-lo-jen'tē-sis) [*cephalo-* + Gr. *gennan* to produce] the development of the head in the embryo.

cephaloglycin (sef'ah-lo-gli'sin) [USP] chemical name: [6R-[6a,7β(R*)]]-3-[(acetyloxy)methyl]-7-(aminophenylacetyl)amino]-8-oxo-5-thio-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid dihydrate. A semisynthetic analogue, $C_{18}H_{18}N_3O_6S \cdot 2H_2O$, of the natural antibiotic cephalosporin C, occurring as a white to off-white, crystalline powder, effective against a wide range of gram-negative and gram-positive bacteria; used in the treatment of acute and chronic urinary infections due to sensitive pathogens, administered orally.

cephalogram (sef'ah-lo-gram) an x-ray image of the anatomic structures of the head; cephalometric radiograph.

cephalogyric (sef'ah-lo-jī'rik) [*cephalo-* + Gr. *gyros* a turn] pertaining to turning motions of the head.

cephalohematocoele (sef'ah-lo-he-mat'o-sēl) cephalhematocoele.

cephalohematoma (sef'ah-lo-he'mah-to'mah) cephalhematoma.

cephaloma (sef-ah-lo'mah) (obs.) medullary carcinoma.

cephalomelus (sef'ah-lom'ē-lus) [*cephalo-* + Gr. *melos* limb] a monster with an accessory limb growing from the head.

cephalomenia (sef'ah-lo-me'ne-ah) [*cephalo-* + Gr. *mēn* month] vicarious menstruation from the head, as in a nasal discharge at the menstrual period.

cephalomeningitis (sef'ah-lo-men'in-jī'tis) [*cephalo-* + *meningitis*] (obs.) inflammation of the membranes of the brain.

cephalometer (sef'ah-lom'ē-ter) [*cephalo-* + Gr. *metron* measure] an instrument for measuring the head; an orienting device for positioning the head for radiographic examination and measurement.

cephalometrics (sef'ah-lo-met'riks) cephalometry.

cephalometry (sef'ah-lom'ē-tre) scientific measurement of the dimensions of the head. In dentistry, certain combinations of linear and angular measurements developed from tracing the oriented lateral and frontal radiographic head film are used to assess craniofacial growth and development on a longitudinal basis and to determine the nature of orthodontic treatment

response. **fetal c.**, measurement of the fetal skull *in utero* by means of x-ray films or by interpreting the echoes of ultrasonic radiation received from each side of the skull; useful in determining the proper time for elective termination of pregnancy.

cephalomotor (sef'ah-lo-mo'tor) [*cephalo-* + *L. motus* motion] moving the head; pertaining to motions of the head.

Cephalomyia (sef'ah-lo-mi'yah) *Oestrus*.

cephalon (sef'ah-lo-ne-ah) a condition in which the head is abnormally large with sclerotic hyperplasia of the brain.

cephalont (sef'ah-lont) [*cephalo-* + *Gr. ōn* being] that stage of a developing gregarine protozoan in which it is attached to the epithelial host cell.

cephalopagus (sef'ah-lo-p'ah-gus) craniopagus.

cephalopathy (sef'ah-lo-p'ah-the) [*cephalo-* + *Gr. pathos* disease] any disease of the head.

cephalopelvic (sef'ah-lo-pel'vik) pertaining to the relationship of the fetal head to the maternal pelvis.

cephalopharyngeus (sef'ah-lo-fah-rin'je-us) *musculus constrictor pharyngis superior*; see *Table of Musculi*.

cephaloplegia (sef'ah-lo-ple'je-ah) [*cephalo-* + *Gr. plēgē* stroke] paralysis of the muscles about the head and face.

Cephalopoda (sef'ah-lo-p'ō-dah) [*cephalo-* + *Gr. pous* foot] the class of mollusks embracing the octopus, squid, cuttlefish, and nautilus.

cephalorhachidian (sef'ah-lo-rah-kid'e-an) (*obs.*) pertaining to the head and the spinal column.

cephaloridine (sef'ah-lo-rī-dēn) chemical name: (6*R*-trans)-1-[[2-carboxy-8-oxo-7-[(2-thienylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-en-3-yl)methyl]pyridinium hydroxide inner salt. A semisynthetic analogue, $C_{19}H_{17}N_3O_4S_2$, of the natural antibiotic cephalosporin C, occurring as a white to off-white crystalline powder, effective against many gram-positive and some gram-negative bacteria; used in the treatment of infections of the bones, joints, skin, soft tissues, and major organ and tissue systems due to sensitive pathogens, administered intramuscularly or intravenously. Sterile cephaloridine, prepared in conformance with USP specifications, is suitable for parenteral use.

cephalosporin (sef'ah-lo-spōr'in) any of a group of broad-spectrum, relatively penicillinase-resistant antibiotics derived from the fungus *Cephalosporium*, which share the nucleus 7-aminocephalosporanic acid and are structurally related to the penicillins. The cephalosporins available for medicinal use are semisynthetic derivatives of the natural antibiotic cephalosporin C. **c. C.**, chemical name: 7-(D-5-aminocarboxyvaleramide)-3-(hydroxymethyl)-3-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid acetate. A cephalosporin isolated from *Cephalosporium acremonium*, $C_{16}H_{21}N_3O_6S$, which is the parent compound of a number of semisynthetic antibiotics, including cefazolin sodium, cephalexin, cephaloridine, cephaloglycin, cephalothin, cephapirin, and cephradine, used in the treatment of a wide range of infections due to sensitive gram-positive and gram-negative bacteria. **c. N.**, adicillin. **c. P.**, an antibacterial steroid, $C_{33}H_{50}O_6$; the crude form contains at least five components (P_1 , P_2 , P_3 , P_4 , P_5), P_1 being the major active substance.

cephalosporinase (sef'ah-lo-spōr'in-ās) an enzyme that hydrolyzes the CO—NH bond in the lactam ring of cephalosporin and converting it to an inactive product. Called also β -lactamase II.

cephalosporiosis (sef'ah-lo-spo're-o'sis) infection with species of *Cephalosporium* (q.v.).

Cephalosporium (sef'ah-lo-spo're-um) a genus of soil-inhabiting imperfect fungi of the family Moniliaceae, order Moniliales; some species are the source of a group of antibiotics, the cephalosporins. **C. falcifor'me**, *Acremonium kiliense*. **C. granulo'matis**, a species reported as causing gumma-like lesions in man.

cephalostat (sef'ah-lo-stat') a head-positioning device which assures reproducibility of the relations between an x-ray beam, a patient's head, and an x-ray film in dental radiology.

cephalostyle (sef'ah-lo-stil') the cranial end of the notochord.

cephalotetanus (sef'ah-lo-tet'ah-nus) cerebral tetanus.

cephalothin (sef'ah-lo-thin') chemical name: (6*R*-trans)-3-[(acetyloxy)methyl]-8-oxo-7-[(2-thienyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. A semisynthetic analogue, $C_{16}H_{18}N_3O_6S_2$, of the natural antibiotic cephalosporin C, effective against a wide range of gram-positive and gram-negative bacteria. **c. sodium** [USP], the monosodium salt of cephalothin, $C_{16}H_{17}N_3NaO_6S_2$, used in the treatment of those infections of the major organ and tissue systems of the body that are due to sensitive pathogens; it is administered parenterally.

cephalothoracic (sef'ah-lo-tho-ras'ik) pertaining to the head and thorax.

cephalothoracopagus (sef'ah-lo-tho'rah-kop'ah-gus) a twin monster united at the head, neck, and thorax. **c. disym'met'ros**, a cephalothoracopagus fused squarely in the frontal plane and presenting two broad anterior surfaces and two narrow posterior ones, with a common head bearing two faces, each being formed by the right and left halves of the different components. **c. monosym'metros**, a cephalothoracopagus with one com-

Cephalothoracopagus (Abt.).

plete face formed by a right and a left half of the two components, the other face being only rudimentary.

cephalotome (sef'ah-lo-tōm) an instrument for cutting the fetal head.

cephalotomy (sef-ah-lo't'o-me) [*cephalo-* + *Gr. temnein* to cut] 1. the cutting up of the fetal head to facilitate delivery. 2. dissection of the fetal head.

cephalotribe (sef'ah-lo-trib') [*cephalo-* + *Gr. tribein* to crush] (*obs.*) an instrument for use in cephalotripsy.

cephalotripsy (sef'ah-lo-trip'se) [*cephalo-* + *Gr. tripsis* a rubbing] (*obs.*) the crushing of the fetal head in order to facilitate delivery.

cephalotropic (sef'ah-lo-trop'ik) [*cephalo-* + *Gr. tropōs* a turning] having an affinity for brain tissue.

cephalotrypsis (sef'ah-lo-tri-pe'sis) [*cephalo-* + *Gr. trypsis* a boring] trephination of the cranium.

cephamycin (sef'ah-mi'sin) any of a family of naturally occurring antibacterial antibiotics derived from various species of *Streptomyces* or produced semisynthetically, which are resistant to degradation by β -lactamase. Cephamycins A, B, and C have been isolated.

cephapirin (sef-ah-pi'rin) chemical name: [6*R*-trans]-3-[(acetyloxy)methyl]-8-oxo-7-[[4-pyridinylthio]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. A semisynthetic analogue, $C_{17}H_{16}N_3O_6S_2$, of the natural antibiotic cephalosporin C, effective against a wide range of gram-negative and gram-positive bacteria. **c. sodium**, the monosodium salt of cephapirin, $C_{17}H_{15}N_3NaO_6S_2$, used in the treatment of infections of the respiratory and genitourinary tracts, skin, soft tissues, bones, joints, and blood due to sensitive pathogens. It is administered intramuscularly and intravenously. Sterile cephapirin sodium [USP] conforms to FDA regulations concerning antibiotic drugs.

cephradine (sef'rah-dēn) [USP] chemical name: [6*R*-[6 α ,7 β -(*R'*)]-7-[(amino-1,4-cyclohexadien-1-ylacetyl)amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-carboxylic acid. A semisynthetic analogue, $C_{16}H_{19}N_3O_4S$, of the natural antibiotic cephalosporin C, effective against a wide range of gram-positive and gram-negative bacteria; used in the treatment of infections of the urinary tract, skin, and soft tissues due to sensitive pathogens, administered orally or by intramuscular or intravenous injection.

ceptor (sep'tor) 1. in Ehrlich's side-chain theory, receptors that have been thrown off into the blood stream. 2. any nervous apparatus that receives external stimuli or impressions and transfers them to the nerve centers. Cf. *beneceptor* and *nociceptor*.

chemical c., a ceptor that transforms proper stimuli into electrochemical reactions in the body. **contact c.**, a ceptor that receives stimuli of direct physical contact. **distance c.**, the nervous apparatus through which an individual perceives or is affected by his distant environment. **nerve c.**, ceptor, def. 2.

cera (se'rah) [L.] wax. **c. al'ba**, white wax. **c. fla'va**, yellow wax.

ceraceous (se-ra'shus) [L. *cera* wax] waxlike in appearance.

ceramics (sē-ram'iks) [*Gr. keramos* potters' clay] the modeling and processing of objects made of clay or similar material. **dental c.**, the employment of porcelain and similar materials in restorative dentistry; called also *ceramodontics*.

ceramidase (ser-am'i-dās) an enzyme occurring in most mammalian tissue that catalyzes the reversible acylation-deacylation of ceramides.

ceramide (ser'ah-mid) any of a group of naturally occurring sphingolipids in which the NH_2 group of sphingosine is acylated with a fatty acyl CoA derivative to form an *N*-acylsphingosine. **galactosyl c.**, cerebroside. **c. glucoside**, the major sphingolipid accumulated in Gaucher's disease; called also *glucocerebroside*. **c. trihexoside**, the major sphingolipid accumulated in Fabry's disease.

ceramidosis (ser-am'i-do'sis) accumulation of ceramides in tissues. **lactosyl c.**, ceramide lactosidosis.

ceramodontics (se-ram'o-don'tiks) dental ceramics.

cerasin (ser'ah-sin) a class of gums from cherry, plum, and other trees, containing carbohydrate; they are insoluble in cold water.

cerasine (ser'ah-sin) a red azo dye, $C_{10}H_7 \cdot N:N \cdot C_{10}H_4(SO_2 \cdot ONa)_2 \cdot OH$, used as a cytoplasmic stain.

cerasus (ser'ah-sus) [L.] cherry, or cherry tree; see *Prunus*.

cerate (se'rāt) [L. *ceratum*, from *cera* wax] a medicinal preparation for external application, made with a basis of fat or wax, or both, intermediate in consistency between an ointment and a plaster. **simple c.**, a mixture of benzoated lard and white wax, melted together. **Turner's c.**, calamine ointment.

ceratectomy (ser-ah-tek'to-me) keratectomy.

ceratin (ser'ah-tin) keratin.

ceratitis (ser'ah-ti'tis) keratitis.

cerato- for words beginning thus, see also those beginning *kerato-*.

ceratocricoid (ser'ah-to-kri'koid) pertaining to the posterior horn of the thyroid cartilage and the cricoid cartilage.

ceratocricodeus (ser'at-to-kri-koi'de-us) see *Table of Musculi*.

ceratohyal (ser'ah-to-hi'al) pertaining to a cornu minus of the hyoid bone.

ceratonosus (ser'ah-ton'o-sus) [Gr. *keras* cornea + *nosos* disease] any disease of the cornea.

ceratopharyngeus (ser'at-o-fahr-in'je-us) see *Table of Musculi*.

Ceratophyllus (ser'ah-tof'i-lus) [Gr. *keras* horn + *phyllon* leaf] a genus of fleas, now including only bird fleas, but formerly including those of birds and small mammals. **C. acutus**, *Diamanus montanus*. **C. fascia'tus**, *Nosopsyllus fasciatus*. **C. galli'nae**, a species that attacks chickens and man. **C. idahoensis**, *Oropsylla idahoensis*. **C. monta'nus**, *Diamanus montanus*. **C. punjabensis**, a rat flea of India. **C. silantiew'i**, *Oropsylla silantiewi*. **C. tesquo'rum**, a plague-transmitting flea of ground squirrels in the Russian steppes.

Ceratopogonidae (ser'ah-to-po-gon'i-de) biting midges or sandflies.

ceratum (se-ra'tum) [L.] cerate.

cerberin, **cerberine** (ser'bē-rin) a poisonous alkaloid, C₃₂H₄₈O₈, from *Cerbera odallam*, a tree of Asia; a cardiotonic agent.

cercaria (ser-ka're-ah), pl. *cercariae* [Gr. *kerkos* tail] the final free-swimming larval stage of a trematode parasite, consisting of a body and tail. Cercariae encyst on aquatic vegetation and penetrate the skin of a fish or the tissues of an aquatic arthropod to form encysted metacercariae. (Cercariae of schistosomes penetrate directly into the skin of the definitive host without forming metacercariae.)

cercaricidal (ser-ka're-si'dal) destructive to cercariae.

cercarienhiillenreaktion (ser-ka're-en-hul'en-re-ak'shun) a test for *Schistosoma mansoni*, utilized in measuring the efficiency of chemotherapy against schistosomiasis. When cercariae of *S. mansoni* are placed *in vitro* in contact with sera of monkeys or men infected with *S. mansoni*, a transparent envelope is formed around each cercaria.

cerclage (sār-klahzh') [Fr. "an encircling"] encircling of a part with a ring or loop, such as encirclement of the incompetent cervix uteri, or the binding together of the ends of a fractured bone with a metal ring or wire loop (tiring).

cercocystis (ser'ko-sis'tis) cysticeroid.

cercoid (ser'koid) the last stage in the development of a tapeworm.

cercomonad (ser-kom'ō-nad) any protozoon of the genus *Cercomonas*.

Cercomonas (ser-kom'ō-nas) [Gr. *kerkos* tail + *monas* monad] a genus of biflagellate protozoa of the family Bodonidae, sometimes coprozoic. **C. hom'inis**, the name formerly given to the organisms now known as *Trichomonas hominis* and *Chilomastix mesnili*. **C. longicau'da**, a species coprozoic in humus feces.

cercopithecoid (ser'ko-pith'ē-koid) an Old World monkey, having a tail but not using it as a limb.

Cercopithecoidea (ser'ko-pith'ē-koid'e-ah) a superfamily of the order Primates (suborder Anthropoidea), characterized by nostrils that are close together and directed downward, including the Old World apes and monkeys, and man; formerly called *Catarrhina*.

Cercosphaera addisoni (ser'ko-sfēr'ah ad'i-so'ni) *Microsporium audouini*.

Cercospora apii (ser'kos'por-ah a'pe-i) a fungus that is a common plant pathogen (celery blight) and that causes cercosporamycosis in man.

Cercosporalla vexans (ser'kos-pō-ral'ah vek'sanz) a species of molds of the Fungi Imperfecti, order Moniliales, family Moniliaceae, which has been reported to cause skin eruptions, probably a variant of *Trichophyton mentagrophytes*.

cercosporamycosis (ser'ko-spōr'ah-mi-ko'sis) a fungous disease of man in Indonesia characterized by subcutaneous, indurated verrucous lesions in which brown mycelium is seen.

cercus (ser'kus), pl. *cer'ci* [L.; Gr. *kerkos* tail] a bristle-like structure.

cerea flexibilitas (sēr'e-ah-flek'sī-bil'i-tas) flexibilitas cerea.

cereal (se're-al) [L. *cerealis*] 1. Pertaining to edible grain. 2. any graminaceous plant bearing an edible seed; also the seed or grain of such a plant.

cerealin (se-re'ah-lin) an enzyme contained in grain extract and capable of converting starch into dextrose.

cerealose (se're-ah-lōs) a substance containing maltose and glucose, obtained by the action of enzymes on grains.

cerebellar (ser'ē-bel'ar) pertaining to the cerebellum.

cerebellifugal (ser'ē-bel-lif'ū-gal) [*cerebellum* + L. *fugere* to flee] tending or proceeding from the cerebellum.

cerebellipetal (ser'ē-bel-lip'ē-tal) [*cerebellum* + L. *peterere* to seek] tending or moving toward the cerebellum.

cerebellitis (ser'ē-bel-li'tis) inflammation of the cerebellum.

cerebellofugal (ser'ē-bel-lof'ū-gal) cerebellifugal.

cerebello-olivary (ser'ē-bel'o-ol'i-va-re) conducting or proceeding from the cerebellum to the olivary body.

cerebellopontile (ser'ē-bel'o-pon'tēl) conducting or proceeding from the cerebellum to the pons varolii.

cerebellopontine (ser'ē-bel'o-pon'tēn) cerebellopontile.

cerebellorubral (ser'ē-bel'o-ru'bral) conducting or proceeding from the cerebellum to the red nucleus.

cerebellorubrospinal (ser'ē-bel'o-roo'bro-spi'nal) conducting or proceeding from the cerebellum, to the red nucleus, and then to the spinal cord.

cerebellospinal (ser'ē-bel'o-spi'nal) conducting or proceeding from the cerebellum to the spinal cord.

cerebellum (ser'ē-bel'um) [L. dim. of *cerebrum* brain] [NA] the part of the metencephalon that occupies the posterior cranial fossa behind the brain stem, being a fissured mass consisting of a median lobe (vermis) and two lateral lobes (the hemispheres) connected with the brain stem by three pairs of peduncles. It is concerned in the coordination of movements.

cerebral (ser'ē-bral, sē-re'bral) pertaining to the cerebrum.

cerebration (ser'ē-bra'shun) [L. *cerebratio*] functional activity of the cerebrum. **unconscious c.**, mental action of which the subject has no consciousness.

cerebriform (sē-reb'rī-form) [L. *cerebrum* brain + *forma* form] resembling the brain or brain substance.

cerebrifugal (ser'ē-brif'ū-gal) [*cerebrum* + L. *fugere* to flee] conducting or proceeding away from the brain, or cerebrum.

cerebripetal (ser'ē-brip'ē-tal) [*cerebrum* + L. *peterere* to seek] conducting or proceeding toward the brain, or cerebrum.

cerebritis (ser'ē-bri'tis) inflammation of the cerebrum. **sat-urnine c.**, brain inflammation due to lead poisoning.

cerebrocardiac (ser'ē-bro-kar'de-ak) [*cerebrum* + L. *cardia* heart] pertaining to the brain and heart.

cerebrocentric (ser'ē-bro-sen'trik) [*cerebro-* + Gr. *kentrikos* of or from the center] relating to the concept, or designating, that control of the personality centers in the physical brain, as distinguished from the mind or the psychical system of the individual. Cf. *psychocentric*.

cerebrocerebellar (ser'ē-bro-ser'ē-bel'ar) pertaining to the cerebrum and the cerebellum.

cerebrocuprein (ser'ē-bro-ku'pre-in) a copper protein isolated from the human and bovine brain.

cerebrogalactose (ser'ē-bro-gah-lak'tos) galactose (of cerebrosides).

cerebrogalactoside (ser'ē-bro-gah-lak'to-sīd) cerebroside.

cerebrohyphoid (ser'ē-bro-hi'foid) [*cerebrum* + Gr. *hyphē* web + *eidos* form] resembling brain tissue.

cerebroid (ser'e-broid) resembling the brain substance.

cerebrology (ser'ē-brol'o-je) [*cerebrum* + *-logy*] the sum of knowledge regarding the brain.

cerebroma (ser'ē-bro'mah) any abnormal mass of brain substance.

cerebromacular (ser'ē-bro-mak'u-lar) pertaining to or affecting the brain and the macula retinae.

cerebromalacia (ser'ē-bro-mah-la'she-ah) [*cerebrum* + Gr. *malakos* soft] abnormal softening of the substance of the cerebrum.

cerebromedullary (ser'ē-bro-med'u-la-re) cerebrosinial.

cerebromeningeal (ser'ē-bro-mē-nin'je-al) pertaining to the brain and its membranes.

cerebromeningitis (ser'ē-bro-men'in-jī'tis) meningoencephalitis.

cerebron (ser'ē-bron) phrenosin.

cerebro-ocular (ser'e-bro-ok'u-lar) pertaining to the brain and the eye.

cerebropathia (ser'ē-bro-path'e-ah) [L.] cerebropathy. **c. psychica toxemica**, Korsakoff's psychosis.

cerebroopathy (ser'ē-brop'ah-the) [*cerebrum* + Gr. *pathos* disease] any disorder of the brain.

cerebrophysiology (ser'ē-bro-fiz'e-ol'o-je) the physiology of the cerebrum.

cerebropontile (ser/'ē-bro-pon'til) pertaining to the cerebrum and pons.

cerebropsychosis (ser/'e-bro/'si-ko'sis) [*cerebrum* + *psychosis*] (*obs.*) organic brain syndrome; see under *syndrome*.

cerebrospinal (ser/'ē-bro/'rah-kid'e-an) cerebrospinal.

cerebroscclerosis (ser/'ē-bro/'skle-ro'sis) [*cerebrum* + *sclerosis*] morbid hardening of the substance of the cerebrum.

cerebrose (ser/'e-brōs) galactose (of cerebroside).

cerebroside (ser/'ē-bro-sid') a general designation of an acid amide of a C₂₄, C₁₈, or C₁₆ fatty acid with sphingosine or dihydrosphingosine in glycosidic linkage with galactose or glucose. Kerasin and phrenosin are typical members of this class. It is abundant in membranes of nervous tissue, especially the myelin sheath, and is a major component of the cell coats of higher organisms. Called also *cerebrogalactoside*, *galactocerebroside*, and *glucocerebroside*.

cerebrosideosis (ser/'ē-bro/'si-do'sis) a lipoidosis in which the fatty accumulation in the body consists largely of kerasin, as in Gaucher's disease.

cerebrosis (ser/'ē-bro'sis) any disease of the cerebrum.

cerebrospinal (ser/'ē-bro-spi'nal) pertaining to the brain and spinal cord.

cerebrospinal (ser/'ē-bro-spi'nal) any medicine or agent that affects the brain and spinal cord.

cerebrospinase (ser/'e-bro-spi'nās) an oxidizing enzyme occurring in the cerebrospinal fluid.

cerebrostomy (ser/'ē-bros'to-me) [*cerebrum* + Gr. *stoma* opening] the making of an artificial opening into the cerebrum.

cerebrotendinous (ser/'ē-bro-ten'di-nus) pertaining to the cerebrum and the tendons.

cerebrotomy (ser/'ē-brot'o-me) [*cerebrum* + Gr. *temnein* to cut] the anatomy or dissection of the brain.

cerebrotonia (ser/'ē-bro-to'ne-ah) [*cerebro* + Gr. *tonos* tension + *-ia*] (*obs.*) a psychic type characterized by predominance of restraint, inhibition, and desire for concealment.

cerebrovascular (ser/'ē-bro-vas'ku-lar) pertaining to the blood vessels of the cerebrum, or brain.

cerebrum (ser/'ē-brum, sē-re'brum) [L.] 1. [NA] the main portion of the brain, occupying the upper part of the cranial cavity; its two hemispheres (see *cerebral hemisphere*, under *hemisphere*), united by the corpus callosum, form the largest part of the central nervous system in man. It is derived (developed) from the telencephalon of the embryo. 2. a term sometimes applied to the postembryonic prosencephalon and mesencephalon together or to the entire brain. **c. exsiccatum**, the gray substance of the brain of calves, freed from fats, dried, and pulverized; used therapeutically in brain and nervous diseases.

cerecloth (sēr'kloth) cloth impregnated with wax and made antiseptic; used in dressings.

Cerenkov radiation (ka'ren-kov) [P. A. Cerenkov, Russian physicist] see under *radiation*.

cereoli (se-re'o-li) plural of *cereolus*.

cereolus (se-re'o-lus), pl. *cere'oli* [L., dim. of *cereus* wax taper] a medicated bougie.

cerevisia (ser/'ē-viz'e-ah), pl. and gen., *cerevis'iae* [L.] beer, ale, porter, or other brewed malt liquor. **cerevis'iae fermentum**, brewer's yeast. **cerevis'iae fermentum compressum**, compressed yeast.

cerevisiae (ser/'e-viz'e-e) [L.] plural and genitive singular of *cerevisia*.

cerin (se'rin) cerotic acid.

Cerithidia (ser/'i-thid'e-ah) a genus of spiral-shelled snails found in brackish water in tropical and subtropical areas. **C. cingulata**, the chief intermediate host of *Heterophyes heterophyes*; it is found in Japan.

cerium (se're-um) [L.] a metallic element: symbol, Ce; atomic number, 58; atomic weight, 140.12. **c. oxalate**, a white, insoluble powder, a mixture of the oxalates of cerium, neodymium, praseodymium, lanthanum, and other elements; sedative, tonic, and nervine; has been used as a sedative and antiemetic.

ceroid (se'roid) an insoluble, acid-fast, sudanophilic, lipid pigment found in the liver, the nervous system, and muscle.

cerolipoid (se'ro-li'poid) a waxy substance existing in plants.

cerolysin (se-rol'i-sin) [L. *cera* wax + *-lysin*] a lysin that decomposes wax.

ceroma (se-ro'mah) [Gr. *kērōma* waxy mass] a tumor of tissue that has undergone a waxy degeneration.

ceroplasty (se'ro-plas'te) [L. *cera* wax + Gr. *plassein* to mold] the making of anatomical models in wax.

cerotin (ser'o-tin) ceryl alcohol.

certifiable (ser/'ti-fi'ah-b'l) capable of being certified; said of infectious diseases, cases of which must by law be reported to the health officers.

cerulein (sē-roo'le-in) a decapeptide amide isolated from the skin of frogs; it is a peptide analogue of choleystokinin and gastrin; in mammals it is a powerful stimulant of gallbladder contraction.

ceruloplasmin (sē-roo'lo-plaz'min) an alpha₂-globulin of the plasma, being a glycoprotein in which approximately 96 per cent of the plasma copper is transported.

cerumen (sē-roo'men) [L. from *cera* wax] the waxlike secretion found within the external meatus of the ear; called also *earwax*. **impacted c.**, accumulated cerumen forming a solid mass that adheres to the wall of the external auditory canal. **inspired c.**, dried earwax in the external canal of the ear.

ceruminal (sē-roo'mi-nal) of or pertaining to the cerumen.

ceruminolysis (sē-roo'mi-nol'i-sis) the solution or disintegration of cerumen in the external auditory meatus.

ceruminolytic (sē-roo'mi-no-li'tik) 1. pertaining to, characterized by, or promoting ceruminolysis. 2. an agent that dissolves cerumen in the external auditory canal.

ceruminoma (sē-roo'mi-no'mah) tumor of the ceruminous glands.

ceruminosis (sē-roo'mi-no'sis) excessive or disordered secretion of cerumen.

ceruminous (sē-roo'mi-nus) ceruminal.

ceruse (se'rōos) [L. *cerussa*] the basic carbonate of lead; white lead.

cervical (ser/'vi-kal) [L. *cervicalis*, from *cervix* neck] pertaining to the neck, or to the neck of any organ or structure.

cervicalis (ser/'vi-ka'lis) [L.] cervical.

cervicectomy (ser/'vi-sek'to-me) excision of the cervix uteri; called also *trachelectomy*.

cervicitis (ser/'vi-si'tis) inflammation of the cervix uteri; called also *trachelitis*. **granulomatous c.**, granulomatous infections of the cervix, including tuberculosis, syphilis, and granuloma inguinale. **traumatic c.**, a nonspecific cervicitis resulting from such procedures as irradiation or cauterization.

cervicoaxillary (ser/'vi-ko-ak'si-lār-e) pertaining to the neck and axilla.

cervicobrachial (ser/'vi-ko-bra'ke-al) pertaining to the neck and arm.

cervicobrachialgia (ser/'vi-ko-brak'e-al'je-ah) pain in the neck radiating to the arm, due to compression of nerve roots of the cervical spinal cord.

cervicobuccal (ser/'vi-ko-buk'al) buccocervical.

cervicocolpitis (ser/'vi-ko-kol-pi'tis) inflammation of the cervix uteri and vagina. **c. emphysematosa**, colpitis emphysematosa with similar lesions occurring beneath the squamous mucosa of the cervix uteri.

cervicodorsal (ser/'vi-ko-dor'sal) pertaining to the neck and the back.

cervicodynia (ser/'vi-ko-din'e-ah) [*cervix* + Gr. *odynē* pain] pain in the neck.

cervicofacial (ser/'vi-ko-fa'she-al) pertaining to the neck and face.

cervicolabial (ser/'vi-ko-la'be-al) labiocervical.

cervicolingual (ser/'vi-ko-ling'gwāl) linguocervical.

cervico-occipital (ser/'vi-ko-ok-sip'i-tal) pertaining to the neck and occiput.

cervicoplasty (ser/'vi-ko-plas'te) [*cervix* + Gr. *plassein* to form] plastic surgery on the neck.

cervicoscapular (ser/'vi-ko-skap'u-lar) pertaining to the neck and scapula.

cervicothoracic (ser/'vi-ko-tho-ras'ik) pertaining to the neck and thorax.

cervicovaginitis (ser/'vi-ko-vaj'i-ni'tis) inflammation involving both the cervix uteri and vagina.

cervicovesical (ser/'vi-ko-ves'e-kal) pertaining to the cervix uteri and urinary bladder.

Cervilaxin (ser/'vi-lak'sin) trademark for a preparation of relaxin.

cervimeter (ser-vim'ē-ter) [*cervix* + Gr. *metron* measure] an apparatus for measuring the cervix uteri.

cervix (ser'viks), pl. *cervices* [L.] neck; [NA] a term denoting the front portion of the collum, or neck (the part connecting the head and trunk), or a constricted part of an organ (e.g., cervix uteri). **c. of axon**, a constricted part of an axon, before the myelin sheath is added. **c. colum'nae posterio'ris**, **c. cor'nu**, the constricted part of the dorsal horn of gray matter in the spinal cord. **c. den'tis**, neck of the tooth (collum dentis [NA]). **c. glan'dis**, collum glandis penis. **incompetent c.**, one that is abnormally prone to dilate in the second trimester of pregnancy, resulting in premature expulsion of the fetus (middle trimester abortion). **c. mal'lei**, collum mallei. **tapiroid c.**, a uterine cervix with a peculiarly elongated anterior lip. **c. u'teri**, neck of uterus: the lower and narrow end of the uterus, between the isthmus and the ostium uteri. **c. ves'i'cae** [NA], a constricted portion of the urinary bladder, formed by the meeting of its inferolateral surfaces proximal to the opening of the urethra.

ceryl (se'ril) a univalent aliphatic, straight-chain hydrocarbon radical having the formula C₂₆H₅₃.

c.e.s. central excitatory state; see under *state*.

cesarean (se-sa're-an) [L. *caesarea*, from *caedere* to cut] see under *section*.

Cesaris Demel bodies (cha'sar-is da'mel) [Antonio *Cesaris Demel*, Italian pathologist, born 1866] see under *body*.

cesium (se'ze-um) [L. *caesium*, from *caesius* blue] a rare univalent metallic element with an alkaline oxide; atomic number, 55; atomic weight, 132.905; symbol, Cs. Some of its salts and binary compounds are used like those of potassium.

Cestan-Chenais syndrome (ses-tan'shen-az') [Raymond *Cestan*, French neurologist, 1872-1934] see under *syndrome*.

Cestan-Raymond syndrome (ses-tan'-ra-maw') [Etienne Jacques Marie Raymond *Cestan*; Fulgence *Raymond*, French neurologist, 1844-1910] Raymond-Cestan syndrome.

cesticidal (ses'ti-si'dal) destructive to cestodes.

Cestoda (ses-to'dah) a subclass of Cestoidea comprising the true tapeworms, which have a head or scolex, and segments or proglottides. Adult tapeworms are endoparasitic in the alimentary tract and associated ducts of various vertebrate hosts; their larval stages (cysticercus, coenurus, hydatid, sparganum) may be found in various organs or tissues. Of the eleven orders, two—Pseudophyllidea and Cyclophyllidea—contain species that parasitize man and other animals. Called also *Eucestoda*.

Cestodaria (ses-to-da're-ah) a subclass of tapeworms, the unsegmented tapeworms of the class Cestoidea, which are endoparasitic in the intestines and coelom of various primitive fishes and rarely in reptiles.

cestode (ses'töd) 1. any tapeworm or plathyhelminth of the class Cestoidea, especially those of the subclass Cestoda. 2. cestoid.

cestodiasis (ses'to-di'ah-sis) infection by cestodes.

cestodology (ses'to-dol'o-je) the scientific study of cestodes.

cestoid (ses'toid) [Gr. *kestos* girdle + *eidos* form] resembling a tapeworm.

Cestoidea (ses-toi'de-ah) a class of tapeworms (plathyhelminths) characterized by the absence of a mouth and digestive tract and by the presence of a noncuticular layer covering their bodies. It comprises two subclasses: Cestodaria and Cestoda.

cetaben sodium (se'tah-ben) chemical name: 4-(hexadecylamino)benzoic acid sodium salt; an antihyperlipoproteinemic, $C_{22}H_{38}NNaO_2$.

cetaceum (sē-ta'se-um) spermaceti.

cetalkonium chloride (set-al-ko'ne-um) chemical name: *N*-hexadecyl-*N,N*-dimethylbenzene methanaminium chloride. A cationic quaternary ammonium surfactant, $C_{22}H_{46}ClN$, used as a topical anti-infective and disinfectant.

cetanol (se'tah-nol) a solid white alcohol, $C_{16}H_{33}OH$, from sperm oil.

cetiedil citrate (sē-ti'ē-dil) chemical name: 2-(hexahydro-1*H*-azepin-1-yl) ethyl ester α -cyclohexyl-2-hydroxy-1,2,3-propanetricarboxylate (1:1); a peripheral vasodilator, $C_{20}H_{31}NO_2S \cdot C_6H_5O_7$, which has been used in the treatment of arteritis, Raynaud's disease, and acrocyanosis.

cetocycline hydrochloride (se'to-si'klēn) chemical name: [4*R*-(4 α , 4 β , 12 α)]-acetyl-4-amino-4a,12a-dihydro-3,10,11,12a-tetrahydroxy-6,9-dimethyl-1,12(4*H*,5*H*)-naphthacenedione; an antibacterial, $C_{22}H_{21}NO_7 \cdot HCl$.

cetohexazine (se-to-heks'ah-zēn) ketohexazine.

Cetraria (sē-tra're-ah) 1. a genus of lichens. 2. the official name of *C. islandica*, so-called Iceland moss; it is nutritious and useful in lung and bowel affections, and is a source of lichenin.

cetrimide (se'tri-mid) cetrimonium bromide.

cetrimonium bromide (se'tri-mo'ne-um) a quaternary ammonium antiseptic and detergent composed of a mixture of tetradecyltrimethylammonium bromide with dodecyl- and hexadecyltrimethyl ammonium bromides, $C_{19}H_{42}BrN$, occurring as a white to creamy white powder; applied topically to the skin to cleanse wounds, as a preoperative disinfectant, and to treat seborrhea of the scalp; solutions are also used to cleanse utensils and to store surgical instruments. Abbreviated CTBA. Called also *cetrimide* and *cetyltrimethylammonium bromide*.

cetyl (se'til) a univalent alcohol radical, $CH_3(CH_2)_{14}CH_2$.

cetylpyridinium chloride (se'til-pi'rī-din'e-um) [USP] chemical name: 1-hexadecylpyridinium chloride. A cationic disinfectant, $C_{22}H_{38}ClN \cdot H_2O$, occurring as a white powder; used as a local anti-infective administered sublingually or applied topically to intact skin and mucous membranes, and as a preservative in pharmaceutical preparations.

cetyltrimethylammonium bromide (se'til-meth'il-ah-mo'ne-um) cetrimonium bromide.

Cevalin (se'vah-lin) trademark for preparations of ascorbic acid (vitamin C).

Cevex (se'veks) trademark for a liquid preparation of ascorbic acid (vitamin C).

Ce-Vi-Sol (se'vi-sol) trademark for a preparation of ascorbic acid for calibrated dropper dosage.

Ceylancyclostoma (se'lan-si-klos'to-mah) *Ancylostoma braziliense*.

ceyssatite (sēs'ah-tit) [*Ceyssat*, a village of France] a white earth from France, useful as an adsorbent powder in eczema and hyperidrosis, and in preparing ointments and medicated pastes.

CF cardiac failure; Christmas factor (see under *factor*).

C.F. carbolfuchsin; citrovorum factor.

Cf chemical symbol for *californium*.

cf. abbreviation for L. *confer* bring together, compare.

c.f.f. critical fusion frequency (flicker fusion threshold); see under *flicker*.

C.F.T. complement-fixation test; see under *fixation*.

CFU-C colony-forming unit-culture, a granulocytic precursor cell which grows in *in vitro* culture in the presence of appropriate stimulants.

CFU-E colony-forming unit-erythroid, a red cell precursor detectable in *in vitro* culture; it precedes the proerythroblast in development but follows the BFU-E.

CUF-S colony-forming unit-spleen, the pluripotential stem cell which gives rise to the erythroid, granulocytic, and megakaryocytic cell lines; so named because the cell gives rise to colonies of marrow cells in the spleen of irradiated mice.

CG trademark for a preparation of indocyanine green.

cg. centigram.

cgm. centigram.

C.G.S., c.g.s. abbreviation for *centimeter-gram-second* system, a system of measurements in which the units are based on the centimeter as the unit of length, the gram as the unit of mass, and the second as the unit of time.

C.H. crown-heel (length of fetus).

Ch¹ Christchurch chromosome; see under *chromosome*.

C.H.A. Catholic Hospital Association.

CH₄ methane.

C₂H₂ acetylene.

C₂H₄ ethylene.

C₆H₆ benzene.

Chabert's disease (shah-bärz') [Philebert *Chabert*, French veterinarian, 1737-1814] symptomatic anthrax.

Chabertia (shah-ber'te-ah) a genus of nematodes parasitic in animals. **C. ovi'na**, a species of worms, the large-mouth bowel worm, parasitic in the colon of sheep, goats, and cattle.

Chaddock's reflex (sign) (chad'oks) [Charles Gilbert *Chaddock*, St. Louis neurologist, 1861-1936] see under *reflex*.

chafe (chāf) to irritate the skin, as by the rubbing together of opposing folds.

Chagas' disease (chag'as) [Carlos *Chagas*, physician in Brazil, 1879-1934] see under *disease*.

Chagas-Cruz disease (chag'as-kruz) [Carlos *Chagas*; Oswald *Cruz*, Brazilian physician, 1871-1917] Chagas' disease.

Chagasia (chah-gas'e-ah) [Carlos *Chagas*] a subgenus of *Anopheles* mosquitoes of Central and South America.

chagasic (chah-gas'ik) pertaining to or due to Chagas' disease.

chagoma (chā-go'mah) a skin tumor occurring in Chagas' disease.

Chagres fever (chag'res) [named from a river in Panama] see under *fever*.

Chaillietia (ka-il'e'she-ah) a genus of trees and shrubs, nearly all tropical. **C. cymo'sa**, a species of South Africa that contains the poison fluoroacetic acid. **C. toxica'ria**, of West Africa, bears poisonous fruit and seeds.

Chain (chān), Ernst Boris. A German biochemist, born 1906; co-winner, with Sir Alexander Fleming and Sir Howard Walter Florey, of the Nobel prize for medicine in 1945 for his work on antibacterial substances produced by microorganisms.

chain (chān) a collection of objects linked together in linear fashion, or end to end, as the assemblage of atoms or radicals in a chemical compound, or an assemblage of individual bacterial cells. **branched c.**, an open chain of atoms, usually carbon, with one or more side chains attached to it. **closed c.**, several atoms linked together so as to form a ring, which may be

saturated, as in cyclopentane, or aromatic, as in benzene. **food c.**, a sequence of organisms through which energy is transferred from its ultimate source in a plant; each organism eats the preceding and is eaten by the following member in the sequence. **heavy c.**, any of the large polypeptide chains of five classes that, paired with the light chains, make up the antibody molecule; see

immunoglobulin. Heavy chains bear the antigenic determinants that differentiate the immunoglobulin classes. **J c.**, a polypeptide present in both IgM and certain IgA molecules that permits them to form polymers. **kappa c.**, a light polypeptide chain of immunoglobulin molecules; see *light c.* **lambda c.**, a light polypeptide chain found in immunoglobulin molecules; see *light c.* **lateral c., side c., light c.**, either of the two small polypeptide chains (molecular weight 22,000) that, when linked to heavy chains by disulfide bonds, make up the antibody molecule; they are of two types, kappa and lambda, which are unrelated to immunoglobulin class differences. See *immunoglobulin*. Light chains have an N-terminal variable region related to the antibody combining site and a C-terminal constant region which is invariable with the exception of the Inv and Oz group allotypic markers. **nuclear c.**, a longitudinal array of nuclei occurring on an intrafusal fiber of muscle. **open c.**, several atoms united to form an open chain; compounds of this series are related to methane and are also called *fatty, aliphatic, acyclic, or paraffin* compounds. **side c.**, a chain of atoms attached to a larger chain or to a ring; called also *lateral c.* **sympathetic c.**, the sympathetic trunk (truncus sympathicus [NA]).

Chalara (kah-lar'ah) a genus of imperfect fungi of the order Moniliales, which causes many diseases of plants, such as oak wilt.

chalasia (kah-la'ze-ah) [Gr. *chala*sis relaxation] relaxation of a bodily opening, such as the cardiac sphincter, which is a cause of vomiting in infants.

chalastodermia (kah-las'to-der'me-ah) cutis laxa.

chalaza (kah-la'zah) [Gr. "lump"] a spiral band of albumin extending from either end of the yolk of a bird's egg to the shell.

chalazia (kah-la'ze-ah) [Gr.] plural of *chalazion*.

chalazion (kah-la'ze-on), pl. *chala'zia* or *chalazions* [Gr. "small lump"] an eyelid mass that results from chronic inflammation of a meibomian gland and shows a granulomatous reaction to liberated fat when subjected to histopathological examination; sometimes called *meibomian* or *tarsal cyst*.

chalazodermia (kah-laz'o-der'me-ah) cutis laxa.

chalcitis (kal-si'tis) chalcitis.

chalcone (kal'kon) [Gr. *chalkos* copper or brass] any one of a group of yellow pigments that are substituted benzalacetophenone derivatives.

chalcosis (kal-ko'sis) [Gr. *chalkos* copper] the presence of copper deposits in the tissues. **c. cor'neae**, deposition of copper in the cornea resulting in a pigmented ring in the deeper layers; seen especially in metal workers. **c. len'tis**, sunflower cataract.

chalicosis (kal-i'ko'sis) [Gr. *chalis* gravel] a disorder of the lungs or bronchioles (chiefly among stone-cutters), due to the inhalation of fine particles of stones; it is a form of pneumoconiosis. Called also *flint disease*.

chalinoplasty (kal'i-no-plas'te) [Gr. *chalin*os a corner of the mouth + *plassein* to mold] plastic surgery of the angle of the mouth.

chalk (chawk) [L. *calx* or *creta*] 1. impure calcium carbonate. 2. prepared c. **French c., talc.** **precipitated c.**, precipitated calcium carbonate. **prepared c.**, native calcium carbonate freed from most of its impurities by elutriation; used as an antacid, and has been used in the treatment of diarrhea and in the preparation of dentifrices.

chalkitis (kal-ki'tis) [Gr. *chalkos* brass] inflammation of the eyes caused by rubbing the eyes after the hands have been used on brass; called also *brassy eye*.

challenge (chal'enj) in immunology, (1) to administer antigen to evoke an immunologic response in a previously sensitized individual, or (2) an instance of so challenging.

chalone (kal'on) [Gr. *chalan* to relax] 1. a group of tissue-specific (but not species-specific) water-soluble substances that are produced within a tissue and that inhibit mitosis of cells of that tissue and whose action is reversible. 2. (*obs.*) a substance which neutralizes the action of a hormone; inhibitory hormone.

chalconic (kah-lon'ik) of or pertaining to a chalone.

chaluni (chal-oo'ne) pitted keratolysis.

chalybeate (kah-lib'e-at) [L. *chalybs*; Gr. *chalyps* steel] containing or charged with iron: ferruginous or martial.

chamaecephalic (kam'e-se-fal'ik) pertaining to or characterized by chamaecephaly.

chamaecephaly (kam'e-sef'ah-le) [Gr. *chamai* low + *kephale* head] the condition of having a low flat head, that is, a cephalic index of 70 or less.

chamaeprosopic (kam'e-pro-sop'ik) pertaining to or characterized by chamaeprosopy.

chamaeprosopy (kam'e-pros'o-pe) [Gr. *chamai* low + *prosōpon* face] the condition of having a low, broad face, i.e., a facial index of 90 or less.

chamber (chām'ber) [L. *camera*; Gr. *kamara*] an enclosed space or antrum. **Abbé-Zeiss counting c.**, Thoma-Zeiss counting c. **acoustic c.**, a soundproof room or enclosure used in measuring hearing. **air c., relief c.** **air-equivalent ionization c.**, in radiology, a chamber in which the materials of the wall

and electrodes are such that ionizing radiations produce ionization essentially similar to that in a free air ionization chamber. **altitude c.**, a vacuum chamber used to simulate the effects of high altitude and low atmospheric pressure. **anterior c. of eye**, that portion of the aqueous-containing space between the cornea and the lens which is bounded in front by the cornea and part of the sclera, and behind by the iris, part of the ciliary body, and that part of the lens which presents through the pupil; called also *camera anterior bulbi* [NA]. **aqueous c.**, that part of the eyeball which is filled with aqueous humor; see *anterior c. of eye* and *posterior c. of eye*. **bubble c.**, an instrument designed to permit the use of superheated liquid to display the tracks of ionizing particles, the ions acting as nuclei for the production of small bubbles along the path of the particle. **cloud c.**, an instrument with a chamber containing air or other gas saturated with vapor, used in demonstrating the tracks produced by the passage of ionizing particles. **counting c.**, a space of definite thickness provided with a ruled base, into which blood samples of specific dilutions may be placed, for counting and quantitating the formed elements. **detonating c.**, a muffler surrounding the discharging balls of a static machine or resonator for deadening the sound of a spark discharge. **diffusion c.**, an apparatus for separating a substance by means of a semipermeable membrane. **c's of eye**, the various spaces in the eyeball; see *anterior c. of eye*, *posterior c. of eye*, and *vitreous c.* **Haldane c.**, an air-tight chamber in which animals may be confined for the performance of metabolic studies; called also *Haldane apparatus*. **c's of the heart**, the cavities of the atria and ventricles. **hyperbaric c.**, a compartment in which the air pressure may be raised to more than normal atmospheric pressure; used in treatment of gas gangrene and other anaerobic infections, or other conditions in which a high concentration of oxygen is desirable, and for studying the effects of pressure and decompression in animals and man. **ionization c.**, any chamber designed to permit measurement of the ionization of the gas contained in the chamber. **lethal c.**, a chamber that may be filled with gas, for killing small animals. **Petroff-Hauser counting c.**, a chamber containing a grid and so arranged as to hold a fixed volume of fluid; used to count microorganisms such as bacteria under high magnification. **posterior c. of eye**, that portion of the aqueous-containing space of the eye which is bounded in front by the iris, and behind by the lens and suspensory ligament; called also *camera posterior bulbi* [NA]. **pulp c.**, the natural cavity in the central portion of the tooth crown occupied by the dental pulp; called also *pulp cavity*. **relief c.**, the recess in the surface of a denture that rests on the oral structures, to reduce or eliminate pressure on the tissues at that particular site in the mouth. **standard ionization c.**, a chamber in which a delimited beam of radiation passes between the electrodes without striking them or other internal parts of the equipment. **Storm Van Leeuwen c.**, a room that can be kept free of airborne antigens for allergic patients. **thimble ionization c.**, a small thimble-shaped ionization chamber, usually with walls of organic material. **Thoma-Zeiss counting c.**, a device consisting of a receptacle in the bottom of a slide for a microscope, with ruled lines dividing the area into minute squares, to facilitate the counting of blood corpuscles or other cells; called also *Abbe-Zeiss counting c.* **tissue-equivalent ionization c.**, a chamber in which the walls, electrodes, and gas are so selected that ionizing radiations produce ionization essentially equivalent to the characteristics of the tissue under consideration. **vitreous c.**, the space in the eyeball enclosing the vitreous humor, bounded anteriorly by the lens and ciliary body, and posteriorly by the posterior wall of the eyeball. **Zappert's c.**, a form of counting chamber.

Chamberland filter (shahm-ber-lah') [Charles Edouard Chamberland, French bacteriologist, 1851-1908] see under *filter*.

Chamberlen forceps (Peter (Pierre) Chamberlen, English obstetrician, 1560-1631] see under *forceps*.

chamaecephalic (kam'e-se-fal'ik) chamaecephalic.

chamaecephaly (kam'e-sef'ah-le) chamaecephaly.

chamaeprosopic (kam'e-pro-sop'ik) chamaeprosopic.

chamaeprosopy (kam'e-pros'o-pe) chamaeprosopy.

Champetier de Ribes' bag (shahmp-te-a' de rēbz') [Camille Louis Antoine Champetier de Ribes, French obstetrician, 1848-1935] see under *bag*.

chancre (shang'ker) [Fr. for "canker," a destructive sore, from L. *cancer* crab] 1. the primary sore of syphilis, a painless, indurated, eroded papule occurring at the site of entry of the infection; called also *hard c.*, *hunterian c.*, and *true c.* 2. the primary cutaneous lesion of such diseases as sporotrichosis and tuberculosis; see *sporotrichotic c.* and *tuberculous c.* **fungating c.**, chancre characterized by fungoid granulations. **hard c., hunterian c.**, see *chancre*. **mixed c.**, a skin lesion due to simultaneous infection with *Treponema pallidum* (primary syphilis) and *Hemophilus ducreyi* (chancroid); called also *mixed sore*. **recurrent c.**, c. redux. **c. redux**, chancre developing on the scar of a healed primary chancre, caused by organisms that remain in the scar; called also *monorecidive c.*, *recurrent c.*, and *sclerosus redux*. **Rollet's c.**, mixed c. **soft c.**, chancroid. **sporotrichotic c.**, the primary lesion occurring at the site of inoculation

in the cutaneous lymphatic form of sporotrichosis. **true c.**, see *chancriform*. **tuberculous c.**, a brownish red papule which develops into an indurated nodule or plaque that may ulcerate, representing the initial cutaneous infection of the tubercle bacillus into the skin or, less often, into the mucosa of a previously unexposed individual, usually a child. Called also *primary inoculation complex* and *primary tuberculous complex*.

chancriform (shang/'kre-form) resembling a chancre.

chancroid (shang/'kroid) a nonsyphilitic venereal disease transmitted by direct contact, and caused by *Hemophilus ducreyi*. It begins as a painless macule on the genitalia, which enlarges and becomes pustular; an ulcer forms with a shaggy base and adjacent bubo formation. Called also *soft chancre*. See also *mixed chancre*.

phagedenic c., a variety attended by sloughing of the tissues.

serpiginous c., a variety which tends to spread in curved lines.

chancroidal (shang-'kroi'dal) pertaining to chancroid.

chancrous (shang/'krus) of the nature of chancre.

change (chānjī) an alteration. **Armanni-Ebstein c.**, see under *lesion*. **Crooke's c's**, **Crooke-Russel c's**, see under *degeneration*. **harlequin color c.**, transient reddening of one half of the body longitudinally with simultaneous blanching of the other half; a temporary vasomotor disorder of the newborn.

Ch'ang Shan (chang/'shan) the Chinese name for the root of the shrub *Dichroa febrifuga* Lour. Basak, Aseru (Saxifragaceae), of China, Java, India, and the Philippines. The Chinese have used it for its antiparasitic, emetic, and antipyretic effect in malaria. It contains several isomeric active alkaloids, e.g., febrifugine, isofebrifugine, and α -, β -, and γ -dichroines.

channel (chan/'el) [L. *canalis* a water pipe] that through which anything flows; a cut or groove. **blood c's**, narrow passages with no distinct walls, but containing blood; they are found in fresh granulation tissue. **central c.**, a long straight capillary that connects an arteriole to a venule. **lymph c's**, the smaller lymph sinuses; irregular in and about the lymphatic glands and around lymphatic vessels. **perineural c.**, a lymph channel that surrounds a nerve trunk. **thoroughfare c.**, a channel between terminal arterioles and venules, larger than a capillary.

Ch'an su (chan soo) the dried venom of various Chinese toads.

Chantemesse' reaction (shant-mes') [André Chantemesse, French bacteriologist, 1851-1919] see under *reaction*.

Chaoborus (ka/'o-bor'us) a genus of non-blood-sucking gnats of the family Culicidae; called also *Corethra*. **C. lacus'tris**, the Clear Lake gnat of California.

Chaos chaos (ka/'os ka/'os) *Pelomyxa carolinensis*.

Chaoul therapy, tube (showl) [Henri Chaoul, Lebanese radiologist in Berlin, 1887-1964] see under *therapy* and *tube*.

Chapman's mixture, pill (chap'manz) [Nathaniel Chapman, American physician, 1780-1853] see under *mixture* and *pill*.

chappa (chap/'ah) a disease of West Africa somewhat resembling syphilis or yaws; it is characterized by the formation of marble-sized nodules beneath the skin which degenerate and give off scaly material.

chapped (chapt) roughened and cracked, or split open by the cold or frequent wetting, as chapped hands or lips.

Chaput's method (shap-'ōōz') [Henri Chaput, French surgeon, 1857-1919] see under *method*.

character (kar/'ak-ter) a quality or attribute indicative of the nature of an object or an organism. In genetics, the expression of a gene or group of genes as seen in a phenotype. **acquired c.**, a noninheritable modification produced in an animal as a result of its own activities or of environmental influences. **compound c.**, a character that is dependent on two or more genes for its production. **dominant c.**, a mendelian character that develops when it is transmitted by a single gene. **imvic c's**, four important characters in the classification of the coliform organisms: they are indole, methyl-red, Voges-Proskauer reaction, and sodium citrate. **mendelian c's**, in genetics, the separate and distinct traits that are exhibited by an animal or plant, and are dependent on the genetic constitution of the organism; they may be recessive or dominant. See *Mendel's law*, under *law*. **primary sex c's**, those characters of the male and female that are concerned directly in reproduction. **recessive c.**, a mendelian character that develops only when it is transmitted by both genes determining the trait. **secondary sex c's**, those characters specific to the male or female organism but not directly concerned in reproduction. **sex-conditioned c.**, an autosomal trait whose full expression is conditioned by the sex of the individual, e.g., human baldness. **sex-influenced c.**, sex-conditioned c. **sex-limited c.**, a sex-linked or autosomal trait that is expressed in one sex only. **sex-linked c.**, one transmitted consistently to individuals of one sex only, being carried in the sex chromosome. **unit c.**, a trait transmitted from parent to offspring intact, i.e., without blending or mixing, though it may be either dominant or recessive.

characteristic (kar/'ak-ter-'is'tik) 1. character. 2. typical of an individual or other entity. **demand c's**, behavior exhibited by an experimental subject in his attempt to fulfill the expectations of the experimenter as he perceives them; it is believed that the experimenter unknowingly communicates these expectations

by subtle cues or by the design of the experiment itself. Called also *experimenter effects*.

characterization (kar/'ak-ter-'i-za'shun) in prosthodontics, modification of the form and color of the denture base and teeth and of crown restorations to produce a more lifelike appearance. **denture c.**, see *characterization*.

characterology (kar/'ak-ter-'ol'o-je) the study of character and personality.

charas (chahr/'as) ganja.

charbon (shar-'baw') [Fr. "coal"] anthrax. **c. symptomatique'**, blackleg.

charcoal (char/'kōl) carbon prepared by charring wood or other organic material. **activated c.**, [USP], the residue from the destructive distillation of various organic materials, treated to increase its adsorptive powers; used as a general purpose antidote. Called also *carbo activatus*. **animal c.**, charcoal prepared from bone; called also *animal*, *ivory*, or *Paris black*, and *bone-black*. **purified animal c.**, charcoal prepared from bone and purified by removal of materials dissolved by hot hydrochloric acid and water; adsorbent and decolorizer.

Charcot's arthritis, etc. (shar-'kōz') [Jean Martin Charcot, French neurologist, 1825-1893] see under *arthritis*, *arthropathy*, *arthrosis*, *bath*, *cirrhosis*, *disease*, *fever*, *foot*, *gait*, *joint*, *syndrome*, and *triad*.

Charcot-Leyden crystals (shar-'ko' li'den) [J. M. Charcot; Ernst Victor von Leyden, German physician, 1832-1910] see under *crystal*.

Charcot-Marie atrophy (type) (shar-'ko' mah-'re') [J. M. Charcot; Pierre Marie, French physician, 1853-1940] progressive neuropathic (peroneal) muscular atrophy; see under *atrophy*.

Charcot-Marie-Tooth atrophy, disease, type (shar-'ko' mah-'re'tooth) [J. M. Charcot; Pierre Marie; Howard Henry Tooth, English physician, 1856-1925] progressive neuropathic (peroneal) muscular atrophy.

Charcot-Neumann crystals (shar-'ko'noy'mahn) see under *crystal*.

Charcot-Vigouroux sign (shar-'ko've-goo-roo') [J. M. Charcot; Romain Vigouroux, French physician of 19th century] Vigouroux's sign; see under *sign*.

charlatan (shar/'lah-tan) [Fr.] a pretender to knowledge or skills that he does not possess, in medicine, a quack.

charlatanism (shar/'lah-tan-izm) the pretension of knowledge and skills that one does not possess; in medicine, quackery.

charlatanry (shar/'lah-tan-re) charlatanism.

Charles' law (sharlz) [Jacques Alexandre César Charles, French physicist, 1746-1823] see under *law*.

charley horse (char/'le-hors) soreness and stiffness in a muscle caused by overstrain or contusion; the term is usually restricted to injuries of the quadriceps muscle.

Charlouis's disease (shar/'loo-ēz') [M. Charlouis, Dutch physician in Java] yaws.

Charrière scale (shar/'e-ār') [Joseph Frédéric Benoit Charrière, French instrument maker, 1803-1876] see under *scale*.

Charrin's disease (shar-'raz') [Albert Charrin, pathologist in Paris, 1857-1907] pyocyanic infection.

charring (char/'ing) carbonization; in surgical diathermy, the reduction of tissue into a residue of carbon.

Chart. abbreviation for L. *charta*, paper.

chart (chart) 1. a simplified graphic representation of the fluctuation of some variable, as of pulse, temperature, and respiration, or a record of all the clinical data of a particular case. 2. to record graphically the fluctuation of some variable, or to record the clinical data of a particular case. **Amsler's c's**, a set of charts showing various geometric patterns in black and white, e.g., grids or parallel lines, used for detecting defects of the central visual field. **Guibor's c.**, a chart containing outline pictures for orthoptic training. **Hawley c.**, graded outlines of dental arch sizes based on the mesiodistal diameters of the six anterior teeth. **reading c.**, a chart bearing material printed in type of gradually increasing sizes; used in testing acuity of near vision. **Reuss' color c's**, charts with colored letters printed on colored backgrounds, used in testing color vision; called also *Reuss' tables*. **Snellen's c.**, a chart imprinted with block letters (Snellen's test type) in gradually decreasing sizes, identified according to distances at which they are ordinarily visible; used in testing visual acuity.

charta (kar/'tah), pl. *char'tae* [L.; Gr. *chartēs*] 1. paper. 2. a piece of paper, medicated or otherwise. **c. exploratoria caeru'lea**, blue litmus paper; see under *paper*. **c. exploratoria lu'tea**, turmeric paper; paper stained with turmeric for use as a test paper. **c. exploratoria ru'bra**, red litmus paper; see under *paper*.

chartaceous (kar-'ta'shus) papyraceous.

chartula (kar/'tu-lah), pl. *char'tulae* [L. dim. of *charta* paper] a small piece of paper, as for containing a dose of a medicinal powder.

chasma (kaz'mah) [L.; Gr. *chasma* a cleft] a yawning; an opening.

chasmatoplasson (kaz-mat'o-plas'on) plasson in an expanded condition. Cf. *pyknoplasson*.

chasmus (kas'mus) [L.; Gr. *chasma* a cleft] chasma.

Chassaignac's tubercle (shas'an-yahks') [Charles Marie Édouard Chassaignac, French surgeon, 1804–1879] *tuberculum caroticum vertebrae cervicalis IV*.

chaude-pisse (shôd-pēs) [Fr.] a burning sensation experienced during micturition.

chauffage (sho-fahzh') [Fr. *chauffer* to heat] treatment with a cautery at low heat which is passed to and fro across the tissue about $\frac{1}{4}$ inch distant therefrom.

Chauffard's syndrome (sho-farz') [Anatole Marie Emile Chauffard, French physician, 1855–1932] see under *syndrome*.

Chauffard-Still syndrome (sho-far'stil) [Anatole Marie Emile Chauffard; Sir George Frederick Still, English physician, 1868–1941] Chauffard's syndrome.

Chauliac (sho'le-ahk'), Guy de (1300–1368). An eminent French surgeon who practiced in Avignon. His treatise on surgery (*Chirurgia magna*) was regarded as a standard work until Paré's time.

Chaussier's areola, line (sho'se-âz') [François Chaussier, Parisian surgeon and anatomist, 1746–1828] see under *areola* and *line*.

Chauveau's bacillus, bacterium (sho-vôz') [Auguste Chauveau, Paris veterinarian, 1827–1917] *Clostridium chauvoei*.

Ch.B. abbreviation for L. *Chirurgiae Baccalau'reus*, Bachelor of Surgery.

C₂H₅Br ethyl bromide.

CHCl₃ chloroform.

C₂H₄Cl₂ ethylene chloride.

C₂H₅Cl ethyl chloride.

C₂H₅CO₂NH₂ ethyl carbamate.

(CH₃·CO)₂O acetic anhydride.

CH₃·COOH acetic acid.

C₄H₈·COOH valeric acid.

CHD coronary heart disease.

Ch.D. abbreviation for L. *Chirurgiae Doc'tor*, Doctor of Surgery.

ChE cholinesterase.

Cheadle's disease (che'delz) [Walter Butler Cheadle, London pediatrician, 1835–1910] infantile scurvy.

check-bite (chek'bit) a sheet of hard wax or modeling compound placed between the teeth in centric, eccentric, lateral, or protrusive occlusion, to be used as a check on the occlusion of the teeth in those positions in the articulator.

checkerboard (chek'er-bôrd) a grid with margins which shows the gametes of each parent (in the margins) and their possible progeny (in the squares).

Chediak test (reaction) [Alejandro Chediak, Cuban physician] see under *test*.

cheek (chêk) a fleshy protuberance, especially the fleshy portion of the side of the face; called also *bucca* [NA]. Also applied to the fleshy mucous-membrane covered side of the oral cavity (*bucca cavum oris* [NA]). **cleft c.**, facial cleft caused by developmental failure of union between the maxillary and primitive frontonasal processes.

cheesy (che'ze) caseous, resembling cheese.

cheil- see *cheilo-*.

cheilectomy (ki-lek'to-me) [*cheil-* + Gr. *ektomē* excision] 1. excision of a lip. 2. the operation of chiseling off the irregular bony edges of a joint cavity that interfere with motion.

cheilectropion (ki'lek-tro'pe-on) [*cheil-* + *ectropion*] eversion of the lip.

cheilitis (ki-li'tis) [*cheil-* + *-itis*] inflammation affecting the lips. **actinic c.**, **c. actinica**, pain and swelling of the lips and development of a scaly crust on the vermilion border after exposure to actinic rays; called also *acute solar c.* **acute c.**, *eczema* of the lips. **angular c.**, *perlèche*. **apostematous c.**, see *c. glandularis*. **commissural c.**, cheilitis affecting principally the angles (commissures) of the mouth. **c. exfoliati/va**, seborrheic dermatitis affecting the vermilion border of the lips. **c. glandularis**, a rare disease in which the lower lip becomes enlarged, firm, and finally everted, exposing the openings of the accessory salivary glands, which are inflamed and dilated, appearing as small red macules on the mucosa; the glands themselves are enlarged and sometimes nodular. It occurs in three basic types: The *simple type* is characterized by multiple painless, pin-head-sized lesions, with central depressions and dilated canals, and may develop into either of the other two types. The *superficial suppurative type* is characterized by painless swelling, induration, crusting, and superficial and deep ulcerations of the lip; called also *Baelz's disease*. The *deep suppurative type* is a basically deep-seated infection, with abscesses and fistulous tracts that eventually form scars; called also *apostematous c.*, *c. glandularis apostematosa*, and *myxadenitis labialis*. **c. glandularis**

apostemato'sa, see *c. glandularis*. **c. granulomato'sa**, an inflammation of the lips marked by granular papules. **impetiginous c.**, impetigo of the lips. **migrating c.**, *perlèche*. **solar c.**, involvement of the lips after exposure to actinic rays; such involvement may be acute (see *actinic c.*), or chronic, with alteration of the epithelium and sometimes fissuring or ulceration. **c. venenata**, inflammation of the lips caused by a chemical irritant.

cheilo-, cheil- (ki'lo, kil') [Gr. *cheilos* lip; an edge, or brim] a combining form denoting relationship to the lip, or to an edge or brim.

cheiloangiography (ki'lo-an'je-os'ko-pe) [*cheilo-* + Gr. *angeion* vessel + *skopein* to examine] microscopic observation of the circulation in the blood vessels of the lip.

cheilocarcinoma (ki'lo-kar'si-no'mah) carcinoma of the lip.

cheilognathopalatoschisis (ki'lo-na'tho-pal'ah-tos'ki-sis) cheilognathouranoschisis.

cheilognathoprosoposchisis (ki'lo-na'tho-pros'o-pos'ki-sis) [*cheilo-* + Gr. *gnathos* jaw + *prosōpon* face + *schisis* cleft] a developmental anomaly characterized by presence of an oblique facial cleft continuing into the lip and upper jaw.

cheilognathoschisis (ki'lo-na'thos'ki-sis) [*cheilo-* + Gr. *gnathos* jaw + *schisis* cleft] a developmental anomaly characterized by the presence of a cleft in the lip and jaw.

cheilognathouranoschisis (ki'lo-na'tho-u-rah-nos'ki-sis) [*cheilo-* + Gr. *gnathos* jaw + *ouranos* palate + *schisis* cleft] a developmental anomaly characterized by the presence of a cleft in the lip, upper jaw, and palate.

cheiloncus (ki-long'kus) (*obs.*) a tumor of the lip.

cheilophagia (ki'lo-fa'je-ah) [*cheilo-* + Gr. *phagein* to eat] biting of the lips.

cheiloplasty (ki'lo-plas'te) [*cheilo-* + Gr. *plassein* to form] surgical repair of a defect of the lip.

cheilorrhaphy (ki-lor'ah-fe) [*cheilo-* + Gr. *rhaphe* suture] the operation of suturing the lip; surgical repair of a congenitally cleft lip.

cheiloschisis (ki-los'ki-sis) [*cheilo-* + Gr. *schisis* cleft] harelip.

cheiloscopsy (ki-los'ko-pe) study of the surface configuration of the vermilion border of the lips to identify individual patterns (lip-print patterns).

cheilosis (ki-lo'sis) [*cheilo-* + *-osis*] a condition marked by fissuring and dry scaling of the vermilion surface of the lips and angles of the mouth (*perlèche*); it is characteristic of riboflavin deficiency. **angular c.**, *perlèche*.

cheilostomatoplasty (ki'lo-sto-mat'o-plas'te) [*cheilo-* + Gr. *stoma* mouth + *plassein* to form] surgical restoration of the lips and mouth, as after trauma or the removal of a cancer.

cheilotomy (ki-lot'o-me) [*cheilo-* + Gr. *tomē* a cutting] incision into the lip; also, cheilectomy.

cheir- see *cheiro-*.

Cheiracanthium (ki'rah-can'the-um) *Chiracanthium*.

Cheiracanthus (ki'rah-kan'thus) *gnathostoma*.

cheiragra (ki-rag'rah) [*cheir-* + Gr. *agra* seizure] gout of the hand, especially tophaceous gout with torsion of the fingers.

cheiralgia (ki-ral'je-ah) pain in the hand. **c. paresthetica**, isolated neuritis of the superficial ramus of the radial nerve.

cheirarthrits (ki'rar-thri'tis) [*cheir-* + *arthrits*] inflammation of the joints of the hand and fingers.

cheiro-, cheir- [Gr. *cheir* hand] a combining form denoting relationship to the hand. For words beginning with this root, see also those beginning *chir-* and *chiro-*.

cheiromachialgia (ki'ro-ma'ke-al'je-ah) a syndrome of paresthesia and pain in the arm, hand, and fingers; called also *cheiromachialgia paresthetica*.

cheirocinesthesia (ki'ro-sin'es-the'ze-ah) cheirokinesthesia.

cheirognomy (ki-rog'no-me) [*cheiro-* + Gr. *gnomōn* judge] the study of the hand as a guide to characteristics of the individual.

cheirognostic (ki'rog-nos'tik) [*cheiro-* + Gr. *gnostikos* knowing] pertaining to or characterized by the ability to distinguish stimuli as originating on the right or the left side of the body.

cheirokinesthesia (ki'ro-kin'es-the'ze-ah) the subjective perception of the movements of the hand, especially in writing.

cheirokinesthetic (ki'ro-kin'es-thet'ik) pertaining to or characterized by cheirokinesthesia.

cheirolgy (ki-rol'o-je) dactylology.

cheiromegaly (ki-ro-meg'ah-le) abnormal enlargement of the hands.

cheiroplasty (ki'ro-plas'te) [*cheiro-* + Gr. *plassein* to form] plastic surgery on the hand.

cheiropodalgia (ki'ro-po-dal'je-ah) [*cheiro-* + Gr. *pous* foot + *algos* pain] pain in the hands and feet.

cheiropompholyx (ki'ro-pom'fo-lik) [*cheiro-* + Gr. *pompholyx* a bubble] pompholyx.

cheiroscope (ki'ro-skōp) [*cheiro-* + Gr. *skopein* to view] an instrument used in the training of binocular vision, by which the

image of a test object seen reflected in a mirror by the sound eye is projected by the other eye to a drawing board, where it is traced with a pencil guided by the hand of the subject.

cheirospasm (ki'ro-spazm) [*cheiro-* + Gr. *spasmos* spasm] spasm of the muscles of the hand.

chelate (ke'lāt) [Gr. *chēlē* claw] to combine with a metal in complexes in which the metal is part of a ring. By extension, a chemical compound in which a metallic ion is sequestered and firmly bound into a ring within the chelating molecule. Chelates are used in chemotherapeutic treatments for metal poisoning.

chelation (ke-la'shun) combination with a metal in complexes in which the metal is part of a ring.

chelen (ke'len) ethyl chloride.

chelicera (ke-lis'er-ah) a pair of pincer-like head appendages of spiders, scorpions, and other arachnids.

Chel-Iron (kēl'i-ron) trademark for preparations of ferrocholine.

keloid (ke'lōid) keloid.

cheloma (ke-lo'mah) keloid.

chelonian (ke-lo'ne-an) [Gr. *chelonē* tortoise] pertaining to turtles and tortoises, (order Chelonia).

chemabrasion (kēm-ah-bra'shun) superficial destruction and exfoliation of the epidermis and the upper layer of the dermis by application of a cauterant to the skin; done to remove scars, tattoos, pigmented nevi, etc. Called also *chemexfoliation*. See also *planing*.

chemanesthesia (kēm'ah-ne'ze-ah) the controlled and reversible amnesia induced by a drug, as in certain anesthesia procedures.

chemasthenia (kēm'as-the'ne-ah) an asthenic condition of the chemical processes of the body.

chemexfoliation (kēm'eks-fō'le-a'shun) chemabrasion.

chemiatic (kēm'e-at'rik) iatrochemical.

chemiatry (kēm'e-ah-tre) [Gr. *chēmeia* chemistry + *iatreia* treatment] iatrochemistry.

chemical (kem'i-kal) 1. of, or pertaining to, chemistry. 2. a substance composed of chemical elements, or obtained by chemical processes.

chemicobiological (kēm'i-ko-bi'o-loj'e-kal) biochemical.

chemicocautery (kēm'i-ko-kaw'ter-e) chemocautery.

chemicogenesis (kēm'i-ko-jen'ē-sis) [*chemistry* + Gr. *genesis* production] development of an ovum by chemical stimulation.

chemicophysical (kēm'i-ko-fiz'e-kal) pertaining to chemistry and physics; pertaining to physical chemistry.

chemicophysiologic (kēm'i-ko-fiz'e-o-loj'ik) pertaining to physiology and chemistry.

chemiluminescence (kēm'i-loo'mī-nes'ens) chemoluminescence.

cheminosis (kēm'i-no'sis) [*chemistry* + Gr. *nosos* disease] any disease due to chemical agents.

chemiosmosis (kēm'e-os-mō'sis) chemosmosis.

chemiosmotic (kēm'e-o-os-mō'tik) chemosmotic.

chemiotaxis (kēm'e-o-tak'sis) chemotaxis.

chemiotherapy (kēm'e-o-ther'ah-pe) chemotherapy.

chemism (kēm'izm) chemical activity; chemical property or relationship.

chemisorption (kēm'i-sorp'shun) the chemical adsorption of one material by another, resulting in the production of a different chemical compound.

chemist (kēm'ist) 1. an individual skilled in chemistry. 2. (British) a pharmacist.

chemistry (kēm'is-tre) [Gr. *chēmeia*] the science that treats of the elements and atomic relations of matter, and of the various compounds of the elements. **analytical c.**, chemistry that deals with analysis of different elements in a compound. **applied c.**, the application of chemistry to industry and the arts; called also *industrial c.* **biological c.**, biochemistry. **colloid c.**, chemistry dealing with the nature and composition of colloids. **dental c.**, the chemistry of materials used in dental procedures and the processes to which they are subjected. **ecological c.**, the study of those chemical compounds synthesized by plants that serve no metabolic purpose but which, by reason of their toxic effect on insects and higher animals, influence a community of interacting plants and animals. **forensic c.**, use of chemical knowledge in the solution of legal problems. **industrial c.**, applied c. **inorganic c.**, that branch of the science of chemistry which deals with compounds that do not occur in the plant or animal worlds; called also *mineral c.* **medical c.**, chemistry as it relates to medicine. **metabolic c.**, biochemistry. **mineral c.**, inorganic c. **organic c.**, that branch of chemistry which deals with compounds that contain carbon. **pharmaceutical c.**, chemistry that deals with the composition and preparation of substances used in treatment of patients or diagnostic studies. **physical c.**, that branch of chemistry which deals with the relationship of chemical and physical properties. **physiological c.**, biochemistry. **structural c.**, chemical study of the structure of molecules.

surface c., in the field of catalysis, the study of chemical reactions between the outermost layer of atoms of a solid and molecules brought to the solid surface in the liquid or gaseous state. **synthetic c.**, that branch of chemistry which deals with the building up of chemical compounds from simpler substances or from the elements.

chemo- (ke'mo, kem'o) [Gr. *chēmeia* chemistry] a combining form denoting relationship to chemistry, or to a chemical.

chemoattractant (ke'mo-ah-trak'tant) a chemical (chemotactic) agent that induces an organism or a cell (e.g., a leukocyte) to migrate toward it.

chemoautotroph (ke'mo-aw'to-trōf) a chemoautotrophic microorganism.

chemoautotrophic (kem'o-aw'to-trōf'ik) capable of synthesizing cell constituents from carbon dioxide by means of the energy derived from inorganic reactions.

chemobiotic (ke'mo-bi-ō'tik) the combination of a chemotherapeutic agent and an antibiotic, as of one or more of the sulfonamide compounds with penicillin.

chemocautery (ke'mo-kaw'ter-e) destruction of tissue by application of a caustic chemical substance.

chemocephalia (ke'mo-sē-fa'le-ah) chamaecephaly.

chemocephaly (ke'mo-sēf'ah-le) chamaecephaly.

chemoreceptor (ke'mo-sep'tor) chemoreceptor.

chemocoagulation (ke'mo-ko-ag'u-la'shun) coagulation or destruction of neoplasm by the application of chemicals.

chemodectoma (ke'mo-dek-to'mah) [*chemo-* + *dektos* to be received or accepted + *-oma*] any tumor of the chemoreceptor system, such as a tumor of the carotid body, aortic pulmonary bodies, or glomus jugulare; called also *nonchromaffin paraganglioma*.

chemodifferentiation (ke'mo-dif'er-en-she-a'shun) the invisible point of decision which foreruns and controls the actual differentiation of cells into the rudimentary organs of the embryo.

chemodynesis (ke'mo-di'nē-sis) the initiation of cytoplasmic streaming in plant cells by chemicals.

chemoheterotroph (ke'mo-het'er-o-trōf') a microorganism, parasitic or saprophytic, deriving its energy and most of its carbon from the oxidation of preformed organic compounds.

chemoheterotrophic (ke'mo-het'er-o-trōf'ik) pertaining to a chemoheterotroph.

chemohormonal (ke'mo-hor-mō'nal) pertaining to drugs having hormone activity.

chemoimmunology (ke'mo-im-u-nol'o-je) the study of the chemical processes involved in immunity; immunochemistry.

chemokinesis (ke'mo-ki-ne'sis) [*chemo-* + Gr. *kinēsis* motion] increased activity of an organism due to the presence of a chemical substance.

chemokinetic (ke'mo-ki-net'ik) pertaining to or exhibiting chemokinesis.

chemolithotroph (ke'mo-lith'o-trōf) an organism that derives its energy from oxidation of inorganic compounds and its carbon from carbon dioxide.

chemolithotrophic (ke'mo-lith'o-trōf'ik) deriving energy from the oxidation of inorganic compounds of iron, nitrogen, sulfur, or hydrogen; said of bacteria.

chemoluminescence (ke'mo-loo'mī-nes'ens) luminescence produced by the direct transformation of chemical energy into light energy.

chemolysis (ke-mol'i-sis) [*chemo-* + Gr. *lysis* solution] chemical decomposition.

chemomorphosis (ke'mo-mor-fō'sis) [*chemo-* + Gr. *morphē* form] change of form due to chemical action.

chemonucleolysis (ke'mo-nu'kle-ol'i-sis) [*chemo-* + *nucleo* nucleus + *lysis*] dissolution of the nucleus pulposus of an intervertebral disk by injection of a chemolytic agent, e.g., the enzyme chymopapain; used especially in the treatment of herniation of a disk.

chemoorganotroph (ke'mo-or'gah-no-trōf') an organism that derives its energy and carbon from organic compounds.

chemoorganotrophic (ke'mo-or'gah-no-trōf'ik) deriving energy from the oxidation of organic compounds; said of bacteria.

chemopallidectomy (ke'mo-pal'i-dek'to-me) [*chemo-* + *pallidum* + *ektomē* excision] creation of a lesion of the globus pallidus by destruction of tissue by a chemical agent.

chemopallidothalamectomy (ke'mo-pal'i-do-thal'ah-mek'to-me) creation of a lesion of the globus pallidus and thalamus by a chemical agent.

chemopharmacodynamic (ke'mo-far'mah-ko-di-nam'ik) denoting the relationship between chemical constitution and biologic or pharmacologic activity.

chemophysiology (ke'mo-fiz'i-ol'o-je) biochemistry.

chemoprophylaxis (ke'mo-pro'fi-lak'sis) [*chemo-* + Gr. *phylax* an advanced guard] use of a chemotherapeutic agent as a means of preventing development of a specific disease. **primary c.**, prophylactic use of a chemotherapeutic agent before

infection has occurred in an individual. **secondary c.**, prophylactic use of a chemotherapeutic agent in an individual after infection has occurred (with *Mycobacterium tuberculosis*, for example) but before disease has become manifest.

chemopsychiatry (ke'mo-si-ki'ah-tre) the use of drugs in the treatment of mental and emotional disorders; psychopharmacology.

chemoreception (ke'mo-re-sep'shun) [*chemo-* + L. *receptio*, from *recipere* to receive] the process of being sensitive to or perceiving chemical stimuli in the surrounding medium.

chemoreceptor (ke'mo-re-sep'tor) 1. a receptor adapted for excitation by chemical substances, e.g., olfactory and gustatory receptors, or a sense organ, as the carotid body or the aortic (supracardial) bodies, which is sensitive to chemical changes in the blood stream, especially reduced oxygen content, and reflexly increases both respiration and blood pressure. See *receptor*. 2. a supposed group of atoms in cell protoplasm having the power of fixing chemicals, in the same way as bacterial poisons are fixed. Called also *chemoceptor*.

chemoresistance (ke'mo-re-zis'tans) specific resistance acquired by cells to the action of chemicals.

chemosensitive (ke'mo-sen'si-tiv) sensitive to changes in chemical composition.

chemosensory (ke'mo-sen'so-re) relating to the perception of chemical substances, as in odor detection.

chemosotherapy (ke'mo-se'ro-ther'ah-pe) the treatment of disease with both drugs and serum.

chemosis (ke-mo'sis) [Gr. *chemōsis*] excessive edema of the ocular conjunctiva.

chemosmosis (ke'mos-mo'sis) chemical action taking place through an intervening membrane.

chemosmotic (ke'mos-mot'ik) pertaining to chemosmosis.

chemisorption (kem'o-sorp'shun) chemisorption.

chemosphere (ke'mo-sfēr) the layer of the upper atmosphere where photochemical reactions become important (30–80 km.).

chemostat (ke'mo-stat) an apparatus in which the environment is so controlled that bacterial populations are maintained in a steady state of continuous cell division in a constant environment.

chemosterilant (ke'mo-ster'i-lant) a chemical compound the ingestion of which causes sterility of an organism; such compounds have been used as a means of controlling various insects and other pests by inducing sterility in the male.

chemosurgery (ke'mo-sur'jer-e) the destruction of tissue by chemical agents; originally applied to chemical fixation of malignant, gangrenous, or infected tissue, with the use of frozen sections to facilitate systematic microscopic control of the extent of ablation.

chemosynthesis (ke'mo-sin'the-sis) [*chemo-* + Gr. *synthesis* putting together] the synthesis of carbohydrate from carbon dioxide and water as a result of the energy derived from chemical reactions, rather than from absorbed light. Such synthesis is carried out by certain bacteria and algae. Cf. *photosynthesis*.

chemosynthetic (ke'mo-sin-thet'ik) pertaining to or characterized by chemosynthesis.

chemotactic (ke'mo-tak'tik) of or pertaining to chemotaxis.

chemotaxin (ke'mo-tak'sin) a substance, e.g., a complement component, that induces chemotaxis.

chemotaxis (ke'mo-tak'sis) [*chemo-* + Gr. *taxis* arrangement] the movement of an organism or an individual cell, such as a leukocyte, in response to a chemical concentration gradient. **leukocyte c.**, the response of leukocytes to products formed in immunologic reactions, wherein leukocytes are attracted to and accumulate at the site of the reaction; it is a part of the inflammatory response. **negative c.**, movement of an organism from a region of high to a region of low concentration of a specific chemical compound or element; tactile irritability. **positive c.**, movement of an organism from a region of low to a region of high concentration of a specific chemical compound or element.

chemothalamectomy (ke'mo-thal-ah-mek'to-me) destruction of a portion of the thalamus by the introduction of chemical agents.

chemotherapeutic (ke'mo-ther-ah-pu'tik) pertaining to chemotherapy.

chemotherapeutics (ke'mo-ther-ah-pu'tiks) chemotherapy.

chemotherapy (ke'mo-ther'ah-pe) the treatment of disease by chemical agents; first applied to use of chemicals that affect the causative organism unfavorably but do not harm the patient.

chemotic (ke-mot'ik) 1. pertaining to or affected with chemosis. 2. an agent that increases the production of lymph in the ocular conjunctiva.

chemotrophic (ke'mo-trof'ik) deriving energy from the oxidation of organic (chemoorganotrophic) or inorganic (chemolithotrophic) compounds; said of bacteria.

chemotropic (ke'mo-trop'ik) of or pertaining to chemotropism.

chemotropism (ke-mot'ro-pizm) [*chemo-* + Gr. *tropos* a turning] an orienting response or a growth toward a chemical stimulus in plants and animals; chemotaxis.

chemurgy (kem'er-ge) [*chemo-* + Gr. *ergon* work] chemistry applied to the industrial use of raw organic products, especially agricultural products.

chenodeoxycholate (ke'no-de-ok-si-ko'lāt) the salt or dissociated form of chenodeoxycholic acid; see under *acid*.

chenodiol (ke'no-di'ōl) chemical name: 3α,7α-dihydroxy-5β-cholan-24-oic acid; an anticholelithogenic, C₂₄H₄₀O₄.

Chenopodium (ke'no-po'de-um) a genus of herbs of the temperate regions of the world; see also under *oil*.

chenotherapy (ke'no-ther'ah-pe) treatment with chenodeoxycholic acid, as for dissolution of gallstones.

cheoplastic (ke'o-plas'tik) pertaining to cheoplasty.

cheoplasty (ke'o-plas'te) [Gr. *chein* to pour + *plassein* to form] a method once used to mold artificial teeth with an alloy of tin, silver, and bismuth.

Cherchewski's (Cherchewski's) disease (sher-shev'skēz) [Mikhail Cherchewski, Russian physician] see under *disease*.

cheromania (ke'ro-ma'ne-ah) [Gr. *chairein* to rejoice + *mania* madness] (obs.) mania characterized by exaltation and cheerfulness.

Cheron's serum (sha-rawz') [Jules Cheron, French gynecologist, 1837–1900] see under *serum*.

cherry (cher'e) [L. *cerasus*] the name of various rosaceous trees and species of the genus *Prunus*; see *Prunus virginiana*.

choke c., *Prunus virginiana*. **c. laurel**, an Old World evergreen cherry tree, *Prunus laurocerasus* L. (Rosaceae); the source of a preparation (cherry laurel water) formerly used as an antispasmodic, sedative, and anodyne, and for cough. **rum c.**, *Prunus serotina*. **wild c.**, 1. *Prunus serotina*. 2. [USP] the carefully dried stem bark of *P. serotina*, used in a syrup as a flavored vehicle for drugs; called also *wild black cherry bark*. See also under *symp*.

cherubism (cher'ū-bizm) [*cherub* + *-ism*] hereditary and progressive bilateral swelling at the angle of the mandible, sometimes involving the entire jaw. The swelling imparts a cherubic look to the face, in some cases enhanced by upturning of the eyes. Called also *familial fibrous dysplasia of jaw* and *familial bilateral giant cell tumor*.

Chervin's treatment (method) (sher-vaz') [Claudius Chervin, French teacher, 1824–1896] see under *treatment*.

chest (chest) the thorax. **alar c.**, flat chest. **barrel c.**, a rounded, bulging chest with abnormal increase in the anteroposterior diameter, showing little movement on respiration; seen in emphysema and in kyphosis. **blast c.**, pulmonary concussion and hemorrhage occurring as the result of injury by a blast. **cobbler's c.**, a chest showing a sinking in at the lower end of the sternum. **flail c.**, one whose wall moves paradoxically with respiration, owing to multiple fractures of the ribs. **flat c.**, deformity of the chest in which it is flattened from front to back; called also *alar c.* and *ptyergoid c.* **foveated c.**, funnel chest. **funnel c.**, a chest in which there is funnel-shaped depression in the middle of the anterior thoracic wall, the deepest part being in the sternum; called also *foveated c.*, *funnel breast*, *pectus excavatum* or *recurvatum*, *koilosternia*, *chonechondrosternon*, and *trichterbrust*. **keeled c.**, pigeon breast. **paralytic c.**, a long and narrow chest with emaciation so that the ribs stand out sharply under the skin. **phthinoid c.**, the same as *flat chest*; so called as indicating a tubercular diathesis. **pigeon c.**, pigeon breast. **ptyergoid c.**, flat chest. **tetrahedron c.**, a chest that suggests a solid with four sides, each an equilateral triangle, the chest projecting in a peak between the nipples.

chestnut (chest'nut) 1. *Castanea*. 2. one of the masses of horn on the medial surface of the forearm and on the distal part of the medial surface of the tarsus of horses. **horse c.**, *Aesculus*.

Cheyletiella (sha'lē-te-el'lah) a genus of mites. **C. parasitovorax**, a species infesting the cat or on other mites infesting cats, and which may cause a dermatosis in human beings.

Cheyne-Stokes asthma, etc. (chān'stōks) [John Cheyne, Scottish physician, 1777–1836; William Stokes, Irish physician, 1804–1878] see *cardiac asthma*, under *asthma*, and see under *nystagmus*, *psychosis*, and *respiration*.

CHF congestive heart failure.

CHI₃ iodoform.

C₂H₅I ethyl iodide.

Chiari's network (reticulum), syndrome (disease) (ke-ar'ēz) [Hans Chiari, Austrian pathologist, 1851–1916] see under *network*, and see *Budd-Chiari syndrome*, under *syndrome*.

Chiari-Arnold syndrome (ke-ar'e-ar'nold) [Hans von Chiari; Julius Arnold, Austrian pathologist, 1835–1915] Arnold-Chiari deformity.

Chiari-Frommel syndrome (disease) (ke-ar'e-from'el) [Johann Baptist Chiari, German obstetrician, 1817–1854; Richard Frommel, German gynecologist, 1854–1912] see under *syndrome*.

chiasm (ki'azm) [L., Gr. *chiasma*] a decussation or X-shaped crossing; see *chiasma*. **c. of digits of hand**, *chiasma tendinum digitorum manus*. **optic c.**, *chiasma opticum*. **tendinous c. of flexor digitorum sublimis muscle**, *chiasma tendinum digitorum manus*.

chiasma (ki-as'mah), pl. *chiasmata* [L.; Gr.] a decussation or X-shaped crossing. In genetics, the points at which members of a chromosome pair are in contact during the prophase of meiosis and because of which recombination, or crossing over, occurs on separation. In official anatomical nomenclature the crossing of two elements or structures, as the optic nerves. **c. op'ticum** [NA], the optic chiasm: the part of the hypothalamus formed by the decussation, or crossing, of the fibers of the optic nerve from the medial half of each retina; called also *optic decussation* and *decussation of optic nerve*. **c. ten'dinum digito'rum ma'nus** [NA], the crossing of the tendons of the flexor digitorum profundus through the tendons of the flexor digitorum sublimis; called also *c. of digits of hand* and *tendinous c. of flexor sublimis*.

chiasmal (ki-as'mal) chiasmatic.

chiasmata (ki-as'mah-tah) plural of *chiasma*.

chiasmatic (ki-az-mat'ik) resembling a chiasm; crosswise.

chiasmotypy (ki-az'mah-ti'pe) [Gr. *chiasma* a crossing + *type*] crossing over.

chiasmic (ki-az'mik) chiasmatic.

chiasmometer (ki'as-tom'è-ter) [Gr. *chastos* crossed + *metron* measure] an apparatus for measuring any deviation of the optic axes from their normal parallelism.

chichism (che'chizm) a term in northern South America for pellagra.

chickenpox (chik'en-poks) a highly contagious disease caused by the herpes zoster virus and characterized by crops of vesicular eruptions confined mainly to the face and trunk, appearing over a period of a few days to a week, after an incubation period of 17–21 days. The lesions begin as macules, develop quickly into vesicles, and then become crusted. The disease is usually benign in children, but may be serious in infants, children with underlying malignancy, and adults; varicella pneumonia may occur, particularly in adults. Called also *varicella*.

chick-pea (chik'pe) the plant *Cicer arietinum* of Southern Europe whose seeds are used as food and may be toxic to certain individuals.

Chiene's operation (shēnz) [John Chiene, Scottish surgeon, 1843–1923] see under *operation*.

Chievitz's layer, organ (che'wits-ez) [Johan Henrik Chievitz, Danish anatomist, 1850–1901] see under *layer* and *organ*.

chigger (chig'er) the six-legged red larva of mites of the family Trombiculidae, which attach to the skin of their hosts, and whose bites produce a wheal, usually accompanied by intense itching and severe dermatitis. The habitat of these mites is tall grass and underbrush. *Eutrombicula alfreddugèsi* is the common chigger of the United States; *E. splendens* is a species found in southeastern localities; and *Trombicula autumnalis* is the chigger of Europe. Some species in the Asiatic-Pacific region are vectors of the rickettsiae of scrub typhus. Chiggers are to be distinguished from chigoes. Called also *bête rouge*, *harvest mite*, *mower's mite*, *red bug*, and *red mites*.

chigo (chig'o) chigoe.

chigoe (chig'o) the flea, *Tunga* (*Dermatophilus*, *Sarcopsylla*, *Pulex*) *penetrans*, of tropical and subtropical America and Africa. The pregnant female flea burrows into the skin of the feet (often beneath the nail), legs, or other part of the body, causing intense irritation and ulceration, and sometimes leading to spontaneous amputation of a digit. Chigoes are to be distinguished from chiggers. Called also *burrowing flea*, *chigo*, *jigger*, and *sand flea*.

chikungunya (chik'un-gun'yah) a febrile viral disease that occurred in an outbreak of infection in the Newala district of Tanganyika in 1953; it resembles dengue, but without headache.

chilblain (chil'blān) [L. *pernio*] a recurrent localized itching, swelling and painful erythema on the fingers, toes, or ears, produced by mild frostbite; called also *pernio* and *erythema pernio*. **necrotized c.**, *sarcoidosis*.

child (child) the human young, from infancy to puberty. **pre-school c.**, a child between two and six years of age. **school c.**, a child between six and ten to twelve years of age.

childbed (child'bed) the puerperal state or period.

childbirth (child'birth) the act or process of giving birth to a child; see *labor*.

childhood (child'hood) the period of life of the human young generally considered to extend from infancy to puberty.

chilitis (ki-li'tis) cheilitis.

chill (chil) a shivering or shaking; an attack of involuntary contractions of the voluntary muscles, accompanied by a sense of cold and pallor of the skin; called also *ague*. **brass c.**, *brazier's c.*, see *brassfounder's fever*. **peritubular contractile c's**, Bloom & Fawcett p. 807 myoid c's, (def. 1). **congestive c.**, pernicious malaria with gastrointestinal congestion and diarrhea, preceded by a chill. **creeping c.**, a chilly sensation, without any definite tremor or chattering of the teeth. **ner-**

vous c., a tremor due to some form of excitement and unaccompanied by alteration of temperature. **shaking c.**, a chill in which there is a definite tremor. **spelter c's**, see under *fever*. **urethral c.**, a chilly sensation, with or without tremor, sometimes following the passage of a catheter. **zinc c.**, spelter's fever.

chilo- for words beginning thus, see also words beginning *chei-*lo-.

Chilodon (ki'lo-don) a genus of free-living ciliates, some species of which have been described as probable contaminants of human feces. *C. dentatus* has been found in the feces in a case of dysentery. *C. uncinatus* was found in the feces in a case of schistosomiasis.

Chilognatha (ki-log'nah-thah) an order of arthropods of the class Diplopoda, superclass Myriapoda, embracing the millipedes.

chilomastigiasis (ki'lo-mas'ti-gi'ah-sis) infection with *Chilomastix*.

Chilomastix (ki'lo-mas'tiks) a genus of minute piriform protozoa of the order Polymastigida, class Zoomastigophora, with three anterior flagella and a fourth undulating within the cleft formed by the cytosome; the organisms are found in the intestine of vertebrates. **C. mesnili**, a very common, widely distributed species found as a commensal in the colon and cecum of humans; both trophozoites and cystic stages are found in feces.

chilomastixiasis (ki'lo-mas'tik-si'ah-sis) chilomastigiasis.

Chilopoda (ki-lop'ò-dah) [Gr. *cheilos* lip + *pous* foot] a class of the phylum Arthropoda, embracing the centipedes.

chimaera (ki-me'rah) chimera.

chimera (ki-me'rah) [Gr. *chimaira* a mythological fire-spouting monster with a lion's head, goat's body, and serpent's tail] an individual organism whose body contains cell populations derived from different zygotes, of the same or of different species, occurring spontaneously, as in twins (blood group chimeras), or produced artificially, as an organism which develops from combined portions of different embryos, or one in which tissues or cells of another organism have been introduced. Cf. *mosaic*. **heterologous c.**, a chimera in which the foreign cells or tissues are derived from an organism of a different species. **homologous c.**, a chimera in which the foreign cells or tissues are derived from an organism of the same species but of a different genotype. **isologous c.**, a chimera in which the foreign cells or tissues are derived from a different organism of the same genotype, such as an identical twin. **radiation c.**, an organism that survives with immunologic characteristics of host and donor after a bone marrow graft from an antigenically different donor, the host having first been subjected to sublethal whole-body irradiation so that there is no immune response to foreign cells by the donor.

chimerism (ki-mēr'izm) the quality of being a chimera; in genetics, the presence in an individual of cells of different origin, as of blood cells derived from a dizygotic co-twin. Cf. *mosaicism*.

chimpanzee (chim-pan'ze, chim-pan-ze') an anthropoid ape, *Pan troglodytes*, inhabiting the tropical rain forests of Africa, used for experimental purposes because of its susceptibility to some of the diseases of man and in behavioral studies because of its high level of intelligence.

chin (chin) the anterior prominence of the lower jaw; the mentum [NA]. **galoche c.** (gah-losh') [Fr. "galosh"], a long pointed chin.

chinacrine (kin'ah-krin) quinacrine.

chincap (chin'kap) an extraoral orthodontic appliance for applying pressure to the chin, designed to exert an upward and backward force on the mandible in anterior cross-bite, skeletal Class III, and open bite malocclusions; also utilized for anchorage in some forms of malocclusion.

chiniofon (kin'e-o-fon) a canary yellow powder, containing 26.5–29.0 per cent iodine, formerly used as an antiprotozoan in amebic dysentery.

chionablepsia (ki'o-nah-blep'se-ah) [Gr. *chiōn* snow + *ablepsia* blindness] snow blindness.

chip (chip) a small piece, as of something broken off. **bone c's**, small pieces of bone, usually cancellous, generally used to fill in bony defects to facilitate recalcification.

chip-blower (chip-blo'er) chip syringe; see under *syringe*.

chir- see *chiro*; for words beginning thus, see also those beginning *cheir* and *cheiro*.

Chiracanthium (ki'rah-kan'the-um) a genus of venomous spiders, two species of which, *C. inclusum* and *C. diversum*, have produced local reactions in man in California and Hawaii, respectively.

chiro-, chir- (ki'ro, kir') [Gr. *cheir* hand] a combining form denoting relationship to the hand; for words beginning thus, see also those beginning *cheir* and *cheiro*.

chirobrachialgia (ki'ro-bra'ke-al'je-ah) cheirobrachialgia.

chirognostic (ki'rog-nos'tik) cheirognostic.

chiromegaly (ki'ro-meg'ah-le) cheiromegaly.

Chironomidae (ki'ro-nom'i-de) a family of the suborder Nematocera, order Diptera, that comprises the true midges.

Chironomus (ki-ron/'o-mus) a genus of gnatlike flies noted for their giant chromosomes.

chioplasty (ki/'ro-plas/'te) cheiroplasty.

chiropodalgia (ki/'ro-po-dal/'je-ah) cheiropodalgia.

chiropodical (ki/'re-pod/'f-kal) pertaining to chiropody (now called *podiatry*).

chiropodist (ki-rop/'o-dist) podiatrist.

chiropody (ki-rop/'o-de) podiatry.

chiropactic (ki-'ro-prak/'tik) [*chiro-* + Gr. *prattein* to do] a system of therapeutics based upon the claim that disease is caused by abnormal function of the nerve system. It attempts to restore normal function of the nerve system by manipulation and treatment of the structures of the human body, especially those of the spinal column. Called also *chiropaxis*.

chiropactor (ki-'ro-prak/'tor) a practitioner of chiropactic.

chiropaxis (ki-'ro-prak/'sis) chiropactic.

chiroscope (ki/'ro-skōp) cheiroscope.

chirosppasm (ki/'ro-spazm) cheiropsasm.

chirurgenic (ki-'rur-'jer/'ik) [*chirurgia* + Gr. *gennan* to produce] arising as a result of a surgical procedure.

chirurgion (ki-rur/'jun) archaic term for a surgeon.

chirurgery (ki-rur/'jer-e) [L. *chirurgia*, from Gr. *cheir* hand + *ergon* work] archaic term for surgery.

chirurgic (ki-rur/'jik) archaic term for surgical.

chisel (chis/'l) a cutting instrument with a beveled edge for planing or smoothing a surface, as during cavity preparations in teeth. **binangled c.**, one whose blade forms two angles before meeting with the shank.

chi-square (ki/'skwār) see under *tests*.

chitin (ki/'tin) [Gr. *chitōn* tunic] a white, insoluble, horny polysaccharide, $C_{30}H_{50}O_{19}N_4$, the principal constituent of the shells of arthropods and the shards of beetles and found in certain fungi. On hydrolysis it yields a linear homopolymer of β -(1-4)-2-acetamido-2-deoxy-D-glucose (an acetyl glucosamine). Next to cellulose, it is the most abundant natural polysaccharide.

chitinase (ki/'ti-nās) an enzyme that catalyzes the hydrolysis of chitin to acetyl glucosamine.

chitinous (kit/'i-nus) composed of or of the nature of chitin.

chitobiose (ki/'to-bi/'ōs) a disaccharide composed of two glucosamine units, obtained by hydrolysis of de-acetylated chitin (chitosan).

chitosan (ki/'to-san) a polysaccharide composed of repeating glucosamine units; obtained by de-acetylation of chitin and used in the preparation of chitobiose.

chitose (ki/'tōs) a sugar, 2,5-anhydro-D-mannose, $C_6H_{12}O_4$, formed by the reduction of chitonic acid.

chitotriose (ki/'to-tri/'ōs) a trisaccharide composed of three glucosamine units; obtained from chitosan by hydrolysis.

chiufa (che-oo/'fah) a gangrenous inflammation of the colon and rectum occurring in mountainous regions of South America and South Africa.

chlamydemia (klah-mi-de/'me-ah) the presence of chlamydiae in the blood.

Chlamydia (klah-mid/'e-ah) [Gr. *chlamys* cloak] a genus of the family Chlamydiaceae, order Chlamydiales, occurring as two species which cause a wide variety of diseases in man and animals. Called also *PLT group* and, formerly, *Miyagawanella*, *Bedsonia*, and *Chlamydozoon*. **C. psittaci**, a species, various strains of which cause psittacosis in man and psittacine birds and ornithosis in nonpsittacine birds; pneumonitis in cattle, sheep, swine, cats, goats, and horses; epizootic bovine abortion and enzootic abortion of ewes; enteritis of calves; sporadic encephalomyelitis of calves; epizootic chlamydiosis of hares and muskrats; and conjunctivitis of cattle, sheep, and guinea pigs. **C. trachomatis**, a species various strains of which cause trachoma, inclusion conjunctivitis (or inclusion blennorrhoea), "nonspecific" urethritis, proctitis, mouse pneumonitis, and lymphogranuloma venereum. It is differentiated from *C. psittaci* by its intracytoplasmic production of glycogen and susceptibility to sulfadiazine. Called also *TRIC group*.

chlamydia (klah-mid/'e-ah), pl. *chlamydiae*. Any member of the genus *Chlamydia*.

Chlamydiaceae (klah-mid/'e-a/'se-e) a family of the order Chlamydiales consisting of small coccoid microorganisms that have a unique, obligately intracellular developmental cycle and are incapable of synthesizing ATP. They induce their own phagocytosis by host cells, in which they then form intracytoplasmic colonies. They are parasites of birds and mammals (including man), in which they cause a variety of diseases (see *Chlamydia*). They have also been isolated from sanguivorous arachnids and insects, but the role of arthropods in the transmission of chlamydial diseases is unclear. The family contains a single genus, *Chlamydia*.

chlamydiae (klah-mid/'e-e) plural of *chlamydia*.

chlamydial (klah-mid/'e-al) pertaining to or caused by *Chlamydia*.

Chlamydiales (klah-mid/'e-al-ēz) an order of coccoid, gram-negative, parasitic microorganisms that multiply only within the cytoplasm of vertebrate host cells by a unique developmental cycle. It includes one family, Chlamydiaceae, which was formerly assigned to the order Rickettsiales.

chlamydiosis (klah-mid/'e-o/'sis) 1. a general term for any infection or disease caused by any species of *Chlamydia* (q.v.). 2. a term embracing psittacosis and ornithosis. **epizootic c.**, a fatal septicemia of muskrats and snowshoe hares caused by a strain of *Chlamydia psittaci*.

Chlamydobacteriaceae (klah-mi/'do-bak-te/'re-a/'se-e) a family of Schizomycetes (order Chlamydobacteriales), made up of filamentous, alga-like cells, frequently showing false branching. It includes three genera: *Leptothrix*, *Sphaerotilus*, and *Toxothrix*.

Chlamydobacteriales (klah-mi/'do-bak-te/'re-a/'lēz) an order of Schizomycetes, made up of nonpigmented alga-like bacteria occurring in filaments which may or may not be ensheathed, and which frequently show false branching as a result of lateral displacement of cells within a sheath. It includes three families: Chlamydobacteriaceae, Crenotrichaceae, and Peloplocaceae.

Chlamydophrys (klah-mid/'o-fris) a genus of free-living or coprozoic protozoa. **C. anhelys**, **C. sterco'rea**, species of coprozoic protozoa found in the feces of man and various animals.

chlamydospore (klam/'i-do-spōr') [Gr. *chlamys* cloak + *spore*] a thick-walled intercalary or terminal asexual spore formed by the rounding-up of a cell; it is not shed. See *spore*. Cf. *condium*.

Chlamydozoaceae (klam/'i-do/'zo-a/'se-e) a name formerly given the family Chlamydiaceae.

Chlamydozoon (klam/'i-do-zo/'on) a name formerly given a genus of gram-negative microorganisms; see *Chlamydia*.

chloasma (klo-az/'mah) [Gr. *chloazein* to be green] melasma. **c. grava'da'rum**, melasma. **c. hepaticum**, discoloration of the skin allegedly resulting from disorder of the liver; presumably indirectly due to accumulation of estrogen in the blood. **c. periora'le virgin'ium**, brownish or blackish pigmentation, associated with macular seborrhea, situated chiefly around the mouth but involving other parts of the face, and occurring in normal young girls at the time of the first menstrual period. **c. uteri'num**, melasma gravidarum.

chlrophedianol hydrochloride (klo/'fē-di/'ah-nol) chemical name: 2-chloro- α -[(dimethylamino)ethyl]- α -phenylbenzenemethanol hydrochloride. An antitussive agent, $C_{17}H_{20}ClNO \cdot HCl$, occurring as a white, crystalline powder; administered orally.

chloracetization (klor-as/'e-ti-za/'shun) the production of local anesthesia by application of equal parts of chloroform and glacial acetic acid; no longer used.

chloracne (klor-ak/'ne) an acneiform eruption caused by exposure to chlorine compounds.

chloral (klo/'ral) [*chlorine* + -al] 1. chemical name: trichloroacetaldehyde. A colorless, oily liquid, $Cl_3C \cdot CHO$, having a pungent, irritating odor, and prepared by the mutual action of alcohol and chlorine. It is used in the manufacture of chloral hydrate and DDT. 2. chloral hydrate. **c. betaine**, an adduct formed by the reaction of chloral hydrate with betaine, occurring as a white, crystalline powder, having actions and uses similar to those of chloral hydrate but having the advantage of eliminating undesirable gastrointestinal symptoms sometimes associated with chloral hydrate; administered orally. **butyl c.**, see *butylchloral hydrate*. **c. carmine**, a staining fluid made of carmine, 0.05 gm.; hydrochloric acid, 30 minims; alcohol, 20 cc.; and chloral hydrate, 25 gm. **c. hydrate** [USP], chemical name: 2,2,2-trichloro-1,1-ethanediol. A hypnotic and sedative, $C_2H_2Cl_3O_2$, occurring as colorless, transparent, or white crystals; administered orally.

chloralism (klo/'ral-izm) a morbid condition caused by excessive use of chloral.

chloralization (klo/'ral-i-za/'shun) 1. chloralism. 2. formerly, anesthesia by the use of chloral.

chloralose (klo/'rah-lōs) chemical name: 1,2,0-(2,2,2-trichloroethylidene)- α -D-glucofuranose. A compound of chloral and glucose, $C_6H_{11}Cl_3O_6$, which has been used as a hypnotic, but is primarily used as a surgical anesthetic in laboratory animals, rodenticide for mice, and bird repellent on grain. Called also *α -chloralose*.

chloraubucil (klo-ram/'bu-sil) [USP] chemical name: 4-[p-bis(2-chloroethyl)amino]benzenesulfonamide. A cytotoxic alkylating agent, $C_{14}H_{16}Cl_2NO_2$, occurring as an off-white, slightly granular powder; used as an antineoplastic in the palliative treatment of Hodgkin's disease, chronic lymphocytic leukemia, and lymphosarcoma, administered orally.

chloraamine-T (klo/'rah-mēn) chemical name: N-chloro-4-methylbenzenesulfonamide sodium salt. A chlorine derivative, $C_7H_7ClNNaO_2S$, which has been used in solution as a topical antiseptic to irrigate and dress wounds and as a mouthwash, and has been used to sterilize drinking water.

chloramphenicol (klo/'ram-fen/'i-kol) [USP] chemical name: [R-(R*, R*)]-2, 2-dichloro-N-[2-hydroxy-1-(hydroxymethyl)-2-(4-nitrophenyl)ethyl]acetamide. A broad-spectrum antibiotic, $C_{11}H_{12}Cl_2N_2O_6$, originally derived from *Streptomyces venezuelae* and later shown to be elaborated by other streptomyces, and produced synthetically. It occurs as fine, white to grayish white or yellowish

white, needle-like crystals or elongated plates, and is effective against rickettsiae, gram-positive and gram-negative bacteria, and certain spirochetes, being used especially in the treatment of typhus and other rickettsial infections and in typhoid, shigellosis, and related enteric diseases; used as an antibacterial, administered orally or applied topically to the conjunctiva, or as an antirickettsial, administered orally. **c. palmitate** [USP], the monopalmitic ester of chloramphenicol, $C_{27}H_{42}Cl_2N_2O_6$, occurring as a fine, white, unctuous, crystalline powder, having the same actions and uses as the base; administered orally. **c. sodium succinate**, the sodium succinate derivative of chloramphenicol, $C_{15}H_{15}Cl_2N_2NaO_8$, occurring as a light yellow powder, having the same actions and uses as the base; administered intravenously. Sterile chloramphenicol sodium [USP] conforms to FDA regulations concerning antibiotic drugs.

chlorate (klo'rat) any salt of chloric acid.

chlorazaniil hydrochloride (klo-rah'zah-nil) chemical name: *N*-(4-chlorophenyl)-1,3,5-triazine-2,4-diamine monohydrochloride; a diuretic, $C_8H_8ClN_4$.HCl.

chlorbutol (klör-bu'tol) chlorobutanol.

chlorcyclizine hydrochloride (klör-si'klī-zēn) [USP] chemical name: 1-[(4-chlorophenyl)phenylmethyl]-4-methylpiperazine monohydrochloride. An antihistaminic, $C_{18}H_{21}ClN_2$.HCl, occurring as white, crystalline powder; administered orally.

chlordane (klör'dän) chlordane.

chlordane (klör'dän) a poisonous substance of the chlorinated hydrocarbon group, used as an insecticide; human poisoning may occur by percutaneous absorption, ingestion, or inhalation.

chlordantoin (klör-dan'to-in) chemical name: 5-(1-ethylpentyl)-3-[(trichloromethyl)thio]-2,4-imidazolidinedione. An antifungal agent, $C_{11}H_{17}Cl_3N_2O_2S$, effective against various fungi, including *Candida albicans*; used topically in the treatment of fungal infections of the vulvovaginal region and of the skin.

chlor diazepam (klör'di-az'pōk'sid) [USP] chemical name: 7-chloro-*N*-methyl-5-phenyl-3*H*-1,4-benzodiazepin-2-amine-4-oxide. One of the benzodiazepine tranquilizers, $C_{16}H_{14}ClN_2O$, occurring as a yellow, crystalline powder; administered orally in the treatment of conditions in which anxiety, tension, and apprehension are prominent symptoms, in acute anxiety, and in chronic alcoholism or alcohol withdrawal. **c. hydrochloride** [USP], the monohydrochloride salt of chlor diazepam, $C_{16}H_{14}Cl_2N_2$.HCl, occurring as a white, or almost white, crystalline powder; used for the same purposes as the base, administered orally, intravenously, or intramuscularly.

chlordimorine hydrochloride (klör-dim'or-ēn) chemical name: 4-[3-(3-chloro-4-biphenyl)oxy]propylmorpholine hydrochloride; an antifungal agent, $C_{18}H_{22}ClNO_2$.

chlorella (klo-rel'ah) a genus of fresh-water green algae which are the source of chlorellin and are used in studies of photosynthesis.

chlorellin (klo-rel'in) a bacteriostatic substance derived from fresh water algae of the genus *Chlorella*.

chloremia (klo-re'me-ah) [Gr. *chlōros* green + *haima* blood + *-ia*] 1. chlorosis. 2. hyperchloremia.

chlorenchyma (klo-ren'kī-mah) the chlorophyll-bearing tissue of plants.

chloretic (klo-ret'ik) an agent that accelerates the flow of bile.

Chloretone (klo're-tōn) trademark for a preparation of chlorobutanol.

chlorguanide (klör-gwan'id) proguanil.

chlorhexidine (klör-heks'i-dēn) chemical name: *N,N'*-bis(4-chlorophenyl)-3,12-diimino-2,4,11,13-tetraazatetradecanediiimide. An antibacterial, $C_{22}H_{30}Cl_2N_{10}$, effective against a wide variety of gram-negative and gram-positive organisms. **c. acetate**, the diacetate salt of chlorhexidine, $C_{22}H_{30}Cl_2N_{10}O_4 \cdot 2C_2H_4O_2$, occurring as a white, crystalline powder, having the same actions as the base; used mainly as a preservative for eye-drops. **c. gluconate**, the digluconate salt of chlorhexidine, $C_{22}H_{30}Cl_2N_{10} \cdot 2C_6H_{12}O_7$, having the same actions as the base; used as a topical anti-infective for the skin and mucous membranes. **c. hydrochloride**, the dihydrochloride salt of chlorhexidine, $C_{22}H_{30}Cl_2N_{10} \cdot 2HCl$, occurring as a white or almost white, crystalline powder, having the same actions as the base; used as a topical anti-infective for the skin and mucous membranes.

chlorhistechia (klör'his-tek'e-ah) [*chloride* + Gr. *histos* tissue + *echein* to hold + *-ia*] the presence of an abnormally large amount of chloride in a tissue.

chlorhydria (klör-hi'dre-ah) an excess of hydrochloric acid in the stomach.

chloric (klo'rik) [L. *chloricus*] derived from or containing pentavalent chlorine; a term used to distinguish those compounds which contain a smaller proportion of chlorine than the chlorous compounds, and forming salts known as chlorates.

chloride (klo'rid) a salt of hydrochloric acid; any binary compound of chlorine in which the latter is the negative element. Formerly called *muriate*. **acid c.**, a substance formed by substituting chlorine for hydroxyl in an acid molecule. **ferric c.**, orange-yellow or brownish yellow crystalline pieces, $FeCl_3 \cdot 6H_2O$,

very soluble in water; used as a reagent and as a diagnostic aid in phenylketonuria; it was formerly used as a hematinic in the treatment of iron deficiency anemias, and has been used as a topical astringent and styptic. Called also *iron chloride*. **mercuric c.**, mercury bichloride. **mercurous c.**, calomel. **stannous c.**, chemical name: tin chloride ($SnCl_2$) dihydrate; a pharmaceutical aid, $SnCl_2 \cdot 2H_2O$.

chloridemia (klo'rī-de'me-ah) [*chloride* + Gr. *haima* blood + *-ia*] (obs.) hyperchloremia.

chloridimeter (klo'rī-dim'ē-ter) [*chloride* + Gr. *metron* measure] an instrument for measuring the chloride content of the urine or other fluid.

chloridimetry (klo'rī-dim'ē-tre) the determination of the chloride content of fluids.

chloridion (klo'rid-i'on) negatively ionic chlorine, the anion of hydrochloric acid and the chlorides.

chloridometer (klo'rī-dom'ē-ter) chloridimeter.

chloridorrhea (klo'rīd-o-re'ah) diarrhea with an excess of chlorides in the stool.

chloriduria (klo'rī-du're-ah) [*chloride* + Gr. *ouron* urine + *-ia*] excess of chlorides in the urine.

chlorinated (klo'rī-nāt'ed) charged with chlorine.

chlorine (klor'ēn, klo'rēn, klo'rin) [L. *chlorum* or *chlorinum*, from Gr. *chlōros* green] a yellowish green, gaseous element, of suffocating odor; symbol, Cl; atomic number, 17; atomic weight, 35.453; specific gravity, 1.56. It is disinfectant, decolorant, and an irritant poison. It is used for disinfecting, fumigating, and bleaching, either in an aqueous solution or in the form of chlorinated lime. **c. dioxide**, an oxidizing and germicidal agent, ClO_2 , used in the purification of water and for bleaching.

chlorinum (klo-ri'num) [L.] (obs.) chlorine.

chloriodized (klör-i'o-dizd) containing chlorine and iodine.

chlorisondamine chloride (klör'i-son'dah-mēn) chemical name: 4,5,6,7-tetrachloro-1,3-dihydro-2-methyl-2-[2-(trimethylammonio)ethyl]-2*H*-isindolium dichloride. An asymmetrical bis-quaternary ammonium derivative with ganglionic blocking action, $C_{14}H_{20}Cl_6N_2$, used as an antihypertensive.

chlorite (klo'rit) any salt of chlorous acid.

chlormadinone acetate (klör-mah'dī-nōn) chemical name: 17-(acetyloxy)-6-chloro-pregna-4,6-diene-3,20-dione. A progestin, $C_{23}H_{28}ClO_4$, formerly used in oral contraceptive products.

chlormerodrin (klör-mer'o-drin) chemical name: [3-[(amino-carbonyl)amino]-2-methoxypropyl]chlormercury. An orally effective mercurial diuretic, $C_5H_{11}ClHgN_2O_2$, occurring as a white powder. **c. Hg 197** [USP], chlormerodrin tagged with radioactive mercury (^{197}Hg); used as a diagnostic aid in renal function determination, administered intravenously. **c. Hg 203** [NF], chlormerodrin tagged with radioactive mercury (^{203}Hg); used as a diagnostic aid in renal function determination, administered intravenously.

chlormethazanone (klör'meth-az'ah-nōn) chlormezanone.

chlormethyl (klör-meth'il) methyl chloride.

chlormezanone (klör-mez'ah-nōn) chemical name: 2-(4-chlorophenyl)tetrahydro-3-methyl-4*H*-1,3-thiazin-4-one. A muscle relaxant and tranquilizer, $C_{11}H_{12}ClN_2OS$, occurring as a white, crystalline powder; administered orally.

chloro- (klo'ro) [Gr. *chlōros* green] a combining form meaning green.

chloroazodin (klo'ro-a'zo-din) [USP] chemical name: *N,N'*-dichlorodiazenedicarboximidamide. An antibacterial, $C_2H_4Cl_2N_6$, which has been used as an antiseptic.

Chlorobacteriaceae (klo'ro-bak-te're-a'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Rhodobacteriineae), composed of microorganisms developing in environments containing considerable hydrogen sulfide and exposed to light, and containing green pigments resembling but not identical with chlorophylls. It includes six genera, *Chlorobacterium*, *Chlorobium*, *Chlorochromatium*, *Clathrochloris*, *Cylindrogloea*, and *Pelodictyon*.

Chlorobacterium (klo'ro-bak-te're-um) a genus of microorganisms of the family Chlorobacteriaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as nonmotile, often slightly curved rod-shaped cells growing symbiotically on the outside of protozoa. The type species is *C. symbioticum*.

Chlorobium (klo-ro'be-um) a genus of microorganisms of the family Chlorobacteriaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as spherical to rod-shaped cells, singly or in chains. It includes two species: *C. limicola* and *C. thiosulfatophilum*.

chlorobrightism (klo'ro-brit'izm) chlorosis with albuminuria.

chlorobutanol (klo'ro-bu'tah-nol) [NF] chemical name: 1,1,1-trichloro-2-methyl-2-propanol. Colorless to white crystals, $C_4H_7Cl_3O$, with a camphoraceous odor and taste; used as an antimicrobial preservative in various pharmaceutical solutions, especially injectables. It has been used as a local dental analgesic, hypnotic, antipruritic, sedative, somnifacient, and antiseptic.

Chlorochromatium (klo'ro-kro-ma'te-um) a genus of micro-

organisms of the family Chlorobacteriaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as ovoid to rod-shaped cells with rounded ends, forming barrel-shaped aggregates about a large, colorless bacterium. The type species is *C. aggregatum*.

chlorocruorin (klo'ro-kroo'o-rin) a green respiratory pigment occurring in certain marine worms.

chloroerythroblastoma (klo'ro-e-rith'ro-blas-to'mah) a new growth containing the elements of granulocytic sarcoma (chloroma) and erythrocytic sarcoma (erythroblastoma).

chloroethane (klo-ro-eth'ān) ethyl chloride.

chloroform (klo'ro-form) [L. *chloroformum*; from *chlorine* + *formyl*] [NF] a clear, colorless, volatile liquid, CHCl_3 , with a strong ethereal smell and a sweetish, burning taste used as a solvent. It was once widely used as an inhalation anesthetic and analgesic, and as an antitussive, carminative, and counterirritant. Called also *trichlormethane*. **acetone c.**, chlorobutanol. **alcoholized c.**, a mixture of chloroform and alcohol. **Anschütz's c.**, a crystalline substance from which gentle heat liberates a vapor of pure chloroform; called also *salicylide chloroform*. **Pictet's c.**, chloroform purified by congelation at a very low temperature.

chloroformism (klo'ro-form'izm) 1. the habitual use of chloroform for its narcotic effect. 2. the anesthetic effect of the vapor of chloroform.

chloroformization (klo'ro-form'i-za'shun) the administration of chloroform.

chloroguanide hydrochloride (klor'o-gwan'id) proguanil hydrochloride.

chlorolabe (klor'o-lāb) [*chloro* + Gr. *lambainein* to take] name proposed for the pigment in retinal cones that is more sensitive to the green portion of the spectrum than are the other pigments (cyanolabe and erythrolabe).

chloroleukemia (klo'ro-lu-ke'me-ah) chloroma.

chlorolymphosarcoma (klo'ro-lim'fo-sar-ko'mah) chloroma; so called because mononuclear cells in the peripheral blood were thought to be lymphocytes rather than myeloblasts.

chloroma (klo-ro'mah) [*chloro* + *oma*] a malignant green-colored tumor arising from myeloid tissue, associated with myelogenous leukemia and occurring anywhere in the body. Besides containing green pigment, which has no clear metabolic role and is principally myeloperoxidase (verdoperoxidase), chloroma tissue demonstrates a bright red fluorescence under ultraviolet light. Called also *green cancer*, *chloroleukemia*, *chlorolymphosarcoma*, and *granulocytic sarcoma*.

p-chloromercuribenzoate (klo'ro-mer'ku-re-ben'zo-āt) a univalent organic mercury compound that reacts with sulfhydryl groups on proteins, or other molecules, thereby often inhibiting their activities.

chloromethapyriline citrate (klo'ro-meth'ah-pi'rī-lēn) chlorothen citrate.

chlorometry (klo-rom'ē-tre) the quantitative determination of chlorine.

Chloromycetin (klo'ro-mi-se'tin) trademark for preparations of chloramphenicol.

chloromyloma (klo'ro-mi-ē-lo'mah) chloroma attended with growths in the bone marrow.

chloronaphthalene (klo'ro-naf'thah-lēn) any of the products of the chlorination of naphthalene; exposure to such substances may cause halogen acne.

chloropenia (klo'ro-pe'ne-ah) [*chlorine* + Gr. *penia* poverty] (obs.) hypochloremia.

chloropenic (klo'ro-pe'nik) (obs.) hypochloremic.

chloropexia (klo'ro-pek'se-ah) the fixation of chlorine in the body tissues.

chlorophane (klo'ro-fān) [*chloro* + Gr. *phainein* to show] a greenish yellow pigment obtainable from the retina.

p-chlorophenol (klo'ro-fe'no) parachlorophenol.

chlorophenothane (klo'ro-fe'no-thān) chemical name: 1,1'(2,2,2-trichloroethylidene)bis-4-chlorobenzene. An insecticide and larvicide, $\text{C}_{14}\text{H}_9\text{Cl}_5$, effective against a wide variety of insects, occurring as white crystals or as a white to slightly off-white powder; used as a topical pediculicide. Called also *DDT*, *dicophane*, *gesarol*, and *pentachlorin*.

chlorophyll (klo'ro-fil) chlorophyll.

chlorophyllase (klo'ro-fil-ās) chlorophyll chlorophyllido-hydro-lase: an esterase that occurs in green leaves and hydrolyzes chlorophyll.

chlorophyll (klo'ro-fil) [*chloro* + Gr. *phyllon* leaf] the green coloring matter of plants by which photosynthesis is accomplished. There are many types: *chlorophyll a*, $\text{C}_{55}\text{H}_{72}\text{O}_5\text{N}_4\text{Mg}$, is bluish green in color and the major pigment in plants that release oxygen in photosynthesis; *chlorophyll b*, $\text{C}_{55}\text{H}_{70}\text{O}_6\text{N}_4\text{Mg}$, is yellowish green in color; *chlorophyll c* occurs in many marine algae; *chlorophyll d* occurs in red algae. The bacteriochlorophylls occur in phototrophic bacteria. Preparations of *water-soluble chlorophyll derivatives*, consisting mainly of the copper complex of the

sodium and/or potassium salts of chlorophyll, are applied topically to the skin for deodorization, for enhancement of normal tissue repair, and for relief of itching in various skin lesions. Preparations of the derivatives for oral administration are used to deodorize certain necrotic, ulcerative lesions, to control fecal and urinary odors in colostomy, ileostomy, or incontinence, and to deodorize urinary and fecal fistulas and breath and body odors not related to faulty hygiene.

chlorophyllin (klo'ro-fil-in) any of the water-soluble salts obtained by alkaline hydrolysis of chlorophyll with replacement of the methyl and phytyl ester groups by sodium or potassium.

chloropia (klo-ro'pe-ah) chloropsia.

Chloropidae (klo-ro'pī-de) a family of small to minute flies (order Diptera); two medically important genera are *Hippelates* and *Siphunculina*.

chloroplast (klo'ro-plast) [*chloro* + Gr. *plastos* formed] any one of the chlorophyll-bearing bodies of plant cells; called also *chloroplastid*.

chloroplastid (klo'ro-plas'tid) chloroplast.

chloroprivic (klo'ro-pri'vik) [*chlorine* + L. *privare* to deprive] deprived of chlorides; due to loss of chlorides.

chloroprocaine hydrochloride (klo'ro-pro'kān) [USP] chemical name: 2-(diethylamino)ethyl ester benzoic acid monohydrochloride. A local anesthetic, $\text{C}_{17}\text{H}_{19}\text{ClN}_2\text{O}_2 \cdot \text{HCl}$, occurring as a white, crystalline powder; used in minor and general surgery for infiltration, field block, and regional nerve block, including caudal and epidural block.

chloroprocaine penicillin (klo'ro-pro'kān) see under *penicillin*.

chloropsia (klo-ro'pse-ah) [*chloro* + Gr. *opsis* vision + *-ia*] a visual defect in which all objects seen appear to have a greenish tinge.

Chloroptic (klōr-op'tik) trademark for preparations of chloramphenicol.

chloroquine (klo'ro-kwin) [USP] chemical name: N^4 -(7-chloro-4-quinolinyl)- N^1 , N^1 -diethyl 1,4-pentanediamine. A compound, $\text{C}_{18}\text{H}_{26}\text{ClN}_3$, occurring as a white or slightly yellow, crystalline powder; used as antimalarial in certain forms of malaria and as an antiamebic in extraintestinal amebiasis, administered intramuscularly. **c. phosphate** [USP], the phosphate salt of chloroquine, $\text{C}_{18}\text{H}_{26}\text{ClN}_3 \cdot 2\text{H}_3\text{PO}_4$, occurring as a white, crystalline powder; used as an antimalarial for the suppression and treatment of certain forms of malaria, as an antiamebic in extraintestinal amebiasis, and as a lupus erythematosus suppressant, administered orally.

chlorosarcolumphadeny (klo'ro-sar'ko-lim-fad'ē-ne) (obs.) chloroma.

chlorosarcoma (klo'ro-sar-ko'mah) (obs.) chloroma.

chlorosarcomyeloma (klo'ro-sar'ko-mi'ē-lo'mah) (obs.) chloroma.

chlorosis (klo-ro'sis) a disorder, especially common during the nineteenth century and disappearing abruptly soon thereafter, generally affecting adolescent females, believed to be associated with iron deficiency anemia, and characterized by greenish yellow discoloration of the skin and by hypochromic erythrocytes.

Chlorostigma (klo'ro-stig'mah) a genus of plants, e.g., *C. stuckertianum* (Asclepiadaceae). Its alkaloid, chlorostigmene, has been used to stimulate the secretion of milk during lactation.

chlorostigmine (klōr'o-stig'mēn) a galactopoietic alkaloid from plants of the genus *Chlorostigma*.

chlorothen citrate (klo'ro-then) chemical name: N [(5-chloro-2-thienyl)methyl]- N , N' -dimethyl- N -2-pyridinyl-1,2-ethanediamine dihydrogen citrate. An antihistaminic, $\text{C}_{14}\text{H}_{18}\text{ClN}_3\text{S} \cdot \text{C}_6\text{H}_5\text{O}_7$, occurring as a white, crystalline powder; administered orally.

chlorothenium citrate (klo'ro-then'i-um) chlorothen citrate.

chlorothiazide (klo'ro-thi'ah-zīd) [USP] chemical name: 6-chloro-2H-1,2,4-benzothiadiazine-7-sulfonamide-1,1-dioxide. An orally effective diuretic, $\text{C}_7\text{H}_8\text{ClN}_3\text{O}_4\text{S}_2$, occurring as a white or practically white, crystalline powder; used in the treatment of renal, hepatic, and drug-induced edema, edema and toxemia of pregnancy, and fluid retention associated with various conditions, and in hypertension. **c. sodium**, the monosodium salt of chlorothiazide, $\text{C}_7\text{H}_7\text{ClN}_3\text{NaO}_4\text{S}_2$, administered intravenously for the same purposes as the base.

chlorothymol (klo'ro-thi'mol) chemical name: 4-chloro-5-methyl-2-(1-methylethyl)phenol; a powerful germicide, $\text{C}_{10}\text{H}_{13}\text{ClO}$, which has been used as a topical antibacterial and fungicide.

chlorotic (klo-ro'tik) pertaining to, or affected with chlorosis.

chlorotrianisene (klo'ro-tri-an'i-sēn) [USP] chemical name: 1,1',1''-(1-chloro-1-ethenyl-2-ylidene)tris-4-methoxybenzene. A synthetic estrogen, $\text{C}_{28}\text{H}_{32}\text{ClO}_3$, occurring as small white crystals or as a crystalline powder; used to suppress lactation in postpartum women, for palliative treatment in inoperable prostatic carcinoma, and for replacement therapy of estrogen deficiency, administered orally.

chlorous (klo'rus) derived from or containing trivalent chlorine, as in chlorous acid, HClO_2 ; a term used to distinguish those

compounds which contain a larger proportion of chlorine than the chloric compounds, and forming salts known as chlorites.

chlorovinyldichloroarsine (klo'ro-vin'il-di-klo'ro-ar'sin) lewisite.

chloroxine (klo-roks'en) chemical name: 5,7-dichloro-8-quinolinol. A synthetic antibacterial, $C_9H_6Cl_2NO$; used in the topical treatment of dandruff and seborrheic dermatitis of the scalp.

chloroxyleneol (klo'ro-zi'lë-nöl) chemical name: 4-chloro-3,5-dimethylphenol. An antibacterial, C_8H_8ClO , which is most active against streptococci; used mainly as a disinfectant for the skin.

chlorphenesin (klör-fen'ë-sin) chemical name: 3-(4-chlorophenoxy)-1,2-propanediol. An antibacterial, antifungal, and antitrichomonal agent, $C_9H_{11}ClO_3$, occurring as white or pale cream-colored crystals or crystalline masses; used in the treatment of tinea pedis and other fungal infections of the skin and in fungal and trichomonal infections of the vagina, applied topically or intravaginally. **c. carbamate**, a skeletal muscle relaxant, $C_{10}H_{12}ClNO_4$ occurring as a white, crystalline powder; used as an adjunct in the short-term treatment of skeletal muscle spasms, such as sprains, strains, and trauma to tendons and ligaments, administered orally.

chlorpheniramine (klör'fen-ir'ah-mën) chemical name: γ -(4-chlorophenyl)-*N,N*-dimethyl-2-pyridinepropanamine. An antihistaminic, $C_{16}H_{19}ClN_2$, derived from pheniramine. **c. maleate** [USP], the maleate salt of chlorpheniramine, $C_{16}H_{19}ClN_2 \cdot C_4H_4O_4$, occurring as a white, crystalline powder; administered orally or by subcutaneous injection for therapy and prophylaxis of conditions in which antihistamines may be effective. Called also *chlorprophenpyridamine maleate*.

chlorphenoxamine hydrochloride (klör'fen-ok'sah-mën) [USP] chemical name: 2-[1-(4-chlorophenyl)-1-phenylethoxy]-*N,N*-dimethylethanamine hydrochloride. An anticholinergic $C_{18}H_{23}Cl_2NO$, with weak antihistaminic action, occurring as needle-like crystals; used as a skeletal muscle relaxant in the treatment of Parkinson's disease, administered orally.

chlorphentermine hydrochloride (klör-fen'ter-mën) chemical name: 4-chloro- α,α -dimethylbenzeneethanamine hydrochloride. A sympathomimetic amine, $C_{10}H_{14}ClN \cdot HCl$, occurring as a white to off-white powder; used as an anorexic agent, administered orally.

chlorpromazine (klör-pro'mah-zën) [USP] chemical name: 2-chloro-*N,N*-dimethyl-10-*H*-phenothiazine-10-propanamine. A phenothiazine derivative, $C_{17}H_{19}ClN_2S$, occurring as a white, crystalline solid; used as an antiemetic and tranquilizer, administered by rectal suppository. **c. hydrochloride** [USP], the hydrochloride of chlorpromazine, occurring as a white, crystalline powder, used orally, muscularly, or intravenously as a major tranquilizer.

chlorpropamide (klör-pro'pah-mid) [USP] chemical name: 4-chloro-*N*-[(propylamino)carbonyl]benzenesulfonamide. An orally effective hypoglycemic agent, $C_{10}H_{13}ClN_2O_3S$, occurring as a white, crystalline powder.

chlorprophenpyridamine (klör'pro-fen-pi-rid'ah-mën) chlorpheniramine.

chlorprothixene (klör-pro-thiks'en) [USP] chemical name: (*Z*)-3-(2-chloro-9-*H*-thioxanthen-9-ylidene)-*N,N*-dimethyl-1-propanamine. A drug, $C_{18}H_{19}ClNS$, occurring as a yellow crystalline powder, having sedative, antiemetic, antihistaminic, anticholinergic, and alpha-adrenergic blocking activity; used to control the symptoms of psychotic disorders, administered orally or by intramuscular injection.

chlorquinaldol (klör-kwin'al-dol) chemical name: 5,7-dichloro-8-hydroxyquinaldine. A yellow, crystalline powder, $C_{10}H_7Cl_2NO$, insoluble in water; used as a topical keratoplastic, bactericide, and fungicide in dermatoses.

chlortetracycline (klör'tet-rah-si'klën) chemical name: 7-chloro-4-dimethylamino-1,4,4a,5,5a,6,11,12a-octahydro-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-2-naphthacenecarboxamide. A broad-spectrum antibiotic, $C_{22}H_{23}ClN_2O_8$, elaborated by *Streptomyces aureofaciens*; it was the first of the tetracycline group to be discovered. **c. hydrochloride** [USP], the monohydrochloride salt of chlortetracycline, $C_{22}H_{23}ClN_2O_8 \cdot HCl$, occurring as a yellow crystalline powder; a broad-spectrum antibiotic used as an antibacterial and antiprotozoal, administered orally, by intravenous injection, or applied topically to the conjunctiva.

chlorthalidone (klör-thal'i-dön) [USP] chemical name: 2-chloro-5-(2,3-dihydro-1-hydroxy-3-oxo-1*H*-isindol-1-yl)benzenesulfonamide. An orally effective diuretic, $C_{14}H_{11}ClN_2O_4S$, occurring as a white to yellowish white, crystalline powder; used in the treatment of edema associated with various conditions and in hypertension.

Chlor-Trimeton (klör-tri'më-ton) trademark for preparations of chlorpheniramine maleate.

chlorum (klo'rum) [L.] chlorine.

chloruremia (klo'roo-re'me-ah) [*chloride* + Gr. *ouron* urine + *haima* blood + *-ia*] (*obs.*) hyperchloremia.

chloruremic (klo'roo-re'mik) (*obs.*) hyperchloremic.

chloruresis (klör'u-re'sis) [*chloride* + Gr. *ourein* to urinate] the excretion of chlorides in the urine.

chloruretic (klör'u-ret'ik) 1. promoting the excretion of chlorides in the urine. 2. an agent that promotes the excretion of chlorides in the urine.

chloruria (klo-roo're-ah) [*chloride* + Gr. *ouron* urine + *-ia*] presence of chlorides in the urine.

chlorzoxazone (klör-zok'sah-zön) chemical name: 5-chloro-2(3*H*)-benzoxazolone. A skeletal muscle relaxant, $C_7H_6ClNO_2$, occurring as a white or creamy white, glistening, crystalline powder; used to relieve discomfort of painful musculoskeletal disorders, administered orally.

Chlumsky's button (klum'skëz) [Vitezslav Chlumsky, Czech surgeon, 1867-1943] see under *button*.

Ch.M. abbreviation for *L. Chirurgiae Magister*, Master of Surgery.

$C_6H_5NH_2$ aniline.

$C_3H_5(NO_3)_3$ glyceryl trinitrate (nitroglycerin).

$C_5H_4N_4O_3$ uric acid.

$C_5H_{11}NO_2$ amyl nitrite.

C_6H_5NO acetanilid.

$C_9H_9NO_3$ hippuric acid.

$C_6H_2(NO_2)_3OH$ trinitrophenol (picric acid).

CH_2O formaldehyde.

CH_2O_2 formic acid.

CH_4O methyl alcohol.

$C_2H_2O_4$ oxalic acid.

$C_2H_4O_2$ acetic acid.

C_2H_5O ethyl alcohol.

C_3H_6O acetone.

$C_3H_5O_3$ lactic acid.

$C_3H_8O_3$ glycerin.

$C_4H_6O_2$ crotonic acid.

$C_4H_8O_5$ malic acid.

$C_4H_6O_6$ tartaric acid.

$C_4H_8O_2$ butyric acid; isobutyric acid.

$C_4H_{10}O$ ether (ethyl ether).

$C_5H_{10}O_2$ valeric acid.

$C_5H_{12}O$ amyl alcohol.

C_6H_6O phenol.

$C_6H_8O_7$ citric acid.

$(C_6H_{10}O_5)_n$ starch, glycogen, or other hexose polymers.

$C_6H_{12}O_6$ dextrose (*D*-glucose).

$C_7H_4O_7$ meconic acid.

$C_7H_6O_2$ benzoic acid.

$C_7H_6O_3$ salicylic acid.

$C_7H_6O_5$ gallic acid.

$C_{12}H_{22}O_{11}$ cane sugar.

$C_{15}H_{16}O_4$ chrysophanic acid.

$C_{18}H_{34}O_2$ oleic acid.

$C_{18}H_{36}O_2$ stearic acid.

choana (ko'a-nah), pl. *choanæ* [L.; Gr. *choanē* funnel] 1. any funnel-shaped cavity or infundibulum. 2. [pl.] [NA] the paired openings between the nasal cavity and the nasopharynx; called also *choanæ osseæ* and *posterior nares*. **bony choanæ**, *choanæ os'seæ*, see *choana*, def. 2. **primary c.**, the opening of the embryonic olfactory sac into the mouth. **secondary c.**, the definitive choana after the formation of the palate.

choanæ (ko-a'ne) [L.] plural of *choana*.

choanal (ko'ah-nal) pertaining to a choana.

choanoid (ko'ah-noid) [Gr. *choanē* funnel + *eidos* form] funnel-shaped.

choanocyte (ko'ah-no'sit) a unique type of cell having a flagellum surrounded by a thin cytoplasmic collar; characteristic of sponges and certain protozoa.

choanoflagellate (ko'ah-no-flaj'ë-lät) any member of the order Choanoflagellida.

Choanoflagellida (ko'ah-no-flaj'ë-li'dah) an order of sedentary protozoa resembling sponges and having a single flagellum surrounded by a delicate cytoplasmic collar.

Choanotaenia (ko-a'no-te'ne-ah) a genus of tapeworms. **C. infundibulum**, an important tapeworm parasite of both chickens and turkeys.

choc (shok) [Fr.] shock.

chocolate (chok'o-lat) [L. *chocolata*, from Mexican *chocolatl*] a dried paste prepared from the kernels of the cacao, *Theobroma cacao*, with sugar and flavoring substances.

C_6H_5OH phenol.

choke (chök) 1. to interrupt respiration by obstruction or compression, or the condition resulting from such interruption. 2. [pl.] a burning sensation beginning in the substernal region, with increasing uncontrollable urge to cough, and great apprehension and anxiety, leading to vasovagal attack, experienced during

decompression. **ophthalmovascular c.**, interference with the blood supply of the retina due to pressure of the retinal vessels against one another. **thoracic c.**, in veterinary medicine, obstruction of the thoracic part of the esophagus with a foreign body. **water c.**, laryngeal spasm caused by fluid entering the larynx and especially by getting between the true and false vocal cords.

chol- see *chole-*.

cholagogic (ko'lah-goj'ik) stimulating the flow of bile to the duodenum.

cholagogue (ko'lah-gog) [*chol-* + Gr. *agōgos* leading] an agent that stimulates the flow of bile into the duodenum.

cholaligenic (ko-lal'i-jen'ik) [*cholic* acid + Gr. *gennan* to produce] (*obs.*) forming cholic (cholic) acid from cholesterol—one of the functions of the liver.

Cholan-DH (ko'lan) trademark for preparations of dehydrocholic acid.

cholaneresis (ko'lah-ner'ē-sis) increase in the output or elimination of bile acids, their conjugates, or their salts.

cholangitis (ko'lan-ji'tis) cholangitis.

cholangiectasis (ko-lan'je-ek'tah-sis) dilatation of a bile duct.

cholangioadenoma (ko-lan'je-o-ad'ē-no'mah) a benign adenoma of the liver made up of congeries of small alveoli with distinct lumina, lined by cubical or cylindrical cells resembling those of normal bile ducts.

cholangiocarcinoma (ko-lan'je-o-kar'si-no'mah) cholangiocellular carcinoma.

cholangiocholecystocholedochectomy (ko-lan'ge-o-ko'le-sis'to-ko'le-do-kek'to-me) excision of hepatic duct, common bile duct, and gallbladder.

cholangioenterostomy (ko-lan'je-o-en'ter-os'to-me) [*chol-* + Gr. *angeion* vessel + *enteron* intestine + *stomoun* to provide with an opening, or mouth] surgical anastomosis of a bile duct to the intestine.

cholangiogastrostomy (ko-lan'je-o-gas-tros'to-me) [*chol-* + Gr. *angeion* vessel + *gaster* stomach + *stomoun* to provide with an opening, or mouth] surgical anastomosis of a bile duct to the stomach.

cholangiogram (ko-lan'je-o-gram) a roentgenogram of the gallbladder and bile ducts.

cholangiography (ko-lan'je-o-grah-fe) [*chol-* + Gr. *angeion* vessel + *graphein* to write] roentgenography of the biliary ducts after administration or injection of a contrast medium. **operative c.**, cholangiography performed during a surgical procedure on the gallbladder.

cholangiohepatitis (ko-lan'je-o-hep'ah-ti'tis) severe inflammation of the bile passages often associated with liver fluke infestation, which causes obstruction of the bile ducts.

cholangiohepatoma (ko-lan'je-o-hep'ah-to'mah) primary carcinoma of the liver of mixed liver cell and bile-duct cell origin; called also *hepatocholangiocarcinoma*.

cholangiojejunostomy (ko-lan'je-o-jē-ju-nos'to-me) surgical anastomosis of a bile duct to the jejunum. **intrahepatic c.**, surgical creation of an anastomosis between an intrahepatic bile duct and the jejunum; also, the anastomosis so constructed.

cholangiolar (ko'lan-je'o-lar) pertaining to a cholangiole.

cholangiole (ko-lan'je-ōl) [*chol-* + Gr. *angeion* vessel + *-ole* diminutive suffix] one of the fine terminal elements of the bile duct system, leaving the portal canal, and pursuing a course at the periphery of a lobule of the liver; called also *bile* or *biliary ductule* and, rarely, *bile capillary*.

cholangiolitis (ko-lan'je-o-li'tis) inflammation of the cholangioles.

cholangioma (ko-lan'je-o'mah) [*chol-* + Gr. *angeion* vessel + *-oma*] cholangiocellular carcinoma.

cholangiostomy (ko'lan-je-os'to-me) [*chol-* + Gr. *angeion* vessel + *stomoun* to provide with an opening, or mouth] fistulization of a bile duct.

cholangiotomy (ko'lan-je-ot'o-me) [*chol-* + Gr. *angeion* vessel + *tomē* a cutting] incision into a bile duct.

cholangitis (ko'lan-ji'tis) [*chol-* + Gr. *angeion* vessel + *-itis*] inflammation of a bile duct. **c. len'ta**, chronic infectious cholangitis without gallstones or biliary tract obstruction.

cholanopoiesis (ko'lah-no-poi-e'sis) the synthesis of bile acids or of their conjugates and salts by the liver.

cholanopoietic (ko'lah-no'poi-et'ik) 1. pertaining to or promoting cholanopoiesis. 2. an agent that promotes cholanopoiesis.

cholanthrene (ko-lan'thrēn) a pentacyclic hydrocarbon, C₂₀H₁₄, of great carcinogenicity.

cholate (ko'lāt) a salt or ester of cholic acid.

chole-, chol-, cholo- (ko'le, kōl, ko'lo) [Gr. *cholē* bile] a combining form denoting relationship to the bile.

cholebilirubin (ko'le-bil'e-ru'bin) a pigment, C₃₂H₅₀O₁₁N₂, differing from bilirubin, occurring in gallbladder bile; it gives a direct reaction to the Van den Bergh test.

Cholebrine (ko'le-brin) trademark for a preparation of iocetamic acid.

cholecalciferol (ko'le-kal-sif'er-ol) [USP] chemical name: activated 5,7-cholestadien-3β-ol. An antirachitic vitamin occurring as white, odorless crystals, C₂₇H₄₄O, soluble in alcohol, chloroform, and fatty oils; it undergoes metabolic conversion before exerting biological effects (see *dihydroxycholecalciferol*). Called also *activated 7-dehydrocholesterol* and *vitamin D₂*.

cholechromopoiesis (ko'le-kro'mo-poi-e'sis) the synthesis of bile pigments.

cholecyanin (ko'le-si'ah-nin) bilicyanin.

cholecyst (ko'le-sist) [*chole-* + Gr. *kystis* bladder] the gallbladder.

cholecystagogic (ko'le-sis'tah-goj'ik) cholecystokinetic.

cholecystagogue (ko'le-sis'tah-gog) a cholecystokinetic agent.

cholecystalgia (ko'le-sis-tal'je-ah) [*cholecyst* + *-algia*] 1. gallbladder colic due to impaction of a gallstone in the cystic duct. 2. pain due to inflammation of the gallbladder.

cholecystatony (ko'le-sis-tat'o-ne) atony of the gallbladder.

cholecystectasia (ko'le-sis'tek-ta'ze-ah) [*cholecyst* + Gr. *ektasis* distention] distention of the gallbladder.

cholecystectomy (ko'le-sis-tek'to-me) [*cholecyst* + Gr. *ektomē* excision] surgical removal of the gallbladder.

cholecystenteric (ko'le-sis'ten-ter'ik) pertaining to communication between the gallbladder and intestine; called also *cholecystointestinal*.

cholecystenteroanastomosis (ko'le-sis'ten'ter-o-ah-nas'to-mo'sis) cholecystenterostomy.

cholecystenterorrhaphy (ko'le-sis'ten'ter-or'ah-fe) suture of the gallbladder to the small intestine.

cholecystenterostomy (ko'le-sis'ten'ter-os'to-me) [*cholecyst* + Gr. *enteron* bowel + *stomoun* to provide with an opening, or mouth] surgical anastomosis of the gallbladder to the intestine.

cholecystgastrostomy (ko'le-sist-gas-tros'to-me) cholecystogastrostomy.

cholecystic (ko'le-sis'tik) pertaining to the gallbladder.

cholecystis (ko'le-sis'tis) [Gr. *chole* bile, gall + *kystis* bladder] the gallbladder.

cholecystitis (ko'le-sis-ti'tis) [*cholecyst* + *-itis*] inflammation of the gallbladder. **acute c.**, a form usually due to obstruction of the gallbladder outlet, with signs ranging from mild edema and congestion to severe infection with gangrene and perforation. **chronic c.**, inflammation of the gallbladder with relatively mild symptoms persisting over a long period. **c. emphysemato'sa**, emphysematous c. **emphysematous c.**, inflammation of the gallbladder caused by gas-producing organisms, characterized by gas in the gallbladder lumen and frequently infiltrating into the wall of the gallbladder and surrounding tissues; called also *gaseous c.* **follicular c.**, inflammation of the gallbladder in which there is conspicuous formation of lymphoid follicles, which commonly contain germinal centers. **gaseous c.**, emphysematous c. **c. glandula'ris prolif'erans**, a thickening of the wall of the chronically inflamed gallbladder, with formation of crypts which may develop into cysts.

cholecystnephrostomy (ko'le-sist'ne-fros'to-me) cholecystopyelostomy.

cholecystocholangiogram (ko'le-sis'to-ko-lan'je-o-gram) roentgenogram of the gallbladder and bile ducts.

cholecystocolonic (ko'le-sis'to-ko-lon'ik) pertaining to communication between the gallbladder and colon, as *cholecystocolonic fistula*.

cholecystocolostomy (ko'le-sis'to-ko-lōs'to-me) surgical anastomosis of the gallbladder to the colon; called also *colocholecystostomy*.

cholecystocolotomy (ko'le-sis'to-ko-lōt'o-me) surgical incision of the gallbladder and colon.

cholecystoduodenostomy (ko'le-sis'to-du'o-dē-nos'to-me) surgical anastomosis of the gallbladder and the duodenum.

cholecystoenterostomy (ko'le-sis-to-en'ter-os'to-me) cholecystenterostomy.

cholecystogastric (ko'le-sis'to-gas'trik) pertaining to communication between the gallbladder and stomach, as a *cholecystogastric fistula*.

cholecystogastrostomy (ko'le-sis'to-gas-tros'to-me) surgical anastomosis between the gallbladder and the stomach.

cholecystagogic (ko'le-sis'to-goj'ik) cholecystokinetic.

cholecystogram (ko'le-sis'to-gram) a roentgenogram of the gallbladder.

cholecystography (ko'le-sis-tog'rah-fe) [*cholecyst* + Gr. *graphein* to write] roentgenography of the gallbladder.

cholecystoileostomy (ko'le-sis'to-il'e-os'to-me) surgical anastomosis of the gallbladder and the ileum.

cholecystointestinal (ko'le-sis'to-in-tes'ti-nal) cholecystenteric.

cholecystojejunostomy (ko'le-sis'to-jē-ju-nos'to-me) surgical anastomosis of the gallbladder and the jejunum.

cholecystokinase (ko''le-sis''to-ki'nās) an enzyme in the blood that catalyzes the decomposition of cholecystokinin.

cholecystokinetic (ko''le-sis''to-ki-net'ik) causing or promoting contraction of the gallbladder.

cholecystokinin (ko''le-sis''to-kin'in) [*cholecyst* + Gr. *kinein* to move] a polypeptide hormone secreted by the mucosa of the upper intestine which stimulates contraction of the gallbladder (with release of bile) and secretion of pancreatic enzymes. It is identical with pancreozymin. Abbreviated CCK.

cholecystolithiasis (ko''le-sis''to-lī-thi'ah-sis) [*cholecyst* + *lithiasis*] cholelithiasis.

cholecystolithotripsy (ko''le-sis''to-lith'o-trip'se) [*cholecyst* + *lithotripsy*] the crushing of gallstones within the gallbladder.

cholecystonephrostomy (ko''le-sis''to-ne-fros'to-me) cholecystopyelostomy.

cholecystopathy (ko''le-sis-top'ah-the) [*cholecyst* + Gr. *pathos* disease] any gallbladder disease.

cholecystopexy (ko''le-sis'to-pek'se) [*cholecyst* + Gr. *pēxis* fixation] suspension or fixation of the gallbladder by surgical means.

cholecystoptosis (ko''le-sis''to-to'sis) [*cholecyst* + Gr. *ptōsis* fall] downward or distal displacement of the gallbladder.

cholecystopyelostomy (ko''le-sis''to-pi''ē-los'to-me) surgical anastomosis of the gallbladder to the pelvis of the kidney; called also *cholecystonephrostomy*.

cholecystorrhaphy (ko''le-sis-tor'ah-fe) [*cholecyst* + Gr. *rhaphe* suture] suture or repair of the gallbladder.

cholecystosis (ko''le-sis-to'sis) any noninflammatory disease of the gallbladder. **hyperplastic c.**, abnormal increase in cellular structure of the gallbladder.

cholecystostomy (ko''le-sis-tos'to-me) [*cholecyst* + Gr. *stomoun* to provide with an opening, or mouth] the creation of an opening into the gallbladder for drainage.

cholecystotomy (ko''le-sis-tot'o-me) [*cholecyst* + Gr. *tomē* a cutting] surgical incision of the gallbladder; done for exploration, drainage (cholecystostomy), or removal of calculi.

cholecystotyphoid (ko''le-sis''to-ti'foīd) typhoid fever complicated by acute cholecystitis.

choledochal (kol'ē-dok-al) pertaining to the common bile duct.

choledochectomy (kol'ē-do-kek'to-me) [*choledochus* + Gr. *ektomē* excision] excision of a portion of the common bile duct.

choledochendysis (kol'ē-do-ken'dī-sis) [*choledochus* + Gr. *endysis* entrance] choledochotomy.

choledochitis (kol'ē-do-ki'tis) inflammation of the common bile duct, or ductus choledochus.

choledochoceale (ko-led'o-ko-sēl) a rare form of congenital cystic dilatation of the common bile duct in which the dilated portion is within the wall of the duct.

choledochocholedochostomy (ko-led'o-ko-kol'ē-do-kos'to-me) surgical formation of an anastomosis between two portions of the common bile duct.

choledochoduodenostomy (ko-led'o-ko-du'o-dē-nos'to-me) surgical anastomosis of the common bile duct to the duodenum.

choledochointerostomy (ko-led'o-ko-en'ter-os'to-me) surgical anastomosis of the common bile duct to the intestine.

choledochogastrostomy (ko-led'o-ko-gas-tros'to-me) surgical anastomosis of the common bile duct and the stomach.

choledochogram (ko-led'ō-ko-gram'') a roentgenogram of the common bile duct.

choledochography (ko-led'o-kog'rah-fe) [*choledochus* + Gr. *graphein* to write] roentgenography of the common bile duct after the administration of opaque material.

choledochohepatostomy (ko-led'o-ko-hep'ah-tos'to-me) surgical anastomosis of the common bile duct to the hepatic duct.

choledochoileostomy (ko-led'o-ko-il-e-os'to-me) surgical anastomosis of the common bile duct and the ileum.

choledochojejunostomy (ko-led'o-ko-jē-ju-nos'to-me) surgical anastomosis of the common bile duct and the jejunum.

choledocholith (ko-led'ō-ko-lith'') a calculus in the common bile duct.

choledocholithiasis (ko-led'ō-ko-lī-thi'ah-sis) the occurrence of calculi in the common bile duct.

choledocholithotomy (ko-led'ō-ko-lī-thot'o-me) incision of the common bile duct for the removal of stone.

choledocholithotripsy (ko-led'ō-ko-lith'o-trip'se) the crushing of a gallstone within the common bile duct.

choledochoplasty (ko-led'o-ko-plas'te) the performance of a plastic operation on the common bile duct; plastic repair of the duct following injury.

choledochorrhaphy (ko-led'o-kor'ah-fe) [*choledochus* + Gr. *rhaphe* suture] suture or repair of the common bile duct.

choledochoscope (ko-led'o-ko-skōp'') an instrument for direct inspection of the interior of the common bile duct by artificial light.

choledochostomy (ko-led'o-kos'to-me) [*choledochus* + Gr. *sto-*

moun to provide with an opening, or mouth] surgical formation of an opening into the common bile duct and drainage by catheter or T-tube.

choledochotomy (ko-led'o-kot'o-me) [*choledochus* + Gr. *tomē* a cutting] incision into the common bile duct for exploration or removal of a calculus; called also *choledochendysis*.

choledochus (ko-led'o-kus) [*chole-* + Gr. *dochos* receptacle] the ductus choledochus, or common bile duct.

Cholel (ko-lē'dil) trademark for a preparation of oxtrophyl-line.

choglobin (ko''le-glo'bin) a compound of globin and an open-ring iron porphyrin, being an intermediate in the formation of bile pigment from the catabolism of hemoglobin.

cholehematin (ko''le-hem'ah-tin) a red pigment (not a bile pigment) found in the bile of herbivorous animals; it is derived from chlorophyll and is the same as phylloerythrin and bilipurpurine.

cholechemia (ko''le-he'me-ah) (*obs.*) cholemia.

choleic (ko-le'ik) pertaining to or derived from the bile; see under *acid*.

cholelith (ko''le-lith) [*chole-* + Gr. *lithos* stone] a gallstone.

cholelithiasis (ko''le-lī-thi'ah-sis) [*chole-* + *lithiasis*] the presence or formation of gallstones.

cholelithic (ko''le-lith'ik) pertaining to or caused by gallstones.

cholelithotomy (ko''le-lī-thot'o-me) removal of gallstones through an incision in the gallbladder.

cholelithotripsy (ko''le-lith'o-trip-se) [*cholelith* + Gr. *tribein* to crush] the crushing of gallstones.

cholelithotripty (ko''le-lī-thot'ri-te) cholelithotripsy.

cholemesis (ko-lem'ē-sis) [*chole-* + Gr. *emein* to vomit] vomiting of bile.

cholemia (ko-le'me-ah) [*chole-* + Gr. *haima* blood + *-ia*] the presence of bile or bile pigments in the blood. **familial c.**, **Gilbert's c.**, Gilbert's disease.

cholemic (ko-le'mik) pertaining to, marked by, or due to cholemia.

cholemimetry (ko''le-mim'ē-tre) determination of the amount of bile pigment in the blood.

cholephosphatase (ko''le-o-fos'fah-tās) an enzyme in the pancreas and in the intestinal juice which liberates choline from lecithin.

cholepathia (ko''le-path'e-ah) [*chole-* + Gr. *pathos* disease + *-ia*] a morbid condition of the biliary tract. **c. spas'tica** (*obs.*), a morbid condition of the biliary tract, characterized by spasm of the bile ducts.

choleperitoneum (ko''le-per'i-to-ne'um) [*chole-* + *peritoneum*] the presence of bile in the peritoneum resulting from rupture of the bile passages; called also *biliary* or *bile peritonitis*, and *choleperitonitis*.

choleperitonitis (ko''le-per'i-to-ni'tis) choleperitoneum.

cholepoiesis (ko''le-poi-e'sis) 1. the manufacture and secretion by the liver of bile constituents other than water. 2. the manufacture and secretion of bile salts by the liver.

cholepoietic (ko''le-poi-et'ik) [*chole-* + Gr. *poiein* to make] forming or secreting a constituent peculiar to bile; increasing the secretion of bile without a fall in its specific gravity.

choleprasin (ko''le-pra'sin) one of the pigments of bile isolated from gallstones.

cholera (kol'er-ah) [Gr., from *cholē* bile] an acute infectious disease caused by *Vibrio cholerae* and characterized by severe diarrhea with extreme fluid and electrolyte depletion, metabolic acidosis, and by vomiting, muscle cramps, and prostration. A specific toxin of the cholera vibrio blocks sodium absorption and promotes excretion of water and electrolytes. The resultant severe dehydration may lead to shock or renal failure. The disease, most commonly disseminated by contaminated drinking water, is endemic and epidemic in Asia. Called also *Asiatic c.* **Asiatic c.**, a term applied to epidemic outbreaks of cholera in Asia and associated with a high mortality rate; see *cholera*. **automatic c.**, that characterized by twitching movements of the fingers, toes, and occasionally the arms or legs preceding tonic muscle cramps after voluminous water and electrolyte loss. **bilious c.**, former term for mild cholera characterized by violent and painful vomiting and copious bilious stools. **chicken c.**, pasteurellosis in chickens; see *fowl c.* **dry c.**, *c. sicca*. **English c.** (*obs.*), *c. morbus*. **European c.**, bilious c. **fowl c.**, hemorrhagic septicemia caused by *Pasteurella multocida* and occurring in all species of domestic fowl, canaries, waterfowl, seagulls, game birds, and birds of prey, all over the world. **c. ful'minans**, *c. sicca*. **c. gallina'rium**, *fowl c.* **hog c.**, an infectious communicable disease of swine occurring in epizootics and caused by a virus; marked by fever, loss of appetite, emaciation, ulceration of the intestines, diarrhea, and ecchymoses in the kidney and on the skin of the ventral surface of the body; called also *swine fever*. **c. infan'tum**, a common, noncontagious diarrhea of young children prevailing in the summer months. **c. mor'bus**, a once popular name for an acute gastroenteritis, with diarrhea, cramps,

and vomiting, occurring in summer or autumn; called also *summer c.* or *summer complaint*. **c. nos'tras**, bilious c. **c. nos'tras paratypho'sa**, former term for gastroenteritis paratyphosa B. **pancreatic c.**, a condition marked by profuse watery diarrhea, hypokalemia, and usually achlorhydria, due to an islet-cell tumor (other than beta cell) of the pancreas. **c. sic'ca**, **c. sid'erans**, cholera in which death takes place before diarrhea has occurred. **summer c.**, c. morbus. **typhoid c.**, a form of Asiatic cholera, marked by extreme depression. **winter c.** (*obs.*), a mild diarrheal disease of unknown cause, occurring in the winter months.

cholera (kol'er-ah-jen) the exotoxin produced by the cholera vibrio, which is thought to stimulate electrolyte and water secretion into the small intestine in Asiatic cholera.

choleraic (kol'ë-ra'ik) of, pertaining to, or of the nature of cholera.

cholera phage (kol'er-ah-fāj) a bacteriophage that infects cholera bacilli.

choleresis (ko-ler'ë-sis) [*chole-* + Gr. *hairesis* a taking] the secretion of bile by the liver by either cholepoiesis or hydrocholeresis.

choloretic (ko'ler-et'ik) 1. stimulating the production of bile by the liver by either cholepoiesis or hydrocholeresis. 2. a cholaretic agent.

cholera (ko-ler'e-ah) an irritable or hostile temperament.

choleric (kol'er-ik) hot-tempered; irascible.

choleric form (ko-ler'i-form) choleric.

cholorigenic (kol'er-i-jen'ik) causing cholera.

cholorigenous (kol'er-i-jen'us) causing cholera.

cholera (kol'er-in) 1. the earliest stage of cholera. 2. a comparatively mild form of bilious cholera, sometimes closely simulating Asiatic cholera, but not often of a fatal issue.

cholization (kol'er-i-za'shun) protective inoculation with cholera.

choloid (kol'er-oid) [Gr. *cholera* + *eidos* form] resembling cholera.

cholomania (kol'er-o-ma'ne-ah) [*cholera* + Gr. *mania* madness] mania sometimes seen in cholera.

cholestane (kol'es-tān) a saturated steroid hydrocarbon, $C_{27}H_{48}$, with C-18 and C-19 methyl groups and an isooctyl side chain at C-17; obtained by reduction of cholesterol and other C_{27} steroids.

cholestanol (ko-les'tah-nol) a compound, $C_{27}H_{47}OH$, formed by the reduction of cholesterol. **beta-c.**, an isomer of coprosterol derived from cholesterol by bacterial action and found in the feces; called also *dihydrocholesterol*.

cholestasia (ko'le-sta'ze-ah) cholestasis.

cholestasis (ko'le-sta'sis) [*chole-* + Gr. *stasis* stoppage] stoppage or suppression of the flow of bile, having intrahepatic or extrahepatic causes.

cholestatic (ko'le-stat'ik) pertaining to or characterized by cholestasis.

cholesteatoma (ko'le-ste'ah-to'mah) [*chole-* + *steatoma*] a cystlike mass, with a lining of stratified squamous epithelium, usually of keratinizing type, filled with desquamating debris frequently including cholesterol. Cholesteatomas occur in the meninges, central nervous system, and bones of the skull, but are most common in the middle ear and mastoid region. **congenital c.**, epidermoidoma. **c. tym'pani**, cholesteatoma associated with chronic infection of the middle ear, formed of the outer desquamating layers of stratified squamous epithelium which has extended inward and upward to line the tympanum, epitympanum, and antrum.

cholesteatomatous (ko'le-ste'ah-to'mah-tus) relating to or of the nature of cholesteatoma.

cholesteatosis (ko'le-ste-ah-to'sis) fatty degeneration due to cholesterol esters.

cholestene (kol'es-tēn) an unsaturated hydrocarbon, $C_{27}H_{46}$, formed by the dehydrogenation of cholestane.

cholesteremia (ko-les'ter-e'me-ah) [*cholesterol* + Gr. *haima* blood + *-ia*] hypercholesterolemia.

cholesterin (ko-les'ter-in) cholesterol.

cholesterinemia (ko-les'ter-in-e'me-ah) hypercholesterolemia.

cholesterinosis (ko-les'ter-ī-no'sis) cholesterosis.

cholesterinuria (ko-les'ter-ī-nu're-ah) cholesteroluria.

cholesterogenesis (ko-les'ter-o-jen'ë-sis) synthesis of cholesterol.

cholesterohistechia (ko-les'ter-o-his-tek'e-ah) [*cholesterol* + Gr. *histos* tissue + *echein* to hold + *-ia*] the presence of an abnormally large amount of cholesterol in a tissue.

cholesterohydrothorax (ko-les'ter-o-hi'dro-tho'raks) presence in the thoracic cavity of watery fluid that contains cholesterol crystals.

cholesterol (ko-les'ter-ol) [*chole-* + Gr. *stereos* solid] 1. a pearly, fatlike steroid alcohol, $C_{27}H_{46}OH$, crystallizing in the form of leaflets or plates from dilute alcohol, and found in animal fats

and oils, in bile, blood, brain tissue, milk, yolk of egg, myelin sheaths of nerve fibers, the liver, kidneys, and adrenal glands. It constitutes a large part of the most frequently occurring type of gallstones and occurs in atheroma of the arteries, in various cysts, and in carcinomatous tissue. Most of the body's cholesterol is synthesized in the liver, but some is absorbed from the diet. It is a precursor of bile acids and is important in the synthesis of steroid hormones. 2. [USP] a commercial preparation of cholesterol used as a pharmaceutical aid. Called also *cholesterin*.

cholesterolemia (ko-les'ter-ol-e'me-ah) [*cholesterol* + Gr. *haima* blood + *-ia*] hypercholesterolemia.

cholesteroleresis (ko-les'ter-ol-er'ë-sis) increased elimination of cholesterol in the bile.

cholesterol ester (ko-les'ter-ol-es'ter-stoorts) [Ger.] decrease in the proportion of esters in the blood cholesterol.

cholesterolopoiesis (ko-les'ter-ol'o-poi-e'sis) the synthesis of cholesterol by the liver.

cholesterolosis (ko-les'ter-ol-o'sis) cholesterosis.

cholesteroluria (ko-les'ter-ol-u're-ah) [*cholesterol* + Gr. *ouron* urine + *-ia*] the presence of cholesterol in the urine; called also *cholesterinuria*.

cholesterosis (ko-les'ter-o'sis) a condition in which cholesterol is deposited in tissues in abnormal quantities. **extracellular c.**, a condition in which cholesterol is deposited in extracellular sites; it is marked by erythematous nodules of the acral areas, particularly the hands, and considered to be a variant of erythema elevatum diutinum.

choletelin (ko-let'ë-lin) [*chole-* + Gr. *telos* end] a yellow pigment, $C_{18}H_{18}N_2O_6$, the oxidation product of bilirubin; bilixanthine.

choletherapy (ko'le-ther'ah-pe) [*chole-* + *therapy*] treatment by the administration of bile salts.

choleuria (ko'le-u're-ah) [*chole-* + Gr. *ouron* urine + *-ia*] choleluria.

choleverdine (ko'le-ver'din) biliverdin.

choline (ko'lin) hydroxyethyl trimethyl ammonium hydroxide, $CH_3OH \cdot CH_2N^+(CH_3)_3$, derivable from many animal and some vegetable tissues and produced synthetically. Considered to be a vitamin of the B complex, it is the basic constituent of lecithin and prevents the deposition of fat in the liver; the acetic acid ester of choline (acetylcholine) is essential in synaptic transmission of nerve impulses. Choline is also oxidized to form betaine in methionine biosynthesis. Choline readily forms salts, several of which (*c. bitartrate*, *c. chloride*, and *c. dihydrogen citrate*) have been used in medicine as lipotropic agents in the treatment of fatty degeneration and hepatic cirrhosis. **c. acetylase**, choline acetyltransferase. **c. acetyltransferase**, acetyl CoA:choline O-acetyltransferase: an enzyme that brings about the synthesis of acetylcholine; called also *choline acetylase*. **c. magnesium trisaclylate**, a combination of choline salicylate and magnesium salicylate, used as an antiarthritic. **phosphatidyl c.**, lecithin. **c. salicylate**, the choline salt of salicylic acid, $C_{12}H_{19}NO_4$, having analgesic, antipyretic, and anti-inflammatory properties; used in conditions where salicylates, including aspirin, are indicated. It is administered orally. **c. theophyllinate**, oxtriphylline.

cholinergic (ko'lin-er'jik) 1. stimulated, activated or transmitted by choline (acetylcholine): a term applied to those nerve fibers which liberate acetylcholine at a synapse when a nerve impulse passes, i.e., the parasympathetic nerve endings. 2. an agent that produces such effects. Called also *parasympathomimetic*. Cf. *adrenergic*.

cholinesterase (ko'lin-es'ter-ās) an enzyme that catalyzes the hydrolysis of acetylcholine to choline and an anion; called also *pseudocholinesterase*. **serum c.**, cholinesterase. **true c.**, acetylcholinesterase.

cholinoceptive (ko'lin-o-sep'tiv) pertaining to the sites on effector organs that are acted upon by cholinergic transmitters.

cholinoceptor (ko'lin-o-sep'tor) cholinergic receptor; see under *receptor*.

cholinolytic (ko'lin-o-lit'ik) 1. blocking the action of acetylcholine, or of cholinergic agents. 2. an agent that blocks the action of acetylcholine in cholinergic areas, that is, organs supplied by parasympathetic nerves, and voluntary muscles.

cholinomimetic (ko'li-no-mi-met'ik) having an action similar to that of acetylcholine; parasympathomimetic.

cholo- see *chole-*.

cholochrome (kol'o-kro'm) [*cholo-* + Gr. *chrōma* color] any bilary pigment.

cholocyanin (kol'o-si'ah-nin) [*cholo-* + Gr. *kyanos* blue] bilicyanin.

chologenic (kol'o-je-net'ik) [*cholo-* + Gr. *gennan* to produce] producing bile; cholepoietic.

Cholografin (kol'o-gra'fin) trademark for preparations of iodipamide.

cholohematin (kol'o-hem'ah-tin) cholehematin, a brown bile pigment.

cholo-hemothorax (ko'lo-he'mo-tho'raks) [*cholo-* + Gr. *haima* blood + *thōrax* chest] presence of bile and blood in the thorax.

chololith (kol'o-lith) cholelith.

chololithiasis (kol'o-li-thi'ah-sis) cholelithiasis.

chololithic (kol'o-lith'ik) cholelithic.

cholo-poesis (kol'o-poi-e'sis) cholepoiesis.

choloscopy (ko-lo'sko-pe) [*cholo-* + Gr. *skopein* to examine] (*obs.*) examination of the biliary system or testing of the biliary function.

cholothorax (ko'lo-tho'raks) [*cholo-* + Gr. *thōrax* chest] chole-hemothorax.

Choloxin (ko-lok'sin) trademark for a preparation of dextro-thyroxine sodium.

choluria (ko-lu're-ah) [*chol-* + Gr. *ouron* urine + *-ia*] the presence of bile in the urine; discoloration of the urine with bile pigments.

choloric (ko-lur'ik) pertaining to or marked by choluria.

chondodendrine (kon'do-den'drēn) bebeerine.

Chondodendron (kon'do-den'dron) a genus of climbing menispermaceous shrubs. **C. tomento'sum** Ruiz et Pavon, one of the sources of curare, or South American arrow poison. The major alkaloid is D-tubocurarine, which is used as a skeletal muscle relaxant in surgery, to control convulsion in strychnine toxicity and tetanus, and as a diagnostic aid in myasthenia gravis.

chondr- see *chondro-*.

chondral (kon'dral) pertaining to cartilage.

chondralgia (kon-dral'je-ah) chondrodynia.

chondralloplasia (kon'dral-lo-pla'ze-ah) [*chondr-* + Gr. *allos* other + *plassein* to form] dyschondroplasia.

chondrectomy (kon-drek'to-me) [*chondr-* + Gr. *ektomē* excision] surgical removal of a cartilage.

chondri- see *chondrio-*.

chondric (kon'drik) cartilaginous; of or relating to cartilage.

chondrichthyes (kon-drik'thi-ēz) [Gr. *chondros* cartilage + *ichthys* fish] a class of fishes with cartilaginous skeletons, includes sharks, skates, and their allies.

chondrification (kon'dri-fi-ka'shun) [*chondri-* + L. *facere* to make] the formation of cartilage; transformation into cartilage.

chondrigen (kon'dri-jen) chondrogen.

chondrin (kon'drin) a protein, resembling gelatin, from cartilage (Johannes Müller, 1837); it is considered to be a mixture of gelatin and mucin.

Chondrina (kon-dri'nah) a genus of snails that serves as a host of *Dicrocoelium dendriticum*.

chondrio- (kon'dre-o) [Gr. *chondrion*, diminutive of *chondros* (1) a granule (2) gristle or cartilage] a combining form denoting relationship (1) to a granule or (2) to cartilage; see also words beginning *chondro-*.

chondriome (kon'dre-ōm) a term sometimes used to denote the total mitochondrion content of a cell.

chondriosome (kon'dre-o-sōm") [*chondrio-* + Gr. *sōma* body] mitochondrion.

chondritis (kon-dri'tis) [*chondr-* + *-itis*] inflammation of cartilage. **costal c.**, Tietze's syndrome. **c. intervertebra'lis calca'nea**, calcinosis intervertebralis.

chondro-, chondr- (kon'dro, kon'dr) [Gr. *chondros* cartilage] a combining form denoting relationship to cartilage; see also words beginning *chondri-* and *chondrio-*.

chondroadenoma (kon'dro-ad'ē-no'mah) adenochondroma.

chondroangioma (kon'dro-an'je-o'mah) a benign mesenchymoma containing chondromatous and angiomatous elements.

chondroblast (kon'dro-blast) [*chondro-* + Gr. *blastos* germ] a cell that arises from the mesenchyma and forms cartilage; called also *chondroblast*.

chondroblastoma (kon'dro-blas-to'mah) [*chondroblast* + *-oma*] a benign tumor composed of cells which arise from chondroblasts or their precursors and which tend to differentiate into cartilage cells; it occurs primarily in the epiphyses of adolescents. **benign c.**, chondroblastoma.

chondrocacinos (kon'dro-kal'si-no'sis) [*chondro-* + L. *calx* lime + *-osis*] the presence of calcium salts, especially calcium pyrophosphate, in the cartilaginous structures of one or more joints; when accompanied by attacks of goutlike symptoms, it is known as *pseudogout*.

chondrocarcinoma (kon'dro-kar'si-no'mah) carcinoma with chondromatous metaplasia.

chondroclast (kon'dro-klast) [*chondro-* + Gr. *klan* to break] a giant cell of the class that is believed associated with the absorption of cartilage.

Chondrococcus (kon'dro-kok'us) a genus of microorganisms of the family Myxococcaceae, found in dung of various animals.

chondrocostal (kon'dro-kos'tal) [*chondro-* + L. *costa* rib] of or pertaining to the ribs and costal cartilages.

chondrocranium (kon'dro-kra'ne-um) [*chondro-* + Gr. *kranion* head] the cartilaginous skull of the embryo.

chondrocyte (kon'dro-sīt) [*chondro-* + Gr. *kytos* hollow vessel] a mature cartilage cell embedded in a lacuna within the cartilage matrix. **isogenous c's**, cartilage cells that make up a single group.

chondrodermatitis (kon'dro-der'mah-ti'tis) an inflammatory process involving cartilage and skin; used almost exclusively to mean chondrodermatitis nodularis chronica helicis. **c. nodula'ris chron'ica hel'icis**, a condition marked by the presence of a painful nodule on the helix of the ear.

chondrodynia (kon'dro-din'e-ah) [*chondro-* + Gr. *odynē* pain] pain in a cartilage.

chondrodysplasia (kon'dro-dis-pla'ze-ah) [*chondro-* + *dys-plasia*] enchondromatosis. **hereditary deforming c.**, enchondromatosis.

chondrodystrophia (kon'dro-dis-tro'fe-ah) [*chondro-* + *dys-* + Gr. *trophē* nutrition] chondrodystrophy. **c. calcif'icans congen'ita**, **c. congen'ita puncta'ta**, **c. feta'lis calcif'icans**, dysplasia epiphysealis punctata. **c. feta'lis**, achondroplasia.

chondrodystrophy (kon'dro-dis'tro-fe) a morbid condition characterized by abnormal development of cartilage. **familial c.**, hereditary deforming chondrodysplasia. **hereditary deforming c.**, dyschondroplasia. **hyperplastic c.**, chondrodystrophy with excessive growth of the epiphyses. **hypoplastic c.**, chondrodystrophy in which the bone is spongy and the epiphyses are irregularly developed. **hypoplastic fetal c.**, chondrodystrophia calcificans congenita. **c. mala'cia**, a form marked by softening of the epiphyseal cartilage.

chondroendothelioma (kon'dro-en'do-the'le-o'mah) a benign mesenchymoma containing chondromatous and endotheliomatous elements.

chondroepiphyseal (kon'dro-ep'i-fiz'e-al) pertaining to the epiphyseal cartilages.

chondroepiphysitis (kon'dro-ep'i-fiz-i'tis) inflammation involving the epiphyseal cartilages.

chondrofibroma (kon'dro-fi-bro'mah) [*chondroma* + *fibroma*] a fibroma with cartilaginous elements.

chondrogen (kon'dro-jen) [*chondro-* + Gr. *gennan* to produce] a substance regarded as the basis of cartilage and of the corneal tissue: boiling turns it into chondrin.

chondrogenesis (kon'dro-jen'ē-sis) [*chondro-* + Gr. *genesis* production] the formation of cartilage.

chondrogenic (kon'dro-jen'ik) giving rise to or forming cartilage.

chondroglossus (kon'dro-glos'us) see *Table of Musculi*.

chondroglucose (kon'dro-glu'kōs) a sugar formed by the action of hydrochloric acid on chondrin from cartilage.

chondrography (kon-drog'rah-fe) [*chondro-* + Gr. *graphein* to write] a description or account of the cartilages.

chondroid (kon'droid) resembling cartilage.

chondroitin (kon'dro'i-tin) a mucopolysaccharide, C₁₈H₂₇NO₁₄, found in the cornea and differing from hyaluronic acid in that it contains acetylgalactosamine in place of acetylglucosamine. The sulfate ester occurs in 3 forms, A composed of glucuronic acid and sulfated galactosamine, B in which the uronic acid constituent is replaced by L-iduronic acid, and C which differs from chondroitin sulfate B in the position of the sulfate on the galactosamine residue. They are widespread in connective tissues, particularly cartilage. Chondroitin sulfate B is also called *dermatan sulfate*.

chondroitinuria (kon-dro'i-tin-u're-ah) the presence of chondroitin acid in the urine.

chondrolipoma (kon'dro-lī-po'mah) a benign mesenchymoma containing lipomatous and cartilaginous elements.

chondrology (kon-drol'o-je) [*chondro-* + *-logy*] the sum of knowledge in regard to the cartilages.

chondrolysis (kon-drol'i-sis) [*chondro-* + Gr. *lysis* dissolution] the degeneration of cartilage cells that occurs in the process of intracartilaginous ossification.

chondroma (kon-dro'mah) [*chondro-* + *-oma*] a tumor or tumor-like growth of cartilage cells. It may remain within the substance of a cartilage or bone (*true chondroma*, or *enchondroma*) or may develop on the surface of a cartilage (*ecchondroma*, or *ecchondrosis*). **joint c.**, a mass of cartilage in the synovial membrane of a joint; see *synovial chondromatosis*. **c. sarcomato'sum**, chondrosarcoma. **synovial c.**, a cartilaginous body formed in a synovial membrane; see under *chondromatosis*. **true c.**, enchondroma.

chondromalacia (kon'dro-mah-la'she-ah) [*chondro-* + Gr. *malakia* softness] softening of the articular cartilage, most frequently in the patella. **c. feta'lis**, a condition in which the limbs of the stillborn fetus are soft and pliable due to softening of the epiphyseal cartilage. **c. patel'lae**, premature degeneration of the patellar cartilage, the patellar margins being tender so that pain is produced when the patella is pressed against the femur.

chondromatosis (kon'dro-mah-to'sis) multiple formation of chondromas. **synovial c.**, a rare condition in which cartilage is formed in the synovial membranes of joints, tendon sheaths, or bursa, by metaplasia of the connective tissue beneath the surface of the membrane. Some metaplastic foci on the surface of the membrane may become sessile, and then pedunculated, and finally become detached, producing a number of loose bodies. Called also *synovial chondrometaplasia*.

chondromatous (kon-drom'ah-tus) pertaining to or of the nature of cartilage.

chondromere (kon'dro-mēr) [*chondro-* + Gr. *meros* part] a cartilaginous vertebra of the fetal vertebral column.

chondrometaplasia (kon'dro-met'ah-pla'ze-ah) a condition characterized by metaplastic activity of the chondroblasts. **synovial c.**, synovial chondromatosis. **tenosynovial c.**, synovial chondromatosis affecting the sheath of a tendon.

chondromitome (kon'dro-mi'tōm) [*chondro-* + Gr. *mitos* thread] the paranucleus.

chondromucin (kon'dro-mu'sin) a dense homogeneous intercellular substance in cartilage, being a compound of a protein with chondroitin acid; called also *chondromucoid*.

chondromucoid (kon'dro-mu'koid) chondromucin.

chondromucoprotein (kon'dro-mu'ko-pro'te-in) the principal constituent of the ground substance of cartilage, a copolymer of a mucoprotein, chondroitin-4-sulfate (chondroitin sulfate A), and chondroitin-6-sulfate (chondroitin sulfate C).

Chondromyces (kon'dro-mi'sēz) [*chondro-* + Gr. *mykēs* fungus] a genus of bacteria of the family Polyangiaceae, found in animal manure and decaying fungi.

chondromyoma (kon'dro-mi-o'mah) a benign mesenchymoma containing myomatous and cartilaginous elements.

chondromyxoma (kon'dro-mik-so'mah) myxoma containing cartilaginous elements.

chondromyxosarcoma (kon'dro-mik'so-sar-ko'mah) a malignant mesenchymoma containing sarcomatous and cartilaginous elements.

chondronecrosis (kon'dro-nē-kro'sis) necrosis of cartilage.

chondro-osseous (kon'dro-os'e-us) composed of cartilage and bone.

chondro-osteodystrophy (kon'dro-os'te-o-dis'tro-fe) [*chondro-* + Gr. *osteon* bone + *dystrophy*] Morquio's syndrome.

chondropathia (kon'dro-path'e-ah) chondropathy. **c. tubero'sa**, Tietze's syndrome.

chondropathology (kon'dro-pah-thol'o-je) the pathology of disease of cartilage.

chondropathy (kon-drop'ah-the) [*chondro-* + Gr. *pathos* disease] disease of a cartilage.

chondrophyte (kon'dro-fit) [*chondro-* + Gr. *phyton* a growth] a cartilaginous growth at the articular extremity of a bone.

chondroplasia (kon'dro-pla'ze-ah) the formation of cartilage by specialized cells (chondrocytes). **c. puncta'ta**, dysplasia epiphysealis punctata.

chondroplast (kon'dro-plast) [*chondro-* + Gr. *plassein* to form] chondroblast.

chondroplastic (kon'dro-plas'tik) pertaining to plastic operations on cartilage.

chondroplasty (kon'dro-plas'te) [*chondro-* + Gr. *plassein* to form] plastic surgery on cartilage; repair of lacerated or displaced cartilage.

chondroporosis (kon'dro-po-ro'sis) [*chondro-* + Gr. *poros* a passage] the formation of spaces or sinuses in the cartilages; it occurs normally during ossification.

chondroproteid (kon'dro-pro'te-id) chondroprotein.

chondroprotein (kon'dro-pro'te-in) any of a series of glycoproteins occurring in cartilage, comprising lardacein and chondromucoid; they yield chondroitin acid on decomposition.

chondrosamine (kon-dro'sam-in) a galactosamine, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{CH}(\text{NH}_2)\text{CHO}$, which results from hydrolysis of chondrosin.

chondrosarcoma (kon'dro-sar-ko'mah) [*chondro-* + *sarcoma*] a malignant tumor derived from cartilage cells or their precursors; called also *chondroma sarcomatosum*. **central c.**, one developing in the interior of a bone; called also *enchondrosarcoma*. **mesenchymal c.**, a chondrosarcoma that is multicentric in origin.

chondrosarcomatosis (kon'dro-sar'ko-mah-to'sis) the formation of multiple chondrosarcomas.

chondrosarcomatous (kon'dro-sar-ko'mah-tus) pertaining to or of the nature of chondrosarcoma.

chondroseptum (kon'dro-sep'tum) [*chondro-* + *septum*] the cartilaginous part of the nasal septum.

chondrosin (kon'dro-sin) a disaccharide, 2-amino-2-deoxy-3-O-(β -D-glucopyranosyl)-D-galactopyranose, $(\text{C}_{12}\text{H}_{21}\text{NO}_{11})$; the most common aldohexuronic acid in nature occurring as a structural unit. It is obtained by hydrolysis of chondroitins and chondroitin sulfates.

chondrosis (kon-dro'sis) [Gr. *chondros* cartilage] the formation of cartilaginous tissue.

chondroskeleton (kon'dro-skel'ē-ton) 1. a cartilaginous skeleton, as in certain fish. 2. that part of the skeleton composed of cartilage.

chondrosome (kon'dro-sōm) [*chondro-* + Gr. *sōma* body] chondriosome.

chondrosteoma (kon-dros'te-o'mah) osteochondroma.

chondrosternal (kon'dro-ster'nal) pertaining to the costal cartilages and the sternum.

chondrosternoplasty (kon'dro-ster'no-plas'te) surgical correction of funnel chest.

chondrotome (kon'dro-tōm) an instrument for cutting the cartilages.

chondrotomy (kon-drot'o-me) [*chondro-* + Gr. *temnein* to cut] the dissection or surgical division of cartilage.

chondrotrophic (kon'dro-trof'ik) [*chondro-* + Gr. *trophē* nutrition] having an influence on the formation or growth of cartilage.

chondroxiphoid (kon'dro-zi'foid) [*chondro-* + *xiphoid*] pertaining to the xiphoid process.

Chondrus (kon'drus) the dried, sun-bleached plant of the seaweed *Chondrus crispus*; used as a protective agent for the skin; called also *carrageen* or *carrageen*, *Irish moss*, *killeen*, *pearl moss*, and *salt rock moss*.

chonechondrosternon (ko'ne-kon'dro-ster'non) funnel chest.

Chopart's amputation (operation), articulation (joint) (sho-parz') [François Chopart, French surgeon, 1743-1795] see under *amputation*, and see *articulatio tarsi transversa*.

chorangioma (ko-ran'je-o'mah) chorioangioma.

chord (kord) cord. **condyle c.**, condylar axis.

chorda (kor'dah), pl. *chor'dae* [L.; Gr. *chordē* + cord] [NA] any cord or sinew. **c. dorsa'lis**, notochord. **c. gubernac'u-lum**, gubernacular cord; a portion of the gubernaculum testis or of the round ligament of the uterus that develops in the inguinal crest and adjoining body wall. **c. mag'n'a**, tendo calcaneus. **c. obli'qua membra'nae interos'seae antebra'chii** [NA], a small ligamentous band extending from the lateral face of the tuberosity of the ulna to the radius a little distal to its tuberosity; called also *oblique cord of elbow joint*, and *Weitbrecht's cord or ligament*. **c. spermat'ica**, spermatic cord. **c. spina'lis**, spinal cord (medulla spinalis [NA]). **c. tendin'gae cor'dis** [NA], the tendinous cords that connect each cusp of the two atrioventricular valves to appropriate papillary muscles in the heart ventricles. **c. tym'pani** [NA], a nerve originating from the facial nerve (nervus intermedius) and distributed to the submandibular, sublingual, and lingual glands and the anterior two-thirds of the tongue; modality: parasympathetic and special sensory. **c. umbilica'lis**, umbilical cord. **c. voca'lis**, ligamentum vocale. **chor'dae willis'ii**, dural trabeculae, which are numerous fibrous bands that extend transversely across the inferior angle of the superior sagittal sinus.

chordae (kor'de) [L.] plural of *chorda*.

chordal (kor'dal) pertaining to any chorda (chiefly used of the notochord).

chorda-mesoderm (kor'dah-mez'o-derm) tissue of the dorsal lip of the blastopore, which gives rise to both notochord and mesoderm.

Chordata (kor-da'tah) [L. *chordatus* having a cord] a phylum of the animal kingdom comprising all animals that have a notochord during some stage of their development. It includes the subphyla Cephalochordata, Urochordata, and Vertebrata.

chordate (kor'dāt) 1. an animal belonging to the phylum Chordata. 2. having a notochord.

chordectomy (kor-dek'to-me) [*chorde-* + Gr. *ektomē* excision] excision of a vocal cord.

chordee (kor'de, kor'da) [Fr. *cordée* corded] downward bowing of the penis as a result of a congenital anomaly (hypospadias) or a urethral infection (gonorrhea); called also *gryposis penis*.

chorditis (kor-di'tis) inflammation of a vocal or spermatic cord. **c. canto'rum**, inflammation of the vocal cords in professional singers. **c. fibrino'sa**, acute laryngitis marked by the deposition of fibrin and the formation of erosions on the vocal cords. **c. nodo'sa**, *c. tuberosa*. **c. tubero'sa**, a condition marked by the formation of a small whitish nodule on one or both vocal cords, occurring in persons who use their voice excessively; called also *c. nodosa*. **c. voca'lis**, inflammation of the vocal cords. **c. voca'lis infe'rior**, chronic subglottic laryngitis.

chordo- (kor'do) [Gr. *chordē* cord] a combining form denoting relationship to a cord.

chordoblastoma (kor'do-blas-to'mah) [*chorde-* + Gr. *blastos* germ + *-oma*] a tumor, the cells of which tend to differentiate into cells like those of the notochord.

chordocarcinoma (kor'do-kar'si-no'mah) chordoma.

chordoeptithelioma (kor'do-ep'ti-the'le-o'mah) a chordoma.

chordoid (kor'doid) resembling the notochord.

chordoma (kor-do'mah) [*chordo-* + *-oma*] a malignant tumor arising from the embryonic remains of the notochord; called also *chordocarcinoma* and *chordoeipithelioma*. Cf. *echchordosis physaliphora*.

chordopexy (kor'do-pek'se) chordopexy.

chordosarcoma (kor'do-sar-ko'mah) chordoma.

chordoskeleton (kor'do-skel'ē-ton) [*chordo-* + *skeleton*] that portion of the bony skeleton which is formed around the notochord.

chordotomy (kor-dot'o-me) [*chordo-* + Gr. *tomē* a cutting] cordotomy, def. 2.

chorea (ko-re'ah) [L.; Gr. *choreia* dance] the ceaseless occurrence of a wide variety of rapid, highly complex, jerky movements that appear to be well coordinated but are performed involuntarily. **acute c.**, Sydenham's c. **automatic c.**, a disease characterized by the performance of actions which seem to be intentional, but which are really performed independently of the will in response to some impulse or external stimulus. **Bergeron's c.**, electric chorea of childhood, characterized by violent rhythmic spasms, but running a benign course; see also *c. major*. **button-makers' c.**, an occupation neurosis observed in button-makers. **chronic c.**, **chronic progressive hereditary c.**, Huntington's c. **chronic progressive nonhereditary c.**, senile c. **c. cor'dis**, chorea with great irregularity of the heart's action. **dancing c.**, saltatory chorea. **degenerative c.**, Huntington's c. **diaphragmatic c.**, the utterance of a peculiar cry in cases of painless tic; called also *laryngeal c.* and *Schrötter's c.* **c. dimidia'ta**, hemichorea. **Dubini c.**, an acute, fatal form of electric chorea due to acute infection of the central nervous system; called also *Dubini's disease*. **electric c.**, a variety with violent and sudden movements. See *Bergeron's c.*, *Dubini's c.*, and *Henoch's c.* **epidemic c.**, dancing mania. **c. fes'tinans**, old name for ataxia with festination; paralysis agitans. **fibrillary c.**, fibrillary contractions of various muscles; paramyoclonus. **c. gravidarum**, Sydenham's chorea occurring in the early months of pregnancy, with or without a previous history of rheumatic disease; it may recur in subsequent pregnancies. **hemilateral c.**, hemichorea. **Henoch's c.**, chronic progressive electric chorea; see also *c. major*. **hereditary c.**, Huntington's c. **Huntington's c.**, a rare hereditary disease characterized by chronic progressive chorea and mental deterioration terminating in dementia; the age of onset is variable but usually occurs in the fourth decade of life. Death usually follows within 15 years. It is transmitted as an autosomal dominant trait. Called also *chronic (progressive hereditary) c.*, *degenerative c.*, and *hereditary c.* **hyoscine c.**, chorea-like movements occurring in acute hyoscine (scopolamine) intoxication. **hysterical c.**, *c. major*. **imitative c.**, a pseudochorea, or neurotic affection; a kind of tic due to imitation. **c. insaniens**, chorea with symptoms of insanity, chiefly seen in pregnant women; called also *maniacal c.* **juvenile c.**, Sydenham's c. **laryngeal c.**, diaphragmatic c. **limp c.**, chorea associated with extreme weakness; called also *c. mollis*. **local c.**, occupation neurosis. **c. ma'jor**, hysteria with continuous and somewhat regular oscillatory movements; called also *Bergeron's disease*, and *hysterical c.* **malleatory c.**, rhythmic chorea in which the patient performs persistent movements of hammering. **maniacal c.**, *c. insaniens*. **methodic c.**, a variety in which the movements take place at regular intervals. **mimetic c.**, that which is caused by imitation. **c. mi'nor**, Sydenham's c. **c. mol'lis**, limp c. **Morvan's c.** (*obs.*), fibrillary contractions of the muscles of the calves and posterior part of the thighs, sometimes extending to the trunk, but never affecting the neck and face. **c. nocturna**, chorea in which the movements continue during sleep. **c. nu'tans**, nodding spasm, or chorea with nodding head movements. **one-sided c.**, hemichorea. **paralytic c.**, chorea in which immobility replaces movement; see *Huntington's c.* **posthemiplegic c.**, a form that affects the partially paralyzed muscles after hemiplegia; see *athetosis*. **prehemiplegic c.**, choreic movements that may precede an attack of hemiplegia. **rhythmic c.**, chorea major in which the patient performs persistent rhythmic movements. **rotary c.**, chorea major marked by rhythmic movements of the head or body. **saltatory c.**, rhythmic chorea with dancing movements; called also *dancing c.* **Schrötter's c.**, diaphragmatic c. **senile c.**, a benign, usually mild disorder of the elderly, marked by choreiform movements unassociated with mental disturbance. **simple c.**, Sydenham's c. **Sydenham's c.**, an acute, usually self-limited disorder of early life, usually between the ages of five and fifteen, or during pregnancy, and closely linked with rheumatic fever. It is characterized by involuntary movements that gradually become severe, affecting all motor activities including gait, arm movements, and speech. A mild psychic component is usually present. The disorder may be limited to one side of the body (hemichorea) or may take the form of muscular rigidity (paralytic chorea). Called also *St. Vitus' dance*.

choreal (ko're-al) choreic.

choreatic (ko're-at'ik) choreic.

choreic (kō-re'ik) pertaining to, of the nature of, or characterized by chorea.

choreiform (kō-re'i-form) [*chorea* + L. *forma* form] resembling chorea.

choreoathetoid (ko're-o-ath'ē-toid) pertaining to or characterized by choreoathetosis.

choreoathetosis (ko're-o-ath'ē-to'sis) a condition marked by choreic and athetoid movements.

choreoid (ko're-oid) choreiform.

choreomania (ko're-o-ma'ne-ah) [Gr. *choreia* dance + *mania* madness] dancing mania.

choreophrasia (ko-re'o-fra'ze-ah) a condition in which the patient repeats phrases without regard to form or meaning.

chorial (ko're-al) of or relating to the chorion.

chorioadenoma (ko're-o-ad'ē-no'mah) adenomatous tumor of the chorion. **c. destru'ens**, a form of hydatidiform mole in which molar chorionic villi penetrate into the myometrium and/or parametrium or, rarely, are transported to distant sites, most often the lungs; called also *invasive*, *metastasizing*, or *malignant mole*.

chorioallantoic (ko're-o-al'an-to'ik) pertaining to the chorioallantois.

chorioallantois (ko're-o-ah-lan'to-is) an extraembryonic structure derived from union of the chorion and allantois which by means of vessels in the associated mesoderm serves in gas exchange. In reptiles and birds, it is a membrane apposed to the egg shell; in many mammals, it forms the placenta.

chorioamnionitis (ko're-o-am'ne-o-ni'tis) inflammation of fetal membranes.

chorioangiofibroma (ko're-o-an'je-o-fi-bro'mah) angiofibroma of the chorion.

chorioangioma (ko're-o-an'je-o'mah) an angiomatous tumor of the chorion.

chorioblastoma (ko're-o-blas-to'mah) choriocarcinoma.

chorioblastosis (ko're-o-blas-to'sis) overgrowth of the chorion.

choriocapillaris (ko're-o-kap'i-la'ris) [*chorioid* + L. *capillaris* capillary] lamina choriocapillaris.

choriocarcinoma (ko're-o-kar'si-no'mah) an epithelial malignancy of trophoblastic cells, formed by the abnormal proliferation of cuboidal and syncytial cells of the placental epithelium, without the production of chorionic villi. Almost all cases arise in the uterus, developing from hydatidiform mole (50 per cent), following abortion (25 per cent), or during normal pregnancy (22 per cent). The remainder occur in ectopic pregnancies and genital (ovarian and testicular) and extragenital teratomas. Called also *chorioblastoma*, *chorioepithelioma*, *chorionic carcinoma* or *epithelioma*, *deciduocellular sarcoma*, and *syncytioma malignum*.

choriocele (ko're-o-sēl) [*chorion* + Gr. *kēlē* hernia] protrusion of the eye through an aperture in the choroid.

chorioepithelioma (ko're-o-ep'i-the'le-o'mah) choriocarcinoma. **c. malig'num**, choriocarcinoma.

choriogenesis (ko're-o-jen'ē-sis) [*chorio-* + Gr. *genesis* origin] the development of the chorion.

chorioid (ko're-oid) the choroid, def. 1.

chorioidea (ko're-oi'de-ah) the choroid, def. 1.

chorioido- for words beginning thus, see those beginning *choroido-*.

chorioma (ko're-o'mah) [*chorion* + *-oma*] any trophoblastic proliferation, benign or malignant.

choriomeningitis (ko're-o-men'in-jī'tis) cerebral meningitis with lymphocytic infiltration of the choroid plexuses. **lymphocytic c.**, a form of viral meningitis usually occurring in adults 20 to 40 years of age during the fall and winter months.

chorion (ko're-on) [Gr.] 1. in human embryology, the cellular, outermost extraembryonic membrane, composed of trophoblast lined with mesoderm; it develops villi about 2 weeks after fertilization, is vascularized by allantoic vessels a week later, gives rise to the placenta, and persists until birth. 2. in mammalian embryology, the cellular, outer extraembryonic membrane, not necessarily developing villi. 3. endometrial stroma. 4. in biology, the noncellular membrane covering eggs of various animals, including fish and insects. See illustration under *amnion*. **c. frondo'sum**, the region of the chorion that bears villi; called also *shaggy c.* **c. lae've**, the smooth (nonvillous) and membranous part of the chorion. **primitive c.**, the chorion from its inception by addition of mesoderm to trophoblast through the stage in which it has many primitive villi. **shaggy c.**, *c. frondosum*.

chorionepithelioma (ko're-on-ep'i-the'le-o'mah) choriocarcinoma.

chorionic (ko're-on'ik) pertaining to the chorion.

chorioplacental (ko're-o-plah-sen'tal) pertaining to the chorion and the placenta.

Chorioptes (ko're-op'tēz) a genus of parasitic mites infesting the skin and hair of domestic animals and causing a sort of mange (*chorioptic acariasis* or *itch*).

chorioretinal (ko're-o-ret'i-nal) pertaining to the choroid and retina.

chorioretinitis (ko're-o-ret'i-ni'tis) inflammation of the choroid and retina.

chorioretinopathy (ko're-o-ret'i-nop'ah-the) a noninflammatory process involving both chorion and retina.

chorista (ko-ris'tah) [Gr. *chōristos* separated] defective development due to, or characterized by, displacement of the primordium.

choristoblastoma (ko-ris'to-blas-to'mah) [Gr. *chōristos* separated + *blastos* germ + *-oma*] choristoma.

choristoma (ko'ris-to'mah) [Gr. *chōristos* separated + *-oma*] a mass of tissue histologically normal for an organ or part of the body other than the site at which it is located; called also *aberrant rest* and *heterotopic tissue*.

choroid (ko'roid) [chorion + Gr. *eidos* form] 1. the thin, pigmented, vascular coat of the eye extending from the ora serrata to the optic nerve; it furnishes blood supply to the retina and conducts arteries and nerves to the anterior structures. Called also *choroidea* [NA] and *chorioidea*. 2. resembling the chorion or corium.

choroidal (ko-roi'dal) pertaining to the choroid.

choroidea (ko-roi'de-ah) [NA] the choroid, def. 1.

choroidectomy (ko'roi-dek'to-me) surgical removal or destruction of the choroid plexus of the lateral ventricles of the brain.

choroideremia (ko'roi-der-e'me-ah) [choroid + Gr. *erēmia* destitution] hereditary primary choroidal degeneration, transmitted as an X-linked trait and beginning in the first decade of life. In males, the earliest symptom is usually night blindness, followed by constricted visual field and eventual blindness as the degeneration of the pigment epithelium of the retina progresses to complete atrophy. In females, it is nonprogressive; usually there is normal vision and often an atypical pigmentary retinopathy.

choroiditis (ko'roid-i'tis) [choroid + *-itis*] inflammation of the choroid. **anterior c.**, that in which there are points of inflammation in the peripheral choroid. **areolar c.**, that which starts around or near the macula lutea and progresses toward the periphery. **areolar central c.**, Förster's c. **central c.**, a variety in which the inflammation is in the region of the macula lutea. **diffuse c.**, **disseminated c.**, that which is characterized by spots scattered over the fundus. **Doyle's familial honeycombed c.**, a hereditary degenerative ocular abnormality marked by light-colored patches in the neighborhood of the optic disk and macula. **exudative c.**, that which is characterized by scattered patches of an exudate. **Förster's c.**, former term for a type of central choroiditis in which the spots are black at first, but later enlarge and become white; called also *areolar central c.* and *Forster's disease*. **c. gutta/ta seni/lis**, Tay's c. **metastatic c.**, a form due to metastasis in pyemia, meningitis, etc. **senile macular exudative c.**, disciform macular degeneration. **c. sero/sa**, glaucoma. **suppurative c.**, that which leads to the formation of pus. **Tay's c.**, degeneration of the choroid marked by irregular yellow spots around the macula lutea, and believed to be due to an atheromatous state of the arteries; seen in advanced life. Called also *c. guttata senilis* and *Tay's disease*.

choroidocyclitis (ko-roi'do-sik-li'tis) inflammation of the choroid and ciliary processes.

choroidiritis (ko-roi'do-i-ri'tis) inflammation of the choroid coat and the iris.

choroidopathy (ko'roi-dop'ah-the) [choroid + Gr. *pathos* disease] any morbid process affecting the choroid.

choroidoretinitis (ko-roi'do-ret'i-ni'tis) inflammation of the choroid and retina.

chorology (ko-rol'o-je) [Gr. *chōros* place + *-logy*] the science of geographic distribution of organisms.

choromania (ko'ro-ma'ne-ah) [Gr. *choros* dance + *mania* madness] a morbid desire to dance.

cholesteryl (kor-tos'ter-ol) [Gr. *chortis* grass] the sterol of grass; also a mixture of sterols found in the feces of the horse, hence *hippocoprosterol*.

Chr. Chromobacterium.

Christian's disease (syndrome) (kris'chanz) [Henry Asbury Christian, American physician, 1876-1951] Hand-Schüller-Christian disease.

Christian-Weber disease (kris'chan-web'er) [H. A. Christian; Frederick Parkes Weber, British physician, 1863-1962] nodular nonsuppurative panniculitis.

Christison's formula (kris'ti-sonz) [Sir Robert Christison, Scotch physician, 1797-1882] Trapp's formula; see under *formula*.

Christmas disease, factor [Christmas, for the name of the first patient with the disease who was studied in detail] see *coagulation Factor IX*, under *factor*.

chrom- see *chromo-*.

chromaffin (kro-maf'in) [chromium- + L. *affinis* having affinity for] taking up and staining strongly with chromium salts; said of certain cells occurring in the adrenal, coccygeal, and carotid

glands, along the sympathetic nerves, and in various organs whose cytoplasmic granules give a brownish reaction with chromium salts. Called also *chromaphil*.

chromaffinity (kro'mah-fin'i-te) the property of staining strongly with chrome salts.

chromaffinoblastoma (kro-maf'i-no-blas-to'mah) (*obs.*) argentaffinoma.

chromaffinoma (kro'maf-i-no'mah) any tumor containing chromaffin cells. **medullary c.**, pheochromocytoma.

chromaffinopathy (kro'maf-i-nop'ah-the) [chromaffin + Gr. *pathos* disease] any disease of the chromaffin system.

chromaphil (kro'mah-fil) [chrom- + Gr. *philein* to love] chromaffin.

chromargentaffin (krōm'ar-jen'tah-fin) [chromium + L. *argentum* silver + L. *affinis* having affinity for] staining with chromium salts and impregnable with silver; said of certain cells of the mucous membrane of the intestinal tract. Cf. *enterochromaffin gland* and *argentaffinoma*.

chromate (kro'māt) 1. any salt of chromic acid. 2. to subject to the action of a salt of chromic acid.

chromatopsia (kro'mat-el-op'se-ah) [chrom- + Gr. *atelēs* imperfect + *opsis* sight + *-ia*] imperfect perception of colors; called also *chromatodysopia*.

chromatic (kro-mat'ik) 1. pertaining to color; stainable with dyes. 2. pertaining to chromatin.

chromatid (kro'mah-tid) one of the two spiral filaments joined at the centromere which make up a chromosome, and which separate in cell division, each going to a different pole of the dividing cell and each becoming a chromosome of one of the two daughter cells. **nonsister c's**, the two chromatids of one homologous chromosome with respect to those of the other homologue. **sister c's**, the two chromatids of a chromosome held together by a centomere; dyads.

chromatin (kro'mah-tin) [Gr. *chrōma* color] the more readily stainable portion of the cell nucleus, forming a network of nuclear fibrils within the achromatin of a cell. It is a deoxyribonucleic acid attached to a protein (primarily histone) structure base and is the carrier of the genes in inheritance. It occurs in two interchangeable states, euchromatin and heterochromatin, and during cell division it coils and folds to form the chromosomes. Called also *chromoplasm*. **nucleolar-associated c.**, **nucleolus-associated c.**, heterochromatin containing DNA, situated around, and sometimes extending into, the nucleolus of a cell. **sex c.**, the persistent mass of the material of the inactivated X chromosome in cells of normal females; called also *Barr body*. See *Lyon's hypothesis*, under *hypothesis*.

chromatinic (kro'mah-tin'ik) of or pertaining to the chromatin.

chromatin-negative (kro'mah-tin-neg'ah-tiv) lacking sex chromatin; characteristic of the nuclei of cells in a normal male.

chromatinolysis (kro'mah-ti-nol'i-sis) [chromatin + Gr. *lysis* dissolution] chromatolysis.

chromatinorrhesis (kro'mat-i-no-rek'sis) [chromatin + Gr. *rhēxis* rupture] splitting up of the chromatin.

chromatin-positive (kro'mah-tin-poz'i-tiv) having sex chromatin (Barr body) in the nuclei of autosomal cells, a characteristic of the normal female.

chromatism (kro'mah-tizm) a hallucinatory perception of colored light.

Chromatium (kro-ma'te-um) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, made up of more or less ovoid, bean-shaped, or vibrio-shaped cells, or short rods, occurring singly. It includes 21 species.

chromatize (kro'mah-tiz) to charge with some chromium compound.

chromato- (kro'mah-to) [Gr. *chrōma*, *chrōmatos* color] 1. combining form denoting relationship to chromatin. 2. see *chromo-*.

chromatoblast (kro-mat'o-blast) [chromato- + Gr. *blastos* germ] a cell that can become a chromatophore, or bearer of pigment.

chromatocinesis (kro'mah-to-si-ne'sis) chromatokinesis.

chromatodysopia (kro'mah-to-dis-o'pe-ah) chromatelopsia.

chromatogenous (kro'mah-toj'ē-nus) [chromato- + Gr. *gennan* to produce] producing color or coloring matter.

chromatogram (kro-mat'o-gram) 1. the record produced by the bands of color in an adsorption column after a solution for analysis has been poured into an adsorbent-containing vertical glass tube, or the record produced in paper chromatography. 2. any graphical record of the results of a chromatographic separation.

chromatograph (kro-mat'o-graf) 1. the apparatus used in chromatography. 2. to analyze by chromatography.

chromatographic (kro'mah-to-graf'ik) pertaining to or produced by chromatography.

chromatography (kro'mah-tog'rah-fe) [chromato- + Gr. *graphein* to write] a method of separating and identifying the components of a complex mixture by differential movement

through a two-phase system, in which the movement is effected by a flow of a liquid or a gas (mobile phase) which percolates through an adsorbent (stationary phase) or a second liquid phase, based on the physicochemical principles of adsorption, partition, ion exchange, or exclusion, or a combination of these principles. Chromatographic techniques may be classified according to the nature of the adsorbent employed, the physical characteristics of the mobile and stationary phases, or the type of technique employed. **adsorption c.**, that in which the adsorptive force is provided by molecules adhering to the surface of a solid packed in a column, spread as a thin film on a glass or plastic sheet, or as a coating inside a tube; the various components move through the stationary phase at different velocities, according to their degree of attraction to it, and are deposited at specific sites on the adsorbent. **column c.**, that in which the various solutes of a solution are allowed to travel down an adsorptive column, the individual components being adsorbed by the stationary phase; the most strongly adsorbed component will remain near the top of the column, and the other components will move to sites farther and farther down the column according to their affinity for the adsorbent. If the individual components are naturally colored, they will form bands or zones at different levels on the adsorption column. **electric c.**, electrochromatography. **exclusion c.**, that based on molecular size and, to some extent, molecular shape and hydration, in which the stationary phase consists of very small beads of special polymers, most often gel-forming hydrophilic beads, containing pores and channels, the size of which can be varied so that a molecule is either allowed to enter the gel beads or is excluded and flows along the spaces between the beads. Called also *gel-filtration c.*, *gel-permeation c.*, and *molecular sieve c.* **filter paper c.**, paper c. **gas c.**, that in which an inert gas is used to move the vapors of the materials to be separated through a column of inert material. **gas-liquid c.**, that in which the substances to be separated are moved by an inert gas along a long tube filled with a finely divided inert solid coated with a nonvolatile oil; each component migrates at a rate determined by its solubility in oil and its vapor pressure. **gel-filtration c.**, **gel-permeation c.**, **exclusion c.** **ion-exchange c.**, that utilizing resins to which are coupled either cations or anions that will exchange with other cations or anions in the material passed through their meshwork. **liquid-liquid c.**, partition c. **molecular sieve c.**, exclusion c. **paper c.**, a form of chromatography in which a sheet of blotting paper, usually filter paper, is substituted for the adsorption column. After separation of the components as a consequence of their differential migratory velocities, they are stained to make the chromatogram visible. Called also *filter paper c.* **partition c.**, a form of separation of solutes utilizing the partition of the solutes between two liquid phases, namely, the original solvent and the film of solvent on the adsorption column. **thin-layer c.**, chromatography through a thin layer of inert material, such as cellulose.

chromatoid (kro'mah-to'id) having the tinctorial properties of chromatin; see also under *body*.

chromatokinesis (kro'mah-to-ki-ne'sis) [*chromatin* + Gr. *kinēsis* movement] movement of chromatin during the life and division of a cell.

chromatology (kro'mah-to'l'o-je) [*chromato-* + *-logy*] the science of colors.

chromatolysis (kro'mah-to-l'i-sis) [*chromato-* + Gr. *lysis* dissolution] 1. the solution and disintegration of the chromatin of cell nuclei. 2. disintegration of the Nissl (chromophil) bodies of a nerve cell as the result of injury, or of fatigue or exhaustion; a part of the so-called axon reaction.

chromatolysm (kro-mat'o-lizm) chromatolysis.

chromatolytic (kro'mah-to-lit'ik) pertaining to chromatolysis.

chromatometer (kro'mah-tom'ē-ter) [*chromato-* + Gr. *metron* measure] an instrument for measuring color or color perception.

chromatopathy (kro'mah-top'ah-the) [*chromato-* + Gr. *pathos* disease] (*obs.*) any skin disease characterized by a disorder of pigmentation.

chromopectic (kro'mah-to-pek'tik) chromopectic.

chromatopexis (kro'mah-to-pek'sis) chromatopexy.

chromatophagus (kro'mah-tof'ah-gus) [*chromato-* + Gr. *phagein* to devour] destroying pigments.

chromatophil (kro'mah-to-fil') a cell or element that stains easily.

chromatophile (kro'mah-to-fil') 1. chromatophil. 2. chromatophilic.

chromatophilia (kro'mah-to-fil'e-ah) [*chromato-* + Gr. *philein* to love + *-ia*] the condition of staining easily.

chromatophilic (kro'mah-to-fil'ik) staining easily.

chromatophilous (kro'mah-tof'i-lus) chromatophilic.

chromatophore (kro'mah-to-för') [*chromato-* + Gr. *pherein* to bear] any pigmentary cell or color-producing plastid, such as those of the cutis or deep layers of the epidermis. Cf. *melanophore*.

chromatophoroma (kro'mah-to-fo-ro'mah) (*obs.*) malignant melanoma.

chromatophoromatoses (kro'mah-to-fo-ro-mah-to'sis) (*obs.*) malignant melanomatosis.

chromatophorotropic (kro'mah-to-fo-ro-trop'ik) having an influence or effect on chromatophores; applied to a principle of the pars intermedia of the pituitary.

chromatoplasm (kro'mah-to-plazm) the colored portions of the protoplasm of a pigmented cell.

chromatopseudopsis (kro'mah-to-su-dop'sis) [*chromato-* + Gr. *pseudēs* false + *opsis* vision] abnormal perception of color.

chromatopsia (kro'mah-top'se-ah) [*chromato-* + Gr. *opsis* vision + *-ia*] 1. a visual defect in which colorless objects appear to be tinged with color. 2. a visual defect in which various colors are imperfectly perceived; anomalous color vision.

chromatoptometer (kro'mah-top-tom'ē-ter) [*chromato-* + Gr. *op-* to see + *metron* measure] a device used in measuring color perception.

chromatoptometry (kro'mah-top-tom'ē-tre) the testing of the power of discriminating colors.

chromatosis (kro'mah-to'sis) (*obs.*) pigmentation, especially abnormal pigmentation of the skin.

chromatoskiameter (kro'mah-to-ski-am'ē-ter) an instrument for measuring the color sense.

chromatosome (kro-mat'o-sōm) [*chromato-* + Gr. *sōma* body] chromosome.

chromatotaxis (kro'mah-to-tak'sis) [*chromatin* + Gr. *taxis* arrangement] the attraction or influence of certain substances on the chromatin of a cell nucleus, causing destruction of the chromatin, while the cell body remains intact.

chromatotropism (kro'mah-tot'ro-pizm) [*chromato-* + Gr. *tropos* a turning] an orienting response to a color.

chromaturia (kro'mah-tu're-ah) [*chromato-* + Gr. *ouron* urine + *-ia*] abnormal coloration of the urine.

1,2-chromene (kro'mēn) a plant pigment, a constituent of oxidized tocopherol; called also *1,2-benzopyran*.

chromesthesia (kro'mes-the'ze-ah) [*chrom-* + Gr. *aisthēsis* perception] the association of imaginary sensations of color with actual sensations of hearing, taste, or smell; see *photism*.

chromhidrosis (kro'mi-dro'sis) [*chrom-* + Gr. *hidrōs* sweat] the secretion of colored sweat.

chromicize (kro'mi-siz) to treat with a chromium compound.

chromidia (kro-mid'e-ah) plural of *chromidium*.

chromidial (kro-mid'e-al) pertaining to or composed of chromidia.

chromidiation (kro'mid-e-a'shun) chromidiosis.

chromidien (kro-mid'e-en) [Ger.] that part of the extranuclear chromatin not concerned in the reproduction of the cell.

chromidiosis (kro-mid-e-o'sis) the outpouring of nuclear substance and chromatin from the nucleus into the cytoplasm of a cell.

chromidium (kro-mid'e-um), pl. *chromidia*. Any one of the granules of extranuclear chromatin seen in the cytoplasm of a cell, and staining deeply with basic stains.

chromidrosis (kro'mid-ro'sis) chromhidrosis.

chromiole (kro'me-ōl) one of the minute granules of chromatin composing the chromosomes (Eisen, 1899).

chromium (kro'me-um) [L.; Gr. *chrōma* color] a blue-whitish, brittle metal: atomic number, 24; atomic weight, 51.996; specific gravity, 7.1; symbol, Cr; several of its compounds are pigments, and the metal itself is used for weather-resistant plating. Chromium, which plays a role in glucose metabolism, is considered essential in trace amounts in nutrition. **c. oxide**, a substance used in dentistry as a polishing agent, especially for stainless steel; called also *chrome green*. **c. trioxide**, chromic acid, def. 2.

chromo-, chrom-, chromato- [Gr. *chrōma*, *chrōmatos* color] a combining form denoting relationship to color.

Chromobacterium (kro'mo-bak-te're-um) a genus of microorganisms of the family Rhizobiaceae, order Eubacteriales, made up of small flagellated rods that characteristically produce a violet pigment which is soluble in alcohol but not in water or chloroform. It includes four species: *C. amythis* tinum, *C. janthinum*, *C. marismor* tui, and *C. viola* ceum.

chromoblast (kro'mo-blast) [*chromo-* + Gr. *blastos* germ] an embryonic cell that develops into a pigment cell.

chromoblastomycosis (kro'mo-blas'to-mi-ko'sis) chromomycosis.

chromocenter (kro'mo-sen'ter) 1. karyosome. 2. a fused mass of heterochromatin with spokelike extensions of euchromatin, representing the chromosomes in the salivary glands of some insects.

chromocholoscapy (kro'mo-ko-los'ko-pe) [*chromo-* + Gr. *cholē* bile + Gr. *skopein* to examine] testing the biliary function by a pigment excretion test (methylthionine chloride).

chromoclastogenic (kro'mo-klas'to-jen'ik) giving rise to or inducing chromosomal disruption or damage.

chromocrinia (kro'mo-krin'e-ah) [*chromo-* + Gr. *krinein* to separate] the secretion or excretion of coloring matter.

chromocystoscopy (kro'mo-sis-tos'ko-pe) [*chromo-* + *cystoscopy*] examination of the interior of the bladder after administration of indigo carmine or other dye which is excreted in the urine, for identification and study of the activity of the ureteral orifices; called also *chromoureteroscopy* and *cystochromoscopy*.

chromocyte (kro'mo-sit) [*chromo-* + Gr. *kytos* hollow vessel] any colored cell or pigmented corpuscle.

chromodacryorrhea (kro'mo-dak're-o-re'ah) [*chromo-* + Gr. *dacryon* tear + *rhoia* flow] the shedding of bloody tears.

chromodiagnosis (kro'mo-di'ag-no'sis) [*chromo-* + *diagnosis*] 1. diagnosis by change of color. 2. diagnosis of functional derangements by observing the rate at which coloring matters, such as methylthionine chloride, are excreted. 3. diagnostic examination made through colored glass or sheets of colored gelatin.

chromoflavine (kro'mo-fla'vin) acriflavine.

chromogen (kro'mo-jen) any substance that may give origin to a coloring matter. **Porter-Silber c's**, 17-hydroxycorticosteroids, adrenocorticosteroids with a dihydroxyacetone side chain; so called because their concentration in urine can be determined by the Porter-Silber reaction employing sulfuric acid-phenylhydrazine reagent.

chromogene (kro'mo-jen) [*chromosome* + *gene*] a gene that is located on a chromosome. Cf. *plasmagene*.

chromogenesis (kro'mo-jen'e-sis) [*chromo-* + *genesis*] the formation of pigments or colors, as by bacterial action.

chromogenic (kro'mo-jen'ik) producing a pigment or coloring matter.

chromogranin (kro'mo-gran'in) a soluble protein constituent of the secretory granules of the chromaffin cells of the adrenal medulla.

chromoisomerism (kro'mo-i-som'er-iz-m) [*chromo-* + *isomerism*] isomerism in which the isomers have different colors.

chromolipoid (kro'mo-lip'oid) lipochrome.

chromolysis (kro-mol'i-sis) chromatolysis.

chromoma (kro-mo'mah) (obs.) an ulcerated malignant melanoma.

chromomere (kro'mo-mēr) [*chromo-* + Gr. *meros* part] 1. any one of the beadlike granules occurring in series along the chromonema of a chromosome; called also *idiomere*. 2. granulomere.

chromometer (kro-mom'ē-ter) [*chromo-* + Gr. *metron* measure] colorimeter.

chromomycosis (kro'mo-mi-ko'sis) a chronic fungal infection of the skin, producing wartlike nodules or papillomas that may or may not ulcerate; microscopically, they are characterized by round, brown bodies that reproduce by equatorial splitting and not by budding. The disease occurs sporadically in many areas of the world, and may be caused by *Phialophora verrucosa*, *Fonsecaea pedrosoi*, *F. compactum*, *Cladosporium carrioni*, and other fungi. Called also *chromoblastomycosis* and *dermatitis verrucosa*.

chromonar hydrochloride (kro'mo-nar) chemical name: [[3-[2-(diethylamino)-ethyl]4-methyl-2-oxo-2H-1-benzopyran-7-yl]oxy]acetic acid ethyl ester hydrochloride; a coronary vasodilator, C₂₀H₂₇NO₆·HCl. Called also *carbocromen hydrochloride*.

chromone (kro'mōn) [Gr. *chrōma* color] coumarin.

chromonema (kro'mo-ne'mah), pl. *chromone'mata* [*chromo-* + Gr. *nēma* thread] the coiled central thread of a chromatid, along which lie the chromomeres.

chromonemal (kro'mo-ne'mal) of or pertaining to a chromonema.

chromonemata (kro'mo-ne'mah-tah) plural of *chromonema*.

chromoneme (kro'mo-nēm) chromonema.

chromoparic (kro'mo-par'ik) [*chromo-* + L. *parere* to produce] producing or giving rise to color; chromogenic.

chromopathy (kro-mop'ah-the) chromatopathy.

chromopectic (kro'mo-pek'tik) pertaining to, characterized by, or promoting chromopecty.

chromopectic (kro'mo-pek'sik) chromopectic.

chromopecty (kro'mo-pek'se) [*chromo-* + Gr. *pēxis* fixation] the fixation of pigment, a term applied especially to the function of the liver in forming bilirubin.

chromophage (kro'mo-fāj) [*chromo-* + Gr. *phagein* to eat] pigmentophagocyte.

chromophane (kro'mo-fān) [*chromo-* + Gr. *phainein* to show] a retinal pigment.

chromophil (kro'mo-fil) [*chromo-* + Gr. *philein* to love] any easily stainable cell, structure, or tissue.

chromophile (kro'mo-fil) 1. chromophil. 2. chromophilic.

chromophilic (kro-mo-fil'ik) readily or easily stained; said especially of certain leukocytes and other histologic elements.

chromophilous (kro-mof'i-lus) chromophilic.

chromophobe (kro'mo-fōb) [*chromo-* + Gr. *phobein* to be frightened by + *ia*] any cell, structure, or tissue that does not stain readily; applied especially to the nonstaining cells of the anterior hypophysis (pituitary gland).

chromophobia (krō'mo-fō'be-ah) the quality of staining poorly with dyes.

chromophore (kro'mo-fōr) any chemical group whose presence gives a decided color to a compound and which unites with certain other groups (auxochromes) to form dyes; called also *color radical*.

chromophoric (kro'mo-fōr'ik) [*chromo-* + Gr. *pherein* to bear] 1. bearing color; said of chromogenic bacteria when the pigment is a component of the bacterial cell itself. 2. pertaining to a chromophore.

chromophorous (kro-mof'o-rus) chromophoric.

chromophose (kro'mo-fōs) [*chromo-* + *phose*] a subjective sensation of color.

chromophotherapy (kro'mo-fō'to-ther'ah-pe) [*chromo-* + Gr. *phōs* light + *therapeia* treatment] treatment with colored light.

chromoplasm (kro'mo-plazm) [*chromo-* + Gr. *plasma* something formed] chromatin.

chromoplast (kro'mo-plast) chromoplastid.

chromoplastid (kro'mo-plas'tid) [*chromo-* + *plastid*] any pigment-producing plastid other than a chloroplast.

chromoprotein (kro'mo-pro'te-in) [*chromo-* + *protein*] a colored conjugated protein. Examples are the red hemoglobin of the higher animals, the blue hemocyanin of many lower animals, and the red and blue pigments of seaweeds. Chromoproteins have respiratory functions and are closely related to the green chlorophyll of the higher plants.

chromopsia (kro-mop'se-ah) chromatopsia.

chromoptometer (kro'mo-tom'ē-ter) [*chromo-* + Gr. *op-* to see + *metron* measure] chromatoptometer.

chromoradiometer (kro'mo-ra'de-om'ē-ter) [*chromo-* + L. *radius* ray + Gr. *metron* measure] an apparatus once used for estimating radiation exposure by means of the color changes produced in slides placed next to the skin. **Holzknicht's c.**, an apparatus once used for estimating radiation exposure, consisting of a capsule which contains a substance color-sensitive to the roentgen ray. This capsule is placed in the pathway of the x-ray beam at the level of treatment. Following exposure the color is then compared with a color scale whose colors are numbered from 3 to 24. The quantities indicated by these numbers are known as *Holzknicht's units*.

chromoretinography (kro'mo-ret'i-nog'rah-fe) [*chromo-* + *retina* + Gr. *graphein* to write] color photography of the retina.

chromorhinorrhea (kro'mo-ri'no-re'ah) [*chromo-* + Gr. *rhis* nose + Gr. *rhoia* a flow] the discharge of a pigmented secretion from the nose.

chromosantonin (kro'mo-san'to-nin) yellow santonin; an isomeric form produced when santonin is exposed to sunlight.

chromoscope (kro'mo-skōp) [*chromo-* + Gr. *skopein* to examine] an instrument for testing color perception.

chromoscopy (kro-mos'kō-pe) [*chromo-* + Gr. *skopein* to examine] 1. the testing of color vision. 2. diagnosis of renal function by the color of the urine following the administration of dyes. **gastric c.**, diagnosis of gastric function by the color of the gastric contents; a test for achylia gastrica.

chromosomal (kro'mo-so'mal) pertaining to chromosomes.

chromosome (kro'mo-sōm) [*chromo-* + Gr. *sōma* body] 1. in animal cells, a structure in the nucleus containing a linear thread of DNA, which transmits genetic information and is associated with RNA and histones; during cell division, the material (chromatin) composing the chromosome is compactly coiled, making it visible with appropriate staining and permitting its movement in the cell with minimal entanglement. Each organism of a species is normally characterized by the same number of chromosomes in its somatic cells, 46 being the number normally present in man, including the two (XX or XY) which determine the sex of the organism. See *illustration*. 2. in bacterial genetics, a closed circle of double-stranded DNA that contains the genetic material of the cell and is attached to the cell membrane; the bulk of the material forms a compact bacterial nucleus (called also *chromatinic body*). **accessory c's**, see *sex c's*. **bivalent c.**, see *bivalent*, def. 2. **Christchurch c.**, an autosome of Group G, with deletion of the short arms, first found in two siblings with chronic lymphocytic leukemia; now considered to be a variant found incidentally in patients with different defects. Symbol Ch¹. **daughter c's**, the name for chromatids when they reach the poles of the cell in the anaphase stage of mitosis. **gametic c.**, one in a haploid cell (gamete) consisting of a double strand of DNA. **giant c's**, 1. polytene c's. 2. lampbrush c's. **heterotypical c's**, see *sex c's*. **homologous c's**, the chromosomes of a matching pair in the diploid complement that contains the alleles of specific genes. **lampbrush c's**, giant chromosomes of the oocytes of many lower animals arranged like a cylindrical brush. **m-c.**, a small chromosome that conjugates only in the first spermatocyte division. **nucleolar c's**, those in relation to which the nucleoli reorganize during the telophase of mitosis. **odd c's**, see *sex c's*. **Ph¹ c.**, Philadelphia c., an abnormality of chromosome 22, characterized by shortening of its long arms (the

Human male chromosomes with Giemsa banding (Type G banding), arranged as a karyotype. (Courtesy of R. G. Worton in Thompson & Thompson)

missing portion usually translocated to chromosome 9) and present in marrow cells of most patients with chronic myelocytic leukemia. **polytene c's**, giant bundles of unseparated chromonemata occurring especially in the salivary glands of some insects; called also *giant c's*. **ring c.**, a chromosome in which both ends have been lost (deletion) and the two broken ends have reunited to form a ring-shaped figure. **sex c's**, chromosomes that are associated with the determination of sex, in mammals constituting an unequal pair, the X and the Y chromosome. **small c., m-c.** **somatic c.**, an autosome: one in a diploid (tissue) cell of the body, consisting of a double strand of DNA. **supernumerary c.**, one or more extra chromosomes found inconsistently in wild populations of certain species of animals; they are not homologous to members of the regular set of chromosomes and apparently exert little influence on the phenotypic effect. **W c's, Z c's**, the sex chromosomes of certain insects, birds, and fishes, in which the female is heterogametic (i.e., has a W and a Z chromosome) and the males are homogametic (having only Z chromosomes). **X c.**, the female sex chromosome, being the differential sex chromosome carried by half the male gametes and all female gametes in man and other male-heterogametic species. **Y c.**, the male sex chromosome, being the differential sex chromosome carried by half the male gametes and none of the female gametes in man and in some other male-heterogametic species in which the homologue of the X chromosome has been retained.

chromospermism (kro'mo-sper'mizm) [*chromo-* + *sperm*] a colored condition of the sperm.

chromotherapy (kro'mo-ther'ah-pe) [*chromo-* + Gr. *therapeia* treatment] 1. treatment of disease by variously colored lights. 2. the therapeutic use of restricted areas of the spectrum; called also *beamtherapy*.

chromotoxic (kro'mo-tok'sik) [*chromo-* + Gr. *toxikon* poison] destructive to hemoglobin or due to the destruction of hemoglobin.

chromotrichia (kro'mo-trik'e-ah) [*chromo-* + Gr. *thrix* hair + *-ia*] coloration of the hair.

chromotrichial (kro'mo-trik'e-al) pertaining to the coloration of the hair.

chromotropic (kro'mo-trop'ik) [*chromo-* + Gr. *tropikos* turning] turning to or attracting color or pigment.

chromoureteroscopy (kro'mo-u-re'ter-os'ko-pe) chromocystoscopy.

chromourinography (kro'mo-u'rī-nog'rah-fe) diagnosis by

measuring the intensity of color and the time of appearance in the urine after injection of a dye.

chron- see *chrono-*.

chronaxia (kro-nak'se-ah) chronaxy.

chronaxie (kro'nak-se) chronaxy.

chronaximeter (kron'ak-sim'ē-ter) Lapicque's instrument for measuring chronaxy in nerve lesions.

chronaximetric (kron'ak-sī-met'rik) pertaining to chronaximetry.

chronaximetry (kron'ak-sim'ē-tre) the measurement of chronaxy.

chronaxy (kro'nak-se) [*chron-* + Gr. *axios* fit] the minimum time an electric current must flow at a voltage twice the rheobase to cause a muscle to contract.

chronic (kron'ik) [L. *chronicus*, from Gr. *chronos* time] persisting over a long period of time.

chronicity (kro-nis'i-te) the quality of being chronic.

chroniosepsis (kron'e-o-sep'sis) a chronic form of sepsis.

chrono- [Gr. *chronos* time] a combining form denoting relationship to time.

chronobiologic, chronobiological (kron'o-bi'o-loj'ik; kron'o-bi'o-loj'i-kal) pertaining to chronobiology; relating to the effects of time and biological rhythms on living systems.

chronobiologist (kron'o-bi-ol'o-jist) a specialist in chronobiology.

chronobiology (kron'o-bi-ol'ō-je) [*chrono-* + Gr. *bios* life + *-logy*] the scientific study of the effect of time on living systems; see *anachronobiology* and *catachronobiology*.

chronognosis (kron'og-no'sis) [*chrono-* + Gr. *gnōsis* knowledge] the measurement of the effect of time on living systems.

chronograph (kron'o-graf) [*chrono-* + Gr. *graphein* to write] an instrument for recording small intervals of time.

chronometry (kro-nom'ē-tre) [*chrono-* + Gr. *metrein* to measure] the measurement of time or intervals of time. **mental c.**, the measurement and study of the duration of mental processes.

chronomyometer (kron'o-mi-om'ē-ter) an apparatus for measuring chronaxy.

chronon (kro'non) a unit representing the persistence of genetic information throughout a lifetime; it is a function of gene

redundancy and is reflected in the persistence of the resultant phenotypical trait. Cf. *ergon*.

chronophotograph (kron'o-fō'to-graf) [*chrono-* + *photograph*] one of a series of photographs of a moving object taken for the purpose of showing successive phases of the motion.

chronoscope (kron'o-skōp) [*chrono-* + Gr. *skopein* to examine] an instrument for measuring minute intervals of time.

chronosphygmograph (kron'o-sfig'mo-graf) Jaquet's instrument for observing the rhythm as well as the character of the pulse.

chronotaraxis (kro-no-tar-ak'sis) [*chrono-* + Gr. *taraxis* confusion] disorientation for time; observed as a transient symptom following thalamic or frontal lobe lesions.

chronotropic (kron'o-trop'ik) [*chrono-* + Gr. *tropikos* turning] affecting the time or rate, as the rate of contraction of the heart.

chronotropism (kro-not'ro-pizm) interference with the regularity of a periodic movement, such as the heart beat.

chrotoplast (kro'to-plast) [Gr. *chrōs* skin + *plassein* to form] a dermal or skin cell.

chrysalis (kris'ah-lis) [L.] the pupa of some insects, especially of a moth or butterfly.

chrysarobin (kris'ah-ro'bin) [L. *chrysarobinum*, from Gr. *chrysos* gold + *araroba*] a brownish to yellow-orange microcrystalline powder consisting of a mixture of the neutral principles extracted from Goa powder; a reduction product of chrysophanic acid, it is used topically in the treatment of psoriasis and other chronic skin disease.

chrysazin (kris'ah-zin) danthron.

chrysiasis (kri-si'ah-sis) [Gr. *chrysos* gold] the deposition of gold in the tissues; called also *auriosis*.

Chrysippus (kri-sip'us) of **Cnidos** (4th century B.C.) a Greek physician who was a teacher of Erasistratus.

chryso- (kris'o) [Gr. *chrysos* gold] a combining form denoting relationship to gold.

chrysoderma (kris'o-der'mah) [*chryso-* + Gr. *derma* skin] a permanent pigmentation of the skin due to gold deposit.

Chrysomonadina (kris'o-mon-ah-di'nah) an order of very small, free-swimming, chiefly ameoboid protozoa of the class Phytomastigophora, subphylum Mastigophora, which usually have one or two flagella, and are found in fresh and marine waters. It includes the families Syncryptidae and Ochomonadidae.

Chrysomyia (kris'o-mi'yah) [*chryso-* + Gr. *myia* fly] a genus of flies of the family Calliphoridae, of Africa, Australia, and parts of Asia. **C. albiceps**, a South African species whose larvae (wool maggots) live in the soiled wool of sheep. **C. bezzia'na**, a species widely distributed in Asia and Africa and frequently found in wounds of man and animals; it may cause severe and disfiguring myiasis in man. Called also *Cochliomyia bezziana*. **C. macella'ria**, *Cochliomyia hominivorax*.

chryso-phoresis (kris'o-fo-re'sis) diffusion of gold particles to various organs of the body after therapeutic administration of preparations of gold, by macrophages and polymorphonuclear leukocytes.

Chrysops (kris'ops) [*chryso-* + Gr. *ōps* eye] a genus of blood-sucking tropical tabanid flies, the grove flies. **C. cecu'tiens**, a species that inflicts bites about the eyes of men and animals. **C. dimidia'ta**, a species of southwestern Africa that is an intermediate host of *Loa loa*; called also *mango* or *mangrove fly*. **C. disca'lis**, a common vector of tularemia in the western part of the United States; called also *deer fly*. **C. sila'cea**, an intermediate host of *Loa loa*.

chryso-sis (kris-o'sis) chrysiasis.

Chrysosporium (kris-o-spōr'i-um) a genus of imperfect, keratinophilic, soil fungi, related to the dermatophytes; some species have been isolated from dermatophytosis. Formerly called *Aleuri-sma* and *Glenosporella*.

chrysotherapy (kris'o-ther'ah-pe) [*chryso-* + *therapy*] treatment with gold salts.

Chrysozona (kris'o-zō'nah) [*chryso-* + Gr. *zōne* girdle] a genus of tabanid flies. *C. ital'ica* and *C. pluvia'lis* are common in Europe; called also *Hematopota*.

chthonophagia (thon'o-fa'je-ah) [Gr. *chthōn* earth + *phagein* to eat] the morbid habit of eating clay or other earth; geophagia.

chthonophagy (thon-of'ah-je) chthonophagia.

chunk (chunk) in learning theory, a unit of information already stored in memory before beginning the learning of new material that includes the unit.

churus (chur'us) ganja.

Chvostek's anemia, sign (symptom) (vos'teks) [Franz Chvostek, Austrian surgeon, 1835-1884] see under *anemia* and *sign*.

Chvostek-Weiss sign (vos'tek-vis') [Franz Chvostek; Nathan Weiss, physician in Vienna, 1851-1883] Chvostek's sign.

chylangioma (ki'lan-je-o'mah) [*chyle* + *angioma*] a tumor made up of intestinal lymph vessels.

chylaqueous (ki-la'kwe-us) [*chyle* + L. *aqua* water] both chylous and watery.

chyle (kil) [L. *chylus* juice] the milky fluid taken up by the lacteals from the food in the intestine during digestion. It consists of lymph and droplets of triglyceride fat (chylomicrons) in a stable emulsion. It passes into the veins by the thoracic duct, becoming mixed with the blood; called also *chylus* [NA].

chylectasia (ki'lek-ta'se-ah) [*chyle* + Gr. *ektasis* dilatation] dilatation of a chylous vessel; e.g., of a lacteal.

chylemia (ki-le'me-ah) [*chyle* + Gr. *haima* blood + *-ia*] the presence of chyle in the blood.

chylifacient (ki'li-fa'shent) forming chyle.

chylifaction (ki'li-fak'shun) [*chyle* + L. *facere* to make] the formation of chyle; called also *primary assimilation* and *chylipoiesis*.

chylifactive (ki'li-fak'tiv) [*chyle* + L. *facere* to make] chylifacient.

chyliferous (ki-lif'er-us) [*chyle* + L. *ferre* to bear] 1. forming chyle. 2. conveying chyle.

chylification (ki'li-fi-ka'shun) [*chyle* + L. *facere* to make] the formation of chyle.

chyliform (ki'li-form) resembling chyle.

chylocele (ki'lo-sēl) [*chyle* + Gr. *kēlē* tumor] elephantiasis scroti. **parasitic c.**, elephantiasis scroti.

chylocyst (ki'lo-sist) [*chyle* + Gr. *kystis* bladder] the cisterna chyli.

chyloderma (ki'lo-der'mah) [*chyle* + Gr. *derma* skin] elephantiasis filarensis.

chyloid (ki'lloid) resembling chyle.

chylology (ki-lol'o-je) the study of chyle.

chylomediastinum (ki'lo-me'de-as-ti'num) the presence of chyle in the mediastinum.

chylomicrograph (ki'lo-mi'kro-graf) a curve plotted from counts of chylomicrons.

chylomicron (ki'lo-mi'kron) a stable droplet containing 86 per cent triglyceride fat, 3 per cent cholesterol, 9 per cent phospholipids, and 2 per cent protein, found in the intestinal lymphatics (lacteals) and blood during and after meals; this is the form in which absorbed long-chain fats and cholesterol are transported from the intestine.

chylomicronemia (ki'lo-mi'kron-e'me-ah) [*chylomicron* + Gr. *haima* blood + *-ia*] an excess of chylomicrons in the blood.

chylopericarditis (ki'lo-per'i-kar-di'tis) pericarditis with effusion of chyle into the pericardial sac.

chylopericardium (ki'lo-per'i-kar-de-um) [*chyle* + *pericardium*] the presence of effused chyle in the pericardium.

chyloperitoneum (ki'lo-per'i-to-ne-um) the presence of effused chyle in the peritoneal cavity.

chylophoric (ki'lo-for'ik) [*chyle* + Gr. *phoros* bearing] conveying chyle.

chylopleura (ki'lo-ploo'rah) chylothorax.

chylopneumothorax (ki'lo-nu'mo-tho'raks) the presence of chyle and air in the pleural cavity.

chylopoiesis (ki'lo-poi-e'sis) [*chyle* + Gr. *poiēsis* formation] chylifaction or chylification.

chylopoietic (ki'lo-poi-et'ik) concerned in the formation of chyle.

chylorrhoea (ki'lo-re'ah) 1. discharge of chyle due to rupture of or injury to the thoracic duct. 2. chylous diarrhea, due to rupture of lymphatics in the small intestine.

chylosis (ki-lo'sis) the process of conversion of food into chyle and of absorption of the latter into the tissues.

chylothorax (ki'lo-tho'raks) [*chyle* + Gr. *thōrax* chest] the presence of effused chyle in the thoracic cavity; called also *chylopleura*.

chylous (ki'lus) pertaining to, mingled with, or of the nature of chyle.

chyluria (ki-lu're-ah) [*chyle* + Gr. *ouron* urine + *-ia*] the presence of chyle in the urine, giving it a milky appearance, due to obstruction anywhere between the intestinal lymphatics and the thoracic duct, which causes rupture of renal lymphatics into the renal tubules. The chief cause of obstruction is filariasis due to infection with *Wuchereria bancrofti* (*tropical c.*). Called also *galacturia*. **c. trop'ica**, see *chyluria*.

chylus (ki'lus) [L. *juice*] [NA] the milky fluid taken up by the lacteals from the food in the intestine after digestion. See *chyle*.

Chymar (ki'mar) trademark for preparations of chymotrypsin.

chymase (ki'mās) an enzyme of the gastric juice, which accelerates the action of the pancreatic juice.

chyme (kīm) [Gr. *chymos* juice] the semifluid, homogeneous, creamy or gruel-like material produced by gastric digestion of food; called also *chymus*.

chymification (ki'mi-fi-ka'shun) [*chyme* + L. *facere* to make] the formation of chyme; gastric digestion.

chymodenin (ki'mo-de'nin) a polypeptide secreted by the duodenum that specifically stimulates pancreatic secretion of chymotrypsinogen.

chymopapain (ki'mo-pah-pa'in) a proteolytic enzyme (a sulf-hydryl proteinase) from the latex of a chiefly tropical tree, *Carica papaya*, that curdles milk and breaks down the mucopolysaccharide-protein complexes in the nucleus pulposus; used in chemonucleolysis.

chymorrhea (ki'mo-re'ah) [chyme + Gr. *rhoia* flow] a discharge or flow of chyme.

chymosin (ki-mo'sin) rennin.

chymosinogen (ki'mo-sin'o-jen) renninogen.

chymotrypsin (ki'mo-trip'sin) 1. one of the proteolytic and milk-curdling enzymes of the pancreatic secretion, produced in the intestine by activation of chymotrypsinogen by trypsin. It is a protein endopeptidase that catalyzes the hydrolysis of native food proteins to peptones, polypeptides, and amino acids, by breaking the peptide linkages of the carboxyl groups of tyrosine and phenylalanine. There are two forms, A and B, having similar specificity. 2. [USP] a proteolytic enzyme preparation crystallized from an extract of the pancreas of the ox, *Bos taurus*. It is a white to yellowish white, crystalline powder; used for enzymatic zonulolysis in intracapsular lens extraction, applied by irrigation to the posterior chamber of the eye, under the iris. It has also been used to débride necrotic lesions and to reduce inflammation and edema, administered orally, buccally, and intramuscularly.

chymotrypsinogen (ki'mo-trip-sin'o-jen) a crystallizable pre-enzyme occurring in the pancreas and converted to chymotrypsin by trypsin.

chymous (ki'mus) pertaining to chyme.

chymus (ki'mus) chyme.

Chytridiales (ki-trid'ē-a-lēz) an order of usually aquatic fungi of the subclass Chytridiomycetes, class Phycmycetes, most of which are parasites of algae, higher plants, microscopic animals, and fresh-water fungi, although some are saprophytic; they usually have a thallus that is not a true mycelium. It includes the genus *Chytridium*.

Chytridiomycetes (ki-trid'ē-o-mi-se'tēz) a subclass of phycmycetous fungi in which the reproductive cells most commonly have one flagellum and the cells walls are composed of chitin; it includes the order Chytridiales.

Chytridium (ki-trid'e-um) a genus of water molds of the order Chytridiales, subclass Chytridiomycetes, which are usually parasitic on plants.

C.I. color index; Colour Index.

Ci symbol for *curie* recommended by the International Commission on Radiological Units and Measurements.

Ciaccio's glands (chah'chōz) [Giuseppe Vincenzo Ciaccio, Italian anatomist, 1824-1901] glandulae lacrimales accessoriae.

Ciaccio's method, stain (chah'chōz) [Carmelo Ciaccio, Palermo pathologist, born 1877] see *Table of Stains*.

Ciarrocchi's disease (char-ro'kēz) [Gaetano Ciarrocchi, Italian dermatologist, 1857-1924] see under *disease*.

Cib. abbreviation for *L. ci'bus*, food.

cibarian (si-ba're-an) [L. *cibus* food] pertaining to food.

cibisotome (si-bis'o-tōm) [Gr. *kibisis* pouch + *tomē* cut] an instrument for opening the capsule of the lens in removing cataract.

cicatrectomy (sik'ah-trek'to-me) excision of a cicatrix.

cicatrices (sik-ah-tri'sēz) plural of *cicatrix*.

cicatricial (sik'ah-trish'al) pertaining to or of the nature of a cicatrix.

cicatricotomy (sik'ah-tri-kot'o-me) [cicatrix + Gr. *tomē* a cutting] incision of a cicatrix.

cicatrix (sik-a'triks; sik'ah-triks), pl. *cica'trices* [L.] a scar; the new tissue formed in the healing of a wound. **filtering c.**, a cicatrix following glaucoma operation through which the aqueous humor escapes. **hypertrophic c.**, a hard, rigid tumor formed by hypertrophy of the tissue of a cicatrix. **manometric c.**, a cicatrix of the drum membrane of the ear that moves in and out with variations of the intratympanic pressure. **vicious c.**, a cicatrix that causes deformity or impairs the function of an extremity.

cicatrization (sik-at'rī-zant) an agent that promotes cicatrization.

cicatrization (sik'ah-trī-za'shun) the formation of a cicatrix or scar.

cicatrise (sik'ah-triz) to heal by the formation of a scar or cicatrix.

ciclafrine hydrochloride (sik'lah-fēn) chemical name: 3-(1-oxa-4-azaspiro[4.6]undec-2-yl)phenol hydrochloride; an antihypertensive, C₁₅H₂₁NO₂·HCl.

ciclopirox olamine (si'klo-pēr'oks) chemical name: 6-cyclohexyl-1-hydroxy-4-methyl-2-(1H)-pyridinone compound with 2-aminoethanol (1:1); an antifungal, C₁₂H₁₇NO₂·C₂H₇NO.

cicloprofen (si'klo-pro'fen) chemical name: α-methyl-9-*fluorene*-2-acetic acid; an anti-inflammatory, C₁₆H₁₄O₂.

Cicuta (sik'u-tah) a genus of umbelliferous plants, including the water hemlocks, long recognized for their poisonous qualities. **C. macula'ta** L., American water hemlock; its root is very poi-

sonous, containing cicutoxin. **C. viro'sa**, the highly poisonous European water hemlock, which contains cicutoxin.

cicutoxin (sik'u-toks'in) a very poisonous, highly unsaturated higher alcohol from *Cicuta*.

Cidex (si'deks) trademark for a preparation of glutaraldehyde.

CIF clone-inhibiting factor; see under *factor*.

ciguatera (se'gwah-ta'rah) [Sp. (orig. Taino) *cigua* a poisonous snail + *-era*, Sp. noun suffix] a form of ichthyosarcotoxism, marked by gastrointestinal and neurological symptoms due to ingestion of marine fish (e.g., grouper and snapper) that store the toxin in their tissues; it occurs in tropical and subtropical coastal areas. The term was formerly applied to all types of fish poisoning in the West Indies, where the name originated.

C.I.H. Certificate in Industrial Health.

cilia (sil'e-ah) [L.] plural of *cilium*.

ciliaris (sil'e-a'ris) [L., from *cilium*] see *Table of Musculi*.

ciliariscope (sil'e-ar'fī-skōp) [ciliary + Gr. *skopein* to examine] an instrument for examining the ciliary region of the eye.

ciliarotomy (sil'e-ar-ot'o-me) surgical division of the ciliary zone for glaucoma.

ciliary (sil'e-er'e) [L. *ciliaris*, from *cilium*] pertaining to or resembling the eyelashes or cilia; used particularly in reference to certain structures in the eye, as the ciliary (ciliaris) muscle, ciliary process, and ciliary ring.

Ciliata (sil'e-a'tah) a class of protozoa of the subphylum Ciliophora, characterized by the presence of cilia throughout the life cycle. It includes the subclasses Euciliatia and Protociliatia.

ciliate (sil'e-āt) 1. having cilia. 2. any individual organism of the subphylum Ciliophora.

ciliated (sil'e-āt'ed) provided with cilia or with a fringe of hairs.

ciliectomy (sil'e-ek'to-me) [cilia + Gr. *ektomē* excision] 1. excision of a portion of the ciliary body. 2. excision of a portion of the ciliary margin of the eyelid with the roots of the lashes.

ciliogenesis (sil'e-o-jen'ē-sis) the formation or development of cilia.

Ciliophora (sil'e-of'o-rah) a subphylum of Protozoa characterized by the presence of cilia during some stage of development and usually possessing two kinds of nuclei (a micronucleus and a macronucleus). Most species are free-living, but several are parasitic. It includes the classes Ciliata and Suctorina. Called also *Infusoria*.

ciliophoran (sil'e-of'o-ran) 1. any individual of the subphylum Ciliophora. 2. of or pertaining to the subphylum Ciliophora.

cilioretinal (sil'e-o-ret'i-nal) pertaining to the retina and the ciliary body.

cilioscleral (sil'e-o-skle'ral) pertaining to the ciliary apparatus and to the sclera.

ciliospinal (sil'e-o-spi'nal) pertaining to the ciliary body and the spinal cord; see under *center* and *reflex*.

ciliotomy (sil'e-ot'o-me) surgical division of the ciliary nerves.

cilium (sil'e-um), pl. *ci'lia* [L.] 1. an eyelid or its outer edge. 2. [pl.] [NA] the hairs growing on the edges of the eyelids; called also *eyelashes*. 3. a minute vibratile, hairlike process projecting from the free surface of a cell; composed of nine pairs of microtubules arrayed around a central pair, cilia are extensions of basal bodies. They beat rhythmically to move the cell about in its environment or to move fluid or mucous films over its surface. Ciliary movement consists of an *effective stroke*, in which the cilium stiffens and moves forward rapidly, and a *recovery stroke*, in which the cilium becomes flexible and bends. Cilia may all beat simultaneously (*isochronal rhythm*) or successive cilia in each row may start their beat sequentially producing a wavelike movement (*metachronal rhythm*). Cf. *flagellum*. **olfactory cilia**, see under *hair*.

cillo (sil'lo) cilliosis.

Cillobacterium (sil'lo-bak-te're-um) a genus of microorganisms of the tribe Lactobacilleae, family Lactobacillaceae, order Eubacteriales, made up of nonsporulating, anaerobic, gram-positive bacilli found in the intestinal tract and occasionally associated with purulent infections.

ciliosis (sil-lo'sis) [L.] a spasmodic quivering of the eyelid; called also *cillo*.

cimbria (sim'be-ah) [L.] a white band running across the ventral surface of the crus cerebri.

cimetidine (si-met'i-dēn) chemical name: *N*'-cyano-*N*-methyl-*N*'-[2-[[[5-methyl-1*H*-imidazol-4-yl)-methyl]thio]ethyl]guanidine. An antagonist to histamine H₂ receptors, C₁₀H₁₆N₆S, which inhibits gastric acid secretion in response to all stimuli, and is effective especially in the treatment of peptic ulcer; administered orally, intravenously, and by intravenous infusion.

Cimex (si'meks) [L. "bug"] a genus of insects, the bedbugs, of the family Cimicidae. **C. boue'ti**, the tropical bedbug of West Africa and South America; called also *Leptocimex boueti*. **C. hemip'terus**, *C. rotundatus*. **C. lectula'rius**, the common bedbug that infests man in temperate areas; called also *Acanthia lectularia*. **C. pilosel'lus**, an American species found in bats.

C. pipistrel/la, a species that transmits a trypanosome disease of bats. **C. rotunda/tus**, a flattened, oval, reddish bedbug that infests man in the tropics; called also *C. hemipterus*.

cimex (si'meks), pl. *cim'ices* [L.] an individual of the genus *Cimex*; a bedbug.

cimices (sim'i-sēz) plural of *cimex*.

cimicid (si'mī-sid) pertaining to insects of the family Cimicidae.

Cimicidae (si-mis'i-de) a family of wingless, blood-sucking, hemipterous insects of the suborder Heteroptera, including the bedbugs and related forms. *Cimex*, *Haematophilum*, *Leptocimex*, and *Oeciacus* are medically important genera.

Cimicifuga (sim'i-sif'u-gah) [L. *cimex* bug + *fugare* to put to flight] a genus of ranunculaceous plants. The rootlets of *C. racemosa* (L.) Nutt. (black snakeroot or cohosh) are tonic and antispasmodic.

cimicosis (sim'i-ko'sis) itching of the skin due to the bites of *Cimex lectularius* (bedbug).

cinanserin hydrochloride (sin-an'ser-in) chemical name: *N*[2-[[[3-(dimethyl-amino)propyl]thio]phenyl]-3-phenyl-2-propenamide monohydrochloride. A serotonin antagonist, $C_{20}H_{24}N_2OS \cdot HCl$, which has been used in the treatment of mania and schizophrenia.

cinching (sinc'h-ing) surgical shortening of an ocular muscle by plicating.

Cinchona (sin-ko'nah) [named from a countess of Chinchon] a genus of rubiaceous trees, all natives of South America, the source of the medicinally important quinoline alkaloids, quinine, quinidine, cinchonine, and cinchonidine. Mainly used for malaria and as cardiac depressants. The major species used are *C. succirubra* Pavon et Klotzsch and hybrids (red cinchona), *C. calisaya* Weddell, *C. Ledgeriana* (Howard) Moens et Trimen, and hybrids (yellow cinchona).

cinchona (sin-ko'nah) the dried bark of the stem or of the root of various species of *Cinchona*. It is the source of the medicinally important quinoline alkaloids quinine, quinidine, cinchonine, and cinchonidine. Cinchona was once widely used as an antimalarial but it has been largely replaced by its alkaloids. Called also *calisaya bark*, *cinchona bark*, *Jesuit's bark*, *Peruvian bark*, and *quinquina*.

cinchonidine (sin-ko'nī-dēn) chemical name: (8*a*,9*R*)-cinchon-9-ol. An alkaloid of cinchona, $C_{19}H_{22}N_2O$, used as an antimalarial, chiefly in the form of the sulfate salt; administered orally.

cinchonine (sin'ko-nin) [L. *cinchonina*] chemical name: (9*S*)-cinchon-9-ol. An alkaloid of cinchona, $C_{19}H_{22}N_2O$, used as an antimalarial, chiefly in the form of the sulfate salt; administered orally.

cinchonism (sin'ko-nizm) the morbid or injurious effect of the injudicious use of cinchona bark or its alkaloids; it is attended by nausea, vomiting, headache, tinnitus aurium, deafness, symptoms of cerebral congestion, vertigo, and visual disturbances.

cinchophen (sin'ko-fen) chemical name: 2-phenyl-quinoline-4-carboxylic acid. An analgesic, antipyretic, and uricosuric agent, $C_{19}H_{11}NO_2$, formerly used in the treatment of gout and acute rheumatic fever. Called also *phenylcinchoninic acid* and *phenylquinoline carboxylic acid*.

cinclisis (sin'kli-sis) [Gr. *kinklisis* a wagging] a rapidly repeated movement, such as rapid breathing, or rapid winking.

cine- [Gr. *kinēsis* movement] a combining form denoting relationship to movement.

cineangiocardiology (sin'e-an'je-o-kar'de-og'rah-fe) the photographic recording of fluoroscopic images of the heart and great vessels by motion picture techniques.

cineangiograph (sin'e-an'je-o-graf) a motion picture camera for photographing fluoroscopic images.

cineangiography (sin'e-an'je-og'rah-fe) the photographic recording of fluoroscopic images of the blood vessels by motion picture techniques. **radioisotope c.**, that in which a sample of human serum albumin labeled with a radioisotope (technetium 99) is injected into the peripheral blood and then a scintillation camera records emitted radiation over the chest area, the heart movements being shown on a video tube.

cinedensigraphy (sin'e-den-sig'rah-fe) the recording of movements of internal body structures by means of x-rays and radiosensitive cells.

cinefluorography (sin'e-floo'or-og'rah-fe) cineradiography.

cinemascope (sin'e-mah-sko'pe-ah) the use of motion picture records for the study of movements of the body.

cinemascope (sin'e-mas'ko-pe) cinemascope.

cinematics (sin'e-mat'iks) kinematics.

cinematization (sin'e-mat-i-za'shun) kineplasty.

cinematography (sin'e-mah-tog'rah-fe) cineradiography.

cinematography (sin'e-mah-tog'rah-fe) cineradiography.

cinematography (sin'e-mah-to-ra'de-og'rah-fe) cineradiography.

cinemicrography (sin'e-mi-krog'rah-fe) the making of moving pictures of a small object through the lens system of a microscope. **time-lapse c.**, the taking of motion pictures of a minute object through a microscope at a slower than normal

speed, so that with projection at normal speed the movements of the object appear to occur more rapidly.

cincol (sin'e-ol) eucalyptol.

cinopazet maleate (sin'e-paz'et) chemical name: 4-[1-oxo-3-(3,4,5-trimethoxyphenyl)-2-propenyl]-1-piperazineacetic acid ethyl ester. A coronary vasodilator, $C_{20}H_{28}N_2O_6 \cdot C_4H_8O_4$, which has been used in the treatment of angina of effort.

cinophlebography (sin'e-flē-bog'rah-fe) cineradiography of the veins after administration of a contrast medium. In *ascending functional cinophlebography*, the contrast medium is introduced into a vein in the foot and its progress is observed as it courses through the tibial, popliteal, femoral, and iliac veins.

cinoplastics (sin'e-plas'tiks) kineplasty.

cinoplasty (sin'e-plas'te) kineplasty.

cineradiography (sin'e-ra'de-og'rah-fe) the making of a motion picture record of the successive images appearing on a fluoroscopic screen; called also *cinfluorography*, *cinematography*, *cinematography*, *cineroentgenofluorography*, and *cineroentgenography*.

cinerea (si-ne're-ah) [L. *cinereus* ashen hued] the gray matter of the nervous system.

cinereal (si-ne're-al) pertaining to the gray matter of the brain or nervous system.

cineritious (sin'er-ish'us) [L. *cineritius*] ashen gray; of the color of ashes.

cineroentgenofluorography (sin'e-rent'gen-o-floo'or-og'rah-fe) cineradiography.

cineroentgenography (sin'e-rent'gen-og'rah-fe) cineradiography.

cinesalgia (sin'es-al'je-ah) [Gr. *kinēsis* motion + *-algia*] pain in a muscle when it is brought into action.

cinesi- for words beginning thus, see those beginning *kinesi-*.

cineto- for words beginning thus, see those beginning *kineto-*.

cinurography (sin'e-u-rog'rah-fe) cineradiography of the urinary tract.

cingestol (sin-jes'tōl) chemical name: 19-nor-17*α*-pregn-5-en-20-yn-17-ol; a progestin, $C_{20}H_{28}O$.

cingula (sing'gu-lah) plural of *cingulum*.

cingule (sing'gūl) cingulum.

cingulectomy (sin'gu-lek'to-me) bilateral extirpation of the anterior half of the gyrus cinguli.

cingulotomy (sing'gu-lot'o-me) cingulotomy.

cingulum (sing'gu-lum), pl. *cing'ula* [L. "girdle"] 1. [NA] an encircling structure or part; anything that encircles a body. Called also *cingule* and *girdle*. 2. [NA], a bundle of association fibers that partly encircles the corpus callosum not far from the median plane, the fibers of which interrelate the cingulate and hippocampal gyri. 3. the lingual lobe of an anterior tooth, making up the bulk of the cervical third of its lingual surface; called also *basal ridge*. **c. extremitatis inferioris**, *c. membri inferioris*, **c. extremitatis superioris**, *c. membri superioris*. **c. hemisphe'rii**, gyrus cinguli. **c. mem'bri inferioris** [NA], the encircling bony structure that supports the lower limbs, comprising the two ossa coxae, articulating with each other and with the sacrum, to complete the essentially rigid bony ring; called also *c. extremitatis inferioris*, *girdle of inferior extremity*, and *pelvic girdle*. **c. mem'bri superioris** [NA], the encircling bony structure supporting the upper limbs, comprising the clavicles and scapulae, articulating with each other and with the sternum and vertebral column, respectively; called also *c. extremitatis superioris*, *shoulder girdle*, *thoracic girdle*, and *girdle of superior extremity*.

cingulumotomy (sing'gu-lum-ot'o-me) the creation of precisely placed lesions in the cingulum of the frontal lobe, for relief of intractable pain; called also *cingulotomy*.

cinnamaldehyde (sin-ah-mal'dē-hid) a yellowish oily liquid with a strong odor of cinnamon, C_9H_8O , used as a flavoring agent.

cinnamene (sin-am'en) styrol.

cinnamic (si-nam'ik) of or relating to cinnamon; see under *acid*.

cinnamol (sin'ah-mol) styrol.

Cinnamomum (sin'ah-mo'mum) a genus of evergreen trees native to Asia. The wood of *C. camphora* is the source of camphor and the bark of *C. loureirii* of cinnamon.

cinnamon (sin'ah-mon) [L.; Gr. *kinnamon*] [NF] the dried bark of *Cinnamomum loureirii*, containing, in each 100 gm., not less than 2.5 ml. of volatile oil; used as a flavor in pharmaceutical preparations.

cinnarizine (si-nar'i-zēn) chemical name: 1-(diphenylmethyl)-4-(3-phenyl-2-propenyl)piperazine. An antihistamine, $C_{28}H_{28}N_2$, used chiefly in the treatment of nausea and vertigo associated with labyrinthine disorders and in the prevention and treatment of motion sickness.

cinnopentazone (sin-o-pen'tah-zōn) cintazone.

cinology (si-nol'o-je) kinesiology.

cinometer (si-nom'e-ter) kinesimeter.

cinoplasm (sin'o-plazm) kinoplasm.

cinoxacin (sin-oks'ah-sin) chemical name: 1-ethyl-1,4-dihydro-4-oxo-[1,3]dioxolo[4,5-g]cinnoline-3-carboxylic acid. An antibacterial, $C_{12}H_{10}N_2O_5$, which inhibits most gram-negative organisms.

cinoxate (sin-oks'ät) chemical name: 3-(4-methoxyphenyl)-2-propenoic acid 2-ethoxyethyl ester; an ultraviolet screen, $C_{14}H_{18}O_4$, applied topically to the skin.

cinromide (sin'ro-mid) chemical name: 3-(3-bromophenyl)-2-propenamide; an anticonvulsive, $C_{11}H_{12}BrNO$.

cintazone (sin'tah-zön) chemical name: 2-pentyl-6-phenyl-1*H*-pyrazolo[1,2-*a*]cinnoline-1,3(2*H*)-dione; an anti-inflammatory agent, $C_{22}H_{22}N_2O_2$. Called also *cinnopentazone*.

C.I.O.M.S. Council for International Organizations of Medical Sciences.

cionectomy (si'o-nek'to-me) [Gr. *kiön* uvula + *ektomē* excision] excision of the uvula or of a part of it; uvulectomy.

Cionella (si'o-nel'ah) a genus of land snails that serve as hosts of *Dicrocoelium dendriticum*.

Cionellidae (si'o-nel'i-de) a family of garden snails (suborder Stylommatophora, subclass Euthyneura, class Gastropoda) that serve as hosts of *Dicrocoelium dendriticum*.

cionitis (si'o-ni'tis) [Gr. *kiön* uvula + *-itis*] inflammation of the uvula; uvulitis.

cionoptosis (si'on-op-to'sis) [Gr. *kiön* uvula + Gr. *ptōsis* a falling] undue elongation of the uvula.

cionorrhaphy (si'δ-nor'ah-fe) plastic repair of the uvula.

cionotomy (si-on'o-tōm) [Gr. *kiön* uvula + *tomē* cut] a cutting instrument for amputating the uvula; uvulotomy.

cionotomy (si'o-not'o-me) [Gr. *kiön* uvula + *tomē* a cutting] surgical removal of part of the uvula; uvulotomy.

ciprocinnonide (sip'ro-si'no-nid) chemical name: 21-[(cyclopropylcarbonyl)-oxy]-6α,9-difluoro-11β-hydroxy-16α,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione; an adrenocortical steroid, $C_{28}H_{34}F_2O_7$.

ciprofibrate (si'pro-fi'brät) chemical name: 2-[4-(2,2-dichlorocyclopropyl)phenoxy]-2-methylpropanoic acid; an antihyperlipidemic, $C_{13}H_{14}Cl_2O_3$.

circadian (ser'kah-de'an) [L. *circa* about + *dies* a day] pertaining to a period of about 24 hours; applied especially to the rhythmic repetition of certain phenomena in living organisms at about the same time each day (circadian rhythm).

circannual (ser-kan'u-al) [L. *circa* about + *annus* year] occurring every year; applied especially to the rhythmic repetition of certain phenomena (e.g., the flowering of plants) in living organisms at about the same time each year.

circellus (ser-sel'lus) a small ring; or circle.

circinate (ser'sī-nät) resembling a ring, or circle.

circle (ser'k'l) [L. *circulus*] a round figure, structure, or part.

arterial c. of iris, greater, *circulus arteriosus iridis major*.

arterial c. of iris, lesser, *circulus arteriosus iridis minor*.

arterial c. of Willis, *circulus arteriosus cerebri*.

Berry's c., charts with circles on them for testing stereoscopic vision.

c. of Carus, see under *curve*.

c. of confusion, a disk representing the image of a theoretical point made by a lens.

defensive c., the coexistence of two conditions that tend to have an antagonistic or inhibitory effect on each other.

diffusion c., a confused image formed on the retina when the latter is not at the focus of the eye.

c. of dispersion, **c. of dissipation**, the circular space on the retina within which the image of a luminous point is formed.

c. of Haller, 1. *circulus vasculosus nervi optici*. 2. (*obs.*) *valvula pylori*.

c. of Hovius, an intrascleral circular arrangement of anastomosing ciliary veins anterior to the vorticosae veins, not far from the corneoscleral margin, occurring in mammals other than man; called also *circulus venosus hovii*.

Huguier's c., the circle formed about the junction of the cervix with the body of the uterus by the uterine arteries.

c. of iris, greater, *anulus iridis major*.

c. of iris, lesser, *anulus iridis minor*.

Latham's c., a circle 2 inches in diameter covering the area of pericardial dullness and situated midway between the left nipple and the lower end of the sternum.

Minsky's c's, a device used for the graphic recording of eye lesions.

Pagenstecher's c., the circle formed on the abdominal wall by joining the points marking the positions occupied by a mobile abdominal tumor which has been manipulated throughout its entire range of motion. The center of such a circle indicates the point of attachment of the tumor.

Robinson's c., an arterial circle formed by anastomoses between the abdominal aorta, common iliac, hypogastric, uterine, and ovarian arteries.

sensory c., an area on the body within which it is impossible to distinguish separately the impressions arising from two sites of stimulation.

vascular c. of optic nerve, *circulus vasculosus nervi optici*.

c's of Weber, circles of points on the skin marking the points of tactile sense discrimination.

c. of Willis, *circulus arteriosus cerebri*.

c. of Zinn, *circulus vasculosus nervi optici*.

circlet (ser'klet) a small circular structure.

circling (ser'kling) movement in a circle, as manifested by animals with listeriosis.

circuit (ser'kit) [L. *circuitus*] the round or course traversed by an electrical current. The circuit is said to be *closed* when it is continuous, so that the current may pass through it; it is *open*, *broken*, or *interrupted* when it is not continuous and the current cannot pass through it. **magnetic c.**, the closed path of magnetic lines. **open c.**, a circuit having some break in it so that current is not passing or cannot pass. **reflex c.**, a chain of neurons that function in a reflex act. **short c.**, 1. a current developed between two branches of another circuit at a point short of the terminals, so that the current does not reach the latter. 2. a communication between two portions of intestine, one above and the other below an obstruction.

circular (ser'ku-lar) [L. *circularis*] shaped like a circle; occurring in a circle.

circulation (ser'ku-la'shun) [L. *circulatio*] movement in a regular or circuitous course, as the movement of the blood through the heart and blood vessels. **allantoic c.**, fetal circulation through the umbilical vessels; called also *umbilical c.* **assisted c.**, pumping that aids the natural activity of the heart. **collateral c.**, that which is carried on through secondary channels after obstruction of the principal vessel supplying the part; called also *compensatory c.* **compensatory c.**, collateral **c. coronary c.**, that within the coronary vessels of the heart. **cross c.**, the circulation in a portion of the body of one animal of blood supplied from another animal. **derivative c.**, the passage of blood from arteries to the veins without going through capillaries. **enterohepatic c.**, the recurrent cycle in which bile salts and other substances excreted by the liver pass through the intestinal mucosa and become reabsorbed by the hepatic cells and re-excreted. **extracorporeal c.**, the circulation of blood outside the body, as through a heart-lung apparatus for carbon dioxide-oxygen exchange, or through an artificial kidney for removal of substances usually excreted in the urine. **fetal c.**, that propelled by the fetal heart through the fetus, umbilical cord, and placental villi. **first c.**, primitive **c. fourth c.**, the con-

Schematic diagram of fetal circulation.

tinuous movement of lymphocytes from their sources in all the hematopoietic and connective tissues to the blood passing through all the tissues and organs, then to the lymph nodes, then into the lymph of the thoracic duct, and into the blood again. **greater c.**, systemic **c. hypophyseoportal c.**, that passing from the capillaries of the median eminence of the hypothalamus into the portal vessels to the sinusoids of the adenohypophysis. **intervillous c.**, the flow of maternal blood through the intervillous space. **lesser c.**, pulmonary **c. lymph c.**, the passage of the lymph through lymph vessels and glands. **omphalomesenteric c.**, vitelline **c. persistent fetal c.**, pulmonary hypertension in the postnatal period secondary to right-to-left shunting of the blood through the foramen ovale and ductus arteriosus. **placental c.**, the fetal circulation; also, the maternal circulation through the intervillous space of the placenta. **portal c.**, the circulation of blood from the capillaries of one organ through larger vessels to the capillaries of another organ, before returning through larger veins back to the heart, especially the passage of

the blood from capillaries of the gastrointestinal tract and spleen through capillaries of the liver before entering the hepatic vein. See also *hypophyseoportal c.* **portocumbilical c.**, Cruveilhier-Baumgarten syndrome. **primitive c.**, the earliest circulation by which nutriment and oxygen are conveyed to the embryo; called also *first c.* **pulmonary c.**, that carrying the venous blood from the right ventricle to the lungs, and returning oxygenated blood to the left atrium of the heart; called also *lesser c.* **sinusoidal c.**, that occurring through the sinusoids of various organs. **systemic c.**, the general circulation, carrying oxygenated blood from the left ventricle to various tissues of the body, and returning the venous blood to the right atrium of the heart; called also *greater c.* **thebesian c.**, the circulation of blood through the thebesian veins. **umbilical c.**, allantoic c. **vitelline c.**, the circulation through the blood vessels of the yolk sac; called also *omphalomesenteric c.*

circulatory (ser'ku-lah-to're) pertaining to the circulation.

circulus (ser'ku-lus), pl. *circuli* [L. "a ring"] a circle or circuit, used in anatomical nomenclature to designate such an arrangement, usually of arteries or veins. **c. arterio/sus cer'ebri** [NA], the important polygonal anastomosis formed by the internal carotid, the anterior and posterior cerebral arteries, the anterior communicating artery, and the posterior communicating arteries; called also *c. arteriosus* [Willis], *circle of Willis*, and *c. Willisii*. **c. arterio/sus hal'leri**, c. vasculosus nervi optici. **c. arterio/sus i'ridis ma'jor** [NA], greater arterial circle of the iris: a circle of anastomosing arteries situated in the ciliary body along the ciliary margin of the iris. **c. arterio/sus i'ridis mi'nor** [NA], lesser arterial circle of the iris: a circle of anastomosing arteries in the iris near the pupillary margin. **c. arterio/sus** [Willis'i], c. arteriosus cerebri. **c. articularis vasculo/sus** [NA], an arrangement of anastomosing vessels encircling a joint. **c. umbilicalis**, an arterial plexus in the subperitoneal tissue surrounding the navel. **c. vasculo/sus ner'vi op'tici** [NA], a circle of arteries in the sclera surrounding the site of entrance of the optic nerve; called also *c. vasculosus nervi optici* [Halleri], c. arteriosus halleri, c. zinnii, *circle of Haller*, and *circle of Zinn*. **c. veno/sus hal'leri**, plexus venosus areolaris. **c. veno/sus ho'vii**, circle of Hovius. **c. veno/sus rid'levi**, sinus circularis. **c. willis'ii**, c. arteriosus cerebri. **c. zinn'ii**, c. vasculosus nervi optici.

circum- (ser'kum) [L.] a prefix signifying around.

circumanal (ser'kum-a'nal) surrounding the anus.

circumarticular (ser'kum-ar-tik'u-lar) around a joint.

circumaxillary (ser'kum-ak'si-lar'e) around the axilla.

circumbulbar (ser'kum-bul'bar) surrounding the eyeball.

circumcallosal (ser'kum-kah-lo'sal) surrounding the corpus callosum.

circumcise (ser'kum-siz) to perform circumcision.

circumcision (ser'kum-siz'hun) [L. *circumcisio* a cutting around] the removal of all or part of the prepuce, or foreskin. **female c.**, incision of the fold of the skin over the glans clitoridis; called also *clitoridotomy*. **pharaonic c.**, infibulation.

circumclulsion (ser'kum-kloo'zhun) [L. *circumcludere* to shut in] compression of an artery by a wire and pin.

circumcorneal (ser'kum-kor'ne-al) around the cornea.

circumcrescent (ser'kum-kres'ent) [circum- + L. *crecere* to grow] growing around and over.

circumduction (ser'kum-duk'shun) [L. *circumducere* to draw around] the active or passive circular movement of a limb or of the eye.

circumference (ser-kum'fer-ens) [circum- + L. *ferre* to bear] the outer limit or margin of a rounded body. **articular c.**, circumferentia articularis; see specific names under *circumferentia*.

circumferentia (ser-kum'fer-en'she-ah) [L.] circumference. **c. articularis**, articular circumference: the rounded surface of a bone which is received into a depression of another bone with which it articulates. **c. articularis cap'itis ul'nae** [NA], articular circumference of head of ulna: the semilunar surface of the head of the ulna which articulates with the ulnar notch of the radius; called also *c. articularis capituli ulnae*. **c. articularis capit'uli ul'nae**, c. articularis capiti ulnae. **c. articularis ra'dii** [NA], the rounded surface of the head or capitulum of the radius which articulates with the radial notch of the ulna; called also *articular circumference of head of radius*.

circumferential (ser'kum-fer-en'shal) pertaining to forming a circumference.

circumflex (ser'kum-fleks) [L. *circumflexus* bent about] curved like a bow.

circumflexus (ser'kum-flek'sus) [L.] bent about; circumflex.

circumgemmal (ser'kum-jem'al) [circum- + L. *gemma* bud] surrounding a bud; a term applied to that form of nerve ending in which an end-bud is surrounded by fibrils.

circuminsular (ser'kum-in'su-lar) [circum- + L. *insula* island] surrounding, situated, or occurring about the insula.

circumintestinal (ser'kum-in-tes'ti-nal) surrounding the intestine.

circumlental (ser'kum-len'tal) [circum- + L. *lens* lens] situated or occurring around the lens.

circumnuclear (ser'kum-nu'kle-ar) surrounding or occurring near the nucleus.

circumocular (ser'kum-ok'u-lar) [circum- + L. *oculus* eye] surrounding or occurring around the eye.

circumoral (ser'kum-o'ral) [circum- + L. *os*, *oris* mouth] around or near the mouth.

circumorbital (ser'kum-or'bi-tal) [circum- + L. *orbita* orbit] situated around or occurring near an orbit.

circumpolarization (ser'kum-po'lar-i-za'shun) [circum- + *polarization*] the rotation of a ray of polarized light to the right or left; cf. *optical rotation*, under *rotation*.

circumrenal (ser'kum-re'nal) [circum- + L. *ren* kidney] situated or occurring near a kidney.

circumscribed (ser'kum-skribd) [circum- + L. *scribere* to write] bounded or limited; confined to a limited space.

circumscribed (ser'kum-skrip'tus) [L.] circumscribed.

circumstantiality (ser'kum-stan'she-al'i-te) a disturbance in the flow of thought in which the patient's conversation is characterized by unnecessary elaboration of many trivial details.

Circumstraint (sir'kum-strant') trademark for a device used to hold a baby for circumcision.

circumtractor (ser'kum-trak'tor) a self-retaining circular retractor (H. R. Arnold).

circumvallate (ser'kum-val'at) [circum- + L. *vallare* to wall] surrounded by a trench or by a ridge; see *vallate papilla*, under *papilla*.

circumvascular (ser'kum-vas'ku-lar) [circum- + L. *vasculum* vessel] situated or occurring about the vessels.

circumvolute (ser'kum-vo'lüt) [circum- + L. *volutus* rolled] twisted about.

circumvolutio (ser'kum-vo-lu'she-o) a convolution, or the folding of one object about another. **c. crista'ta**, gyrus fornicatus.

cirrhogenous (sir-roj'ē-nus) producing cirrhosis or hardening.

cirrhonosis (sir-ron'o-sus) [Gr. *kirrhos* orange yellow + *nosos* disease] a fetal disease characterized by a golden-yellow staining of the pleura and peritoneum.

cirrhosis (sir-ro'sis) [Gr. *kirrhos* orange yellow] liver disease characterized pathologically by loss of the normal microscopic lobular architecture, with fibrosis and nodular regeneration; see *c. of the liver*. The term is sometimes used to refer to chronic interstitial inflammation of any organ. **acholangic biliary c.**, a liver ailment affecting children up to 12 years old, due to complete or partial agenesis of the intrahepatic, intralobular bile ducts, with manifestations similar to those in obstructive biliary cirrhosis. **alcoholic c.**, cirrhosis in the alcoholic, attributed by some to associated nutritional deficiency and by others to chronic excessive exposure to alcohol as a hepatotoxin. **atrophic c.**, cirrhosis in which the liver is decreased in size; it may be seen in the alcoholic, but is more common in posthepatic or postnecrotic cirrhosis. **bacterial c.**, a variety said to be of microbic origin. **biliary c.**, cirrhosis of the liver due to obstruction or infection of the major extra- or intrahepatic bile ducts (except in *primary biliary c.*). It is marked by jaundice, abdominal pain, steatorrhea, and enlargement of the liver and spleen. See *primary and secondary biliary c.* **biliary c. of children**, secondary biliary cirrhosis due to congenital atresia of the bile ducts; called also *infantile liver*. See also *Indian childhood c.* **Budd's c. (obs.)**, chronic hepatic enlargement once thought to be caused by intestinal intoxication. **calculus c.**, secondary biliary cirrhosis caused by the presence of gallstones. **cardiac c.**, fibrosis of the liver, probably following central hemorrhagic necrosis, in association with congestive heart disease. It is characterized by scarring about the central veins of the hepatic lobules. **cardi-otuberculous c. (obs.)**, Hutinel's disease. **Charcot's c.**, primary biliary c. **congestive c.**, cirrhosis of the liver with passive congestion. **Cruveilhier-Baumgarten c.**, see under *syndrome*. **fatty c.**, cirrhosis in which liver cells are infiltrated with fat (triglyceride), the infiltration usually being due to alcohol ingestion; Laennec's c. **Hanot's c.**, 1. primary biliary c. 2. secondary biliary c. **hypertrophic c.**, primary biliary c. **Indian childhood c.**, cirrhosis of the liver of unknown etiology occurring in children in India, characterized typically by insidious onset, stunting of growth, hepatomegaly, and a low inconstant fever. In the late stages, portal hypertension with ascites, evidence of collateral circulation, hematemesis, splenomegaly, and edema may be seen. Cf. *veno-occlusive disease of the liver*, under *disease*. **c. of kidney (obs.)**, chronic interstitial nephritis. **Laennec's c.**, cirrhosis of the liver closely associated with chronic excessive alcohol ingestion. In the early stages, liver enlargement may reflect fatty infiltration of liver cells (fatty c.), with necrosis and inflammation due to acute alcohol injury; progressive fibrosis extending from portal areas separates uniform small regeneration nodules. See *c. of liver* for symptoms. **c. of liver**, a group of chronic diseases of the liver characterized by loss of normal hepatic lobular architecture with fibrosis, and by destruction of parenchymal cells and their regeneration to form

nodules. The disease has a lengthy latent period, usually followed by the sudden appearance of abdominal swelling and pain, hematemesis, dependent edema, or jaundice. In advanced stages, ascites, jaundice, portal hypertension, and central nervous system disorders, which may end in hepatic coma, become prominent. Called also *chronic interstitial hepatitis*. **c. of lung**, see *diffuse interstitial pulmonary fibrosis*, under *fibrosis*. **malarial c.**, cirrhosis associated with malaria; the malaria is probably not an etiologic factor. **c. mam'mae**, chronic interstitial mastitis. **metabolic c.**, cirrhosis of the liver associated with metabolic diseases, such as hemochromatosis, Wilson's disease, glycogen storage disease, galactosemia, and disorders of amino acid metabolism. **multilobular c.**, postnecrotic c. **periportal c.**, postnecrotic c. **pigment c.**, **pigmentary c.**, a condition marked by a slightly to moderately enlarged, chocolate-brown liver, the surface of which is diffusely nodular; it is the characteristic lesion of hemochromatosis. **pipe stem c.**, cirrhosis of the liver characterized by fibrotic scars around the large portal vessels; seen in hepatic schistosomiasis, in which fibrosis surrounds parasites or ova trapped in branches of the portal vein. **portal c.**, Laennec's c. **posthepatic c.**, cirrhosis (usually macronodular) resulting as a sequel to acute hepatitis. **postnecrotic c.**, cirrhosis which follows submassive necrosis of the liver (subacute yellow atrophy) due to toxic or viral hepatitis. The reticulin framework of normal lobules collapses and may be replaced by broad bands of fibrous tissue separating regeneration nodules (multilobular liver) of varying size. Called also *multilobar c.*, *periportal c.*, *toxic c.*, and *healed yellow atrophy*. **primary biliary c.**, a rare form of biliary cirrhosis of unknown etiology, occurring without obstruction or infection of the major bile ducts, sometimes developing after the administration of such drugs as chlorpromazine and arsenicals. Affecting chiefly middle-aged women, it is characterized by chronic cholestasis with pruritus, jaundice, and hypercholesterolemia, with xanthomas, and malabsorption. Called also *Charcot's c.*, *Hanot's c.*, *disease*, or *syndrome*, *hypertrophic c.*, *Todd's c.*, and *unilobular c.* **pulmonary c.**, see *diffuse interstitial pulmonary fibrosis*, under *fibrosis*. **secondary biliary c.**, cirrhosis of the liver resulting from chronic bile obstruction due to congenital atresia or stricture. **stasis c.**, a general term for cirrhosis due to obstruction of the outflow of the hepatic vein; see also *cardiac c.*, *veno-occlusive disease*, and *Budd-Chiari syndrome*. **c. of stomach**, linitis plastica. **syphilitic c.**, cirrhosis of the liver due to congenital or tertiary syphilis. **Todd's c.**, primary biliary c. **toxic c.**, postnecrotic c. **unilobular c.**, primary biliary c. **vascular c.**, cirrhosis of the liver following upon obstruction of the hepatic vein, portal vein, or general hepatic circulation.

cirrhotic (sir-rot'ik) pertaining to or characterized by cirrhosis.

cirri (sir'ri) plural of *cirrus*.

cirrus (sir'rus), pl. *cir'ri* [L. "curl"] a slender, usually flexible, appendage, such as one of the stiff, spike-like organs of locomotion of ciliate protozoa, composed of fused cilia from several rows, or the muscular retractile copulatory organ of certain trematodes, or one of the short, tentacle-like projections around the mouth of cephalochordates that form a coarse sieve preventing entrance of large particles (e.g., sand) into the mouth.

cirsectomy (ser-sek'to-me) [Gr. *kirsos* varix + *ektomē* excision] excision of a portion of a varicose vein.

cirsenchysis (ser-sen'ki-sis) [Gr. *kirsos* varix + *enchysis* injection] treatment of varicose veins by injection of a sclerosing solution.

cirso- (ser'so) [Gr. *kirsos* varix] a combining form denoting relationship to a varix.

cirsocele (ser'so-sēl) [*cirso-* + Gr. *kēlē* tumor] varicocele.

cirsodesis (ser-sod'ē-sis) [*cirso-* + Gr. *desis* ligation] the ligation of varicose veins.

cirroid (ser'soid) [*cirso-* + Gr. *eidos* form] resembling a varix.

cirsomphalos (ser-som'fah-los) [*cirso-* + *omphalos* navel] a varicose state of the navel; caput medusae.

cirsophthalmia (ser'sof-thal'me-ah) [*cirso-* + Gr. *ophthalmos* eye] a varicose state of the conjunctival vessels.

cirsotome (ser'so-tōm) [*cirso-* + Gr. *tomē* a cutting] a cutting instrument for use in operating on varicosities.

cirsotomy (ser-sot'o-me) [*cirso-* + Gr. *temnein* to cut] incision of varicose veins.

cis (sis) [L. "on the same side"] a prefix denoting on this side, on the same side, on the near side; in organic chemistry, having certain atoms or radicals on the same side; in genetics, having the two mutant genes of a pseudoallele on the same chromosome. Cf. *trans*.

cisclomiphene (sis-klo'mī-fēn) enclomiphene.

cismatan (sis'mah-tan) the seeds of *Cassia absus*; used in Egypt as a cure for ophthalmia.

cisplatin (sis'plah-tin) chemical name: (SP-4-2)diamminedichloroplatinum; an antineoplastic, $\text{Cl}_2\text{H}_2\text{N}_2\text{Pt}$, used in the treatment of metastatic testicular and ovarian cancer. Called also *cis-platinum* and *platinum diamminodichloride*.

cis-platinum (sis-plat'i-num) cisplatin.

11-cis retinal see *retinal*.

cissa (sis'ah) [Gr. *kissa* longing for strange food] pica.

Cissampelos (sis-am'pē-los) [Gr. *kissos* ivy + *ampelos* vine] a genus of menispermaceous climbing plants. *C. capensis* of Africa, is emetic and purgative. *C. pareira* L. is used by tropical American tribes for snakebites; also used as a diuretic, expectorant, emmenagogue, and febrifuge. It contains pelosine, an alkaloid.

cistern (sis'tern) a closed space serving as a reservoir for fluid; see also *cisterna*. **basal c.**, cisterna interpeduncularis. **cerebellomedullary c.**, cisterna cerebellomedullaris. **c. of chiasma**, **chiasmatic c.**, cisterna chiasmatis. **c. of fossa of Sylvius**, cisterna fossae lateralis cerebri. **great c.**, cisterna cerebellomedullaris. **interpeduncular c.**, cisterna interpeduncularis. **c. of lateral fossa of cerebrum**, cisterna fossae lateralis cerebri. **c. of Pecquet**, cisterna chyli. **posterior c.**, cisterna cerebellomedullaris. **subarachnoidal c's**, cisternae subarachnoideales. **c. of Sylvius**, cisterna fossae lateralis cerebri. **terminal c's**, pairs of transversely oriented channels that are confluent with the sarcotubules, which together with an intermediate T tubule constitute a triad of skeletal muscle. See also *T system*, under *system*; *T tubule*, under *tubule*; and *triad of skeletal muscle*.

cisterna (sis-ter'nah), pl. *cister'nae* [L.] [NA] a cistern: a closed space serving as a reservoir for lymph or other body fluid, especially one of the enlarged subarachnoid spaces containing cerebrospinal fluid. **c. am'biens**, one that connects the cisterna venae magnae cerebri with the cisterna interpeduncularis. **c. basa'lis**, c. interpeduncularis. **c. cerebellomedulla'ris** [NA], cerebellomedullary cistern: the enlarged subarachnoid space between the under surface of the cerebellum and the posterior surface of the medulla oblongata, and continuous below with the spinal subarachnoid space. It can be tapped by means of a needle inserted through the posterior atlanto-occipital membrane (cisternal puncture). Called also *c. magna*, and *great* or *posterior cistern*. **c. chiasmatic**, *c. chiasmatis*. **c. chias'matis** [NA], chiasmatic cistern: a subarachnoid space between the optic chiasma and the rostrum of the corpus callosum; called also *cistern of chiasma*. **c. chy'li** [NA], a dilated portion of the thoracic duct at its origin in the lumbar region; it receives several lymph-collecting vessels, including the intestinal, lumbar, and descending intercostal trunks. Called also *ampulla chyli*, *chylocyst*, *cistern of Pecquet*, *receptaculum chyli*, and *receptaculum Pecqueti*. **c. fos'sae latera'lis cer'e'bri** [NA], cistern of lateral fossa of cerebrum: the space between the arachnoid and the lateral cerebral fossa; called also *c. fossae lateralis cerebri* [Sylvii], *cistern or fossa of Sylvius*, and *c. sulci lateralis*. **c. fos'sae Syl'vii**, *fossae lateralis cerebri*. **c. intercru'alis profun'da**, c. interpeduncularis. **c. interpeduncula'ris** [NA], interpeduncular cistern: a dilatation of the subarachnoid space between the cerebral peduncles; called also *c. intercru'alis profunda*, and *basal cistern*. **c. mag'na**, c. cerebellomedullaris. **perinuclear c.**, the space separating the inner from the outer nuclear membrane; called also *perinuclear space*. **cister'nae subarachnoidea'les**, cisternae subarachnoideales. **cister'nae subarachnoidea'les** [NA], subarachnoidal cisterns: localized enlargements of the subarachnoid space, occurring in areas where the dura mater and arachnoid do not closely follow the contour of the brain with its covering pia mater, and serving as reservoirs of cerebrospinal fluid; called also *cisternae subarachnoideales*. **c. sul'ci latera'lis**, c. Sylvii, c. fossae lateralis cerebri. **c. ve'nae mag'nae cer'e'bri**, the superior confluent of the subarachnoid space, lying in the angle between the splenium of the corpus callosum and the superior surfaces of the cerebellum and mesencephalon, and containing the great vein of the cerebrum. Called also *Bichat's* or *arachnoid canal*.

cisternae (sis-ter'ne) [L.] plural of *cisterna*.

cisternal (sis-ter'nal) pertaining to a cistern, especially the cisterna cerebellomedullaris.

cisternographic (sis'ter-no-graf'ik) pertaining to cisternography.

cisternography (sis'ter-nog'rah-fe) radiography of the basal cistern of the brain after subarachnoid injection of a contrast medium.

cistron (sis'tron) [L. *cis* on this side + *trans* on the other side + Gr. *on* neuter ending] the smallest unit of genetic material that must be intact to function as a transmitter of genetic information, i.e., to determine the sequence of amino acids of one polypeptide chain. The cistron is identified by the *cis-trans* test. The gene as traditionally conceived is identical to the cistron. Cf. *muton* and *recon*.

Citanest (si'tah-nest) trademark for preparations of prilocaine hydrochloride.

Citelli's syndrome (che-tel'ēz) [Salvatore Citelli, Italian laryngologist, 1875-1947] see under *syndrome*.

Citellus (si-tel'us) *Spermophilus*.

citrate (sit'rāt) any salt of citric acid. In biochemistry, the term is often used interchangeably with citric acid (see under *acid*). **cupric c.**, a bluish green, crystalline powder, $\text{Cu}_2\text{C}_6\text{H}_4\text{O}_7$; antiseptic and astringent. **ferric c.**, garnet-red scales or brown granules, $\text{FeC}_6\text{H}_5\text{O}_7 \cdot x\text{H}_2\text{O}$, used as a reagent; called also *iron citrate*.

citrated (sit/'rāt-ed) containing a citrate, especially potassium citrate.

citroeviridin (si/'tre-o-vir/'i-din) a toxic compound isolated from the fungus *Penicillium citroeviride*, said to have the empirical formula of $C_{23}H_{30}O_8$.

Citromyces (sit/'ro-mi'sēz) [*citric acid* + Gr. *mykes* fungus] a name formerly used for some species of *Penicillium*, especially those which produce citric acid from sugars.

citron (sit/'ron) [L. *citrus*] 1. the orange-like tree, *Citrus medica*, and its fruit. 2. in bacteriology, shaped like a lemon.

citronella (sit/'ron-el'ah) a fragrant grass, *Cymbopogon (Andropogon) nardus* (L.) Rendle, the source of a volatile oil (citronella oil) used in perfumes and insect repellents.

citrophosphate (sit/'ro-fos'fāt) a compound of a citrate and a phosphate.

citrulline (sit-'rul/'lin) alpha-amino delta-carbamido normal valeric acid, $NH_2 \cdot CO \cdot NH \cdot (CH_2)_3 \cdot CH(NH_2) \cdot COOH$; it is formed from ornithine and is itself converted into arginine in the urea cycle.

citrullinuria (sit-'rul/'li-nu're-ah) the presence of large amounts of citrulline in the urine, with increased levels of citrulline in both plasma and cerebrospinal fluid.

Citrullus (si-'trul/'lus) a genus of cucurbitaceous plants, including *C. vulgaris*, the watermelon, the seeds of which are the source of cucurbital and cucurbitacin.

Citrus (sit/'rus) [L.] a genus of rutaceous trees: *C. aurantifolia*, the lime; *C. aurantium*, the orange; *C. bergamia*, the bergamot; *C. limonum*, the lemon; *C. medica*, the citron; *C. sinensis*, the sweet orange.

citta (sit/'ah) [Gr. *kitta* longing for strange food] pica.

cittosis (sit-to/'sis) pica.

Civatte's poikiloderma (siv-at's/) [Achille Civatte, French dermatologist, 1877-1956] see under *poikiloderma*.

Civiale's operation (se-'ve-alz') [Jean Civiale, French physician, 1792-1867] see under *operation*.

Civinini's ligament, process (spine) (che-'ve-ne'nēz) [Filippo Civinini, Italian anatomist, 1805-1844] see *ligamentum pterygospinale* and *processus pterygospinosus*.

Cl chemical symbol for *chlorine*.

cl. *centiliter*.

cladiosis (klad-'e-o'sis) a fungal disease resembling sporotrichosis, marked by chains of subcutaneous nodules along the forearm, and from which an organism called *Scopulariopsis blochi* was isolated; the organism was later found to be a *Paecilomyces*, and was probably a contaminant. Called also *gummatous lymphangitis*.

Clado's anastomosis, etc. (klah/'dōz) [Spiro Clado, French gynecologist, born 1856] see under *anastomosis*, *band*, *fossa*, and *point*.

Cladonia (klah-do'ne-ah) [Gr. *klados* branch] a genus of lichens. *C. rangiferina*, reindeer moss, was formerly used as a stomachic and pectoral.

Cladorchis watsoni (kla-dor/'kis wat-so'ni) *Watsonius watsoni*.

cladosporiosis (klad-'o-spo're-o'sis) a general term for infection with *Cladosporium*, including black degeneration of the brain, chromomycosis, and tinea nigra.

Cladosporium (klad-'o-spo're-um) a genus of dematiaceous Fungi Imperfecti of the order Moniliales. *C. herbarum* produces "black spot" on meat in cold storage. It will grow at a temperature of 18° F. (-8° C.). *C. carrioni* is an agent of chromomycosis. *C. wernecki* and *C. mansonii* are agents of tinea nigra. *C. trichoides* and other species cause black degeneration of the brain.

cladotrichosis (klad-'o-thri-'ko'sis) infection with *Cladotrich* (*Nocardia*); now called *nocardiosis*.

Cladotrich (klad-'o-thriks) [Gr. *klados* branch + *thrix* hair] former name of a genus of bacteria, now discarded.

clairaudience (klār-aw/'de-ens) [Fr. *clair* clear + *audience* a hearing] the subjective impression of sound; see *clairvoyance*.

clairsentience (klār-sen'she-ens) [Fr. *clair* clear + *sentience* perception] clairvoyance.

clairvoyance (klār-voi'ans) [Fr.] a form of extrasensory perception in which knowledge of objective events is acquired without the use of the senses; called also *clairsentience*. Cf. *telepathy*.

clamoxyquin hydrochloride (klah-moks/'i-kwin) chemical name: 5-chloro-7-[[[3-(diethylamino)propyl]amino]methyl]-8-quinolinol dihydrochloride; an antiamoebic agent, $C_{21}H_{26}ClNO$, which has been used in intestinal amebiasis.

clamp (klamp) a surgical instrument for effecting compression. **Cope's c.**, a crushing clamp with several hinged segments for use in surgery of the colon and rectum. **cotton roll rubber dam c.**, a rubber dam clamp with a buccal and lingual wing or flange to hold cotton rolls in position in the mouth. **Crile's c.**, a rubber-shod clamp to secure temporary hemostasis in suture of blood vessels. **Doyen's c.**, a forceps with flexible blades for clamping tissues to control bleeding temporarily during operations on the gastrointestinal tract. **Gant's c.**, a right-angled

clamp used in operating for piles. **gingival c.**, a clamp for retracting gingival tissues. **Goldblatt's c.**, a clamp for the renal artery to produce experimental hypertension. **Herif's c.**, a variety of wound clamp. **Joseph's c.**, a clamp used after a nasal operation to improve the alignment of the mobilized fragments of the bony framework of the nose. **Martel's c.**, a crushing clamp used in resection of the colon. **Mikulicz's c.**, a clamp used for crushing the septum between the proximal and distal segments of the colon after exteriorization. **Payr c.**, a crushing clamp used in resections of the stomach, intestine, and colon. **pedicle c.**, clamp forceps, def. 1; see under *forceps*. **Pott's c's**, clamps used to grasp individual blood vessels. **Rankin c.**, a three-bladed clamp for crushing the colon during resection. **rubber dam c's**, metallic devices that are used to retain the rubber dam on a tooth. **Sehrt's c.**, a clamp for compressing the aorta or for compressing a limb to arrest hemorrhage; called also *Sehrt's compressor*. **voltage c.**, an electronic technique employing the feedback principle to impose a fixed potential difference across a cell membrane. **Willet's c.**, Willet's forceps. **Yellen c.**, a special clamp used for circumcision.

clang (klang) a harsh quality of a sound or of the voice.

clap (klap) gonorrhea.

clapotage (klap/'o-tahzh') clapotement.

clapotement (klah-pawt-maw') [Fr.] a splashing sound heard on succussion; called also *clapotage*.

claquement (klak-maw') [Fr.] a clapping or snapping. **c. d'ouverture**, opening snap.

clarificant (klar-iff'i-kant) an agent that clears liquids of turbidity.

clarification (klar/'fi-ka'shun) [L. *clarus* clear + *facere* to make] the clearing of a liquid from turbidity.

clarify (klar/'fi) [L. *clarificare* to render clear] to clear of turbidity or of suspended matter.

Clark II an irritant poison gas, diphenylcyanoarsine, $(C_6H_5)_2AsCN$.

Clark's test (klarks) [Guy Wendell Clark, American biochemist, born 1887] see under *tests*.

Clark-Collip method (klark-kol'ip) [Earl Perry Clark, American biochemist, born 1892; James Bertram Collip, Canadian biochemist, born 1892] see under *method*.

Clarke's cells, nucleus (column) (klarks) [Jacob Augustus Lockhart Clarke, English anatomist and physician, 1817-1880] see under *cell*, and see *nucleus thoracicus*.

clasmatocyte (klaz-mat'o-sit) [Gr. *klasma* a piece broken off + *kytos* hollow vessel] Ranvier's name for certain branched cells in connective tissue that allegedly detach portions of their processes as a means of discharging their secretions. As now used the term is equivalent to the cell described under *macrophage*.

clasmatocytosis (klaz-mat'o-si-to'sis) an excess of clasmatocytes.

clasmatodendrosis (klaz-mat'o-den-dro'sis) [Gr. *klasma* a piece broken off + *dendron*] a breaking up of the protoplasmic expansions of astrocytes.

clasmatosis (klaz/'mah-to'sis) [Gr. *klasma* a piece broken off] 1. the breaking off of parts of a cell. 2. the process of cytoplasmic fragmentation by which plasmacytes are said to release synthesized immunoglobulins.

clasmocytoma (klaz/'mo-si-to'mah) reticulum cell sarcoma.

clasp (klasp) a device by which something is held, such as a part of a removable partial denture which retains and stabilizes the denture by contacting or partially surrounding an abutment tooth; called also *direct retainer*. **Adams c.**, a specially designed retention crib for assisting in retention of a removable appliance. **bar c.**, one with two or more separate arms located opposite to each other on the tooth, one acting as a retentive and the other as a reciprocal arm. **circumferential c.**, one that encircles without interruption more than half of the circumference of the abutment tooth. **Dujarier's c.**, a metal device for use in fractures of the calcaneus.

class (klas) 1. a taxonomic category subordinate to a phylum (or subphylum) and superior to an order. 2. in statistics, a group of variables all of which show a particular value or a value falling between certain limits. The *frequency of class* is the number of variables that it contains.

classic (klas'ik) of first class or rank; standard.

classification (klas/'si-fi-ka'shun) the systematic arrangement of similar entities on the basis of certain differing characteristics. **adansonian c.**, numerical taxonomy. **Angle's c.**, a classification of dental malocclusion based on the mesiodistal (anteroposterior) position of the mandibular dental arch and teeth relative to the maxillary dental arch and teeth; see under *malocclusion*. **Arneth's c.**, see under *formula*. **Broders' c.**, see under *index*. **Caldwell-Moloy c.**, classification of female pelvis as gynecoid, android, anthropoid, and platypelloid; see under *pelvis*. **Denver c.**, the classification of human chromosomes on the basis of size and centromere position. Ideally, the 23 pairs of chromosomes are classified individually, but usually the best that can be

done is to arrange them into seven groups, labeled A to G, in the order of decreasing length. **Jansky's c.**, a classification of ABO blood types designated by roman numerals I to IV, corresponding with types O, A, B, and AB, respectively. **Jensen's c.**, a classification of bacteria based upon the nutritive characteristics of the organisms. **Keith-Wagener-Barker c.**, a classification of hypertension and arteriosclerosis based on retinal changes. Group 1, essential benign hypertension indicated by moderate arteriolar attenuation. Group 2, constant high blood pressure but no apparent effect on health, indicated by more definite arteriolar attenuation with localized constriction. Group 3, hypertension with retinal, renal, cerebral, and other symptoms, indicated by marked attenuation of the arterioles, cotton-wool exudates, and hemorrhages. Group 4, severe hypertension with severe nervous system, visual, and other organ disturbances, indicated by ophthalmoscopic signs of Group 3, with papilledema. **Kennedy c.**, a classification of partially edentulous conditions and partial dentures, based on the location of the edentulous spaces in relation to the remaining teeth. **Krapelin's c.**, a classification of the manic-depressive and schizophrenic groups of mental disease. **Lancefield c.**, a serologic classification of the hemolytic streptococci based on the precipitin test, depending on the presence of group-specific cell-wall antigens (carbohydrates), and giving a strong indication of their predilections. They are grouped as follows: *group A*, primarily pathogenic for man; *group B*, almost exclusively found in bovine mastitis; *group C*, primarily pathogenic for lower animals; *group D*, isolated from cheese; *group E*, isolated from milk; *group F*, isolated from human throats; *group G*, isolated from man, dogs, and monkeys; *groups H, K, and O*, nonpathogenic from the respiratory tract of man. **McNeer c.**, a classification of gastric carcinoma as (1) polypoid, (2) ulcerocancerous, (3) ulcerating and infiltrating, and (4) infiltrating. **Migula's c.**, a classification of bacteria drawn up by Migula in 1900. **Moss' c.**, a classification of ABO blood types designated by roman numerals I to IV, corresponding with types AB, A, B, and O, respectively. **New York Heart Association (NYHA) c.**, a functional and therapeutic classification for prescription of physical activity for cardiac patients. Class I (or A): patients with no limitation of activities; they suffer no symptoms from ordinary activities. Class II (or B): patients with slight limitation of activity; they are comfortable at rest or with mild exertion. Class III (or C): patients with marked limitation of activity; they are comfortable only at rest. Class IV (or D): patients who should be at complete rest, confined to bed or chair; any physical activity brings on discomfort. **numerical c.**, see under *taxonomy*.

clastic (klas'tik) [Gr. *klastos* broken] 1. causing or undergoing a division into parts. 2. separable into parts, as an anatomical model.

clastogenic (klas'to-jen'ik) giving rise to or inducing disruption or breakages, as of chromosomes.

clastothrix (klas'to-thriks) [Gr. *klastos* broken + *thrix* hair] trichorrhesis nodosa.

clathrate (kläth'rät) [L. *clathare* to provide with a lattice] 1. having the shape or appearance of a lattice. 2. a clathrate compound; also, pertaining or relating to a clathrate compound. See under *compound*.

Clathrochloris (klath'ro-klo'ris) a genus of microorganisms of the family Chlorobacteriaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring usually as spherical cells arranged in chains and joined in trellis-like aggregates; the type species is *C. sulphurica*.

Clathrocystis (klath'ro-sis'tis) a genus name formerly given microorganisms, some of which are now classified in the genus *Lamprocystis*.

Clauberg's culture medium, test, unit (klaw'bergz) [Karl Wm. Clauberg, German bacteriologist, born 1893] see under *culture medium, test, and unit*.

Claude's hyperkinesis sign, syndrome (klawdz) [Henri Claude, French psychiatrist, 1869-1945] see under *sign and syndrome*.

claudicant (klaw'di-kant) pertaining to or affected by claudication; by extension, sometimes used to denote a patient with intermittent claudication.

claudication (klaw'di-ka'shun) [L. *claudicatio*] limping or lameness. **intermittent c.**, a complex of symptoms characterized by absence of pain or discomfort in a limb when at rest, the commencement of pain, tension, and weakness, after walking is begun, intensification of the condition until walking becomes impossible, and the disappearance of the symptoms after a period of rest. The condition is seen in occlusive arterial diseases of the limbs, such as thromboangiitis obliterans, and in compression of the cauda equina. Called also *Charcot's syndrome* and *angina cruris*. **venous c.**, intermittent claudication caused by venous stasis.

claudicatory (klaw'di-kah-tor'e) pertaining to or marked by claudication.

Claudius' cell (klaw'de-us) [Friedrich Matthias Claudius, Austrian anatomist, 1822-1869] see under *cell*.

claustra (klaws'trah) [L.] plural of *claustrum*.

claustral (klaws'tral) pertaining to or of the nature of a claustrum.

claustrophilia (klaws'tro-fil'e-ah) a morbid desire to be shut in, to close all doors, windows, etc.

claustrophobia (klaws'tro-fö-be-ah) [L. *claudere* to shut + Gr. *phobein* to be affrighted by + *ia*] morbid dread of being shut up in a confined space.

claustrum (klaws'trum), pl. *claus'tra* [L. "a barrier"] [NA] the thin layer of gray matter lateral to the external capsule of the brain, dividing it from the white matter of the insula; it is mainly composed of spindle cells. Called also *claustrum of insula*. **c. gut'turis**, **c. o'ris**, palatum molle. **c. virginal'e**, hymen.

clausura (klaw-su'rah) [L. "closure"] atresia.

clava (kla'vah) [L. "stick"] tuberculum nuclei gracilis.

clavacin (kla'vah-sin) patulin.

claval (kla'val) pertaining to the clava (tuberculum nuclei gracilis [NA]).

clavate (kla'vāt) [L. *clavatus* club] pertaining to the clava (tuberculum nuclei gracilis [NA]); club-shaped.

clavelization (klav'ē-li-za'shun) [Fr. *clavelée* sheep-pox] inoculation with the virus of sheep-pox for the purpose of immunizing the host against the disease.

Claviceps (klav'i-seps) [L. *clava* club + *caput* head] a genus of parasitic ascomycetous fungi of the family Clavicipitaceae, order Clavicipitales, which infest the seeds of various plants. *C. purpurea* is the source of the common ergot of rye. See *ergot*, def. 1.

Clavicipitaceae (klav'i-sip'i-ta'se-e) a family of fungi of the order Clavicipitales having long cylindrical asci and long filiform ascospores, including the genera *Claviceps* and *Cordyceps*.

Clavicipitales (klav'i-sip'i-ta'lēz) an order of ascomycetous fungi of the series Pyrenomycetes, in which the perithecia are formed in well-developed stroma and the asci have thick caps; it includes the family Clavicipitaceae.

clavicle (klav'i-k'l) the bone articulating with the sternum and scapula; see *clavicula*.

clavotomy (klav'i-kot'o-me) [*clavicle* + Gr. *tomē* a cutting] the operation of cutting or dividing the clavicle.

clavicula (klah-vik'u-lah) [L. dim. of *clavis* key] [NA] the clavicle: a bone, curved like the letter *f*, that articulates with the sternum and scapula, forming the anterior portion of the shoulder girdle on either side; called also *collar bone*.

clavicular (klah-vik'u-lar) pertaining to the clavicle.

clavicular (klah-vik'u-lar), pl. *clavic'uli* [L. dim. of *clavus* nail] any one of Sharpey's fibers (a set of fibers that hold together the laminae of a bone).

claviformin (klav'i-for'min) patulin.

clavipectoral (klav'i-pek'to-ral) [L. *clavis* clavicle + *pectus* breast] pertaining to the clavicle and thorax.

clavus (kla'vus), pl. *cla'vi* [L. "nail"] a corn. **c. hystericus**, a sensation as if a nail were being driven into the head. **c. secali'nus**, ergot, def. 1.

clawfoot (klaw-fut) a high-arched foot with the toes hyperextended at the metatarsophalangeal joint and flexed at the distal joints; called also *gampsodactyly* and *griffe des orteils*.

clawhand (klaw-hand) flexion and atrophy of the hand and fingers; it occurs in lesions of the ulnar nerve, in leprosy, and in syringomyelia. Called also *main en griffe*.

Clawhand.

clay (kla) a native hydrated aluminum silicate, resulting from the decomposition of rocks caused by weathering; various forms of clays have been used in medicine, both externally and internally, since earliest times. **China c.**, kaolin.

clazolam (kla'zo-lam) chemical name: 2-chloro-5,9,10,14b-tetrahydro-5-methylisoquinol[2,1-d][1,4]benzodiazepin-6(7H)-one; a minor tranquilizer, C₁₈H₁₇ClN₂O.

clazolimine (kla'zo-li-mēn) chemical name: 1-(4-chlorophenyl)-2-imino-3-methyl-4-imidazolidinone; a diuretic, C₁₀H₁₀ClN₃O.

Cl₂C·CHO chloral.

clear (klēr) to remove cloudiness from microscopical specimens by the use of a clearing agent.

clearance (klēr'ans) 1. the act of clearing; specifically complete removal of a solute or substance from a specific volume of blood per unit of time, i.e., blood cleared of substance per minute, e.g., creatinine clearance of 120 ml. per minute. 2. the space existing between opposed structures. **blood-urea c.**, the volume of the blood cleared of urea per minute by renal elimination; called also *urea c.* **creatinine c.**, the volume of plasma cleared of creatinine after the parenteral administration of a specified amount of the substance (exogenous creatinine clearance); the

volume of plasma cleared of creatinine occurring without parental administration, i.e., of creatinine synthesized within the body (endogenous creatinine clearance). **immune c.**, immune elimination. **interocclusal c.**, interocclusal distance. **inulin c.**, an expression of the renal efficiency in eliminating inulin from the blood; it approximates the glomerular filtration rate (G.F.R.). **iron plasma c.**, a term indicating the time (in minutes) required for 50 per cent of a measured quantity of radioactive iron, injected for test purposes, to be cleared from the plasma. **occlusal c.**, a condition in which the opposing occlusal surfaces may glide over one another without any interfering projection. **plasma c.**, an expression of the ability of the kidneys to completely remove various substances, e.g., urea, from the blood plasma on a single passage through the kidneys; it is determined by simultaneously measuring the concentration of the substance in question in the plasma and in the urine in conjunction with the rate of urine formation (ml. per minute). **urea c.**, blood-urea c.

clearer (klēr'er) a clearing agent; an agent used in microscopy to remove the cloudiness from a specimen.

cleavage (klēv'ij) the mitotic segmentation of the fertilized ovum, the size of the structure remaining unchanged, as the cleavage cells, or blastomeres, become smaller and smaller with each division. **accessory c.**, peripheral cleavage in telolecithal eggs due to polyspermy. **adequal c.**, a form in which the blastomeres are practically equal in size. **complete c.**, holoblastic c. **determinate c.**, cleavage following a precise pattern, each blastomere having a characteristic and unalterable fate, i.e., each blastomere becoming the precursor of a definite part of the embryo. **discoidal c.**, cleavage limited to the animal pole of highly telolecithal eggs. **equal c.**, a form in which the blastomeres are equal in size. **equatorial c.**, cleavage that occurs in a plane passing through the equator of the egg. **holoblastic c.**, a form in which the entire egg participates in cell division; called also *complete* or *total c.* **incomplete c.**, meroblastic c. **indeterminate c.**, that following a less rigid cleavage pattern, the blastomeres having more developmental possibilities than they usually show, each of which, when isolated, being capable of developing into a normal embryo. **latitudinal c.**, cleavage in planes passing at right angles to the egg axis. **meridional c.**, cleavage in planes passing through the egg axis. **meroblastic c.**, a form in which only the protoplasmic portions of the egg participate; called also *incomplete* or *partial c.* **partial c.**, meroblastic c. **superficial c.**, a form in which only the surface region of centrolecithal eggs participate. **total c.**, holoblastic c. **unequal c.**, a form in which the blastomeres about the vegetal pole remain larger in size than those nearer the animal pole.

cleft (kleft) a fissure or elongated opening, especially one occurring in the embryo or derived from a failure of parts to fuse during embryonic development. **anal c.**, crena ani. **branchial c.**, any of the slit-like openings in the gills of fishes, formed between the branchial arches. Also, any of the analogous branchial grooves of the mammalian embryo. **cervical c's**, clefts in the endocervical mucosa. **cholesterol c.**, a cleft in a section of tissue embedded in paraffin, due to the dissolving of cholesterol crystals. **clunial c.**, crena ani. **corneal c.**, see under *fissure*. **facial c.**, the clefts between the embryonic processes that normally unite to form the face. Failure of such union, depending on its site, causes such developmental defects as cleft cheek; cleft lip (harelip); cleft mandible; oblique facial cleft; and transverse facial cleft. **facial c.**, **lateral**, a unilateral or bilateral cleft with complete fissure extending from the commissure of the mouth into the cheeks, usually to the anterior border of the masseter muscle. **facial c.**, **oblique**, a fissure extending from the ala nasi to the lateral canthus of the eye, caused by failure of union of the maxillary and lateral nasal processes in the embryo. **facial c.**, **transverse**, lateral facial c. **genital c.**, a depression of the external genital region of the fetus, which develops into the male urethra or the vestibule. **hyobranchial c.**, the cleft between the hyoid and the next succeeding arch in the developing embryo; called also *posthyoidian c.* **hyoid c.**, hyomandibular c. **hyomandibular c.**, the cleft between the mandibular and hyoid arches in the developing embryo; called also *hyoid c.* **interdental c.**, diastema. **intergluteal c.**, gluteal furrow. **Lanternman's c's**, incisures of Lanternman. **Larrey's c.**, trigonum sternocostale. **Maurer's c's**, Maurer's dots. **natal c.**, gluteal furrow. **posthyoidian c.**, hyobranchial c. **Schmidt-Lanternman c's**, incisures of Lanternman. **synaptic c.**, a narrow extracellular cleft between the pre- and postsynaptic cell membranes at the synapse. **visceral c's**, grooves between the branchial (visceral) arches of the embryo. **vulval c.**, rima pudendi.

clegs (klegz) a common name for certain tabanid flies, the horseflies or gadflies.

cleid- see *cleido-*.

cleidagra (kli-dag'rah) [*cleid-* + Gr. *agra* seizure] gouty pain in the clavicle.

cleidal (kli'dal) pertaining to or affecting the clavicle.

cleidarthritis (kli'dar-thri'tis) [*cleid-* + Gr. *arthron* joint] gout in the clavicular region.

cleido-, cleid- (kli'do, kliš) [Gr. *kleis* bolt, hook; the collar bone (clavicle), so called from its hook shape] combining form denoting relationship to the clavicle, or to something barred.

cleidocostal (kli'do-kos'tal) pertaining to the clavicle and the ribs.

cleidocranial (kli'do-kra'ne-al) [*cleido-* + Gr. *kranion* head] pertaining to the clavicle and the head.

cleidoic (kli'do'ik) [Gr. *kleidouchos* holding the keys] isolated from the environment, self-contained, as the ova (eggs) of reptiles, birds, and primitive mammals, which are self-sufficient, having become a closed system, and, except for oxygen intake, developing at the expense of the substances stored inside the egg itself, directly into miniature adults without passing through a larval stage.

cleidomastoid (kli'do-mas'toid) pertaining to the clavicle and the mastoid process.

cleidorrhaxis (kli'do-rek'sis) [*cleido-* + Gr. *rhēxis* rupture] cleidotomy.

cleidotomy (kli-dot'o-me) [*cleido-* + Gr. *tomē* a cutting] surgical division of the clavicle of the fetus in difficult labor, to facilitate passage of the shoulders through the birth canal; called also *cleidorrhaxis*.

cleidotripsy (kli'do-trip'se) [*cleido-* + Gr. *tribein* to rub] crushing of the fetal clavicle to facilitate delivery.

cleisagra (kli-sag'rah) cleidagra.

cleisiophobia (kli'se-o-fō'be-ah) [Gr. *kleisis* closure + *phobia*] (obs.) claustrophobia.

cleistothecium (klis'to-the'se-um) [Gr. *kleisis* closure + *thēkē* case] the fruiting body, or carp, produced by certain ascomycetes, in which there is no pore for the escape of ascospores, the spores being released after decay of the cleistothecium. Cf. *apothecium*, *gymnothecium*, and *perithecium*.

cleithrophobia (kli'thro-fō'be-ah) (obs.) claustrophobia.

clemastine (klem'as-tēn) chemical name: (+)-2-[2-[(*p*-chloro- α -methyl- α -phenylbenzyl)oxy]ethyl]-1-methylpyrrolidine; an antihistaminic, $C_{21}H_{26}ClNO$. **c. fumarate**, a salt of clemastine, $C_{21}H_{26}ClNO \cdot C_4H_4O_6$; an antihistaminic used in the treatment of allergic rhinitis and allergic skin disorders.

Clematis (klem'ah-tis) [Gr. *klēmatis*] a genus of ranunculaceous plants, many of them active poisons.

clemizole (klem'i-zōl) chemical name: 1-[(4-chlorophenyl)methyl]-2-(1-pyrrolidinylmethyl)-1*H*-benzimidazole; an antihistaminic, $C_{19}H_{20}ClN_3$. **c. hydrochloride**, the hydrochloride salt of clemizole, $C_{19}H_{20}ClN_3 \cdot HCl$, used as an antihistaminic in the treatment of skin allergies, food and cosmetic hypersensitivities, and serum sickness; administered orally. **c. penicillin**, see under *penicillin*.

clenching (klench'ing) a frequent oral neuromuscular response during sleep or occurring subconsciously when awake, the jaws being forcibly closed, and the teeth firmly in contact, with continuous pulsating contraction of the temporalis and pterygomasseteric muscles. It is often associated with bruxism, and as with bruxism, nervous excitability and dental malocclusion are etiologic factors.

Cleocin (kle'o-sin) trademark for preparations of clindamycin.

cleoid (kle'oid) [Anglo-Saxon *cle*, claw + Gr. *eidōs* form] a dental instrument, shaped like a claw, used for carving dental restorations.

cleptomania (klep'to-ma'ne-ah) kleptomania.

cleptophobia (klep'to-fō'be-ah) kleptophobia.

Clérambault-Kandinsky complex (syndrome) (kla'rah-bo' kan-din'ske) [Gatien de Clérambault, French psychiatrist, 1872-1934; Viktor Kandinsky, 1849-1889] see under *complex*.

Clethrionomys (kleth're-on'o-mis) a genus of voles. **C. glario'lus**, a species implicated as a reservoir of epidemic hemorrhagic fever.

click (klik) a brief sharp sound; see also *clicking*. **ejection c's**, see under *sound*. **Ortolani's c.**, a click felt when the thigh is abducted in flexion, in congenital dislocation of the hip. It results from the sliding of the femoral head over the acetabular rim. A click can also be felt when the head slips out of the acetabulum on the opposite maneuver. Called also *Ortolani's sign*. **systolic c's**, short, dry clicking heart sounds during systole, indicative of various heart conditions.

clicking (klik'ing) a series of clicks, such as the snapping, cracking, or crepitant noise evident on excursions of the mandibular condyle.

clid-, clido- for words beginning thus, see those beginning *cleid-*.

clidinium bromide (kli'din'e-um) [USP] chemical name: 3-[(hydroxydiphenylacetyl)oxy]-1-methyl-1-azoniabicyclo[2.2.2]octane bromide. A quaternary ammonium anticholinergic, $C_{22}H_{28}BrNO_2$, with pronounced antispasmodic and antisecretory effects on the gastrointestinal tract, occurring as a white or nearly white, crystalline powder; used as adjunctive therapy in the treatment of peptic ulcer and other gastrointestinal disorders, administered orally.

climacteric (kli-mak'ter-ik, kli'mak-ter'ik) [Gr. *klimaktērion* of ladder, critical point in human life] the syndrome of endocrine, somatic, and psychic changes occurring at the termination of the reproductive period in the female (menopause); it may also accompany the normal diminution of sexual activity in the male. Called also *climacterium*.

climacterium (kli'mak-te're-um) climacteric. **c. prae'cox**, premature menopause.

climatology (kli'mah-tol'o-je) [Gr. *klima* the supposed slope of the earth from the equator to the pole + *logos* treatise] the science devoted to the study of the conditions of the natural environment (rainfall, daylight, temperature, humidity, air movement) prevailing in specific regions of the earth. **medical c.**, that concerned especially with the effect of climatic factors on man, on his functions and health, and on the treatment of his ills.

climatotherapeutics (kli'mah-to-ther'ah-pu'tiks) climatology.

climatotherapy (kli'mah-to-ther'ah-pe) [*climate* + Gr. *therapeia* treatment] the treatment of disease by means of a favorable climate.

climax (kli'maks) [Gr. *klimax* a ladder, staircase] the acme, or period of greatest intensity, as in the course of a disease (crisis), or in sexual excitement (orgasm).

climograph (kli'mō-graf) [*climate* + Gr. *graphein* to write] a diagram representing the effect of climate on man.

clinarthrosis (klin'ar-thro'sis) [Gr. *klinein* to bend + *arthrōsis* a jointing] abnormal deviation in the alignment of the bones at a joint.

clindamycin (klin'dah-mi'sin) chemical name: 2*S*-trans-methyl-7-chloro-6, 7, 8-trideoxy-6-[(1-methyl-4-propyl-2-pyrrolidinyl)carbonyl]amino]-1-thio-*L*-α-D-galacto-octopyranoside. A semisynthetic analogue of the natural antibiotic lincomycin from which it is produced by chlorination, $C_{18}H_{33}ClN_2O_5S$; it is effective primarily against gram-positive bacteria. **c. hydrochloride** [USP], the hydrated hydrochloride salt of clindamycin, $C_{18}H_{33}ClN_2O_5S \cdot HCl$, occurring as a white or practically white, crystalline powder; used primarily in the treatment of penicillin-resistant gram-positive infections and in patients allergic to penicillin; administered orally. **c. palmitate hydrochloride** [USP], a water-soluble hydrochloride salt of the ester of clindamycin and palmitic acid, $C_{34}H_{63}ClN_2O_6S \cdot HCl$, occurring as a white to off-white amorphous powder, having the same actions and uses as the hydrochloride salt; it is suitable for the preparation of solutions for oral administration. **c. phosphate** [USP], a water-soluble ester of clindamycin and phosphoric acid, $C_{18}H_{34}ClN_2O_8PS$, occurring as a white to off-white, hygroscopic, crystalline powder, having the same actions and uses as the hydrochloride salt; it is suitable for preparation of parenteral dosage forms, administered intramuscularly or intravenously.

cline (klīn) [Gr. *klinein* to slope] a continuous series of differences in structure or function exhibited by the members of a species along a line extending from one part of their range to another.

clinic (klin'ik) [Gr. *klinikos* pertaining to a bed] 1. a clinical lecture; examination of patients before a class of students; instruction at the bedside. 2. an establishment where patients are admitted for special study and treatment by a group of physicians practicing medicine together. **ambulant c.**, one for patients not confined to the bed. **dry c.**, a clinical lecture with the presentation of case histories but without the presence of the patients described.

clinical (klin'e-k'l) pertaining to a clinic or to the bedside; pertaining to or founded on actual observation and treatment of patients, as distinguished from theoretical or basic sciences.

clinician (kli-nish'an) an expert clinical physician and teacher. **nurse c.**, see under *nurse*.

clincogenetic (klin'f-ko-jē-net'ik) pertaining to the clinical manifestations of a chromosomal (genetic) abnormality.

clincopathologic (klin'e-ko-path'o-loj'ik) pertaining both to the symptoms of disease and to its pathology.

Clinistix (klin'i-stiks) trademark for an enzyme-impregnated strip of plastic used to test for sugar in the urine. The strip is dipped into the urine and results of positive or negative are indicated by the color of the strip.

Clinitest (klin'i-test) trademark for reagent tablets containing copper sulfate, used to test for the presence of sugar in the urine. Ten drops of water and 5 of urine are placed in a test tube. The tablet, which generates heat, is added and the solution is allowed to boil. After a few moments the color of the solution is compared to a color chart.

clinocephalism (kli-no-sef'ah-lizm) [Gr. *klinein* to bend + *kephalē* head] clinocephaly.

clinocephaly (kli'no-sef'ah-le) congenital flatness or concavity of the vertex of the head.

clinodactylism (kli'no-dak'ti-lizm) clinodactyly.

clinodactyly (kli'no-dak'ti-le) [Gr. *klinein* to bend + *daktylos* finger] permanent lateral or medial deviation or deflection of one or more fingers.

clinography (kli-nog'rah-fe) [Gr. *klinē* bed + *graphein* to write] a system of graphic representations of the temperature, symptoms, and pathologic manifestations exhibited by a patient.

clinoid (kli'noid) [Gr. *klinē* bed + *eidōs* form] resembling a bed; bed-shaped, as the clinoid processes. See *processus clinoides*.

clinology (kli-nol'ō-je) [Gr. *klinein* to recline + *-logy*] the science of the retrogression of an animal organism.

clinometer (kli-nom'ē-ter) [Gr. *klinein* to recline + *metron* measure] clinoscope.

clinoscope (kli'no-skōp) [Gr. *klinein* to recline + *skopein* to examine] an instrument for measuring an angle of deviation, as the torsion of the eyes when gazing at a fixed object; it is used for measuring paralysis of the ocular muscles. Called also *clinometer*.

clinostatic (kli'no-stat'ik) occurring when the patient lies down.

clinostatism (kli'no-stat'izm) [Gr. *klinē* bed + *stasis* position] a lying-down position of the body.

clinothrapy (kli'no-ther'ah-pe) treatment by keeping the patient in bed.

clioquinol (kli'o-kwin'ol) iodochlorhydroxyquin.

clioxanide (kli-oks'ah-nid) chemical name: 2-(acetyloxy)-*N*-(4-chlorophenyl)-3,5-diiodobenzamide; an anthelmintic, $C_{15}H_{10}ClI_2NO_3$.

clip (klip) a metallic device for approximating the edges of a wound or for the prevention of bleeding from small individual blood vessels.

cliprofen (kli-pro'fen) chemical name: 3-chloro-α-methyl-4-(2-thienylcarbonyl)benzeneacetic acid; an anti-inflammatory, $C_{14}H_{11}ClO_3S$.

cliseometer (klis'e-om'ē-ter) [Gr. *klisis* inclination + *metron* measure] an instrument for measuring the angle which the pelvic axis makes with the spinal column.

clisis (kli'sis) [Gr. *klisis* inclination] attraction or inclination.

Clistin (klis'tin) trademark for preparations of carbinoxamine maleate.

clithridium (klith-rid'e-um) [Gr. *kleithria* a keyhole] any bacterium having a shape like a keyhole or figure of 8.

clithrophobia (klith'ro-fō-be-ah) (*obs.*) claustrophobia.

clition (klit'e-on) [Gr. *kleitys* slope, clivus] the midpoint of the anterior border of the clivus.

Clitocybe (kli-tos'f-be) a genus of club fungi of the family Agaricus, order Agaricales. *C. gigantea* is the source of clitocybine, *C. nebularis* the source of nebularine. The ingestion of *C. illudens*, the orange jack-o-lantern mushroom, causes mycetismus gastrointestinalis.

clitocybine (klit'o-si'bin) any one of a group of antibiotic substances obtained from a mushroom, *Clitocybe gigantea*, of the Agaricus family.

clitoral (klit'o-ral, kli'to-ral, klī-tor'al) pertaining to the clitoris.

clitrectomy (klit'o-rek'to-me) clitoridectomy.

clitoridaxe (kli'to-rid-awk'se) [*clitoris* + Gr. *auxē* increase] enlargement of the clitoris; clitorism.

clitoridean (kli'to-rid-e'an) clitoral.

clitoridectomy (kli'to-ri-dek'to-me) [*clitoris* + Gr. *ektomē* excision] excision of the clitoris; called also *clitrectomy*.

clitoriditis (kli'to-ri-di'tis) clitoritis.

clitoridotomy (kli'to-ri-dot'o-me) [*clitoris* + Gr. *tomē* cut] incision of the clitoris; female circumcision.

clitorimegaly (kli'to-ri-meg'ah-le) [*clitoris* + Gr. *megalē* great] an enlarged clitoris.

clitoris (klit'o-ris, kli'to-ris, klī-tor'is) [Gr. *kleitoris*] a small, elongated, erectile body, situated at the anterior angle of the rima pudendi; homologous with the penis in the male. Called also *coles femininus*.

clitorism (kli'to-rism) 1. hypertrophy of the clitoris. 2. persistent and usually painful erection of the clitoris.

clitoritis (kli'to-ri'tis) inflammation of the clitoris.

clitoromania (kli'to-ro-ma'ne-ah) (*obs.*) nymphomania.

clitoromegaly (kli'to-ro-meg'ah-le) clitorimegaly.

clitoroplasty (kli'to-ro-plas'te) plastic surgery of the clitoris.

clitorotomy (kli'to-rot'o-me) [*clitoris* + Gr. *tomē* a cut] surgical incision of the clitoris.

clival (kli'val) pertaining to the clivus.

clivography (kli-vog'rah-fe) radiographic visualization of the clivus, or posterior cranial fossa.

clivus (kli'vus) [L. "slope"] [NA] a bony surface in the posterior cranial fossa, sloping upward from the foramen magnum to the dorsum sellae, the lower part being formed by a portion of the basilar part of the occipital bone (c. *ossis occipitalis*) and the upper part by a surface of the body of the sphenoid bone (c. *ossis sphenoidalis*). Called also *c. blumenbachii*. **basilar c.**, **c. basilaris**, c. *ossis occipitalis*. **c. blumenbachii**, clivus. **c. monticuli**, declive. **c. ossis occipitalis**, the lower part of the clivus, formed by the basilar portion of the occipital

bone; called also *basilar c.* or *c. basilaris*, and *basilar groove of occipital bone*. **c. os/sis sphenoida/lis**, the upper part of the clivus, formed by a surface of the body of the sphenoid bone; called also *basilar groove of sphenoid bone*.

clo (klo) a unit of measurement, being the insulation provided by man's normal everyday clothing and representing approximately the insulation provided by $\frac{1}{4}$ in. thickness of wool.

cloaca (klo-a'kah), pl. *cloacae* [L. "drain"] 1. in zoology, a common passage for fecal, urinary, and reproductive discharge in most lower vertebrates. 2. in mammalian embryology, the terminal end of the hindgut before division into rectum, bladder, and genital primordia. 3. in pathology, an opening in the involucre of a necrosed bone. **congenital c.**, persistent **c. ectodermal c.**, that portion of the embryonic cloaca originally external to the cloacal membrane. **entodermal c.**, that portion of the embryonic cloaca originally internal to the cloacal membrane. **persistent c.**, the congenital persistence of a common cavity into which the intestinal, urinary, and reproductive ducts open; called also *congenital c.*

cloacal (klo-a'kal) pertaining to the cloaca.

cloacitis (klo'ah-si'tis) an infectious disease of fowls, marked by ulceration of the cloaca and a chronic discharge.

cloacogenic (klo'ah-ko-jen'ik) originating from the cloaca or from persisting cloacal remnants; said of a group of rare transitional-cell nonkeratinizing epidermoid anal cancers.

clobazam (klo'bah-zam) chemical name: 7-chloro-1-methyl-5-phenyl-1*H*-1,5-benzodiazepine-2,4,4(3*H*,5*H*)-dione; a minor tranquilizer, $C_{16}H_{13}ClN_2O_2$.

clock (klok) a device by which time may be measured. **biological c.**, the physiologic mechanism that governs the rhythmic occurrence of certain biochemical, physiological, and behavioral phenomena in plants and animals.

clocortolone (klo-kor'to-lōn) chemical name: 9-chloro-6 α -fluoro-11 β , 21-dihydroxy-16 α -methylpregna-1,4-diene-3,20-dione. A glucocorticoid, $C_{22}H_{28}ClFO_4$, available as the 21-acetate, $C_{24}H_{30}ClFO_6$, and as the 21-pivalate, $C_{27}H_{34}ClFO_8$, esters.

clodanole (klo-dan'o-lēn) chemical name: 1-[[[5-(3,4-dichlorophenyl)-2-furanyl]methylene]amino]-2,4-imidazolidinedione; a skeletal muscle relaxant, $C_{14}H_8Cl_2N_2O_3$.

clodazon hydrochloride (klo'dah-zōn) chemical name: 5-chloro-1-[3-(dimethylamino)propyl]-1,3-dihydro-3-phenyl-2*H*-benzimidazol-2-one monohydrochloride monohydrate; an antidepressant, $C_{18}H_{20}ClN_3O \cdot HCl \cdot H_2O$.

clofazimine (klo-fah'zi-mēn) chemical name: *N*,5-bis(4-chlorophenyl)-3,5-dihydro-3-[(1-methylethyl)imino]-2-phenazamine; an antibacterial, $C_{27}H_{22}Cl_2H_4$, having leprostatic and tuberculostatic actions.

clofedanol (klo-fed'ah-nōl) chlrophedanol.

clofibrate (klo-fi'brāt) [USP] chemical name: 2-(4-chlorophenoxy)-2-methylpropanoic acid methyl ester. An antihyperlipidemic agent, $C_{12}H_{15}ClO_3$, occurring as a colorless to pale yellow liquid; used to reduce elevated serum lipids, administered orally.

clogestone acetate (klo-jes'tōn) chemical name: 3 β -17-bis(acetyloxy)-6-chloropregna-4,6-dien-20-one; a progestin, $C_{28}H_{38}ClO_6$.

clomacran phosphate (klo'mah-kran) chemical name: 2-chloro-9,10-dihydro-*N,N*-dimethyl-9-acridinepropanamine phosphate; a tranquilizer, $C_{18}H_{21}ClN_2 \cdot H_3PO_4$.

Clomid (klo'mid) trademark for a preparation of clomiphene citrate.

clomiphene citrate (klo'mī-fēn) [USP] chemical name: 2-[4-(2-chloro-1,2-diphenylethyl)phenoxy]ethanamine. A synthetic gonad-stimulating principle structurally related to the proestrogen chlorotrianisene, occurring as a white to pale yellow powder and consisting of a mixture of the *cis*- and *trans*-isomers; used to induce ovulation in certain forms of anovulatory infertility, administered orally.

clomipramine hydrochloride (klo-mip'rah-mēn) chemical name: 3-chloro-10, 11-dihydro-*N,N*-dimethyl-5*H*-dibenz[*bf*]azepine-5-propanamine monohydrochloride; a tricyclic antidepressant, $C_{19}H_{23}ClN_2 \cdot HCl$.

clonal (klōn'al) of or pertaining to a clone; see also *clonal selection theory*, under *theory*.

clonality (klo-nal'i-te) the ability to form clones.

clonazepam (klo-naz'ē-pam) chemical name: 5-(*o*-chlorophenyl)-1,3-dihydro-7-nitro-2*H*-1,4-benzodiazepin-2-one; an anticonvulsant, $C_{15}H_{10}ClN_2O_3$.

clone (klōn) [Gr. *klōn* young shoot or twig] 1. in microbiology, the asexual progeny of a single cell. 2. a group of plants which have been propagated vegetatively (i.e., by cutting or budding) from one single seedling or stock. The members of a clone are identical in character with one another, but they will not come true from seed. Called also *clonal variety*. 3. a strain of cells descended in culture or *in vivo* from a single cell; used also as a verb to denote the establishment or initiation of such a strain. **forbidden c.**, in the clonal selection theory, a clone of immunologically competent cells that may become reactive against self-antigens and cause autoimmune disease.

clonic (klon'ik) [Gr. *klonos* turmoil] pertaining to or of the nature of clonus.

clonicity (klo-nis'i-te) the condition of being clonic.

clonicotonic (klon'e-ko-ton'ik) both clonic and tonic.

clonidine hydrochloride (klo'nī-dēn) chemical name: *N*-(2,6-dichlorophenyl)-4,5-dihydro-1*H*-imidazol-2-amine monohydrochloride. An antiadrenergic, $C_9H_8Cl_2N_3 \cdot HCl$, used as an antihypertensive; administered orally.

clonism (klon'izm) [Gr. *klonos* turmoil] a succession of clonic spasms.

clonismus (klo-niz'mus) clonism.

clonixeril (klo-niks'er-il) chemical name: 2-[(3-chloro-2-methylphenyl)amino]-2,3-dihydroxypropyl ester; an analgesic, $C_{16}H_{17}ClN_2O_4$.

clonixin (klo-niks'in) chemical name: 2-[(3-chloro-2-methylphenyl)amino]-3-pyridinecarboxylic acid; an analgesic, $C_{13}H_{11}ClN_2O_2$.

clonogenic (klo'no-jen'ik) [*clone* + Gr. *gennan* to produce] giving rise to a clone of cells.

clonograph (klon'o-graf) [*clonus* + Gr. *graphein* to write] an instrument for recording spasmodic movements of parts and tendon reflexes.

Clonopin (klon'o-pin) trademark for a preparation of clonazepam.

clonorchiasis (klo'nor-ki'ah-sis) infection of the biliary passages with the liver fluke *Clonorchis sinensis*, which may lead to inflammation of the biliary tree, proliferation of the biliary epithelium, and progressive portal fibrosis; extension into the liver parenchyma may lead to fatty changes and cirrhosis.

clonorchiosis (klo-nor'ke-o'sis) clonorchiasis.

Clonorchis sinensis (klo-nor'kis si-nen'sis) [Gr. *klōn* branch + *orchis* testicle] the common liver fluke of man in China, Japan, Korea, Taiwan, and Indochina. Adult worms inhabit the bile ducts. Larval development requires two intermediate hosts, the first a snail of the genus *Parafossarulus* or *Bithynia*, the second a fresh-water fish of the carp family. Human infection (see *clonorchiasis*) is acquired from the latter host. Called also *Opisthorchis sinensis* and *Distoma sinensis*.

clonospasm (klon'o-spazm) [Gr. *klonos* turmoil + *spasmos* spasm] clonic spasm.

Clonothrix (klo'no-thriks) [Gr. *klōn* branch + *thrix* hair] a genus of microorganisms of the family Crenotrichaceae, order Chlamydobacteriales, made up of colorless cylindrical cells occurring in attached trichomes which show false branching and are enclosed in sheaths encrusted with iron or manganese compounds. The type species is *C. putealis*.

clonus (klo'nus) [Gr. *klonos* turmoil] alternate muscular contraction and relaxation in rapid succession. **ankle c.**, a series of abnormal reflex movements of the foot, induced by sudden dorsiflexion of the foot, which causes alternate contraction and relaxation of the triceps surae muscle (gastrocnemius and soleus muscles); called also *foot c.* **anodal closure c. (ACCl)**, clonic muscular contraction occurring at the anode when the electrical circuit is closed. **anodal opening c. (AOCl)**, muscular contraction occurring at the anode when the electrical circuit is opened or broken. **cathodal closure c. (CCCl)**, clonic muscular contraction occurring at the cathode when the electrical circuit is closed. **cathodal opening c. (COCl)**, clonic muscular contraction occurring at the cathode when the electrical circuit is opened or broken. **foot c.**, ankle **c. patellar c.**, rhythmic jerking movement of the patella produced by grasping the patella between the thumb and forefinger and pushing it forcibly toward the foot one or more times; an abnormal reflex with alternate contraction and relaxation of the quadriceps muscle. **toe c.**, abnormal rhythmic movement of the great toe, induced by suddenly extending the first phalanx. **wrist c.**, spasmodic movement of the hand, which is induced by forcibly extending the hand at the wrist.

clopamide (klo-pah'mid) chemical name: 3-(aminosulfonyl)-4-chloro-*N*-(2,6-dimethyl-1-piperidinyl)benzamide. A diuretic, $C_{14}H_{20}ClN_3O_3S$, used in the treatment of edema associated with various disorders and in hypertension.

Clopane (klo'pān) trademark for preparations of cyclopentamine hydrochloride.

clopenthixol (klo'pen-thiks'ōl) chemical name: 4-[3-(2-chloro-9*H*-thioxanthene-9-ylidene)propyl]-1-piperazineethanol. A compound, $C_{22}H_{25}ClN_2OS$, having sedative, tranquilizing, antiemetic, antihistaminic, anticholinergic, and alpha-adrenergic blocking properties; it has been used as a tranquilizer in the treatment of schizophrenia.

clopidol (klo'pī-dōl) chemical name: 3,5-dichloro-2,6-dimethyl-4-pyridinol; a coccidiostat for poultry, $C_7H_7Cl_2NO$.

clopimozide (klo-pim'o-zīd) chemical name: 1-[1-[4,4-bis(4-fluorophenyl)butyl]-4-piperidinyl]-5-chloro-1,3-dihydro-2*H*-benzimidazol-2-one; a tranquilizer, $C_{28}H_{28}ClF_4N_3O$.

cloniprac (klo'pī-rak) chemical name: 1-(4-chlorophenyl)-2,5-dimethyl-1*H*-pyrrole-3-acetic acid; an anti-inflammatory, $C_{14}H_{14}ClNO_2$.

cloprednol (klo-pred'nōl) chemical name: 6-chloro-11 β ,17,21-trihydroxypregna-1,4,6-triene-3,20-dione; a glucocorticoid, C₂₁-H₂₅ClO₅.

cloprostenol (klo-pros'tē-nōl) chemical name: (+)-(Z)-7-[1(R*,2R*,3R*,5S*)-2-[(E)-(3R*)-4-(*m*-chlorophenoxy)-3-hydroxy-1-butenyl]-3,5-dihydroxycyclopentyl]-5-heptenoic acid; a prostaglandin, C₂₂H₃₆ClO₆. Also available as the sodium salt.

Cloquet's canal, fascia, hernia, ligament, septum (klo-kāz') [Jules Germain Cloquet, French surgeon, 1790-1883] see under *fascia*, and see *canalis hyaloidens*, *crural hernia*; *vestigium processus vaginalis*, and *septum femorale*.

Cloquet's ganglion (pseudoganglion) (klo-kāz') [Hippolyte Cloquet, anatomist in Paris, 1787-1840] see under *ganglion*.

clorazepate (klo-raz'ē-pāt) chemical name: 7-chloro-2,3-dihydro-2,2-dihydroxy-5-phenyl-1*H*-1,4-benzodiazepine-3-carboxylic acid. One of the benzodiazepine tranquilizers, C₁₆H₁₃ClN₂O₄, derived from clorazepic acid. **c. dipotassium**, the dipotassium salt of clorazepic acid, C₁₆H₁₁ClK₂N₂O₄, used orally as a minor tranquilizer. **c. monopotassium**, the monopotassium salt of clorazepic acid, C₁₆H₁₀ClKN₂O₄; a minor tranquilizer.

clorexolone (klo-reks'o-lōn) chemical name: 6-chloro-2-cyclohexyl-2,3-dihydro-3-oxo-1*H*-isoindole-5-sulfonamide. A diuretic, C₁₄H₁₁ClO, used in the treatment of edema associated with various disorders and in hypertension.

cloroperone hydrochloride (klo'ro-per'ōn) chemical name: 4-[4-(4-chlorobenzoyl)-1-piperidinyl]-1-(4-fluorophenyl)-1-butanone hydrochloride; a tranquilizer, C₂₂H₂₃ClFNO₂·HCl.

clorophene (klo'ro-fēn) chemical name: 4-chloro-2-(phenylmethyl)phenol. A disinfectant, C₁₄H₁₇ClN₂O₃S, effective against a wide variety of bacteria and fungi.

Clorpactin XCB (klōr-pak'tin) trademark for a preparation of oxychlorosene.

clorprenaline hydrochloride (klōr-pren'ah-lēn) chemical name: 2-chloro- α -[[1-methylethyl]amino]methyl]benzenemethanol monohydrochloride monohydrate. An adrenergic, C₁₁H₁₆ClNO·HCl·H₂O, used as a bronchodilator.

clortermine hydrochloride (klōr-ter'mēn) chemical name: 2-chloro- α , α -dimethylbenzeneethanamine hydrochloride. An adrenergic, C₁₀H₁₄ClN·HCl, used as an oral anorectic in the short-term treatment of exogenous obesity.

closantel (klo'san-tel) chemical name: *N*-[5-chloro-4-[(4-chlorophenyl)-cyanomethyl]-2-methylphenyl]-2-hydroxy-3,5-diiodobenzamide; an anthelmintic, C₂₂H₁₄Cl₂I₂N₂O₂.

closiramine acetate (klo-sēr'ah-mēn) chemical name: 8-chloro-11-[2-(dimethylamino)ethyl]-6,11-dihydro-5*H*-benzo[5,6]cyclohepta[1,2-*b*]pyridine compound with *N*-acetylglycine (1:1); an antihistaminic, C₁₈H₂₁ClN₂·C₄H₇NO₃.

clostridia (klos-trid'e-ah) plural of *clostridium*.

clostridial (klo-strid'e-al) pertaining to or caused by clostridia.

clostridiopeptidase (klos-trid'e-o-pep'ti-dās) an enzyme that hydrolyzes peptides, the A form (collagenase) hydrolyzing those containing proline, including collagen and gelatin, and the B form hydrolyzing peptides at bonds involving arginine residues.

Clostridium (klo-strid'e-um) [Gr. *klōstēr* spindle] a genus of Schizomycetes, family Bacillaceae, order Eubacteriales, made up of obligate anaerobic or microaerophilic, gram-positive, spore-forming, rod-shaped bacteria, with spores of greater diameter than the vegetative cells. The spores may be central, terminal, or subterminal. Two hundred and five species have been differentiated on the basis of physiology, morphology, and toxin formation. **C. acetobutyl'icum**, a species found widely distributed in agricultural soils but not found to be pathogenic. **C. ag'ni**, a name once given type B of *C. perfringens*, which causes dysentery in lambs. **C. biferment'ans**, a species found widely distributed in nature, occurring commonly in feces, sewage, and soil; variously reported as being associated with 4 to 54 per cent of cases of gas gangrene. See also *C. sordellii*. **C. botuli'num**, the agent causing botulism in man, wild ducks, and other waterfowl, limberneck of fowl, certain forms of forage poisoning in cattle and horses in Australia, and lamziekte of cattle in South Africa. It produces a powerful exotoxin that is resistant to proteolytic

whose toxin causes pseudomembranous enterocolitis in those receiving prolonged antibiotic therapy. **C. fe'seri**, *C. chauvoei*. **C. haemolytic'um**, a species isolated from the blood and other tissues of cattle dying with bacillary hemoglobinuria, thought by some to be a type of *C. novyi*. **C. histolytic'um**, a species found occasionally in feces and soil, originally isolated from necrotic war wounds; according to one report found in 6 per cent of cases of gas gangrene. **C. klu'yveri**, a species thought to be widely distributed in nature, which has been used in study of both microbial synthesis and microbial oxidation of fatty acids. **C. no'vyi**, a species that is an important cause of gas gangrene, being reported in 32 to 48 per cent of cases; three immunological types have been identified, designated A, B, and C. Formerly called *C. oedematiens* and *Bacillus oedematis maligni* No. II. **C. oedemat'iens**, *C. novyi*. **C. ovitox'icus**, a name once given type D of *C. perfringens*, which causes enterotoxemia of sheep. **C. palu'dis**, a name once given type C of *C. perfringens*, which causes struck in sheep. **C. paraboluti'num**, a species that is widely dispersed in soil and is pathogenic for animals, producing a powerful neurotoxin. **C. paraboluti'num e'qui**, *C. botulinum* type D. **C. pasteuria'num**, an anaerobic microorganism occurring in soil, which was the first nitrogen-fixing bacterium to be studied in pure culture. **C. pastoria'num**, *C. pasteurianum*. **C. perfring'ens**, the most common etiologic agent of gas gangrene, variously reported as occurring in 39 to 83 per cent of cases; differentiable, on the basis of the distribution of nine different toxins and three other substances, which are enzymes, into several different types: type A (the cause of classic gas gangrene in man), B (lamb dysentery), C (struck in sheep), D (enterotoxemia in sheep), E (enterotoxemia

Clostridium perfringens.

Clostridium tetani.

in lambs and calves), F (enteritis necroticans in man). It has also been shown to cause a form of food poisoning; see *clostridial food poisoning*, under *poisoning*. Called also *C. welchii* and, formerly, *Bacillus capsulatus welchii*. **C. sep'ticum**, a species commonly occurring in animal intestines and soil, strikingly pathogenic for various animals but reportedly associated with gaseous infections in man in only 4 to 24 per cent of cases. Six groups have been distinguished. Called also *Vibrio septicus*, *vibrio septique*, and *Ghon-Sacks bacillus*. **C. sordel'lii**, a name commonly given more toxic and virulent strains of *C. bifermentans*. **C. sporog'enes**, a species widely distributed in nature; a harmless saprophyte in pure culture, it is reportedly associated with pathogenic anaerobes in 37 to 72 per cent of gangrenous infections. **C. ter'tium**, a species found widely distributed in feces, sewage, and soil, and variously reported as present in 3 to 59 per cent of gangrenous infections. **C. tet'ani**, a common inhabitant of soil and human and horse intestines, and the cause of tetanus in man and domestic animals; its potent exotoxin is made up of two components, a neurotoxin, or tetanospasmin, and a hemolytic toxin, or tetanolysin. It is variously reported as associated with gangrene in 4 to 13 per cent of cases. Formerly called *Bacillus tetani*. **C. welch'ii**, British name for *C. perfringens*.

clostridium (klo-strid'e-um), pl. *clostrid'ia*. a microorganism belonging to the genus *Clostridium*.

closure (klo'shur) the act of shutting, or of bringing together two parts, one or both of which may be movable. **flask c.**, the bringing together of the two halves or parts of a flask in which a denture base is formed. **flask c., final**, the last closure of a flask before curing the denture-base material packed in the mold. **flask c., trial**, preliminary closure of the flask, to eliminate excess material and to ensure that the mold is completely filled. **velopharyngeal c.**, closure of nasal air escape by the elevation of the soft palate and contraction of the posterior pharyngeal wall.

closylate (klo'si-lāt) USAN contraction for *p*-chlorobenzenesulfonate.

clot (klot) a semisolidified mass, as of blood or lymph; called also *coagulum*. **agonal c.**, **agony c.**, a blood clot formed in the heart during the death agony. **antemortem c.**, a blood clot formed in the heart or in a large vessel before death. **blood c.**, a coagulum formed of blood, either in or out of the body. **chicken fat c.**, a blood clot that appears yellow because of the settling out of the erythrocytes before clotting occurred. **currant jelly c.**, a clot of reddish color because of the presence of erythrocytes enmeshed in it. **distal c.**, a clot formed in a blood vessel distal to a ligature. **external c.**, a clot formed outside a blood vessel. **heart c.**, postmortem coagulation within the heart. **internal c.**, a blood clot formed within a blood vessel. **laminated c.**, a blood clot formed by successive

Clostridium botulinum.

digestion, and is divided into types A, B, C alpha and beta, D, and E on the basis of the immunological specificity of the toxin. Formerly called *Bacillus botulinus*. **C. butyr'icum**, a species isolated from the soil. **C. chauvoe'i**, the etiologic agent of blackleg, or symptomatic anthrax, in cattle and sheep; called also *C. fesi*, and *Chauveau's bacillus* or *bacterium*. **C. dif'ficile**, a species often occurring transiently in the gut of infants, but

deposits, giving it a layered appearance; called also *stratified c.* **marantic c.**, a blood clot formed because of enfeebled circulation and general malnutrition. **muscle c.**, a clot formed by coagulation of muscle plasma. **passive c.**, a clot formed in the sac of an aneurysm through which the blood has stopped circulating. **plastic c.**, a clot formed from the intima of an artery at the point of ligation, permanently obstructing the artery. **postmortem c.**, a blood clot formed in the heart or in a large blood vessel after death. **proximal c.**, a clot formed in a blood vessel proximal to a ligature. **Schede's c.**, a blood clot formed in Schede's operation (def. 3); see under *operation*. **spider-web c.**, the fine fibrin clot that forms when a sample of fluid from a subject with tuberculous meningitis is allowed to stand, especially when it is warmed to 37° C. for a few hours. **stratified c.**, laminated c. **washed c.**, **white c.**, a blood clot composed of fibrin and platelets.

clothiapine (klo-thi'ah-pēn) chemical name: 2-chloro-11-(4-methyl-1-piperazinyl)dibenzo[*b,f*][1,4]thiazepine; a tranquilizer, $C_{18}H_{18}ClN_5S$.

clotrimazole (klo-trim'ah-zōl) [USP] chemical name: 1-[(2-chlorophenyl)diphenylmethyl]-1*H*-imidazole. A broad-spectrum antifungal agent, $C_{22}H_{17}ClN_2$, applied topically to the skin in the treatment of candidiasis and various forms of tinea, and administered intravaginally in the treatment of vulvovaginal candidiasis.

clouding (klowd'ing) loss of clarity. **c. of consciousness**, loss of perception or comprehension of the environment, with loss of ability to respond properly to external stimuli.

Cloudman's melanoma S91 (klowd'manz) [Arthur M. Cloudman, American pathologist] see under *melanoma*.

Clouston's syndrome (klow'stonz) [H. R. Clouston] hidrotic ectodermal dysplasia.

clove (klōv) [L. *clavus* a nail or spike] an aromatic spice, the dried flower bud of *Eugenia caryophyllus*; formerly used as a carminative, for the relief of nausea and vomiting, and to stimulate digestion. See also *clove oil*, under *oil*.

clownism (klown'izm) the hysterical performance of grotesque actions.

cloxacillin sodium (kloks'ah-sil'in) [USP] chemical name: [[3-(2- α -chlorophenyl-5- α -methyl-4-isoxazolyl)carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo [3.2.0] heptane-2-carboxylic acid monosodium monohydrate. A semisynthetic penicillinase-resistant penicillin, $C_{19}H_{17}ClN_3NaO_5SH_2O$, occurring as a white, crystalline powder; used primarily in the treatment of infections due to penicillinase-producing staphylococci, administered orally.

cloxyquin (kloks'i-kwin) chemical name: 5-chloro-8-quinolinol; an antibacterial, C_9H_6ClNO .

clozapine (klo'zah-pēn) chemical name: 8-chloro-11-(4-methyl-1-piperazinyl)-5*H*-dibenzo[*b,e*][1,4]diazepine; a sedative, $C_{18}H_{18}ClN_4$.

clubbing (klub'ing) a proliferative change in the soft tissues about the terminal phalanges of the fingers or toes, with no constant osseous changes.

clubfoot (klub'foot) a congenitally deformed foot; called also *reel foot*. See *talipes*.

clubhand (klub'hand) a hand deformity analogous to clubfoot; see *talipomanus*.

clump (klump) an aggregation as of bacteria caused by the action of agglutinins (agglutination).

clumping (klump'ing) the aggregation of particles, such as bacteria, into irregular masses. See *agglutination* (def. 3), and *Gruber's reaction*, under *reaction*.

cluneal (kloo'ne-al) pertaining to the buttocks.

clunis (kloo'nis), pl. *clu'nes* [L.] [NA] the buttock; see *nates*.

clupeine (kloo'pe-in) [L. *clupea* herring] a protamine obtainable from the spermatozoa of the herring.

cluttering (klut'er-ing) hurried nervous speech, marked by the dropping of syllables.

Clutton's joint (klut'unz) [Henry Hugh Clutton, London surgeon, 1850-1909] see under *joint*.

clysis (kli'sis) [Gr. *klysis*] 1. (*obs.*) the washing out of a body cavity. 2. the administration other than by the oral route of any one of several solutions to replace lost body fluid, supply nutrient, or raise blood pressure. 3. the solution so administered.

clyisma (kliz'mah), pl. *clys'mata* [Gr. *klyisma*] a clyster, or enema.

Clysodrast (kli'so-drast) trademark for a preparation of bisacodyl tannex.

clyster (klis'ter) [Gr. *klyster* a syringe] an injection into the rectum; an enema.

clysterize (klis'ter-iz) [L. *clysterizare*; Gr. *klystēr*] to treat with enemata, or with injections into the rectum.

clitocybine (kli'to-si'bēn) clitocybine.

C.M. abbreviation for L. *Chirurgiae Magister*, Master in Surgery.

Cm chemical symbol for curium.

cm. centimeter.

cm.² square centimeter.

cm.³ cubic centimeter.

CMA Certified Medical Assistant.

C.M.A. Canadian Medical Association.

CMI cell-mediated immunity.

c./min. cycles per minute.

c.mm. cubic millimeter.

C.M.R. cerebral metabolic rate.

c.m.s. abbreviation for L. *cras ma'ne sumen'dus*, to be taken tomorrow morning.

C.N. abbreviation for L. *cras noc'te*, tomorrow night.

C.N.A. Canadian Nurses' Association.

cnemial (ne'me-al) pertaining to the shin.

Cnemidoptes (ne'mi-do-kop'tēz) *Knemidokoptes*.

cnemis (ne'mis) the lower leg, shin, or tibia.

cnemitis (ne-mi'tis) inflammation of the tibia.

cnemocoliosis (ne'mo-sko'le-o'sis) [Gr. *knēmē* leg + *skoliōsis* crookedness] a lateral bending of the leg.

Cnidaria (ni-dah're-ah) [Gr. *knide* a nettle] Coelenterata.

cnidarian (ni-dah're-an) 1. of or pertaining to Cnidaria. 2. any member of Cnidaria.

Cnidian (ni'de-an) [*Cnidos*, site of one of the early Greek temples of medicine] 1. an early school of medicine in Greece that stressed the diagnosis and classification of disease. 2. a believer in or practitioner of the Cnidian theory of medicine.

cnidoblast (ni'dō-blast) the epidermal cells of coelenterates which contain the nematocysts, especially numerous on the tentacles.

cnidocil (ni'dō-sil) [Gr. *knidē* nettle + L. *cilium* hair] a bristle-like process at one end of a cnidoblast, which, when stimulated, triggers the discharge of the nematocyst.

C.N.M. Certified Nurse-Midwife; see *nurse-midwife*.

CNOH cyanic acid.

CNS sulfocyanate.

C.N.S. central nervous system.

c.n.s. abbreviation for L. *cras noc'te sumen'dus*, to be taken tomorrow night.

CO carbon monoxide.

CO₂ carbon dioxide.

Co chemical symbol for cobalt.

co- a prefix signifying with, together.

C.O.A. Canadian Orthopaedic Association.

CoA coenzyme A.

coacervate (ko-as'er-vāt) [L. *coacervatus* heaped up] the viscous phase separating from a colloid-containing system in the phenomenon of coacervation.

coacervation (ko-as'er-va'shun) a phenomenon that involves both lyophilic and hydrophilic colloids, but particularly the latter, being the separation of microscopic liquid droplets when sols of two hydrophilic colloids of opposite electric charge are mixed. These droplets may later unite to form a viscous layer at the bottom of the container, constituting a new phase.

coadaptation (co'ad-ap-ta'shun) [co- + L. *adaptare* to adapt] the mutual, correlated, adaptive changes in two interdependent organs.

coadunation (ko'ad-u-na'shun) [L. *co*-together + *ad* to + *u'nus* one] union of dissimilar substances in one mass.

coadunition (ko'ad-u-nish'un) coadunation.

coagglutination (ko'ah-gloo'ti-na'shun) the aggregation of particulate antigens combined with agglutinins of more than one specificity.

coagglutinin (ko'ah-gloo'ti-nin) partial agglutinin.

coagula (ko-ag'u-lah) [L.] plural of *coagulum*.

coagulability (ko-ag'u-lah-bil'i-te) the state of being capable of forming or of being formed into clots.

coagulable (ko-ag'u-lah-b'l) susceptible of being coagulated.

coagulant (ko-ag'u-lant) [L. *coagulans*] 1. promoting, accelerating, or making possible the coagulation of blood. 2. an agent that promotes or accelerates the coagulation of blood.

coagulase (ko-ag'u-lās) an antigenic substance of bacterial origin, produced chiefly by the staphylococci, that may be causally related to thrombus formation. See also under *tests*.

coagulate (ko-ag'u-lāt) [L. *coagulare*] 1. to cause to clot. 2. to become clotted.

coagulation (ko-ag'u-la'shun) [L. *coagulatio*] 1. the process of clot formation; see *blood c.* 2. in colloid chemistry, the solidification of a sol into a gelatinous mass; an alteration of a disperse phase or of a dissolved solid which causes the separation of the system into a liquid phase and an insoluble mass called the clot or curd. Coagulation is usually irreversible. 3. in surgery, the disruption of tissue by physical means to form an amorphous residuum, as in electrocoagulation and photocoagulation.

blood c., the sequential process by which the multiple coagulation factors of the blood interact, ultimately resulting in the formation of an insoluble fibrin clot; it may be divided into three stages: stage 1, the formation of intrinsic and extrinsic prothrombin converting principle; stage 2, the formation of thrombin; stage 3, the formation of stable fibrin polymers. **diffuse intravascular c.**, **disseminated intravascular c. (DIC)**, a disorder characterized by reduction in the elements involved in blood coagulation due to their utilization in widespread blood clotting within the vessels; the activation of the clotting mechanism may arise from any of a number of disorders. In the late stages, it is marked by profuse hemorrhaging. Called also *consumption coagulopathy* and *defibrination syndrome*. **electric c.**, electrocoagulation. **massive c.**, coagulation of the spinal fluid so as to form an almost solid clot; a condition seen in some cases of *Froin's syndrome* in meningomyelitis or tumor of the cord.

coagulative (ko-ag'u-lā'tiv) associated with coagulation or promoting a process of coagulation; of the nature of coagulation.

coagulator (ko-ag'u-lā'tor) a surgical device that utilizes electrical current or light to stop bleeding.

coagulogram (ko-ag'u-lo-gram") a term used colloquially in clinical hematology to denote a series of laboratory tests measuring the various parameters of hemostasis.

coagulopathy (ko-ag'u-lo-pā-the) any disorder of blood coagulation. **consumption c.**, diffuse intravascular coagulation.

coagulum (ko-ag'u-lum), pl. *coagula* [L.] a clot or curd. **closing c.**, the clot that closes the gap made in the uterine lining by the implanting blastocyst; *schlusskoagulum*.

Coakley's operation (kōk'lēz) [Cornelius Godfrey Coakley, laryngologist in New York, 1862–1934] see under *operation*.

coalescence (ko-ah-les'ens) [L. *coalescere* to grow together] the fusion or blending of parts.

coapt (ko'apt) [L. *coaptare*] to approximate, as the edges of a wound or the ends of a fractured bone.

coarctate (ko-ark'tāt) [L. *coarctare* to straighten or tighten] 1. to press close together; contract. 2. pressed together; restrained.

coarctation (ko'ark-tā'shun) [L. *coarctatio*, from *cum* together + *arctare* to make tight] a condition of stricture or contraction.

c. of aorta, a localized malformation characterized by deformity of the aortic media, causing narrowing, usually severe, of the lumen of the vessel. **c. of aorta, adult type**, a form characterized by a localized constriction at or below the insertion of the ductus arteriosus and distal to the aortic isthmus and left clavian artery, and by a closed ductus and absence of cyanosis. **c. of aorta, infantile type**, a form characterized by diffuse involvement of the aortic isthmus, by association with other anomalies, including a patent ductus, and by cyanosis. **reversed c.**, pulseless disease.

coarse (kōrs) not fine; not microscopical.

coarticulation (ko'ar-tik'tu-lā'shun) [L. *cont* together + *articulare* to join] a synarthrosis.

coat (kōt) [L. *col'ta* a tunic] a membrane or other structure covering or lining a part or organ; see also *tunic* and *tunica*. **adventitial c.**, tunica adventitia; see terms beginning thus under *tunica*. **adventitious c. of uterine tube**, tela subserosa. **albugineous c.**, tunica albuginea; see terms beginning thus under *tunica*. **buffy c.**, the thin yellowish layer of leukocytes overlying the packed red cells in centrifuged blood; called also *buffy crust* and *leukocytic cream*. **corneoscleral c.**, the corneosclera. **cremasteric c. of testis**, musculus cremaster. **dartos c.**, tunica dartos. **external c. of capsule of graafian follicle**, tunica externa thecae folliculi. **external c. of esophagus**, tunica adventitia esophagi. **external c. of ureter**, tunica adventitia ureteris. **external c. of vessels**, tunica externa vasorum. **external c. of viscera**, tunica adventitia. **extraneous c.**, a cement-like structure, constituting a visible cell wall, in some animal cells; it generally plays no role in permeability, but has other important functions. **fibrous c.**, tunica fibrosa; see terms beginning thus under *tunica*. **fibrous c. of corpus cavernosum of penis**, tunica albuginea corporum cavernosorum. **fibrous c. of eye**, tunica fibrosa bulbi. **fibrous c. of ovary**, theca folliculi. **fibrous c. of testis**, tunica albuginea testis. **internal c. of capsule of graafian follicle**, tunica interna thecae folliculi. **internal c. of pharynx of Luschka**, tela submucosa pharyngis. **mucous c.**, tunica mucosa; for various specific structures, see terms beginning thus under *tunica*. **muscular c.**, tunica muscularis; see terms beginning thus under *tunica*. **pharyngobasilar c.**, fascia pharyngobasilaris. **proper c.**, tunica propria; see also *lamina propria*. **proper c. of corium**, stratum reticulare corii. **proper c. of pharynx**, tela submucosa pharyngis. **proper c. of testis**, tunica albuginea testis. **sclerotic c.**, the sclera. **serous c.**, tunica serosa; see terms beginning thus under *tunica*. **submucous c.**, tela submucosa; see terms beginning thus under *tela*. **subserous c.**, tela subserosa; see terms beginning thus under *tela*. **vaginal c. of testis**, tunica vaginalis testis. **vascular c. of pharynx**, tela submucosa pharyngis. **vascular c. of stomach**, tela submucosa ventriculi. **vascular c. of viscera**, tela sub-

mucosa. **villous c. of small intestine**, tunica mucosa intestini tenuis. **white c.**, tunica albuginea.

Coats' disease, retinitis (kōts) [George Coats, London ophthalmologist, 1876–1915] exudative retinopathy.

cobalamin (ko-bal'ah-min) the cobalt-containing complex common to all members of the vitamin B₁₂ group; frequently used generically to designate any substituted derivative, even cyanocobalamin. **c. concentrate** [USP], a dried, partially purified product resulting from the growth of selected *Streptomyces* cultures, containing in each gram not less than 500 µg. of cobalamin; used as a vitamin B₁₂ supplement.

cobalt (ko'bawlt) [L. *cobaltum*] a metal, atomic number, 27; atomic weight 58.9332; symbol Co; the metal is used in magnetic alloys, and the compounds afford pigments. In animals, a deficiency of this element leads to anemia; an excess of normal dietary requirements leads to erythrocytosis. In the human, although cobalt has been used with limited transient effectiveness to treat the anemia of infection, and renal disease, its sole physiological function, most probably, is as a constituent of vitamin B₁₂. Radioisotopes of cobalt, particularly ⁶⁰Co, a gamma emitter, are used in experimental biology and medicine and in cancer therapy. **c. salipyrine**, a salicylate of cobalt and antipyrine, forming a pale red powder. **c. 60**, a radioactive isotope of cobalt, ⁶⁰Co, which has a half-life of 5.27 years, used as a source of radiation in the treatment of malignancies and in industrial radiography.

cobaltosis (ko'bal-to'sis) pneumoconiosis due to inhalation of and tissue reaction to cobalt dust.

cobaltous (ko-bawlt'us) pertaining to or containing cobalt in its bivalent state.

cobra (ko'brah) any of several extremely poisonous elapid snakes commonly found in Africa, Asia, and India, which are capable of expanding the neck region to form a hood, and have two comparatively short, erect, deep grooved fangs. A serum obtained from animals inoculated with cobra venom is used in counteracting the effects of bites by the cobra. See table accompanying *snake*. **black-necked c.**, *Naja nigricollis*, a species that usually does not bite but discharges venom by spitting when agitated; the venom is not poisonous but may cause severe irritation or even blindness if it enters the eyes. Called also *spitting c.* **Indian c.**, a yellowish to dark brown cobra, *Naja tripudians*, characterized by black and white markings that resemble a pair of spectacles on its hood; it sometimes attains a length of 6 feet. Called also *c. de capello* and *Naja naja*. **king c.**, a very large cobra, *Naja hannah*, sometimes reaching a length of 12 feet. **spitting c.**, black-necked c.

cobraism (ko'brah-izm) poisoning by cobra venom.

cobralysin (ko-bral'i-sin) a hemolytic substance derived from the poison of the cobra.

COBS abbreviation for *cesarean-obtained barrier-sustained*, a term applied to animals delivered by cesarean section into a germ-free environment and maintained under the same conditions.

cobweb (kob'web) [A.S. abbreviation of *attercop*, poison head, and *web*, from *wefan*] the web of various kinds of spider; sometimes used as a styptic, in the moxa, and as a domestic remedy: a febrifuge and antispasmodic.

COC cathodal opening contraction.

coca (ko'kah) the leaves of *Erythroxylon coca*, a South American plant from which cocaine is obtained; once used as a central nervous system stimulant and still widely used in parts of South America as a euphoriant masticatory.

cocaine (ko'kän) [USP] chemical name: [1*R*-(*exo*,*exo*)]-3-(benzoylexy)-8-methyl-8-azabicyclo[3.2.1]octane-2-carboxylic acid methyl ester. A crystalline alkaloid, C₁₇H₂₁NO₄, obtained from leaves of *Erythroxylon coca* (coca leaves) and other species of *Erythroxylon*, or by synthesis from ecgonine or its derivatives; used as a local narcotic anesthetic applied topically to mucous membranes. **c. hydrochloride** [USP], the hydrochloride salt of cocaine, C₁₇H₂₁NO₄·HCl, occurring as colorless crystals or a white crystalline powder; used as an anesthetic, applied topically to mucous membranes.

cocainism (ko'kän-izm) the morbid condition resulting from prolonged misuse of cocaine as a stimulant or a narcotic.

cocainist (ko'kän-ist) a person addicted to the habitual use of cocaine.

cocainization (ko'kän-i-zā'shun) the act of putting under the influence of cocaine.

cocainize (ko'kän-iz) to put under the influence of cocaine.

cocarboxylase (ko'kar-bok'si-lās) phosphorylated thiamine.

cocarcinogen (ko-kar'si-no-jen") a factor that, in combination with other factors, produces cancer.

cocarcinogenesis (ko-kar'si-no-jen'ē-sis) the development, according to one theory, of cancer only in preconditioned cells and as a result of conditions favorable to its growth.

cocardiform (ko-kar'di-form) [Fr. *cocarde* a rosette worn as a decoration] shaped like a cockade.

coccal (kok'al) resembling or pertaining to cocci.

coccerin (kok/'sē-rin) a wax from *Coccus*, the cochineal insect, being an ester of cocceryl alcohol and two acids, 13-keto-n-dotriacontanoic acid and n-triacontanoic acid; used as a biological stain.

cocci (kok/'si) [L.] plural of *coccus*.

Coccidia (kok-sid/'e-ah) an order of protozoa of the subphylum Sporozoa, commonly parasitic in the epithelial cells of the intestinal tract, but also found in the liver and other organs (see *coccidiosis*). It includes the genera *Eimeria*, *Haemogregarina*, *Isospora*, *Hepatozoon*, *Karyolysus*, and *Lankesterella*.

coccidia (kok-sid/'e-ah) plural of *coccidium*.

coccidial (kok-sid/'e-al) pertaining to coccidia.

coccidian (kok-sid/'e-an) 1. pertaining to Coccidia. 2. any individual of the order Coccidia.

coccidioid (kok-sid/'e-oi'dal) caused by *Coccidioides*.

Coccidioides (kok-sid/'e-oi'dēz) a genus of pathogenic imperfect fungi of the family Moniliaceae, order Moniliales. In soil it grows as a mycelium with arthrospores; in tissue as a spherule with endospores. *C. im'mitis* (*Blastomyces coccidioides*, *Blastomyces immitis*) causes coccidioidomycosis.

Coccidioides in tissue (de Rivas).

coccidioidin (kok/'sid-e-oi'din) [USP] a sterile solution containing the by-products of growth products of *Coccidioides immitis*, injected intracutaneously as a test for coccidioidomycosis.

coccidioidoma (kok-sid/'e-oi-do'mah) residual pulmonary granulomatous nodules seen roentgenographically as solid round foci in coccidioidomycosis.

coccidioidomycosis (kok-sid/'e-oi'do-mi-ko'sis) a fungous disease caused by infection with *Coccidioides immitis*, occurring in a primary and a secondary form. Called also *coccidioidial granuloma*, *Posada's mycosis*, *Posada-Wernicke disease*, *California disease*, and *desert fever*. The primary form is an acute, benign, self-limited respiratory infection due to inhalation of spores, and varying in severity from that of a common cold to symptoms resembling those accompanying influenza, with pneumonia, cavitation, high fever, and, rarely, erythema nodosum (bumps). Called also *desert rheumatism*, *San Joaquin Valley fever*, and *valley fever*. The secondary form (or *progressive c.*) is a virulent and severe, chronic, progressive, granulomatous disease resulting in involvement of the cutaneous and subcutaneous tissues, viscera, central nervous system, and lungs, with anemia, phlebitis, and various allergic responses. This form may be caused by a new infection or by reactivation of arrested primary disease. **primary extrapulmonary c.**, coccidioidomycosis in which infection occurs by primary cutaneous inoculation, usually with secondary lymphadenopathy; called also *chancriform syndrome*.

coccidioidosis (kok-sid/'e-oi-do'sis) coccidioidomycosis.

coccidiosis (kok/'sid-e-o'sis) infection by coccidia. In man, the term is applied to the presence of *Isospora hominis* or *I. belli* in the stools; such infection is often asymptomatic, rarely causing a severe watery mucous diarrhea. In mammals, such as cattle, sheep, rabbits, swine, cats, and dogs, especially young animals, coccidiosis causes destruction of the intestinal mucosa, accompanied by diarrhea, intestinal hemorrhage, emaciation, and sometimes fatal dysentery. It is due principally to species of *Eimeria* and *Isospora*. In domesticated mammals, four genera of coccidia are associated with disease: *Eimeria*, *Tyzzeria*, *Isospora*, and *Hepatozoon*. Among domesticated animals, coccidial infections cause greatest damage to poultry; *Eimeria* species are highly infective, producing high morbidity and mortality rates, especially in young birds.

coccidiostat (kok-sid/'i-o-stat') any of a group of chemical agents, e.g., nitrofurazone, nitrophenide, nicarbazin, mixed in feed or drinking water to control coccidiosis in animals.

coccidiostatic (kok-sid/'i-o-stat'ik) 1. inhibiting the growth of coccidia. 2. an agent that inhibits the growth of coccidia; see *coccidiostat*.

Coccidium (kok-sid/'e-um) [L.; dim. of Gr. *kokkos* berry] a former genus of sporozoans of the order Coccidia. **C. bigem'ium**, *Isospora bigemina*. **C. cunic'uli**, *Eimeria stiedae*. **C. hom'inis**, *Isospora hominis*. **C. ovifor'me**, *Eimeria stiedae*. **C. tenel'lum**, *Eimeria tenella*.

coccidium (kok-sid/'e-um), pl. *coccid'ia*. Any organism of the order Coccidia.

coccigenic (kok/'si-jen'ik) caused by cocci.

coccillana (kok/'si-yah'nah) cocillana.

coccinella (kok/'si-nel'ah) cochineal.

coccinellin (kok/'si-nel'in) [L. *coccinellinum*] carmine; the coloring principle of cochineal.

coccobacillary (kok/'o-bas'i-ler'e) pertaining to or resembling a coccobacillus.

coccobacilli (kok/'o-bah-sil'i) plural of *coccobacillus*.

Coccobacillus (kok/'o-bah-sil'us) *Asterococcus*.

coccobacillus (kok/'o-bah-sil'us), pl. *coccobacil'li*. An oval bacterial cell intermediate between the coccus and bacillus forms.

coccobacteria (kok/'o-bak-te're-ah) [Gr. *kokkos* berry + *baktērion* rod] a common name for the spheroid bacteria, or for the various bacterial cocci.

coccode (kok/'ōd) a globular granule.

coccogenic (kok/'o-jen'ik) coccigenic.

coccogenous (kok-'oj'ē-nus) [*coccus* + Gr. *gennan* to produce] coccigenic.

coccoid (kok/'oid) resembling a coccus; globose.

cocculin (kok/'u-lin) picrotoxin.

cocculus (kok/'u-lus) [L. dim. of *coccus*] a small berry. **c. in'dicus**, the dried berry or fruit of *Anamirta cocculus*, from which picrotoxin is derived.

Coccus (kok/'us) [L.; Gr. *kokkos* berry] a genus of hemipterous insects which are the source of cochineal, kermes, and lac.

coccus (kok/'us), pl. *coc'ci* [L.] a spherical bacterial cell, usually slightly less than 1μ in diameter.

coccyalgia (kok/'se-al'je-ah) coccygodynia.

coccycephalus (kok/'se-seff'ah-lus) [Gr. *kokkys* cuckoo + *kephalē* head] a monster whose head is beak shaped.

coccydynia (kok/'sē-din'e-ah) coccygodynia.

coccygalgia (kok/'se-gal'je-ah) coccygodynia.

coccygeal (kok-sij/'e-al) pertaining to or located in the region of the coccyx.

coccygectomy (kok/'se-jek'to-me) [*coccyx* + Gr. *ektomē* excision] excision of the coccyx.

coccygorector (kok/'se-je-rek'tor) the ventral sacrococcygeal muscle.

coccygeus (kok-sij/'e-us) [L.] pertaining to the coccyx.

coccygodynia (kok/'se-go-din'e-ah) [*coccyx* + Gr. *odynē* pain] pain in the coccyx and neighboring region; called also *coccygalgia*.

coccygotomy (kok/'se-got'o-me) [*coccyx* + Gr. *tomē* a cutting] incision of the coccyx.

coccydynia (kok/'se-o-din'e-ah) coccygodynia.

coccyx (kok/'siks) [Gr. *kokkys* cuckoo, whose bill it is said to resemble] the small bone caudad to the sacrum in man, formed by union of four (sometimes five or three) rudimentary vertebrae, and forming the caudal extremity of the vertebral column. Called also *os coccygis* [NA], and *coccygeal*, *cuckoo*, or *pelvic bone*.

Cochicella (kok/'i-sel'ah) a genus of snails that serve as a host of *Dicrocoelium dentriticum*.

cochineal (koch/'i-nēl') the dried female insects, *Coccus cacti*, enclosing the young larvae; formerly used as a coloring agent for pharmaceutical agents. It is the source of carmine and carminic acid.

cochl. abbreviation for L. *cochlea're*, a spoonful. **cochl. amp.**, L. *cochlea're am'plum*, a heaping spoonful. **cochl. mag.**, L. *cochlea're mag'num*, a tablespoonful. **cochl. med.**, L. *cochlea're me'dium*, a dessertspoonful. **cochl. parv.**, L. *cochlea're par'vum*, a teaspoonful.

cochlea (kok/'le-ah) [L. "snail shell"] 1. anything of a spiral form. 2. [NA] the essential organ of hearing; a spirally wound tube, resembling a snail shell, which forms part of the inner ear. Its base lies against the lateral end of the internal acoustic meatus and its apex is directed anterolaterally. Called also *acoustic labyrinth*. **membranous c.**, ductus cochlearis.

cochlear (kok/'le-ar) of or pertaining to the cochlea.

cochleare (kok/'le-a're) [L.] spoon or spoonful. **c. am'plum** [L. "large spoon"], a heaping spoonful. **c. mag'num**, a tablespoon or tablespoonful. **c. me'dium**, a dessertspoon or dessertspoonful. **c. par'vum**, a teaspoon or teaspoonful.

Cochlearia (kok/'le-a're-ah) [L.] a genus of cruciferous plants. *C. armoracia* L. is the common horse radish, used as a condiment and appetite stimulant, and has also been used as a rubefacient and plaster, like mustard, because it contains sinigrin and myrosin, which yield on hydrolysis the counterirritant principle allyl isothiocyanate. **C. officina'lis**, a species once used as an antiscorbutic; called also *scurvy grass*.

cochleariform (kok/'le-ar'i-form) [L. *cochleare* spoon + *forma* form] shaped like a spoon.

cochleitis (kok/'le-i'tis) inflammation of the cochlea.

cochleotopic (kok/'le-o-top'ik) relating to the organization of the auditory pathways and auditory area of the brain.

cochleovestibular (kok/'le-o-ves-tib'u-lar) pertaining to the cochlea and vestibule of the ear.

Cochliomyia (kok''le-o-mi'yah) [Gr. *kochlias* snail with a spiral shell + *myia* fly] a genus of flies of the family Calliphoridae. **C. americana**, **C. hominivorax**. **C. bezzia**'na, *Chrysomya bezziana*. **C. hominivo**'rax, the screw-worm fly, a bluish green fly that deposits its eggs during the warmest hours of the day on wounds of animals; the larvae, known as screw-worms, after hatching, burrow into the wound and feed on living tissue. Called also *C. americana* and *Chrysomya macellaria*.

Cochliomyia hominivorax: A, adult; B, maggot. (x3).

cochlitis (kok-li'tis) cochleitis.

cocillana (ko''se-yah'nah) the bark of *Guarea rusbyi* (Britt.) Rusby (Meliaceae) used as an emetic, expectorant, and cathartic.

Cock's operation (koks) [Edward Cock, English surgeon, 1805-1892] see under *operation*.

cockade (kok-ād') a rosette or knot of ribbons; by extension, a lesion with two or more concentric zones, as in erythema multiforme or relapsing tuberculous leprosy.

Cockayne's syndrome (disease) (kok-ānz') [E. A. Cockayne, British physician] see under *syndrome*.

cocktail (kok'tāl) a beverage concocted of various ingredients. **frostbite c.**, a solution of alcohol, procaine, and heparin, in 5 per cent glucose, once recommended in treatment of frostbite. **lytic c.**, a concoction of various drugs used to block the function of the autonomic nervous system at every level, thus inhibiting the homeostatic defense reactions of the organism and producing the state known as artificial hibernation. **McConckey c.**, an emulsion of cod liver oil and tomato juice. **Philadelphica c.**, Rivers' c. **Rivers' c.**, a solution of dextrose in isotonic saline solution, with thiamine chloride and insulin added, given by intravenous drip for detoxification in acute alcoholism.

COCI cathodal opening clonus.

cocoa (ko'ko) [NF] a powder prepared from the roasted, cured kernels of the ripe seed of *Theobroma cacao*, which contains caffeine and theobromine; used as a flavor in pharmaceutical preparations. See also *cocoa syrup*, under *syrup*.

coconscious (ko-ken'shus) not in the field of the conscious yet capable under favorable circumstances of being remembered.

coconsciousness (ko-kon'shus-nes) consciousness secondary to the main stream of consciousness, being made up of processes outside that stream.

cocontraction (ko''kon-trak'shun) the mutual coordination of antagonist muscles as of flexors and extensors in maintaining a straight limb.

coconut (ko'ko-nut) the fruit of *Cocos nucifera*, a palm tree whose sap affords palm wine or toddy, while the nut is an important article of food, and supplies great quantities of a valuable oil. See also under *oil*.

Coct. abbreviation for *L. coctio*, boiling.

cocction (kok'shun) [*L. coctio*, a cooking] 1. the process of boiling. 2. digestion (def. 2).

coccto-immunogen (kok''to-ī-mu'no-jen) an immunogen that has been heated.

coccolabile (kok''to-la'bil) [*L. coctus* cooked + *labilis* perishable] destroyed or altered by heating to the boiling point of water.

cocctoprecipitin (kok''to-pre-sip'i-tin) [*L. coctus* cooked + *precipitin*] a precipitin produced by injection of a heated serum or other antigen (thermoprecipitinogen); it reacts not only with the heated antigen, but with the unheated one also.

cocctoprotein (kok''to-pro'te-in) a heated protein.

cocctostabile (kok''to-sta'bil) [*L. coctus* cooked + *stabilis* resisting] not altered by heating to the temperature of boiling water.

cocctostable (kok''to-sta'b'l) cocctostabile.

coculine (kok'u-lēn) sinomenine.

cocultivation (ko''kul-ti-va'shun) the culturing of cells (e.g., normal uninfected human cells) with infected or latently infected cells of the same kind.

code (kōd) [*L. codex* something written] 1. a set of rules governing one's conduct. 2. a system by which information can be communicated. **genetic c.**, the arrangement of nucleotides in the polynucleotide chain of a chromosome that governs the transmission of genetic information to proteins, i.e., determines the sequence of amino acids in the polypeptide chain making up each protein synthesized by the cell. Genetic information is coded in DNA by means of four bases (two purines: adenine and guanine; and two pyrimidines: thymine and cytosine). Each adjacent sequence of three bases (a codon) determines the insertion of a

specific amino acid. In RNA, uracil replaces thymine. **triplet c.**, the three-base sequence (nucleotide) in the DNA molecule which codes for one amino acid.

codehydrogenase I (ko'de-hi'dro-jen-ās'') nicotinamide adenine dinucleotide (NAD). **c. II**, nicotinamide-adenine dinucleotide phosphate (NADP).

codeine (ko'dēn) [*L. codeina*] [USP] chemical name: 7,8-didehydro-4,5a-epoxy-3-methoxy-17-methyl-morphinan-6a-ol monohydrate. A narcotic alkaloid obtained from opium or prepared by methylating morphine, $C_{18}H_{21}NO_3 \cdot H_2O$, occurring as colorless or white crystals or as a white, crystalline powder; used as an analgesic and antitussive, administered orally. Called also *methylmorphine*. **c. phosphate** [USP], the phosphate salt of codeine, $C_{18}H_{21}NO_3 \cdot H_3PO_4 \cdot \frac{1}{2}H_2O$, occurring as fine white, needle-shaped crystals or a white crystalline powder; used as a narcotic analgesic and antitussive; administered subcutaneously. **c. sulfate** [USP], white crystals or white crystalline powder, $(C_{18}H_{21}NO_3)_2 \cdot H_2SO_4 \cdot 3H_2O$; used as a narcotic analgesic, administered orally.

codex (ko'deks), pl. *cod'ices* [L.] an authorized medicinal formula; especially the French Pharmacopoeia, *Codex medicamentarium*.

Codivilla's extension, operation (ko'di-vil'ahz) [Alessandro Codivilla, surgeon in Bologna, 1861-1912] see under *extension* and *operation*.

Codman's sign, triangle (kod'manz) [Ernest Amory Codman, Boston surgeon, 1869-1940] see under *sign* and *triangle*.

codominance (ko-dom'i-nans) the full expression in a heterozygote of both alleles of a pair without either being influenced by the other, as in a person with blood group AB.

codominant (ko-dom'i-nant) exhibiting codominance.

codon (ko'don) a series of three adjacent bases in one polynucleotide chain of a DNA or RNA molecule, which codes for a specific amino acid; called also *triplet*.

coe- for words beginning thus, see also words beginning *ce-*.

coefficient (ko''ē-fish'ent) 1. an expression of the change or effect produced by the variation in certain factors, or of the ratio between two different quantities. 2. in chemistry, a number or figure put before a chemical formula to indicate how many times the formula is to be multiplied. **absorption c.**, 1. the ratio of the linear rate of change of roentgen rays in a homogeneous material to the intensity at a given point (A. M. A.); see *linear absorption c.* and *mass absorption c.* 2. a number indicating the volume of a gas absorbed by a unit volume of a liquid at 0° C. and a pressure of 760 mm. Hg; called also *Bunsen c.* **activity c.**, the ratio of the activity (of an electrolyte) as measured by some property, such as the depression of the freezing point of a solution, to the true concentration (molality). It is usually less than 1 and increases as the solution becomes more dilute, approaching unity at infinite dilution, when the attractive forces between oppositely charged ions become negligible. **Amann's c.**, the normal proportion between the quantities of ethereal sulfates and the total nitrogen in the urine. It is expressed as follows: (eth. s. × 100)/urea in urine. **Ambard's c.**, see under *formula*. **Baumann's c.**, the ratio of the ethereal to the total sulfates in the urine. **biological c.**, the amount of potential energy consumed by the body when at rest. **Bouchard's c.**, 1. the ratio between the amount of urine and the total solids present in the urine. 2. urotoxic coefficient. **Bunsen c.**, absorption c., def. 2. **creatinine c.**, the figure obtained by dividing the total of milligrams of creatinine in the day's urine by the body weight expressed in kilograms. **cryoscopic c.**, the comparison of the freezing point depression of an electrolyte with that of an ideal nonelectrolyte of the same concentration (usually 1 molal of each). **c. of demineralization**, the proportion of mineral matter to the total dry residue of the urine; it averages 30 per cent. **distribution c.**, partition c. **c. of extinction**, that dilution of an antibody at which its specific activity is no longer manifest. **Falta's c.**, the percentage of ingested sugar eliminated from the system. **Haines' c.**, see under *formula*. **Häser's c.**, see under *formula*. **homogeneity c.**, in radiology, the ratio of the half-value layer and the additional thickness of the material needed to reduce a radiation beam to one fourth of its original exposure rate; it is unity for monoenergetic photons. **hygienic laboratory c.**, phenol c. **c. of inbreeding**, an expression of the probability that an individual has received both alleles of a pair from a single ancestor common to both parents, or of the proportion of loci at which he is homozygous. **isometric c. of lactic acid**, the ratio of the total isometric tension a muscle can produce before fatigue, to the milligrams of lactic acid it produced. **Lancet c.**, phenol c. **lethal c. (obs.)**, that concentration of a disinfectant that will kill sporeless bacteria (*inferior lethal c.*) or bacterial spores (*superior lethal c.*) in water at a temperature of 20° to 25° C. **linear absorption c.**, in radiology, a factor expressing the fraction of a beam of x- or gamma-radiation absorbed in unit thickness of material. **Loebisch's c.**, see under *formula*. **Long's c.**, see under *formula*. **Maillard's c.**, a coefficient expressing the relationship between the urea and the total nitrogen of the urine. **mass absorption c.**, in radiology, the linear absorption coefficient per centi-

meter divided by the density of the absorber in grams per cubic centimeter. **osmotic c.**, a factor, ϕ , which corrects for the deviation in the behavior of a solute in question from ideal behavior defined by the ideal gas equation as applied to osmotic pressure. **c. of partage**, a number indicating the ratio between the amount of an acid absorbed by ether from an aqueous solution of the acid and the amount remaining in solution. Symbol C' . **partition c.**, the ratio in which a given substance distributes itself between two or more different phases; called also *distribution c.* **phenol c.**, a measure of the bactericidal activity of a chemical compound in relation to phenol. The test and test microorganisms are standardized (Rideal-Walker method, U. S. Department of Agriculture method), and the activity of the unknown is expressed as the ratio of dilution in which it kills in 10 minutes but not in 5 minutes, to the dilution of phenol (ca. 1:90) which kills in 10 minutes but not in 5 minutes under the specified conditions. It can be determined in the absence of organic matter, or in the presence of a standard amount of added organic matter. **c. of relationship**, an expression of the probability that two persons have inherited a certain gene from a common ancestor; or the proportion of all their genes that have been inherited from common ancestors. **Rideal-Walker c.**, see *phenol c.* **sedimentation c.**, the rate in centimeters per second per unit centrifugal field at which a particle (e.g., protein) in solution travels in the analytical ultracentrifuge. A rate of 1×10^{-13} cm./second/unit centrifugal field is defined as one Svedberg unit (S). **selection c.**, a measure of the disadvantage in survival value of a given genotype as compared with that of a standard genotype in a population. **temperature c.**, a number indicating the effect of temperature upon the velocity constant of a chemical reaction. Cf. *van't Hoff's rule*, under *rule*. **c. of thermal conductivity**, a number indicating the quantity of heat that passes in a unit of time through a unit thickness of a substance when the difference in temperature is 1°C . **c. of thermal expansion**, the change in volume per unit volume of a substance produced by a 1°C temperature increase. **Trapp's c.**, see under *formula*. **urohemolytic c.**, the smallest degree of dilution necessary to render a specimen of urine hemolytic. **urotoxic c.**, a number expressing the toxicity of the urine; it is the quantity of urotoxic units produced per unit weight and eliminated in unit time. Called also *Bouchard's c.* **c. of variability**, the ratio of the standard deviation to the mean. **velocity c.**, a number expressing the rate of a reaction; the rate of transformation of a unit mass of a substance in a chemical reaction. **c. of viscosity**, the force necessary to slide tangentially a unit of area of smooth surface at unit velocity on another parallel surface separated from the first surface by a unit layer of viscous substance. **volume c.**, the volume of packed red cells per 100 ml. of blood. **Yvon's c.**, the ratio between the quantity of urea and the phosphates of the urine.

coel- (sēl) [Gr. *koilia* cavity] a combining form denoting relationship to a cavity or space; sometimes spelled *cel-*.

coelarium (se-la're-um) [L., from Gr. *koilos* a hollow] the membrane that lines the body cavity of the embryo, or coelom; it consists of a parietal layer, the *exocoelarium*, and a visceral layer, the *endocoelarium*. Called also *mesothelium*.

-coele (sēl) [Gr. *koilia* cavity] a word termination denoting relationship to a cavity or space; sometimes spelled *-cele* and *-coel*.

Coelenterata (se-len'ter-a'tah) [Gr. *koilos* hollow + *enteron* intestine] a phylum of invertebrates that includes the hydras, jellyfish, sea anemones, and corals; called also *Cnidaria*.

coelenterate (se-len'ter-āt) 1. pertaining or belonging to the Coelenterata. 2. an individual of the phylum Coelenterata.

coelenteron (se-len'ter-on) archenteron.

coeliac (se'le-ak) celiac.

coeloblastula (se'lo-blas'tu-lah) [*coelo-* + Gr. *blastos* germ] the common type of blastula, consisting of a hollow sphere composed of blastomeres.

coelom (se'lom) [Gr. *koilōma*] the body cavity. In the mammalian embryo, it is situated between the somatopleure and the splanchnopleure; it is both extraembryonic and intraembryonic. From the intraembryonic portion arise the principal cavities of the trunk. Also spelled *celom*. Called also *coeloma* and *somatic cavity*. **extraembryonic c.**, the portion of the coelom external to the embryo, bordered by chorionic mesoderm and the mesoderm of the amnion and yolk sac; it communicates temporarily at the umbilicus with the intraembryonic coelom. Called also *exocoelom*.

coeloma (se-lo'mah) coelom.

coelomate (sēl'o-māt) 1. having a coelom. 2. an individual of the Eucoelomata; eucoelomate.

coelomic (se-lom'ik) pertaining to the coelom.

coelomyarian (se'lo-mi-a're-an) designating a type of nematode musculature in which the muscle fibers are next to the hypodermis and perpendicular to it; myofibrils extend varying distances up the side of the muscle cell, partially enclosing the sarcoplasm.

coelosomy (se'lo-so'me) a developmental anomaly characterized by protrusion of the viscera from and their presence outside the body cavity.

coelothel (se'lo-thel) [Gr. *koilos* hollow + *thēlē* nipple] mesothelium.

coeno- see *ceno-*.

coenurosis (se'nu-ro'sis) gid.

Coenurus (se-nu'rus) [Gr. *koinos* common + *oura* tail] a genus of certain tapeworm larvae. **C. cerebralis**, the larva of the *Multiceps multiceps*, found in the brain of sheep, goats, and other ruminants, and rarely in man.

coenurus (se-nu'rus) the larval stage of tapeworms of the genus *Multiceps*, a semitransparent, fluid-filled, bladder-like organism that contains multiple scoleces attached to the inner surface of its wall and that does not form brood capsules. It develops in various parts of the host body, especially in the central nervous system. Cf. *cystercicus* and *hydatid cyst*.

coenzyme (ko-en'zim) 1. an organic, dialyzable, thermostable molecule, usually containing phosphorus and some vitamin, and sometimes separable from the enzyme protein. A coenzyme and an apoenzyme must unite in order to function (as a holoenzyme). Formerly called *coferment* and *cohydrogenase*. 2. the prosthetic group (see under *group*) of an enzyme. **c. A**, a coenzyme consisting of adenine, ribose, three phosphate groups, pantothenic acid, and mercaptoethylamine, which plays a central role in metabolism by catalyzing the transfer of acyl groups (acetylation); abbreviated CoA. See also *acetylcoenzyme A*. **c. I**, nicotinamide-adenine dinucleotide (NAD). **c. II**, nicotinamide-adenine dinucleotide phosphate (NADP). **c. Q**, any of a group of related quinones with isoprenoid units in the side chains (the ubiquinones), occurring in the lipid fraction of mitochondria and serving, along with the cytochromes, as an intermediate in electron transport. They are similar in structure and function to vitamin K₁. **c. R**, biotin. **Warburg's c.**, nicotinamide-adenine dinucleotide phosphate (NADP).

coenzymometer (ko'en-zi-mom'ē-ter) an instrument that measures light absorption to determine enzyme activity.

COEPT cortically originating extrapyramidal system: pathways from the cortex to the spinal cord, the major ones being the corticostriatal and corticopallidal, corticothalamic, corticoreticular, and corticopontine pathways.

coetaneous (ko'ē-ta'ne-us) [L. *co* with + *aetas* age] having the same age.

coeur (ker) [Fr.] heart. **c. en sabot** (ker-on-sā-bo'), a heart visible radiographically as having an increased transverse diameter, a convexity in the inferior line, and an elevation and rounded shape of the apex, so that its form suggests vaguely that of a wooden shoe; noted in tetralogy of Fallot.

coexcitation (ko-ek-si-ta'shun) simultaneous excitation.

cofactor (ko'fak-tor) an element or principle, as a coenzyme, with which another must unite in order to function. **platelet c. I**, Factor VIII; see *coagulation factors*, under *factor*. **platelet c. II**, Factor IX; see *coagulation factors*, under *factor*.

coferment (co-fer'ment) coenzyme.

coffee (kof'e) [L. *coffea*, *caffea*] the dried seeds of *Coffea arabica* L. and *C. liberica* (Rubiaceae), trees believed to have originated in Africa, but now growing in nearly all tropical regions: a drink made by decoction or infusion of the dried and roasted ripe seeds is invigorating, tonic, and conservant; useful in chronic asthma, headache, and opium poisoning. The active principles include caffeine in seed, coffee oil, sugars, protein, and numerous volatile flavor oils.

coffeaurin (kof-e-u'r'in) a substance said to be present in the urine after the free use of coffee.

Coffey-Humber treatment [Walter B. Coffey, American surgeon, 1868-1944; John D. Humber, American surgeon, born 1895] see under *treatment*.

cogener (ko'jē-ner) congener.

Cogentin (ko-jen'tin) trademark for preparations of benzotropine mesylate.

cognition (kog-nish'un) [L. *cognitio*, from *cognoscere* to know] that operation of the mind by which we become aware of objects of thought or perception; it includes all aspects of perceiving, thinking, and remembering.

cognitive (kog'nī-tiv) of, pertaining to, or characterized by cognition.

cohesion (ko-he'zhun) [L. *cohaesio*, from *con* together + *haerere* to stick] the force that causes various particles to unite.

cohesive (ko-he'siv) uniting together, or characterized by cohesion.

Cohn's solution (kōnz) [Ferdinand Julius Cohn, German bacteriologist, 1828-1898] see under *solution*.

Cohn's test (kōnz) [Hermann Ludwig Cohn, German oculist, 1838-1906] see under *tests*.

C₄O₄H₄NaK potassium sodium tartrate.

Cohnheim's areas, etc. (kōn'himz) [Julius Friedrich Cohnheim, German pathologist, 1839-1884] see under *area*, *field*, *frog*, and *theory*.

cohoba (ko-ho'bah) parica.

cohobation (ko/'ho-ba'shun) the repeated distilling of a liquid from the same material; redistillation.

cohort (ko/'hort) 1. a group of individuals sharing a statistical characteristic (e.g., date of birth) who are used in epidemiologic or other statistical studies of disease. 2. a taxonomic category approximately equivalent to a division, order, or suborder in various systems of classification.

cohosh (ko-hosh') a North American (Algonkin) name for various medicinal plants, as *Actaea spicata*, or red cohosh; *Caulophyllum thalictroides*, or blue cohosh; and *Cimicifuga racemosa*, or black cohosh.

cohydrogenase (ko/'hi-dro'jen-ās) coenzyme.

CoI coenzyme I (nicotinamide-adenine dinucleotide).

CoII coenzyme II (nicotinamide-adenine dinucleotide phosphate).

coil (koi) anything wound in a spiral. **paranemic c.**, a coil formed between two or more chromosomal threads which has freely separable subunits. **plectonemic c.**, a coil formed between two or more chromosomal threads which has intertwined subunits. **relational c.**, the stretched subunits of the plectonemic coil. **standard (somatic) c.**, a helical structure similar to the major coil of meiotic chromosomes but found in mitotic chromosomes.

coino- see *ceno-*.

coinosite (koi/'no-sit) [Gr. *koinos* common + *sitos* food] a free or unfixed commensal organism; called also *cenosite*.

coisogeneic (ko-i/'so-jē-na'ik) of or relating to strains of inbred animals that are genetically identical except for a difference at a single genetic locus.

coital (ko/'i-tal) pertaining to coitus.

coition (ko-ish'un) coitus.

coitophobia (ko/'i-to-fō-be-ah) [coitus + Gr. *phobein* to be frightened by + *ia*] morbid dread of coitus.

coitus (ko/'i-tus) [L. *coitio* a coming together, meeting] sexual connection per vaginam between male and female. **c. incomple'tus**, **c. interrup'tus**, coitus in which the penis is withdrawn from the vagina before ejaculation; a widely used but unreliable method of contraception. **c. reserva'tus**, coitus in which ejaculation is intentionally suppressed. **c. à la vache**, coitus from behind, with the woman in the knee-chest position.

Coix (ko/'iks) [L.; Gr. *koix* a palm] a genus of grasses. *C. lacryma*, an Asiatic species, bears large seeds called *Job's tears*, which have been strung as beads for infants' use in teething; said to be anodyne and diuretic.

Col. abbreviation for *L. col'a*, strain.

col (kol) a small depression in the interdental tissues just below the interproximal contact area, connecting the buccal and lingual papillae.

Colace (ko/'lās) trademark for a preparation of docusate sodium.

colamine (ko/'lah-min) monoethanolamine.

colaspase (ko-las/'pās) asparaginase.

Colat. abbreviation for *L. colat'us*, strained.

colation (ko-la'shun) [L. *colatio*] 1. the process of straining or filtration. 2. the product of such a process.

colatorium (kol/'ah-to're-um), pl. *colatoria* [L., from *colare* to strain] a strainer or colander; a sieve.

colature (ko/'lah-tūr) [L. *colatura*, from *colare* to strain] a liquid obtained by straining.

colauze (ko-lawk'se) [Gr. *kolon* colon + *auxē* increase] (obs.) dilatation of the colon.

colchicine (kol/'chī-sin) [USP] chemical name: (S)-N-(5,6,7,9-tetrahydro-1,2,3,10-tetramethoxy-9-oxobenzo[*a*]heptalen-7-yl) acetamide. An alkaloid, C₂₂H₂₅NO₆, obtained from various species of *Colchicum*, occurring as pale yellow amorphous scales or powder; used as a gout suppressant, usually administered orally.

Colchicum (kol/'chī-kum) a genus of Old World liliaceous trees, the meadow saffron, from whose corm or dried ripe seed colchicine is obtained.

cold (kōld) 1. privation, or relatively low degree, of heat. 2. common cold; a catarrhal disorder of the upper respiratory tract, which may be viral, a mixed infection, or an allergic reaction. It is marked by acute coryza, slight rise in temperature, chilly sensations, and general indisposition. **allergic c.**, hay fever. **common c.**, see *cold*, def. 2. **June c.**, hay fever. **rose c.**, a form of seasonal hay fever caused by the pollen of roses.

cold sore (kōld'sōr) see *herpes simplex*.

cole- see *coleo-*.

Cole's sign (kōlz) [Lewis Gregory Cole, American roentgenologist, 1874-1954] see under *sign*.

Cole's test (kōlz) [Sidney William Cole, English physiologist, born 1877] see under *tests*.

colectasia (ko/'lek-ta'se-ah) (obs.) dilatation of the colon.

colectomy (ko-lek/'to-me) [colon + Gr. *ektomē* excision] excision of a portion of the colon (*partial c.*) or of the whole colon (*complete* or *total c.*).

coleetitis (kol/'e-i'tis) [*cole-* + *-itis*] (obs.) vaginitis.

Coleman-Shaffer diet [Warren Coleman, New York physician, 1869-1948; Philip Anderson Shaffer, American biochemist, born 1881] see under *diet*.

coleo-, cole- (kol/'e-o, kol'e) [Gr. *koleos* sheath] a combining form denoting relationship to the vagina, or to a sheath.

coleoceles (kol/'e-o-sē'l) [*coleo-* + Gr. *kēlē* hernia] (obs.) vaginal hernia.

coleocystitis (kol/'e-o-sis-ti'tis) [*coleo-* + *cystitis*] (obs.) inflammation of the vagina and bladder.

Coleomitus (ko/'le-o-mi'tus) a genus of Schizomycetes of the order Caryophanales, family Arthromitaceae.

Coleoptera (kol/'e-op'ter-ah) [*coleo-* + Gr. *pteron* wing] an order of insects comprising the beetles.

coles (kol/'lēz) [Gr. *kōlē*] the penis. **c. femini'nus**, the clitoris.

Colesiotes (ko-le/'se-o'tah) [J. D. W. A. Coles] a genus (incertae sedis) of microorganisms, occurring as a single species, *C. conjunctivae*, the agent causing infectious ophthalmia of sheep.

colestipol (ko-lest/'tī-pōl) chemical name: tetraethylenepentamine polymer with 1-chloro-2,3-epoxypropane; an antilipemic agent.

Colet. abbreviation for *L. cole'tur*, let it be strained.

Colettsia (ko-let/'se-ah) [J. D. W. A. Coles] a genus (incertae sedis) of microorganisms occurring as a single species, *C. pe'coris*, a parasitic microorganism found in the conjunctiva of domestic animals.

Coley's toxin (fluid) (kol/'lēz) [William Bradley Coley, surgeon in New York, 1862-1936] see under *toxin*.

colibacillemia (kol/'li-bas-ī-le'me-ah) the presence of *Escherichia coli* in the blood.

colibacillosis (kol/'li-bas-ī-lo'sis) infection with *Escherichia coli*. **c. grava'da'rum**, severe infection with *Escherichia coli* during pregnancy.

colibacilluria (kol/'li-bas-ī-lu're-ah) presence of *Escherichia coli* in the urine; called also *Albarrán's disease*.

colibacillus (kol/'li-bas-sil'us) *Escherichia coli*.

colic (kol/'ik) [Gr. *kōlikos*] 1. pertaining to the colon. 2. acute abdominal pain; characteristically, intermittent visceral pain with fluctuations corresponding to smooth muscle peristalsis. **appendicular c.**, vermicular c. **biliary c.**, paroxysms of pain and other severe symptoms due to the passage of gallstones along the bile duct; called also *gallstone* or *hepatic c.*, and *cholecystalgia*. **bilious c.**, abdominal pain accompanied by the vomiting of bile. **copper c.**, a severe colic due to copper poisoning. **Devonshire c.**, lead colic. **endemic c.**, a dangerous form of colic peculiar to hot countries. **flatulent c.**, tympanitis. **gallstone c.**, biliary c. **gastric c.**, pain in the stomach. **hepatic c.**, biliary c. **infantile c.**, benign paroxysmal abdominal pain during the first three months of life. **intestinal c.**, colic originating from the small bowel, characteristically periumbilical in location. **lead c.**, colic due to lead poisoning. **meconial c.** (obs.), colic of newborn infants. **menstrual c.**, severe abdominal pain at the menstrual period; dysmenorrhea. **nephric c.**, renal c. **ovarian c.**, ovarian pain. **painters' c.**, lead c. **pancreatic c.**, abdominal pain caused by obstruction of the excretory duct of the pancreas. **Poitou c.**, lead c. **renal c.**, pain produced by thrombosis or dissection of the renal artery, renal infarction, intrarenal mass lesions, the passage of a stone within the collecting system, or thrombosis of the renal vein; called also *nephric c.* **salivary c.**, pain in the region of the salivary gland occurring in cases of salivary calculus. **sand c.**, chronic indigestion in horses and cattle due to the presence in the stomach or intestine of sand taken in with food or drink. **saturine c.**, lead c. **stercoral c.**, intestinal colic due to accumulation of feces. **tubal c.**, painful spasmodic contraction of the fallopian tube. **ureteral c.**, colicky pains due to obstruction of the ureter. **uterine c.**, severe abdominal pain arising in the uterus, usually at the menstrual period. **vermicular c.**, a condition of colic in the vermiform appendix occasioned by a catarrhal inflammation resulting from blocking of the outlet of the appendix; called also *appendicular c.* **verminous c.**, colic due to the presence of intestinal worms; called also *worm c.* **wind c.**, pain in the bowels due to their distention with air or gas. **worm c.**, verminous c. **zinc c.**, colic resulting from chronic zinc poisoning.

colica (kol/'i-kah) [L.] colic. **c. muco'sa**, mucous colitis. **c. pic'tonum**, lead colic. **c. scorto'rum** (obs.), severe colicky pain in the region of the fallopian tubes; seen in salpingitis.

colicin (kol/'i-sin) [*coli* (from *Escherichia coli*) + *-cin* (adapted from *L. cadere* to kill)] a protein secreted by colicinogenic strains of *Escherichia coli* and lethal to other strains of the same species. Specific colicins attach to specific receptors on the cell membrane with resulting impairment of macromolecule synthesis or energy production.

colicinogen (kol/'i-sin'o-jen) an episome in some strains of *Escherichia coli* that induces secretion of the corresponding colicin. Some colicinogens also serve as sex factors. Called also *colicinogenic factor* (Cf).

colicinogenic (kol'ī-sin'o-jen'ik) elaborating colicin; said of strains of *Escherichia coli*.

colicinogeny (kol'ī-sin-oj'ē-ne) the production of colicin; see *colicinogen*.

colicky (kol'ik-e) pertaining to or affected by colic.

colicoplegia (kol'ī-ko-plē'je-ah) [Gr. *kōlikos* colic + *plēgē* stroke] lead colic and lead paralysis together.

colicystitis (ko'li-sis-ti'tis) cystitis dependent upon the presence of *Escherichia coli*.

colicystopyelitis (ko-li-sis'to-pi'e-li'tis) [*colon* + Gr. *kystis* bladder + *pyelos* pelvis] inflammation of the bladder and kidney pelvis due to *Escherichia coli*.

coliform (ko'li-form) [L. *colum* a sieve] 1. a collective term denoting enteric, fermentative gram-negative rods, and sometimes restricted to the lactose-fermenting, gram-negative enteric bacilli, i.e., *Escherichia*, *Klebsiella*, *Enterobacter*, and *Citrobacter*. 2. any organism of that group.

colinearity (ko'lin-e-ar'i-te) the correspondence between the linear sequence of the nucleotide codons, the RNA, and the linear sequence of amino acids in the polypeptide coded for by that sequence; a concept implicit in the original Watson-Crick model of the DNA structure.

colinephritis (ko'li-ne-fri'tis) nephritis due to the presence of *Escherichia coli*.

coliphage (kol'ī-fāj) any bacteriophage that infects *Escherichia coli*.

coliplication (ko'li-pi-ka'shun) coloplication.

colipuncture (ko'li-punk'tūr) colocentesis.

colisepsis (ko'li-sep'sis) infection with *Escherichia coli*.

colistimethate sodium (ko-lis'ti-meth'āt) chemical name: colistinmethanesulfonic acid pentasodium. The pentasodium salt of the methanesulfonate derivative of colistin, $C_{58}H_{108}N_{18}Na_5O_{28}S_8$, occurring as a white to slightly yellow, fine powder, having actions and uses similar to those of the base (colistin); administered intramuscularly or intravenously.

colistin (ko-lis'tin) a polypeptide antibiotic of the polymyxin (q.v.) group, produced by the growth of the soil bacterium *Bacillus polymyxa* var. *colistinus*, specifically effective against many gram-negative bacteria, especially *Pseudomonas aeruginosa*, but also useful against others, including *Escherichia coli* and species of *Aerobacter*, *Klebsiella*, *Shigella*, and *Brucella*; *Proteus* species are resistant. **c. sulfate** [USP], the sulfate salt of colistin, occurring as a white to cream-colored, hygroscopic powder; used in the treatment of various systemic, urinary tract, gastrointestinal, ophthalmic, and otic infections due to susceptible gram-negative bacteria, administered orally, parenterally, and topically.

colitides (ko-lit'i-dēz) plural of *colitis*. Inflammatory disorders of the colon considered collectively.

colitis (ko-li'tis) inflammation of the colon. **amebic c.**, colitis due to *Entamoeba histolytica*; amebic dysentery. **antibiotic-associated c.**, see under *enterocolitis*. **balantidial c.**, colitis due to infestation with *Balantidium coli*. **c. cys'tica profun'da**, a condition marked by mucous retention cysts in the colic submucosa that are characteristic of the healing of chronic lesions of bacillary dysentery. **c. cys'tica superficialis**, a cystic condition of the colic mucous membrane sometimes seen in children with such chronic debilitating disease as leukemia, possibly the result of malnutrition and vitamin deficiency. **granulomatous c.**, transmural colitis with the formation of noncaseating granulomas. **c. gra'vis**, ulcerative c. **ischemic c.**, acute vascular insufficiency of the colon usually involving the portion supplied by the inferior mesenteric artery; symptoms include pain at the left iliac fossa, bloody diarrhea, low-grade fever, abdominal distention, and abdominal tenderness. The classic radiologic sign is thumbprinting due to localized elevation of the mucosa by submucosal hemorrhage or edema. Ulceration may follow. **mucous c.**, a chronic noninflammatory disease characterized by excessive secretion of mucus and disordered colonic motility with consequent colic, constipation, and/or diarrhea with the passage of mucus; it is a common disorder with a psychophysiologic basis. Called also *spastic* or *irritable colon*, and *irritable bowel* (or *colon*) syndrome. The term mucous colitis is sometimes restricted to cases in which diarrhea with considerable mucus is the major manifestation. **myxo-membranous c.**, mucous c. **c. polypo'sa**, ulcerative colitis associated with the formation of pseudopolyps (edematous, inflamed islands of mucosa between areas of ulceration). **pseudomembranous c.**, see under *enterocolitis*. **regional c.**, **segmental c.**, transmural or granulomatous inflammatory disease of the colon; regional enteritis involving the colon. It may be associated with ulceration, strictures, or fistulas. **transmural c.**, inflammation of the full thickness of the bowel, rather than mucosal and submucosal disease, usually with the formation of noncaseating granulomas. It may be confined to the colon, segmentally or diffusely, or may be associated with small bowel disease (regional enteritis). Clinically, it may resemble ulcerative colitis, but the ulceration is often longitudinal or deep, the disease is often segmental, stricture formation is common, and fistulas, particularly in the perineum, are a frequent complication. **c.**

ulcerati'va, **ulcerative c.**, chronic, recurrent ulceration in the colon, chiefly of the mucosa and submucosa, of unknown cause; it is manifested clinically by cramping abdominal pain, rectal bleeding, and loose discharges of blood, pus, and mucus with scanty fecal particles. Complications include hemorrhoids, abscesses, fistulas, perforation of the colon, pseudopolyps and carcinoma.

colitose (kol'ī-tōs) an unusual sugar found to be a polysaccharide somatic antigen of *Salmonella* species.

colitoxemia (ko'li-tok-se'me-ah) toxemia due to infection with *Escherichia coli*.

colitoxicosis (ko'li-tok'si-ko'sis) intoxication caused by *Escherichia coli*.

colitoxin (ko'li-tok'sin) a substance contained in *Escherichia coli* that is the cause of colitoxicosis.

coliguria (ko'li-u're-ah) presence of *Escherichia coli* in the urine.

colla (kol'lah) [L.] plural of *collum*.

collacin (kol'ī-sin) degenerated collagenous tissue; collastin.

collagen (kol'ah-jen) [Gr. *kolla* glue + *gennan* to produce] the protein substance of the white fibers (collagenous fibers) of skin, tendon, bone, cartilage, and all other connective tissue; composed of molecules of tropocollagen (q.v.), it is converted into gelatin by boiling. See also under *disease*. **fibrous long-spacing (FLS) c.**, a form of collagen having a periodicity of about 240 nm. instead of the 64 nm. characteristic of the native fibers; found in the trabecular network of the eye and in aging collagen. **segment long-spacing (SLS) c.**, collagen occurring in segments about 240 nm. long instead of in fibers.

collagenase (kol-laj'ē-nās) an enzyme that catalyzes the degradation of collagen.

collagenation (kol-laj'ē-na'shun) the appearance of collagen in developing cartilage.

collagenic (kol'ah-jen'ik) 1. collagenous. 2. collagenogenic.

collagenitis (kol-laj'ē-ni'tis) inflammatory involvement of collagen fibers in the fiber component of connective tissue, characterized by pain, swelling, low-grade fever, and by increased erythrocyte sedimentation rate.

collagenoblast (kol-laj'ē-no-blast) a cell which arises from a fibroblast and which, as it matures, is associated with the production of collagen; it may also, at times, form cartilage and bone by metaplasia.

collagenocyte (kol-laj'ē-no-sit'') a mature collagen-producing cell; see *collagenoblast*.

collagenogenic (kol'lah-jen-o-jen'ik) pertaining to or characterized by the production of collagen; forming collagen or collagen fibers.

collagenolysis (kol'ah-jen-ol'i-sis) dissolution or digestion of collagen.

collagenolytic (kol-laj'ē-no-lit'ik) effecting the digestion of collagen.

collagenosis (kol-laj'ē-no'sis) collagen disease; see under *disease*.

collagenous (kol-laj'ē-nus) pertaining to collagen; forming or producing collagen.

collapse (kō-laps') [L. *collapsus*] 1. a state of extreme prostration and depression, with failure of circulation. 2. abnormal falling in of the walls of any part or organ. **circulatory c.**, shock; circulatory insufficiency without congestive heart failure. **c. of the lung**, an airless or fetal state of all or a part of a lung, as seen in atelectasis from bronchial obstruction and in pneumothorax. **massive c.**, a condition in which an entire lung becomes airless, often due to obstruction of a main bronchus.

collar (kol'ler) an encircling band, generally around the neck. **Bielt's c.**, a ring of epidermis around a papulolenticular syphilid. **Casal's c.**, see under *necklace*. **c. of pearls**, syphilitic leukoderma about the neck. **periosteal bone c.**, a band of spongy bone that forms around the middle of the diaphysis of early bones. **Spanish c.**, paraphimosis. **c. of Stokes**, an edematous thickening of the neck and soft parts of the thorax associated with dilatation of the veins from the neck to the diaphragm, seen in cases of obstruction of the superior vena cava. **venereal c.**, **c. of Venus**, syphilitic leukoderma about the neck.

collarette (kol'er-et') 1. a narrow rim of loosened keratin overhanging the periphery of a circumscribed skin lesion, attached to the normal surrounding skin, especially in moniliasis and pityriasis rosea. 2. (obs.) collar-like dermatitis in pellagra. 3. ciliary zone. **c. of Biet**, the ring of scales that develops around the macular lesions of secondary syphilis.

collastin (kō-las'tin) degenerate collagenous tissue that stains like normal elastic tissue.

collateral (kō-lat'er-al) [L. *con* together + *la'tus* side] 1. secondary or accessory; not direct or immediate. 2. a small side branch, as of a blood vessel or nerve.

collenchyma (ko-leng'kī-mah) [Gr. *kolla* glue + *enchyma* infusion] supportive tissue occurring just beneath the epidermis of

stems and leaf stalks of plants, composed of elongated living cells with walls thickened in the corner. Cf. *sclerenchyma*.

Colles' fascia, ligament, etc. (kol'ēz) [Abraham Colles, an Irish surgeon, 1773-1843] see *fascia diaphragmatis urogenitalis inferior* and *ligamentum inguinale reflexum*, and see under *fracture*, *law*, and *space*.

Colles-Baumès law (kol'ēz-bo-māz') [Abraham Colles; Pierre Prosper François Baumès, French physician, 1791-1871] see *Colles' law*, under *law*.

Collet's syndrome (kol-lāz') [Frédéric Justin Collet, Lyons laryngologist, born 1870] see under *syndrome*.

Collet-Sicard syndrome (kol-la'-se-kar') [Frédéric Justin Collet; Jean Athanase Sicard, Paris neurologist, 1872-1929] Collet's syndrome.

colliculectomy (kō-lik'-u-lek'-to-me) [*colliculus* + Gr. *ektomē* excision] excision of the colliculus seminalis.

colliculi (kō-lik'-u-li) plural of *colliculus*.

colliculitis (kō-lik'-u-li'tis) inflammation about the colliculus seminalis.

colliculus (kō-lik'-u-lus), pl. *collic'uli* [L.] a small elevation, or mound. **c. of arytenoid cartilage**, c. cartilaginis arytenoideae. **bulbar c.**, corpus spongiosus penis. **c. cartilag'inis arytenoi'deae** [NA], colliculus of arytenoid cartilage: a small eminence on the anterior margin and anterolateral surface of the arytenoid cartilage; called also *c. cartilaginis arytaenoideae*. **c. cauda'lis** (obs.), c. inferior. **c. cauda'tus**, nucleus caudatus. **cervical c. of female urethra**, of Barkow, crista urethralis femininae. **c. crania'lis** (obs.), c. superior. **facial c.**, **c. facia'lis** [NA], an elevation of the medial eminence above the medullary striae in the rhomboid fossa, caused by the internal genu of the facial nerve as it loops backward around the abducent nucleus. **inferior c.**, **c. inf'e'rior lam'inae quadrigem'inae**, **c. inf'e'rior lam'inae tec'ti** [NA], the caudal of the two pairs of rounded eminences in the tectum of the mesencephalon; it is primarily concerned with auditory reflexes. Called also *inferior c.* and *c. inferior laminae quadrigeminae*. **seminal c.**, **c. semina'lis** [NA], a prominent portion of the urethral crest on which are the opening of the prostatic utricle and, on either side of it, the orifices of the ejaculatory ducts; called also *caput gallinaginis*, *seminal crest*, and *seminal hillock*. **superior c.**, **c. supe'rior lam'inae quadrigem'inae**, **c. supe'rior lam'inae tec'ti** [NA], the rostral of the two pairs of rounded eminences in the tectum of the mesencephalon; it is primarily concerned with visual reflexes.

collifixation (kol'i-fik-sa'shun) collopexia.

colligation (kol'i-ga'shun) 1. a form of mental composition in which the units maintain their own distinction. 2. the bringing together of isolated elements in a composite experience.

colligative (kol'i-ga'tiv) in physical chemistry, depending on the number of molecules present in a given space, rather than on their size, molecular weight or chemical constitution.

collimation (kol'i-ma'shun) a making parallel. In microscopy, the process of making light rays parallel; the process of aligning the optical axis of the optical system to the reference mechanical axes or surfaces of the instrument, or the adjustment of two or more optical axes with respect to each other. In radiology, the elimination of the peripheral (more divergent) portion of an x-ray beam by means of metal tubes, cones, or diaphragms interposed in the path of the beam.

collimator (kol'i-ma'tor) a diaphragm or system of diaphragms made of an absorbing material, designed to define the dimensions and direction of a beam of radiation.

Collin's osteoclast (kol'inz) [Anatole Collin, Parisian instrument maker, 1831-1923] see under *osteoclast*.

Collinsonia (kol'in-so'ne-ah) [after Peter Collinson, 1694-1768] a genus of labiate herbs. *C. canadensis*, stoneroot or richweed, is tonic and diuretic.

Collip unit (kol'ip) [James Bertram Collip, Canadian biochemist, born 1892] see under *unit*.

colliquation (kol'i-kwa'shun) [L. *con* together + *liquare* to melt] liquefactive degeneration of tissue. **ballooning c.**, liquefaction of cell protoplasm attended by edematous swelling. **reticulating c.**, liquefaction of cell protoplasm with the formation of reticulations.

colliquative (kō-lik'-wah-tiv) [L. *con* together + *liquare* to melt] 1. characterized by an excessive fluid discharge. 2. marked by liquefaction of tissues.

collision (ko-li'zhun) in obstetrics, the contact *in utero* of any parts of one twin with those of the co-twin, so that engagement of either is prevented.

collochemistry (kol'o-kem'is-tre) the chemistry of colloids.

collodiaphyseal (kol'o-di'ah-fiz'e-al) [L. *collum* neck + *diaphysis*] pertaining to the neck and shaft of a long bone, especially the femur.

collodion (ko-lo'de-on) [L. *collodium*, from Gr. *kollōdēs* glutinous] [USP] a clear or slightly opalescent, highly flammable, syrupy liquid compounded of pyroxylin, ether, and alcohol, which dries to a transparent, tenacious film; used as a topical protectant, applied

to the skin to close small wounds, abrasions, and cuts, to hold surgical dressings in place, and to keep medications in contact with the skin. **c. elastique**, flexible c. **flexible c.** [USP], a preparation of camphor, castor oil, and collodion, used for the same purposes as collodion but providing a flexible, contracting film. Called also *c. elastique*. **salicylic acid c.** [USP], a preparation containing between 9.5 and 11.5 per cent salicylic acid in flexible collodion; used as a topical keratolytic for warts and corns.

colloid (kol'oid) [Gr. *kollōdēs* glutinous] 1. glutinous or resembling glue. 2. a state of matter in which the matter is dispersed in or distributed throughout some medium called the dispersion medium. The matter thus dispersed is called the disperse phase of the colloid system. The particles of the disperse phase are larger than an ordinary crystalloid molecule, but are not large enough to settle out under the influence of gravity; and they resist diffusion; they range in size from 1 to 100 nm. or up to 500 or 1000 nm., the range being indefinite and arbitrary. There are two kinds of colloids: *suspension colloids* (suspensoids), in which the disperse phase consists of particles of any insoluble substance, as a metal, and the dispersion medium may be gaseous, liquid, or solid; and *emulsion colloids* (emulsoids), in which the dispersion medium is usually water and the disperse phase consists of highly complex organic substances, such as starch or glue, which absorb much water, swell, and become uniformly distributed throughout the dispersion medium in a manner not well understood. The former tend to be less stable than the latter. Cf. *crystalloid*. 3. the translucent, yellowish, gelatinous substance resulting from colloid degeneration. **amyl c.**, **anodyne c.**, a local anodyne preparation containing $\frac{1}{2}$ ounce each of amyl hydride and absolute alcohol, 1 grain aconitine, 6 grains veratrine, and 2 oz. of collodion. **antimony trisulfide c.**, antimony sulfide (Sb₂S₃), a pharmaceutical aid. **association c.**, a colloid in which the dispersed particles are each made up of many molecules. **bovine c.**, conglutinin. **dispersion c.**, see *colloid*, def. 2. **emulsion c.**, see *colloid*, def. 2. **hydrophilic c.**, emulsion c.; see *colloid*, def. 2. **hydrophobic c.**, suspension c.; see *colloid*, def. 2. **irreversible c.**, a colloid that cannot be dispersed. Cf. *reversible c.* **lyophilic c.**, emulsion c.; see *colloid*, def. 2. **lyophobic c.**, suspension c.; see *colloid*, def. 2. **lyotropic c.**, emulsion c.; see *colloid*, def. 2. **protective c.**, one that is able to prevent the precipitation of another colloid. **reversible c.**, a colloid that can be dispersed after having been precipitated or a gel that can be converted into a sol. **stable c.**, reversible c. **stannous sulfur c.**, a sulfur colloid containing stannous ions formed by reacting sodium thiosulfate with hydrochloric acid, then adding stannous ions; a diagnostic aid (bone, liver, and spleen imaging). **suspension c.**, see *colloid*, 2nd def. **thyroid c.**, the colloid found in the acini of the thyroid gland, consisting essentially of thyroglobulin.

colloidal (kō-loi'dal) of the nature of a colloid. **c-S**, an iron-oxide preparation used intravenously in severe infections.

colloidin (ko-loi'din) a jelly-like substance, C₆H₁₂NO₆, one of the products of colloid degeneration.

colloidoclasia (ko-loi'do-kla'se-ah) [*colloid* + Gr. *klasis* breaking up] a breaking up of the physical equilibrium of the colloids of the body, producing anaphylactic shock attributed to absorption into the blood of unchanged colloids; called also *colloidoclastic crisis*.

colloidoclasia (kō-loi'do-kla'sis) colloidoclasia.

colloidophagy (kol'oi-dof'ah-je) [*colloid* + Gr. *phagein* to eat] resorption of colloid by macrophages under the influence of the thyroid-stimulating hormone.

colloma (kō-lo'mah) [Gr. *kolla* glue + *-oma*] (obs.) mucinous carcinoma.

collonema (kol'o-ne'mah) [Gr. *kolla* glue] (obs.) see *mucinous carcinoma*, under *carcinoma*.

collopexia (kol'o-pek'se-ah) [L. *collum* neck + Gr. *pēxis* fixing.] (obs.) the surgical fixation of the uterine neck.

colloxylin (kō-lok'si-lin) [Gr. *kolla* glue + *xylinos* woody] pyroxylin.

collum (kol'lum), pl. *col'la* [L.] [NA] 1. the neck: the portion of the body connecting the head and trunk; the lower front portion of the collum is called the cervix, and the back is called the nucha. 2. a general term applied to any necklike part of a body structure or organ. **c. anatom'icum hu'meri** [NA], anatomical neck of humerus: the somewhat constricted zone on the humerus just distal to the head, separating the articular surface from the tubercles. **c. chirur'gicum hu'meri** [NA], surgical neck of humerus: the region on the humerus just below the tubercles, where the bone becomes constricted. **c. cos'tae** [NA], neck of rib: the part of a rib extending from the head to the tubercle. **c. den'tis** [NA], the slightly constricted region of union of the crown and the root or roots of a tooth; called also *neck of tooth*, *cervix dentis*, and *dental neck*. **c. distor'tum**, torticollis. **c. fem'oris** [NA], neck of femur: the heavy column of bone connecting the head of the femur and the shaft. **c. follic'uli pi'li**, the narrow portion of a hair follicle between the hair bulb and the opening on the surface of the skin. **c. glan'dis pe'nis** [NA], neck of the glans penis: the constricted portion between the corona of the glans penis and the corpora cavernosa;

called also *cervix glandis*. **c. mal'lei** [NA], neck of malleus: the constricted portion of the malleus below the head; called also *cervix mallei*. **c. mandib'ulae** [NA], neck of mandible: the narrow portion supporting the condyle of the mandible; called also *c. processus condyloidei mandibulae*. **c. proces'sus condyloidei mandib'ulae**, *c. mandibulae*. **c. ra'dii** [NA], neck of radius: the somewhat constricted portion of the radius just distal to the head. **c. scap'ulae** [NA], neck of scapula: the somewhat constricted part of the scapula that surrounds the lateral angle. **c. ta'li** [NA], neck of talus: the constriction between the head and body of the talus. **c. val'gum**, coxa valga. **c. vesi'cae fel'leae** [NA], neck of gallbladder: the upper, constricted part of the gallbladder, between the body and the cystic duct.

collunaria (kol'u-na're-ah) plural of *collunarium*.

collunarium (kol'u-na're-um), pl. *colluna'ria* [L.] a nasal douche.

Collut. abbreviation for *L. collutorium* (mouth wash).

collutoria (kol'u-to're-ah) [L.] plural of *collutorium*.

collutorium (kol'u-to're-um), pl. *colluto'ria* [L.] collutory.

collutory (kol'u-to're) [L. *collutorium*] a mouthwash or gargle. **Miller's c.**, a mouth wash containing benzoic acid, tincture of krameria, oil of peppermint.

Collyr abbreviation for *L. collyrium*, an eye wash.

collyria (ko-lir'e-ah) [L.] plural of *collyrium*.

Collyriculum (kol'le-rik'u-lum) a genus of trematode parasites. **c. fa'ba**, a trematode parasite forming subcutaneous cysts in chickens, turkeys, and sparrows.

collyrium (kō-lir'e-um), pl. *colly'ria* [L.; Gr. *kollyrion* eye salve] a lotion for the eyes; an eye wash. **Beer's c.**, lead acetate, rose water, and spirit of rosemary.

coloboma (kol'o-bo'mah), pl. *colobomas* or *colobo'mata* [L.; Gr. *kolobōma*] an apparent absence or defect of some ocular tissue, usually resulting from a failure of a part of the fetal fissure to close. **atypical c's**, those involving areas of the eye which do

Coloboma of the iris.

not originate from the embryonic cleft. **bridge c.**, a variety of coloboma of the iris in which a strip of iris tissue bridges over the fissure. **c. of choroid**, fissure in the choroid coat due to persistence of a fetal fissure and causing a scotoma on the retina. **Fuchs's c.**, a small, crescent-shaped defect of the choroid, at the lower edge of the optic disk. **c. i'ridis**, **c. of iris**, a fissure of the iris, usually of the lower portion. **c. len'tis**, a defect in the lens of the eye in which the periphery is incomplete or indented. **c. lob'uli**, fissure of the ear lobe, which may occur as a congenital defect, or be acquired. **c. of optic nerve**, a defect attributed to the incomplete closure of the fetal fissure of the optic stalk. **c. palpebra'le**, a vertical fissure of an eyelid. **c. of retina**, **c. ret'inae**, a congenital fissure of the retina attributed to incomplete closure of the fetal fissure in the optic cup. **typical c's**, those that arise from faulty closure of the fetal fissure. **c. of vitreous**, a notch in the lower border of the vitreous.

colocecostomy (kol'o-se-kos'to-me) [*colon* + *cecum* + Gr. *stomoun* to provide with an opening, or mouth] cecocolostomy.

colocentesis (kol'o-sen-te'sis) [*colon* + Gr. *kentēsis* puncture] surgical puncture of the colon for the withdrawal of fluid or gas; called also *colopuncture*.

cholecystocystostomy (kol'o-ko'le-sis-tos'to-me) cholecystocolostomy.

coloclysis (kol'o-kli'sis) [*colon* + Gr. *klysis* a drenching] irrigation of the colon.

coloclyster (kol'o-kli-s'ter) an enema injected into the colon through the rectum.

colocolostomy (kol'o-ko-lo's'to-me) [*colon* + *colostomy*] surgical formation of an anastomosis between two portions of the colon.

colocutaneous (kol'o-ku-ta'ne-us) pertaining to the colon and skin, or communicating with the colon and the cutaneous surface of the body, as colocutaneous fistula.

colocynth (kol'o-sinth) [L. *colocynthis*; Gr. *kolokynthē*] the dried pulp of the unripe but full-grown fruit of *Citrullus colocynthis*; used as a drastic cathartic. Called also *bitter apple* and *bitter cucumber*.

colocynthidism (kol'o-sin'thī-dizm) poisoning by colocynth.

colocynthin (kol'o-sin'thin) a bitter, purgative glycoside, C₃₄H₅₄O₁₃, from colocynth.

colocynthis (kol'o-sin'this), gen. *colocyn'thidis* [L.] colocynth.

colodyspepsia (kol'o-dis-pep'se-ah) dyspepsia due to reflex disturbance set up by the constipated colon.

coloenteritis (kol'o-en'ter-i'tis) [*colon* + *enteritis*] enterocolitis.

colofixation (kol'o-fik-sa'shun) the fixation or suspension of the colon in cases of ptosis.

Cologel (kol'o-jel) trademark for a preparation of methylcellulose.

colohepatopexy (kol'o-hep'ah-to-pek'se) [*colon* + Gr. *hēpar* liver + *pēxis* fixation] fixation of the colon to the liver to prevent the formation of adhesions between the liver and the stomach, which occasionally occurs after removal of the gallbladder.

coloileal (kol'o-il'e-al) ileocolic.

cololysis (ko-lol'i-sis) [*colon* + Gr. *lysis* dissolution] the division of pericolic adhesions.

colometrometer (kol'o-mē-trom'ē-ter) an apparatus for measuring the activity of the colon.

colon (kol'on) [L.; Gr. *kolon*] [NA] that part of the large intestine which extends from the cecum to the rectum; sometimes used inaccurately as a synonym for the entire large intestine. **c. ascen'dens** [NA], **ascending c.**, the portion of the colon between the cecum and the right colic flexure. **c. descen'dens** [NA], **descending c.**, the portion of the colon between the left colic flexure and the sigmoid colon at the pelvic brim; the portion of the descending colon lying in the left iliac fossa is sometimes called the *iliac colon*. **giant c.**, megacolon. **iliac c.**, that part of the descending colon lying in the left iliac fossa and continuous with the sigmoid colon. **irritable c.**, see *mucous colitis*, under *colitis*. **lead-pipe c.**, a term applied to the radiological appearance of a diseased colon which has become shortened, contracted, and rigid owing to inflammatory fibrosis. In such a colon the normal haustral pattern is lost and function may be impaired. This is usually a consequence of chronic ulcerative or granulomatous colitis. **left c.**, the distal portion of the large intestine, developing embryonically from the hind gut and functioning in the storage and elimination from the body of nonabsorbed residue. **pelvic c.**, sigmoid c. **right c.**, the proximal portion of the large intestine, extending from the ileocecal valve usually to a point proximal to the left colic flexure, developing embryonically from the terminal portion of the midgut and functioning in absorption. **sigmoid c.**, **c. sigmoi'deum** [NA], the S-shaped part of the colon which lies in the pelvis, extending from the pelvic brim to the third segment of the sacrum, and continuous above with the descending (or iliac) colon and below with the rectum; called also *pelvic c.* and *sigmoid flexure*. **spastic c.**, see *mucous colitis*, under *colitis*. **transverse c.**, **c. transver'sum** [NA], the portion of the colon that runs transversely across the upper part of the abdomen, from the right to the left colic flexure.

colonalgia (kol'on-al'je-ah) [*colon* + *-algia*] pain in the colon.

colonic (ko-lon'ik) pertaining to the colon.

colonitis (kol'o-ni'tis) colitis.

colonization (kol'ō-nī-za'shun) innidiation.

Colonna's operation (kō-lōn'ah) [Paul Colonna, American orthopedic surgeon, 1892-1966] see under *operation*.

colonopathy (kol'o-nop'ah-the) [*colon* + Gr. *pathos* disease.] any disease or disorder of the colon.

colonorrhagia (kol'on-o-ra'je-ah) hemorrhage from the colon.

colonorrhea (kol'on-o-re'ah) [*colon* + Gr. *rhoia* flow] mucous colitis.

colonoscope (ko-lon'o-skōp) [*colon* + Gr. *skopein* to examine] an elongated flexible endoscope which permits visual examination of the entire colon; called also *coloscope*.

colonoscopy (kol'on-os'ko-pe) 1. endoscopic examination of the colon during laparotomy by insertion of a sigmoidoscope proximally and distally through a colotomy. 2. examination by means of the colonoscope. Called also *coloscopy*.

colony (kol'o-ne) [L. *colonia*] a collection or group of bacteria in a culture derived from the increase of an isolated single organism or group of organisms. **bitten c.**, a colony from the edge of which a portion has been removed as though bitten out, but has really been lysed out by the action of bacteriophage; called also *nibbled c.* **butyrous c.**, a colony of butter-like consistency. **D. c.**, dwarf c. **daughter c.**, a small bacterial colony formed as a papilla on the surface or in the margin of a normal colony. **disgonic c.**, a bacterial colony that grows feebly and slowly. **dwarf c.**, a bacterial colony smaller than normal and containing poorly developed forms; called also *D. colony*. **effuse c.**, one that is very thin and flat. **H c.** (Ger. *Hauch* film), a type of bacterial colony that spreads in a thin film over the culture medium. **M. c.**, mucoid c. **matte c.** (Ger. "mat"), a variant of the R. colony in β -hemolytic streptococci, indicating virulence. **mucoid c.**, a colony that is large, dome-shaped, and shiny, and

may be drawn out in viscid strings by a needle; called also *M. colony*. **nibbled c.**, bitten c. **O c.** (Ger. *ohne Hauch* without film), a bacterial colony that is compact as contrasted with an H colony. **R c.**, **rough c.**, a bacterial colony showing a rough, wrinkled, granular, flattened surface; known as R-type. **S c.**, **smooth c.**, a bacterial colony showing the smooth, glistening, rounded, regular surface, normally shown by colonies of organisms; known as S-type. **satellite c.**, a bacterial colony that grows more vigorously in the immediate vicinity of a colony of some other organism, as *Hemophilus influenzae* near a colony of staphylococci; called also *bacterial satellite*.

colopathy (ko-lop'ah-the) colonopathy.

colopexia (ko'lo-pek'se-ah) colopexy.

colopexotomy (ko'lo-pek-sot'o-me) [*colon* + Gr. *pēxis* fixation + *tomē* a cutting] incision and fixation of the colon.

colopexy (ko'lo-pek'se) [*colon* + Gr. *pēxis* fixation] fixation or suspension of the colon by surgical means.

colophony (ko-lof'ō-ne) [L. *colophonia*; Gr. *Kolophōn* (Colophon) a city of Asia Minor] former name of rosin.

coloplication (ko'lo-pli-ka'shun) [*colon* + L. *plica* fold] the operation of infolding or taking tucks in the wall of the colon in cases of dilatation to shorten or decrease its lumen.

coloproctectomy (ko'lo-prok-tek'to-me) surgical removal of the colon and rectum.

coloproctitis (ko'lo-prok-ti'tis) inflammation of the colon and rectum.

coloproctostomy (ko'lo-prok-tos'to-me) [*colon* + Gr. *prōktos* anus + *stomoun* to provide with an opening, or mouth] coloproctostomy.

coloptosis (ko'lop-to'sis) [*colon* + Gr. *ptōsis* fall] downward displacement of the colon, a term based on the outmoded concept that variations in the position of abdominal organs are pathological.

colopuncture (ko'lo-punk'tūr) colocentesis.

Color. abbreviation for L. *colore'tur*, let it be colored.

color (kul'or) [L. *color*, *colos*] 1. a property of a surface or substance resulting from absorption of certain of the incident light rays and reflection of others falling within the range of wavelengths (roughly 370–760 mμ) adequate to excite the retinal receptors. 2. radiant energy within the range of adequate chromatic stimuli of the retina, that is, between the infrared and ultraviolet. 3. a sensory impression of one of the rainbow hues, excited by stimulation of the retinal receptors, notably the cones, by radiant energy of the appropriate wavelength. **complementary c's**, a pair of colors the sensory mechanisms for which are so linked that when they are mixed on the color wheel they cancel each other out, leaving neutral gray; complementary colors are also associated with each other in after-image and contrast. **confusion c's**, different colors that are likely to be mistakenly matched by individuals with defective color vision (e.g., violet and blue with defect of vision for red); for this reason they are combined in the design on charts used for detecting different types of color vision defects. **contrast c.**, an illusory tinge of complementary hue or brightness induced by a vivid hue or luminance on the area surrounding it in the visual field. **incidental c.**, that seen as an after-image. **metameric c's**, colors that appear identical to the normal eye, but which are the resultants of different combinations of chromatic stimuli or wavelengths. **Munsell's c's**, a set of standardized colors, representing 40 hues in varying degrees of brightness and saturation, identifiable by a simple letter-number formula. **primary c's**, a small number of fundamental colors, usually referred to the retinal receptor cones, mixture of varying proportions of the approximate stimuli of which will yield the 150 discriminable hues of normal human vision. According to (a) the Newton theory, the seven rainbow hues: violet, indigo, blue, green, yellow, orange, red; (b) the painter and printer: blue (cyan), yellow, red (or magenta); (c) the Helmholtzian theory (old school): red, green, blue (or violet); (d) the Hering theory: four paired complementary hues, red-green and blue-yellow, plus a black-white pair. (e) *Other theories list five to seven colors as primaries.* **pseudoisochromatic c's**, colors that appear the same to an individual with defective color vision; see *confusion c's*. **pure c.**, a color whose stimulus consists of homogeneous wavelengths, with little or no admixture of other hues. **saturation c.**, one that is high on the chroma or vividness scale, the farthest possible removed from gray.

coloration (kul'er-a'shun) the state of being colored; an arrangement of colors distinguishing a species. **protective c.**, coloration that blends with the background, making the organism less visible to predators. **warning c.**, brilliant, conspicuous coloration of poisonous or unpalatable animals, as a warning to potential predators.

colorectal (kol'o-rek'tal) pertaining to or affecting the colon and rectum.

colorectitis (ko'lo-rek-ti'tis) coloproctitis.

colorectostomy (ko'lo-rek-tos'to-me) [*colon* + *rectum* + Gr. *stomoun* to provide with an opening, or mouth] formation of an artificial opening between the colon and rectum; called also *coloproctostomy*.

colorectum (kol'o-rek'tum) the colon and rectum considered as a unit.

colorimeter (kul'or-im'ē-ter) [*color* + Gr. *metron* measure] an instrument for measuring color differences; especially one for measuring the color of the blood in order to determine the proportion of hemoglobin. Called also *chromometer*. **Duboscq's c.**, an apparatus for measuring concentration by comparing the tint of the substance in question against that of a standard. **titration c.**, a device using colorimetric technique to automatically stop titration at the end point.

colorrhaphy (ko-lor'ah-fe) [*colon* + Gr. *rhaphe* suture] suture or repair of the colon.

colorrhea (ko'lo-re'ah) a discharge of mucus from the colon.

coloscope (kol'o-skōp) colonoscope.

coloscopy (ko-lo'sko-pe) colonoscopy.

colosigmoidostomy (ko'lo-sig'moi-dos'to-me) surgical creation of an artificial opening between the sigmoid and the proximal portion of the colon.

colostomy (ko-lo'sto-me) [*colon* + Gr. *stomoun* to provide with an opening, or mouth] the surgical creation of an opening between the colon and the surface of the body; also used to refer to the opening, or stoma, so created. **dry c.**, colostomy performed in the left half of the colon, the discharge from the stoma consisting of soft or formed fecal residue with no urine. **Hartmann's c.**, see under *procedure*. **ileotransverse c.**, surgical anastomosis between the ileum and the transverse colon. **wet c.**, colostomy in (a) the right half of the colon, the drainage from which is liquid in character, or (b) the left half of the colon following anastomosis of the ureters to the sigmoid or descending colon so that urine is also expelled through the same stoma.

colostriac (ko-lo'strik) pertaining to or occurring in colostrum.

colostrorrhea (ko-lo's'tro-re'ah) [L. *colostrum* + Gr. *rhoia* flow] spontaneous discharge of colostrum.

colostrous (ko-lo's'trus) [L. *colostrosus*] containing or filled with colostrum.

colostrum (kō-lo's'trum) [L.] the thin, yellow, milky fluid secreted by the mammary gland a few days before or after parturition. It contains up to 20 per cent protein, predominant among which are immunoglobulins, representing the antibodies found in maternal blood. It contains more minerals and less fat and carbohydrate than does milk. It also contains many colostrum corpuscles and usually will coagulate on boiling due to a large amount of lactalbumin. **c. gravidarum**, the colostrum secreted before parturition, and especially that secreted during the first few days following delivery. **c. puerperarum**, the colostrum secreted after labor.

colotomy (ko-lo'to-me) [*colo* + Gr. *tomē* a cutting] incision into the colon for removal of a foreign body, polyp, or other benign tumor. Cf. *colostomy*.

colotyphoid (ko'lo-ti'foid) typhoid fever in which there is follicular ulceration of the colon, with extensive lesions in the small intestine.

colovaginal (ko'lo-vaj'ē-nal) pertaining to or communicating with the colon and vagina, as a colovaginal fistula.

colovesical (ko'lo-ves'i-kal) pertaining to or communicating with the colon and urinary bladder, as a colovesical fistula.

colp- see *colpo-*.

colpalgia (kol-pal'je-ah) [*colp-* + *-algia*] colpodynia; vaginodynia.

colpatresia (kol'pah-tre'ze-ah) [*colp-* + *atresia*] atresia or occlusion of the vagina.

colpectasia (kol-pek-ta'se-ah) [*colp-* + Gr. *ektasis* distention + *-ia*] distention or dilatation of the vagina.

colpectasis (kol-pek'tah-sis) colpectasia.

colpectomy (kol-pek'to-me) [*colp-* + Gr. *ektomē* excision] excision of the vagina.

colpeurynter (kol'pu-rin'ter) [*colp-* + Gr. *eurynein* to dilate] metreurynter.

colpeuryxis (kol-pu'ri-sis) [*colp-* + Gr. *eurynein* to dilate] dilatation of the vagina.

colpismus (kol-piz'mus) [Gr. *kolpos* vagina] vaginismus.

colpitis (kol-pit'ik) pertaining to colpitis.

colpitis (kol-pi'tis) [*colpo-* + *-itis*] inflammation of the vagina; see also *vaginitis*. **c. emphysemato'sa**, **emphysematous c.**, inflammation of the vagina characterized by the presence of small gas-filled spaces in the lamina propria mucosae. **c. granulo'sa**, vaginitis verrucosa. **c. mycot'ica**, inflammation of the vagina due to the presence of fungi.

colpo-, **colp-** (kol'po, kolp) [Gr. *kolpos* a bosom or fold; vagina] a combining form denoting relationship to the vagina.

colpocele (kol'po-sēl) [*colpo-* + Gr. *kēlē* hernia] 1. hernia into the vagina. 2. colpoptosis.

colpoceliocentesis (kol'po-se'le-o-sen-te'sis) puncture of the abdominal cavity through the vagina, usually the posterior vault.

colpoceliotomy (kol'po-se'le-ot'o-me) [*colpo-* + Gr. *kōilia* belly

+ *tomē* a cutting] incision into the abdomen through the vaginal wall.

colpocleisis (kol'po-kli'sis) [*colpo-* + Gr. *kleisis* closure] surgical closure of the vaginal canal.

colpocystitis (kol'po-sis-ti'tis) [*colpo-* + Gr. *kystis* bladder + *itis*] inflammation of the vagina and of the bladder.

colpocystocele (kol'po-sis-to-sēl) [*colpo-* + Gr. *kystis* bladder + *kēlē* hernia] hernia of the bladder into the vagina, of which the anterior wall becomes prolapsed.

colpocystoplasty (kol'po-sis-to-plas'te) [*colpo-* + Gr. *kystis* bladder + *plassein* to form] plastic operation for the repair of the vesicovaginal wall.

colpocystotomy (kol'po-sis-tot'o-me) [*colpo-* + Gr. *kystis* bladder + *tomē* cutting] incision of the bladder through the vaginal wall.

colpocystouterocystotomy (kol'po-sis'to-u-re'ter-o-sis-to'o-me) [*colpo-* + Gr. *kystis* bladder + *ourēter* ureter + *cystotomy*] the operation of exposing the ureteral orifices by incising the walls of the bladder and vagina.

colpocytoqram (kol'po-si'to-gram) a tabulation of the various types of cells observed in smears taken from the mucous membrane of the vagina.

colpocytology (kol'po-si-tol'o-je) the quantitative and differential study of cells exfoliated from the epithelium of the vagina.

colpodynia (kol'po-din'e-ah) [*colpo-* + Gr. *odynē* pain] pain in the vagina; called also *colpalgia* and *vaginodynia*.

colpoepisiorrhaphy (kol'po-ē-piz'e-or'ah-fe) [*colpo-* + Gr. *episeion* pubes + *rhaphe* suture] (obs.) the operation of suturing the vagina and vulva.

colpohyperplasia (kol'po-hi-per-pla'ze-ah) [*colpo-* + *hyperplasia*] excessive growth of the mucous membrane and wall of the vagina. **c. cystica**, a variety characterized by the presence of cysts in the mucous membrane. **c. emphysemato'sa**, a variety characterized by the presence of small gas-filled spaces in the mucous membrane.

colpohysterectomy (kol'po-his'ter-ek'to-me) [*colpo-* + *hysterectomy*] (obs.) surgical removal of the uterus by a vaginal operation.

colpohysteropexy (kol'po-his'ter-o-pek'se) [*colpo-* + Gr. *hystera* uterus + *pēxis* fixation] (obs.) vaginal hysteropexy.

colpohysterorrhaphy (kol'po-his'ter-or'ah-fe) [*colpo-* + Gr. *hystera* uterus + *rhaphe* suture] (obs.) vaginal hysteropexy.

colpohysterotomy (kol'po-his'ter-ot'o-me) [*colpo-* + *hysterotomy*] (obs.) surgical incision of the vagina and uterus.

colpomicroscope (kol'po-mi'kro-skōp) an instrument especially designed for insertion in the vagina, for the microscopic examination of tissues of the cervix in situ; it has higher powers of magnification than the colposcope.

colpomicroscopic (kol'po-mi'kro-skop'ik) performed with the colpomicroscope, or pertaining to colpomicroscopy.

colpomicroscopy (kol'po-mi-kros'ko-pe) examination of tissues of the cervix in situ with the colpomicroscope.

colpomycosis (kol'po-mi-ko'sis) [*colpo-* + Gr. *mykēs* fungus] (obs.) colpitis mycotic.

colpomyomectomy (kol'po-mi'o-mek'to-me) [*colpo-* + *myomectomy*] myomectomy performed through a vaginal incision.

colpoperineoplasty (kol'po-per'i-ne-o-plas'te) [*colpo-* + Gr. *perinaion* perineum + *plassein* to form] plastic surgery of the vagina and perineum.

colpoperineorrhaphy (kol'po-per'i-ne-or'ah-fe) [*colpo-* + Gr. *perinaion* perineum + *rhaphe* suture] suture of the ruptured vagina and perineum; vaginoperineorrhaphy.

colpoplexy (kol'po-pek'se) [*colpo-* + Gr. *pēxis* fixation] suture of a relaxed vagina to the abdominal wall; vaginofixation.

colpoplasty (kol'po-plas'te) [*colpo-* + Gr. *plassein* to shape] plastic surgery involving the vagina; called also *vaginoplasty*.

colpoποίηση (kol'po-poi-e'sis) [*colpo-* + Gr. *poiein* to make] the formation of a vagina by plastic operation.

colpopolypus (kol'po-pol'e-pus) [*colpo-* + *polypus*] (obs.) a vaginal polyp.

colpoptosis (kol'po-to'sis) [*colpo-* + Gr. *ptōsis* prolapse] prolapse or falling of the vagina; called also *colpocele*.

colporectopexy (kol'po-rek'to-pek'se) [*colpo-* + *rectum* + Gr. *pēxis* fixation] suspension of a prolapsed rectum by suture to the vaginal wall.

colporrhagia (kol'po-ra'je-ah) [*colpo-* + Gr. *rhēgnynai* to burst out] vaginal hemorrhage.

colporrhaphy (kol'por'ah-fe) [*colpo-* + Gr. *rhaphe* suture] 1. the operation of suturing the vagina. 2. the operation of denuding and suturing the vaginal wall for the purpose of narrowing the vagina.

colporrhexis (kol'po-rek'sis) [*colpo-* + Gr. *rhēxis* rupture] laceration of the vagina.

colposcope (kol'po-skōp) [*colpo-* + Gr. *skopein* to examine] originally a speculum for examining the vagina; now an instrument inserted into the vagina for examination of the tissues of the

vagina and cervix by means of a magnifying lens. Cf. *colpomicroscope*.

colposcopic (kol'po-skop'ik) relating to the colposcope or to colposcopy.

colposcopy (kol-pos'ko-pe) examination of the cervix and vagina by means of the colposcope.

colpospasm (kol'po-spazm) [*colpo-* + Gr. *spasmos* spasm] vaginal spasm.

colpostat (kol'po-stat) [*colpo-* + Gr. *statos* standing] an appliance for retaining something, such as radium, in the vagina.

colpostenosis (kol'po-stē-no'sis) [*colpo-* + Gr. *stenōsis* stricture] contraction or narrowing of the vagina.

colpostenotomy (kol'po-stē-not'o-me) [*colpo-* + Gr. *stenōsis* stricture + *tomē* a cutting] a cutting operation for stricture or atresia of the vagina.

colpotharm (kol'po-therm) [*colpo-* + Gr. *thermē* heat] an electrical apparatus for applying heat within the vagina.

colpotomy (kol-pot'o-me) [*colpo-* + Gr. *tomē* a cutting] incision of the vagina with entry into the cul-de-sac; called also *vaginotomy*. **posterior c.**, culdotomy.

colpoureterocystotomy (kol'po-u-re'ter-o-sis-tot'o-me) [*colpo-* + *ureter* + *cystotomy*] the exposure of the orifices of the ureters by cutting through the walls of the vagina and bladder.

colpoureterotomy (kol'po-u-re'ter-ot'o-me) incision of the ureter through the vagina, performed for the relief of ureteral stricture.

colpoxerosis (kol'po-ze-ro'sis) [*colpo-* + Gr. *xēros* dry] abnormal dryness of the vulva and vagina.

colterol mesylate (kōl'tē-rōl) chemical name: (+)-4-[2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl] 1,2-benzenediol methane-sulfonate (salt); a bronchodilator, C₁₂H₁₉NO₃·CH₃O₃S.

Coluber (kol'u-ber) a genus of nonvenomous snakes (family Colubridae) found in northeastern Asia and North America. **C. constrictor**, is the American blacksnake or black racer.

colubrid (kol'ü-brid) 1. any snake of the family Colubridae. 2. of or pertaining to the family Colubridae.

Colubridae (kol-u'bri-de) [L. *coluber* serpent] a family of snakes; most of the species are harmless, though the boomslang of South Africa is venomous. See table accompanying snake.

columbium (ko-lum'be-um) a former name of the element *nio-bium*.

columella (kol'u-mel'lah), pl. *columel'lae* [L.] 1. a little column. 2. in molds, the central axis of the spore case, around which the spores are arranged, especially in the series Gasteromycetes. Called also *columnella*. **c. coch'leae**, modiolus. **c. for'nicis** (obs.), columna fornicis. **c. na'si**, the fleshy distal margin of the nasal septum.

columellae (kol'u-mel'le) [L.] plural of *columella*.

column (kol'um) [L. *colum'na*] an anatomical part in the form of a pillar-like structure, sometimes used specifically for the gray column of the spinal cord; see also *columna*. **c's of abdominal ring**, thickened fibers of the aponeurosis of the external oblique muscle around the superficial abdominal ring. **anal c's**, columnae anales. **anterior c. of fauces**, arcus palatoglossus. **anterior c. of spinal cord**, columna anterior medullae spinalis. **anterolateral c.**, funiculus lateralis medullae spinalis. **c's of Bertin**, columnae renales. **c. of Burdach**, fasciculus cuneatus medullae spinalis. **Clarke's c. of spinal cord**, nucleus thoracicus. **dorsal c.**, columna vertebralis. **enamel c's**, prismata adamantina. **fat c's**, columns of fatty tissue extending from the cutaneous connective tissue to the hair follicles and sweat glands; called also *columnae adiposae* and *Warren's fat c's*. **fleshy c's of heart**, trabeculae carneae cordis. **c's of folds of tongue**, papillae foliatae. **fornix c.**, **c. of fornix**, columna fornicis. **fractionating c.**, an apparatus for separating the volatile constituents of a solution by distillation. **fundamental c.**, fasciculi proprii. **c. of Goll**, fasciculus gracilis medullae spinalis. **c. of Gowers**, tractus spinocerebellaris anterior. **gray c's of spinal cord**, columnae griseae. **gray c. of spinal cord, anterior**, columna anterior medullae spinalis. **gray c. of spinal cord, lateral**, columna lateralis medullae spinalis. **gray c. of spinal cord, posterior**, columna posterior medullae spinalis. **c. of Kölliker**, sarcostyle, def. 2. **lateral c. of spinal cord**, columna lateralis medullae spinalis. **c. of Lissauer**, tractus dorsolateralis. **c's of Morgagni**, columnae anales. **muscle c.**, sarcostyle, def. 2. **c. of nose**, septum nasi. **positive c.**, a pinkish stream of light seen when a current of high potential is passed through a tube from which the air has been partly exhausted. **posterior c. of fauces**, arcus palatopharyngeus. **posterior c. of spinal cord**, columna posterior medullae spinalis. **posteroexternal c.**, the outer wider portion of the posterior column of the spinal cord. **posteromedian c. of medulla oblongata**, fasciculus gracilis medullae oblongatae. **posteromedian c. of spinal cord**, fasciculus gracilis medullae spinalis. **Rathke's c's**, two cartilages at the anterior end of the notochord. **rectal c's**, columnae anales. **renal c's of Bertin**, columnae renales. **c. of Rolando**, a name once given an elevation on the lateral side of the fasciculus cuneatus of

the medulla oblongata. **c's of rugae of vagina**, columnae rugarum vaginae. **c. of Sertoli**, an elongated Sertoli cell in the parietal layer of the seminiferous tubules. **spinal c.**, columna vertebralis. **c. of Spitzka-Lissauer**, tractus dorso-lateralis. **Stilling's c.**, nucleus thoracicus. **striomotor c.**, an efferent column of the anterior horn of the spinal cord supplying striated muscle. **Türk's c.**, tractus pyramidalis anterior. **c's of vagina**, columnae rugarum vaginae. **vertebral c.**, the columnar assemblage of the vertebrae from the cranium through the coccyx; called also *axon*, *columna vertebralis* [NA], *backbone*, *spine*, and *dorsal or spinal c.* **Warren's fat c's**, fat c's.

columna (ko-lum'nah), pl. *columnae* [L.] [NA] column: a pillar-like structure; in anatomical nomenclature, used to designate a pillar-like structure or part. **columnae adipo'sae**, fat columns. **columnae ana'les** [NA], **columnae a'ni**, anal columns: vertical ridges or folds of mucous membrane at the upper half of the anal canal; called also *columnae rectales* [Morgagnii], *rectal columns*, *columns of Morgagni*, and *mucous folds of rectum*. **c. ante'rior medul'lae spina'lis** [NA], the ventral portion of the gray substance of the spinal cord; in transverse section it is seen as a horn. Called also *anterior column* or *horn of spinal cord*. **columnae berti'ni**, columnae renales. **columnae car'neae cor'dis**, trabeculae carnae cordis. **c. for'niceis** [NA], fornix column: either of the two columnar masses of fibers diverging from the anterior end of the body of the fornix to descend into the diencephalon; called also *anterior pillar of fornix*, *column of fornix*, and *columnella fornicis*. **columnae gris'ae** [NA], the longitudinally oriented parts of the spinal cord in which the nerve cell bodies are found, comprising the gray substance of the spinal cord; called also *gray columns of spinal cord*. **c. latera'lis medul'lae spina'lis** [NA], the lateral portion of the gray matter of the spinal cord, in transverse section seen as a horn; it is present only in the thoracic and upper lumbar regions. Called also *lateral column* or *horn of spinal cord*. **c. na'si**, septum nasi. **c. poste'rior medul'lae spina'lis** [NA], the dorsal portion of the gray substance of the spinal cord, in transverse section seen as a horn; called also *posterior column* or *horn of spinal cord*. **columnae recta'les** [Morgagnii], columnae anales. **columnae rena'les** [NA], renal columns: inward extensions of the cortical structure of the kidney, between the renal pyramids; called also *columnae renales* [Bertini], *columnae bertini*, and *renal columns of Bertin*. **columnae rena'les** [Berti'ni], columnae renales. **c. ruga'rum ante'rior vagi'nae** [NA], a well-marked longitudinal ridge on the anterior wall of the vagina. **c. ruga'rum poste'rior vagi'nae** [NA], a well-marked longitudinal ridge on the posterior wall of the vagina. **columnae ruga'rum vagi'nae** [NA], columns of rugae of vagina: well-marked longitudinal ridges on either the anterior (c. rugarum anterior vaginae) or posterior (c. rugarum posterior vaginae) wall of the vagina; called also *columns of vagina*. **c. vertebra'lis** [NA], the columnar assemblage of the vertebrae from the cranium through the coccyx; called also *axon*, *vertebral*, *dorsal*, or *spinal column*, *backbone*, and *spine*.

columnae (ko-lum'ne) [L.] plural of *columna*.

columnella (kol'um-nel'ah) [L.] columnella.

columning (kol'um-ing) columnization.

columnization (kol'um-ni-za'shun) the supporting of the prolapsed uterus with tampons.

Coly-Mycin M (kol'e-mi'sin) trademark for preparations of colistimethate sodium.

Coly-Mycin S (kol'e-mi'sin) trademark for a preparation of colistin sulfate.

colypeptic (ko'le-pep'tik) kolypeptic.

coma (ko'mah) [L.; Gr. *kōma*] 1. a state of unconsciousness from which the patient cannot be aroused, even by powerful stimulation; called also *examination*. 2. the optical aberration produced when an image is received upon a screen which is not exactly at right angles to the line of propagation of the incident light. **agrypnodal c.**, c. vigil. **alcoholic c.**, stupor accompanying severe alcoholic intoxication. **alpha c.**, coma in which there are electroencephalographic findings of dominant alpha-wave activity. **apoplectic c.**, the stupor that accompanies stroke. **diabetic c.**, the coma of severe diabetic acidosis. **hepatic c.**, **c. hepat'icum**, coma accompanying hepatic encephalopathy. **hyperosmolar nonketotic c.**, diabetic coma in which the level of ketone bodies is normal, due to hyperosmolality of extracellular fluid resulting in dehydration of intracellular fluid; often a consequence of overtreatment with hyperosmolar solutions. **c. hypochlorae'micum**, coma occurring in disorders associated with sodium chloride loss. **irreversible c.**, brain death; see under *death*. **Kussmaul's c.**, the coma and air hunger of diabetic acidosis. **metabolic c.**, the coma accompanying metabolic encephalopathy. **c. somnolen'tium**, catapora. **trance c.**, lethargy produced by hypnosis. **uremic c.**, lethargic state due to uremia. **c. vigil**, apparent wakefulness with absent or grossly diminished response to outside stimuli; called also *agrypnodal c.* and *akinetic autism*.

comatose (ko'mah-tōs) pertaining to or affected with coma.

combing (kōm'ing) hersage.

combustion (kom-bust'yun) [L. *combustio*] rapid oxidation with emission of heat.

comedo (kom'ē-do), pl. *comedones*. A plug of keratin and sebum within the dilated orifice of a hair follicle, frequently containing the bacteria *Corynebacterium acnes*, *Staphylococcus albus*, and *Pityrosporon ovale*; called also *blackhead*. See also *acne vulgaris*.

comedocarcinoma (kō-me'do-kar-si-no'mah) an intraductal carcinoma of the breast, the central cells of which are degenerated and easily expressed from the cut surface of the tumor.

comedogenic (kom'ē-do-jen'ik) producing comedones.

comedomastitis (kō-me'do-mas-ti'tis) mammary duct ectasia.

comes (ko'mēz), pl. *comites* [L. "*companion*"] an artery or vein that accompanies a nerve trunk, as *arteria comitans nervi ischiadici*.

comfimeter (kum-fim'ē-ter) an apparatus devised by Leonard Hill to measure the cooling power of the atmosphere at body temperature; it is used as a guide to keeping comfortable conditions in rooms.

comfortization (kum'fort-i-za'shun) the scientific application of physiological principles for the promotion of comfort in potentially stressful situations, as in aircraft design.

comites (kom'i-tēz) plural of *comes*.

commasculation (kom-mas'ku-la'shun) homosexuality between men.

commensal (kō-men'sal) [L. *com-* together + *mensa* table] 1. living on or within another organism, and deriving benefit without injuring or benefiting the other individual. 2. an organism living on or within another, but not causing injury to the host. See *symbiosis*.

commensalism (kō-men'sal-izm") symbiosis (q.v.) in which one population (or individual) gains from the association and the other is neither harmed nor benefited.

comminuted (kom'i-nūt'ed) [L. *comminutus*, from *com* together + *minuere* to diminish] broken or crushed into small pieces, as a comminuted fracture.

comminution (kom'i-nu'shun) [L. *comminutio*] the act of breaking, or condition of being broken, into small fragments, as of a fractured bone.

Commiphora (kom-if'o-rah) a genus of trees of the East Indies and Africa. *C. molmol* and other species yield myrrh. *C. opobalsamum* Engl. (Burseraceae) yields balsam of Gilead.

commissura (kom'mi-su'rah), pl. *commissurae* [L. "a joining together"] [NA] commissure: a site of union of corresponding parts; a general term used to designate such a junction of corresponding anatomical structures, frequently, but not always, across the midplane of the body. **c. al'ba medul'lae spina'lis** [NA], the structure formed by fibers crossing from one side of the spinal cord to the other, anterior and posterior to the central canal; called also *white commissure of spinal cord*. **c. ante'rior al'ba medul'lae spina'lis**, the aggregate of fibers crossing from one side of the spinal cord to the other, anterior to the central canal; see *c. alba medullae spinalis* [NA]. **c. ante'rior cer'ebri** [NA], anterior commissure of cerebrum: the band of fibers passing transversely through the lamina terminalis and connecting the parts of the two cerebral hemispheres, and consisting of a pars anterior and a pars posterior. **c. ante'rior gris'ea medul'lae spina'lis**, a network of gray matter anterior to the central canal of the spinal cord. **c. bre'vis lobo'rum poste'rio'rum inferio'rum cerebel'li** (obs.), tuber vermis. **c. cerebel'li**, pons, def. 2. **c. for'niceis** [NA], commissure of fornix: a band of fibers connecting the hippocampi of the two sides through the body of the fornix; called also *c. hippocampi*, and *hippocampal commissure*. **c. habenula'rum** [NA], commissure of habenulae: a band of fibers of the stria medullaris that pass through the habenula of each side to decussate and terminate in the habenula of the other side. **c. hippocam'pi**, c. fornix. **c. infe'rior** [Gudde'ni], see *commissurae supraopticae*. **c. labio'rum ante'rior** [NA], anterior commissure of labia: the junction of the two labia majora anteriorly, at the lower border of the pubic symphysis. **c. labio'rum o'ris** [NA], commissure of lips of mouth: the junction of the upper and lower lips at either side of the mouth. **c. labio'rum poste'rior** [NA], posterior commissure of labia: the apparent junction of the labia majora posteriorly, formed by the forward projection of the tendinous center of the perineum into the pudendal cleft. **c. labio'rum puden'di**, see *c. labiorum anterior* and *c. labiorum posterior*. **c. mag'na cer'ebri**, corpus callosum. **c. me'dia cer'ebri**, c. mol'li (obs.), adhesio interthalamica. **c. oliva'rum**, see *fibrae arcuatae internae*. **c. palpebra'rum latera'lis** [NA], the lateral junction of the superior and inferior eyelids; called also *c. palpebrarum temporalis* and *lateral commissure of eyelids*. **c. palpebra'rum media'lis** [NA], the medial junction of the superior and inferior eyelids; called also *c. palpebrarum nasalis* and *medial commissure of eyelids*. **c. palpebra'rum nasa'lis**, c. palpebrarum medialis. **c. palpebra'rum tempora'lis**, c. palpebrarum lateralis. **c. poste'rior cer'ebri** [NA], posterior commissure of cerebrum: a large fiber bundle that crosses from one side of the brain to the other just dorsal to the

point where the aqueduct opens into the third ventricle. **c. poste'rior medul'lae spina'lis**, a transverse bar of gray substance connecting the lateral crescents of gray matter and lying posterior to the central canal of the spinal cord. **c. supe'rior** [Meyner'ti], see *commissurae supraopticae*. **commissu'rae supraop'ticae** [NA], supraoptic commissures: commissural fibers that cross the midline of the human brain dorsal to the caudal border of the optic chiasma, connecting the medial geniculate body and inferior colliculus of one side with those of the opposite side; they represent the combined commissures of Gudden and Meynert.

commissurae (kom'mī-su're) [L.] plural of *commissura*.

commissural (kom-mis'u-ral) pertaining to or acting as a commissure.

commissure (kom'fī-shūr) a site of union of corresponding parts; see *commissura*. Used also with specific reference to the sites of junction between adjacent cusps of the valves of the heart. **anterior c. of cerebrum**, commissura anterior cerebri. **anterior c. of labia**, commissura labiorum anterior. **For-el's c.**, a name once applied to a band that joins the subthalamic nucleus of each side. **c. of fornix**, commissura fornicis. **Gudden's c.**, see *commissurae supraopticae*. **c. of habenu-lae**, commissura habenularum. **hippocampal c.**, commissura fornicis. **interthalamic c.**, adhesio interthalamica. **laryngeal c.**, the region of junction (anterior or posterior) of the two sides of the larynx. **lateral c. of eyelids**, commissura palpebrarum lateralis. **c. of lips of mouth**, commissura labiorum oris. **medial c. of eyelids**, commissura palpebrarum medialis. **Meynert's c.**, see *commissurae supraopticae*. **middle c. of cerebrum**, adhesio interthalamica. **optic c.** (obs.), chiasma opticum. **posterior c.**, commissura posterior cerebri. **posterior c., chiasmatic**, see *commissurae supraopticae*. **posterior c. of labia**, commissura labiorum posterior. **superior c.**, see *commissurae supraopticae*. **supraop-tic c's**, commissurae supraopticae. **white c. of spinal cord**, commissura alba medullae spinalis. **white c. of spi-nal cord, lateral**, funiculus lateralis medullae spinalis.

commissurorrhaphy (kom'fī-shūr-or'ah-fe) [*commissure* + Gr. *rhaphē* a seam] suture of the component parts of a commissure, to decrease the size of the orifice.

commissurotomy (kom'fī-shūr-ot'o-me) [*commissure* + Gr. *tomē* cutting] surgical incision or digital disruption of the component parts of a commissure to increase the size of the orifice; commonly utilized to separate the adherent, thickened leaflets of a stenotic mitral valve.

commitment (kō-mit'ment) the legal consignment of a mental patient to an institution for treatment.

commotio (kō-mo'she-o) [L. "disturbance"] a concussion; a violent shaking, or the shock which results from it. **c. cer'ebri**, concussion of the brain. **c. ret'inae**, edema around the macular region of the retina, caused by a severe blow to the eyeball, and producing a permanent central scotoma as a result of destruction of the delicate cones in the fovea. Called also *Berlin's disease* or *edema*, and *commotio of the retina*. **c. spina'lis**, concussion of the spine.

communicable (kō-mu'nī-kah-b'l) capable of being transmitted from one person or animal to another.

communicans (kō-mu'nē-kanz) [L.] communicating; used in anatomical nomenclature to denote a communicating structure, as a nerve.

communis (kō-mu'nis) [L.] common; [NA] a general term denoting a structure serving several branches.

community (kō-mu'ni-te) a body of individuals living in a defined area or having a common interest or organization. **bi-otic c.**, an assemblage of populations living in a defined area. **climax c.**, the final, stable, and mature community in a series that appears in succession, which is in equilibrium with the environmental conditions and is composed of a definite group of plant and animal species. The entire sequence of communities is called a *sere* and the individual transitional communities are *seral stages*. **seral c.**, see under *stage*. **therapeutic c.**, a specially structured mental hospital or ward employing group and milieu therapy and encouraging the patient to function within social norms.

Comolli's sign (kom-ol'ēz) [Antonio Comolli, Italian pathologist, born 1879] see under *sign*.

Comp. abbreviation for *L. compos'itus*, compound.

compact (kom-pakt') dense; having a dense structure.

compacta (kom-pak'tah) the more superficial and denser portion of the decidua basalis; stratum compactum.

compaction (kom-pak'shun) a complication of labor in twin births in which there is simultaneous full engagement of the leading fetal poles of both twins, so that the true pelvic cavity is filled and further descent is prevented. Cf. *interlocking*.

comparascope (kom-par'ah-skōp') a device attached to a microscope for the purpose of comparing two slides.

comparator (kom'pah-ra'tor) a simple colorimeter consisting of a block of wood with holes in which to place the test tubes to be

compared, and transverse holes through which to view the colors; called also *comparator block*.

compartment (com-part'ment) a small enclosure within a larger space. **muscular c.**, lacuna musculorum. **vascular c.**, lacuna vasorum.

compartmentalization, compartmentation (kom'part-men'tah-li-za'shun; kom-part'men-ta'shun) the natural partitioning within cells due to the selectively permeable membranes which enclose each of the separate parts (mitochondria, lysosomes, Golgi complex, etc.), enabling each part to regulate its own contents.

compatibility (kom-pat'fī-bil'i-te) [L. *compatibilis* accordant] the quality of being compatible.

compatible (kom-pat'fī-b'l) capable of harmonious coexistence; of medications, suitable for simultaneous administration without nullification or aggravation of the effects of either.

Compazine (kom'pah-zēn) trademark for preparations of prochlorperazine maleate.

compensation (kom'pen-sa'shun) [L. *compensatio*, from *cum* together + *pensare* to weigh] the counterbalancing of any defect of structure or function. In psychoanalysis, the mechanism by which an approved character trait is put forward to conceal from the ego the existence of an opposite trait. In cardiology, the maintenance of an adequate blood flow without distressing symptoms, accomplished by such cardiac and circulatory adjustments as tachycardia or cardiac hypertrophy, or increase of blood volume by sodium and water retention. **broken c.**, inability of the heart to maintain sufficient blood flow through the fissures, so that stagnation ensues and symptoms of stasis are produced. **dosage c.**, in genetics, the mechanism by which the effect of the two X chromosomes of the normal female is rendered identical to that of the one X chromosome of the normal male. See *Lyon hypothesis*, under *hypothesis*.

compensatory (kom-pen'sah-to're) making good a defect or loss; restoring a lost balance.

competence (kom'pē-tens) the ability of an organ or part to perform adequately any function required of it. In embryology, the ability of embryonic cells to differentiate into cell types determined by inductors. **embryonic c.**, the ability of embryonic tissue to respond normally to the influence of an inductor. **immunologic c.**, immunocompetence.

competition (kom'pē-tish'un) the phenomenon in which two structurally similar molecules "compete" for a single binding site on a third molecule. See *competitive inhibition*, under *inhibition*.

compimeter (kom-pim'ē-ter) an instrument for measuring the field of vision.

complaint (kom-plānt') a symptom, disease, or disorder. **chief c.**, the symptom or group of symptoms about which the patient first consults the doctor; the presenting symptom. **summer c.**, cholera morbus.

complement (kom'plē-ment) a complex series of enzymatic proteins occurring in normal serum that interact to combine with antigen-antibody complex, producing lysis when the antigen is an intact cell. Complement comprises eleven discrete proteins, or nine functioning components symbolized as C1 through C9, with C1 being divided into subcomponents C1q, C1r, and C1s. Activated forms are indicated by a bar over the numeral (e.g., C1̄), or over the numerals signifying a complex of components (e.g., C567). Biologically active fragments of a component are designated by the lower-case *a* or *b* (e.g., C3a). The components combine in various sequences and interact to participate in biological activities such as cell lysis, anaphylotoxin activities, promotion of phagocytosis, etc. (see Plate XIII). The complement system is known to be activated by IgG and IgM and by the properdin system, cobra venom, and other factors. Called also *alexin*. See also under *fixation*, and see *alternative pathway*, under *pathway*. **dominant c.**, that one of several complements which exerts the specific action. **endocellular c.**, endocomplement.

complemental (kom'plē-men'tal) complementary.

complementary (kom'plē-men'tā-re) [L. *comple* to fill] supplying a defect, or helping to do so; making complete; accessory.

complementation (kom'ple-men-ta'shun) in genetics, the restoration of wild-type function as a result of two distinct mutations on the same chromosome. In virology, the interaction of two defective bacteriophages that results in the replication of both, as occurs in some mixed infections of bacterial cells. **interal-lelic c.**, intragenic c. **intercistronic c., intergenic c.**, the essentially full restoration of wild-type function in a *cis-trans* test when two mutations, in transportation, are located in two different cistrons (genes). **intracistronic c., intragenic c.**, the partial restoration of function sometimes seen in the *cis-trans* test when the two mutations are located at different sites within the same cistron.

complemented (kom'plē-ment'ed) joined with complement so as to be active.

complementoid (kom'plē-men'toid) in early immunological theory, a complement that has lost its activity, the zymotonic group being destroyed, without affecting its binding property with amboceptors. A complementoid, produced by heating a comple-

ment, is capable of producing an anticomplement when injected.

complementophil (kom'plē-men'to-fil) [L. *complement* + Gr. *philein* to love] in early immunological theory, possessing an affinity for a complement, a term applied to that element of the amboceptor to which the complement becomes attached. See *Ehrlich's side-chain theory*, under *theory*.

complex (kom'pleks) [L. *complexus* woven together] 1. complicated; not simple. 2. the sum or combination of various things, like or unlike, as a *complex* of symptoms; see *syndrome*. 3. Jung's term for a group of associated, partially or wholly repressed ideas that can evoke emotional forces which influence an individual's behavior, usually outside his awareness. 4. that portion of an electrocardiographic tracing which represents the systole of an atrium or ventricle. **adrenochrome monosemicarbazone sodium salicylate c.**, carbazochrome salicylate. **anomalous c.**, a complex that varies from the normal type, as an electrocardiographic complex. **antigen-antibody c.**, molecules of antibody and antigen bound together in various molecular ratios, some of which are soluble and some of which are insoluble and precipitate out of solution. Complexes whose antibody Fc regions possess the capability may fix complement, reducing serum levels of complement components in patients with immune complex diseases. These complexes are the mediators of Type III hypersensitivity reactions such as Arthus reactions, and serum sickness and immune complex glomerulonephritis. **atrial c.**, the P wave of the electrocardiogram; see *electrocardiogram*. **avian leukosis c.**, see *avian leukosis*, under *leukosis*. **Cain c.**, the rivalry, competition, or destructive impulses between brothers. (*Genesis 4*: the first born of Adam and Eve, who murdered his brother Abel.) **calcarine c.**, calcar avis. **castration c.**, the fear (usually fantasied) of damage to sexual organs or of loss of sexual organs as punishment for forbidden sexual desires; called also *castration anxiety*. **Clérambault-Kandinsky c.**, a mental state in which the patient thinks his mind is controlled by some outside influence or by another person. **Diana c. (obs.)**, masculine psychic tendencies in a female. (*Roman mythology*: goddess of the moon, chastity, and hunting, and protectress of women.) **EAHF c.**, the symptom complex of eczema, asthma, and hay fever. **Eisenmenger c.**, a defect of the interventricular septum with severe pulmonary hypertension, hypertrophy of the right ventricle, and latent or overt cyanosis. **Electra c.**, libidinous fixation of a daughter toward her father; some authors use Oedipus complex (q.v.) to refer equally to son-mother and daughter-father attachments while others reserve Oedipus complex for the former and Electra complex for the latter. (*Greek legend*: the daughter of Agamemnon and Clytemnestra, who incited her brother Orestes to kill their mother and their mother's former lover and new husband, Aegisthus, to avenge the murder of their father.) Called also *father c.* Cf. *Oedipus c.* **factor IX c.** [USP], a sterile, freeze-dried powder consisting of partially purified Factor IX fraction, as well as concentrated Factors II, VII, and X fractions, of venous plasma from healthy human donors. **father c.**, Electra c. **Ghon c.**, primary c. **Golgi c.**, a complex cuplike structure within cells, made up of several elements, each consisting of a number of flattened sacs (cisternae) with associated vacuoles and vesicles. Golgi complexes are membrane sites of the formation of the carbohydrate side chains of glycoproteins and mucopolysaccharides, and of other substances. The secretion vacuoles migrate through the cell membrane and release the glycoproteins and mucopolysaccharides, and thus play a role in internal and external secretion. Cytochemical studies have shown that they are also sites of formation of primary lysosomes and give rise to the acrosome of spermatozoa and the nematocyst of *Hydra*. Called also *Golgi apparatus* and *Golgi body*. **haptan-carrier c.**, the antigen formed by the coupling of a haptan and a carrier protein. **hemoglobin-haptoglobin c.**, the binding resulting from the extremely high affinity between haptoglobin and hemoglobin, so that no free hemoglobin is detectable in plasma unless extensive intravascular hemolysis has saturated all the available haptoglobin. **immune c.**, antibody combined with its specific antigen; if complement is fixed by the antigen-antibody complexes, deposition in tissues, such as renal glomeruli, may lead to inflammation and tissue injury. Use of the term *immune complex* usually denotes an association with disease, whereas the term *antigen-antibody complex* is usually used as the general term. **inclusion c's**, compounds in which molecules of one type are enclosed within cavities in the crystalline lattice of another substance. **inferiority c.**, a combination of emotionally charged feelings of inferiority that operate in the unconscious to produce timidity or, as a compensation, exaggerated aggressiveness and expression of superiority (superiority c.). **Jocasta c.**, libidinous fixation of a mother toward a son. (*Greek legend*: the queen of Thebes, who married her son, Oedipus.) Cf. *Lear c.* **jumped process c.**, dislocation of articular processes of spine. **junctional c.**, the intercellular arrangement between adjacent columnar epithelial cells, consisting of the zonula occludens, the zonula adherens, and the desmosome. **Lear c.**, libidinous fixation of a father toward his daughter. (Shakespeare's *King Lear*.) Cf. *Jocasta c.* **Lutembacher's c.**, see under *syndrome*. **major histocompatibility c.**, the chromosomal region containing the genes that control the histocompatibility antigens (see under *antigen*); in man, it is designated

HLA. Abbreviated MHC. Immune response (IR) genes located in the I region of the MHC control the capacity to develop specific immune responses to thymus-dependent antigens. **Meyenburg's c's**, bile duct hamartomas. **mother c.**, Oedipus c. **Oedipus c.**, libidinous fixation of a son toward his mother. (*Greek legend*: the son of Jocasta and the Theban king, Laius, who, raised by a foster parent, killed his father and subsequently married his mother. Later, when he discovered the true relationship, he blinded himself [edipism].) Called also *mother c.* Cf. *Electra c.* **Parkinson-dementia c.**, a condition characterized by a gradually progressive parkinsonian state associated with progressive dementia. It occurs among the Chamorro population of Guam and is sometimes associated with the familial form of amyotrophic lateral sclerosis. **pore c.**, a nuclear pore and its annulus considered together. **primary c.**, 1. the combination of a parenchymal pulmonary lesion (*Ghon focus* or *tubercle*) and a corresponding lymph node focus, occurring in primary tuberculosis, usually in children; it may undergo cellular necrosis and eventually calcify. Similar lesions may also be associated with other mycobacterial infections and with fungal infections such as histoplasmosis and coccidioidomycosis. Called also *Ghon c.* and *Ranke c.* 2. the primary cutaneous lesion at the site of infection in the skin, e.g., chancre in syphilis and tuberculous chancre. **primary inoculation c.**, **primary tuberculous c.**, tuberculous chancre. **Ranke c.**, primary c. **sex c.**, the correlation between the internal secretions and the sex functions. **superiority c.**, see *inferiority c.* **symptom c.**, a set of symptoms that occur together; the sum of signs of any morbid state; a syndrome. **synaptonemal c.**, a thick, threadlike structure formed during the zygotene (synaptic) stage of meiosis by the intertwining of two leptotene chromosomes so that they are indistinguishable separately. **ureterotrigonal c.**, ureterovesical junction. **urobilin c.**, a hypothetical substance consisting of a number of urobilinogen molecules linked together, which is the form in which urobilinogen exists in the blood and tissues. **ventricular c's**, the Q, R, S, and T waves of the electrocardiogram, representing ventricular electrical activity. **zymase c.**, the enzyme system of systems that function in alcoholic fermentation.

complexion (kom-plek'shun) [L. *complexio* combination] 1. the color and appearance of the skin of the face. 2. (*obs.*) physical constitution or bodily habit.

complexus (kom-plek'sus) [L. "encompassing"] musculus semispinalis capitis.

compliance (kom-pli'ans) a quality of yielding to pressure or force without disruption, or an expression of the measure of the ability to do so, as an expression of the distensibility of an air- or fluid-filled organ, e.g., the lung or urinary bladder, in terms of unit of volume change per unit of pressure change. Cf. *elastance*.

complicated (kom-pli'kat'ed) [L. *complicare* to infold] involved; associated with other injuries, lesions, or diseases.

complication (kom-pli'ka'shun) [L. *complicatio* from *cum* together + *plicare* to fold] 1. a disease or diseases concurrent with another disease. 2. the concurrence of two or more diseases in the same patient.

complan (kom'plon) a cistron.

Compcillin-VK (com'po-sil'in) trademark for a preparation of penicillin V potassium.

component (kom-po'nent) a constituent element or part; specifically in neurology, a series of neurons forming a functional system for conducting the afferent and efferent impulses in the somatic and splanchnic mechanisms of the body. **anterior c.**, Angle's term for "a forward propelling force which is the result of meshing and pounding of the occlusal inclined planes of the teeth and the mesial inclination of the teeth." **group-specific c.**, a serum group of particular use in anthropological studies because of the great differences in gene frequency in different populations. **M c.**, a single species of homogeneous immunoglobulins of any class (IgA, IgG, etc.) appearing as a very narrow band on electrophoresis. It occurs in such diseases as multiple myeloma, macroglobulinemia of Waldenström, heavy chain disease, and lichen myxedematosus. **plasma thromboplastin c.** (PTC), Factor IX; see *coagulation factors*, under *factor*. **secretory c.**, see under *piece*. **somatic motor c.**, the system of neurons that conduct impulses to the somatic effectors (skeletal muscle) of the body. **somatic sensory c.**, the system of neurons conducting impulses from the somatic receptors. **splanchnic motor c.**, the system of neurons conducting impulses to the splanchnic (visceral) effectors (cardiac muscle, smooth muscle, and glands). **splanchnic sensory c.**, the system of neurons conducting impulses from the splanchnic receptors.

compos mentis (kom'pos men'tis) [L.] sound of mind; sane.

compound (kom-pownd) [L. *componere* to place together] 1. made of two or more parts or ingredients. 2. any substance made up of two or more kinds of materials. 3. in chemistry, a substance that consists of two or more chemical elements in union. **c. A**, 11-dehydrocorticosterone. **acyclic c.**, an open-chain compound; see under *chain*. **addition c.**, a compound formed by the union of two or more compounds or elements. **ali-**

CLASSICAL COMPLEMENT ACTIVATION

Schematic representation of classical complement pathway: Two molecules of IgG, termed a "doublet," combine with homologous antigenic determinants on a red blood cell surface and activate the first complement component by interacting with C1q. This is followed by C1r and C1s activation. The reaction sequence of the classical complement pathway is C1,4,2,3,5,6,7,8,9. This biochemical pathway leads to the formation of a "hole" in the cell membrane, leading to cell swelling and lysis. Although C9 is not essential for lysis, it accelerates the lytic reaction. This in contrast to the alternative or properdin pathway which provides a mechanism to mediate the bactericidal and opsonic effects of complement without requiring specific antibody. From the C3 step forward both pathways follow a similar course.

phatic c., an open-chain compound that does not contain multiple bonds; a saturated compound. See under *chain*. **APC c.**, a preparation of acetylsalicylic acid, phenacetin, and caffeine citrate. **aromatic c.**, a closed-chain compound that contains bonds similar to those in benzene; see under *chain*. **c. B.**, corticosterone. **benzene c's**, aromatic compounds. **benzoin tincture c.**, see under *tincture*. **binary c.**, a compound whose molecule is composed of atoms of only two elements. **clathrate c's**, inclusion complexes in which molecules of one type are trapped within cavities of the crystalline lattice of another substance; called also *clathrates* or *occlusion c's*. **closed-chain c.**, see under *chain*. **coal-tar c.**, a closed-chain compound; see under *chain*. **condensation c.**, a compound that is formed by union of substances with the loss of one or more molecules, usually of low molecular weight, as water or ammonia. **cyclic c.**, a closed-chain compound; see under *chain*. **diaz c.**, a compound containing the group $-N_2-$. **c. E.**, cortisone. **endothermic c.**, one whose formation is attended with absorption of heat. **energy-rich c's**, high-energy c's. **exothermic c.**, one whose formation is attended with loss of heat. **c. F.**, cortisol. **fatty c.**, an open-chain compound; see under *chain*. **Grignard c.**, see under *reagent*. **heterocyclic c.**, a chemical substance that contains a ring-shaped nucleus composed of dissimilar elements. **high-energy c's**, a group of pyrophosphates that yield high levels of negative free energies on hydrolysis, and so are basic to the energy supply of living organisms. Among the most important are ATP, acetyl CoA, aminoacyl adenylates, phosphocreatinine, and phosphoenol pyruvate. Called also *energy-rich c's*. **Hurler-Scheie c.**, mucopolysaccharidosis I-H/S. **inorganic c.**, a compound that contains no carbon. **isocyclic c.**, a chemical substance that contains a ring-shaped nucleus composed of the same elements throughout. **isopropyl alcohol rubbing c.**, a solution containing 70 per cent isopropyl alcohol in water; used as a rubefacient. **Kendall's c. A.**, 11-dehydrocorticosterone. **Kendall's c. B.**, corticosterone. **Kendall's c. E.**, cortisone. **Kendall's c. F.**, cortisol. **low-energy c's**, compounds containing phosphate ester or other linkages that yield relatively low levels of negative free energies on hydrolysis, including AMP, glucose-1-phosphate, and glucose-6-phosphate. **nonpolar c's**, compounds in which electrons are shared equally by the two atoms forming a bond and which therefore do not ionize in solution, e.g., the paraffins, olefins, and cyclic compounds. **occlusion c's**, clathrate c's. **open-chain c.**, see under *chain*. **organic c.**, a compound of chemical elements containing carbon atoms. **organometallic c.**, one in which carbon is linked to a metal. **paraffin c.**, an open-chain compound; see under *chain*. **polar c's**, compounds in which the electrons are unequally shared by the two atoms forming the bond and which therefore may act as dipoles or, in some instances, completely ionize. They include the alcohols, water, ammonia, etc. **quaternary c.**, one composed of four elements. **quaternary ammonium c.**, see *tetraethylammonium*. **ring c.**, see *closed chain*, under *chain*. **saturated c.**, a compound in which the combining capacities of all the elements are satisfied. **substitution c.**, a compound formed by replacement of elements of a molecule by other elements. **ternary c.**, **tertiary c.**, a compound composed of three elements. **unsaturated c.**, a compound in which the combining capacities of all the elements are not satisfied; see *unsaturated*, 2nd def. **Wintersteiner's c. F.**, cortisone.

compress (kom'pres) [L. *compressus*] a pad or bolster of folded linen or other material, applied with pressure; it is sometimes medicated, and may be wet or dry, hot or cold. **cribriform c.**, one perforated with holes, like a sieve, to permit the escape of fluids from an underlying wound. **fenestrated c.**, one pierced with a hole for the discharge of purulent material or to permit inspection of the underlying wound. **graduated c.**, one composed of layers of gradually decreasing size. **Priessnitz c.**, a cold wet compress; called also *Priessnitz's bandage*.

compressibility (kom-pres'i-bil'i-te) the volume change per unit of a substance produced by a unit increase in pressure.

compression (kom-pres'un) [L. *compressio* from *comprimere* to squeeze together] 1. the act of pressing together; an action exerted upon a body by an external force which tends to diminish its volume and augment its density. 2. in embryology, the shortening or omission of certain stages during development. **c. of the brain**, a condition in which the brain is compressed by fractures, tumors, blood clots, abscesses, etc. **digital c.**, compression of a blood vessel by the fingers for the purpose of checking hemorrhage. **instrumental c.**, compression of a blood vessel by instruments. **pneumatic c.**, compression applied to a body part, e.g., the calf, by means of compressed air. **spinal c.**, a condition in which pressure is exerted on the spinal cord, as by a tumor, spinal fracture, etc.; its manifestations, which vary with location and degree of pressure, may include pain, paresthesias, and sensory and motor disturbances.

compressor (kom-pres'or) [L.] any agent by which compression may be achieved. **Deschamps' c.**, an instrument for the direct compression of an artery. **c. na'ris**, pars transversa musculi nasalis. **Sehrt's c.**, see under *clamp*. **shot c.**, a forceps for compressing split shot applied to sutures; see also *shotted suture*, under *suture*. **c. ure/thrae**, musculus sphincter ure-

thrae. **c. vagi'nae**, the bulbospongiosus muscle in the female.

compressorium (kom'pres-o're-um), pl. *compressoria* [L.] a device for making graduated pressure upon objects under microscopic examination.

compromised (kom'pro-mizd) lacking adequate resistance to infection, or lacking the ability to mount an adequate immune response, owing to a course of treatment (irradiation, etc.) or to an underlying disorder (leukemia, etc.).

Compton effect (komp'ton) [Arthur Holly Compton, American physicist, 1892-1962; winner of the Nobel prize in physics for 1927] see under *effect*.

compulsion (kom-pul'shun) an irresistible impulse to perform some act contrary to one's better judgment or will. **repetition c.**, in psychoanalytic theory, the impulse to reenact earlier emotional experiences.

compulsive (kom-pul'siv) pertaining to or characterized by compulsion.

con- [L.] a prefix signifying with or together.

conalbumin (kon'al-bu'min) a glucoprotein, formed by the acidification of egg white to pH 3.9, containing 2.1 per cent of mannose and 0.7 per cent of galactose; the noncrystalline part of egg albumin.

conamen (ko-na'men) [L. "an effort"] (*obs.*) attempted suicide.

conarial (ko-na're-al) pertaining to the conarium.

conarium (ko-na're-um) [L.; Gr. *kōnaron* a cone] the pineal body; so called from its conical shape.

conation (ko-na'shun) in psychology, the power that impels to effort of any kind; the conscious tendency to act.

conative (kon'ah-tiv) pertaining to the basic strivings of a person, as expressed in his behavior and actions.

conavanine (kon-ah-van'in) a basic amino acid from soy bean meal, α -amino- γ -guanidinoxybutyric acid.

concameration (kon-kam'er-a'shun) (*obs.*) an arrangement of connecting cavities or chambers.

concanavilin (kon'ka-nav'i-lin) either of two phytohemagglutinins isolated along with canavalin from the meal of the Jack bean (*Canavalia ensiformis* D.C., and other species of *Canavalia*), which agglutinate the blood of mammals as a result of reaction with polyglucosans. *Concanavilin A* has been shown to inhibit the growth of ascites tumors.

concassation (kon'kah-sa'shun) the act of breaking up roots or woods into small pieces in order that their active principles may be more easily extracted by solvents.

concatenate (kon-kat'e-nāt) [L. *con* together + *catena* chain] to fasten or link together, as in a chain.

concatenation (kon-kat'e-na'shun) a series of events or objects occurring together or in sequence.

Concato's disease (kon-kah'tōz) [Luigi Maria Concato, Italian physician, 1825-1882] see under *disease*.

concave (kon'kāv) [L. *concavus*] having a rounded, somewhat depressed surface, resembling the hollowed inner surface of a segment of a sphere.

concavity (kon-kav'i-te) [L. *concavitas*, from *con* together + *cavus* hollow] a hollowed-out area on the surface of an organ or other structure.

concavoconcave (kon-ka'vo-kon'kāv) concave on each of two opposite surfaces.

concavoconvex (kon-ka'vo-kon'veks) concave on one surface and convex on the opposite one.

conceive (kon-sēv') 1. to become pregnant. 2. to take in, grasp, or form in the mind.

concentrate (kon'sen-trāt) [L. *con* together + *centrum* center] 1. to bring to a common center; to gather together at one point. 2. To increase the strength by diminishing the bulk of, as of a liquid; to condense. 3. A drug or other preparation that has been strengthened by the evaporation of its nonactive parts. **liver c.**, a dried, unfractionated product produced from a water extract derived from mammalian liver; used as a hematopoietic. **plant protease c.**, a concentrate of bromelains, proteolytic enzymes derived from pineapple plants; used to reduce inflammation and edema, and to accelerate tissue repair. **vitamin c.**, a concentrated medicinal preparation of a vitamin or vitamins.

concentration (kon'sen-tra'shun) [L. *concentratio*] 1. increase in strength by evaporation. 2. the ratio of the mass or volume of a solute to the mass or volume of the solution or solvent. Cf. *molarity*, *molality*, *normality*, and *mol fraction*. **hydrogen ion c.**, the degree of concentration of hydrogen ions in a solution; it is related approximately to the pH of the solution by the equation $(H^+) = 10^{-pH}$. **ionic c.**, the number of moles of an ion that are contained in the unit volume of a solution or in the unit mass of solvent. **limiting isorrheic c. (LIC)**, the upper limit of urinary concentration at which a steady state consistent with effective physiologic regulation of solute and water balance can be maintained. **mass c.**, the mass of a constituent substance divided by the volume of the mixture, as milligrams per liter (mg/l), etc. **maximum urinary c. (MUC)**, the highest

attainable concentration of a solute or of the collective solutes of the urine. **MC c.**, the limiting living population density of microorganisms that is possible in any fluid culture medium. **minimal isorrheic c. (MIC)**, the lower limit of urinary concentration at which a steady state consistent with effective physiologic regulation of solute and water balances can be maintained. **molar c.**, substance c. **substance c.**, the amount of a constituent substance in moles (millimoles or micromoles) divided by the volume of the mixture, as millimoles per liter (mmol./l.), etc. Called also *molar c.*

concentric (kon-sen'trik) [L. *concentricus*, from *con* together + *centrum* center] having a common center; extending out equally in all directions from a common center.

concept (kon'sept) the image of a thing as held in the mind. **second messenger c.**, the concept that a hormone (first messenger) activates adenylyl cyclase in the surface membrane of its target tissue, increasing the intracellular level of cyclic AMP, which acts as a "second messenger" and carries out the work of the hormone within the target cell.

conception (kon-sep'shun) [L. *conceptio*] 1. the onset of pregnancy, marked by implantation of the blastocyst; the formation of a visible zygote. 2. concept.

conceptive (kon-sep'tiv) 1. able to become pregnant. 2. pertaining to conception.

conceptus (kon-sep'tus) [L.] the sum of derivatives of a fertilized ovum at any stage of development from fertilization until birth, including extraembryonic membranes as well as the embryo or fetus.

concha (kong'kah), pl. *con'chae* [L.; Gr. *konchē*] a shell; used in anatomical nomenclature to designate a structure or part that resembles a shell in shape. **c. of auricle, c. auric'ulae** [NA], the hollow of the auricle of the external ear, bounded anteriorly by the tragus and posteriorly by the anthelix. **c. bullo'sa**, a cystic distention of the middle nasal concha, sometimes seen in chronic rhinitis. **c. of cranium, calvaria.** **ethmoidal c., inferior, c. nasalis media.** **ethmoidal c., superior, c. nasalis superior.** **ethmoidal c., supreme, c. nasalis suprema.** **c. of eye, orbita.** **inferior nasal c., c. nasalis inferior.** **inferior turbinate c., c. nasalis inferior.** **middle nasal c., c. nasalis media.** **c. nasa'lis infe'rior** [NA], inferior nasal concha: a thin bony plate with curved margins, articulating with the ethmoid, maxilla, and lacrimal and palatine bones, and forming the lower part of the lateral wall of the nasal cavity, and the mucous membrane covering the plate; called also *inferior spongy or turbinate bone* and *maxilloturbinal bone*. **c. nasa'lis me'dia** [NA], middle nasal concha: the

Nasal conchae (Anson).

lower of two bony plates projecting from the inner wall of the ethmoid labyrinth and separating the superior from the middle meatus of the nose, and the mucous membrane covering the plate; called also *inferior ethmoidal c., middle turbinate bone, and ethmoid cornu*. **c. nasa'lis supe'rior** [NA], superior nasal concha: the upper of two bony plates projecting from the inner wall of the ethmoid labyrinth and forming the upper boundary of the superior meatus of the nose, and the mucous membrane covering the plate; called also *superior ethmoidal c. and superior turbinate or spongy bone*. **c. nasa'lis supe'ria** [NA], supreme nasal concha: a thin bony plate occasionally found projecting from the inner wall of the ethmoid labyrinth above the bony superior nasal concha, and the mucous membrane covering the plate; called also *highest turbinate bone, supreme nasal or ethmoidal bone, and supreme ethmoidal c.* **nasoturbinal c., agger nasi.** **sphenoidal c.,** 1. concha sphenoidalis. 2. ala minor ossis sphenoidalis. **c. sphenoida'lis** [NA], a thin curved plate of bone at the anterior and lower part of the body of the sphenoid bone, on either side, forming part of the roof of the nasal cavity; called also *sphenoturbinal bone* or *ossicles, Bertin's bone* or *ossicles*, and *sphenoidal c.* **superior nasal c., c. nasalis superior.**

conchae (kong'ke) [L.] plural of *concha*.

conchiform (kong'ki'form) [L. *concha* shell + *forma* shape] shaped like one half of a bivalve shell.

conchiolin (kong-ki'o-lin) [Gr. *konchē* shell] a substance, isomeric with ossein, from the outer surface of shells of mollusks.

conchiolinososteomyelitis (kong-ki'o-lin-os'te-o-mi'ē-li'tis) a form of osteomyelitis occurring in pearl workers.

conchitis (kong-ki'tis) an inflammation of a concha.

conchoidal (kong-ko'i'dal) like a shell.

conchoscope (kong'ko-skōp) [Gr. *konchē* shell + Gr. *skopein* to examine] a speculum for examining the walls of the nasal cavity.

conchotome (kong'ko-tōm) [Gr. *konchē* shell + *tomē* a cutting] an instrument for the surgical removal of the nasal conchae.

conchotomy (kong-kot'o-me) incision of a nasal concha.

Concis. abbreviation for L. *conci'sus*, cut.

conclination (kon'kli-na'shun) [L. *con* together + *clinatus* leaning] inward rotation of the upper pole of the vertical meridian of each eye. Cf. *disclination*.

concoction (kon-kok'shun) [L. *concoctio*] 1. a mixture of medicinal substances usually prepared by the aid of heat. 2. the digestive process.

concomitant (kon-kom'i-tant) [L. *concomitans*, from *cum* together + *comes* companion] accompanying; accessory; joined with another.

conconscious (kon-kon'shus) Prince's term to denote associated mental processes of which the subject is not aware.

concordance (kon-kor'dans) in genetics, the occurrence of a given trait in both members of a twin pair, as opposed to discordance.

concordant (kon-kor'dant) exhibiting concordance.

concrement (kon'kre-ment) [L. *concrementum*] a concretion, especially a calcified tubercle or similar mass.

conrescence (kon-kres'ens) [L. *con* together + *crecere* to grow] a growing together; a union of parts originally separate. In embryology, the flowing together and piling up of cells. In dentistry, the union of the roots of two approximating teeth by a deposit of cementum.

concrete (kon-krēt') [L. *concretus*] 1. solid; tangible. 2. a mass of coalesced particles, solidified or hardened after having been more or less fluid.

concretio (kon-kre'she-o) [L.] concretion. **c. cor'dis, c. pericar'dii**, a form of adhesive pericarditis in which the pericardial cavity is obliterated.

concretion (kon-kre'shun) [L. *concretio*, from *cum* together + *crecere* to grow] 1. a calculus or inorganic mass in a natural cavity or in the tissues of an organism. 2. abnormal union of adjacent parts. 3. a process of becoming harder or more solid. **alvine c.**, a bezoar, or calculus, in the stomach or intestine. **calculus c.**, articular calculus. **preputial c.**, a concretion formed beneath a tight foreskin through deposit of urinary salts on the accumulated smegma. **prostatic c's**, rounded and often lamellated masses of amyloid-like material present in many prostatic alveoli. **tophic c.**, tophus, def. 1.

concretism (kon-krēt'izm) thinking and behaving at simple and concrete (as contrasted with abstract) levels which are related to sensation.

concussion (kon-kush'un) [L. *concussio*] a violent jar or shock, or the condition which results from such an injury. **abdominal c., hydraulic**, abdominal injury produced in persons in the water by violent underwater explosions. **air c.**, see under *blast*, 3rd def. **c. of the brain**, loss of consciousness as the result of a blow to the head. In *mild* concussion there is transient loss of consciousness with possible impairment of the higher mental functions, such as retrograde amnesia and emotional lability. In *severe* concussion there is prolonged unconsciousness with impairment of the functions of the brain stem, such as transient loss of respiratory reflex, vasomotor activity, and dilatation of the pupils. Concussion is sometimes differentiated from contusion in that in the former the injury is functional, whereas in the latter it is organic. **c. of the labyrinth**, deafness with tinnitus, resulting from a blow on or explosion near the ear. **pulmonary c.**, mechanical damage to the lungs produced by an explosion. **c. of the retina**, commotio retinae. **c. of the spinal cord**, transient spinal cord dysfunction due to mechanical injury.

condensation (kon'den-sa'shun) [L. *condensatio*, from *con* together + *densare* to make thick] 1. the act of rendering, or process of becoming, more compact; in dentistry, the packing of filling materials into tooth cavities to eliminate voids within the cavity or filling. 2. a Freudian term for a fusion of events, thoughts or concepts to produce a new and simpler concept. 3. the process of passing from a gaseous to a liquid or solid phase.

condenser (kon-den'ser) [L. *condensare* to make thick, press close together] 1. a vessel or apparatus for condensing gases or vapors. 2. a device on a microscope used to supply illumination of the degree necessary for the specimen under study to be easily visible, and under the conditions necessary for the full resolving power of the instrument to be realized. 3. an apparatus by

which charges of electricity can be accumulated, consisting of two conducting surfaces separated by a nonconductor. 4. in dentistry, an instrument used to pack a plastic filling material into the prepared cavity of a tooth. **Abbe's c.**, as originally designed, a two-lens condenser combination placed below the stage of a microscope. **cardioid c.**, a special type of condenser for illuminating a specimen in darkfield microscopy. **darkfield c.**, one with a central stop, permitting production of a hollow cone of light having its apex in the plane of the specimen. **paraboloid c.**, a special type of condenser for illuminating a specimen in darkfield microscopy.

condition (kon-dish'un) to train; to subject to conditioning.

conditioning (kon-dish'un-ing) learning in which a response is elicited by a neutral stimulus which previously has been repeatedly presented in conjunction with the stimulus that originally elicited the response. Called also *classical* or *respondent c.* **classical c.**, see *conditioning*. **instrumental c.**, learning in which a particular response is elicited by a stimulus because that response produces consequences which are rewarding to the organism; called also *operant c.* **operant c.**, instrumental c. **respondent c.**, see *conditioning*.

condom (kon'dum) [L. *condus* a receptacle; according to some authorities a corruption of *Condon*, the inventor] a sheath or cover for the penis, worn during coitus to prevent impregnation or infection.

conductance (kon-duk'tans) capacity for conducting or ability to convey; the unit of electrical conductance is the mho.

conduction (kon-duk'shun) [L. *conductio*] the transfer of sound waves, heat, nervous impulses, or electricity; see also under *system*. **aerial c.**, the passing of sound waves to the ear through the air. **aerotympanic c.**, the conduction of sound to the inner ear through the air and tympanum. **air c.**, the conduction of sound to the inner ear through the auditory canal and middle ear to the inner ear. **anomalous c.**, conduction of the sinus impulse which avoids the delay in passage through the normal atrioventricular node. **antidromic c.**, the conduction of a nerve impulse in a direction contrary to the normal direction, as from the axon toward the dendrites. **avalanche c.**, the conduction of nerve impulses which takes place when the terminals of one neuron come in contact with the bodies of several neurons, resulting in widespread discharge following relatively little input. **bone c.**, the conduction of sound to the inner ear through the bones of the skull; called also *cranial c.*, *osteotympanic c.*, and *tissue c.* **concealed c.**, the conduction of a sinus impulse only part of the way through the conducting pathway of the heart so that a ventricular response is not elicited. **cranial c.**, bone conduction. **decremental c.**, the delay or failure of propagation of an impulse in the normal atrioventricular node resulting from progressive decrease in the rate of the rise and amplitude of the action potential as it spreads through the node. **delayed c.**, a nonspecific term indicating mild degree of atrioventricular heart block with an increase above the normal 0.2 second in the time interval between the atrial and ventricular contractions. **ephaptic c.**, the conduction of a nerve impulse across an ephapse, as opposed to synaptic conduction. **osteotympanic c.**, bone c. **saltatory c.**, the rapid passage of a potential from node (of Ranvier) to node of a myelinated nerve fiber, rather than along the full length of the membrane. **synaptic c.**, the conduction of a nerve impulse across a synapse. **tissue c.**, bone conduction.

conductivity (kon'duk-tiv'i-te) the capacity of a body to conduct a current; when expressed in figures conductivity is the reciprocal of resistance. Gold, silver, and copper are good conductors.

conductor (kon-duk'tor) [L.] 1. a material that possesses conductivity; a substance that transmits electricity. 2. a grooved director for surgical use. 3. a healthy individual who may transmit some hereditary condition, as the daughter of a hemophiliac.

conduit (kon'doo-it) a channel for the passage of fluids. **ileal c.**, the surgical anastomosis of the ureters to one end of a detached segment of ileum, the other end being used to form a stoma on the abdominal wall.

conduplicato (kon-du'pli-ka'to) [L. *conduplicare* to double up] doubled up. **c. cor'poris**, a doubled-up attitude of a fetus in shoulder presentation.

condurangin (kon'du-rang'gin) either of two poisonous glycosides from *condurango*.

condurango (kon'du-rang'go) [Spanish American] the bark of *condurango blanco*, *Marsdenia (Gonolobus) condurango*, a South American asclepiadaceous plant; used as a bitter tonic and stomachic.

Condy's fluid (kon'déz) [Henry Bollmann *Condy*, English physician of the 19th century] see under *fluid*.

condylar (kon'di-lar) pertaining to a condyle.

condylarthrosis (kon'dil-ar-thro'sis) [*condyle* + Gr. *arthrōsis* joint] articulatio ellipsoidea.

condyle (kon'dil) [L. *condylus*; Gr. *kondylos* knuckle] a rounded projection on a bone; see *condylus*. **extensor c. of humerus**, epicondylus lateralis humeri. **external c. of fe-**

mur, condylus lateralis femoris. **external c. of humerus**, epicondylus lateralis humeri. **external c. of tibia**, condylus lateralis tibiae. **fibular c. of femur**, condylus lateralis femoris. **flexor c. of humerus**, epicondylus medialis humeri. **c. of humerus**, condylus humeri. **internal c. of femur**, condylus medialis femoris. **internal c. of humerus**, epicondylus medialis humeri. **internal c. of tibia**, condylus medialis tibiae. **lateral c. of femur**, condylus lateralis femoris. **lateral c. of humerus**, epicondylus lateralis humeri. **lateral c. of tibia**, condylus lateralis tibiae. **c. of mandible**, processus condylaris mandibulae. **medial c. of femur**, condylus medialis femoris. **medial c. of humerus**, epicondylus medialis humeri. **medial c. of tibia**, condylus medialis tibiae. **c. of metacarpal bone**, caput ossis metacarpalis. **occipital c.**, condylus occipitalis. **radial c. of humerus**, epicondylus lateralis humeri. **c. of scapula**, angulus lateralis scapulae. **tibial c. of femur**, condylus medialis femoris. **ulnar c. of humerus**, epicondylus medialis humeri.

condylectomy (kon'dil-ek'to-me) [*condyle* + Gr. *ektomē* excision] excision of a condyle.

condyli (kon'di-li) plural of *condylus*.

condylicus (kon-dil'i-kus) pertaining to a condyle; condylar.

condyliion (kon-dil'i-on) [Gr. *kondyliion* knob] the most lateral point on the surface of the caput mandibulae.

condyloid (kon'di-loid) [*condyle* + Gr. *eidōs* form] resembling a condyle or knuckle.

condyloma (kon'di-lo'mah), pl. *condylomata* [Gr. *kondylōma*, knuckle or knob] 1. c. acuminatum. 2. rarely, c. latum. 3. in veterinary medicine, hyperplasia of the skin in cloven-hoofed animals, growing between the toes, caused by chronic inflammation. **c. acuminatum**, a papilloma with a central core of connective tissue in a treelike structure covered with epithelium, usually occurring on the mucous membrane or skin of the external genitals or in the perianal region; although the lesions are usually few in number, they may aggregate to form large cauliflower-like masses. Caused by a virus, it is infectious, and autoinoculable. Called also *acuminate wart*, *verruca acuminata*, or *venereal wart*. **flat c.**, c. latum. **giant c. acuminatum**, Buschke-Löwenstein tumor. **c. la'tum**, a broad and flat syphilitic condyloma located in warm, moist, intertriginous areas, especially about the anus and external genitals, it may become hypertrophic and erode to form a soft, red mass with a moist, weeping surface. Called also *flat c.* **pointed c.**, c. acuminatum.

condylomata (kon'di-lo'mah-tah) plural of *condyloma*.

condylomatoid (kon'di-lo'mah-toid) resembling a condyloma.

condylomatosis (kon'di-lo'mah-to'sis) the presence of numerous condylomas.

condylomatous (kon'di-lo'mah-tus) of the nature of a condyloma.

condylotomy (kon'di-lot'o-me) [Gr. *kondylos* condyle + *temnein* to cut] surgical incision or division of a condyle or of condyles.

condylus (kon'di-lus), pl. *condyli* [L.; Gr. *kondylos* knuckle] [NA] condyle: a rounded projection on a bone, usually for articulation with another. **c. hu'meri** [NA], condyle of humerus: the distal end of the humerus, including the various fossae as well as the trochlea and capitulum. **c. latera'lis fem'oris** [NA], lateral condyle of femur: the lateral of the two surfaces at the distal end of the femur that articulate with the superior surfaces of the head of the tibia; called also *external* or *fibular condyle of femur*. **c. latera'lis hu'meri**, epicondylus lateralis humeri. **c. latera'lis tib'iae** [NA], lateral condyle of tibia: the lateral articular eminence on the proximal end of the tibia; called also *external condyle of tibia*. **c. media'lis fem'oris** [NA], medial condyle of femur: the medial of the two surfaces at the distal end of the femur that articulate with the superior surfaces of the head of the tibia; called also *internal* or *tibial condyle of femur*, and *c. tibialis femoris*. **c. media'lis hu'meri**, epicondylus medialis humeri. **c. media'lis tib'iae** [NA], medial condyle of tibia: the medial articular eminence on the proximal end of the tibia; called also *internal condyle of tibia*. **c. occipita'lis** [NA], occipital condyle: one of two oval processes on the lateral portions of the occipital bone, on either side of the foramen magnum, for articulation with the atlas. **c. tibial'is fem'oris**, c. medialis femoris.

cone (kōn) [Gr. *kōnos*; L. *conus*] 1. a solid figure or body with a circular base tapering to a point; specifically one of the conelike bodies of the retina; called also *conus*. See *retinal c's*. 2. in radiology, a conical or open-ended cylindrical structure attached over the portal of the x-ray tube housing, used as an aid in centering the radiation beam on the target field and as a guide to source-to-film distance; also, often designed to collimate primary and/or scattered radiation, and/or to retain disks for added filtration. 3. surgical cone. **acrosomal c.**, an axial body of the spermatozoon between the acrosomal granule and the nucleus. **adjusting c's**, a pair of hollow cones used in measuring the distance between the axes of the eyes when they are parallel. **antipodal c.**, the cone of rays opposite the spindle fibers of the amphiaster. **arterial c.**, *conus arteriosus*. **attraction c.**, fertilization c. **bifurcation c.**, the cone-shaped structure at the bifurcation of a dendrite. **cerebellar pressure c.**, a de-

formity of the brain caused by increased intracranial pressure, which forces the cerebellum downward into the spinal canal. **Dunham's c's**, see under *fan*. **ectoplacental c.**, the thickened trophoblast of the blastocyst in rodents which becomes the fetal portion of the placenta. **elastic c. of larynx**, conus elasticus laryngis. **ether c.**, originally an apparatus to be placed over the face for the administration of ether by inhalation, now used with various anesthetics. **fertilization c.**, a bulging of the cytoplasm in the ovum at the site of contact of a spermatozoon, which gradually engulfs the spermatozoon and then retracts, carrying the spermatozoon inward; called also *attraction c.* **growth c.**, a bulbous enlargement of the growing tip of a nerve axon. **Haller's c's**, lobuli epididymidis. **implantation c.**, the cone-shaped insertion of an axon in its neuron. **c. of light**, the triangular reflection of light seen on the membrana tympani; called also *Politzer's c. and light reflex*. **long c.**, in dental radiology, a tubular "cone" designed to establish an extended anode-to-skin distance, usually within a range of from 12 to 20 inches. **medullary c.**, conus medullaris. **ocular c.**, a cone of light in the eye, the base being on the cornea, the apex on the retina; called also *visual c.* **Politzer's c.**, c. of light. **pressure c.**, the area of compression exerted by a mass in the brain, as in uncus or transtentorial herniation. **primitive c.**, the conelike arrangement of the collecting tubules in the kidney. **retinal c's**, the highly specialized conical or flask-shaped outer segments of the visual cells; together with the retinal rods, they form the light-sensitive elements of the retina. Called also *cones*, *cone cells*, and *visual cones*. **sarcoplasmic c.**, the conical mass of sarcoplasm at each end of the nucleus of a smooth or cardiac muscle fiber. **short c.**, in dental radiology, a conical or a tubular "cone" having as one of its functions the establishment of an anode-to-skin distance of up to 9 inches. **surgical c.**, a cone of tissue removed surgically, as in partial excision of the cervix uteri. **terminal c. of spinal cord**, conus medullaris. **theca interna c.**, a wedge-shaped thickening of the theca interna projecting toward the ovarian surface, found only in growing follicles. **twin c's**, cone cells of the retina in which two cells are blended. **Tyndall c.**, the murky cone of scattered light seen when a colloid is viewed at right angles to the incident beam; it distinguishes colloids from crystalloids. **ureteral c.**, the upper conic part of the ureter; at ordinary rates of urine flow it is filled with urine during the resting phase of the renal pelvis and emptied during activity. **visual c.**, 1. ocular cone. 2. retinal cone.

cone-nose (kōn'nōs) see *Reduviidae*.

Conestron (kon-es'tron) trademark for a preparation of conjugated estrogens.

conexus (kō-nek'sus) [L. "connection, union"] a connecting structure. **c. intertendin'eus** [NA], tendinous junctions: narrow bands extending obliquely between the tendons of insertion of the extensor digitorum muscles on the back of the hand; called also *juncturae tendinum*. **c. interthalam'icus**, adhesio interthalamica.

confabulation (kon'fab-u-la'shun) the recitation of imaginary experiences to fill gaps in the memory, especially seen in organic psychoses, such as Korsakoff's psychosis; called also *fabrication*.

confectio (kon-fek'she-o) [L.] confection.

confection (kon-fek'shun) [L. *confectio*] a medicated conserve, sweetmeat, or electuary. **Damocrates' c.**, a confection of some thirty ingredients, the chief of which were agaric, frankincense, galbanum, cinnamon, garlic, gentian, ginger, opium, etc. **c. of senna**, a mild laxative containing powdered senna with other ingredients.

confertus (kon-fer'tus) [L.] close together; confluent.

configuration (kon-fig'u-ra'shun) 1. the general form of a body. 2. in gestalt psychology, an organized whole with interdependent parts so that the whole is more than the sum of its parts. **cis c.**, in genetics, the condition (coupling) in which the two mutant genes of a pseudoallele are on one chromosome and the two wild-type genes are on the homologous chromosome. Called also *cis position*. Cf. *trans c.* **trans c.**, in genetics, the condition (repulsion) in which each of two homologous chromosomes contains one mutant and one wild-type gene of a pseudoallele. Called also *trans position*. Cf. *cis c.*

confinement (kon-fin'ment) restraint within a specific area; used especially to designate the termination of pregnancy with delivery of the infant; see *labor*.

conflict (kon'flikt) a painful state of consciousness due to clash between opposing trends found to a certain extent in every person. **approach-approach c.**, conflict resulting from two available goals which are desirable but incompatible. **approach-avoidance c.**, conflict resulting from a single goal having both desirable and undesirable consequences. **avoidance-avoidance c.**, conflict resulting from the desire to avoid two equally distasteful alternatives. **extrapsychic c.**, that between the self and the external environment. **intrapsychic c.**, that between forces within the personality.

confluence (kon'floo-ens) [L. *confluens* running together] the meeting of streams; in embryology the flowing of cells, a compo-

nent process of gastrulation. **c. of sinuses**, confluens sinuum.

confluens (kon'floo-ens) [L.] a place of running together; the meeting of streams. **c. sin'uum** [NA], confluence of sinuses: the dilated point of confluence of the superior sagittal, straight, occipital, and two transverse sinuses of the dura mater, lodged in a depression at one side of the internal occipital protuberance; called also *torcular Herophili*.

confluent (kon'floo-ent) [L. *confluens* running together] becoming merged; not discrete.

confocal (kon-fo'kal) having the same focus.

conformation (kon'for-ma'shun) the particular shape of an entity, such as the shape a molecule assumes.

confrication (kon'fri-ka'shun) [L. *confricatio*] the rubbing of a drug to the condition of a powder.

confrontation (kon'frun-ta'shun) [L. *con* together + *frons* face] a technique in treating psychological disorders whereby the contradictory statements or actions of a patient are brought directly to his attention.

confusion (kon-fu'zhun) disturbed orientation in regard to time, place, or person, sometimes accompanied by disordered consciousness.

confusional (kon-fu'zhun-al) pertaining to, characterized by, or resulting in confusion.

cong. abbreviation for L. *con'gius*, gallon.

congelation (kon'jē-la'shun) [L. *congelatio*] frostbite or freezing.

congeneic (kon'jē-na'ik) of or relating to a strain of animals developed from an inbred (isogenic) strain by repeated matings with animals from another stock that have a foreign gene, the final congeneic strain then presumably differing from the original inbred strain by the presence of this gene.

congener (kon'jē-ner) [L. *con* together + *genus* race] something closely related to another thing, as a member of the same genus, a muscle having the same function as another, or a chemical compound closely related to another in composition and exerting similar or antagonistic effects, or something derived from the same source or stock. Also, a secondary product in alcohol fermentation that helps to determine the composition of the final product.

congeneric (kon'jē-ner'ik) pertaining to a congener.

congenerous (kon-jen'er-us) [L. *con* together + *genus* race] having a common action or function; derived from the same source. See *congener*.

congenital (kon-jen'i-tal) [L. *congenitus* born together] existing at, and usually before, birth; referring to conditions that are present at birth, regardless of their causation. Cf. *hereditary*.

congested (kon-jest'ed) overloaded, as with blood; in a state of congestion.

congestin (kon-jes'tin) a toxic substance derived from the tentacles of sea anemones which, when injected into dogs, causes intense congestion of the splanchnic vessels, and hemorrhage; originally called *actinocongestin*. Cf. *meduscongestin*.

congestion (kon-jest'yun) [L. *congestio*, from *congerere* to heap together] excessive or abnormal accumulation of blood in a part. **active c.**, accumulation of blood in a part on account of the dilatation of the lumen of its blood vessels. **functional c.**, increased vascularization and flow of blood to an organ during the performance of its function. **hypostatic c.**, congestion of the lowest part of an organ by reason of the action of gravity when the circulation is much enfeebled. **neuroparalytic c.**, that which results from paralysis of the constrictor fibers of the vasomotor nerves. **neurotonic c.**, that which is due to irritation of the vasodilator nerves. **passive c.**, the congestion of a part due to the obstruction to the escape of blood from the part; called also *venous c.* **physiologic c.**, increased vascularization and blood flow that occurs during functional activity. **pulmonary c.**, engorgement of the pulmonary vessels, with transudation of fluid into the alveolar and interstitial spaces; it occurs in cardiac disease, infections, and certain injuries. **venous c.**, passive c.

congestive (kon-jes'tiv) pertaining to, characterized by, or resulting in congestion.

congius (kon'je-us) [L.] a gallon; abbreviated c. or cong.

conglobate (kon'glo-bāt) [L. *conglobatus*] forming a rounded mass or clump; said of certain glands.

conglobation (kon'glo-ba'shun) the act of forming, or the state of being formed, into a rounded mass.

conglomerate (kon-glom'er-āt) [L. *con* together + *glomerare* to heap] heaped together.

conglutin (kon-gloo'tin) a protein from almonds and from seeds of various leguminous plants.

conglutinant (kon-gloo'ti-nant) [L. *conglutinare* to glue together] promoting union, as of the lips of a wound.

conglutination (kon-gloo'ti-na'she-o) [L.] conglutination. **c. orific'ii exter'ni**, a condition in labor in which the circular

fibers around the cervical os will not relax, and the cervix remains closed.

conglutination (kon-gloo/'ti-na'shun) 1. agglutination of erythrocytes that is dependent upon both complement and antibodies; see *conglutinin*. 2. the adherence of tissues to each other.

conglutinin (kon-gloo/'ti-nin) a factor present in fresh bovine and certain other sera that agglutinates erythrocytes in the presence of complement. It has been used as the indicator system in the conglutinating complement absorption test (CCAT) in the serodiagnosis of glanders, Q fever, and infection with microorganisms of the psittacosis-lymphogranuloma group (*Chlamydia*). Called also *bovine colloid*.

congressus (kon-gres/'us) [L. "a coming together"] coitus.

CO(NH₂)₂ urea.

coni (ko/'ni) [L.] plural of *conus*.

conic (kon/'ik) conical.

conical (kon/'e-kal) cone-shaped.

conidia (ko-nid/'e-ah) plural of *conidium*.

conidial (ko-nid/'e-al) pertaining to or of the nature of conidia; bearing conidia.

conidiophore (ko-nid/'e-o-för) [L. *conidium* + Gr. *phoros* bearing] the branch of the mycelium of a fungus that bears conidia.

Conidiosporales (ko-nid/'e-o-spo-ra'léz) former name for Moniliales.

conidiospore (ko-nid/'e-o-spör) [Gr. *konidion* a particle of dust + *spore*] conidium.

conidium (ko-nid/'e-um), pl. *conidia*. An asexual fungal spore shed at maturity (deciduous), and formed by splitting off from the summit of a conidiophore; called also *exospore*. See *spore*. Cf. *aleuriospore* and *chlamydospore* (def. 1).

coniine (co/'ne-ën) a poisonous, liquid alkaloid from *Conium maculatum* L. (poison hemlock), C₈H₁₇N.

coniofibrosis (ko/'ne-o-fi-bro'sis) [Gr. *konis* dust + *fibrosis*] a form of pneumoconiosis marked by an exuberant growth of connective tissue caused by a specific irritant; it may occur in asbestosis, silicosis, and silicotuberculosis.

coniology (ko-ne-ol/'ō-je) [Gr. *konis* dust + *-logy*] the scientific study of dust, its influence and its effects on plant and animal life.

coniolymphstasis (ko/'ne-o-limf'stah-sis) a form of pneumoconiosis caused by dusts that act by blocking the lymphatics.

coniometer (ko/'ne-om/'ē-ter) konometer.

coniophage (ko/'ne-o-fāj'') [Gr. *konis* dust + *phagein* to eat] a macrophage that ingests dust particles.

coniosis (ko/'ne-o'sis) [Gr. *konis* dust] a disease state caused by the inhalation of dust, such as pneumoconiosis.

Coniosporium (ko/'ne-o-spo-rē-um) a genus of saprophytic fungi. *C. corticale* (*Cryptostroma corticale*), which grows under the bark of certain trees, causes coniosporosis.

coniosporosis (ko/'ne-o-spo-ro'sis) a condition characterized by asthmatic symptoms and acute pneumonitis, caused by inhalation of spores of *Coniosporium corticale*, a fungus which grows under the bark of certain trees; observed in workers engaged in peeling logs.

coniotomy (ko/'ne-ot/'o-me) incision through the conus elasticus laryngis.

coniotoxicosis (ko/'ne-o-tok/'sī-ko'sis) a form of pneumoconiosis in which the irritants affect the tissues directly.

Conium (ko-ni/'um) [L.; Gr. *kōneion*] a genus of umbelliferous plants, the hemlocks. **C. macula'tum** L., poison hemlock; see *hemlock*, def. 2.

conization (kon/'i-za'shun) the removal of a cone of tissue, as in partial excision of the cervix uteri. **cold c.**, that done with a cold knife, as opposed to electrocautery, to better preserve the histologic elements.

conjugal (kon/'ju-gal) [L. *con* together + *jugum* a yoke] pertaining to marriage; pertaining to husband and wife.

conjugata (kon/'ju-ga'tah) [NA] the anteroposterior diameter of the superior aperture of the minor pelvis; see also *true conjugate diameter*. **c. anatom'ica**, true conjugate diameter. **c. diagona'lis**, diagonal conjugate diameter. **c. ve'ra**, true conjugate diameter. **c. ve'ra obstet'rica**, obstetric conjugate diameter.

conjugate (kon/'ju-gāt) [L. *conjungatus* yoked together] 1. paired, or equally coupled; working in unison. 2. a conjugate diameter of the pelvic inlet; used alone usually to denote the true conjugate diameter. See under *diameter*. **anatomic c.**, true conjugate diameter; see under *diameter*. **diagonal c.**, see under *diameter*. **external c.**, see under *diameter*. **obstetric c.**, see under *diameter*.

conjugation (kon/'ju-ga'shun) [L. *conjunctio* a blending] the act of joining together. In bacterial genetics, a form of sexual reproduction in which a donor bacterium (male) contributes some, or all, of its DNA (in the form of a replicated set) to a recipient (female), which then incorporates differing genetic information into its own chromosome by recombination, and passes the

recombined set on to its progeny by replication. In chemistry, the joining together of two compounds to produce another compound, such as the combination of a toxic product with some substance in the body to form a detoxified product, which is then eliminated.

conjugon (kon/'ju-gon) an episome that promotes conjugation.

conjunctiva (kon/'junkt-ti'vah), pl. *conjunctivae* [L.] the delicate membrane that lines the eyelids (*palpebral conjunctiva*) and covers the exposed surface of the sclera (*bulbar or ocular conjunctiva*); called also *tunica conjunctiva* [NA].

conjunctival (kon/'junkt-ti'val) pertaining to the conjunctiva.

conjunctivoplasty (kon-junk'ti-vi-plas'te) conjunctivoplasty.

conjunctivitis (kon-junk'ti-vi'tis) inflammation of the conjunctiva, generally consisting of conjunctival hyperemia associated with a discharge. **actinic c.**, conjunctivitis produced by ultraviolet (actinic) rays, as that of Klieg lights, therapeutic lamps, or acetylene torches. **acute contagious c.**, a mucopurulent inflammation of the conjunctiva occurring in epidemic form and caused by *Hemophilus aegypticus*; called also *epidemic c.*, *Sanders' disease*, and *pink eye*. **acute hemorrhagic c.**, a highly contagious disease, certain epidemics of which have been associated etiologically with enteroviruses, characterized by subconjunctival hemorrhage varying from minute petechiae to copious, and by sudden swelling of the eyelids and congestion, redness, and pain in the eye. **allergic c.**, **anaphylactic c.**, hay fever. **angular c.**, conjunctivitis with characteristic reddening at the canthi, usually due to Morax-Axenfeld bacillus or *Staphylococcus aureus*. **arc-flash c.**, actinic conjunctivitis from electric welding. **atopic c.**, allergic conjunctivitis of the immediate type, due to such airborne allergens as pollens, dusts, spores, and animal hair. **atropine c.**, follicular conjunctivitis from continued use of atropine. **blennorrheal c.**, gonorrheal c. **calcareous c.**, c. petrificans. **catarrhal c.**, a mild form characterized by excessive mucous secretion. **chemical c.**, that due to exposure to chemical irritants. **croupous c.**, membranous c. **diphtheritic c.**, a purulent form due to *Corynebacterium diphtheriae*; diphtheria of the conjunctiva, a major cause of membranous conjunctivitis. **diplobacillary c.**, Morax-Axenfeld's c. **eczematous c.**, phlyctenular c. **Egyptian c.**, trachoma, def. 1. **epidemic c.**, acute contagious c. **follicular c.**, a form characterized by dense localized infiltrations of lymphoid tissue that occur as a response to irritation. **gonococcal c.**, gonorrheal c. **gonorrheal c.**, a severe form caused by infection with gonococci; called also *blennorrheal c.* and *gonoblenorrhea*. **granular c.**, trachoma. **inclusion c.**, conjunctivitis caused by an organism (*Chlamydia trachomatis*) of the psittacosis-lymphogranuloma venereum-trachoma group; it affects primarily newborn infants, beginning as an acute purulent conjunctivitis that leads to papillary hypertrophy of the palpebral conjunctiva. Called also *inclusion blennorrhea* and *swimming pool c.* **larval c.**, myiasis of the conjunctiva. **c. medicamento'sa**, conjunctivitis due to medication. **membranous c.**, a variety associated with the formation of a whitish-gray membrane; called also *croupous c.* **meningococcus c.**, conjunctivitis occurring as a complication of epidemic cerebrospinal meningitis. **mol-luscum c.**, conjunctivitis occurring as a complication of molluscum contagiosum. **Morax-Axenfeld's c.**, a form of conjunctivitis due to *Hemophilus duplex*; called also *diplobacillary c.* **c. necrot'icans infectio'sus**, an infectious conjunctivitis associated with unilateral swelling of the parotid and submaxillary glands; called also *Pascheff's c.* **c. nodo'sa**, **nodular c.**, ophthalmia nodosa. **Parinaud's c.**, Parinaud's oculoglandular syndrome. **Pascheff's c.**, c. necroticans infectiosus. **c. petrificans**, a variety of conjunctivitis marked by the formation of deposits of chalky concretions in the conjunctiva and attended with necrosis; called also *calcareous c.* **phlyctenu-lar c.**, a variety marked by small vesicles or ulcers, each surrounded by a reddened zone; called also *eczematous c.* and *scrofular c.* See also *phlyctenulosis*. **prairie c.**, chronic conjunctivitis marked by white spots on the conjunctiva of the lids. **pseudo-membranous c.**, inflammation of the conjunctiva in which a fibrous exudate forms a false membrane on the epithelial surface; it may result from diphtheria or hyperacute conjunctivitis of other etiology. **purulent c.**, a variety characterized by a discharge of pus. **scrofular c.**, phlyctenular c. **shipyard c.**, epidemic keratoconjunctivitis. **spring c.**, vernal c. **squirrel plague c.**, c. tularensis. **swimming pool c.**, inclusion c. **trachomatous c.**, trachoma, def. 1. **tularemic c.**, c. **tularen'sis**, conjunctivitis associated with tularemia, caused by injection with *Francisella tularensis*; it begins with single or multiple necrotic papules, usually in the lower cul-de-sac, followed by generalized conjunctivitis with enlargement and tenderness of the associated lymph nodes, lasting about four weeks. Called also *squirrel plague c.* **uratic c.**, conjunctivitis marked by the deposit of crystals of uric acid or sodium urate in the conjunctiva. **vernal c.**, conjunctivitis characteristically occurring in the spring; called also *spring c.*, *Fruehjahr*, and *spring catarrh*. **welder's c.**, conjunctivitis occurring in welders, caused by the glare from electric or acetylene torches. **Widmark's c.**, congestion of the inferior tarsal conjunctiva, with occasionally slight stippling of the cornea.

conjunctivodacryocystostomy (kon/'junkt-ti'vo-dak're-o-sis-

tos/to-me) surgical connection of the lacrimal sac directly to the conjunctival sac.

conjunctivoma (kon-junk'ti-vo'mah) a tumor of the eyelid made up of conjunctival tissue.

conjunctivoplasty (kon'junk-ti'vo-plas'te) [*conjunctiva* + Gr. *plassein* to form] repair of a defect of the conjunctiva by plastic operation.

conjunctivorhinostomy (kon'junk-ti'vo-ri-nos'to-me) surgical correction of total lacrimal canalicular obstruction: a dacryocystorhinostomy is done by suturing the posterior flaps, and the lacrimal caruncle is dissected out, preserving the conjunctiva.

Conn's syndrome (konz) [Jerome W. Conn, American internist, born 1907] primary hyperaldosteronism.

connatal (kon-na'tal) [L. *con* along with + *natus* birth] occurring at the time of birth; acquired at birth.

connate (kon'nāt) connatal.

connection (kō-nek'shun) 1. the act of connecting or state of being connected. 2. anything that connects; a connector.

clamp c., a short tubular branch connecting one cell of a hypha to another, formed by fusion during cell division in certain basidiomycetous fungi, and serving in the transfer of the two daughter nuclei of the parent cell to a newly formed cell.

connector (kō-nek'tor) anything serving as a link between two separate objects or units, such as the portion of a neural arc between the receptor and the effector. In dentistry, the portion of a fixed or removable partial denture that unites its components.

major c., a plate or bar, such as a labial, lingual, or palatal bar, that unites two or more bilateral parts of a removable partial denture. **minor c.**, a connecting link between the major connector or base of a partial denture and other units of the prosthesis, such as clasps, indirect retainers, and occlusal rests; called also *connector bar*.

Connell's suture (kōn'elz) [Frank Gregory Connell, American surgeon, 1875-1968] see under *suture*.

connexus (kō-nek'sus) see *conexus*.

conoid (kō'noid) [Gr. *kōnoeidēs*] resembling or shaped like a cone. **Sturm's c.**, the changing shapes of the diffusion images of a point in various forms of astigmatism; the image may be an ellipse, a circle, or a sharp line.

Conolly's system (kon'ō-lēz) [John Conolly, English alienist, 1794-1866] see under *system*.

conomyoidin (kō'no-mi-oi'din) [Gr. *kōnos* cone + *mys* muscle + *eidos* form] a protoplasmic material within the cones of some retinas that expands and contracts under the influence of light, causing the cones to shift.

conophthalmus (kōn'of-thal'mus) [Gr. *kōnos* cone + *ophthalmos* eye] staphyloma corneae, def 1.

Conorhinus (kō'no-ri'nus) [Gr. *kōnos* cone + *rhis* nose] a genus name formerly applied to insects of the family Reduviidae, now placed in the genera *Panstrongylus* and *Triatoma*.

conquinine (kon-kwin'in) quinine.

Conradi's line (kon-rah'dez) [Andreas Christian Conradi, Norwegian physician, 1809-1869] see under *line*.

Conray (kon'ra) trademark for a preparation of iothalamate meglumine.

Cons. abbreviation for L. *conser'va*, keep.

consanguineous (kon'san-gwin'e-us) related by blood.

consanguinity (kon'san-gwin'i-te) [L. *consanguinitas*] kinship; relationship by blood.

conscience (kon'shens) an individual's set of moral values. It corresponds to the conscious part of the superego (q.v.).

conscious (kon'shus) [L. *consciūs* aware] capable of responding to sensory stimuli and having subjective experiences; awake; aware.

consciousness (kon'shus-nes) the state of being conscious; responsiveness of the mind to the impressions made by the senses.

collective c., the aggregation of the conscious processes of all the individuals in a group; shared ideas and experiences. **colon c.**, a condition in which the patient is aware of the colon and its activities, because of disturbance of the normal defecation reflex; embracing chronic constipation. **double c.**, **dual c.**, see *multiple personality*, under *personality*. **noetic c.**, consciousness in which the experiences are largely cognitive.

conscious-sedation (kon'shus-se-da'shun) in dental anesthesia, a state of sedation in which the conscious patient is rendered free of fear, apprehension, and anxiety through the use of pharmacological agents.

consensual (kon-sen'shu-al) [L. *consensus* agreement] excited by reflex stimulation; used especially to designate the similar reaction of both pupils to a stimulus applied to only one.

conservative (kon-ser'vah-tiv) [L. *conservare* to preserve] designed to preserve health, restore function, and repair structures by nonradical methods, as conservative surgery. Cf. *radical*.

conserve (kon'serv) [L. *conserva*] a confection, electuary, or medicated sweetmeat.

consilia (kon-sil'e-ah) [L. pl. of *consilium* a deliberation, consultation] letters published by physicians of the 13th to 17th centuries, outlining the symptomatology and treatment of diseases under their observation.

consolidant (kon-sol'i-dant) [L. *consolidare* to make firm] 1. promoting the healing or union of parts. 2. an agent that promotes the healing or union of parts.

consolidation (kon-sol'i-da'shun) [L. *consolidatio*] solidification; the process of becoming or the condition of being solid, as when the lung becomes firm as air spaces are filled with exudate in pneumonia.

consolute (kon'so-lūt) perfectly miscible.

consonance (kon'so-nans) [L. *consonantia*] agreement or harmony. **cognitive c.**, harmony of thoughts, beliefs, and behavior.

consonation (kon'so-na'shun) the presence of consonating rales; see under *rale*.

conspecific (kon'spē-sif'ik) 1. of or pertaining to the same species. 2. a member of the same species.

constancy (kon'stan-se) the state of being constant.

constant (kon'stant) [L. *constans* standing together] 1. not failing; remaining unaltered. 2. a datum, fact, or principle that is not subject to change. **Ambard's c.**, see *Ambard's formula*, under *formula*. **association c.**, a measure of the extent of a reversible association between two molecular species; called also *binding c.* **Avogadro's c.**, see under *number*. **binding c.**, association c. **decay c.**, the fraction of the number of atoms of a radionuclide which decay in unit time; symbol λ . Called also *disintegration c.* and *radioactive c.* **dielectric c.**, the dielectric value of any substance compared with air, which is taken as 1. **disintegration c.**, decay c. **dissociation c.**, the equilibrium constant for the dissociation of a weak acid into hydrogen ion and its conjugate base in solution. **equilibrium c.**, an expression of the relationship between the equilibrium activities of reactants and products of a reversible chemical reaction to one another. **Faraday's c.**, 1. the quantity of electricity contained in one mole of electrons; the value of the constant is 96,493.5 coulombs per mole of electrons. 2. the minimum amount of electricity necessary to electrodeposit one mole of a univalent metal. **gravitational c.**, c. of gravitation, the constant of proportionality in the law of gravitation, equal to 6.67×10^{-11} newton m.²/kg.²; symbol G. Called also *Newtonian constant of gravitation*. **Lapicque's c.**, the figure 0.37, used for converting noninductive resistance into direct current equivalents. **Michaelis c.**, a constant representing the substrate concentration at which the velocity of an enzyme reaction is half the maximal velocity; symbol K_m . **Newtonian c. of gravitation**, gravitational c. **Planck's c.**, **quantum c.**, a constant, h , which represents the ratio of the energy of any quantum of radiation to its frequency; the value of h is 6.625×10^{-27} erg seconds. **radioactive c.**, decay c. **sedimentation c.**, a measure, commonly expressed in Svedberg units, of the relative sedimentation rate of molecules under an induced gravitational field, as in a centrifuge; symbol S. **urea c.**, see *Ambard's formula*, under *formula*.

constipated (kon'sti-pāt'ed) affected with constipation.

constipation (kon'sti-pa'shun) [L. *constipatio* a crowding together] infrequent or difficult evacuation of the feces. **atonic c.**, constipation due to intestinal atony. **gastrojejunal c.**, constipation due to reflex inhibition from some disease of the gastrointestinal tract. **proctogenous c.**, constipation due to some abnormality of the defecation reflex resulting in failure of fecal masses in the rectum to excite impulses leading to their evacuation. **spastic c.**, constipation marked by spasmodic constriction of a portion of the intestine; seen in neurasthenia and lead poisoning.

constitution (kon'sti-tu'shun) [L. *constitutio*] 1. the make-up or functional habit of the body, determined by the genetic, biochemical, and physiologic endowment of the individual, and modified in great measure by environmental factors. Cf. *diathesis* and *type*. 2. in chemistry, the arrangement of atoms in a molecule. Cf. *atomic configuration*. **ideo-obsessional c.** (obs.), a peculiar psychic constitution marked by a tendency to worrying, fretting, exaggerated doubts, and excessive introspection. **lymphatic c.**, a condition of hyperplasia of the lymphatic system. **neuropathic c.**, that quality of mind and body once thought to predispose to nervous disease. **psychopathic c.** (obs.), a tendency toward mental imbalance. **vasoneurotic c.**, a constitution characterized by instability of the vasomotor mechanism.

constitutional (kon'sti-tu'shun-al) 1. affecting the whole constitution of the body; not local. 2. pertaining to the constitution.

constriction (kon-strik'shun) [L. *contingere* + *stringere* to draw] 1. a constricted part or place; a stricture. 2. in psychiatry, a diminution in range of thinking or feeling, associated with diminished spontaneity. **apical c.**, that point of the apical portion of the root canal of a tooth having the narrowest diameter; it may be associated with the dentinocemental junction cementum alone or with dentin alone. **duodenopyloric c.**, the constriction marking the junction of the stomach and duodenum. **primary c.**, centromere. **Ranvier's c's**, nodes of Ranvier. **secondary c.**, in genetics, the narrowed heterochromatic area

of the short arms of acrocentric autosomes by which a satellite is attached.

constrictive (kon-strik'tiv) causing constriction or having a tendency to constrict.

constrictor (kon-strik'tor) [L.] that which constricts, such as a muscle or an instrument by which a part may be constricted. See *Table of Musculi*. **c. isth'mi fau'cium**, musculus palatoglossus. **c. na'ris**, pars transversa musculi nasalis. **c. ure'thrae**, musculus sphincter urethrae. **c. vagi'nae**, the musculus bulbospongiosus in the female.

constructive (kon-struk'tiv) pertaining to any process of construction; in physiology, anabolic.

consult (kon-sult') [L. *consultus*] to confer with another physician about a case.

consultant (kon-sul'tant) [L. *consultare* to counsel] a physician called in for advice and counsel.

consultation (kon'sul-ta'shun) [L. *consultatio*] a deliberation by two or more physicians with respect to the diagnosis or treatment in any particular case.

consumption (kon-sump'shun) [L. *consumptio* a wasting] 1. the act of consuming, or the process of being consumed. 2. a wasting away of the body; formerly applied especially to pulmonary tuberculosis. **galloping c.**, pulmonary tuberculosis that runs an exceptionally rapid course. **luxus c.**, the ingestion of excess protein which does not form part of the tissues but remains in the body as a reserve supply.

consumptive (kon-sump'tiv) 1. of the nature of or affected with consumption. 2. (obs.) a person affected with tuberculosis of the lungs.

Cont. abbreviation for L. *contus*us, bruised.

contact (kon'takt) [L. *contactus* a touching together] 1. a mutual touching of two bodies or persons. 2. an individual known to have been sufficiently near to an infected individual to have been exposed to the transfer of infectious material. 3. contactant. **balancing c.**, the contact between the upper and lower occlusal surfaces of the teeth (of the natural or artificial dentition) on the side opposite the working contact. **complete c.**, contact of the entire proximal surface of one tooth with the entire proximal surface of the adjacent tooth. **direct c.**, **immediate c.**, the touching by a healthy person of a person having a communicable disease, the disease often being transmitted as a result. **indirect c.**, that achieved through some intervening medium, as the propagation of a communicable disease through the air or by means of fomites. **initial c.**, the first meeting of the upper and lower teeth when the jaws are brought together. **mediate c.**, indirect c. **occlusal c.**, the contact between the upper and lower teeth when the jaws are closed in habitual occlusion. **occlusal c., defective**, a condition in which the mandible is diverted from a normal path of closure to centric jaw relation by abnormal contact between upper and lower teeth. **occlusal c., interceptive**, a condition in which the normal movement of the mandible is stopped or deviated by an initial or premature contact of the teeth. **occlusal c., premature**, occlusal c., interceptive. **proximal c., proximate c.**, touching of the proximal surfaces of two adjoining teeth. **weak c.**, contact in which the proximal surface of one tooth barely touches that of the adjacent tooth, enhancing the packing of food between the teeth. **working c.**, the contact between the upper and lower teeth (of the natural or artificial dentition) on the side toward which the mandible has been moved in mastication.

contactant (kon-tak'tant) an allergen capable of inducing delayed contact-type hypersensitivity of the animal or human epidermis after one or more episodes of contact.

contactologist (kon'tak-to'l'o-jist) an individual skilled in contactology.

contactology (kon'tak-to'l'o-je) the specialized field of knowledge related to the use and prescription of contact lenses.

contagion (kon-ta'jun) [L. *contagio* contact, infection] 1. the communication of disease from one person to another. 2. a contagious disease. 3. a contagium. **direct c.**, **immediate c.**, communication of disease by direct contact with a sick person. **mediate c.**, communication of a disease from a sick to a well person through an intervening object or person. **psychic c.**, communication of psychological symptoms through mental influence.

contagiosity (kon-ta'je-os'i'te) the quality of being contagious.

contagious (kon-ta'jus) [L. *contagiosus*] capable of being transmitted from one person to another.

contagium (kon-ta'je-um), pl. *contag'ia* [L.] (obs.) any virus or other infectious agent that may transmit a disease.

contaminant (kon-tam'i-nant) something that causes contamination.

contamination (kon-tam'i-na'shun) [L. *contaminatio*, from *con* together + *tangere* to touch] 1. the soiling or making inferior by contact or mixture as by the introduction of organisms in a wound, or sewage in a stream. 2. the deposition of radioactive material in any place where it is not desired, and particularly where its presence may be harmful or constitute a radiation hazard.

content (kon'tent) that which is contained within a thing. **latent c.**, the hidden part of a dream or thought, which can be discovered only by free association or by some other appropriate technique. **manifest c.**, the outward form of a dream as remembered by the dreamer.

contiguity (kon'ti-gu'i'te) [L. *contiguus* in contact] contact or close proximity; the quality of being contiguous.

contiguous (kon-tig'u-us) [L. *contiguus*] in contact or nearly so.

Contin. abbreviation for L. *continue*tur, let it be continued.

continence (kon'ti-nens) [L. *continentia*] the ability to refrain from yielding to desire, as self-restraint with respect to sexual indulgence. **fecal c.**, the ability to retain the contents of the colon until conditions are proper for defecation. **urinary c.**, the ability to retain the contents of the bladder until conditions are proper for urination.

continent (kon'ti-nent) able to refrain from yielding to normal impulses, as sexual desire, or from the urge to defecate or urinate.

continued (kon-tin'ud) having no remission, intermission, or interruption.

continuity (kon'ti-nu'i'te) [L. *continuitas*, uninterrupted succession] the quality of being without interruption or separation.

continuous (kon-tin'u-us) [L. *continuus*] not interrupted; having no interruption.

contologist (kon-tol'o-jist) contactologist.

contology (kon-tol'o-je) contactology.

contour (kon'toor) [Fr.] 1. the normal outline or configuration of the body or of a part. 2. to shape a solid along certain desired lines. **height of c.**, in dentistry, the line encircling a tooth at its greatest bulge with reference to a predetermined path of insertion for a removable partial denture.

contoured (kon'toord) 1. having an irregularly undulating outline or surface; said of bacterial colonies. 2. shaped along certain desired lines, as a dental or other prosthesis or plastic restoration.

contra- (kon'trah) [L. *contra* against] a prefix signifying against, opposed.

contra-angle (kon'trah-ang'g'l) an angulation by which the working point of a surgical instrument is brought close to the long axis of its shaft; it may involve two, three, or four bends, or angles, in its shank.

contra-aperture (kon'trah-ap'er-chür) [*contra-* + L. *apertura* opening] a second opening made in an abscess to facilitate the discharge of its contents.

contraception (kon'trah-sep'shun) the prevention of conception or impregnation. **intrauterine c.**, prevention of conception by use of a device inserted in the uterus; see under *device*.

contraceptive (kon'trah-sep'tiv) 1. diminishing the likelihood of, or preventing, conception. 2. an agent that diminishes the likelihood of or prevents conception. **intrauterine c.**, see under *device*. **oral c.**, a hormonal compound taken orally in order to block ovulation and prevent the occurrence of pregnancy.

contract (kon-trakt') [L. *contractus*, from *contrahere* to draw together] 1. to shorten, or reduce in size, as a muscle. 2. to acquire or incur.

contractile (kon-trak'til) [L. *con* together + *trahere* to draw] having the power or tendency to contract in response to a suitable stimulus.

contractility (kon'trak'til'i'te) capacity for becoming short in response to a suitable stimulus. **cardiac c.**, the property of the cardiac muscle cells or tissues to shorten in response to an appropriate stimulus. **galvanic c.**, galvanocontractility. **idiomuscular c.**, a contractility peculiar to wasted or degenerated muscles. **neuromuscular c.**, normal, as distinguished from idiomuscular, contractility.

contraction (kon-trak'shun) [L. *contractus* drawn together] 1. a shortening or reduction in size; in connection with muscles contraction implies shortening and/or development of tension. 2. a morbid or pathologic shortening or shrinkage. 3. in orthodontics, unusual narrowness of the dental arch. **anodal closure c.** (ACC), contraction of the muscles at the anode when the electrical circuit is closed. **anodal opening c.** (AOC), contraction of the muscles at the anode when the electrical circuit is broken. **automatic ventricular c.**, a ventricular contraction caused by an impulse arising in the atrioventricular node; called also *escaped ventricular c.* **Braxton Hicks c's**, Hicks' sign; see under *sign*. **carpopedal c.**, the condition resulting from chronic shortening of the muscles of the fingers, toes, arms, and legs in tetany. **cathodal closure c.** (CCC), contraction of muscles at the cathode when the electrical circuit is closed. **cathodal opening c.** (COC), contraction of the muscles at the cathode when the electrical circuit is opened. **cicatricial c.**, the shrinkage and spontaneous closing of open skin wounds. **clonic c.**, contraction of a muscle alternating with periods of relaxation. **closing c.**, contraction occurring at the point of application of the stimulus when the electrical circuit is closed. **Dupuytren's c.**, Dupuytren's contracture. **Dupuytren's c., false**, a contracted state of the palm and fingers due to injury of the palmar fascia. **escaped ventricular c.**, automatic

ventricular c. **fibrillary c's**, abnormal spontaneous contractions occurring successively in different bundles of the fibers of a diseased muscle. **galvanotonic c.**, a sustained muscular contraction produced by a continuous electrical current. **Gowers' c.**, front tap c. **Hicks' c's**, see under *sign*. **hourglass c.**, contraction of an organ (as the stomach or uterus) at or near the middle. **idiomuscular c.**, a contraction produced by direct electrical stimulation of a wasted muscle. **isometric c.**, muscle contraction without appreciable shortening or change in distance between its origin and insertion. **isotonic c.**, muscle contraction without appreciable change in the force of contraction; the distance between the muscle's origin and insertion becomes less. **myotatic c.**, contraction or irritability of a muscle brought into play by sudden passive stretching or by tapping on its tendon. **opening c.**, contraction occurring at the point of application of the stimulus when the electrical circuit is opened. **palmar c.**, Dupuytren's contracture. **paradoxical c.**, the contraction of a muscle caused by the passive approximation of its extremities. **postural c.**, that state of muscular tension and contraction which just suffices to maintain the posture of the body. **premature c.**, extrasystole. **rheumatic c.**, tetany, def. 1. **segmentation c.**, see under *movement*. **tetanic c.**, sustained contraction of a muscle without intervals of relaxation; called also *tonic c.* Symbol ADTe. **tone c.**, a muscular contraction developing slowly and showing a prolonged phase of relaxation. **tonic c.**, tetanic c. **twitch c.**, the all-or-none response of muscle cells to a single stimulus. **uterine c.**, contraction of the uterus during labor.

contracture (kon-trak'tūr) [L. *contractura*] a condition of fixed high resistance to passive stretch of a muscle, resulting from fibrosis of the tissues supporting the muscles or the joints, or from disorders of the muscle fibers. **Dupuytren's c.**, shortening, thickening, and fibrosis of the palmar fascia, producing a flexion deformity of a finger; sometimes associated with long-standing epilepsy. Applied also to flexion deformity of a toe caused by involvement of the plantar fascia. **ischemic c.**, contracture and degeneration of a muscle due to interference with the circulation from pressure, as by a tight bandage, or from injury or cold. **organic c.**, one that is permanent and continuous. **postpoliomyelitic c.**, any distortion of a joint following an attack of poliomyelitis, due to partial or complete paralysis of one muscle or group of muscles, allowing overuse of an opposing muscle or group of muscles, such as flexion contracture of the knee and paralysis of the quadriceps muscle group. **veratrin c.**, a peculiar type of muscular contraction produced by injecting a muscle with veratrin. **Volkman's c.**, a contraction of the fingers and sometimes of the wrist, with loss of power, developing rapidly after a severe injury in the region of the elbow joint or improper use of a tourniquet. A similar phenomenon may develop in the distal extremity and involve the foot when similar vascular damage is sustained to the muscles of the leg; called also *ischemic muscular atrophy* and *Volkman's syndrome*.

contraextension (kon'trah-eks-ten'shun) counterextension.

contrafissura (kon-trah-fis-su'rah) contrafissure.

contrafissure (kon'trah-fish'ur) a fracture in a part opposite the site of a blow.

contraincision (kon'trah-in-sizh'un) counterincision to promote drainage.

contraindicant (kon'trah-in'dī-kant) rendering any particular line of treatment undesirable or improper.

contraindication (kon'trah-in'dī-ka'shun) any condition, especially any condition of disease, which renders some particular line of treatment improper or undesirable.

contrainsular (kon'trah-in'su-lar) having an inhibiting influence on insular secretion.

contralateral (kon'trah-lat'er-al) [*contra-* + L. *latus* side] situated on, pertaining to, or affecting the opposite side, as opposed to ipsilateral.

contraparetic (kon'trah-pah-ret'ik) 1. counteracting paresis. 2. a preparation useful in the treatment of paresis.

contrasexual (kon'trah-seks'u-al) pertaining to or characteristic of the opposite sex.

contrast (kon'trast) comparison in order to distinguish differences. In radiology, the visual differentiability of variations in photographic or film density produced on a radiograph by the structural composition of the object or objects radiographed. **high c.**, short-scale c. **long-scale c.**, **low c.**, that degree of contrast which limits visual differentiation to those image densities produced by relatively disparate structural features. **short-scale c.**, that degree of contrast which favors visual differentiation of image densities produced by objects or object components with relatively comparable structural features.

contrastimulant (kon'trah-stim'u-lant) [*contra-* + *stimulan*] 1. counteracting or opposing stimulation. 2. a depressant medicine.

contrastimulism (kon'trah-stim'u-lizm) the systematic use of contrastimulant medicines or appliances.

contrastimulus (kon'trah-stim'u-lus) [*contra-* + *stimulus*] a remedy, force, or agent that opposes stimulation.

contravolitional (kon'trah-vo-lish'un-al) done in opposition to the will; involuntary.

contrecoup (kon-tr-koo') [Fr. "counterblow"] injury resulting from a blow on another site, such as a fracture of the skull caused by a blow on the opposite side.

contractation (kon'trek-ta'shun) [L. *contractare* to handle] the fondling of a person of the opposite sex.

Cont. rem. abbreviation for L. *continue'tur remedium*, let the medicine be continued.

control (kon-trōl') [Fr. *contrôle* a register] 1. the governing or limitation of certain objects or events. 2. a standard against which experimental observations may be evaluated, as a procedure identical in all respects to the experimental procedure except for absence of the one factor that is being studied. **associative automatic c.**, nerve impulses that arise in the corpus striatum and act upon the final common pathway, and thus upon the muscles. **aversive c.**, in behavior therapy, the use of unpleasant stimuli to change undesirable behavior. **birth c.**, deliberate limitation of childbearing by measures designed to control fertility and to prevent conception; see also *contraception*. **feedback c.**, a physiological control mechanism operating to regulate the metabolic processes of a cell and thus maintain a constant internal environment, in which the accumulation of the product of a reaction leads to a decrease in its rate of production or a deficiency of the product leads to an increase in its rate of production. **idiodynamic c.**, nerve impulses from the cells of the ventral gray column and the motor nuclei of the brain that maintain the muscles in their normal trophic condition. **reflex c.**, control of muscular activity by nerve impulses transmitted to the muscles by one of the reflex arcs by which reflex action is maintained. **sex c.**, regulation of the sex of future offspring by artificial means. **stimulus c.**, any influence exerted by the environment on behavior. **synergic c.**, nerve impulses transmitted to the common pathway from the cerebellum for the regulation of the muscular activity of the synergic units of the body. **tonic c.**, nerve impulses transmitted to the final common pathway through the reflex arc for the maintenance of the muscle tone. **vestibuloequilibratory c.**, nerve impulses from the semicircular canals, saccule, and utricle for the maintenance of body equilibrium. **volitional c.**, **voluntary c.**, impulses from the motor area of the cerebral cortex that direct muscular action under the influence of the will.

Controlled Substances Act a federal law enacted in 1970 that regulates the prescribing and dispensing of psychoactive drugs, including narcotics, according to five schedules based on their abuse potential, medical acceptance, and ability to produce dependence; it also establishes a regulatory system for the manufacture, storage, and transport of the drugs in each schedule. Drugs covered by this Act include opium and its derivatives, opiates, hallucinogens, depressants, and stimulants.

contund (kon-tund') [L. *contundere*] to bruise.

contuse (kon-tüz') to bruise.

contusion (kon-tu'zhun) [L. *contusio*, from *contundere* to bruise] a bruise; an injury of a part without a break in the skin. **brain c.**, contusion with loss of consciousness as a result of direct trauma to the head, usually associated with fracture of the skull. See also *concussion of the brain*. **contrecoup c.**, a contusion resulting from a blow on one side of the head with damage to the cerebral hemisphere on the opposite side by transmitted force. **c. of spinal cord**, organic injury to the cord due to a blow to the vertebral column, with resultant transient or prolonged dysfunction below the level of the lesion. See also *concussion of spinal cord*.

contusive (kon-tu'siv) producing a bruise.

conular (kon'u-lar) cone-shaped.

Conus (ko'nus) a genus of mollusks, some species of which are able to inflict a poisoned wound.

conus (ko'nus), pl. *co'ni* [L.; Gr. *kōnos*] 1. a cone; [NA] a general term denoting a structure resembling a cone in shape. 2. posterior staphyloma of the myopic eye. **c. arterio'sus** [NA], the anterosuperior portion of the right ventricle of the heart, which is delimited from the rest of the ventricle by the supraventricular crest and which joins the pulmonary trunk, thus forming the outflow tract for blood in the right ventricle. Called also *arterial cone* and *infundibulum (of heart)*. **distraction c.**, a crescentic white area at the temporal edge of the papilla of the optic nerve sometimes seen with the ophthalmoscope in myopic eyes. **c. elastics laryn'gis** [NA], elastic cone of larynx: the lower part of the fibroelastic membrane of the larynx. **co'ni epididym'idis**, NA alternative for *lobuli epididymidis*. **c. medulla'ris** [NA], medullary cone: the cone-shaped lower end of the spinal cord, at the level of the upper lumbar vertebrae; called also *c. terminalis* and *terminal cone of spinal cord*. **myopic c.**, posterior staphyloma of the myopic eye. **supertraction c.**, a gray or yellowish ring on the nasal side of the optic papilla sometimes seen with the ophthalmoscope, especially in myopic eyes. **c. termina'lis**, c. medullaris. **co'ni vasculo'si**, lobuli epididymidis.

convalescence (kon'vah-les'ens) [L. *convalescere* to become strong] the stage of recovery following an attack of disease, a surgical operation, or an injury.

convalescent (kon-'vah-les-'ent) 1. pertaining to or characterized by convalescence. 2. a patient who is recovering from a disease, surgical operation, or injury.

convection (kon-vek-'shun) [L. *convectio*, from *convehere* to convey] transmission of heat in liquids or gases by a circulation carried on by the heated particles.

convergence (kon-ver-'jens) 1. inclination toward a common point. In embryology, the movement of cells from the periphery toward the midline during gastrulation. In physiology, the coordinated movement of the two eyes toward fixation of the same near point. In evolution, development of similar structures or organisms in unrelated taxa. 2. the point of meeting of convergent lines. **accommodative c.**, that portion of convergence initiated by the stimulus to accommodation. **far point of c.**, the point of intersection of the lines of sight at minimum convergence. **fusional c.**, convergence resulting from the attempt to keep the visual stimulus on the fovea of both eyes. **near point of c.**, the point of intersection of the lines of sight at maximum convergence. **negative c.**, outward deviation of the visual axes. **positive c.**, inward deviation of the visual axes. **proximal c.**, convergence induced by the sense of nearness of an object. **tonic c.**, the continuous convergence maintained by the tone of the medial rectus muscle in the primary position.

convergent (kon-ver-'jent) [L. *con* together + *vergere* to incline] meeting at or tending toward a common point.

convergometer (kon-ver-'je-om-'ē-ter) an instrument for measuring latent strabismus.

conversion (kon-ver-'zhun) [L. *con* with + *versio* turning] 1. a freudian term for the process by which emotions become transformed into physical (motor or sensory) manifestations. 2. manipulative correction of any malposition of a fetal part during the course of labor, especially correction of face or brow presentation to occiput presentation. **Mantoux c.**, a term denoting the change from a tuberculin-negative to a tuberculin-positive state, as determined by the intracutaneous injection of a solution of tuberculin; the opposite of Mantoux reversion.

convertase (kon-ver-'tās) an enzyme that converts a substance to its active state. **C3 c.**, the activated form of complement components C4 and C2 (written C42), a peptidase that splits C3 to C3a and C3b.

convertin (kon-ver-'tin) Factor VII; see *coagulation factors*, under *factor*.

convex (kon-'veks) [L. *convexus*] having a rounded, somewhat elevated surface, resembling a segment of the external surface of a sphere. **low c.**, having a rounded, slightly elevated surface, resembling a segment of the external surface of a sphere of long radius.

convexity (kon-vek-'sī-te) [L. *convexitas*] 1. the condition of being convex. 2. a rounded, somewhat elevated area on the surface of an organ or other structure.

convexobasia (kon-vek-'so-'ba-'se-ah) [*convex* + *base* of the skull] a deformity of the occipital bone, which is bent forward by the spine; seen in osteitis deformans.

convexoconcave (kon-vek-'so-'kon-'kāv) convex on one surface and concave on the other.

convexoconvex (kon-vek-'so-'kon-'veks) convex on each of two opposite surfaces.

convoluted (kon-'vo-lūt-ed) [L. *convolutus*] rolled together or coiled.

convolution (kon-vo-lu-'shun) [L. *convolutus* rolled together] a tortuous irregularity or elevation caused by a structure being infolded upon itself, as the convolutions of the brain; see also *gyrus*. **Broca's c.**, the inferior frontal gyrus of the left hemisphere of the cerebrum; called also *Broca's gyrus* or *region*. **c's of cerebrum**, gyri cerebri. **Heschl's c.**, the anterior transverse temporal gyrus; see *gyri temporales transversi*, under *gyrus*. **occipitotemporal c.**, gyrus occipitotemporalis lateralis. **Zuckerland's c.**, gyrus paraterminalis.

convolutional (kon-'vo-lu-'shun-al) of or pertaining to a convolution or convolutions.

convolutionary (kon-'vo-lu-'shun-a-re) convolutional.

convulsant (kon-vul-'sant) 1. producing or causing convulsions. 2. an agent that causes convulsions.

convulsibility (kon-vul-'sī-bil-'tē) capability of being convulsed.

convulsion (con-vul-'shun) [L. *convulsio*, from *convellere* to pull together] a violent involuntary contraction or series of contractions of the voluntary muscles. **central c.**, a convulsion not excited by any external cause, but due to a lesion of the central nervous system; called also *essential c.* and *spontaneous c.* **clonic c.**, a convulsion marked by alternating contracting and relaxing of the muscles. **coordinate c.**, a convulsion marked by clonic movements similar to natural, purposeful movements. **crowing c.**, laryngismus stridulus. **epileptiform c.**, any convulsion attended with loss of consciousness. **essential c.**, central c. **febrile c's**, those associated with high fever, occurring in infants and children. **hysterical c.**, any spasmodic movement attendant upon a hysterical disorder. **hysteroid c.**, hysteroepilepsy. **local c.**, any minor spasm affecting but

one muscle or only one part or member. **mimetic c.**, **mimic c.**, facial spasm or tic. **puerperal c.**, involuntary spasms in women just before, during, or just after, childbirth. **salaam c.**, nodding spasm. **spontaneous c.**, central c. **tetanic c.**, a tonic spasm without loss of consciousness; see *tetanus* (def. 2) and *tetany* (def. 1). **tonic c.**, prolonged contraction of the muscles, as a result of an epileptic discharge. **uremic c.**, one due to uremia, or retention in the blood of material that should have been expelled by the kidneys.

convulsivant (kon-vul-'sī-vant) convulsant.

convulsive (kon-vul-'siv) pertaining to, characterized by, or of the nature of convulsion.

Cooke's formula (count, criterior, index) [William Edmond Cooke, 1881-1939] see under *formula*.

Cooley's anemia, disease [Thomas Benton Cooley, American pediatrician, 1871-1945] see *thalassemia*.

Coolidge tube (koo-'lij) [William David Coolidge, American physicist, born 1873] see under *tube*.

cooling (kōol-'ing) the process of reducing the temperature, especially the body temperature of patients and experimental animals. See also *hypothermia*. **peritoneal c.**, reduction of body temperature achieved experimentally by circulation of a cooled irrigation fluid through the peritoneal cavity. **pleural c.**, reduction of body temperature accomplished experimentally by circulation of a cooled irrigation fluid through the pleural cavity.

Coombs' test (kōōmz) [R. R. A. Coombs, British immunologist] see under *tests*.

Cooper's disease, etc. (koo-'perz) [Sir Astley Paston Cooper, English surgeon, 1768-1841] see under *breast, disease, fascia, hernia, ligament, operation, and testis*.

Cooperia (koo-'pe-'re-ah) a genus of parasitic nematodes. **C. oncoph'ora**, **C. pectina'ta**, **C. puncta'ta**, species of parasitic nematodes sometimes occurring in the small intestine of cattle.

cooperid (koo-'per-id) a parasitic nematode of the genus *Cooperia*.

Coopernail's sign (koo-'per-nālz) [George Peter Coopernail, American physician, born 1876] see under *sign*.

coordination (ko-or-'dī-na-'shun) the harmonious functioning of interrelated organs and parts; applied especially to the process of the motor apparatus of the brain which provides for the co-working of particular groups of muscles for the performance of definite adaptive useful responses.

coossification (ko-os-'fī-fi-ka-'shun) the action or state of being joined together by ossification.

coossify (ko-os-'fī-fi) to grow together by ossification.

copaiba (ko-pi-'bah) the resinous juice (balsam) of various leguminous trees of tropical America, especially *Copaifera officinalis* and *C. langsdorffii* Leguminosae; it was formerly used for gonorrhea and chronic inflammation of mucous membranes and as a diaphoretic and expectorant. Called also *balsam of copaiba*.

copal (ko-pal') [Mex.] the commercial name of many resinous substances of extremely varied origin and character; the original copals came from trees of tropical America, chiefly of the leguminous species *Hymenaea courbaril* L. and various species of *Trachylobium*. It is used in various varnishes and cements and in dentistry for modeling compounds and varnishes for cavities.

coparaffinate (ko-par-'ah-fin-āt) a mixture of water-insoluble isoparaffinic acids partially neutralized with isocetyl hydroxybenzylidialkyl amines; used as an anti-infective for the skin.

COPD chronic obstructive pulmonary disease.

cope (kōp) the upper half of a flask used in the casting art; applied in prosthetic dentistry to the upper or cavity side of a denture flask.

copepod (ko-'pē-pod) [Gr. *kōpē* oar + *pous* foot] an individual member of Copepoda.

Copepoda (ko-'pē-'ō-dah) [Gr. *kōpē* oar + *pous* foot] a subclass of minute aquatic arthropods (class Crustacea) that are intermediate hosts of *Diphyllobothrium* and *Dracunculus*; ingestion of copepods infected with the early larval stages of *Spirometra mansonoides* may cause human sparganosis.

Copernicia (ko-'per-nish-'e-ah) a genus of palms, including *C. cerifera* Mart., a South American species, which is the source of carnauba wax.

coping (kōp-'ing) a thin metal covering or cap, such as the plate of metal applied over the prepared crown or root of a tooth preparatory to attaching an artificial crown; called also *cope* and *thimble*. **long c.**, one placed on a tooth that has been reduced only as much as necessary to receive the crown or overdenture. **short c.**, one placed on a tooth that has been reduced in vertical height to within 0.5 to 1.0 mm. above the gingival margin, after root canal therapy. **transfer c.**, a covering or cap of metal, acrylic resin, or other material, used to position a die in an impression.

copiopia (kop-e-o-'pe-ah) [Gr. *kopos* fatigue + *opsis* sight] eye-strain from overwork or improper use of the eyes.

copodyskinesia (kop'o-dis'ki-ne'ze-ah) [Gr. *kopos* fatigue + *dys-* + *kinesis* motion] (*obs.*) any difficulty of movement due to fatigue from the habitual performance of some particular action; occupation neurosis.

copolymer (ko-pol'i-mer) a polymer containing monomers of more than one kind.

copper (kop'er) [L. *cuprum*; Gr. *Kypros*] a reddish, malleable metal; atomic number, 29; atomic weight, 63.54; symbol Cu, with poisonous salts. Copper is essential in nutrition, being a component of various proteins, including ceruloplasmin, erythrocyte, cytochrome c oxidase, tyrosinase, etc. Deficiency, which is rare, may result in hypochromic microcytic anemia, neutropenia, and bone changes. **c. abietinate**, a copper salt in green scales, soluble in oil; used as an anthelmintic and vermifuge in veterinary practice. **c. citrate**, see *cupric citrate*, under *citrate*. **c. iodide**, cuprous iodide, CuI. **c. oxyphosphate**, a salt of copper, zinc phosphate, and glacial acetic acid, occasionally used as a temporary filling material for tooth cavities; called also *green precipitate*. **c. phenolsulfonate**, green prismatic crystals, (OH·C₆H₄·SO₂O)₂Cu·6H₂O. **c. sulfate**, cupric sulfate; see under *sulfate*.

copperas (kop'er-as) commercial ferrous sulfate, FeSO₄·7H₂O; disinfectant and deodorizer. See also *ferrous sulfate*, under *sulfate*.

copperhead (kop'er-hed) 1. a venomous snake (a pit viper), *Agkistrodon contortrix*, of the United States, having a brown to copper-colored body with dark bands. 2. a very venomous elapid snake, *Denisonia superba*, of Australia, Tasmania, and the Solomon Islands. See table accompanying *snake*.

copracrasia (kop'rah-kra'se-ah) [Gr. *kopros* dung + *akrasia* want of self control] fecal incontinence.

copragogue (kop'rah-gog) [Gr. *kopros* dung + *agōgos* leading] cathartic.

coprecipitin (ko'pre-sip'i-tin) a precipitin in the same serum with one or more other precipitins.

copremesis (kop-rem'ē-sis) [Gr. *kopros* dung + *emesis* vomiting] the vomiting of fecal material.

copro- (kop'ro) [Gr. *kopros* dung] a combining form denoting relationship to feces.

coproantibody (kop'ro-an'ti-bod'e) an antibody (chiefly IgA) present in the intestinal tract, associated with immunity to enteric infection.

coprodæum (kop'ro-de'um) [*copro-* + Gr. *hodiaos* on the way] the large dorsal passage in the proximal part of the cloaca in monotremes, into which the intestine opens.

coprodeum (kop'ro-de'um) coprodæum.

coprolagnia (kop'ro-lag'ne-ah) [*copro-* + Gr. *lagneia* lust] a form of paraphilia in which sexual excitement is associated with feces or defecation.

coprolalia (kop'ro-la'le-ah) [*copro-* + Gr. *lalia* babble] the use of foul language, particularly of words relating to the feces; called also *coprophrasia*, *eschrolalia*, and *coprolomania*.

coprolomania (kop'ro-lal'o-ma'ne-ah) coprolalia.

coprolith (kop'ro-lith) [*copro-* + Gr. *lithos* a stone] a hard fecal concretion.

coprology (kop-rol'o-je) [*copro-* + *-logy*] the study of the feces.

coproma (kop-ro'mah) [*copro-* + *-oma*] stercoroma.

Copromastix (kop'ro-mas'tiks) a genus of coprozoic protozoa of the order Polymastigida, class Zoomastigophora, having four equally long anterior flagella and a trailing flagellum. **C. prowazeki**, a species found in rat and human feces in Brazil.

Copromonas (kop-rom'o-nas) a genus of elongate, ovoid, uniflagellate protozoa of the order Euglenoidina, class Phytomastigophora, which are coprozoic in the feces of toads, frogs, and man. **C. subtilis**, a piriform coprozoic flagellate found in the feces of frogs and sometimes in the human stool.

coprophagia (kop'ro-fa'je-ah) coprophagy.

coprophagous (kop-rof'ah-gus) feeding on dung, or feces.

coprophagy (kop-rof'ah-je) [*copro-* + Gr. *phagein* to eat] the ingestion of dung, or feces.

coprophil (kop'ro-fil) a coprophilic microorganism.

coprophile (kop'ro-fil) 1. coprophil. 2. coprophilic.

coprophilia (kop'ro-fil'e-ah) [*copro-* + Gr. *philia* affection] a psychopathologic interest in filth, especially in feces and in defecation.

coprophiliac (kop'ro-fil'e-ak) an individual exhibiting coprophilia.

coprophilic (kop'ro-fil'ik) 1. pertaining to or characterized by coprophilia. 2. inhabiting dung or feces; said of bacteria.

coprophilous (kop-rof'i-lus) coprophilic.

coprophobia (kop'ro-to'be-ah) [*copro-* + Gr. *phobein* to be frightened by + *ia*] abnormal repugnance to defecation and to feces.

coprophrasia (kop'ro-fra'ze-ah) (*obs.*) coprolalia.

coproporphyrin (kop'ro-por-fir'e-ah) hereditary porphyria characterized by excessive excretion of coproporphyrin, chiefly in the feces; usually a symptomless condition, but attacks resembling

those of acute intermittent porphyria may be precipitated by drugs.

coproporphyrin (kop'ro-por'fir-in) [*copro-* + *porphyrin*] a porphyrin, C₃₆H₃₈O₆N₄, formed in the intestine from bilirubin and found in the feces and in the urine in coproporphyrinuria; each of its four pyrrole groups has a methyl and a propionate side chain. Called also *stercoporphyrin*.

coproporphyrinogen (kop'ro-por'fir-in'o-jin) the fully reduced, colorless compound, readily giving rise to coproporphyrin by oxidation.

coproporphyrinuria (kop'ro-por'fir-in-u're-ah) the presence of coproporphyrin in the urine.

coprostanol (kop'ro-sta'nol) a saturated sterol, C₂₇H₄₆O, found in feces, probably reduced from cholesterol; called also *coprosterin* and *coprosterol*.

coprostasis (kop-ros'tah-sis) [*copro-* + Gr. *stasis* stoppage] impaction of the feces in the intestine.

coprosterasophobia (kop'ro-sta'so'fo-be-ah) [*coprostasis* + *phobia*] (*obs.*) morbid dread of fecal stasis.

coprosterin (kop'ro-ste'rin) [*copro-* + *sterin*] coprostanol.

coprosterol (kop'ro-ste'rol) coprostanol.

coprozoa (kop'ro-zo'ah) [*copro-* + Gr. *zōon* animal] protozoa which are found in fecal matter outside the body, but which do not inhabit the intestine.

coprozoic (kop'ro-zo'ik) living in fecal material; found in fecal material.

Coptis (kop'tis) [L.] a genus of ranunculaceous plants. *C. tee'ta*, an Asiatic species, is tonic. *C. trifolia* (goldthread), of North America, was formerly used as a bitter tonic.

coptosystole (kop'to-sis'to-le) [Gr. *koptein* to cut + *systole*] (*obs.*) the cutting off of a ventricular systole.

copula (kop'u-lah) [L.] 1. any connecting part or structure. 2. copula linguae. **c. lin'guae**, a median ventral elevation on the embryonic tongue formed by union of the second branchial arches; it represents the future root of the tongue.

copulation (kop'u-la'shun) [L. *copulatio*] sexual union between male and female; usually used in reference to animals lower than man.

Coq. abbreviation for L. *co'que*, boil.

Coq. in s. a. abbreviation for L. *co'que in sufficien'te a'qua*, boil in sufficient water.

Coq. s. a. abbreviation for L. *co'que secundum ar'tem*, boil properly.

coquille (ko-kē'l') [Fr.] a glass or lens shaped like a watch crystal.

cor (kor), gen. *cor'dis* [L.] [NA] the muscular organ that maintains the circulation of the blood; see *heart*. **c. adipo'sum**, a heart that has undergone fatty degeneration or that has an accumulation of fat around it; called also *fat*, or *fatty heart*. **c. arterio'sum**, the left side of the heart, so called because it contains oxygenated (arterial) blood. **c. bilocula're**, a congenital anomaly characterized by failure of formation of the atrial and ventricular septums, the heart having only two chambers, a single atrium and a single ventricle, and a common atrioventricular valve. **c. bovi'num** [L. "ox heart"], a greatly enlarged heart due to a hypertrophied left ventricle; called also *c. tauri'num* and *bucardia*. **c. dex'trum** [L. "right heart"], the right atrium and ventricle. **c. hirsu'tum**, *c. villosum*. **c. mo'bile** (*obs.*), an abnormally movable heart. **c. pen'dulum**, a heart so movable that it seems to be hanging by the great blood vessels. **c. pseudotrilocula're biatria'tum**, a congenital cardiac anomaly in which the heart functions as a three-chambered heart because of tricuspid atresia, the right ventricle being extremely small or rudimentary and the right atrium greatly dilated. Blood passes from the right to the left atrium and thence to the left ventricle and aorta. **c. pulmona'le**, heart disease due to pulmonary hypertension secondary to disease of the lung, or its blood vessels, with hypertrophy of the right ventricle. **c. sinis'trum** [L. "left heart"], the left atrium and ventricle. **c. tauri'num**, *c. bovinum*. **c. triatria'tum**, a congenital anomaly caused by failure of incorporation of the embryonic common pulmonary vein into the left atrium, the pulmonary veins emptying into an accessory chamber superior to the true left atrium and communicating with it by a small opening, which obstructs pulmonary venous flow, thus simulating mitral stenosis. Called also *triatrial heart*. **c. trilocula're**, three-chambered heart. **c. trilocula're biatria'tum**, a congenital anomaly caused by failure of formation of the ventricular septum, the heart having two atria, communicating, by the tricuspid and mitral valves, with a single ventricle. **c. trilocula're biven'tricula're**, a three-chambered heart with one atrium and two ventricles. **c. veno'sum**, the right side of the heart, so called because it contains blood that has given up most of its oxygen (venous blood). **c. villo'sum** [L. "hairy heart"], a roughened state of the pericardium caused by exudate on its surface, occurring in pericarditis; called also *c. hirsutum*.

coracidia (kor'ah-sid'e-ah) plural of *coracidium*.

coracidium (kor'ah-sid'e-um), pl. *coracidia*. The individual

free-swimming or free-crawling, spherical, ciliated embryo of tapeworms of the order Pseudophyllidea.

coracoacromial (kor'ah-ko-ah-kro'me-al) pertaining to the coracoid and acromion processes.

coracoclavicular (kor'ah-ko-klah-vik'u-lar) pertaining to the coracoid process and the clavicle.

coracohumeral (kor'ah-ko-hu'mer-al) pertaining to the coracoid process and the humerus.

coracoid (kor'ah-koid) [Gr. *korakoeidēs* crowlike] 1. like a raven's beak. 2. the coracoid process (processus coracoideus scapulae [NA]).

coracoiditis (kor'ah-koi-di'tis) a painful condition in the region of the scapula and of the coracoid process, with deltoid atrophy; attributed to injury of the coracoid process.

coracoradialis (kor'ah-ko-ra'de-a'lis) caput breve musculi bicipitis brachii.

coracoularis (kor'ah-ko-ul-na'ris) the fibers of the biceps muscle attached to the fascia of the forearm.

coralliform (ko-ral'i-form) [L. *corallum* coral + *forma* shape] having the form of a coral; branching like a coral.

corallin (kor'ah-lin) aurin. **yellow c.**, the sodium salt of aurin, occurring as yellow masses with a greenish metallic luster, which turns red in solution; called also *corallin yellow*.

coralloid (kor'ah-loid) coralliform.

Coramine (ko'rah-min) trademark for preparations of nikethamide.

corasthma (kor-az'mah) hay fever.

Corbus' disease (kor'bus) [Budd Clarke *Corbus*, American urologist, 1876-1954] balanitis gangrenosa.

cord (kord) [L. *chorda*; Gr. *chordē* string] any long, rounded, flexible structure; see also *chorda*. **Bergmann's c's**, striae medullares ventriculi quarti; see under *stria*. **Billroth's c's**, red pulp c's. **dental c.**, a cordlike mass of cells from which the enamel organ develops. **enamel c.**, a vertical extension of the enamel knot in a developing tooth, connecting the enamel knot with the outer dental epithelium, a temporary structure which disappears before enamel formation begins. **Ferrein's c's**, the inferior, or true, vocal cords (plica vocalis [NA]). **ganglionated c.**, truncus sympathicus. **genital c.**, in the embryo, the midline fused caudal part of the two urogenital ridges, each containing a mesonephric and paramesonephric duct. **gubernacular c.**, chorda gubernaculum. **hepatic c's**, anastomosing plates of hepatic cells radiating outward from the central vein and composing the parenchyma of a hepatic lobule; called also *hepatic cell c's*. **lateral c.**, see *fasciculus lateralis plexus brachialis*, under *fasciculus*. **lumbosacral c.**, truncus lumbosacralis. **lymph c's**, medullary c's (def. 1). **medial c.**, see *fasciculus medialis plexus brachialis*, under *fasciculus*. **medullary c's**, 1. strands of dense lymphoid tissue surrounded by the sinuses of the medulla of a lymph node; called also *lymph c's*. 2. rete c's. **nephrogenic c.**, a longitudinal cord, formed by fusion of the nephrotome plates, that gives rise to the mesonephric tubule and part of the metanephric tubules. **nerve c.**, any nerve trunk or bundle of nerve fibers. **oblique c. of elbow joint**, chorda obliqua membranae interosae antebrachii. **ovigerous c's**, rete cords of the primitive ovary that resolve into eggs and their follicles. **Pflüger's c's**, 1. the ovarian tubes. 2. the salivary tubes. **posterior c.**, see *fasciculus posterior plexus brachialis*, under *fasciculus*. **psalterial c.**, stria vascularis ductus cochlearis. **red pulp c's**, the masses of red pulp of the spleen; called also *Billroth's c's* and *splenic c's*. **rete c's**, strands of primordial cells in the medulla of the embryonic gonads that connect with some of the mesonephric tubules, and from which the rete ovarii or the rete testis develop; called also *medullary c's* and *sex c's*. **scirrhus c.**, chronic infection of the stump of the spermatic cord of a castrated horse caused by bacterial infection, with discharge of pus and sometimes formation of a tumor-like mass with numerous weeping sinuses. **sex c's**, rete c's. **sexual c's**, the seminiferous tubules of the early fetus. **spermatic c.**, the structure that extends from the abdominal inguinal ring to the testis, comprising the ductus deferens, testicular artery, pampiniform plexus, and nerves, as well as various other vessels, enclosed by its various coverings (tunicae funiculi spermatici et testis); called also *funiculus spermaticus* [NA], and *chorda spermatica*. **spinal c.**, that part of the central nervous system which is lodged in the vertebral canal; it extends from the foramen magnum, where it is continuous with the medulla oblongata, to the upper part of the lumbar region. It ends between the twelfth thoracic and third lumbar vertebrae, often at or adjacent to the disc between the first and second lumbar vertebrae. It is composed of an inner core of gray substance in which nerve cells predominate, and an outer layer of white substance in which myelinated nerve fibers predominate, and is enclosed in three protective membranes, or meninges: the dura mater, the arachnoid, and the pia mater. Thirty-one spinal nerves originate from the spinal cord: 8 cervical, 12 thoracic, 5 lumbar, 5 sacral, and 1 coccygeal. The spinal cord conducts impulses to and from the brain, and controls many automatic muscular activities (reflexes). Called also *chorda spinalis* and *medulla spinalis* [NA]. See Plate X, under *brain*. **splenic c's**, red pulp c's. **testis**

c's, the rete cords of the embryonic testis. **umbilical c.**, the flexible structure connecting the umbilicus of the embryo and fetus with the placenta and giving passage to the umbilical arteries and vein. In the newborn it measures about 50 cm. in length. First formed during the fifth embryonic week from the allantoic stalk, it contains the omphalomesenteric duct and the allantois. Called also *funiculus umbilicalis* [NA] and *chorda umbilicalis*. **vocal c., false**, a fold of mucous membrane covering muscle in the larynx and separating the ventricle from the vestibule; called also *plica vestibularis* [NA], *plica ventricularis*, *false vocal fold*, and *vestibular fold*. **vocal c., true**, a fold of mucous membrane covering the vocalis muscle in the larynx forming the inferior boundary of the ventricle. Called also *plica vocalis* [NA], *vocal fold*, and *Ferrein's c.* **Weitbrecht's c.**, chorda obliqua membranae interosae antebrachii. **Wilde's c's**, a name once applied to the transverse striae of the corpus callosum (striae transversae corporis callosi [NA]). **Willis' c's**, numerous fibrous bands (dural trabeculae) that extend transversely across the inferior angle of the superior sagittal sinus; called also *chordae Willisii*.

cordal (kor'dal) pertaining to a cord; used specifically in referring to the vocal cord, or the plica vocalis.

cordate (kor'dāt) [L. *cor* heart] heart-shaped.

cordectomy (kor-dek'to-me) [cord + Gr. *ektomē* excision] excision of a cord, as a vocal cord.

cordial (kord'yal) [L. *cordialis*] 1. stimulating the heart; invigorating. 2. an aromatized alcoholic liqueur.

cordiale (kor-de-a'le) [L.] cordial.

cordiform (kor'di-form) [L. *cor* heart + *forma* form] heart-shaped.

corditis (kor-di'tis) inflammation of the spermatic cord.

cordopexy (kor'do-pek'se) [cord + Gr. *pēxis* fixation] the operation of displacing outward the vocal cord for bilateral vocal cord paralysis.

cordotomy (kor-dot'o-me) 1. section of a vocal cord. 2. interruption of the lateral spinothalamic tract of the spinal cord, usually in the anterolateral quadrant, for relief of intractable pain; it may be done by open surgery or percutaneously by stereotaxic surgery. Also spelled *chordotomy*.

Cordran (kor'dran) trademark for a preparation of flurandrenolide.

Cordyceps (kor'di-seps) a genus of ascomycetous fungi of the family Clavicipitaceae, order Clavicipitales; certain species produce fatal disease of caterpillars. **C. sinensis**, a parasite of insect larvae; in Chinese medicine ("hea-tao-taog-chung") it is reputed to be a drug coagulant; called also *Sphaeria sinensis*.

Cordylobia (kor'di-lo-be-ah) a genus of flies of the family Calliphoridae. **C. anthropoph'aga**, a species of flies of Africa the larvae (cayor worms) of which burrow under the skin of man and animals, causing a myiasis; called also *tumbu fly*.

core (kōr) 1. the central part of anything, such as the central mass of necrotic matter in a boil. 2. a bar of iron around which a wire is wound to form an induction coil or electromagnet. 3. a metal casting, usually with a post in the canal of a root, designed to retain an artificial crown. 4. a sectional record, usually of plaster of Paris or one of its derivatives, of the relationships of parts, such as teeth, metallic restorations, or copings.

core-, coro- (kōr'e, kōr'o) [Gr. *korē* pupil] a combining form denoting relationship to the pupil of the eye; see also words beginning *irid-* and *irido-*.

coreclisis (kōr'e-kli'sis) [core- + Gr. *kleisis* closure] iridencleisis.

corectasis (kōr-ek'tah-sis) [core- + Gr. *ektasis* a dilatation] dilatation of the pupil.

corectome (kōr-ek'tōm) [core- + Gr. *tomē* a cutting] a cutting instrument used in performing iridectomy (corectomy).

corectomedialysis (ko-rek'to-me'de-al'i-sis) [core- + Gr. *ektemnein* to excise + *dialysis* separating] the operation of forming an artificial pupil by detaching the iris from the ciliary ligament.

corectomy (ko-rek'to-me) [core- + Gr. *ektomē* excision] iridectomy.

corectopia (kōr-ek-to'pe-ah) [core- + Gr. *ek* out + *topos* place] abnormal situation of the pupil.

coredialysis (ko're-di-al'i-sis) [core- + Gr. *dialysis* separating] the surgical separation of the external margin of the iris from the ciliary body; called also *iridodialysis*.

corediastasis (ko're-di-as'tah-sis) [core- + Gr. *diastasis* distention] the dilatation or a dilated state of the pupil.

coregonin (ko-reg'o-nin) a protamine obtained from the sperm of the white fish.

corelysis (ko-rel'i-sis) [core- + Gr. *lysis* dissolution] operative destruction of the pupil; especially the surgical detachment of adhesions of the pupillary margin of the iris from the lens.

coremorphosis (kōr'e-mor'fo-sis) [core- + Gr. *morphōsis* formation] the surgical formation of an artificial pupil.

corenclisis (kōr'en-kli'sis) [core- + Gr. *enkleiein* to inclose] iridencleisis.

coreometer (ko're-om'ē-ter) [*core* + Gr. *metron* measure] pupilometer.

coreometry (ko're-om'ē-tre) pupillometry.

coreoplasty (ko're-o-plas'te) [*core* + Gr. *plassein* to form] any plastic operation on the iris.

corepressor (ko're-pres'sor) a small molecule which combines with an aporepressor to form the substance that controls the synthesis of an enzyme.

corestenoma (ko're-ste-no'mah) [*core* + Gr. *stenōma* contraction] an abnormally contracted state of the pupil. **c. congenitum**, a congenital condition in which the pupil is partially occluded by excrescences which meet, leaving scattered small openings.

Corethra (ko-re'thrā) *Chaoborus*.

coretomedialysis (ko're-to-me-dī-al'ī-sis) [*core* + Gr. *temnein* to cut + *dialysis* separation] the formation of an artificial pupil by a combined cutting and tearing operation upon the iris.

coretomy (ko-ret'o-me) [*core* + Gr. *temnein* to cut] iridotomy.

Cori cycle, ester (ko're) [Carl Ferdinand Cori, born 1896, and Gerty Theresa Cori, 1896–1955: American biochemists; co-winners, with Bernardo Alberto Houssay, of the Nobel prize for medicine and physiology in 1947] see *glucose-lactate cycle*, under *cycle*, and see under *ester*.

coriaceous (ko-re-a'shus) [L. *corium* leather] resembling leather; leathery, tough; said of bacterial cultures.

coriander (ko're-an'der) [L. *coriandrum*] the dried ripe fruit of the umbelliferous plant *Coriandrum sativum*; formerly used as a weak carminative and aromatic, but now used as a flavor.

Coriaria (ko-re-a're-ah) a genus of Old World poisonous coriariaceous plants (shrubs and small trees), containing coriaryrin; they are also noted for their content of dyes and tannins.

coriin (ko're-in) a substance formed by treating fibrous connective tissue with alkalis.

corium (ko're-um) [L. "hide"] [NA] the dermis: the layer of the skin deep to the epidermis, consisting of a dense bed of vascular connective tissue; called also *cutis vera* and *true skin*.

corm (korm) [L. *cormus*] a solid bulblike expansion of a plant stem below the surface of the ground.

cormethasone acetate (kor-meth'ah-sōn) chemical name: 21-(acetyloxy)-6,6,9-trifluoro-11β, 17-dihydroxy-16α-methylpregna-1,4-diene-3,20-dione; a topical anti-inflammatory, C₂₄H₂₈F₃O₆.

corn (korn) [L. *cornu* horn] 1. a horny induration and thickening of the stratum corneum of the skin of the toes, caused by friction and pressure from poorly fitting shoes or hose; it forms a conical mass pointing down into the corium, producing pain and inflammation. There are two kinds: the *hard corn*, usually located on the outside of the little toe or on the upper surfaces of the other toes, and the *soft corn*, found between the toes, most often the fourth and fifth toes, kept softened by moisture. Called also *clavus*. 2. the seeds of a variety of certain cereal grains, especially *Zea mays* L., Gramineae, used as both animal and human food. Corns yield corn oil, used as a solvent for injections, and corn starch, used as an absorbent and dusting powder. 3. a bruise on the bottom of a horse's foot between the wall of the heel and the bar. **hard c.**, see *corn*, def. 1 **soft c.**, See *corn*, def. 1.

cornea (kor'ne-ah) [L. *corneus* horny] [NA] the transparent structure forming the anterior part of the fibrous tunic of the eye. It consists of five layers: (1) the anterior corneal epithelium, continuous with that of the conjunctiva, (2) the anterior limiting layer, (Bowman's membrane), (3) the substantia propria, (4) the posterior limiting layer, (Descemet's membrane), and (5) the endothelium of the anterior chamber, called also *keratoderma*. **conical c.**, keratoconus. **c. farina'ta**, degeneration of the cornea marked by fine dustlike stippling. **flat c.**, the configuration of the cornea when a shallow ocular chamber is present or when the eyeball is atrophic. **c. globo'sa**, buphthalmos. **c. gutta'ta**, a degenerative condition of the cornea due to dystrophy of the endothelial cells; called also *dystrophia endothelialis corneae*. **c. opa'ca**, the sclerotic coat of the eye. **c. pla'na**, congenital flatness of the cornea. **sugar-loaf c. (obs.)**, keratoconus. **c. verticilla'ta**, Fleischer's vortex.

corneal (kor'ne-al) [L. *cornealis*] pertaining to the cornea.

corneitis (kor'ne-i'tis) keratitis.

corneoblepharon (kor'ne-o-blef'ah-ron) [*cornea* + Gr. *blepharon* eyelid] adhesion between the eyelid and cornea.

corneoiritis (kor'ne-o-i-ri'tis) inflammation of the cornea and iris.

corneosclera (kor'ne-o-skle'rah) the cornea and sclera regarded as forming one organ.

corneoscleral (kor'ne-o-skle'ral) affecting or pertaining to both the cornea and the sclera.

corneous (kor'ne-us) [L. *corneus*] hornlike, or horny; consisting of keratin.

corner (kor'ner) the third incisor on either side of each jaw in the horse.

Corner's tampon [Edred Moss Corner, British surgeon, 1873–1950] see under *tampon*.

Corner-Allen test, unit [George Washington Corner, American anatomist, born 1889; Willard Myron Allen, American gynecologist, born 1904] see under *tests* and *unit*.

Cornet's forceps (kor'nets) [Georg Cornet, German bacteriologist, 1858–1915] a cover glass forceps.

corneum (kor'ne-um) [L. "horny"] the horny layer of the skin (stratum corneum epidermidis) [NA].

corniculate (kor-nik'u-lāt) shaped like a small horn.

corniculum (kor-nik'u-lum) [L. dim. of *cornu*] cartilago corniculata.

cornification (kor'ni-fi-ka'shun) [L. *cornu* horn + *facere* to make] 1. conversion into keratin, or horn. 2. conversion of epithelium to the stratified squamous type.

cornified (kor'ni-fid) converted into horny tissue (keratin); keratinized.

Corning's anesthesia (method), puncture (kor'nings) [James Leonard Corning, New York neurologist, 1855–1923] see *spinal anesthesia* (def. 1), under *anesthesia*, and *lumbar puncture*, under *puncture*.

cornoid (kor'noid) [L. *cornu* horn + *eidos* form] resembling horn; see under *lamella*.

cornu (kor'nu), pl. *cor'nua* [L. "horn"] a hornlike excrescence or projection; used in anatomical nomenclature to designate a structure resembling a horn in shape, especially in section. Called also *horn*. **c. Ammo'nis** [L. "horn of Ammon"], hippocampus. **c. ante'rius medul'lae spina'lis** [NA], the horn-shaped structure seen in transverse section of the spinal cord, formed by the anterior column of the cord (columna anterior medullae spinalis); called also *anterior horn of spinal cord*. **c. ante'rius ventric'uli latera'lis** [NA], anterior horn of lateral ventricle: the part of the lateral ventricle that extends forward from the pars centralis into the frontal lobe; called also *anterior cornu*. **cor'nua cartilag'inis thyroi'deae**, the horns of the thyroid cartilage; see *c. inferius cartilaginis thyroideae* and *c. superius cartilaginis thyroideae*. **c. cer'vi**, the horn of a stag or deer; hart's horn. **coccygeal c.**, **c. coccy'geum** [NA], **c. of coccyx**, coccygeal horn: either of the cranial pair of rudimentary articular processes of the coccyx that articulate with the cornua of the sacrum. **c. cuta'neum**, cutaneous horn. **ethmoid c.**, *concha nasalis media*. **c. infe'rius cartilag'inis thyroi'deae** [NA], inferior horn of thyroid cartilage: the inferior extension of the posterior border of the thyroid cartilage. **c. infe'rius mar'ginis falcifor'mis** [NA], inferior horn of falciform margin: the distal edge of the falciform margin of the saphenous hiatus, deep to the great saphenous vein. **c. infe'rius ventric'uli latera'lis** [NA], inferior horn of lateral ventricle: the part of the lateral ventricle that extends forward from the pars centralis and the posterior horn into the temporal lobe; called also *inferior horn of cerebrum*. **c. latera'le medul'lae spina'lis** [NA], the horn-shaped structure seen in transverse section of the spinal cord, formed by the lateral column of the cord (columna lateralis medullae spinalis); called also *lateral horn of spinal cord*. **c. ma'jus os'sis hyoi'dei** [NA], greater horn of hyoid bone: a bony projection passing backward and upward from either side of the body of the hyoid bone; called also *lateral horn of hyoid bone*. **c. mi'nus os'sis hyoi'dei** [NA], lesser horn of hyoid bone: a small conical eminence projecting upward on either side of the hyoid bone at the angle of junction between the body and the greater horns; called also *superior horn of hyoid bone*. **c. occipita'le**, *c. posterius ventriculi lateralis*. **cor'nua os'sis hyoi'dei**, the horns of the hyoid bone; see *c. majus ossis hyoi'dei* and *c. minus ossis hyoi'dei*. **c. poste'rius medul'lae spina'lis** [NA], the horn-shaped structure seen in transverse section of the spinal cord, formed by the posterior column of the cord (columna posterior medullae spinalis); called also *posterior horn of spinal cord*. **c. poste'rius ventric'uli latera'lis** [NA], posterior horn of lateral ventricle: the part of the lateral ventricle that extends posteriorly from the pars centralis into the occipital lobe; called also *c. occipitale*. **sacral c.**, **c. sacra'le** [NA], sacral horn: either of the two hook-shaped processes extending downward from the arch of the last sacral vertebra; called also *coccygeal eminence*. **cor'nua of spinal cord**, the horn-shaped structures seen in transverse section of the spinal cord; see *columna anterior medullae spinalis*, *columna lateralis medullae spinalis*, and *columna posterior medullae spinalis*. **c. supe'rius cartilag'inis thyroi'deae** [NA], superior horn of thyroid cartilage: the superior extension of the posterior border of the thyroid cartilage. **c. supe'rius mar'ginis falcifor'mis** [NA], superior horn of falciform margin: the proximal end of the falciform margin of the saphenous hiatus; called also *Scarpa's ligament*. **c. us'tum** [L. "burnt horn"], the burnt or charred horn of the deer or stag, formerly used in medicine as an antacid.

cornua (kor'nu-ah) [L.] plural of *cornu*.

cornual (kor'nu-al) pertaining to a cornu or to cornua.

cornuate (kor'nu-āt) cornual.

cornucommissural (kor'nu-kō-mis'u-ral) pertaining to a cornu and to a commissure.

cornucopia (kor'nu-kō-pe-ah) [L. *cornu copiae* "horn of plenty"] an extension of the choroid plexus into each of the lateral recesses of the fourth ventricle.

Cornus (kor'nus) [L.] a genus of cornaceous trees and shrubs of both hemispheres; the cornels or dogwoods. The dried root bark of many, especially that of *C. florida*, the common dogwood of North America, was once used as an astringent bitter and tonic.

coro (ko'ro) koro.

coro- see *core-*.

corodiastasis (ko'ro-di-as'tah-sis) corodiastasis.

corolla (ko-rol'ah) [L. "little crown"] the inner set of leaves of a floral envelope, the individual portions of which are called *petals*.

corometer (ko-rom'ē-ter) pupillometer.

corona (ko-ro'nah), pl. *coronas*, or *coronae* [L.; Gr. *korōnē*] a crown; used in anatomical nomenclature to designate a crownlike eminence or encircling structure. **c. cilia'ris** [NA], the region on the anterior inner surface of the ciliary body of the eye from which radiate the ciliary processes. **c. clin'ica** [NA], clinical crown: the portion of a tooth which is exposed above the gingiva. **dental c., c. den'tis** [NA], the portion of a tooth that is covered by enamel and is separated from the root or roots at the cementsenamel junction; called also *anatomical crown*. **c. glan/dis pe'nis** [NA], **c. of glans penis**, the rounded proximal border of the glans penis, separated from the corpora cavernosa penis by the neck of the glans. **c. radia'ta**, 1. [NA] the radiating crown of projection fibers which pass from the internal capsule to every part of the cerebral cortex. 2. an investing layer of radially elongated follicular cells surrounding the zona pellucida of an ovum. **c. seborrhe'ica** (*obs.*), a red line or band along the upper border of the forehead and temples sometimes seen in severe cases of dermatitis seborrheica or pityriasis capitis, and often portending the development of frank psoriasis. **c. ven'eri**, a ring of syphilitic sores around the forehead, sometimes deeply affecting the bones of the head. **Zinn's c.**, *circulus vasculosus nervi optici*.

coronad (kor'ō-nad) toward the crown of the head or any corona.

coronae (ko-ro'ne) [L.] plural of *corona*.

coronal (ko-rō'nal) [L. *coronalis*] 1. pertaining to the crown of the head or to any corona. 2. situated in the direction of the coronal suture; said of a longitudinal plane or section passing through the body at right angles to the median plane. See under *plane*. Called also *coronalis* [NA].

coronale (kor-o-na'le) 1. the point of the coronal suture at the end of the maximum frontal diameter. 2. the frontal bone (os frontale) [NA].

coronalis (kor'o-na'lis) [L.] coronal; [NA] a term used to denote a structure situated in the direction of the coronal suture.

coronaritis (kor'o-nah-ri'tis) coronary arteritis.

coronary (kor'ō-na-re) [L. *corona*; Gr. *korōnē*] encircling in the manner of a crown; a term applied to vessels, nerves, ligaments, etc. The term usually denotes the arteries that supply the heart muscle and, by extension, a pathologic involvement of them.

coronavirus (kor'o-nah-vi'rus) any of a group of morphologically similar, ether-sensitive viruses, probably RNA, causing infectious bronchitis of birds, hepatitis in mice, gastroenteritis in swine, and respiratory infections in humans; called coronaviruses because of their resemblance, under the electron microscope, to a corona or crown.

corone (kō-ro'ne) [L.; Gr. *korōnē*] anything hooked or curved] the coronoid process of the mandible (processus coronoideus mandibulae) [NA].

coroner (kor'o-ner) an officer who holds inquests in regard to violent, sudden, or unexplained deaths.

coronet (kor'o-net) the lower part of the pastern of a horse, where the horn joins the skin.

coronion (ko-ro'ne-on) the tip of the coronoid process of the mandible.

coronitis (kor-o-ni'tis) inflammation of the coronary band or cushion of the horse hoof or the claw of cloven-hoofed animals.

coronoid (kor'o-noid) [Gr. *korōnē* anything hooked or curved, a kind of crown + *oid*] 1. shaped like a crow's beak. 2. crown-shaped.

coronoidectomy (kor'o-noi-dek'to-me) surgical removal of the coronoid process of the mandible.

coroparelcysis (ko'ro-par-el'si-sis) [*coro-* + Gr. *parelkein* to draw aside] the drawing aside of the pupil in partial corneal opacity in order to bring it under a transparent portion.

coroplasty (ko'ro-plas'te) coreoplasty.

coroscopy (ko-ro's'ko-pe) [*coro-* + Gr. *skopein* to examine] retinoscopy.

corotomy (ko-rot'o-me) [*coro-* + Gr. *temnein* to cut] iridotomy.

corpora (kor'po-rah) [L.] plural of *corpus*.

corporeal (kor'po-ral) corporeal.

corporeal (kor-po're-al) pertaining to the body.

corporic (kor-po'rik) [L. *corpus* body] affecting the body, or corpus, of an organ.

corps (kōr) [Fr., from L. *corpus*] 1. an organized body, or group of individuals. 2. *corpus*. **medical c.**, the surgeon officers of

the army or navy, comprising a surgeon general, medical directors, medical inspectors, surgeons, passed assistant surgeons, and assistant surgeons. **c. ronds**, Darier's name for round, double contoured bodies seen in keratosis follicularis.

corpse (korps) [L. *corpus* body] a dead body; used to refer specifically to a human body in the early period after death. Cf. *cadaver*.

corpulency (kor'pu-len'se) [L. *corpulentia*] undue fatness or obesity.

corpus (kor'pus), pl. *cor'pora*, gen. *cor'poris* [L. "body"] a discrete mass of material, as of specialized tissue; used in anatomical nomenclature to designate the entire organism, and applied also to the main portion of an anatomical part, structure, or organ.

c. adipo'sum buc'cae [NA], adipose body of cheek: a thick layer of fat external to the buccinator muscle, containing the buccal glands; the main portion of fatty tissue in the cheek. Called also *fatty ball of Bichat*, *sucking cushion*, and *sucking or suckorial pad*.

c. adipo'sum fos'sae ischiorecta'lis [NA], adipose body of the ischiorectal fossa: a pad of fat found in the ischiorectal fossa.

c. adipo'sum infrapatella're [NA], infrapatellar fatty body: a mass of fibrous fatty tissue inferior to the patella, in the angle between the deep surface of the patellar ligament and the tibia.

c. adipo'sum or'bitae [NA], adipose body of orbit: a mass of fatty tissue in the posterior part of the orbit, around the optic nerve, extraocular muscles, and vessels.

c. al'bi-cans (pl. *cor'pora albican'tia*) [NA], white fibrous tissue that replaces the regressing corpus luteum in the human ovary in the latter half of pregnancy, or soon after ovulation when pregnancy does not supervene; called also *c. fibrosum*.

c. alie'nium, a foreign body. **c. amygdalo'i'deum** [NA], the amygdaloid body: a small, ovoid complex of nuclei partly covered by the pyriform cortex, within the tip of the temporal lobe, anterior to the inferior horn of the lateral ventricle of the brain; it is part of the limbic system and is sometimes classified as one of the basal ganglia.

The amygdala has olfactory connections, is reciprocally connected to the limbic cortex, and projects fibers to the hippocampus, the septum, the thalamus, and especially to the hypothalamus. Called also *amygdala* and *nucleus amygdalae*.

cor'pora amyla'cea [L. "starchy bodies"], small hyaline masses of degenerate cells found in the prostate, neuroglia, etc. Called also *amyloceous bodies* or *corpuscles*, *amyloid bodies* or *corpuscles*, *colloid corpuscles*, and *corpora versicolorata*.

cor'pora aran'tii [L. "bodies of Arantius"], nodules of aortic valve; see *noduli valvularum semilunarium*.

cor'pora atret'ica, ovarian follicles that never mature, but undergo degeneration; called also *pseudolutein body*.

cor'pora bigem'ina (sing. *cor'pus bigem'inum*), corpora quadrigemina. **c. calca'nei**, the body of the calcaneus.

c. callo'sum [NA], an arched mass of white matter, found in the depths of the longitudinal fissure, composed of transverse fibers connecting the cerebral hemispheres and consisting, from the anterior to the posterior, of rostrum, genu, trunk, and splenium; called also *commissura magna cerebri*.

c. caverno'sum clitor'idis [NA], cavernous body of clitoris: a column of erectile tissue on either side [dextrum et sinistrum], the two fusing to form the body of the clitoris (c. clitoridis).

c. caverno'sum pe'nis [NA], cavernous body of penis: one of the columns of erectile tissue forming the dorsum and sides of the penis; called also *spongy body of penis*.

c. caverno'sum ure'thrae viril'is, c. spongiosum penis. **c. cilia're** [NA], **c. cilia'ris**, the ciliary body: the thickened part of the vascular tunic of the eye anterior to the ora serrata, connecting the choroid with the iris; it is composed of the ciliary crown, ciliary processes and folds, ciliary orbiculus, the ciliary muscle, and a basal lamina.

c. clitor'idis [NA], the main part of the clitoris, formed by the two fused corpora cavernosa, which are embedded anteriorly in the floor of the vestibule of the vagina. **c. coccyg'eum** [NA], an arteriovenous anastomotic structure along the course of the median sacral artery.

c. cos'tae [NA], the part of a rib extending between its dorsally placed tubercle and its ventral extremity; called also *shaft of rib*.

c. denta'tum cerebel'li, nucleus dentatus. **c. denta'tum oli'vae**, nucleus olivaris.

c. epididym'idis [NA], the middle part of the epididymis, which is formed by the convolutions of the single ductus epididymidis.

c. fem'oris [NA], the main part or shaft of the femur. **c. fib'ro'sum**, c. albicans. **c. fib'ulae** [NA], the principal part or shaft of the fibula.

c. fimbria'tum [L. "fringed body"], a narrow band of white substance bordering the lateral edge of the lower cornu of the lateral ventricle of the cerebrum. **c. fimbria'tum hippocam'pi**, fimbria hippocampi.

cor'pora fla'va [L. "yellow bodies"], waxy bodies found in the central nervous system and elsewhere, thought to be formed by the transformation of nerve cells.

c. for'nici [NA], body of fornix: the middle part of the fornix of the cerebrum, formed by fusion of the two lateral halves under the corpus callosum.

c. genicula'tum latera'le [NA], the lateral geniculate body: an eminence of the metathalamus produced by the underlying lateral geniculate nucleus, just lateral to the medial geniculate body. It relays visual impulses from the optic tract to the calcarine cortex. Called also *optic thalamus*.

c. genicula'tum media'le [NA], the medial geniculate body: an eminence of the metathalamus produced by the underlying medial geniculate nucleus, just lateral to the superior colliculus. It relays auditory impulses from the lateral lemniscus to the auditory cortex.

c. glan'dulae bulbo're

thra'lis, the body of the bulbourethral gland. **c. glan'dulae sudorif'erae** [NA], the coiled secretory part of a sweat gland, found in the deep part of the corium; called also *coil* or *acinus of the sweat gland*. **c. glandula're prosta'tae**, substantia glandularis prostatae. **c. glandulo'sum**, a spongy eminence surrounding the orifice of the female urethra. **c. hemor-rhag'icum**, 1. an ovarian follicle containing blood. 2. a corpus luteum containing a blood clot. **c. Highmo'ri**, **c. high-moria'num** [L. "body of Highmore"], mediastinum testis. **c. hu'meri** [NA], the main part or shaft of the humerus. **c. hypothalam'icum**, nucleus subthalamicus. **c. incu'dis** [NA], the central part of the incus, which contains an excavation in which the head of the malleus articulates. **c. interpedun-cula're**, nucleus interpeduncularis. **c. lin'guae** [NA], the larger anterior part of the tongue, in the floor of the mouth. **c. lu'teum** (pl. *cor'pora lu'tea*) [L. "yellow body"] [NA], a yellow glandular mass in the ovary formed by an ovarian follicle that has matured and discharged its ovum; if the ovum has been impregnated, the corpus luteum increases in size and persists for several months (*true c. luteum*, *c. luteum of pregnancy*, *c. luteum graviditatis*); if impregnation has not taken place, the corpus luteum degenerates and shrinks (*false c. luteum*, *c. luteum of menstruation*, *c. luteum menstruationis*). The corpus luteum secretes progesterone. Called also *yellow body of ovary*. Cf. *corpus albicans*, def. 1. **cor'pora lu'tea atret'ica**, corpora lutea in which regressive changes have occurred. **c. Luy'sii**, nucleus subthalamicus. **c. malpigh'ii**, the stratum malpighii. **c. mamilla're** [NA], the mamillary body: either of the pair of small spherical masses situated close together in the interpeduncular space rostral to the posterior perforated substance and forming part of the hypothalamus; called also *bullae fornicis* or *bullae of fornix*, and *mamillary eminence*. **c. mam'mae** [NA], the essential mass of the mammary gland, exclusive of the glandular elements, which is thickest beneath the nipple and thinner toward the periphery; see illustration accompanying *mammary gland*, under *gland*. **c. mandib'ulae** [NA], body of mandible: the horizontal horseshoe-shaped portion of the mandible. **c. max-il'lae** [NA], body of maxilla: the large central portion of the maxilla, roughly pyramidal in shape, to which four major processes are connected; it contains the maxillary sinus. **c. medulla're cerebel'li** [NA], medullary body of cerebellum: the white substance of the cerebellum; called also *center of cerebellum*. **c. medulla're ver'mis**, arbor vitae cerebelli. **c. muco'sum**, stratum mucosum. **c. nu'clei cauda'ti** [NA], the part of the caudate nucleus lying in the floor of the pars centralis of the lateral ventricle of the brain, extending posteriorly from the head and continuous with the tail. **c. of Oken**, mesonephros. **cor'pora oryzo'i'dea** (sing. *cor'pus oryzo'i'deum*), rice bodies. **c. os'sis hyoi'dei** [NA], body of hyoid bone: the central portion of the hyoid bone to which the large and small horns are attached; called also *basihyal* and *basihyoid*. **c. os'sis il'ii** [NA], **c. os'sis il'ium**, the inferior portion of the ilium, which forms roughly the superior two-fifths of the acetabulum; called also *body of ilium*. **c. os'sis isch'ii** [NA], the thick, irregular, prismatic part of the ischium. Its superior end participates in the acetabulum, and from its inferior end the ramus of the ischium projects. It incorporates what was formerly called the superior ramus; called also *body of ischium*. **c. os'sis metacarpa'lis** [NA], the main part or shaft of a metacarpal bone. **c. os'sis metatarsa'lis** [NA], the main part or shaft of a metatarsal bone. **c. os'sis pu'bis** [NA], body of pubic bone: the irregular mass of the pubic bone that lies alongside the median plane, articulating with the similar portion of the opposite pubic bone. From it extend the superior and inferior rami of the pubic bone. **c. os'sis sphenoida'lis** [NA], body of sphenoid bone: the central, cuboidal part of the sphenoid bone to which the great wings, small wings, and pterygoid processes are attached; it contains the sphenoidal sinuses. Called also *c. sphenoidale*. **c. pampinifor'me**, epophoron. **c. pancrea'tis** [NA], body of pancreas: the triangularly prismatic portion of the pancreas, extending from the neck on the right to the tail on the left. **cor'pora paraaor'tica** [NA], para-aortic bodies: exclaves of glandular cells of sympathetic origin (chromaffin cells) found near the sympathetic ganglia along the aorta in the abdominal cavity; they serve as chemoreceptors responsive to oxygen, carbon dioxide, and hydrogen ion concentration, that help to control respiration. See also *paraganglion*. **c. pe'nis** [NA], the free part of the penis between the root and the glans, consisting chiefly of the paired corpora cavernosa and the unpaired corpus spongiosum penis; called also *shaft of penis*. **c. phalan'gis digito'rum ma'nus** [NA], the main part or shaft of each phalanx of the fingers. **c. phalan'gis digito'rum pe'dis** [NA], the main part or shaft of each phalanx of the toes. **c. pinea'le** [NA], the pineal body: a small, somewhat flattened, cone-shaped body in the epithalamus, lying above the superior colliculi below the splenium of the corpus callosum. Arising embryologically from the ependyma of the third ventricle and consisting of glial cells and pinealocytes, it appears to be the major or unique site of melatonin biosynthesis in most mammals, including man. The effect of melatonin on the body and the exact function of the corpus pineale remain obscure. Called also *pineal gland*. **c. pontobulba're**, a ridge running obliquely across the restiform body just caudal to the ridge formed by the cochlear

nuclei. **c. pyramida'le medul'lae**, pyramis medullae oblongatae. **cor'pora quadrigem'ina** (sing. *cor'pus quadrigem'inum*), four rounded eminences on the posterior surface of the mesencephalon; called also *bigeminal* or *quadrigeminal bodies*, and *corpora bigemina*. See also *colliculus*. **c. ra'dii** [NA], the main part or shaft of the radius. **cor'pora restifor'mia** (sing. *cor'pus restifor'mis*), see *pedunculus cerebellaris inferior*. **c. rhomboida'le**, nucleus dentatus. **cor'pora san-toria'na**, cartilago corniculata. **c. spongio'sum pe'nis** [NA], the column of erectile tissue that forms the urethral surface of the penis, and in which the urethra is found; its distal expansion forms the glans penis. Called also *c. cavernosum urethrae virilis* and *spongy body of male urethra*. **c. spongio'sum ure-thrae mulie'bris**, the submucous layer of the female urethra. **c. ster'ni** [NA], body of sternum: the second or principal portion of the sternum, located between the manubrium above and the xiphoid process below; called also *gladiolus*. **c. stria'tum** (pl. *cor'pora stria'ta*) [NA], the striate body: one of the components of the basal ganglia; specifically, a subcortical mass of gray and white substance in front of and lateral to the thalamus in each cerebral hemisphere. The gray substance of this structure is arranged in two principal masses, the caudate nucleus and the lentiform nucleus; the striate appearance on section of the area being produced by connecting bands of gray substance passing from one of these nuclei to the other through the white substance of the internal capsule. **c. subthalam'icum**, nucleus subthalamicus. **c. ta'li** [NA], body of talus: the roughly quadrilateral portion of the talus, which presents several surfaces for articulation with the calcaneus, tibia, and fibula. **c. tib'iae** [NA], the main part or shaft of the tibia. **c. trapezoi'deum** [NA], the trapezoid body: a mass of transverse fibers extending through the central part of the pons and forming a part of the path of the cochlear nerve. **c. tritic'eum**, cartilago triticea. **c. ul'nae** [NA], the main part or shaft of the ulna. **c. un'guis** [NA], nail plate: the large distal, exposed portion of the nail of a digit. **c. u'teri** [NA], that part of the uterus above the isthmus and below the orifices of the uterine tubes. **c. ventric'uli** [NA], body of stomach: that part of the stomach between the fundus and the pyloric portion. **cor'pora versicolora'ta**, corpora amylacea. **c. ver'tebrae** [NA], the body of a vertebra; called also *centrum vertebrae* and *intravertebral body*. **c. vesi'cae fel'leae** [NA], body of gallbladder: that part of the gallbladder between the fundus and the neck. **c. vesi'cae urina'riae** [NA], that part of the urinary bladder between the apex and the fundus. **c. vesic'ulae semina'lis**, body of small vesicle: the main portion of the seminal vesicle. **c. vit'reum** [NA], the vitreous body: the transparent substance that fills the part of the eyeball between the lens and the retina; called also *hyaloid body*, *crystalline or vitreous humor*, and *humor crystallinus*. **c. Wolf'fi**, mesonephros.

corpuscle (kor'pus'l) any small mass or body; see also *corpusculum*. **Alzheimer's c's**, compound granular corpuscles in the oligodendroglia of the brain. **amylaceous c's**, amyloid c's, corpora amylacea. **articular c's**, corpuscula articularia. **axile c.**, **axis c.**, the central part of a tactile corpuscle. **Babès-Ernst c's**, metachromatic granules. **basal c.**, see under *body*. **Bennet's large c's**, Nunn's gorged c's. **Bennet's small c's**, Drysdale's c's. **blood c's**, formed elements of the blood; i.e., erythrocytes and leukocytes. **blood c., red**, erythrocyte. **blood c., white**, leukocyte. **bone c.**, bone cell. **bridge c.**, desmosome. **bulboid c's**, corpuscula bulboidea. **Burckhardt's c's**, peculiar yellowish bodies found in trachoma secretion. **canceroid c's** (*obs.*), a nodular epithelioma. **cartilage c.**, cartilage cell. **cement c.**, cementocyte. **chorea c's**, a name given peculiar round hyaline bodies, concentrically laminated and strongly refractile, found in the perivascular sheaths of the vessels of the corpora striata and internal capsule in chorea. **chromophil c.**, Nissl's body. **chyle c.**, a lymphocyte found in chyle. **colloid c's**, corpora amylacea. **colostrum c's**, large rounded bodies in colostrum, containing droplets of fat and sometimes a nucleus; they apparently are phagocytic cells of the mammary gland, present for the first two weeks after parturition. Called also *Donné's bodies* or *corpuscles*. **concentric c's**, Hassall's c's. **corneal c's**, star-shaped connective tissue cells within the corneal spaces; called also *Toynbee's* and *Virchow's c's*. **Dogiel's c.**, a sensory end-organ found in the mucous membrane of the eyes, nose, mouth, and genitals. **Donné's c's**, colostrum c's. **Drysdale's c's**, transparent microscopical cells seen in the fluid of ovarian cysts; called also *Bennet's c's*. **dust c's**, hemoconia. **Eichhorst's c's**, a name once given a peculiar variety of microcytes seen in pernicious anemia. **genital c's**, corpuscula genitalia. **ghost c.**, phantom c. **Gierke's c's**, roundish bodies found in the nervous system, probably identical with Hassall's corpuscles. **Gluge's c's**, granular corpuscles occurring in diseased nerve tissue. **Golgi's c's**, encapsulated end-organs found in a tendon at its junction with the muscular fibers, which mediate tension differences to the innervating nerve fibers. **Golgi-Mazzoni c's**, tactile corpuscles found in the subcutaneous tissue of the fingertips, resembling pacinian corpuscles, but possessing fewer lamellae and a relatively larger cone, and having the contained nerve fibers more extensively branched. **Grandry's c's**, Gran-

dry-Merkel c's, Merkel's c's. **Guarnieri's c's**, see under *body*. **Hassall's c's**, spherical or ovoid bodies found in the medulla of the thymus, composed of concentric arrays of epithelial cells which contain keratohyalin and bundles of cytoplasmic filaments. Called also *Hassall's bodies*, *concentric c's*, *Leber's c's* and *thymus c's*. **Herbst's c's**, peculiar sensory end-organs in the skin of the bill and in the mucous membrane of the tongue of the duck. **Jaworski's c's**, spiral mucous bodies seen in the secretion of the stomach in hyperchlorhydria. **Krause's c's**, corpuscula bulboidea. **lamellar c's**, **lamellated c's**, corpuscula lamellosa. **Langerhans's stellate c's**, see under *cell*. **Laveran's c's**, former name for the malarial parasite, *Plasmodium*. **Leber's c's**, Hassall's c's. **lingual c.**, an encapsulated terminal sensory nerve ending in a lingual papilla. **Los-torfer's c's**, granular bodies observed in the blood in syphilis; called also *Los-torfer's bodies*. **lymph c's**, lymphocytes observed in lymph. **lymphoid c's**, lymphocytes observed in tissues. **malpighian c's of kidney**, corpuscula renis. **malpighian c's of spleen**, see *folliculi lymphatici lienales*. **Mazzoni's c's**, sensory nerve endings resembling Krause's corpuscles. **meconium c's**, epithelial cells containing many coarse yellow granules, observed in the lower part of the small intestine in a fetus. **Meissner's c's**, corpuscula tactus. **Merkel's c's**, tactile corpuscles in the submucosa of the tongue and mouth, each consisting of a sheath which is continuous with the sheath of Henle of the nerve. Enclosed within the sheath are two flattened epithelial cells between the opposed surfaces of which is a biconvex disk continuous with the end of the neurofibrils. Called also *Grandry-Merkel c's* and *Merkel's disks*. **Miescher's c's**, Rainey's c's. **milk c's**, delicate particles of fat suspended in the serum of the milk. **molluscous c's**, molluscum bodies. **mucous c's**, bodies resembling leukocytes occurring in mucus. **nerve c's**, the sheath cells lying between the neurilemma and the medullary sheath. **Norris's c's**, colorless, transparent disks in the blood serum. **Nunn's gorged c's**, epithelial cells found in ovarian cysts that have undergone a high degree of fatty degeneration; called also *Bennet's large c's*. **Pacini's c's**, **pacinian c's**, lamellated nerve endings (corpus-

Sense corpuscles. A, Herbst's corpuscle from the tongue of a duck. B, Pacinian corpuscle from the mesentery of a cat. C, Krause's corpuscle. D, Merkel's corpuscle.

cula lameosa) that are concerned in the perception of pressure. **Paschen's c's**, see under *body*. **Paterson's c's**, molluscum bodies. **pessary c.**, see under *cell*. **phantom c.**, an artifactual red cell from which the hemoglobin has been dissolved. **Purkinje's c's**, see under *cell*. **pus c.**, one of the cells of pus, chiefly neutrophilic leukocytes. **Rainey's c's**, sarcosporidian cysts. **red c.**, erythrocyte. **renal c's**, corpuscula renis. **reticulated c's**, erythrocytes which on proper staining show filamentous reticulations filling a greater part of the cell. **Röhl's marginal c's**, small bodies seen in the margins of erythrocytes of animals after the administration of chemotherapeutic substances. **Ruffini's c's**, lamellated nerve endings (corpuscula lamellosa) that are concerned in the perception of pressure and of warmth. **salivary c's**, white blood cells found in the saliva. **Schwalbe's c.**, caliculus gustatorius. **sensitized c.**, a given kind of blood corpuscle laden with an antibody specific for that variety of corpuscle; if erythrocytes sensitized with specific antibody (hemolysin) are brought into contact with complement, hemolysis takes place. **shadow c.**, phantom c. **splenic c's**, folliculi lymphatici lienales. **tactile c's**, corpuscula tactus. **taste c's**, taste cells. **tendon c's**, flattened cells of connective tissue occurring in rows between the primary bundles of the tendons. **terminal nerve c's**, corpuscula nervosa terminalia. **thymus c's**, Hassall's c's. **Timofeev's c's**, a specialized form of pacinian corpuscle found in the submucosa of the membranous and prostatic portions of the urethra. **touch c's**, corpuscula tactus. **Toynbee's c's**, corneal c's. **Traube's c.**, phantom c. **Trötsch's c's**, connective tissue spaces lined with flattened endothelial cells, and appearing like corpuscular bodies among the radial fibers of the membrana tympani. **typhic c's**, cells of Peyer's patches that have undergone degeneration in typhoid fever. **Valentin's c's**, small amyloid bodies found in nerve tissue. **Vater's c's**, **Vater-Pacini c's**, corpuscula lamellosa. **Virchow's c's**, corneal c's. **Wagner's c's**, corpuscula tactus. **Weber's c.**, utriculus prostaticus. **white c.**, leukocyte. **Zimmermann's c.** (obs.), achromocyte.

corpuscula (kor-pus'ku-lah) [L.] plural of *corpusculum*.

corpuscular (kor-pus'ku-lar) pertaining to or of the nature of corpuscles.

corpusculum (kor-pus'ku-lum), pl. *corpus'cula* [L. dim. of *corpus*] a small mass or body; used as a general term in anatomical

nomenclature to designate certain small discrete masses of specialized tissue, especially of nerve tissue. **corpus'cula articu-laria** [NA], articular corpuscles: encapsulated nerve endings found within joints; called also *corpuscula nervorum articu-laria*. **corpus'cula bulbifor'mia**, corpuscula bulboidea. **corpus'cula bulboi'dea** [NA], bulboid corpuscles: small encapsulated nerve endings found in the skin, mucous membranes, conjunctiva, and heart, at varying levels; called also *bulbs of Krause*, *corpuscula bulbiformis*, and *Krause's corpuscles*. **corpus'cula genita'lia** [NA], genital corpuscles: small encapsulated nerve endings occurring in the mucous membrane in the genital region; called also *corpuscula nervorum genitalia*. **corpus'cula lamello'sa** [NA], lamellar or lamellated corpuscles: large encapsulated nerve endings, which are the most complicated of the nerve endings and are found throughout the body. Concerned with the perception of different sensations, various such endings are named for the men who originally described them, e.g., *Pacini's corpuscles* and *Ruffini's corpuscles*. Called also *Vater's* and *Vater-Pacini corpuscles*. **corpus'cula nervo'rum articu-laria**, corpuscula articularia. **corpus'cula nervo'rum genita'lia**, corpuscula genitalia. **corpus'cula nervo'rum termina'lia**, corpuscula nervosa terminalia. **corpus'cula nervo'sa termina'lia** [NA], terminal nerve corpuscles: nerve endings characterized by a fibrous capsule of varying thickness that is continuous with the endoneurium; for different named varieties, see under *corpuscle*. Called also *corpuscula nervorum terminalia* and *encapsulated nerve endings*. **corpus'cula re'nis** [NA], renal corpuscles: bodies forming the beginnings of the nephrons, each consisting of a tuft of capillaries (the glomerulus), surrounded by an expanded portion of the renal tubule (the glomerular capsule); called also *malpighian corpuscles*, *acinus renalis* [malpighii], *acinus renis* [malpighii], *malpighian bodies of kidneys*, and *malpighian or renal tufts*. **corpus'cula tac'tus** [NA], tactile corpuscles: medium-sized encapsulated nerve endings found in the skin, most commonly in the palms and soles; called also *tactile or touch cells*, and *Meissner's oval, tactile, or touch corpuscles*. **c. tritic'eum**, cartilago triticea.

correction (kõ-rek'shun) [L. *correctio* straightening out; amend-ment] a setting right, as the provision of specific lenses for the improvement of vision, or an arbitrary adjustment made in values or devices in performance of experimental procedures.

corrector (kor-rek'tor) something that corrects or sets right. **function c.**, a removable orthodontic appliance utilizing oral and facial muscle forces to move teeth and possibly change the relationship of dental arches; called also *Fränkel appliance*.

correlation (kor'ë-la'shun) in neurology, those combinations of the afferent impulses within the sensory centers which provide for the integration of the impulses into appropriate responses (Her-rick). In statistics, the degree of association of variable phenom-ena, as intelligence and birth order.

correspondence (kor'e-spon'dens) the condition of being in agreement, or conformity. **anomalous retinal c.**, a condition in which disparate points on the retinas of the two eyes come to be associated sensorially; abbreviated A.R.C. **harmonious retinal c.**, the condition in which corresponding points on the retinas of the two eyes are associated sensorially. **retinal c.**, the state regarding the impingement of images on the retinas of the two eyes.

Corrigan's cautery, etc. (kor'e-ganz) [Sir Dominic John Corri-gan, physician in Dublin, 1802-1880] see under *cautery*, *disease*, *line*, *pulse*, *respiration*, and *sign*.

corrigent (kor'ë-jent) [L. *corrigen's* correcting] 1. amending or rendering milder. 2. any agent that favorably modifies the ac-tion of a drug which is too powerful or harsh, or that improves its taste.

corrin (kor'in) a tetrapyrrole ring system resembling the pro-phyrin ring system of hemoglobin, but in which a pair of the rings is joined directly rather than through a methene bridge, with cobalt being bound to the inner four nitrogen atoms. The cobalamins contain a corrin ring system.

corroid (kor'oid) a compound, such as the cobalamins, contain-ing a corrin ring system.

corrosion (kõ-ro'zhun) [L. *corrosio*] the slow destruction of the texture or substance of a tissue, as by the action of a corrosive substance.

corrosive (kõ-ro'siv) [L. *con* with + *rodere* to gnaw] 1. destruc-tive to the texture or substance of the tissues. 2. a substance that destroys the texture or substance of the tissues. Called also *caustic* and *escharotic*.

corrugator (cor'u-ga'tor) [L. *con* together + *ruga* wrinkle] that which wrinkles; a muscle that wrinkles.

corset (kor'set) an orthopedic device that encircles and supports a part, as worn in certain spinal injuries or deformities.

Cort. abbreviation for L. *cor'tex*, bark.

Cortate (kor'tât) trademark for preparations of desoxycortico-sterone acetate.

Cort-Dome (kort'dôm) trademark for preparations of hydrocor-tisone.

Cortef (kor'tef) trademark for preparations of hydrocortisone.

Cortenema (kor-ten'ē-mah) trademark for a preparation of hydrocortisone.

cortex (kor'teks), gen. *corticis*, pl. *cortices* [L. "bark, rind, shell"]
1. an external layer, as the bark of a tree, or the rind of a fruit.
2. [NA] the outer layer of an organ or other body structure, as distinguished from the internal substance. **adrenal c.**, the outer, firm, yellowish layer that comprises the larger part of the adrenal (suprarenal) gland, the zona glomerulosa, the zona fasciculata, and the zona reticularis; it secretes, in response to release of corticotropin by the pituitary gland, many steroid hormones, including mineralocorticoids, glucocorticoids, androgens, 17-ketosteroids, and progestins (see *adrenal gland*, under *gland*). Called also *cortex glandulae suprarenalis* [NA], *substantia corticalis glandulae suprarenalis*, and *cortical substance of suprarenal gland*. **cerebellar c.**, **c. cerebel'li** [NA], **c. of cerebellum**, the superficial gray matter of the cerebellum; called also *substantia corticalis cerebelli* and *cortical substance of cerebellum*. **cerebral c.**, **c. cer'ebri** [NA], **c. of cerebrum**, the thin layer of gray matter on the surface of the cerebral hemisphere, folded into gyri with about two-thirds of its area buried in the depths of the fissures. It reaches its highest development in man, where it is responsible for the higher mental functions, for general movement, for visceral functions, perception, and behavioral reactions, and for the association and integration of these functions. Many classifications have been suggested: it has been divided into neopallium, archipallium, paleopallium according to supposed phylogenetic and ontogenetic differences; into areas according to the presence of six cell layers (see *neopallium*) or according to differences in the structure and arrangement of cell and fiber layers; and into functional areas such as motor, sensory, and association areas. Called also *pallium*. **c. glan'dulae suprarenalis** [NA], the outer, firm yellowish layer that comprises the larger part of the suprarenal gland; called also *adrenal cortex* (q.v.), *cortical substance of suprarenal gland*, and *substantia corticalis glandulae suprarenalis*. **heterotypical c.**, the portion of the cerebral cortex containing fewer than the six cell layers of the homotypical cortex; see *archipallium*. **homotypical c.**, the portion of the cerebral cortex containing all six cell layers; see *neopallium*. **c. of kidney**, renal c. **c. len'tis** [NA], the softer, external part of the lens of the eye; called also *substantia corticalis lentis* and *cortical substance of lens*. **motor c.**, the area of the frontal lobe of the cerebral cortex concerned with primary motor control of the body; Brodmann's area 4. **c. no'di lymphat'ici** [NA], the outer portion of a lymph node, consisting mainly of dense lymphatic tissue and follicles; called also *substantia corticalis lymphoglandulae* and *cortical substance of lymph nodes*. **nonolfactory c.**, neopallium. **olfactory c.**, archipallium. **piriform c.**, the cortex of the piriform lobe or area. **provisional c.**, the cortex of the fetal adrenal gland that undergoes involution in early fetal life. **renal c.**, **c. re'nis** [NA], cortex of kidney; the outer part of the substance of the kidney, composed mainly of glomeruli and convoluted tubules; called also *substantia corticalis renis* and *cortical substance of kidney*. **somesthetic c.**, postcentral area; see under *area*. **striate c.**, the primary visual cortex: the part of the occipital lobe of the cerebral cortex containing the line of Gennari and receiving the fibers of the optic radiation from the lateral geniculate body; it is the primary receptive area for vision. Called also *striate area* and *area striata*. **c. of thymus**, the outer part of each lobule of the thymus; it consists chiefly of closely packed lymphocytes (thymocytes) and surrounds the medulla. **visual c.**, the area of the occipital lobe of the cerebral cortex concerned with vision; it consists of the primary visual cortex (Brodmann's area 17; see *striate c.*) and two other areas (Brodmann's areas 18 and 19) whose role is not as well defined, although area 18 is linked to the opposite hemisphere by the corpus callosum.

cortexone (kor-tek'sōn) desoxycorticosterone.

Corti's arch, membrane, organ, etc. [Alfonso Corti, Italian anatomist, 1822-1888] see under *arch*, *canal*, *cell*, *fiber*, *ganglion*, *rod*, and *tunnel*, and see *membrana tectoria ductus cochlearis* and *organum spirale*.

cortiadrenal (kor'te-ad-re'nal) corticoadrenal.

cortical (kor'ti-kal) [L. *corticalis*] pertaining to or of the nature of a cortex or bark.

corticalosteotomy (kor'ti-kal-os'te-ot'o-me) osteotomy through the bone cortex at the base of the dentoalveolar segment, which serves to weaken the resistance of the bone to the application of orthodontic forces.

corticate (kor'ti-kāt) possessing a cortex or bark.

corticectomy (kor'ti-sek'to-me) excision of an area of cerebral cortex (scar or microgyrus) in the treatment of focal epilepsy.

cortices (kor'ti-sēz) [L.] plural of *cortex*.

corticifugal (kor'ti-sif'u-gal) [*cortex* + L. *fugere* to flee] proceeding, conducting, or moving away from the cortex.

corticipetal (kor'ti-sip'e-tal) [*cortex* + L. *petere* to seek] proceeding, conducting, or moving toward the cortex.

corticoadrenal (kor'ti-ko-ad-re'nal) pertaining to the adrenal cortex.

corticoafferent (kor'ti-ko-aff'er-ent) conveying impressions from the lower levels inward and upward to the cerebral cortex; said of certain nerve fibers.

corticoautonomic (kor'ti-ko-aw'to-nom'ik) denoting the relationship of autonomic function to definite areas in the cerebral cortex.

corticobulbar (kor'ti-ko-bul'bar) pertaining to or connecting the cerebral cortex and the medulla oblongata and/or brain stem.

corticocerebral (kor'ti-ko-ser'e-bral) pertaining to the cerebral cortex.

corticodiencephalic (kor'ti-ko-di'en-se-fal'ik) pertaining to or connecting the cerebral cortex and the diencephalon.

corticoefferent (kor'ti-ko-ef'er-ent) carrying impressions outward and downward from the cerebral cortex; said of certain nerve fibers.

corticofugal (kor'ti-kof'u-gal) corticifugal.

corticoid (kor'ti-koid) any of the steroids of the adrenal cortex; a corticosteroid (q.v.).

corticomesencephalic (kor'ti-ko-mes'en-se-fal'ik) pertaining to or connecting the cerebral cortex and the mesencephalon.

corticopeduncular (kor'ti-ko-pe-dung'ku-lar) pertaining to the cortex and the peduncles of the brain.

corticopetal (kor'ti-kop'e-tal) corticipetal.

corticopleuritis (kor'ti-ko-ploo-ri'tis) inflammation of the visceral pulmonary pleura.

corticopontine (kor'ti-ko-pon'tin) pertaining to or connecting the cerebral cortex and the pons.

corticospinal (kor'ti-ko-spi'nal) pertaining to or connecting the cortex of the brain and the spinal cord.

corticosteroid (kor'ti-ko-ste'roid) any of the steroids elaborated by the adrenal cortex (excluding the sex hormones of adrenal origin) in response to the release of corticotropin (adrenocorticotrophic hormone) by the pituitary gland, or any of the synthetic equivalents of these steroids. They are divided, according to their predominant biological activity, into two major groups: *glucocorticoids*, chiefly influencing carbohydrate, fat, and protein metabolism, and *mineralocorticoids*, affecting the regulation of electrolyte and water balance. Some corticosteroids exhibit both types of activity in varying degrees, and others exert only one type of effect. The corticosteroids are used clinically for hormonal replacement therapy, for suppression of ACTH secretion by the anterior pituitary, as antineoplastic and anti-inflammatory agents, and to suppress the immune response. Called also *adrenocortical hormone* and *corticoid*.

corticosterone (kor'ti-ko-s'ter-ōn) chemical name: 11β,21-dihydroxypregn-4-ene-3,20-dione. A natural mineralocorticoid with some glucocorticoid activity, C₂₁H₃₀O₄, possessing life-maintaining properties in adrenalectomized animals and several other activities peculiar to the adrenal cortex. It is similar to 11-deoxycorticosterone, but its life-maintaining and sodium-retaining potencies are less. Called also (*Kendall's*) *compound B*.

corticoadrenaloma (kor'ti-ko-su'prah-re'nal-o'mah) (*obs.*) adenoma or carcinoma of the adrenal cortex.

corticoadrenaloma (kor'ti-ko-su'prah-re-no'mah) (*obs.*) adenoma or carcinoma of the adrenal cortex.

corticotensin (kor'ti-ko-ten'sin) a low-molecular-weight polypeptide purified from kidney extract that exhibits a vasopressor effect when given intravenously.

corticothalamic (kor'ti-ko-thah-lam'ik) pertaining to or connecting the cerebral cortex and the thalamus.

corticotrope (kor'ti-ko-trop) any of a group of ACTH-secreting, irregularly stellate chromophobe cells of the anterior pituitary gland, having cell processes extending between and partially surrounding neighboring cells and a few extremely small cytoplasmic granules. Called also *corticotroph*.

corticotrophic (kor'ti-ko-trof'ik) corticotropic.

corticotrophin (kor'ti-ko-tro'fin) corticotropin.

corticotropic (kor'ti-ko-trop'ik) exerting a specific effect upon the cortex of the adrenal gland; called also *adrenocorticotropic*.

corticotropin (kor'ti-ko-tro'pin) a peptide hormone secreted by the anterior pituitary gland that acts primarily on the adrenal cortex, stimulating its growth and its secretion of corticosteroids. The production of corticotropin is increased during times of stress. A sterile preparation [USP] of the same principle(s) derived from the anterior pituitary of those mammals used for food by man is administered parenterally for diagnostic testing of adrenocortical function and to stimulate the adrenal cortex to release its hormones, especially cortisol (hydrocortisone), in the treatment of several diseases, e.g., allergies, rheumatic disorders, and collagen, dermatologic, ophthalmic, hematologic, and neoplastic diseases, etc. It is used in veterinary medicine in the treatment of ketosis. Called also *adrenocorticotrophic hormone (ACTH)* and *adrenocorticotropin*.

cortilymph (kor'tē-limf'') [organ of Corti + *lymph*] the fluid filling the intercellular spaces of the organ of Corti.

cortin (kor'tin) an extract from the adrenal cortex containing a

mixture of hormones having glucocorticoid and mineralocorticoid activity.

cortisol (kor'ti-sol) chemical name: $11\beta,17\alpha,21$ -trihydroxy-pregn-4-ene-3,20-dione. The major natural glucocorticoid (q.v.) elaborated by the human adrenal cortex, or hydrocortisone [USP], as it is usually referred to pharmaceutically. See *hydrocortisone* for therapeutic uses. Called also (*Kendall's*) compound F.

cortisone (kor'ti-sōn) chemical name: $17\alpha,21$ -dihydroxy-4-pregnene-3,11,20-trione. A natural glucocorticoid (q.v.), with significant mineralocorticoid properties, $C_{21}H_{30}O_5$; believed to be both a precursor and a metabolite of cortisol (hydrocortisone). The human adrenal cortex secretes only minute amounts of cortisone; the synthetic hormone exerts its pharmaceutical effects through its metabolic conversion to cortisol. **C. acetate** [USP], an ester of cortisone (q.v.), $C_{23}H_{36}O_6$, occurring as a white or practically white, crystalline powder; used as an anti-inflammatory in various conditions, including allergies and the collagen diseases. It is also used as replacement therapy in adrenocortical deficiencies, including Addison's disease and hypopituitarism, administered intramuscularly or orally, and is applied topically to treat steroid-responsive inflammatory conditions of the eye and skin.

cortivazol (kor-ti'vah-zōl) chemical name: 11β -17,21-trihydroxy-6,16 α -dimethyl-2'-phenyl-2'-H-pregna-2,4,6-trieno [3,2-c]-20-one 21-acetate; a glucocorticoid, $C_{22}H_{34}N_2O_6$.

Cortone (kor'tōn) trademark for preparations of cortisone acetate.

Cortril (kor'tril) trademark for preparations of hydrocortisone.

Cortrophin (kor-tro'fin) trademark for preparations of corticotropin.

Cortrosyn (kor'tro-sin) trademark for a preparation of cosyntropin.

corundum (kō-run'dum) native aluminum oxide.

coruscation (kor'us-ka'shun) a glittering sensation, as of flashes of light before the eyes.

Corvisart's disease (kor've-sarz') [Baron Jean Nicolas *Corvisart* des Marets, French physician, 1755-1821] see under *disease*.

corybantism (kor'ē-ban'te-azm) corybantism.

corybantism (kor'ē-ban'tizm) [Gr. *Korybas* a reveller] wild, frenzied, and sleepless delirium.

corydaline (kō-rid'ah-lēn) an alkaloid, $C_{22}H_{27}NO_4$, from *Corydalis tuberosa*; a diuretic and tonic.

corydalis (kō-rid'ah-lis) [L. from Gr. *korys* helmet] the dried tuber of *Dicentra cucullaria* (L.) Bernh., or of *D. canadensis* (DC.) Walp., Fumariaceae, perennial herbs distributed throughout Ontario to Kentucky and Missouri. Also known as squirrel corn and turkey corn. It contains several isoquinoline type alkaloids, e.g., corydaline, bulbocapnine, corytuberine, etc. Bulbocapnine has been used for various muscle tremors and for vestibular nystagmus. The plant extract was once used as a tonic, antiperiodic, diuretic, and alterative.

corymbiform (ko-rim'bī-form) [Gr. *korymbos* the cluster of ivy flower + *form*] clustered; said of lesions grouped around a single, usually larger, lesion, as in tinea versicolor or late secondary syphilis.

corymbosae (kor'im-bōs) corymbiform.

Corynebacteriaceae (ko-ri'ne-bak-te're-a'se-e) a family of Schizomycetes (order Eubacteriales), made up of usually nonmotile rods, sometimes showing marked variation in form, and sometimes beaded or banded with metachromatic granules. It includes six genera, *Arthrobacter*, *Cellulomonas*, *Corynebacterium*, *Erysipelothrix*, *Listeria*, and *Microbacterium*.

Corynebacterium (ko-ri'ne-bak-te're-um) [Gr. *korynē* club + *bakterion* little rod] a genus of microorganisms of the family Corynebacteriaceae, order Eubacteriales, made up of straight to slightly curved rods, which are generally aerobic but may be microaerophilic or even anaerobic; 144 species have been described. **C. ac'nes**, a diphtheroid bacillus, differing from the diphtheria bacillus in being nontoxigenic and microaerophilic, and in producing a pink pigment in culture. It is found on the skin, and is usually present in acne lesions in association with other bacteria, especially *Staphylococcus albus* and *Pityrosporon ovale*. **C. belfan'tii**, a species considered to be a possible cause of ozena; it may be a nontoxigenic form of the mitis type of *C. diphtheriae*. **C. diphthe'riae**, the specific etiologic agent of diphtheria, producing a potent exotoxin, and separable into three types—mitis, gravis, and intermedius, which are now thought to be without

uncertain pathogenicity for man, but the etiologic agent of an epidemic ophthalmia of sheep. **C. e'qui**, an etiologic agent of pneumonia in foals, occurring as coccoid and bacillary forms, the former being acid-fast. **C. hofmanni**, a species of diphtheroid bacilli occurring in the human throat. **C. infantisept'icum**, *Listeria monocytogenes*. **C. minutis'simum**, a species that causes erythrasma. **C. murisept'icum**, a diphtheria-like bacillus producing septicemic disease in mice, but apparently nonpathogenic for other animals. **C. necroph'orum**, *Fusobacterium necrophorum*. **C. o'vis**, *C. pseudotuberculosis*. **C. par'vulum**, *Listeria monocytogenes*. **C. par'vum**, a species first isolated in the blood of a woman with postpartal fever; used by injection in treating malignant ascitic and pleural infusions. **C. pseudodiphtherit'icum**, a microorganism present in the upper respiratory tract, morphologically indistinguishable from the diphtheria bacillus but nonpathogenic and nontoxigenic; called also *Hofmann's bacillus*. **C. pseudotuberculo'sis-o'vis**, a weakly toxigenic diphtheria-like bacillus whose toxin is unrelated to diphtheria toxin; nonpathogenic for man, but pathogenic for domestic animals, in which it produces a caseous lymphadenitis and ulcerative lymphangitis, referred to as pseudotuberculosis. Called also *Preisz-Nocard bacillus* and *C. ovis*. **C. pyog'enes**, a diphtheria-like bacillus producing an exotoxin less potent than diphtheria toxin and differing from it immunologically; a common cause of purulent infections in lower animals, but nonpathogenic for man. **C. re-na'le**, a diphtheria-like bacillus closely related to *C. pseudotuberculosis*, and pathogenic for lower animals, in which it produces purulent infections of the urinary tract. **C. ten'uis**, the etiologic agent of trichomycosis axillaris. **C. xero'se**, *C. xero'sis*, a species of diphtheroid bacilli which occurs in the normal eye and has been isolated from a form of conjunctivitis known as xerosis.

coryneform (ko-ri'nē-form) denoting or resembling organisms of the family Corynebacteriaceae.

corytuberine (ko're-tu'ber-ēn) a crystalline alkaloid, $C_{10}H_{21}NO_4 \cdot 5H_2O$, from commercial corydalis.

coryza (kō-ri'zah) [L.; Gr. *koryza*] an acute catarrhal condition of the nasal mucous membrane, with a profuse discharge from the nostrils. **allergic c.**, hay fever. **c. foe'tida**, ozena. **infectious avian c.**, an acute respiratory disease of chickens characterized by nasal discharge, sneezing, and edema of the face, and caused by *Hemophilus gallinarum*. Infection of the lower respiratory tract sometimes occurs. **c. oedemato'sa**, a serous inflammation of the inferior and middle turbinate bones.

coryzavirus (kō-ri'zah-vi'rus) one of a group of viral agents isolated from patients with the common cold and believed to be an etiologic agent of the common cold; now called *rhinovirus*.

C.O.S. Canadian Ophthalmological Society; Clinical Orthopaedic Society.

Coschwitz' duct (kosh'vits) [Georgius Daniel *Coschwitz*, German physician, 1679-1729] see under *duct*.

cosensitize (ko-sen'si-tiz) to sensitize to two or more sensitizing agents.

Cosmegen (kos-mē-jen) trademark for a preparation of dactinomycin.

cosmesis (koz-me'sis) [Gr. *kosmēsis*] (*obs.*) the art of increasing and preserving beauty.

cosmetic (koz-met'ik) [Gr. *kosmētikos*] 1. beautifying; tending to preserve, restore, or confer comeliness. 2. a beautifying substance or preparation.

cosmetology (koz'mē-tol'o-je) the study of the proper care of the body from the point of view of cleanliness and comeliness.

cosmic (koz'mik) [Gr. *kosmikos* pertaining to the world] pertaining to the universe; expansive and vast.

costa (kos'tah), pl. *cos'tae* [L. "rib"], [NA] 1. one of the paired bones, twelve on each side, that extend from the thoracic vertebrae toward the median line on the ventral aspect of the trunk; a rib. 2. a thin, firm, rodlike structure running along the base of the undulating membrane of flagellates, such as *Trichomonas*, which is probably a supporting structure. **c. fluc'tuans**, floating rib: one of the lowest two ribs on either side, whose ventral tips ordinarily have no attachment. **c. fluc'tuans dec'ima**, Still-ler's sign. **cos'tae spu'riae** [NA], the lower five ribs on either side: the ventral tips of the upper three of the five pairs connect with the costal cartilages of the superiorly adjacent ribs; the ventral tips of the lower two pairs ordinarily have no attachment. Called also *false ribs*. **cos'tae ve'rae** [NA], true ribs: the upper seven ribs on either side, which are connected to the sides of the sternum by their costal cartilages.

costae (kos'te) [L.] plural of *costa*.

costal (kos'tal) [L. *costalis*] pertaining to a rib or ribs.

costalgia (kos-tal'je-ah) [*costa* + *-algia*] pain in the ribs.

costalis (kos-ta'lis) [L.] costal; used in anatomical nomenclature to denote relationship to a rib.

costatectomy (kos'tah-tek'to-me) costectomy.

costectomy (kos-tek'to-me) [*costa* + Gr. *ektomē* excision] the operation of excising or resecting a rib.

Corynebacterium diphtheriae.

pathological significance. Called also *Klebs-Löffler bacillus*. **C. enzy'micum**, a diphtheria-like bacillus found largely in, and of

Costen's syndrome (kos'tenz) [James Bray Costen, St. Louis otolaryngologist, 1895-1962] temporomandibular joint syndrome.

costicartilage (kos'ti-ka'r'ti-lij) [costa + cartilage] the cartilage of a rib.

costicervical (kos'ti-ser've-kal) pertaining to or connecting the ribs and the neck.

costiferous (kos-tif'er-us) [costa + L. *ferre* to carry] bearing a rib, as the thoracic vertebrae of man.

costiform (kos'ti-form) shaped like a rib.

costispinal (kos-ti-spi-nal) pertaining to or connecting the ribs and spine.

costive (kos'tiv) 1. pertaining to, characterized by, or producing constipation. 2. an agent that depresses intestinal motility.

costiveness (kos'tiv-nes) constipation.

costo- (kos'to) [L. *costa* rib] a combining form denoting relationship to the ribs.

costocentral (kos'to-sen'tral) pertaining to a rib and the centrum (body) of a vertebra.

costocervicalis (kos'to-ser'vi-ka'lis) [costo- + *cervicalis*] musculus iliocostalis cervicis; see *Table of Musculi*.

costochondral (kos'to-kon'dral) pertaining to a rib and its cartilage.

costoclavicular (kos'to-klah-vik'u-lar) pertaining to the ribs and clavicle.

costocoracoid (kos'to-kor'ah-koid) pertaining to the ribs and coracoid process.

costogenic (kos'to-jen'ik) [costo- + Gr. *gennan* to produce] arising from a rib, especially from defect of the marrow of the ribs.

costoinferior (kos'to-in-fe're-or) pertaining to the lower ribs.

costophrenic (kos'to-fren'ik) pertaining to the ribs and diaphragm.

costopleural (kos'to-plu'ral) pertaining to the ribs and the pleura.

costopneumopexy (kos'to-nu'mo-pek'se) [costo- + Gr. *pneumōn* lung + *pēxis* fixing] the operation of anchoring the lung to a rib.

costoscapular (kos'to-skap'u-lar) pertaining to the ribs and the scapula.

costoscapularis (kos'to-skap'u-la'ris) musculus serratus anterior; see *Table of Musculi*.

costosternal (kos'to-ster'nal) pertaining to a rib and to the sternum.

costosternoplasty (kos'to-ster'no-plas'te) surgical repair of funnel chest, a segment of rib being used to support the sternum.

costosuperior (kos'to-su-pe're-or) pertaining to the upper ribs.

costotome (kos'to-tōm) [costo- + Gr. *temnein* to cut] a knife for dividing ribs or costal cartilages.

costotomy (kos-tot'o-me) [costo- + Gr. *tomē* a cut] incision or division of a rib or costal cartilage.

costotransverse (kos'to-trans-vers') lying between the ribs and transverse processes of the vertebrae.

costotransversectomy (kos'to-trans'ver-sek'to-me) excision of a part of a rib with the transverse process of a vertebra.

costovertebral (kos'to-ver'tē-bral) pertaining to a rib and a vertebra.

costoxiphoid (kos'to-zī'foid) connecting the ribs and the xiphoid cartilage.

cosyntropin (ko-sin-tro'pin) α^{1-24} -corticotropin: a synthetic corticotropin used in the screening of adrenal insufficiency on the basis of plasma cortisol response after intramuscular or intravenous injection.

Cotard's syndrome (ko-tarz') [Jules Cotard, French neurologist, 1840-1889] see under *syndrome*.

cotarnine chloride (ko-tar'nēn) chemical name: 7,8-dihydro-4-methoxy-6-methyl-1,3-dioxolo[4,5-*g*]isoquinolinium chloride. A substance, $C_{12}H_{14}ClNO_2$, prepared by oxidation of noscaphine with dilute nitric acid; formerly used as a hemostatic agent.

Cotazym (kot'ah-zīm) trademark for a preparation of pancrelipase.

COTe. cathodal opening tetanus.

cothromboplastin (ko-throm'bo-plas'tin) Factor VII; see *coagulation factors*, under *factor*.

cotinine (ko'ti-nēn) the major urinary metabolite of nicotine.

c. fumarate, an antidepressant, $(C_{10}H_{12}N_2O_2) \cdot C_4H_4O_4$.

co-trimoxazole (ko'tri-moks'ah-zōl) a mixture of trimethoprim and sulfamethoxazole.

Cotte's operation (kots) [Gaston Cotte, Lyons surgeon, 1879-1951] see under *operation*.

Cotting's operation (kot'ingz) [Benjamin Eddy Cotting, American surgeon, 1812-1898] see under *operation*.

cotton (kot'n) [L. *gossypium*] a textile material derived from the seeds of one or more of the cultivated varieties of *Gossypium*.

absorbent c., purified c. **collodion c.**, pyroxylin. **gun**

c., pyroxylin. **gun c.**, soluble, pyroxylin. **purified c.** [USP], the hair of the seed of cultivated varieties of *Gossypium hirsutum* Linné, or other species of *Gossypium*, freed from impurities, deprived of fatty matter, bleached, and sterilized; used as a surgical dressing. Called also *absorbent cotton*, and *gossypium asepticum*, *depuratum*, or *purificatum*. **salicylated c.**, purified cotton charged with salicylic acid, an antiseptic dressing. **styptic c.**, cotton impregnated with a styptic solution and dried.

cottonpox (kot'n-poks) variola minor.

cotton-wool (kot'n-wool) raw nonabsorbent cotton, or especially the absorbent form prepared by removing the cottonseed oil.

Cotugno's disease (ko-toon'yo) [Domenico Cotugno, Italian anatomist, 1736-1822] sciatica. See also *Cotunnus*.

Cotunnus' aqueduct, etc. (ko-tun'e-us) [Domenico Cotugno, Italian anatomist, 1736-1822] see under *aqueduct*, *canal*, *nerve*, and *space*.

coturnism (ko-tur'nizm) food poisoning caused by ingestion of meat of the European migratory quail, genus *Coturnix*, and marked by such symptoms as difficult breathing, impaired speech, nausea, weakness and loss of feeling in the legs, and partial paralysis, and sometimes resulting in death; the causative toxin, which occurs in only some of the quail, is unidentified.

co-twin (ko-twin) a twin; usually applied in twin studies to identify pairs of twins.

cotyledon (kot'i-le'don) [Gr. *kotylēdon*] 1. the seed leaf of the embryo of a plant. 2. any one of the subdivisions of the uterine surface of a discoidal placenta. 3. one of the tufted areas of a ruminant's placenta.

cotyledontoxin (kot'i-le'don-tok'sin) a toxic, neutral nonalkaloidal, nonglucosidal, non-nitrogenous, amorphous substance obtained from the herbaceous plants *Cotyledon ventricosa* and *C. wallchii*.

Cotylogonimus (kot'i-lo-gon'i-mus) [Gr. *kotylē* cup + *gonimos* productive] *Heterophyes*.

cotyloid (kot'i-loid) [Gr. *kotylōides* cup shaped] 1. cup-shaped. 2. pertaining to the cotyloid cavity (acetabulum).

cotylopubic (kot'i-lo-pu'bik) relating to the cotyloid cavity (acetabulum) and the os pubis.

cotylosacral (kot'i-lo-sa'kral) relating to the cotyloid cavity (acetabulum) and the sacrum.

cotype (ko-tip) any strain of microorganisms (of the same taxon), other than a holotype, from the collection of the bacteriologist who originally described the taxon.

cough grass (kowch' gras) the perennial grass *Agropyrum (Triticum) repens* (L.) Beauv. (Gramineae); its long roots are diuretic and have been used in cystitis, and possess demulcent and antitussive properties.

couching (kowch'ing) surgical displacement of the lens in cataract; called also *abaissement*, *cataractopiesia*, and *depression of cataract*.

cough (kawf) [L. *tussis*] 1. a sudden noisy expulsion of air from the lungs, usually produced to keep the airways of the lungs free of foreign matter; see also under *reflex*. 2. to produce such an expulsion of air. **aneurysmal c.**, a variety of cough associated with aortic aneurysm, and sometimes with paralysis of one vocal cord. **Balme's c.**, cough on lying down, seen in obstruction of the nasopharynx. **barking c.**, the barklike cough of early youth, as in croup. **compression c.**, a deep resonant cough caused by compression of a bronchus; it resembles in character the cough of a dog and is sometimes called *dog c.* **dog c.**, see *compression c.* **dry c.**, one that is not accompanied with expectoration. **ear c.**, a reflex cough caused by disease of the ear, when Arnold's nerve is stimulated. **extrapulmonary c.**, a cough due to causes outside the lungs. **hackling c.**, a short, frequent, shallow, and feeble cough. **mechanical c.**, expulsion of air from the lungs produced by use of an exsufflator, with effects similar to those of a natural cough.

minute gun c., whooping cough with the paroxysms occurring close together. **Morton's c.**, a persistent cough in pulmonary tuberculosis which brings on vomiting and thus causes loss of nourishment. **privet c.**, an allergic cough noted in China and attributed to the pollen of privet. **productive c.**, a cough that is effective in removing material from the respiratory tract. **reflex c.**, a cough due to the irritation of some remote organ. **stomach c.**, a cough caused by reflex irritation from stomach disorder. **Sydenham's c.**, hysterical spasm of the respiratory muscles. **tea taster's c.**, cough in tasters of tea, attributed to inhaling fungi, such as *Candida*, *Aspergillus*, etc., from tea leaves. **trigeminal c.**, a cough due to irritation of the fibers of the trigeminal nerve distributed to the throat, nose, and external meatus of the ear. **wet c.**, one attended with expectoration. **whooping c.**, see *whooping cough*, under *W.* **winter c.**, chronic bronchitis recurring in the winter.

coulomb (koo'lom) [after C. A. de Coulomb, French physicist, 1736-1806] the unit of electrical charge, defined as the quantity of electrical charge transferred by one ampere in one second; called also *absolute c.* See also *faraday*. **international c.**, the former standard of electrical charge, equal to 0.999835 absolute coulomb.

Coumadin (koo-mah-din) trademark for preparations of sodium warfarin.

coumamyacin (koo-mah-mi'sin) coumermycin.

coumarin (koo'mah-rin) 1. chemical name: 2*H*-1-benzopyran-2-one. A principle, $C_9H_6O_2$, with a bitter taste and an odor resembling that of vanilla beans, derived from tonka bean, sweet clover, and other plants, and also prepared synthetically. Coumarin contains a factor, dicumarol (3,3'-methylenebis[4-hydroxy-2*H*-1-benzopyran-2-one]), which inhibits the hepatic synthesis of the vitamin K-dependent coagulation factors (prothrombin, Factors VII, IX, and X), and a number of its derivatives are used widely as anticoagulants in the treatment of disorders in which there is excessive or undesirable clotting, such as thrombophlebitis, pulmonary embolism, and certain cardiac conditions. 2. any derivative of coumarin or any synthetic compound with coumarin-like actions.

coumermycin (koo-mer-mi'sin) chemical name: 5-methylpyrrole-2-carboxylic acid, diester with 3,3'-[(3-methylpyrrole-2,4-diyl) bis (carbonylimino)] bis [4-hydroxy-8-methyl-7-[(tetrahydro-3,4-dihydroxy-5-methoxy-6,6-dimethylpyran-2-yl)oxy]coumarin]; an antibacterial agent, $C_{25}H_{38}N_8O_{20}$, isolated from *Streptomyces hazeliensis* var. *hazeliensis* and from *S. rishiriensis*.

Councilman's bodies (lesions) (kown'sil-man) [William Thomas Councilman, American pathologist, 1854-1933] see under *body*.

Councilmania (kown'sil-ma'ne-ah) [William Thomas Councilman] *Entamoeba*. **C. dissimilis**, *Entamoeba coli*. **C. laffleurii**, *Entamoeba coli*.

count (kownt) [L. *computare* to reckon] a numerical computation or indication. **Addis c.**, the determination of the number of red blood cells, white blood cells, epithelial cells, casts, and the protein content in an aliquot of a twelve-hour urine specimen, used in the diagnosis and management of kidney disease. **Arneth c.**, see under *formula*. **blood c.**, determination of the number of formed elements in a measured volume of blood, usually a cubic millimeter (as red blood cell, white blood cell, or platelet count.) **complete blood c.**, a series of tests of the peripheral blood, including the hematocrit (per cent), the amount of hemoglobin (grams per cent), the white cell count (per cubic millimeter), and the proportions of the different white cells as they appear on a blood smear. **differential c.**, a count made by observation, on the stained blood smear, of the proportion of the different types of leukocytes (or other cells), expressed in percentages. **direct platelet c.**, determination of the total number of platelets per cubic millimeter of blood, in a counting chamber, with the use of conventional light or phase microscopy. **filament-nofilament c.**, determination of the number of juvenile and mature leukocytes, as in the differential blood count. **indirect platelet c.**, calculation of the total number of platelets per cubic millimeter of blood by determining, in a peripheral blood smear, the ratio of platelets to erythrocytes, and computing the number of platelets from the total red cell count. **parasite c.**, determination of the number of parasites per unit volume of fluid, as, in malaria, the number of plasmodia per cubic millimeter of blood. **Schilling blood c.** (*obs.*), a differential blood count in which the neutrophils are divided into four groups: myelocytes, juvenile cells (or young forms), staff cells, and segmented forms. **staff c.** (*obs.*), Schilling blood c.

counter (kown'ter) an instrument or apparatus by which numerical value is computed; in radiology, a device for enumerating ionizing events. **Coulter c.**, an automatic photoelectric instrument used in the enumeration of formed peripheral blood elements, based on the principle that cells are poor electrical conductors compared with saline solution. **Geiger c.**, **Geiger-Müller c.**, a highly sensitive amplifying device that indicates the presence of ionizing particles. **proportional c.**, a gas-filled radiation detection tube in which the pulse produced is proportional to the number of ions formed in the gas by the primary ionizing particle. **Quebec bacteria colony c.**, a bacteria colony counter in which an oblique light illuminates the colonies so that they appear as brilliant spots or points on subdued background. **scintillation c.**, an instrument for indicating the emission of ionizing particles, making possible the determination of the concentration of radioactive isotopes in the body or other substance; the radiation is absorbed by a phosphor crystal, which emits minute flashes of light that are detected and amplified by a photomultiplier tube.

counterbalance (kown'ter-bal'ans) counterpoise; offset. **renal c.**, compensatory hypertrophy of a normal kidney or part of a kidney accompanied by the tendency of its diseased mate or part to remain in a relatively atrophic state.

countercurrent (kown'ter-ker'ent) flowing in an opposite direction; see also under *mechanism*.

counterdie (kown'ter-di) the reverse image of a die, usually made of a softer and lower fusing metal than the die.

counterelectrophoresis (kown'ter-e-lek'tro-fo-re'sis) counterimmunoelectrophoresis.

counterimmunoelectrophoresis (kown'ter-im'u-no-e-lek'tro-fo-re'sis) a technique in which antigen and antibody are placed in opposing wells in a buffered diffusion system and

subjected to an electric field; the antigen (e.g., HB_sAg) and antibody (e.g., anti- HB_s) will migrate (toward the anode and cathode, respectively) rapidly toward each other and form a visible precipitin line. Called also *counterelectrophoresis*.

counterextension (kown'ter-eks-ten'shun) traction in a proximal direction coincident with traction in the opposite direction.

counterincision (kown'ter-in-siz'un) a second incision usually made to promote drainage, but occasionally to relieve tension on the edges of a clean wound during closure.

counterinvestment (kown'ter-in-vest'ment) anticathexis.

counterirritant (kown'ter-ir'i-tant) 1. producing a counterirritation. 2. any agent which causes counterirritation.

counterirritation (kown'ter-ir'i-ta'shun) a superficial irritation, an irritation that is intended to relieve some other irritation.

counteropening (kown'ter-o'pen-ing) a second incision made across an earlier one to promote drainage.

counterphobia (kown'ter-fo'be-ah) the seeking out of situations or objects which one fears or has feared.

counterphobic (kown'ter-fo'bik) pertaining to or characterized by counterphobia.

counterpoison (kown'ter-poi'zn) a poison given to counteract another poison.

counterpulsation (kown'ter-pul-sa'shun) a technique for assisting the circulation and decreasing the work of the heart, by synchronizing the force of an external pumping device with cardiac systole and diastole. **intra-aortic balloon c.**, thoracic support provided by a balloon inserted into the thoracic aorta, which is inflated during diastole (enhancing coronary perfusion pressure) and deflated during systole (enhancing peripheral perfusion because of maximal dilation of systemic arterial vessels during diastole).

counterpuncture (kown'ter-punk'chur) a second opening made opposite another.

counterstain (kown'ter-stān) a stain applied to render the effects of another stain more discernible.

countersuggestion (kown'ter-sug-jes'chun) in psychiatry, a technique, often employed with negativistic patients, of suggesting the opposite of what the therapist intends.

countertraction (kown'ter-trak'shun) traction opposed to another traction; employed in the reduction of fractures.

countertransference (kown'ter-trans-fer'ens) in psychoanalysis, the emotional reaction aroused in the physician by the patient; cf. *transference*.

coup (koo) [Fr.] stroke. **c. de fouet** (koo-duh-fwa') [Fr. "stroke of the whip"], rupture of the plantaris muscle accompanied by a sharp disabling pain. **en c. de sabre** (ahn-koo-duh-sahb') [Fr. "saber stroke"], resembling the scar of a saber wound; used to designate such a lesion of linear scleroderma on the forehead and scalp. **c. de sang** (koo-duh-sang'), congestion of the brain. **c. de soleil** (koo-duh-sō-la'), sunstroke. — **c. sur coup** (koo-ser-koo') ["blow on blow"], the administration of a drug in small doses at short intervals, to secure rapid, complete, or continuous action; abbreviated C.S.C.

couple (kup'l) 1. two equal forces operating on an object in parallel but opposite directions. 2. an area of contact between two dissimilar metals, producing a difference in electrical potential.

coupling (kup'ling) a pairing or joining. In genetics, the occurrence on the same chromosome in a double heterozygote of the two mutant alleles of interest. Cf. *repulsion*. In cardiology, the serial occurrence of a normal heart beat followed closely by a premature beat. **excitation-contraction c.**, the coupling of the action potential to muscle constriction by means of calcium ions which diffuse rapidly into the myofibrils and catalyze the chemical reactions that promote the contractile sliding of actin and myosin filaments. **fixed c.**, coupling in which the premature heart beats follow the preceding normal beats at identical intervals.

courap (koo-rap') a disease of the skin occurring in India, with eruption and itching of the armpits, groin, breast, and face.

courbature (koo'r'bah-tür) [Fr.] 1. aching of the muscles. 2. decompression sickness.

Cournand (kōōr'nand), André Frédéric. American physiologist, born in France in 1895; co-winner, with Werner T. O. Forssmann and Dickinson W. Richards, of the Nobel prize in medicine and physiology for 1956, for the development of new techniques to measure more precisely lung and heart function.

courses (kor'sez) (*obs.*) menses.

Courvoisier's law (sign) (koo-r'vwa'h/'ze-āz') [Ludwig Georg Courvoisier, Swiss surgeon, 1843-1918] see under *law*.

Courvoisier-Terrier syndrome (koo-r'vwa'h/'ze-a'-ter-ya') [L. G. Courvoisier; Louis Félix Terrier, Paris surgeon, 1837-1908] see under *syndrome*.

Coutard's method (koo-tarz') [Henri Coutard, French radiologist in United States, 1876-1950] see under *method*.

couvade (koo-vad') a custom of primitive peoples, in which the husband feigns illness during his wife's parturient and puerperal periods.

Couvelaire uterus (koo'-vel-är') [Alexandre Couvelaire, Paris obstetrician, 1873-1948] see *uteroplacental apoplexy*, under *apoplexy*.

couvercle (koo'-ver-kl) [Fr.] a blood clot formed outside a vessel.

couveuse (koo'-vuz') [Fr.] (obs.) incubator.

covalence (ko-väl'ens) the number of electron pairs an atom can share with other atoms.

covalent (ko-väl'ent) see under *bond*.

covariance (ko-vä're-ans) the expected value of the product of the deviations of corresponding values of two random variables from their respective means.

cover (kov'er) 1. to provide protection against, as by prophylaxis. 2. the prophylaxis so provided.

coverglass (kov'er-glas) a thin glass plate that covers a mounted microscopical object or a culture.

coverslip (kov'er-slip) coverglass.

cowage (kow'aj) 1. a perennial herb, *Mucuna pruriens* DC. (Leguminosae), of the East Indies. 2. the hairs of the cowage pods, which cause severe itching, are used medicinally as a vermifuge, anthelmintic, and counterirritant in admixture with such vehicles as honey. Also used as "itching powders" of joke-shop fame.

Cowdria (kow'dre-ah) [Edmund Vincent Cowdry, American anatomist and zoologist, born 1888] a genus of the tribe Ehrlichieae, family Rickettsiaceae, order Rickettsiales. **C. ruminantium**, the etiologic agent of heartwater (q.v.) of sheep, goats, and cattle; it is nonpathogenic for man.

cowl (kowl) caul.

Cowper's gland, ligament (kow'perz) [William Cowper, English surgeon, 1666-1709] see *glandula bulbourethralis* and *fascia pectinea*.

cowperian (kow-pe're-an) described by or named in honor of William Cowper.

cowperitis (kow'per-i'tis) inflammation of Cowper's glands (glandula bulbourethralis).

cowpox (kow'poks) a mild eruptive skin disease of milk cows, usually confined to the udder and teats, caused by vaccinia virus. The disease is transmissible to man by inoculation and contact. See *vaccinia*.

coxa (kok'sah) [L.] [NA] the part of the body lateral to and including the hip joint. Also loosely used to denote the hip joint. **c. adducta**, **c. flex'a**, **c. vara**. **c. mag'na**, a condition marked by broadening of the head and neck of the femur. **c. pla'na**, osteochondrosis of the capitular epiphysis of the femur; see under *osteochondrosis*. **c. val'ga**, deformity of the hip in which the angle formed by the axis of the head and the neck of the femur and the axis of its shaft is materially increased. **c. va'ra**, deformity of the hip in which the angle formed by the axis of the head and neck of the femur and the axis of its shaft is materially decreased; called also **c. adducta** and **c. flexa**. **c. va'ra lux'ans**, fissure of the neck of the femur with dislocation of the head developing from coxa vara.

coxalgia (kok-sal'je-ah) [L. *coxa* hip + *-algia*] 1. hip-joint disease. 2. pain in the hip.

coxarthria (koks-ar'thre-ah) coxitis.

coxarthrit (koks'ar-thri'tis) coxitis.

coxarthrocace (koks'ar-throk'ah-se) fungus disease of the hip joint.

coxarthropathy (koks'ar-throp'ah-the) [L. *coxa* hip + Gr. *arthron* joint + *pathos* disease] hip-joint disease.

coxarthrosis (koks-ar-thro'sis) degenerative joint disease or osteoarthritis of the hip joint.

Coxiella (kok'se-el'lah) [Herald Rae Cox, American bacteriologist, born 1907] a genus of microorganisms of the tribe Rickettsieae, family Rickettsiaceae, order Rickettsiales, occurring as a single species. **C. burnet'ii**, the etiologic agent of Q fever, transmitted by *Haemaphysalis*, *Ixodes*, *Dermacentor*, and *Amblyomma* ticks, and also acquired by inhalation of infectious dust and other materials from animal reservoirs of infection.

coxitis (kok-si'tis) inflammation of the hip joint; called also *coxarthrit*. **c. fu'gax**, a transient benign coxitis. **senile c.**, degenerative arthritis of the hip joint.

coxodynia (kok'so-din'e-ah) coxalgia, def. 2.

coxofemoral (kok'so-fem'o-ral) [L. *coxa* hip + *femur* thigh] pertaining to the hip and thigh.

coxotomy (kok-sot'o-me) the operation of opening the hip joint.

coxotuberculosis (kok'so-tu-ber'ku-lo'sis) [L. *coxa* hip + *tuberculosis*] tuberculous disease of the hip joint.

coxsackievirus (kok-sak'e-vi'rus) [Coxsackie, N.Y., where it was first identified] one of a heterogeneous group of enteroviruses producing, in man, a disease resembling poliomyelitis, but without paralysis; separable into two groups: A, producing degenerative lesions of striated muscle and B, producing leptomeningitis in infant mice. A number of different serotypes have also been identified. Also written *Coxsackie virus*.

cozymase (ko-zi'mäs) nicotinamide-adenine dinucleotide (NAD); see under *dinucleotide*.

C.P. chemically pure; candle power.

cp centipoise.

CPC clinicopathological conference.

C.P.H. Certificate in Public Health.

CPK creatine phosphokinase.

C. Ped. Certified Pedorthist.

c.p.m. counts per minute, an expression of the particles emitted after administration of a radioactive material such as ¹³¹I.

CPR cardiopulmonary resuscitation.

c.p.s. cycles per second.

CR conditioned reflex (response).

C.R. crown-rump; in embryology, the usual axis of measurement of an embryo or fetus.

Cr chemical symbol for *chromium*.

crab (krab) a vernacular term for *Phthirus pubis*.

crack (krak) an incomplete split, break, or fissure. **sand c.**, a crack originating at the ground level in a horse's hoof, sometimes causing lameness. When situated on the inside of the hoof it is termed *quarter c.*; when in the fore part of the hoof it is *toe c.*

crackle (krak'l) a small sharp sound. **pleural c's**, superficial crepitation heard in the early stages of acute fibrinous pleurisy.

cradle (kra'dl) a frame placed over the body of a bed patient for application of heat or cold or for protecting injured parts from contact with the bed clothes. **electric c.**, **heat c.**, a tunnel- or hood-shaped cradle equipped with electric light bulbs, for application of heat to the body of a patient. **ice c.**, a device for lowering a patient's body temperature.

Crafts' test (krafts) [Leo Melville Crafts, American neurologist, 1863-1938] see under *tests*.

Craigia (kra'ge-ah) [Charles Franklin Craig, U. S. Army surgeon, 1872-1950] a genus of flagellate protozoa, originally named *Paramoeba* by Craig. The organisms have been the subject of much controversy, but its flagellate stages are thought by Wenyon to be *Chilomastix mesnili*, and its ameboid stages *Entamoeba coli*.

Cramer's splint (krah'merz) [Friedrich Cramer, German surgeon, 1847-1903] see under *splint*.

cramp (kramp) a painful spasmodic muscular contraction, especially a tonic spasm. **accessory c.**, spastic torticollis due to a lesion of the accessory nerve. **heat c.**, a form of heat exhaustion in which muscular spasm is attended by pains, dilated pupils, and weak pulse; seen in those who labor in intense heat (stokers, miners, cane-cutters) and lose much water and salt. Called also *Edsall's disease*. **intermittent c.**, intermittent abnormal contractions of a muscle, as in tetanus or tetany. **recumbency c's**, cramping of muscles in legs and feet occurring while resting or during light sleep. **stoker's c.**, **heat c.** **writers' c.**, an occupation neurosis which is characterized by spasmodic contraction of the muscles of the fingers, hand, and forearm, together with neuralgic pain therein; it comes on whenever an attempt is made to write. Called also *graphospasm*.

Crampton's muscle (kramp'tonz) [Sir Philip Crampton, Irish surgeon, 1777-1858] see under *muscle*.

Crampton's test (kramp'tonz) [Charles Ward Crampton, American physician, born 1877] see under *tests*.

craniad (kra'ne-ad) [L. *cranium* head + *ad* toward] in a cranial direction; toward the anterior (in animals) or superior (in humans) end of the body.

cranial (kra'ne-al) [L. *cranialis*] pertaining to the cranium, or to the anterior (in animals) or superior (in humans) end of the body.

cranialis (kra'ne-a'lis) [L.] pertaining to the cranium, or to the superior end of the body; [NA] a term used to denote relationship to the superior end of the body.

craniamphitomy (kra'ne-am-fit'o-me) [*cranium* + Gr. *amphi* around + *tomē* a cutting] division of the entire circumference of the skull for securing decompression.

Craniata (kra-ne-a'tah) the subphylum of the Chordata containing the species with a true skull and spinal column; the vertebrates.

craniectomy (kra'ne-ek'to-me) [*cranium* + Gr. *ektomē* excision] excision of a part of the skull. **linear c.**, excision of a strip of the skull, done for the relief of microcephalus.

cranio- (kra'ne-o) [L. *cranium*; Gr. *kranion* skull] a combining form denoting relationship to the cranium or skull.

cranioacromial (kra'ne-o-ah-kro'me-al) pertaining to the cranium and acromion.

cranioaural (kra'ne-o-aw'ral) pertaining to the cranium and the ear.

craniobuccal (kra'ne-o-buk'al) pertaining to the head and mouth.

craniocoele (kra'ne-o-sē'l') [*cranio-* + Gr. *kēlē* hernia] a protrusion of any part of the cranial contents through a defect in the skull.

craniocerebral (kra'ne-o-ser'e-bral) pertaining to the cranium and the cerebrum.

cranioclasia (kra'ne-ok'lah-sis) [*cranio-* + Gr. *klasis* fracture] craniotomy, def. 2.

cranioclast (kra'ne-o-klast') [*cranio-* + Gr. *klan* to break] an instrument for performing craniotomy (def. 2).

A cranioclast.

cranioclasty (kra'ne-o-klas'te) craniotomy, def. 2.

craniocleidodysostosis (kra'ne-o-kli'do-dis'os-to'sis) [*cranio-* + Gr. *kleis* clavicle + *dys-* bad + *osteon* bone] cleidocranial dysostosis.

craniodidymus (kra'ne-o-did'i-mus) [*cranio-* + Gr. *didymos* twin] a monster with two heads.

craniofacial (kra'ne-o-fa'shal) pertaining to the cranium and the face.

craniofenestria (kra'ne-o-fē-nēs'tre-ah) [*cranio-* + L. *fenestra* an opening] defective development of the bones of the vault of the fetal skull, marked by areas in which no bone is formed.

craniognomy (kra-ne-og'no-me) [*cranio-* + Gr. *gnōmōn* an interpreter or judge] the study of the shape of the head.

craniograph (kra'ne-o-graf') [*cranio-* + Gr. *graphein* to write] an instrument for outlining the skull.

craniography (kra'ne-og'rah-fe) the study of the skull by means of photographs, charts, etc.

craniolacunia (kra'ne-o-lah-ku'ne-ah) [*cranio-* + L. *lacuna* a hollow + *-ia*] defective development of the bones of the vault of the fetal skull marked by depressed areas on the inner surfaces of the bones.

craniology (kra'ne-ol'o-je) [*cranio-* + *-logy*] the scientific study of skulls.

craniomalacia (kra'ne-o-mah-la'she-ah) [*cranio-* + Gr. *malakia* softness] abnormal softness of the skull.

craniomeningocele (kra'ne-o-mē-nin'go-sēl) [*cranio-* + Gr. *mēnix* membrane + *kēlē* hernia] protrusion of cerebral membranes through a defect in the skull.

craniometer (kra'ne-om'ē-ter) [*cranio-* + Gr. *metron* measure] an instrument for use in craniometry.

craniometric (kra'ne-o-met'rik) pertaining to craniometry.

craniometry (kra'ne-om'ē-tre) [*cranio-* + Gr. *metrein* to measure] the scientific measurement of the dimensions of the bones of the skull and face.

craniopagus (kra'ne-op'ah-gus) [*cranio-* + Gr. *pagos* a thing fixed] a double monster united by the heads; called also *cephalopagus*. **c. occipita'lis**, craniopagus in which fusion is in the occipital region. **c. parasit'icus**, craniopagus in which a parasitic head is attached to the head of the autosite. **c. parieta'lis**, craniopagus in which fusion is in the parietal region.

craniopathy (kra'ne-op'ah-the) [*cranio-* + Gr. *pathos* disease] any disease of the skull. **metabolic c.**, a condition characterized by lesions of the calvarium with multiple metabolic changes and marked by headache, obesity, and visual disturbances.

craniopharyngeal (kra'ne-o-fah-rin'jē-al) pertaining to the cranium and the pharynx.

craniopharyngioma (kra'ne-o-fah-rin'je-o'mah) a tumor arising from cell rests derived from the hypophyseal stalk or Rathke's pouch, frequently associated with increased intracranial pressure, and showing calcium deposits in the capsule or in the tumor proper. Called also *craniopharyngeal duct tumor*, *Rathke's (pouch) tumor*, *suprasella cyst*, and *pituitary adamantinoma* or *ameloblastoma*.

craniophore (kra'ne-o-fōr) [*cranio-* + Gr. *phoros* bearing] a device for holding a skull during measurement of its diameters and angles.

cranioplasty (kra'ne-o-plas'te) [*cranio-* + Gr. *plassein* to mold] any plastic operation on the skull; surgical correction of defects of the skull.

craniopuncture (kra'ne-o-punk'tūr) puncture of the skull for exploratory purposes in cranial disease.

craniorachischisis (kra'ne-o-rah-kis'ki-sis) [*cranio-* + Gr. *rachis* spine + *schisis* fissure] congenital fissure of the skull and vertebral column.

cranosacral (kra'ne-o-sa'kral) 1. pertaining to the skull and the sacrum. 2. pertaining to the parasympathetic nerves.

cranoschisis (kra'ne-os'ki-sis) [*cranio-* + Gr. *schisis* fissure] congenital fissure of the cranium.

cranosclerosis (kra'ne-o-skle-ro'sis) [*cranio-* + Gr. *sklēros* hard] thickening of the bones of the skull.

cranoscopy (kra'ne-os'ko-pe) [*cranio-* + Gr. *skopein* to examine] diagnostic examination of the head.

craniospinal (kra'ne-o-spi'nal) pertaining to the cranium and spine.

craniostenosis (kra'ne-o-ste-no'sis) [*cranio-* + Gr. *stenōsis* narrowing] deformity of the skull caused by premature fusion of the cranial sutures, with consequent cessation of growth, the nature of the deformity depending on the sutures involved in the process.

craniostosis (kra'ne-os-to'sis) [*cranio-* + Gr. *osteon* bone] congenital ossification of the cranial sutures.

cranosynostosis (kra'ne-o-sin'os-to'sis) premature closure of the sutures of the skull.

craniotabes (kra'ne-o-ta'bēz) [*cranio-* + L. *tabes* a wasting] reduction in the mineralization of the skull, with abnormal softness of the bone, usually located in the occipital and parietal bones along the lambdoidal sutures.

craniotome (kra'ne-o-tōm') [*cranio-* + Gr. *tomē* a cutting] an instrument for use in performing craniotomy.

craniotomy (kra'ne-o-tō-me) [*cranio-* + Gr. *tomē* a cut] 1. any operation on the cranium. 2. an operation to decrease the size of the head of a dead fetus and facilitate delivery by puncturing the skull and removing its contents; encephalotomy.

craniotonoscopy (kra'ne-o-to-nos'ko-pe) [*cranio-* + Gr. *tonos* tone + Gr. *skopein* to examine] auscultatory percussion of the head.

craniotopography (kra'ne-o-to-pog'rah-fe) [*cranio-* + *topography*] the study of the relations of the surface of the skull to the various parts of the brain beneath.

craniotrypsis (kra'ne-o-trī-pe'sis) [*cranio-* + Gr. *trypsis* a piercing] trephination of the skull.

craniotympanic (kra'ne-o-tim-pan'ik) pertaining to the skull and the tympanum.

crinitis (kra-ni'tis) inflammation of the cranial bones.

cranium (kra'ne-um), pl. *crania* [L.; Gr. *kranion* the upper part of the head] the skeleton of the head, variously construed as including all of the bones of the head, all of them except the mandible, or the eight bones which form the vault that lodges the brain. See also *cranial bones*, under *bone*. **c. bif'idum**, congenital cleft of the cranium. **c. bif'idum occul'tum**, congenital cleft of the cranium without associated abnormality of the brain or meninges, detectable only roentgenographically. **cerebral c.**, **c. cerebra'le**, those portions of the bones of the head that contribute to the brain case. **visceral c.**, **c. viscera'le**, those portions of the bones of the head that form the skeleton of the face; this includes the mandible and hyoid bone.

crapulent, crapulous (krap'u-lent, krap'u-lus) [L. *crapulentus*, *crapulosus* drunken] due to excess in eating or drinking.

craquelé (krak-la') [Fr.] profusely cracked; see *eczema craquelé*.

crasis (kra'sis) [L.; Gr. *krasis* mixture] the individual temperament or constitution.

crassamentum (kras'ah-men'tum) [L.] a clot, as of blood.

Crast. abbreviation for L. *cras'tinus*, for tomorrow.

crater (kra'ter) a circular area of depression surrounded by an elevated margin.

crateriform (kra-ter'f-i-form) [L. *crater* bowl + *forma* shape] depressed or hollowed, like a bowl.

craterization (kra'ter-i-za'shun) the operation of excising a craterlike piece from a bone.

cräunology (kraw-nol'o-je) crenology.

cräunotherapy (kraw'no-ther'ah-pe) crenotherapy.

cravat (krah-vat') [Fr. *cravate*] a bandage made by folding a triangular piece of cloth from its apex toward the base.

craw-craw (kraw'kraw) an obstinate form of skin disease occurring in West Africa, and affecting chiefly the thighs and genitals, though it may spread over the whole body; it is caused by *Onchocerca volvulus* and is related to dermatitis nodosa.

crazing (kra'zing) minute cracks on the surface of plastic or porcelain dental restorations.

cream (krēm) the oily or fatty part of milk from which butter is prepared, or a fluid mixture of similar consistency; in pharmaceutical preparations, a semisolid emulsion of the oil-in-water or water-in-oil type, ordinarily used topically. **acrisorcin c.** [USP], acrisorcin in a suitable water-miscible base, containing not less than 90 per cent and not more than 110 per cent of acrisorcin; used as a topical antifungal agent. **benzocaine c.** [USP], a mixture containing 90 to 100 per cent of the labeled amount of benzocaine; used as a local anesthetic, applied topically to the skin and mucous membranes. **betamethasone c.** [USP], a mixture containing 90 to 115 per cent of the labeled amount of betamethasone in a suitable water-miscible base; used topically as an anti-inflammatory glucocorticoid. **betamethasone dipropionate c.** [USP], a mixture containing betamethasone dipropionate equivalent to 90 to 110 of the labeled amount of betamethasone in a suitable cream base; used topically as an anti-inflammatory. **betamethasone valerate c.** [USP], a mixture containing betamethasone valerate equivalent to 95 to 115 per cent of the labeled amount of betamethasone in a suitable cream base; used topically as an anti-inflammatory glucocorticoid. **clotrimazole c.** [USP], a cream containing not less than 90 per cent and not more than 110 per cent of the labeled amount of

clotrimazole; used as a topical antifungal agent. **cold c.** [USP], a preparation of spermaceti, white wax, mineral oil, sodium borate, and purified water; used as a topical emollient for minor skin irritations and as a water-in-oil emulsion ointment base. **cortisol acetate c.** [USP], a mixture containing between 90 and 110 per cent of the labeled amount of total steroids in a suitable cream base; used as a topical anti-inflammatory steroid. **cro-tamiton s.** [USP], a preparation containing 93 to 107 per cent of the labeled amount of cro-tamiton; used as a scabicide, applied topically to the skin. **cyclomethycaine sulfate c.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of cyclomethycaine sulfate in a suitable cream base; used as a local anesthetic, applied topically. **desoximetasone c.** [USP], a preparation containing between 90 and 110 per cent of the labeled amount of desoximetasone in an emollient cream base; used topically as a corticosteroid anti-inflammatory. **dexamethasone sodium phosphate c.**, a cream containing dexamethasone sodium phosphate equivalent to 90 to 115 per cent of the labeled amount of dexamethasone phosphate; used topically as an anti-inflammatory glucocorticoid. **dibucaine c.** [USP], a mixture containing between 90 and 110 per cent of the labeled amount of dibucaine in a suitable cream base; used topically as a local anesthetic. **dienestrol c.** [USP], a mixture containing between 90 to 110 per cent of the labeled amount of dienestrol in a suitable water-miscible base; used topically for its estrogenic effect in the treatment of postmenopausal and senile vulvovaginitis, atrophic vaginitis, pruritus vulvae due to atrophic changes in the vulval epithelium, dyspareunia associated with atrophic vaginal epithelium, and prior to plastic pelvic surgery in menopausal cases. **dioxybenzone and oxybenzone c.** [USP], a preparation usually containing 3 per cent dioxybenzone and 3 per cent oxybenzone; used as a sunscreening agent, applied topically to the skin. **flumethasone pivalate c.** [USP], a preparation containing not less than 90 per cent and not more than 110 per cent of flumethasone pivalate in a suitable cream base; used topically as an anti-inflammatory glucocorticoid. **fluocinonide c.** [USP], a cream containing 90 to 110 per cent of the labeled amount of fluocinonide acetate; used as an anti-inflammatory in steroid-responsive dermatoses, applied topically. **fluocinonide c.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of fluocinonide; used as an anti-inflammatory in steroid-responsive dermatoses, applied topically. **fluorometholone c.** [USP], a cream containing 90 to 110 per cent of the labeled amount of fluorometholone; used topically as an anti-inflammatory in the treatment of steroid-responsive dermatoses. **fluorouracil c.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of fluorouracil; used as an antineoplastic in the treatment of actinic keratoses, applied topically. **flurandrenolide c.** [USP], a cream containing 85 to 115 per cent of the labeled amount of flurandrenolide; used as a topical anti-inflammatory in the treatment of steroid-responsive dermatoses. **gamma benzene hexachloride c.**, lindane c. **gentamicin sulfate c.** [USP], a mixture containing 90 to 135 per cent of gentamicin sulfate, expressed in terms of gentamicin, in a suitable semisolid vehicle; used as a topical antibacterial. **gentian violet c.** [USP], a preparation containing, in each 100 gm., 1.20 to 1.60 gm. of gentian violet, calculated as hexamethyl-parosaniline chloride; applied intravaginally in the treatment of vulvovaginal candidiasis. **hydrocortisone c.** [USP], a mixture containing 90 to 110 per cent of the labeled amount of hydrocortisone in a suitable cream base; used topically as an anti-inflammatory in the treatment of steroid-responsive dermatoses. **hydroquinone c.** [USP], a cream containing 94 to 106 per cent of the labeled amount of the hydroquinone; used as a depigmenting agent. **iodochlorhydroxyquin c.** [USP], a mixture containing 90 to 100 per cent of the labeled amount of iodochlorhydroxyquin in a suitable cream base; used as a topical anti-infective in the treatment of a wide range of dermatoses, including all types of eczema. **iodochlorhydroxyquin and hydrocortisone c.** [NF], a preparation containing 90 to 110 per cent of the labeled amounts of iodochlorhydroxyquin and hydrocortisone; used topically for its local anti-infective effect and for the anti-inflammatory and antipruritic activity of glucocorticoids in a wide range of dermatoses. **leukocytic c.**, buffy coat. **lindane c.** [USP], a mixture containing 90 to 100 per cent of the labeled amount of lindane in a suitable cream base; used topically as a pediculicide and scabicide. Called also **gamma benzene hexachloride c.** **mafenide acetate c.** [USP], a preparation containing 90 to 110 per cent of mafenide acetate in terms of the labeled amount of mafenide; used as a topical anti-infective for adjunctive therapy in patients with second and third-degree burns. **methylprednisolone acetate c.** [USP], a mixture containing 90 to 110 per cent of the labeled amount of methylprednisolone acetate in a cream base; used as a topical glucocorticoid. **Moynihan's c.**, a mixture consisting of as much bismuth carbonate in 1:1000 aqueous solution of HgI₂ as will make a thick paste; used as a wound dressing. **nystatin c.** [USP], a cream containing 90 to 130 per cent of the labeled amount of nystatin, the labeled amount being 100,000 nystatin units per gram of cream. **neomycin sulfate and dexamethasone sodium phosphate c.**, a preparation containing neomycin sulfate equivalent to 90 to 135 per cent of the labeled amount of neomycin base, and

dexamethasone sodium phosphate equivalent to 90 to 115 per cent of the labeled amount of dexamethasone sodium phosphate; used topically for its broad-spectrum antibacterial effects, and for the anti-inflammatory and antipruritic activity of glucocorticoids in a wide range of dermatoses. **nitrofurazone c.** [USP], a mixture containing 95 to 105 per cent of the labeled amount of nitrofurazone in a suitable, emulsified, water-miscible base, used topically as a local anti-infective against a wide variety of gram-negative and gram-positive bacteria in the treatment of many skin lesions, especially second and third degree burns, and to aid healing and prevent infection of skin grafts. **piperazine estrone sulfate vaginal c.** [USP], a mixture containing 90 to 120 percent of the labeled amount of piperazine estrone sulfate in a suitable cream base; used as an estrogen. **pramoxine hydrochloride c.** [USP], a mixture containing 90 to 110 per cent of the labeled amount of pramoxine hydrochloride in a suitable water-miscible base; used topically as a local anesthetic. **prednisolone c.** [USP], a mixture containing 90 to 110 per cent of the labeled amount of prednisolone in a suitable cream base; used as a topical glucocorticoid. **c. of tartar**, potassium bitartrate. **tetracaine hydrochloride c.** [USP], a mixture containing the equivalent of 1 per cent of tetracaine in a suitable water-miscible base; used as a local anesthetic, applied to the skin. **tolnaftate c.** [USP], a cream containing 90 to 110 per cent of the labeled amount of tolinaftate; used topically as an antifungal in the treatment of various forms of tinea of the skin. **tretinoin c.** [USP], a mixture containing 90 to 130 per cent of the labeled amount of tretinoin; used as a topical keratolytic agent. **triacetin c.**, a cream containing 90 to 110 per cent of the labeled amount of triacetin; used topically as a local antifungal. **triamcinolone acetonide c.** [USP], a mixture containing 90 to 115 per cent of the labeled amount of triamcinolone acetonide in a suitable cream base; used as a topical anti-inflammatory in steroid-responsive dermatoses. **triclobisonium chloride c.**, a cream containing 90 to 110 per cent of the labeled amount of triclobisonium chloride; used intravaginally as a local anti-infective, primarily in the treatment of gynecological infections due to susceptible organisms.

Creamalin (krem'ah-lin) trademark for preparations of aluminum hydroxide gel.

creamometer (kre-mom'ē-ter) [*cream* + Gr. *metron* measure] an instrument for the determination of the percentage of cream in milk.

crease (krēs) a line or slight linear depression (in anatomical terminology). **palmar c.**, **flexion c.**, any of the normal grooves across the palm which accommodate flexion of the hand by separating folds of tissue. In certain congenital anomalies, there is only a single transverse (simian) crease. **simian c.**, a single transverse palmar crease formed by fusion of the proximal and distal palmar creases; seen in congenital disorders such as Down's syndrome; called also *simian line*. **Sydney c.**, a proximal transverse palmar crease that extends to the ulnar border of the hands; called also *Sydney line*.

creasote (kre'ah-sōt) creosote.

creatinase (kre-at'i-nās) an enzyme that catalyzes the transformation of creatine into urea and ammonia.

creatine (kre'ah-tin) [Gr. *kreas* flesh] N-methyl-guanidinoacetic acid. A crystallizable nitrogenous compound synthesized in the body, phosphorylated creatine (see *phosphocreatine*) being an important storage form of high-energy phosphate. **c. kinase**, ATP:creatine phosphotransferase. An enzyme of skeletal muscle and the myocardium and of brain tissue that catalyzes the transfer of a phosphate group from phosphocreatine to ADP, producing creatine and ATP. It occurs as three isoenzymes each having two components labeled M and B: the form in brain tissue is BB, in skeletal muscle MM, and in myocardial tissue both MM and MB. The form normally found in serum is virtually all MM isoenzyme. **c. phosphate**, phosphocreatine.

creatinemia (kre'ah-ti-ne'me-ah) [*creatin* + Gr. *haima* blood + *-ia*] excess of creatine in the blood.

creatininase (kre'ah-tin'i-nās) creatinine amidinohydrolase: an enzyme that decomposes creatinine into urea and methyl glycocholate.

creatinine (kre-at'i-nin) an anhydride of creatine, $\text{NH}_2\text{C}(\text{NH})\text{N}(\text{CH}_3)\text{CH}_2$, being the end product of creative metabolism.

tabolism, found in muscle and blood and excreted in the urine.

creatinuria (kre-at'i-nu're-ah) increased concentration of creatinine in the urine.

creatorrhea (kre'ah-to-re'ah) [Gr. *kreas* flesh + *rhoia* flow] the presence of undigested muscle fibers in the feces.

creatotoxism (kre'ah-to-tok'sism) meat poisoning.

creatotoxin (kre'ah-to-tok'se-kon) kreotoxin.

creatotoxin (kre'ah-to-tok'sin) kreotoxin.

crèche (kresh) [Fr.] a day nursery for infants.

Credé's ointment (kra-dāz') [Benno C. Credé, German surgeon, 1847-1929] see under *ointment*.

Credé's method (maneuver) (kra-dāz') [Karl Sigmund Franz Credé, German gynecologist, 1819-1892] see under *method*.

cremaster (kre-mas'ter) [L.; Gr. *kremasthai* to suspend] musculus cremaster; see *Table of Musculi*. **internal c. of Henle**, fibers of the gubernaculum testis, inserted in elements of the fetal spermatic cord.

cremasteric (kre'mas-ter'ik) pertaining to the cremaster.

cremation (kre-ma'shun) [L. *crematio* a burning] the burning or incineration of dead bodies.

crematorium (kre'mah-to're-um) an establishment for the burning of dead bodies.

cremnocele (krem'no-sēl) vaginolabial hernia.

cremor (kre'mor) [L.] cream. **c. tar'tari** ["cream of tartar"], potassium bitartrate.

crena (kre'nah), pl. *cre'nae* [L.] [NA] a notch or cleft. **c. a'ni** [NA], the anal cleft; the cleft between the buttocks on which the anus opens; variously called *c. clunium*, *clunial cleft*, and *rima ani* or *clunium*. **c. clu'nium**, c. ani. **c. cor'dis**, sulcus interventricularis anterior.

crenae (kre'ne) [L.] plural of *crena*.

crenate, **crenated** (kre'nāt, kre'nāt-ed) [L. *crenatus*] scalloped or notched.

crenation (kre-na'shun) the formation of abnormal notching in the edge of an erythrocyte; the notched appearance of an erythrocyte caused by its shrinkage after suspension in a hypertonic solution. Cf. *echinosis*.

Crenated erythrocytes (Hill).

crenilabrin (kren-il-a'brin) a protamine obtained from the sperm of the cunner (fish).

crenocyte (kre'no-sit) a crenated erythrocyte.

crenocytois (kre'no-si-to'sis) the presence of crenated erythrocytes in the blood.

crenology (kre-nol'o-je) [Gr. *krēnē* spring + *-logy*] the science of therapeutic springs.

crenotherapy (kren'o-ther'ah-pe) [Gr. *krēnē* spring + *therapeia* treatment] treatment by water from mineral springs.

Crenothrix (kre'no-thriks) [Gr. *krēnē* spring + *thrix* hair] a genus of microorganisms of the family Crenotrichaceae, order Chlamydobacterales, made up of disc-shaped to cylindrical cells occurring in attached trichomes which are unbranched or show false branching, and are enclosed in plainly visible sheaths, encrusted at the base with iron or manganese oxides. The type species is *C. polyspora*.

Crenotrichaceae (kre'no-tri'ka'se-e) a family of Schizomycetes, order Chlamydobacterales, made up of firmly attached trichomes, showing differentiation of base and tip, enclosed in sheaths that may be encrusted with oxides of iron or manganese. It includes three genera: *Clonothrix*, *Crenothrix*, and *Phragmidiothrix*.

crenulation (kren'u-la'shun) crenation.

creophagism, **creophagy** (kre-of'ah-jizm; kre-of'ah-je) [Gr. *kreas* flesh + *phagein* to eat] the use of flesh as food.

creosol (kre'o-sol) [*creosote* + L. *oleum* oil] chemical name: 2-methoxy-4-methylphenol. A colorless oily liquid, the methyl ether of methyl catechol, $\text{CH}_3\cdot\text{O}\cdot\text{C}_6\text{H}_4(\text{OH})\text{CH}_3$, one of the active constituents of creosote.

creosote (kre'o-sōt) a mixture of phenols obtained by distilling wood tar, mainly beech *Fagus sylvatica* L. (Fagaceae). The liquid is colorless to yellowish, very refractive and oily, and has an empyreumatic odor. It is used externally as an antiseptic and internally in chronic bronchitis as an expectorant. **c. carbonate**, a clear, viscid liquid, a mixture of carbonates of various constituents of creosote, used as an expectorant and antiseptic.

creotoxin (kre'o-tok'sin) kreotoxin.

creotoxism (kre'o-tok'sizm) kreotoxism.

crepitant (krep'i-tant) [L. *crepitare* to rattle] rattling or crackling.

crepitation (krep'i-ta'shun) [L. *crepitare* to crackle] 1. a sound like that made by rubbing the hair between the fingers, or like that made by throwing fine salt into a fire. 2. the noise made by rubbing together the ends of a fractured bone.

crepitus (krep'i-tus) [L.] 1. the discharge of flatus from the bowels. 2. crepitation. 3. a crepitant rale. **articular c.**, joint c. **bony c.**, the crackling sound produced by the rubbing together of fragments of fractured bone. **false c.**, joint c. **c. in'dux**, a crepitant rale, or crackling sound, heard in pneumonia at the beginning of the process of solidification of the lung. **joint c.**, the grating sensation caused by the rubbing together of the dry synovial surfaces of joints; called also *articular c.* **c. re'dux**, crepitus heard in the resolving stage of pneumonia.

silken c., a sensation as of two pieces of silk rubbed between the fingers, felt on moving a joint affected with hydrarthrosis.

crepuscular (kre-pus'ku-lar) [L. *crepusculum* twilight] referring to twilight, as a twilight state; also imperfectly luminous or glimmering.

crescent (kres'ent) [L. *crescens*] 1. shaped like a new moon. 2. a crescent-shaped structure. **articular c.**, a crescent-shaped articular fibrocartilage. **epithelial c.**, a more or less crescentic mass of epithelial cells between the glomerular tuft and the inside of Bowman's capsule in glomerulonephritis. **c's of Giannuzzi**, darkly staining crescents surrounding the mucous tubules, appearing in sections of mixed (mucous and albuminous) glands, and formed by the outnumbered albuminous cells pushed to the blind ends of the terminal portions or into saccular outpocketings. Called also *demilunes of Heidenhain*; *Giannuzzi's bodies*, *cells*, or *demilunes*; *crescent*, *demilune*, or *marginal cells*; and *semilunar bodies*. **gray c.**, an area on some amphibian eggs from which pigment retreats; it is dorsal and opposite to the point of sperm entry, giving the first visible sign of the dorsoventral axis. **malarial c's**, the gametocytes of *Plasmodium falciparum*; they may be male (microgametocytes) or female (macrogametocytes). Called also *flagellated bodies*. **myopic c.**, a crescentic posterior staphyloma in the fundus of the eye in myopia. **c's of spinal cord** (*obs.*), either of the two lateral bands of gray substance in the spinal cord, each made up of the anterior and posterior horn of the respective side. **sublingual c.**, the crescent-shaped area on the floor of the mouth, formed by the lingual wall of the mandible and the adjacent part of the floor of the mouth.

crescentic (krē-sen'tik) resembling a crescent.

cresol (kre'sol) a mixture of isomeric cresols, $\text{CH}_3\text{C}_6\text{H}_4\text{OH}$, obtained from coal tar and containing not more than 5 per cent of phenol; it is a poisonous, colorless, or yellowish to brownish yellow, or pinkish liquid, and is more powerful disinfectant and antiseptic than phenol; used chiefly to sterilize instruments, dishes, utensils, and other inanimate objects. Called also *creylic acid* and *tricrosol*.

cresolphthalein (kre'sol-thal'e-in) an acid-base indicator that is colorless at pH 7.2 and red at 8.8.

cresomania (kre'so-ma'ne-ah) [*Cresus*, king of Lydia in 6th century B.C., renowned for his great wealth] (*obs.*) hallucinations consisting in the imagination of the possession of great wealth.

cresorcin (kre-sor'sin) chemical name: 2,4-dihydroxytoluene. A crystalline derivative from cresol, $\text{C}_7\text{H}_8\text{O}_2$.

cresorcinnol (kre-sor'sin-ol) cresorcinnol.

cresoxydiol (kres-ok'se-di'ol) mephenesin.

cresoxypropanediol (kres-ok'se-pro-pān'de-ol) mephenesin.

crest (krest) [L. *crista*] a projection or projecting structure, or ridge, especially one surmounting a bone or its border; see also *crista* and *ridge*. **acoustic c.**, *crista ampullaris*. **acustico-facial c.**, the embryonic cell mass from which develop the ganglia of the seventh and eighth cranial nerves. **ampullar c.**, **ampullary c.**, *crista ampullaris*. **anterior c. of fibula**, *margo anterior fibulae*. **anterior c. of tibia**, *margo anterior tibiae*. **arcuate c. of arytenoid cartilage**, *crista arcuata cartilaginis arytenoideae*. **basilar c.**, *crista basilaris ductus cochlearis*. **basilar c. of occipital bone**, *tuberculum pharyngeum*. **buccinator c.**, *crista buccinatoria*. **cerebral c's of cranial bone**, *juga cerebraia ossium cranii*; see under *jugum*. **c. of cochlear window**, *crista fenestrae cochleae*. **conchal c. of maxilla**, *crista conchalis maxillae*. **conchal c. of palatine bone**, *crista conchalis ossis palatini*. **cross c.**, a ridge of enamel extending across the face of a tooth. **deltoid c.**, *tuberositas deltoidea humeri*. **dental c.**, the maxillary ridge passing along the alveolar processes of the fetal maxillary bones. **ethmoid c. of maxilla**, *crista ethmoidalis maxillae*. **ethmoid c. of palatine bone**, *crista ethmoidalis ossis palatini*. **femoral c.**, *linea aspera femoris*. **fimbriated c.**, *plica fimbriata*. **frontal c.**, *crista frontalis*. **frontal c., external**, *linea temporalis ossis frontalis*. **frontal c., internal**, *crista frontalis*. **glandular c. of larynx**, *ligamentum vestibulare*. **gluteal c.**, *tuberositas glutea femoris*. **c. of greater tubercle of humerus**, *crista tuberculi majoris*. **c. of hypotrochanteric fossa**, *tuberositas glutea femoris*. **iliac c.**, *crista iliaca*. **iliopectineal c. of iliac bone**, *linea arcuata ossis ilii*. **iliopectineal c. of pelvis**, *linea terminalis pelvis*. **iliopectineal c. of pubis**, *eminentia iliopubica*. **c. of ilium**, *crista iliaca*. **infratemporal c.**, *crista infratemporalis*. **infundibulovenotricular c.**, *crista supraventricularis*. **inguinal c.**, a prominence on the inguinal body wall in the embryo, participating in the formation of the gubernaculum testis. **interosseous c. of fibula**, *margo interosseus fibulae*. **interosseous c. of radius**, *margo interosseus radii*. **interosseous c. of tibia**, *margo interosseus tibiae*. **interosseous c. of ulna**, *margo interosseus ulnae*. **intertrochanteric c.**, *crista intertrochanterica*. **intertrochanteric c., anterior**, *linea intertrochanterica*. **jugal c. of great wing of sphenoid bone**, *margo zygomaticus alae majoris*. **lacrimal c., anterior**, *crista lacrimalis anterior*. **lacrimal c., posterior**, *crista lacrimalis posterior*. **c. of larger tubercle**, *crista tuberculi majoris*. **lateral c. of**

fibula, margo posterior fibulae. **c. of lesser tubercle**, crista tuberculi minoris. **c. of little head of rib**, crista capituli costae. **malar c. of great wing of sphenoid bone**, margo zygomaticus alae majoris. **c. of matrix of nail**, cristae matricis unguis. **medial c. of fibula**, crista medialis fibulae. **mental c., external**, protuberantia mentalis. **mitochondrial c's**, complex infoldings in the mitochondrial cavity which originate in a membrane outside the cavity. **nasal c. of maxilla**, crista nasalis maxillae. **nasal c. of palatine bone**, crista nasalis ossis palatini. **c. of neck of rib**, crista colli costae. **neural c.**, a cellular band dorsolateral to the neural tube that gives origin to the cranial and spinal ganglia and many other structures. **obturator c. (anterior)**, crista obturatoria. **occipital c., external**, crista occipitalis externa. **occipital c., internal**, eminentia cruciformis. **orbital c.**, margo supraorbitalis ossis frontalis. **palatine c. (of palatine bone)**, crista palatina. **pectineal c. of femur**, linea pectinea femoris. **pharyngeal c. of occipital bone**, tuberculum pharyngeum. **pubic c., c. of pubis**, crista pubica. **radial c.**, margo interosseus radii. **c. of ridge**, the highest continuous surface of the ridge, but not necessarily the center of the ridge; the top of a residual or alveolar ridge. **rough c. of femur**, linea aspera femoris. **sacral c.**, crista sacralis mediana. **sacral c., articular**, crista sacralis intermedia. **sacral c., external**, crista sacralis lateralis. **sacral c., intermediate**, crista sacralis intermedia. **sacral c., lateral**, crista sacralis lateralis. **sacral c., medial**, crista sacralis mediana. **seminal c.**, colliculus seminalis. **c. of smaller tubercle**, crista tuberculi minoris. **sphenoidal c.**, crista sphenoidalis. **spinal c. of Rauber**, processus spinosus vertebrarum. **c. of spinous processes of sacrum**, crista sacralis mediana. **supinator c., c. of supinator muscle**, crista musculi supinatoris. **supramastoid c.**, the superior border of the posterior root of the zygomatic process of the temporal bone. **supraventricular c.**, crista supraventricularis. **temporal c. of frontal bone**, linea temporalis ossis frontalis. **terminal c. of right atrium**, crista terminalis atri dextri. **tibial c.**, margo anterior tibiae. **transverse c. of internal auditory meatus**, crista transversa. **trigeminal c.**, the embryonic cell mass from which the trigeminal ganglion develops. **turbinal c. of maxilla, inferior**, crista conchalis maxillae. **turbinal c. of maxilla, superior**, crista ethmoidalis maxillae. **turbinal c. of palatine bone, inferior**, crista conchalis ossis palatini. **turbinal c. of palatine bone, superior**, crista ethmoidalis ossis palatini. **ulnar c.**, margo interosseus ulnae. **urethral c., female**, crista urethralis feminae. **urethral c., male**, crista urethralis masculini. **c. of vestibule**, crista vestibuli. **zygomatic c. of great wing of sphenoid bone**, margo zygomaticus alae majoris.

crestomycin sulfate (kres-to-mi/sin) paromomycin sulfate.

cretin (kre'tin; kret'in) [Fr.] a person affected with cretinism.

cretinism (kre'tin-izm) a chronic condition due to congenital lack of thyroid secretion, marked by arrested physical and mental development, dystrophy of the bones and soft parts, and lowered basal metabolism. It is the congenital form of this deficiency, while myxedema is the acquired form. Called also *cretinoid idiocy* and *myxedematous infantilism*. **athyreotic c.**, cretinism due to thyroid aplasia or destruction of the thyroid of the fetus *in utero*; called also *sporadic nongoitrous c.* **goitrous c.**, cretinism coexisting with severe hypothyroidism, and characterized by goiter. **spontaneous c., sporadic c.**, cretinism in a person not descended from cretins, and who has not lived in a region where cretinism prevails; called also *athyreotic c.* **sporadic goitrous c.**, a genetically determined condition in which enlargement of the thyroid gland is associated with deficiency in the supply of circulating thyroid hormone. **sporadic nongoitrous c.**, athyreotic c.

cretinistic (kre'tin-is'tik) pertaining to cretinism.

cretinoid (kre'tin-oid) resembling a cretin; resembling cretinism.

cretinous (kre'tin-us) affected with cretinism.

Creutzfeldt-Jakob disease (syndrome) (kroits/felt-yak'ob) [Hans Gerhard Creutzfeldt, German psychiatrist, 1885-1964; Alfons Maria Jakob, German psychiatrist, 1884-1931] see under *disease*.

crevice (krev'is) [Fr. *crever* to split] a longitudinal fissure. **gingival c.**, the space between the surface of the cervical enamel of a tooth and the overlying unattached gingiva; called also *subgingival space*.

crevicular (kre-vik'u-lar) pertaining to a crevice, especially the gingival crevice.

CRF corticotropin releasing factor.

crib (krib) 1. a removable anchorage for orthodontic appliances. 2. a fixed orthodontic appliance used to control oral problem habits involving lips, tongue, or fingers. **clinical c.**, a crib in which an infant is placed for observation. **tongue c.**, an appliance used to eliminate visceral (infantile) swallowing and thrusting and to stimulate the mature or somatic tongue posture and function.

cribbing (krib'ing) a bad habit of some horses in which the an-

imal grasps the manger or other object with the incisor teeth, arches the neck, makes peculiar movements with the head, and swallows quantities of air; called also *windsucking*.

cribra (krib'rah) [L.] plural of *cribrum*.

cribral (krib'ral) pertaining to the cribrum, or sieve-like structure.

cribrate (krib'rāt) [L. *cribratus*] perforated, as a sieve.

cribration (krib-ra'shun) 1. the quality of being cribrate. 2. the process or act of sifting or passing through a sieve, as a drug.

cribriform (krib'ri-form) [*cribrum* + L. *forma* form] perforated with small apertures like a sieve.

cribrum (kri'brum), pl. *cri'bra* [L. "sieve"] lamina cribrosa ossis ethmoidalis. **cri'bra orbitalia of Welcker**, small apertures in the lamina cribrosa ossis ethmoidalis, which give the bone a porous appearance and are thought to transmit veins from the diploe to the orbit.

Cricetus (kri-se'tus) a genus of rodents; see *hamster*.

Crichton-Browne's sign (kri'ton-brownz) [Sir James Crichton-Browne, English physician, 1840-1938] see under *sign*.

Crick (krik) Francis Harry Compton. English biologist, born 1916; co-winner, with Maurice Wilkins and James Dewey Watson, of the Nobel prize in medicine and physiology for 1962, for the discovery of the molecular structure of deoxyribonucleic acid.

cricocarytenoid (kri'ko-ar'i-te'noïd) pertaining to or extending between the cricoid and arytenoid cartilages.

cricoid (kri'koid) [Gr. *krikos* ring + *eidōs* form] 1. resembling a ring; ring shaped. 2. the cricoid cartilage (cartilago cricoidea) [NA].

cricoidectomy (kri'koi-dek'to-me) excision of the cricoid cartilage.

cricoidynia (kri'koi-din'e-ah) [Gr. *krikos* ring + *odynē* pain] pain in the cricoid cartilage.

cricopharyngeal (kri'ko-fah-rin'je-al) pertaining to the cricoid cartilage and the pharynx.

cricothyrotomy (kri'ko-thi're-ot'o-me) [Gr. *krikos* ring + *thyreos* shield + *tomē* a cutting] incision through the cricoid and thyroid cartilages.

cricothyroid (kri'ko-thi'roid) pertaining to or connecting the cricoid and thyroid cartilages.

cricothyroidotomy (kri'ko-thi'roi-dot'o-me) cricothyrotomy.

cricothyrotomy (kri'ko-thi-rot'o-me) incision through the skin and cricothyroid membrane to secure a patent airway for emergency relief of upper airway obstruction.

cricotomy (kri-kot'o-me) [Gr. *krikos* ring + *tomē* a cutting] incision of the cricoid cartilage.

cricotracheotomy (kri'ko-tra'ke-ot'o-me) incision of the cricoid cartilage and trachea.

cri du chat (kre-du-shah) [Fr. "cat's cry"] see under *syndrome*.

Crile-Matas operation (kri'l-mat'as) [George Washington Crile, Cleveland surgeon, 1864-1943; Rudolph Matas, New Orleans surgeon, 1860-1957] see under *operation*.

criminology (krim'i-nol'o-je) [L. *crimen* crime + *-logia*] the scientific study of crime and criminals.

crines (kri'nēz) [L.] plural of *crinis*.

crinin (kri'nin) [Gr. *krinein* to separate] a substance that stimulates glandular secretion.

crinis (kri'nis), pl. *cri'nes* [L.] hair; see also *capilli*. **c. cap'itis**, the hair of the head. **c. pu'bis**, the pubic hair.

crinogenic (kri'no-jen'ik, kri'n'o-jen'ik) [Gr. *krinein* to separate + *gennan* to produce] stimulating secretion.

crinology (kri-nol'o-je) the scientific study of secretion and secretions.

crinophagy (kri-nof'ah-je) [Gr. *krinein* to separate + *phagein* to eat] the intracytoplasmic digestion of the contents (peptides, proteins) of secretory vacuoles, after the vacuoles fuse with lysosomes.

Crinum (kri'num) a genus of amaryllidaceous plants; the root of *C. asiaticum*, of India, has properties like those of squill.

crisis (kri'sis), pl. *cri'ses* [L.; Gr. *krisis*] 1. the turning point of a disease for good or evil; especially, a sudden change, usually for the better, in the course of an acute disease. A disease terminates by crisis when recovery is indicated by a sudden and definite decrease in the intensity of the symptoms. Cf. *lysis* (def. 4). 2. a sudden paroxysmal intensification of symptoms in the course of a disease.

addisonian c., adrenal c., the symptoms accompanying an acute onset or worsening of Addison's disease, viz., fatigue, nausea and vomiting, loss of weight, hypotension, fever, and collapse. **anaphylactoid c.**, symptoms resembling those of anaphylaxis due to colloidoclasia. **aplastic c.**, a transient condition, marked by sudden disappearance of erythroblasts from the bone marrow, developing under various circumstances, including certain hemolytic states and infections. **asthmatic c.**, status asthmaticus. **blast c.**, a sudden, severe change in the course of chronic myelocytic leukemia in which the clinical picture resembles that in acute myelocytic leukemia, with an increase in

the proportion of myeloblasts. Recent evidence suggests that in some cases the blast cells may be lymphoblasts. **bronchial c.**, a paroxysm of dyspnea in the course of a case of tabes dorsalis. **cardiac c.**, a severe paroxysm of palpitation of the heart occurring in tabes dorsalis. **celiac c.**, an attack of severe watery diarrhea and vomiting producing dehydration and acidosis which sometimes occurs in the infantile form of nontropical sprue. **clitoris c.**, an attack of sexual excitement occurring in women with tabes dorsalis. **colloidoclastic c.**, colloidoclasia. **deglubulinization c.**, a condition observed in congenital spherocytic anemia, characterized clinically by the acute onset of fever, abdominal pain, and vomiting, associated with reticulocytopenia, leukopenia, thrombocytopenia, erythroblastopenia. **Dietl's c.**, sudden severe attack of nephralgia or gastric pain, chills, fever, nausea and vomiting, and general collapse; said to be due to partial turning of the kidney upon its pedicle. **false c.**, pseudocrisis. **febrile c.**, an attack of chilliness, fever, and sweating. **gastric c.**, a paroxysm of intense abdominal pain in tabes dorsalis. **genital c. of newborn**, a condition characterized by estrinization of the vaginal mucosa and hyperplasia of the breasts, under the influence of transplacentally acquired estrogens. **glaucomatocyclitic c.**, a relatively uncommon, recurrent, unilateral form of secondary open angle glaucoma, lasting one to two weeks, and rarely producing permanent damage to the optic disk or to the outflow facility. It is characterized by high intraocular pressure and marked depression of outflow facility, with minimal inflammatory signs and symptoms. **hepatic c.**, an attack of intense pain in the region of the liver. **identity c.**, a period in the psychosocial development of an individual, usually occurring during adolescence, manifested by a loss of the sense of the sameness and historical continuity of one's self, and inability to accept the role the individual perceives as being expected of him by society. **intestinal c.**, gastric c. **laryngeal c.**, paroxysmal spasm of the larynx in the earlier course of tabes dorsalis. **Lundvall's blood c. (obs.)**, a term used by Lundvall to designate a shift from leukopenia to leukocytosis in patients with dementia praecox. **nefast c.**, the peculiar onset of severe and unaccountable symptoms in experimental icterogenous spirochetosis. **nephralgic c.**, a paroxysm of pain in the ureter in a case of tabes dorsalis. **nitritoid c.**, a group of symptoms sometimes following the injection of arsphenamine, consisting of redness of the face, dyspnea, a feeling of distress, cough, and precordial pain. The condition is named from its resemblance to the symptoms of amyl nitrite poisoning. **ocular c.**, a sudden attack of intense pain in the eyes, with lacrimation, photophobia, etc. **oculogyric c.**, a crisis occurring in epidemic encephalitis or postencephalitic parkinsonism in which the eyeballs become fixed in one position for minutes or hours. **parkinsonian c.**, a condition sometimes observed in parkinsonism, superficially resembling akinetic mutism or coma vigil, the patient lying stiff and motionless, and making no spontaneous communication. **Pel's c's**, ocular crises in tabes dorsalis. **pharyngeal c.**, a sudden attack occurring in tabes dorsalis, marked by peculiar sensations in the pharynx and involuntary swallowing movements. **rectal c.**, a severe seizure of rectal pain in tabes dorsalis. **renal c.**, an attack of pain resembling renal colic, occurring in tabes. **salt-depletion c.**, salt-losing syndrome. **salt-losing c.**, see under *syndrome*. **tabetic c.**, a painful paroxysm with functional disturbance occurring in the course of tabes dorsalis. **thoracic c.**, an attack of pain resembling angina pectoris, but with spasmodic contracture of the muscles of the chest and arms in tabes dorsalis. **thyroid c.**, **thyrotoxic c.**, a sudden and dangerous increase of the symptoms of thyrotoxicosis. **vesical c.**, a severe seizure of pain in the bladder in cases of tabes dorsalis. **visceral c.**, a paroxysm of shooting pain in any viscus occurring in a case of tabes dorsalis.

Crismer's test (kris'merz) [Leon Crismer, Belgian chemist, born 1858] see under *tests*.

crispation (kris-pa'shun) [L. *crispare* to curl] slight convulsive or spasmodic muscular contractions producing a creeping sensation.

crista (kris'tä), pl. *cristae* [L.] [NA] a projection or projecting structure, or ridge, especially one surmounting a bone or its border; called also *crest* and *ridge*. **c. acus'tica**, c. ampullaris. **c. ampulla'ris** [NA], ampullar crest: the most prominent part of a localized thickening of the membrane that lines the ampullae of the semicircular ducts, covered with neuroepithelium containing endings of the vestibular nerve; called also *c. acoustica* or *acoustic crest*. **c. ante'rior fib'ulae**, margo anterior fibulae. **c. ante'rior tib'iae**, margo anterior tibiae. **c. arcua'ta cartilag'inis arytenoi'deae** [NA], arcuate crest of arytenoid cartilage: a ridge on the external surface of the arytenoid cartilage between the triangular pit and the oblong pit. **c. basila'ris duc'tus cochlea'ris** [NA], basilar crest: the triangular eminence on the spiral ligament to which the basilar membrane is attached. **c. buccinato'ria**, buccinator crest: a ridge running from the base of the coronoid process of the mandible to a point near the last molar tooth, giving attachment to the buccinator muscle. **c. cap'itis cos'tae** [NA], **c. capit'uli cos'tae**, crest of head of rib: a horizontal crest dividing the articular surface of the head of the rib into two facets, for articulation with the depression on the bodies of two adjacent vertebrae; called

also *crest of little head of rib*, *cuneiform eminence of head of rib*, and *interarticular ridge of head of rib*. **c. col'li cos'tae** [NA], crest of neck of rib: a crest on the superior border of the neck of a rib, giving attachment to the anterior costotransverse ligament; called also *ridge of neck of rib*. **c. concha'lis maxil'lae** [NA], conchal crest of maxilla: an oblique ridge on the nasal surface of the body of the maxilla, just anterior to the lacrimal sulcus, which articulates with the inferior nasal concha; called also *inferior turbinal crest of maxilla*. **c. concha'lis os'sis palati'ni** [NA], conchal crest of palatine bone: a sharp transverse ridge, near the posterior edge of the palatine bone, which articulates with the inferior concha; called also *inferior turbinal crest of palatine bone*. **crist'ae cu'tis** [NA], ridges of the skin produced by the projecting papillae of the corium on the palm or sole, producing a finger- or foot-print that is characteristic of the individual; called also *dermal ridges*. **c. div'idens**, limbus foraminis ovalis. **c. ethmoida'lis maxil'lae** [NA], ethmoidal crest of maxilla: a low, oblique ridge on the medial surface of the frontal process of the maxilla, which articulates with the middle nasal concha; called also *superior turbinal crest of maxilla*. **c. ethmoida'lis os'sis palati'ni** [NA], ethmoidal crest of palatine bone: a ridge near the upper end of the medial surface of the palatine bone, which articulates with the middle concha; called also *superior turbinal crest of palatine bone*. **c. falcifor'mis**, c. transversa. **c. fem'oris**, linea aspera femoris. **c. fenest'rae coch'leae** [NA], crest of cochlear window: the ledge of bone that overhangs the cochlear window of the middle ear. **c. fronta'lis** [NA], the frontal crest: a median ridge on the internal surface of the frontal bone, extending upward from the foramen cecum to unite with the sulcus for the superior sagittal sinus; called also *internal frontal crest*. **c. gal'li** [NA], a thick triangular process projecting upward from the cribriform plate of the ethmoid bone; the falx cerebri attaches to it. **c. hel'icis**, crus helices. **c. ili'aca** [NA], **c. il'i**, the iliac crest: the thickened, expanded upper border of the ilium; called also *crest of ilium*. **c. infratempora'lis** [NA], infratemporal crest: a crest separating the temporal surface of the great wing of the sphenoid bone into a temporal portion above and an infratemporal portion below. **c. interos'sea fib'ulae**, margo interosseus fibulae. **c. interos'sea ra'dii**, margo interosseus radii. **c. interos'sea tib'iae**, margo interosseus tibiae. **c. interos'sea ul'nae**, margo interosseus ulnae. **c. intertrochanter'ica** [NA], intertrochanteric crest: a prominent ridge running obliquely downward and medialward from the summit of the greater trochanter on the posterior surface of the neck of the femur to the lesser trochanter; called also *intertrochanteric ridge*, *linea intertrochanterica posterior*, and *posterior intertrochanteric line*. **c. la-crima'lis ante'rior** [NA], anterior lacrimal crest: the lateral margin of the groove on the posterior border of the frontal process of the maxilla. **c. lacrima'lis poste'rior** [NA], posterior lacrimal crest: a vertical ridge dividing the lateral or orbital surface of the lacrimal bone into two parts, and forming one margin of the fossa for the lacrimal sac. **c. latera'lis fib'ulae**, margo posterior fibulae. **c. margina'lis** [NA], marginal ridge; see under *ridge*. **crist'ae ma'tricis un'guis** [NA], crests of matrix of nail: vascular longitudinal ridges in the nail matrix. **c. media'lis fib'ulae** [NA], medial crest of fibula: the long crest on the posterior surface of the body of the fibula, which separates the origin of the tibialis posterior muscle from that of the flexor hallucis longus muscle; called also *oblique line of fibula* and *posterointernal border of fibula*. **mitochondrial cristae**, **crist'ae mitochondria'les**, numerous narrow, transverse infoldings of the inner membrane of a mitochondrion. **c. mus'culi supinato'ris** [NA], crest of supinator muscle: a strong ridge forming the posterior margin of the supinator fossa below the radial notch of the ulna, and with it giving attachment to the supinator muscle; called also *supinator crest* or *ridge*. **c. nasa'lis maxil'lae** [NA], nasal crest of maxilla: a ridge, raised along the medial border of the palatine process of the maxilla, with which the vomer articulates. **c. nasa'lis os'sis palati'ni** [NA], nasal crest of palatine bone: a thick ridge projecting upward from the medial part of the horizontal plate of the palatine bone and articulating with the posterior part of the vomer. **c. obturato'ria** [NA], obturator crest: the inferior border of the superior ramus of the os pubis, a strong ridge of bone beginning near the pubic tubercle and extending to the anterior part of the gap in the rim of the acetabulum, forming part of the circumference of the obturator foramen, and giving attachment to the obturator membrane. **c. occipita'lis exter'na** [NA], external occipital crest: a variable crest of bone that sometimes extends from the external occipital protuberance toward the foramen magnum; called also *median* or *middle nuchal line*. **c. occipita'lis inter'na** [NA], internal occipital crest: a median ridge on the internal surface of the occipital bone extending from the midpoint of the cruciform eminence toward the foramen magnum. **c. palati'na** [NA], palatine crest: a transverse crest often seen on the inferior surface of the horizontal plate of the palatine bone a short distance anterior to the posterior border. **c. pu'bica** [NA], pubic crest: the thick, rough, anterior border of the body of the pubic bone. **crist'ae sacra'les articula'res**, see *crista sacralis intermedia*. **c. sacra'lis interme'dia** [NA], inter-

mediate sacral crest: either of two indefinite crests just medial to the dorsal sacral foramina, formed by fusion of the articular processes of the sacral vertebrae; called also *articular sacral crest*. **c. sacra/lis latera/lis** [NA], lateral sacral crest: either of two series of tubercles lateral to the dorsal sacral foramina, representing the transverse processes of the sacral vertebrae; called also *external sacral crest*. **c. sacra/lis me/dia**, **c. sacra/lis media/na** [NA], medial sacral crest: a median ridge on the dorsal surface of the sacrum, formed by the remnants of the spinous processes of the upper four sacral vertebrae; called also *sacral crest*, *crest of spinous processes of sacrum*, and *tubercular ridge of sacrum*. **c. sphenoida/lis** [NA], sphenoidal crest: a median ridge on the anterior surface of the body of the sphenoid bone, articulating with the perpendicular plate of the ethmoid. **c. spira/lis**, labium limbi vestibularis laminae spirales. **c. supraventricula/ris** [NA], supraventricular crest: a ridge on the inner surface of the right ventricle of the heart, marking off the conus arteriosus; called also *infundibuloventricular crest*. **c. tempora/lis**, linea temporalis ossis frontalis. **c. termina/lis a/trii dex'tri** [NA], terminal crest of right atrium: a ridge on the internal surface of the right atrium of the heart, located to the right of the orifices of the superior and inferior venae cavae. The pectinate muscles of the right atrium are attached at this crest. It corresponds to a groove on the external surface, the sulcus terminalis. **c. transver'sa** [NA], transverse crest: a ridge of bone that divides the fundus of the internal acoustic meatus into a superior and an inferior fossa; called also *c. falciformis* and *transverse crest of internal acoustic meatus*. **c. transversa/lis** [NA], transverse ridge; see under *ridge*. **c. triangula/ris** [NA], triangular ridge; see under *ridge*. **c. tuber'culi majo'ris** [NA], crest of greater tubercle (of the humerus): a projection on the greater tubercle of the humerus, forming one lip of the intertubercular groove; called also *crest of larger tubercle*, *pectoral ridge*, and *external, outer, or posterior bicipital ridge*. **c. tuber'culi mino'ris** [NA], crest of lesser tubercle: a projection on the lesser tubercle of the humerus, forming one lip of the intertubercular groove; called also *crest of smaller tubercle*, and *anterior or internal bicipital ridge*. **c. tympan'ica**, a ridge on the tympanic ring. **c. ul'nae**, margo interosseus ulnae. **c. urethra/lis femini'nae** [NA], female urethral crest: a prominent longitudinal fold of the mucosa along the posterior wall of the female urethra; called also *c. urethralis muliebris* and *cervical crest of female urethra* (of Barkow). **c. urethra/lis masculi'nae** [NA], male urethral crest: a median elevation along the posterior wall of the urethra in the male, lying between the prostatic sinuses; called also *c. urethralis virilis*. **c. urethra/lis mulie'bris**, crista urethralis femininae. **c. urethra/lis vir'ilis**, c. urethralis masculinae. **c. vestib'uli** [NA], crest of vestibule: a ridge between the spherical and elliptical recesses of the vestibule, dividing posteriorly to bound the cochlear recess.

cristae (kris'te) [L.] plural of *crista*.

cristal (kris'tal) pertaining to a crest or ridge.

Cristispira (kris'ti-spi'rah) [L. *crista* crest + Gr. *speira* coil] a genus of microorganisms of the family Spirochaetaceae, order Spirochaetales, made up of coarse, flexuous, spiral cells with cross striations and a thin membrane on one side, extending the whole length of the body; found in the intestinal tracts of mollusks. It contains three species: *C. anodon'tae*, *C. balbia'nii*, and *C. pin'nae*.

Critchett's operation (krich'ets) [George Critchett, ophthalmic surgeon, in London, 1817-1882] see under *operation*.

criterion (kri-te're-on) [Gr. *kritēron* a means for judging] a standard by which something may be judged.

crith (krith) [Gr. *krithē* barleycorn, the smallest weight] the unit of weight for gases, being the weight of a liter of hydrogen gas at 0° C. and pressure equivalent to that of a column of mercury 760 mm. high.

Crithidia (kri-thid'e-ah) a genus of parasitic protozoa of the family Trypanosomatidae, order Protomastigida, found in the digestive tract of arthropods and other invertebrates. The adult form is similar to the leptomnads, but the flagellum arises from the kinetoplast just in front of the nucleus, and is attached to the body by an undulating membrane. The organisms go through a leishmanial stage, which is enclosed in a spherical cyst that is discharged by the host in the feces. After ingestion by another host, the cysts develop into a leptomnad form and finally attain the adult form.

crithidia (kri-thid'e-ah) 1. any organism of the genus *Crithidia*. 2. any individual of the family Trypanosomatidae when exhibiting the typical crithidial (epimastigote) form during its life cycle.

crithidial (kri-thid'e-al) 1. pertaining to the genus *Crithidia*. 2. denoting a morphologic stage in the development of certain protozoa of the family Trypanosomatidae; see *epimastigote*.

critical (krit'i-kl) pertaining to or of the nature of a crisis; in danger of death; in sufficient quantity as to constitute a turning point, as a critical mass or critical concentration.

CRM cross-reacting material; see under *material*.

C.R.N.A. Certified Registered Nurse Anesthetist.

crocein (kro'se-in) any one of a series of bright red stains.

crocoidismus (kro'se-diz'mus) [Gr. *krokē* a tuft of wool] cardiology.

Crocq's disease (kroks) [Jean B. Crocq, Belgian physician, 1868-1925] acrocyanosis.

crofilicon A (kro-fil'kon) chemical name: 2-methyl-2-propenoic acid 2,3-dihydroxypropyl ester polymer with methyl-2-2-propenoate; a contact lens material (hydrophobic), (C₇H₁₂O₄)_x(C₅H₈O₂)_y.

Crohn's disease (krōnz) [Burrill Bernard Crohn, New York physician, born 1884] see under *disease*.

cromoglycate (kro'mo-gli'kāt) a salt of cromoglycic acid; the disodium salt, cromolyn sodium, is used in the treatment of bronchial asthma.

cromolyn (kro'mō-lin) cromoglycic acid. **c. sodium** [USP], chemical name: 5,5'-[(2-hydroxy-1,3-propanediyl)bisoxy]bis[4-oxo-4H-1-benzopyran-2-carboxylic acid]disodium salt. The disodium salt of cromoglycic acid, C₂₂H₁₄NaO₁₁, which interferes with allergic histamine release; administered by inhalation in the prophylactic treatment of bronchial asthmas and rhinitis associated with allergy.

Cronin Lowe test (reaction) [E. Cronin Lowe, British physician] see under *tests*.

Crooke's changes [Arthur Carleton Crooke, British pathologist] hyalinization of the cytoplasm of the basophilic cells of the anterior lobe of the pituitary gland, disappearance of their basophilic granules, ballooning of their nuclei, enlargement and multinucleation of the cells.

Crookes's space, tube [Sir William Crookes, English physicist, 1832-1919] see under *space* and *tube*.

crop (krop) a dilatation of the gullet of birds at the base of the neck, where food is stored, softened with fluids, and passed to the stomach in small amounts.

cropropamide (kro-pro'pah-mid) chemical name: *N*-[1-(dimethylcarbamoyl)propyl]-*N*-propylcrotonamide; an analgesic, C₁₃H₂₄N₂O₂. See also *prethcamide*.

cross (kros) 1. any figure or structure in the shape of a cross. 2. any organism produced by crossbreeding; a method of crossbreeding. **clavicular c.**, a wooden or metallic cross applied to the back by a figure-of-8 bandage or web straps over the shoulders to extend the latter and thus reduce overriding fragments of a fractured clavicle; a belt or bandage is worn around the waist to hold the lower projection of the cross tightly against the spine. **diybrid c.**, one in which the parents have different genes determining two particular traits. **monohybrid c.**, one in which the parents have different genes involving only one particular trait. **phage c.**, a phage (bacteriophage) having genes from two or more parental phages as a result of infection by the parent phages of a single bacterial cell; it is a result of recombination. Also, the process of an instance of the formation of a phage cross. **polyhybrid c.**, one in which the parents have different genes determining more than three particular traits. **Ranvier's c's**, dark, cross-shaped markings at the nodes of Ranvier, seen on longitudinal section after staining with silver nitrate. **silver c.**, a crosslike marking seen at the nodes of certain bundles of medullated nerve fibers. **trihybrid c.**, one in which the parents have different genes determining three particular traits. **two-factor c.**, recombination involving two genetic markers. **yellow c.**, 2,2'-dichlorodiethyl sulfide.

crossbite (kros'bīt) malocclusion in which the mandibular teeth are in buccal version (or in complete lingual version in posterior segments) to the maxillary teeth, bilaterally, unilaterally, or involving only a pair of opposing teeth, so that opposing occlusal surfaces are not in contact in habitual occlusion. Also written *cross bite*. **anterior c.**, that in which one or more primary or permanent maxillary incisors is lingual to the mandibular incisors. **buccal c.**, that in which the maxillary molar is buccal to its mandibular antagonist. **lingual c.**, crossbite in which the maxillary or mandibular molar is lingual to its antagonist. **posterior c.**, that in which one or more primary or permanent posterior teeth are locked in an abnormal relation with the opposing teeth of the opposite arch; it may be buccal or lingual crossbite and may be accompanied by a shift of the mandible. **scissors-bite c.**, that in which the mandibular arch is entirely lingual to the maxillary arch. **telescoping c.**, scissors-bite c.

crossbreeding (kros'brēd-ing) hybridization; the mating of animals or plants of different strains or species.

cross-bridges (kros-brij'ez) in A bands of myofibrils, the intertwining of the thick and the thin filaments to form the dark striations.

crossed (krost) shaped or arranged like a cross; decussating.

cross-eye (kros'i) esotropia.

crossfoot (kros'foot) talipes varus.

crossing over (kros'ing o'ver) the exchanging of genetic material between nonsister chromatids of the paired homologous chromosomes during the pachytene stage of the first meiotic division, resulting in new combinations of genes; called also *chiasmata*.

crossmatching (kros-mach'ing) see under *matching*.

cross-over (kros-o'ver) the result of the reciprocal exchange of genetic material between chromosomes; see *crossing over*.

cross-reactivation (kros/'re-ak-ti-va'shun) the activation of an inactive virus particle by another active or inactive virus particle in the same cell.

cross-reactivity (kros/'re-ak-tiv'i-te) the degree to which an antibody participates in cross-reactions (see under *reaction*).

cross-sensitization (kros-sen/'si-ti-za'shun) sensitization to a substance induced by exposure to another substance having cross-reacting antigens.

crossway (kros/'wā) the path by which something crosses; *de-cussation*.

crotalid (krot/'ah-lid) 1. any snake of the family Crotalidae; a pit viper. 2. of or pertaining to the family Crotalidae.

Crotalidae (kro-tal/'i-de) a family of venomous snakes, the pit vipers, characterized by front, movable, hollow fangs, and a depression or pit between the nostril and the eye. It includes the genera *Agkistrodon* (copperhead and water moccasin), *Bothrops* (fer-de-lance), *Crotalus* (rattlesnake), *Lachesis* (bushmaster), and *Trimeresurus* (habu). See table accompanying *snake*.

crotalin (kro/'tah-lin) a protein found in the venom of rattlesnakes and certain other serpents; formerly used hypodermically in the treatment of epilepsy.

crotaline (krot/'ah-lin) crotalid.

crotalism (kro'tal-izm) a disease of animals caused by eating leguminous plants of the genus *Crotalaria*, which are in low bottom land. The disease is characterized by congestion and hemorrhage of the liver and spleen, emaciation, weakness, and stupor. Called also *bottom disease*.

crotalotoxin (kro/'tah-lo-tok'sin) a poisonous substance from rattlesnake venom.

Crotalus (krot/'ah-lus) [L. from Gr. *krotalon* rattle] a genus of rattlesnakes of the family Crotalidae. *C. horridus* is the common rattlesnake of the eastern United States; *C. adamanteus* is the diamondback rattlesnake of Georgia, Alabama, and Florida; *C. atrox* is the western diamondback rattlesnake of the Southwest and adjacent areas of Mexico; and *C. viridis* is the prairie rattlesnake. See table accompanying *snake*.

crotamine (kro/'tah-mēn) a toxic protein occurring in the venom of some *Crotalus* species.

crotamiton (kro/'tah-mi'ton) [USP] chemical name: *N*-ethyl-*N*-(2-methylphenyl)-2-butenamide. A scabicide, C₁₃H₁₇NO, occurring as a light yellow, oily liquid; applied topically to the skin.

crotaphion (kro-taf'e-on) [Gr. *krotaphos* the temple] a cranio-metric point at the tip of the great wing of the sphenoid.

crotch (kroch'et) [Fr. *crochet*] (*obs.*) a hook used in delivering the fetus after craniotomy.

crotethamide (kro-teth/'ah-mid) chemical name: *N*-[1-(dimethylamino)carbonylpropyl]-*N*-ethyl-2-butenamide; an analgesic, C₁₂H₂₂N₂O₂. See also *prethamide*.

croton (kro/'tin) a poisonous substance (phytotoxin) derived from the seeds of *Croton tiglium*; see *crotonism*.

Croton (kro/'ton) [L.; Gr. *krotōn* tick] a genus of euphorbiaceous shrubs, some of which are popular as ornamentals. Certain species are used medicinally in parts of Mexico and South America, and others, e.g., *C. texensis* (Texas C.) and *C. capitatus*, are poisonous to livestock. *C. eluteria* Benn. is a source of cascarrilla bark (tonic and bitter), while *C. tiglium* yields croton oil (see under *oil*), a drastic purgative and counterirritant that can cause pustular eruptions on the skin.

crotonism (kro/'ton-izm) poisoning by croton oil, characterized by burning of the mouth and sometimes emesis, followed by severe watery diarrhea and colic; sometimes accompanied by headache, somnolence, vertigo, prostration, and collapse. Death from circulatory or respiratory failure may occur.

crotoxin (kro-tok'sin) a crystalline neurotoxic principle from the venom of the rattlesnake, *Crotalus terrificus*.

croutotherapy (kroo/'no-ther'ah-pe) [Gr. *krounos* spring + *therapeia* treatment] crenotherapy.

croup (krōōp) a condition resulting from acute obstruction of the larynx caused by allergy, foreign body, infection, or new growth, occurring chiefly in infants and children, and characterized by resonant barking cough, hoarseness, and persistent stridor. Called also *angina trachealis*, *exudative angina*, and *laryngostasis*. **catarrhal c.**, croup accompanied by a catarrhal discharge. **diphtheritic c.**, croup associated with infection by *Corynebacterium diphtheriae*. **false c.**, laryngismus stridulus. **membranous c.**, **pseudomembranous c.**, croup associated with a fibrinous exudate forming a membrane-like deposit, usually caused by *Corynebacterium diphtheriae*; called also *laryngeal diphtheria*. **spasmodic c.**, laryngismus stridulus.

croupous (kroo/'pus) of the nature of croup, or attended with an exudation like that of croup.

croupy (krōōp'e) affected with or resembling croup.

Crouzon's disease (kroo-zonz') [Octave Crouzon, French neurologist, 1874-1938] craniofacial dysostosis.

crowding (krowd'ing) the condition in which the teeth are crowded and assume such altered positions as overlapping, displacement in various directions, torsion, etc.

crown (krown) [L. *corona*] 1. the topmost part of an organ or other structure, such as the top of the head, or the upper part of a tooth (*corona dentis* [NA]); see *anatomical c.* and *physiological c.* 2. an artificial crown replacing the natural crown of a tooth. **anatomical c.**, the portion of a tooth that is covered by enamel; see *corona dentis* [NA]. **artificial c.**, a restoration of metal, porcelain, or plastic which reproduces the surface anatomy of the clinical crown of a tooth and which is affixed to the remains of the natural tooth structure. **bell c.**, a tooth crown whose circumference at the occlusal surface is larger than usual in relation to the size of the circumference at the crown cervix. **cap c.**, an artificial crown that is applied like a cap over the remaining natural crown of a tooth; called also *shell c.* **Carmichael c.**, partial veneer c. **ciliary c.**, *corona ciliaris*. **clinical c.**, that portion of a tooth which is exposed beyond the gingiva. **collar c.**, an artificial crown attached by a metal ferrule to a natural tooth root. **Davis c.**, an artificial porcelain crown attached by a pin inserted into both the crown and the natural root of the tooth; called also *post c.* **extra-alveolar c.**, that portion of a tooth which is mesial or distal to the attachment of the tooth in the alveolus. **full c.**, **full veneer c.**, a dental restoration that completely reproduces the clinical crown of a natural tooth. **half-cap c.**, an artificial crown attached by a metal band which covers only the lingual surface of the tooth that supports it; called also *open-face c.* **jacket c.**, a resin or porcelain restoration that is applied over the clinical crown of a tooth and usually terminates at or under the gingiva. **open-face c.**, half-cap c. **partial veneer c.**, a restoration applied to the proximal and lingual surfaces and the occlusal surface or incisal edge of a tooth, used as a retainer for a bridge or as a single-unit restoration on a carious or fractured tooth; called also *Carmichael c.* and *three-quarter c.* **physiological c.**, the portion of a tooth that is exposed distal to the gingival crevice or to the margin of the gum; it may or may not coincide with the anatomical crown, which is the portion covered by enamel. **post c.**, *Davis c.* **Richmond c.**, a factory-made porcelain dental restoration with a gold retentive post in the root canal and a soldered back, introduced in the late 1870's. **shell c.**, cap c. **three-quarter c.**, partial veneer c. **veneered c.**, an artificial crown that bears a thin layer of resin or porcelain on the buccal or labial surface, attached to or bonded to the metal casting; called also *window c.* **window c.**, veneered c.

crowning (krown'ing) that phase in the second stage of labor when a large segment of the fetal scalp is visible at the vaginal orifice, the perineum being distended and the anus opened.

CRP C-reactive protein; see under *protein*.

CRS Chinese restaurant syndrome.

cruces (kroo'sēz) [L.] plural of *crux*.

crucial (kroo'shal) [L. *crucialis*] 1. (*obs.*) cruciate. 2. severe, searching, and decisive.

cruciate (kroo'she-āt) shaped like a cross.

crucible (kroo'sī-bl) [L. *crucibulum*] a vessel for melting refractory substances.

cruciform (kroo'sī-form) [*crux* + L. *forma* form] shaped like a cross.

crude (krōōd) [L. *crudus* raw] raw or unrefined.

cruentation (kroo'en-ta'shun) [L. *cruor* blood] in medieval jurisprudence, the supposed bleeding of the corpse in the presence of the murderer.

crufomate (kroo'fo-māt) chemical name: methylphosphorimidic acid 2-chloro-4-(1,1-dimethylethyl)phenyl methyl ester; a veterinary anthelmintic, C₁₂H₁₉ClNO₃P.

cruor (kroo'or), pl. *cruores* [L.] a blood clot.

crura (kroo'rah) [L.] plural of *crus*.

crural (krōōr'al) pertaining to the leg or to a leglike structure (*crus*).

crureus (kroo-re'us) *musculus vastus intermedius*; see *Table of Musculi*.

crus (krus), pl. *cru'ra* [L.] [NA] 1. the leg, from knee to foot. 2. a general term used to designate a leglike part. **ampullary crura of semicircular duct**, *crura membranacea ampullaria ductus semicircularis*. **ampullary osseous crura**, *crura ossea ampullaria*. **anterior c. of anterior inguinal ring**, c. *mediale anuli inguinalis superficialis*. **anterior c. of internal capsule**, c. *anterior capsulae internae*. **anterior c. of stapes**, c. *anterior stapedis*. **c. ant'erior cap'sulae inter'nae** [NA], anterior crus of internal capsule: the part of the internal capsule of the brain that separates the caudate and the lentiform nuclei. Called also *anterior limb of internal capsule* and *pars frontalis capsulae internae*. **c. ant'erior stape'dis** [NA], anterior crus of stapes: the anterior of the two bony limbs in the middle ear that connect the base and head of the stapes; called also *anterior limb of stapes*. **cru'ra anthe'l'icis** [NA], **crura of anthe'l'ix**, the two ridges on the external ear marking the superior termination of the anthe'l'ix and bounding the triangular fossa; called also *limbs of anthe'l'ix*. **c. bre've in-cu'dis** [NA], short crus of incus: the backward-projecting process on the incus that is connected to the posterior wall of the tympanic cavity; called also *short limb of incus*. **c. cerebel'li ad pon'-**

tem, pedunculus cerebellaris medius. **c. cer'ebri** [NA], the ventral part of the cerebral peduncle, composed of descending fiber tracts that pass from the cerebral cortex to form the longitudinal fascicles of the pons, including the corticospinal, corticopontine, and corticobulbar tracts; called also *basis pedunculi cerebri*. **c. clitor'idis** [NA], **c. of clitoris**, the continuation of each corpus cavernosum clitoridis, diverging posteriorly to be attached to the pubic arch. **common membranous c. of semicircular duct**, *c. membranaceum commune ductus semicircularis*. **common osseous c.**, *c. osseum commune*. **c. commu'ne cana'lis semicircula'ris**, *c. osseum commune*. **c. dex'trum diaphrag'matis** [NA], right crus of diaphragm; a fibromuscular band arising from the upper three or four lumbar vertebrae, and ascending along with the left crus, to insert into the central tendon of the diaphragm. **crura of diaphragm**, **cru'ra diaphrag'matis**, see *c. dextrum diaphragmatis* and *c. sinistrum diaphragmatis*. **c. of diaphragm**, **left**, *c. sinistrum diaphragmatis*. **c. of diaphragm**, **right**, *c. dextrum diaphragmatis*. **external c. of anterior inguinal ring**, *c. laterale anuli inguinalis superficialis*. **c. fasciculi atrioventricula'ris** [*dex'trum et sinis'trum*] [NA], either branch (right or left) of the atrioventricular bundle, arising from the main trunk of the bundle at the superior end of the muscular part of the interventricular septum and descending on either side to be distributed to the respective ventricle of the heart. **c. for'nicis** [NA], **c. of fornix**, either of the two flattened bands of white substance of the brain that are in close contact with the splenium and that unite under the posterior part of the body of the corpus callosum to form the body of the fornix. **c. glan'dis clitor'idis**, frenulum clitoridis. **c. hel'icis** [NA], **c. of helix**, the anterior termination of the helix of the external ear located above the entrance to the external acoustic meatus; called also *crista helicis*. **c. infe'rius an'nuli inguina'lis subcuta'nei**, *c. laterale anuli inguinalis superficialis*. **internal c. of anterior inguinal ring**, *c. mediale anuli inguinalis superficialis*. **internal c. of greater alar cartilage of nose**, *c. mediale cartilaginis alaris majoris*. **lateral c. of greater alar cartilage**, *c. laterale cartilaginis alaris majoris*. **lateral c. of superficial inguinal ring**, *c. laterale anuli inguinalis superficialis*. **c. latera'le an'uli inguina'lis superficialis** [NA], lateral crus of superficial inguinal ring: the part of the superficial inguinal ring that blends with the inguinal ligament as it goes to the pubic tubercle; called also *c. inferius anuli inguinalis subcutanei*, and *external or posterior c. of anterior inguinal ring*. **c. latera'le cartilag'inis ala'ris majoris** [NA], lateral crus of greater alar cartilage: the part of the greater alar cartilage that curves laterally around the naris and helps maintain its contour. **long c. of incus**, *c. longum incudis*. **c. lon'gum in'cusdis** [NA], long crus of incus: a process on the incus directed downward and inward, parallel with the manubrium of the malleus; called also *long limb of incus*. **medial c. of external inguinal ring**, *ligamentum inguinale reflexum*. **medial c. of greater alar cartilage**, *c. mediale cartilaginis alaris majoris*. **medial c. of superficial inguinal ring**, *c. mediale anuli inguinalis superficialis*. **c. media'le an'uli inguina'lis superficialis** [NA], medial crus of superficial inguinal ring: the part of the superficial inguinal ring that is attached to the symphysis and that blends with the fundiform ligament of the penis; called also *superior c. of subcutaneous inguinal ring*, *c. superius annuli inguinalis subcutanei*, *anterior or interior c. of anterior inguinal ring*, and *anterior or internal inguinal ligament*. **c. media'le cartilag'inis ala'ris majoris** [NA], medial crus of greater alar cartilage: the part of the greater alar cartilage, loosely attached to its fellow of the opposite side, and helping to form the mobile septum of the nose; called also *internal c. of greater alar cartilage*. **cru'ra membrana'cea** [NA], the membranous crura: the two ends of each semicircular duct of the ear, both opening into the utricle. See *crura membranacea ampullaria ductus semicircularis*, *c. membranaceum commune ductus semicircularis*, and *c. membranaceum simplex ductus semicircularis*. **cru'ra membrana'cea ampulla'ria duc'tus semicircula'ris** [NA], ampullary membranous crura of semicircular duct: the end of each semicircular duct of the ear, in which the membranous ampulla is situated. **c. membrana'ceum commu'ne duc'tus semicircula'ris** [NA], common membranous crus of semicircular duct: the joined nonampullary ends of the anterior and posterior semicircular duct of the ear. **c. membrana'ceum sim'plex duc'tus semicircula'ris** [NA], simple membranous crus of semicircular duct: the nonampullary end of the lateral semicircular duct of the ear, opening into the utricle. **membranous crura**, *crura membranacea*. **cru'ra os'sea** [NA], osseous crura: those parts of the bony semicircular canals of the ear that lodge the correspondingly named parts of the membranous crura of the semicircular ducts; see *crura ossea ampullaria*, *c. osseum commune*, and *c. osseum simplex*. **cru'ra os'sea ampulla'ria** [NA], ampullary osseous crura: the parts of the bony semicircular canals of the ear that lodge the crura membranacea ampullaria ductus semicircularis. **osseous crura**, *crura ossea*. **c. os'seum commu'ne** [NA], common osseous crus: the part of the bony semicircular canals of the ear that lodges the crus membranaceum commune ductus semicircularis; called also *c. commune canalis*

semicircularis. **c. os'seum sim'plex** [NA], simple osseous crus: that part of the bony semicircular canals of the ear that lodges the crus membranaceum commune ductus semicircularis; called also *c. simplex canalis semicircularis*. **c. pe'nis** [NA], **c. of penis**, the continuation of each corpus cavernosum penis, diverging posteriorly to be attached to the pubic arch. **posterior c. of anterior inguinal ring**, *c. laterale anuli inguinalis superficialis*. **posterior c. of internal capsule**, *c. posterius capsulae internae*. **posterior c. of stapes**, *c. posterius stapedis*. **c. poste'rius cap'sulae inter'nae** [NA], posterior crus of internal capsule: the part of the internal capsule of the brain that separates the thalamus from the lentiform nucleus; it includes a pars sublentiformis and a pars retrolentiformis. Called also *posterior limb of internal capsule* and *pars occipitalis capsulae internae*. **c. poste'rius stape'dis** [NA], posterior crus of stapes: the posterior of the two bony limbs that connect the base and head of the stapes in the middle ear; called also *posterior limb of stapes*. **short c. of incus**, *c. brevis incudis*. **simple membranous c. of semicircular duct**, *c. membranaceum simplex ductus semicircularis*. **simple osseous c.**, *c. osseum simplex*. **c. sim'plex cana'lis semicircula'ris**, *c. osseum simplex*. **c. sinis'trum diaphrag'matis** [NA], left crus of diaphragm: a fibromuscular band arising from the upper two or three lumbar vertebrae, and ascending along with the right crus, to insert into the central tendon of the diaphragm. **superior c. of cerebellum**, pedunculus cerebellaris superior. **superior c. of subcutaneous inguinal ring**, *c. mediale anuli inguinalis superficialis*. **c. supe'rius an'nuli inguina'lis subcuta'nei**, *c. mediale anuli inguinalis superficialis*.

crust (krust) [*L. crusta*] a formed outer layer, especially an outer layer of solid matter formed by the drying of a bodily exudate or secretion; called also *scab*. **milk c.**, *crusta lactea*.

crusta (krus'tah), pl. *crustae* [L.] 1. a crust. 2. crus cerebri. **c. lac'tea**, seborrhea of the scalp of nursing infants; called also *cradle cap* and *milk crust*. **c. petro'sa den'tis**, the cementum.

Crustacea (krus-ta'she-ah) [L. from *crusta* shell] a large class of arthropods including the lobsters, crabs, shrimps, wood lice, water fleas, and barnacles.

crustaceorubin (krus-ta'se-o-roo'bin) a brown-black pigment (chromoprotein) found in lobster shells and eggs and in certain crabs; called also *zoonerythrin*, *tetra-erythrin*, and *vitellorubin*.

crustae (krus'te) [L.] plural of *crusta*.

crustal (krus'tal) pertaining to the crusta.

crustosus (krus-to'sus) [L.] crusted; said of certain lesions of the skin.

crutch (kruch) a device of wood or metal, ordinarily long enough to reach from the armpit to the ground, with a concave surface fitting under the arm and a cross bar for the hand, used for supporting the weight of the body. **Canadian c.**, a crutch consisting of two uprights extending halfway between the elbow and shoulder, with a cross piece for the hand and a curved upper arm part against which the subject leans his upper arm.

Cruveilhier's atrophy (paralysis), disease, joint (kroo-väl-yäz') [Jean Cruveilhier, French pathologist, 1791-1874; he held the first chair of pathology in the Paris faculty] see *spinal muscular atrophy*, under *atrophy*, see under *disease*, and see *articulatio atlantooccipitalis*.

Cruveilhier-Baumgarten syndrome (cirrhosis) (kroo-väl-yä'-baum-gar-ten) [Jean Cruveilhier; Paul Clemens von Baumgarten, German pathologist, 1848-1928] see under *syndrome*.

crux (kruks), pl. *cruc'es* [L.] cross. **c. of heart**, the intersection of the walls separating the right and left sides and the atrial and ventricular chambers of the heart. **cru'ces pilo'rum** [NA], crosslike figures formed by the pattern of hair growth, the hairs lying in opposite directions.

Cruz's trypanosomiasis (kruz) [Oswaldo Cruz, Brazilian physician, 1871-1917] Chagas' disease.

Cruz-Chagas disease (kruz-chag'as) [Oswaldo Cruz; Carlos Chagas, physician in Brazil, 1879-1934] Chagas' disease.

cry (kri) 1. a sudden loud, involuntary vocal sound. 2. to utter such a sound. 3. to weep. **arthritic c.**, **articular c.**, night c. **cephalic c.**, a shrill, high-pitched penetrating cry of the newborn suggesting intracranial damage of some severity. **epileptic c.**, a loud scream that often occurs at the onset of an epileptic attack. **hydrocephalic c.**, the loud cry of a patient with acute tuberculous meningitis. **joint c.**, night c. **night c.**, a shrill cry uttered by a child in sleep, often heard in beginning joint disease; called also *arthritic*, *articular*, or *joint c.*

cryalgnesia (kri'al-jé'ze-ah) [*cryo-* + Gr. *algēsis* pain] pain due to the application of cold.

cryanesthesia (kri'an-es-the'ze-ah) [*cryo-* + *anesthesia*] loss of the power of perceiving cold.

Cryer's elevator (kri'erz) [Matthew Henry Cryer, American surgeon, 1840-1921] see under *elevator*.

cryesthesia (kri'es-the'ze-ah) [*cryo-* + Gr. *aisthēsis* perception] abnormal sensitiveness to cold.

crymo- (kri'mo) [Gr. *krymos* frost] a combining form denoting relationship to cold.

cryoanesthesia (kri''mo-an-es-the'ze-ah) [*cryo-* + *anesthesia*] refrigeration anesthesia.

cryodyn timer (kri''mo-din'e-ah) [*cryo-* + Gr. *odynē* pain] rheumatic pain coming on in cold or damp weather.

cryophilic (kri''mo-fil'ik) psychrophilic.

cryophylactic (kri''mo-fi-lak'tik) cryophylactic.

cryotherapeutics (kri''mo-ther'ah-pu'tiks) cryotherapy.

cryotherapy (kri''mo-ther'ah-pe) cryotherapy.

cryo- (kri'o) [Gr. *kryos* cold] a combining form denoting relationship to cold.

cryoanalgesia (kri''o-an'al-je'ze-ah) the relief of pain by application of cold by cryoprobe to peripheral nerves.

cryobank (kri'o-bank') a facility for freezing and preserving semen at low temperatures, usually by immersion in liquid nitrogen at -196.5° C.

cryobiology (kri''o-bi-ol'ō-je) [*cryo-* + Gr. *bios* life + *-logy*] the science dealing with the effect of low temperatures on biological systems.

cryocardioplegia (kri''o-kar'de-o-ple'je-ah) cessation of contraction of the myocardium produced by application of cold during cardiac surgery.

cryocautery (kri''o-kaw'ter-e) [*cryo-* + *cautery*] cold cautery.

cryocrit (kri'o-krit) [*cryo-* + Gr. *krinein* to separate] the percentage of the total volume of blood serum or plasma occupied by cryoprecipitable protein after deposition by centrifugation.

cryoextraction (kri''o-eks-trak'shun) the application of low temperature in the removal of a cataractous lens; it is accomplished with an instrument (cryoprobe) whose extremely cold tip forms an adhesion (iceball) with the lens, thus permitting removal of the lens.

cryoextractor (kri''o-eks-trak'tor) a cryoprobe used in cryoextraction.

cryofibrinogen (kri''o-fi-brin'o-jen) [*cryo-* + *fibrinogen*] fibrinogen with the abnormal physical property of precipitating in the cold (4° C.) and subsequently redissolving at 37° C.

cryofibrinogenemia (kri''o-fi-brin'o-jen-e'me-ah) the presence of cryofibrinogen in the blood; see *cryofibrinogen*.

cryogammaglobulin (kri''o-gam'ah-glob'u-lin) cryoglobulin.

cryogen (kri'o-jen) [*cryo-* + Gr. *gennan* to produce] a substance used for lowering temperatures.

cryogenic (kri''o-jen'ik) pertaining to or causing the production of low temperatures.

cryoglobulin (kri''o-glob'u-lin) an abnormal globulin that precipitates at low temperatures (i.e., 4° C.) and redissolves upon warming to body temperature; called also *cryogammaglobulin*.

cryoglobulinemia (kri''o-glob'u-lin-e'me-ah) the presence of cryoglobulin in the blood, which is precipitated in the microvasculature upon exposure to cold temperature; the clinical condition is marked by restricted blood flow through the skin of areas exposed to the cold, e.g., the digits, nose, and ears, where painful ischemia and even infarction may occur.

cryohydrate (kri''o-hi'drat) [*cryo-* + *hydrate*] a eutectic mixture, especially one having water as one of its constituents.

cryohypophysectomy (kri''o-hi'po-fiz-ek'to-me) destruction of the hypophysis by the application of cold.

cryometer (kri-om'ē-ter) [*cryo-* + Gr. *metron* measure] a thermometer for measuring very low temperatures.

cryopathy (kri-op'ah-the) [*cryo-* + Gr. *pathos* disease] any morbid condition caused by cold.

cryophilic (kri''o-fil'ik) [*cryo-* + Gr. *philein* to love] psychrophilic.

cryophylactic (kri''o-fi-lak'tik) [*cryo-* + Gr. *phylaxis* a guarding] resistant to very low temperatures; said of bacteria.

cryoprecipitability (kri''o-pre-sip'i-tah-bil'i-te) the quality of being readily precipitated by reduced temperature (cold).

cryoprecipitate (kri''o-pre-sip'i-tāt) [*cryo-* + *precipitate*] any precipitate that results from cooling, as cryoglobulin or antihemophilic factor.

cryoprecipitation (kri''o-pre-sip'i-ta'shun) the precipitation of a substance in solution (e.g., antihemophilic factor in blood plasma) on exposure to lowered temperature.

cryopreservation (kri''o-pres'er-va'shun) [*cryo-* + *preservation*] the maintaining of the viability of excised tissue or organs by storing at very low temperatures.

cryoprobe (kri'o-prōb) an instrument for applying extreme cold to tissue.

cryoprotective (kri''o-pro-tek'tiv) capable of protecting against injury due to freezing, as glycerol protects frozen red blood cells.

cryoprotein (kri''o-pro'te-in) [*cryo-* + *protein*] any blood protein that precipitates on cooling, as cryoglobulin or cryofibrinogen.

cryoscope (kri'o-skōp) an apparatus for performing cryoscopy.

cryoscopical (kri''o-skop'e-kl) pertaining to cryoscopy.

cryoscopy (kri-os'ko-pe) [*cryo-* + Gr. *skopein* to examine] examination of liquids, based on the principle that the freezing point

of solutions varies according to the amount and the nature of the substance contained in them in solution.

cryospray (kri'o-spra) the use of a liquid nitrogen spray in cryosurgery.

cryostat (kri'o-stat) [*cryo-* + Gr. *histanai* to halt] 1. a device by which temperature can be maintained at a very low level. 2. in pathology and histology, a chamber containing a microtome for sectioning frozen tissue.

cryosurgery (kri''o-sur'jer-e) destruction of tissue by the application of extreme cold; utilized in some forms of intracranial and cutaneous surgery.

cryothalamectomy (kri''o-thal'ah-mek'to-me) destruction of a portion of the thalamus by application of extreme cold; see *cryosurgery*.

cryotherapy (kri''o-ther'ah-pe) [*cryo-* + Gr. *therapeia* treatment] the therapeutic use of cold.

cryotolerant (kri''o-tol'er-ant) able to withstand unusually low temperatures.

crypt (kript) [L. *crypta*, from Gr. *kryptos* hidden] a blind pit or tube on a free surface; see also *crypta* [NA]. **alveolar c.**, the bony compartment surrounding a developing tooth. **anal c's**, sinus anales. **dental c.**, the space occupied by a developing tooth. **enamel c.**, a space bounded by the dental ledges on either side and usually by the enamel organ; it is filled with mesenchyma. **c's of Fuchs**, c's of iris. **c's of Haller**, glandulae preputiales. **c's of iris**, pitlike depressions found in the iris, in the region of the circulus arteriosus minor; called also *c's of Fuchs*. **c's of Lieberkühn**, glandulae intestinales. **c's of Littre**, glandulae preputiales. **Luschka's c's**, deep indentations of the gallbladder mucosa which penetrate into the muscular layer of the organ. **c. of Morgagni**, 1. fossa navicularis urethrae. 2. see *sinus anales*. **mucous c's of duodenum**, glandulae duodenales. **odoriferous c's of prepuce**, glandulae preputiales. **c's of palatine tonsil**, fossulae tonsillares tonsillae palatinae. **c's of pharyngeal tonsil**, fossulae tonsillares tonsillae pharyngeae. **synovial c.**, a pouch in the synovial membrane of a joint. **c's of tongue**, deep, irregular invaginations from the surface of the lingual tonsil. **tonsillar c's**, cryptae tonsillares tonsillae pharyngeae. **tonsillar c's of palatine tonsil**, cryptae tonsillares tonsillae palatinae. **tonsillar c's of pharyngeal tonsil**, cryptae tonsillares tonsillae pharyngeae. **c's of Tyson**, glandulae preputiales.

crypt- (kript) see *crypto-*.

crypta (krip'tah), pl. *cryptae* [L.] [NA] a crypt: a blind pit or tube on a free surface. **cryptae muco'sae**, see *glandula mucosa*. **cryptae muco'sae duode'ni**, glandulae duodenales. **cryptae odorif'erae**, **cryptae praepu'tiales**, glandulae preputiales. **cryptae tonsilla'res tonsil'lae palati'nae** [NA], tonsillar crypt of palatine tonsils: the blind ends of the tonsillar fossulae on the palatine tonsils; called also *tonsillar crypts*. **cryptae tonsilla'res tonsil'lae pharyn'geae** [NA], tonsillar crypts of pharyngeal tonsils: the blind ends of the tonsillar fossulae of the pharyngeal tonsils. **cryptae ure'thrae mulie'bris**, glandulae urethrales urethrae feminae.

cryptae (krip'te) [L.] plural of *crypta*.

cryptanamnesia (kript'an-am-ne'ze-ah) cryptomnesia.

cryptectomy (krip-tek'to-me) [*crypt-* + Gr. *ektomē* excision] excision or obliteration of a crypt.

cryptenamine (krip-ten'ah-min) a mixture of ester alkaloids derived from a nonaqueous extract of *Veratrum viride* Ait. (Liliaceae); it forms a white amorphous powder that possesses antihypertensive properties, and contains several alkaloids, including protoveratrine A and B, neogermine, germitrine, germerine, etc. **c. acetates**, a mixture of the acetate salts of cryptenamine, administered intravenously or intramuscularly in the management of eclampsia and hypertensive encephalopathy. **c. tannates**, a mixture of the tannate salts of cryptenamine, administered orally to control moderate to severe hypertension.

cryptesthesia (krip'tes-the'ze-ah) [*crypt-* + Gr. *aisthēsis* perception] subconscious appreciation or perception of occurrences not ordinarily perceptible to the senses.

cryptic (krip'tik) [Gr. *kryptikos* hidden] concealed, hidden, larval.

cryptitis (krip-ti'tis) inflammation of a crypt. **anal c.**, inflammation of the anal crypts, with pain and tenderness (especially during bowel movements), pruritus, and spasm of the anal sphincter; it may progress to abscess of the crypt.

crypto- (krip'to) [Gr. *kryptos* hidden] a combining form meaning hidden or concealed, or denoting relationship to a crypt.

Cryptobia (krip-tōb'e-ah) [Gr. *kryptos* hidden + *bios* life] a genus of protozoa of the family Cryptobiidae, order Protomonadina, found as parasites in the reproductive organs of invertebrates, especially mollusks, but also in the blood and digestive tract of fish; called also *Trypanoplasma*. It includes the species: *C. abramidis*, found in the bream (*Abramis brama*); *C. borreli* and *C. cyprini*, found in the blood of various fish; *C. helici*, found in the reproductive organs of various pulmonate snails; *T. intestinalis*,

found in a salt-water fish (*Bax boops*)—the first trypanosome-like organism to be found outside the blood; *T. truttae*, found in the trout (*Salmo fario*); and *T. ventriculi*, found in the lump-sucker (*Cyclopterus umpus*).

Cryptobiidae (krip/'to-bi/'i-de) a family of parasitic, trypanosome-like protozoa of the order Protomonadina, class Zoomastigophora, characterized by the presence of two flagella: one is anterior and free and the other is attached to the body, forming the outer edge of an undulating membrane. It includes the genus *Cryptobia*.

cryptocephalus (krip/'to-sef/'ah-lus) [*crypto-* + Gr. *kephalē* head] a monster with an inconspicuous head.

Cryptococcaceae (krip/'to-kok-ka/'se-e) a family of the Fungi Imperfecti, order Moniliales, the members of which are yeastlike throughout most or all of their life cycle; it includes a number of pathogenic genera, such as *Cryptococcus*, *Candida*, *Geotrichum*, *Trichosporon*, and *Pityrosporon*.

cryptococcosis (krip/'to-kok-o/'sis) an infection by *Cryptococcus neoformans* which may involve the skin, lungs, or other parts, but has a predilection for the brain and meninges. The cutaneous form is marked by acneiform lesions; called also *European blastomycosis*. The generalized form invades the central nervous system; less often the lungs, liver, spleen and joints. It is fatal if left untreated. Called also *torulosis*, and *Busse-Buschke disease*.

Cryptococcus (krip/'to-kok/'us) [*crypto-* + Gr. *kokkos* berry] a genus of asexual yeastlike organisms of the family Cryptococcaceae, which usually have a capsule and do not form pseudomycellium as do the *Candida*. Formerly called *Atelosaccharomyces* and *Torula*. **C. capsula'tus**, former name for *Histoplasma capsulatum*. **C. gilchris'ti**, former name for *Blastomyces dermatitidis*. **C. histoly'ticus**, *C. neoformans*. **C. hom'i-nis**, *C. neoformans*. **C. meningi'tidis**, *C. neoformans*. **C. neofo'r'mans**, a species causing an infection in humans; see *cryptococcosis*. Formerly called *C. histolytians*, *hominis*, and *meningitidis*, and *Debaryomyces neoformans hominis* and *Torula histolytica*.

cryptocrystalline (krip/'to-kris/'tah-lin) [*crypto-* + *crystalline*] composed of crystals of microscopic size.

Cryptocys'tis trichodec'tis a name erroneously applied to the cysticeroid larval form of the tapeworm *Dipylidium caninum* when it was first discovered in the body cavity of the dog louse, *Trichodectes*.

cryptodeterminant (krip/'to-de-ter/'min-ant) hidden determinant.

cryptodidymus (krip/'to-did/'i-mus) [*crypto-* + Gr. *didymos* twin] a teratism in which one twin is concealed within the body of the other.

cryptoempyema (krip/'to-em/'pi-e/'mah) [*crypto-* + *empyema*] empyema that is difficult to aspirate, being loculated or interlobar.

cryptogam (krip/'to-gam) [*crypto-* + Gr. *gamos* marriage] any one of the lower plants that have no true flowers, but propagate by spores.

cryptogenetic (krip/'to-jē-net/'ik) cryptogenic.

cryptogenic (krip/'to-jen/'ik) [*crypto-* + Gr. *gennan* to produce] of obscure, doubtful, or unascertainable origin. Cf. *phanerogenic*.

cryptoglioma (krip/'to-gli-o/'mah) [*crypto-* + *glioma*] one of the stages in the development of glioma of the retina, marked by shrinking of the eyeball due to cyclitis, which masks the presence of the growth.

cryptoleukemia (krip/'to-lu-ke/'me-ah) [*crypto-* + *leukemia*] an archaic term previously applied to a hyperplastic blood process in which there were no abnormal cells in the blood stream.

cryptolith (krip/'to-lith) [*crypto-* + Gr. *lithos* stone] a calculus or concretion in a crypt.

cryptomenorrhea (krip/'to-men/'o-re/'ah) [*crypto-* + *menorrhea*] a condition in which the symptoms of menstruation are experienced but no external bleeding occurs, as in cases of imperforate hymen.

cryptomere (krip/'to-mēr) [*crypto-* + Gr. *meros* part] a cystic or saclike condition.

cryptomerorachischisis (krip/'to-me/'ro-rah-kis/'ki-sis) [*crypto-* + Gr. *meros* part + *rhachis* spine + *schisis* cleavage] spina bifida occulta.

cryptomnesia (krip/'tom-ne/'ze-ah) [*crypto-* + Gr. *mnasthai* to be mindful] the recall of events not recognized as part of one's conscious experience.

cryptomnesic (krip/'tom-ne/'sik) hidden in the memory; pertaining to or characterized by cryptomnesia.

cryptomonad (krip/'to-mon/'ad) any of the algae of the order Cryptophyceae.

cryptoneurous (krip/'to-nu/'rus) [*crypto-* + Gr. *neuron* nerve] having no definite or distinct nervous system.

cryptophthalmia (krip/'tof-thal/'me-ah) cryptophthalmos.

cryptophthalmos (krip/'tof-thal/'mos) [*crypto-* + Gr. *ophthalmos* eye] a developmental anomaly in which the skin is continuous over the eyeballs without any indication of the formation of eyelids; called also *ankyloblepharon totale*.

cryptophthalmus (krip/'tof-thal/'mus) cryptophthalmos.

Cryptophyceae (krip/'to-fi/'se-e) [*crypto-* + Gr. *phykos* seaweed] an order of light brown, biflagellate, protozoan-like algae of uncertain taxonomic classification.

cryptopine (krip/'to-pin) [*crypto-* + Gr. *opion* opium] a minor alkaloidal constituent, C₂₁H₂₃NO₅, of opium, of *Corydalis semper-virens* (L.) Pers., and of *Dicentra* spp. (Fumariaceae).

cryptoplasmic (krip/'to-plaz/'mik) occurring in a concealed form; said of an infection in which the infecting organism has concealed itself; occult.

cryptopodia (krip/'to-po/'de-ah) [*crypto-* + Gr. *pous* foot] a condition characterized by swelling of the lower part of the leg and dorsum of the foot so as to cover all but the soles of the feet.

cryptopsychic (krip/'to-si/'kik) of concealed or vague psychic significance.

cryptopsychism (krip/'to-si/'kizm) parapsychology.

cryptopyic (krip/'to-pi/'ik) [*crypto-* + Gr. *pyon* pus] attended by concealed suppuration.

cryptoradiometer (krip/'to-ra/'de-om/'ē-ter) [*crypto-* + L. *radius* ray + Gr. *metron* measure] an apparatus for measuring the penetrative power of roentgen rays.

cryptorchid (krip-'tor/'kid) [*crypto-* + Gr. *orchis* testis] pertaining to or characterized by cryptorchidism; by extension, sometimes used to designate an individual exhibiting cryptorchidism.

cryptorchidectomy (krip/'tor-ki-'dek/'to-me) [*cryptorchid* + Gr. *ektomē* excision] excision of an undescended testis.

cryptorchidism (krip-'tor/'ki-'dizm) a developmental defect characterized by failure of the testes to descend into the scrotum.

cryptorchidopexy (krip-'tor/'ki-'do-pek/'se) orchiopexy.

cryptorchidy (krip-'tor/'ki-'de) cryptorchidism.

cryptorchism (krip-'tor/'kizm) cryptorchidism.

cryptorrhea (krip/'to-re/'ah) [*crypto-* + Gr. *rhoia* flow] abnormal activity of an endocrine organ.

cryptorrheic (krip/'to-re/'ik) cryptorrhetic.

cryptorrhetic (krip/'to-ret/'ik) 1. pertaining to the internal secretions. 2. pertaining to cryptorrhea.

cryptoscope (krip/'to-sköp) [*crypto-* + Gr. *skopein* to examine] a fluoroscope. **Satvioni's c.**, one of the early forms of fluoroscope.

cryptoscopy (krip-tos/'ko-pe) fluoroscopy.

cryptosterol (krip-tos/'ter-ol) a triterpenic sterol, C₃₀H₅₀O, from yeast; it also occurs in wool fat (see *lanosterol*).

Cryptostroma (krip/'to-stro/'mah) a genus of fungi. **C. cortica'le**, *Coniosporium corticale*.

cryptotia (krip-'to-she-ah) a rare anomaly in which the superior portion of the auricle is buried in the scalp.

cryptotoxic (krip/'to-tok/'sik) [*crypto-* + *toxic*] having hidden toxic properties; said of a solution normally nontoxic, but which may become toxic when the colloidal balance is disturbed.

cryptoxanthin (krip/'to-zan/'thin) a yellow carotenoid widely distributed in nature (egg yolk, green grass, yellow corn, etc.), which can be converted into vitamin A in the body.

cryptozoite (krip/'to-zo/'it) [*crypto-* + Gr. *zōon* animal] a malarial sporozoite in the exo-erythrocytic stage as it lives in the tissues before entering the blood to attack a blood corpuscle.

cryptozygous (krip-toz/'i-gus) [*crypto-* + Gr. *zygon* yoke] having the face no wider than the cranium, so that the zygomatic arches are concealed by the bulging of the cranium when the skull is viewed from above. Cf. *phenozygous*.

Crys. crystal.

crystal (kris'tal) [Gr. *krystallos* ice] a naturally produced angular solid of definite form in which the ultimate units from which it is built up are systematically arranged; they are usually evenly spaced on a regular space lattice. **asthma c's**, Charcot-Leyden c's. **blood c's**, hematoxin crystals in the blood. **Böttcher's c's**, microscopic crystals seen on adding a drop of solution of ammonium phosphate to a drop of prostatic fluid. **Charcot-Leyden c's**, crystalline structures, protein in nature, found wherever eosinophilic leukocytes are undergoing fragmentation, e.g., in the bronchial secretions in bronchial asthma and in stools in some cases of intestinal parasitism. Called also *asthma*, *leukocytic*, and *Leyden's c's*. **Charcot-Neumann c's**, minute crystals of spermine phosphate found in semen and various animal tissues. **coffin lid c's**, peculiar indented crystals of ammonio-magnesium phosphate from alkaline urine; called also *knife rest c's*. **Dubos crude c's** (*obs.*), tyrothricin. **dumbbell c's**, crystals of calcium oxalate occurring in the urine. **ear c.**, statolith, def. 1; see *statoconia*. **Florence c's**, crystals formed by the action of iodine on any liquid containing lecithin, as in semen. **hedgehog c's**, a spiny form of uric acid concretions. **knife rest c's**, coffin lid c's. **leukocytic c's**, *Leyden's c's*, Charcot-Leyden c's. **liquid c's**, certain liquids which manifest some of the optical properties of crystals and the hydrodynamic properties of fluids, e.g., phosphatidyl choline. **Lubarsch's c's**, crystals in the testis resembling sperm crystals. **Platner's c's**, crystals of the salts of the bile acids. **c's of Reinke**, conspicuous crystals contained in interstitial cells of the

human testis. They are 2–3 μ thick and up to 20 μ in length with variable shapes, are isotropic in polarized light, and have the solubility and staining properties of protein. They seem to be composed of closely compacted microtubules. **rock c.**, quartz; a transparent form of silicon dioxide (silica), SiO_2 ; used for lenses. **sperm c's**, **spermin c's**, crystals of spermine phosphate in the semen. **Teichmann's c's**, crystals of hemin. **thorn-apple c's**, yellow or reddish brown spheres of ammonium urate which are covered with sharp spicules or prisms, as found in the urine. **Virchow's c's**, yellow or orange crystals of hematoidin sometimes seen in extravasated blood. **whetstone c's**, crystals of xanthine sometimes seen in urine.

crystalbumin (kris'tal-bu'min) 1. an albuminous substance found in an aqueous extract of the crystalline lens. 2. a general term for crystallizable albumins of the type of egg albumin and serum albumin.

crystalli (kris-tal'e) chickenpox.

crystallin (kris-tal'in) a globulin existing in the crystalline lens of the eye. *Alpha c.* is precipitated by dilute acetic acid; *beta c.* is not.

crystalline (kris'tah-lin) resembling a crystal in nature or clearness.

crystallitis (kris-tah-li'tis) phakitis.

crystallization (kris'tah-li-za'shun) the formation of crystals; conversion to a crystalline form. **fern-leaf c.**, crystallization of cervical mucus in a fernlike pattern, observable during the first half of the menstrual cycle and said to be most conspicuous at the time of ovulation.

crystallography (kris'tah-log'rah-fe) [*crystal* + Gr. *graphein* to write] the science dealing with the study of crystals. **x-ray c.**, the determination of the three-dimensional structure of molecules by means of diffraction patterns produced by x-rays.

crystalloid (kris'tah-loid) [*crystal* + Gr. *eidōs* form] 1. resembling a crystal. 2. a noncolloid substance; a substance which, in solution, passes readily through animal membranes, lowers the freezing point of the solvent containing it, and is generally capable of being crystallized. Cf. *colloid*, def. 1. **Charcot-Böttcher c's**, slender spindle-shaped crystals 10 to 25 μ long, commonly found in Sertoli cells of the human testis but not in other species.

crystalloiditis (kris-tah-loi-di'tis) phakitis.

crystalluria (kris-tah-lu're-ah) the excretion of crystals in the urine, producing renal irritation.

Crysticillin (kris'ti-sil'in) trademark for preparations of penicillin G procaine.

Crystodigin (kris'to-dig'in) trademark for preparations of digitoxin.

CS cesarean section; conditioned stimulus.

CS₂ carbon disulfide.

Cs chemical symbol for cesium.

C.S.A.A. Child Study Association of America.

C.S.C. coup sur coup.

C.S.F. cerebrospinal fluid.

C.S.G.B.I. Cardiac Society of Great Britain and Ireland.

C.S.M. cerebrospinal meningitis.

CST convulsive shock therapy; see *shock therapy*, under *therapy*.

CT computerized tomography.

C.T.A. Canadian Tuberculosis Association.

CTBA cetrinonum bromide.

ctenophyte (ti'no-fit) [Gr. *kteinein* to kill + *phyton* plant] a fungus that has a destructive influence upon its host; limited to chemical rather than parasitic activity.

Ctenocephalides (te'no-se-fal'i-dēz) a genus of fleas. **C. ca'nis**, a species frequently found on dogs, which may transmit the dog tapeworm to man; formerly called *Pulex serraticipes*. **C. fe'lis**, a species commonly found parasitic on cats.

Ctenophthalmus (te'nof-thal'mus) a genus of fleas. **C. ag-ry'tes**, the European mouse flea.

Ctenopsyllus (te'no-sil'us) (*obs.*) *Leptopsylla*. **C. seg'nis**, *Leptopsylla segnis*.

Ctenus (te'nus) a genus of spiders. *C. ferus* is the South American wandering spider whose bite causes great pain. In severe cases, weakness and irregularity of the heart beat, breathing difficulty, and temporary blindness may occur; some deaths have occurred in young children.

C-terminal (ter'min-al) the end of the peptide chain carrying the free alpha carboxyl group of the last amino acid, conventionally written to the right.

Ctesias (te'se-as) (5th century B.C.) a Greek physician who was a contemporary of Hippocrates, and who was said by Galen to have written the Cnidian aphorisms.

ctetology (te-tol'ō-je) [Gr. *ktētos* acquired + *-logy*] that branch of biology which treats of acquired characters.

ctetosome (tet'o-sōm) [Gr. *ktētos* acquired + Gr. *sōma* body] a supernumerary chromosome; a sex chromosome.

CTP cytidine triphosphate.

Cu chemical symbol for copper (L. *cuprum*).

cuajani (kwah-hah'ne) an expectorant preparation from *Prunus occidentalis*.

cubeb (ku'beb) [L. *cubeba*; Arabic *kabāba*] the dried, unripe, almost fully grown fruit of *Piper cubeba* L.f. (Piperaceae), the tailed pepper or Java pepper, found throughout Southern Asia, which contains 10–18 per cent volatile oil, cubebin, resins, fat, and wax. Formerly used to stimulate healing of mucous membranes, and as a diuretic and urinary antiseptic.

cubebin (ku-be'bin) an inactive crystalline principle, $\text{C}_{10}\text{H}_{10}\text{O}_3$, from cubeb; formerly used as a urinary antiseptic.

cubebism (ku'beb-izm) poisoning by cubeb (*Piper cubeba*), characterized by nausea, vomiting, diarrhea, fever with or without skin eruptions, prostration, arthralgia, irritation of the kidneys, soft pulse, loss of consciousness, miosis, delirium, and coma. In severe poisonings, death from respiratory failure may occur.

cubicle (ku'bi-k'l) a compartment in a larger area, such as a dormitory or a ward, separated from similar adjoining compartments and from the rest of the room by low partitions.

cubilose (ku'bi-lōs) [L. *cubile* nest] a mucilaginous and nutritious principle from the edible nest of the swiftlet, *Collocalia esculenta*, of southern Asia; it is an excretion from the stomach of the bird.

cubit (ku'bit) [L. *cubitus*] a unit of measure, being the distance from the joint between the arm and forearm (elbow) to the tip of the middle finger; ranging, according to various systems of measurement, between 46 and 53 cm.

cubital (ku'bi-tal) 1. pertaining to the elbow. 2. pertaining to the ulna or to the forearm.

cubitalis (ku-bi-ta'lis) [L.] cubital.

cubitocarpal (ku'bi-to-kar'pal) pertaining to the ulna and the carpus.

cubitoradial (ku'bi-to-ra'de-al) pertaining to the ulna and the radius.

cubitus (ku'bi-tus) [L.] 1. [NA] the bend of the arm; the joint between the arm and forearm; the elbow. 2. the upper limb distal to the humerus: the elbow, forearm, and hand. 3. *ulna c. val'gus*, deformity of the elbow (judged with the palm facing forward), in which it deviates away from the midline of the body when extended. *c. va'rus*, deformity of the elbow, due to lateral angulation of the joint and accompanied by deviation of the forearm toward the midline of the body when the forearm is extended; called also *gun stock deformity*.

cuboid (ku'boid) [Gr. *kyboeides*] 1. resembling a cube. 2. the cuboid bone (os cuboideum [NA]).

cuboidal (ku-boi'dal) resembling a cube.

cu. cm. cubic centimeter.

cucoline (ku'ko-lēn) sinomenine.

cucullaris (ku-ku-la'ris) [L. *cucullus* hood] musculus trapezius; see *Table of Musculi*.

cucumber (ku'kum-ber) [L. *cucumis*] the edible fruit of various species of *Cucumis*, chiefly *C. sativus* L., the seeds of which are diuretic and whose juice is used as an astringent in various cosmetic formulations. **bitter c.**, colocynth.

Cucumis (ku'kum-is) a genus of cucurbitaceous plants which includes several edible species, as well as some which have medicinal properties, e.g., *C. sativus* L., the cucumber (q.v.).

Cucurbita (ku-ker'bi-tah) a genus of cucurbitaceous plants, including *C. pepo* L., the pumpkin (q.v.).

cucurbitol (ku-ker'bi-tol) a sterol, $\text{C}_{24}\text{H}_{40}\text{O}_4$, obtained from watermelon seeds.

cucurbitula (ku'ker-bit'u-lah) [L. dim. of *cucurbita*, a gourd] a cupping glass. **c. cruen'ta** [L. "bloody cup"], a cupping glass applied to draw blood. **c. sic'ca** [L. "dry cup"], a cupping glass that does not draw blood.

cucurbititrin (ku'ker-bo-sit'rin) an extract from watermelon seeds; it has been tried in the treatment of hypertension.

cudbear (kud'bār) a red-brown powder, obtained from lichens, such as *Lecanora tartarea*; and used as a coloring matter in pharmacy.

cudding (kud'ing) quidding.

cuff (kuf) a small bandlike structure encircling a part. **musculotendinous c.**, one formed by intermingled muscle and tendon fibers; see *rotator c.* **rotator c.**, a musculotendinous structure about the capsule of the shoulder joint, formed by the inserting fibers of the supraspinatus, infraspinatus, teres minor, and subscapularis muscles, blending with the capsule, and providing mobility and strength to the shoulder joint.

cuffing (kuff'ing) the formation of a cufflike surrounding border, such as collections of leukocytes surrounding blood vessels, noted in certain viral diseases.

Cuignet's method (ke-ēn-yāz') [Ferdinand Louis Joseph Cuignet, French ophthalmologist, born 1823] skiametry.

cuirass (kwe-ras') [Fr. *cuirasse* breastplate] a covering for the chest. **tabetic c.**, an area of diminished sense of touch encircling the chest of a patient with *tabes dorsalis*.

Cuj., kuj. abbreviation for *L. cujus*, of which.

cul-de-sac (kul'dē-sahk') [Fr.] a blind pouch or cecum. **conjunctival c.**, the fold formed by the junction of the palpebral and the ocular conjunctiva. **Douglas' c.**, excavatio rectouterina. **dural c.**, the terminal portion of the dural sac.

culdacentesis (kul'do-sen-te'sis) [*cul-de-sac* + *centesis*] aspiration of fluid from the rectouterine excavation by puncture of the vaginal wall.

culdoscope (kul'do-skōp) an endoscope for performing culdoscopy.

culdoscopy (kul-dos'ko-pe) visual examination of the female pelvic viscera by means of an endoscope introduced into the pelvic cavity through the posterior vaginal fornix.

culdotomy (kul-dot'o-me) [*cul-de-sac* + Gr. *tomē* a cutting] incision into the cul-de-sac (pouch of Douglas); called also *posterior colpotomy*.

Culex (ku'leks) [L. "gnat"] a genus of culicine mosquitoes characterized by short palpi and by holding the body parallel to the surface on which it rests while the head and beak are bent at an angle to the body. Many species occurring throughout the world are vectors of various disease-producing agents. Species include *C. annulirostris*, *C. fatigans*, *C. moles-tus*, *C. pipiens*, *C. quinquefasciatus*, *C. tarsalis*, and *C. tritaeniorhynchus*, among many others.

culicicide (ku-lis'i-sid) culicide.

Culicidae (ku-lis'i-de) a family of insects of the suborder Nematocera, order Diptera, including the mosquitoes. There are ten tribes, of which three are of particular medical interest: Anopheleini, Culicini, and Megarhinini.

culicidal (ku-lī-si'dal) destructive to gnats and mosquitoes.

culicide (ku'li-sid) [L. *culex* gnat + *caedere* to kill] an agent destructive to gnats and mosquitoes.

culicifuge (ku-lis'i-fūj) [L. *culex* gnat + *fugare* to put to flight] a preparation that repels gnats and mosquitoes.

Culicinae (ku-lī-si'ne) a subfamily of the Culicidae, the true mosquitoes, containing the tribes Anopheleini, Culicini, and Megarhinini.

culicine (ku'li-sin, ku'li-sin) 1. a member of the genus *Culex* or related genera. 2. pertaining to, involving, or affecting mosquitoes of the genus *Culex* or related genera.

Culicini (ku-lī-si'ni) a tribe of the subfamily Culicinae containing many genera, the most important of which are *Aedes*, *Culex*, *Mansonia*, *Psorophora*, *Theobaldia*, and *Wyeomyia*.

Culicoides (ku-lī-koi'dēz) a genus of biting flies of the family Heleidae. *C. austeni* and *C. grahni* are intermediate hosts of the parasitic roundworm *Dipetalonema perstans*. *C. fuscus* and possibly other species are intermediate hosts of *Mansonella ozzardi*.

Culiseta (ku'li-se'tah) a genus of culicine mosquitoes; formerly called *Theobaldia*. **C. inornata**, a vector of the Cache Valley virus in Utah. **C. melanura**, a vector of the viruses causing eastern and western equine encephalitides.

Cullen's sign (kul'enz) [Thomas Stephen Cullen, Baltimore surgeon, 1868-1953] see under *sign*.

culling (kul'ing) the process of selective removal. The term is applied to the removal from the circulation, by the spleen, of abnormal erythrocytes, such as those occurring in congenital spherocytosis, or to the selective separation of other elements or organisms.

culmen (kul'men), pl. *culmina* [L. "ridge"] [NA] the part of the vermis of the cerebellum between the lobulus centralis and the primary fissure; called also *culmen monticuli*.

culmina (kul'mī-nah) [L.] plural of *culmen*.

Culp ureteropelvioplasty [Ormond Skinner Culp, American surgeon, born 1910] see under *urethroplasty*.

cult (kult) a system of treating disease based on some special and unscientific theory of disease causation.

cultivation (kul'ti-va'shun) [L. *cultivatio*] the propagation of living organisms, applied especially to the propagation of cells in artificial media.

culturable (kul'chur-ah-b'l) capable of being cultured.

cultural (kul'tu-ral) pertaining to a culture.

culture (kul'tūr) [L. *cultura*] 1. the propagation of microorganisms or of living tissue cells in special media conducive to their growth. 2. a growth of microorganisms or other living cells. 3. to induce the propagation of microorganisms or living tissue cells in media conducive to their growth. See also *culture medium*. **attenuated c.**, a culture of microorganisms that have altered virulence. **cell c.**, a growth of cells *in vitro*; although the cells proliferate they do not organize into tissue. **chorioallantoic c.**, the cultivation of microorganisms, cells, or tissues on the chorioallantois of the developing chick. **continuous flow c.**, the cultivation of bacteria in a continuous flow of fresh medium to maintain bacterial growth in logarithmic phase. **direct c.**, one made by direct transfer from a natural source to an artificial medium. **flask c.**, one grown on a medium contained in a flask. **fractional c.**, a technique for obtaining a single species of microorganisms from a culture containing more than one. **hanging-block c.**, one grown on a block of agar medium fas-

Types of growth in stab cultures. A, Nonliquefying: 1, filiform (*B. coli*); 2, beaded (*Str. pyogenes*); 3, echinate (*Bact. acidi-lactici*); 4, villous (*Bact. murisepticum*); 5, arborescent (*B. mycoides*). B, Liquefying: 6, crateriform (*B. vulgare*, 24 hours); 7, napiform (*B. subtilis*, 48 hours); 8, infundibuliform (*B. prodigiosus*); 9, saccate (*Msp. finkleri*); 10, stratiform (*Ps. fluorescens*). (Frost.)

tened to a coverglass, which is then inverted over a hollow slide. **hanging-drop c.**, a culture in which the material to be cultivated is inoculated into a drop of fluid attached to a coverglass, which is inverted over a hollow slide. **mixed leukocyte c.**, **mixed lymphocyte c.**, see under *reaction*. **needle c.**, stab c. **plate c.**, one grown on a medium, usually agar or gelatin, on a Petri dish. **primary c.**, a cell or tissue culture started from material taken directly from an organism, as opposed to that from an explant in an organism. **pure c.**, a culture of a single species of cell, without presence of any contaminants. **sensitized c.**, a bacterial culture to which has been added its specific antiserum. **shake c.**, a culture made by inoculating warm liquid agar culture medium in a tube to allow the development of separated colonies in the solidified medium on incubation; especially applicable to obligate anaerobes. **slant c.**, one made on a slanting surface of a solidified medium in a tube; the tube being tilted to provide a greater surface area for growth. **slope c.**, slant c. **smear c.** (obs.), one made by smearing the inoculating material on the surface of the medium. **stab c.**, one in which the medium is inoculated by a needle thrust deeply into its substance; called also *needle c.* and *thrust c.* **stock c.**, a permanent culture from which transfers may be made. **streak c.**, one in which the medium is inoculated by drawing an infected wire across it. **suspension c.**, a culture in which cells multiply while suspended in a suitable medium. **thrust c.**, stab c. **tissue c.**, the maintaining or growing of tissue, organ primordia, or the whole or part of an organ *in vitro* so as to preserve its architecture and/or function. **tube c.**, one made in a test tube. **type c.**, a culture of any species of microorganism usually maintained in a central collection of type or standard cultures. **culture medium** (kul'tūr me'de-um) any substance or preparation used for the cultivation of living cells; see *Table of Culture Media*.

TABLE OF CULTURE MEDIA

Abbreviations used in this table are: a. = agar, b. = broth, c. = culture medium, m. = medium.

acetate differential a., a sodium acetate-inorganic salt medium containing bromthymol blue, for the differentiation of *Shigella* from *Salmonella* and coliform bacteria; *Shigella* does not grow on this medium.

agar c., one in which agar is used as the solidifying agent.

albumin b. (Dubos), a liquid medium containing peptone, asparagine, inorganic salts, and Tween 80, enriched with serum albumin, for the culture of tubercle bacilli and other mycobacteria as a submerged diffuse growth.

Anderson's m., chocolate agar-tellurite medium; an enriched medium for cultivation of the diphtheria bacillus.

antibiotic c. 1, seed a.

antibiotic c. 5, streptomycin assay agar with yeast extract.

antibiotic c. 9 and 10, see *polymyxin test a*.

antibiotic c. 11, neomycin assay a.

antibiotic c. 12, nystatin assay a.

Aronson's c., an alkaline medium for the isolation of the chol-

TABLE OF CULTURE MEDIA (Continued)

era spirillum, consisting of agar, meat extract, peptone, sodium chloride, sodium carbonate, cane sugar, dextrin, basic fuchsin, sodium sulfite, and water.

asparagin c., 1. a synthetic medium containing asparagin, disodium acid phosphate, ammonium lactate, and sodium chloride; called also *Fränkel and Voges' asparagin c.* 2. a synthetic medium containing asparagin, ammonium lactate, sodium chloride, magnesium sulfate, calcium chloride, monopotassium acid phosphate, and glycerin; called also *Uschinsky's c.*

Avery's c., a glucose meat infusion broth containing 5 per cent of sterile defibrinated rabbit blood.

azide violet blood a., a beef heart infusion culture medium containing tryptose, sodium azide, and crystal violet (which inhibits the growth of streptococci, staphylococci, and micrococci), used as a selective medium for the isolation of *Erysipelothrix rhusiopathiae*.

bacteriostasis a., a medium containing peptone, beef extract, sodium chloride, and agar, used to maintain stock cultures of test organisms and to test antibacterial activity.

Balamuth's c., a monophasic culture medium used for the growth of *Entamoeba histolytica*; it consists of buffered aqueous egg yolk infusion with or without liver extract.

Barile-Yaguchi-Eveland (BYE) a., a simplified culture medium containing brain-heart infusion and yeast extract, used for the cultivation of *Mycoplasma*.

basal c., any medium usually composed of meat extract broth and agar as follows: meat extract 3 gm., peptone 5 gm., sodium chloride 5 gm. (included if for serological work or if enriched with blood), and agar 15 gm. (omitted if liquid medium is desired), per liter of distilled water.

beef infusion c., see *infusion m.*

beer wort c., crushed malt macerated in water, then filtered and sterilized.

bile c., **bile salt c.**, nutrient broth containing dextrose and sodium taurocholate and sufficient litmus solution to color it a deep purple.

bismuth sulfite a., Wilson-Blair c.

blood c. (Kracke), a liquid medium containing brain suspension in meat infusion broth with dextrose, peptone, and citrate, and buffered with phosphate at pH 7.4, for the enrichment culture of pathogenic bacteria present in the blood in bacteremias.

Boeck and Drbohlav's c., a culture medium for amoeba containing sodium chloride, calcium chloride, potassium chloride, sodium bicarbonate, and glucose; called also *Les c.*

Bordet-Gengou a., an agar base containing infusion from potato, peptone, sodium chloride, and agar, enriched with blood and glycerol, for isolation of *Hemophilus pertussis* and *Mycobacterium tuberculosis*. Also used without peptone to enhance selectivity of *H. pertussis*.

boric acid b., a liquid culture medium containing peptone, lactose, and boric acid, buffered with phosphate, used in the presumptive test for *Escherichia coli* in water and food.

brain-heart infusion m., a medium containing calf brain and beef heart infusion, peptone, dextrose, and phosphate buffer, used in the liquid state (broth) for blood culture, and solidified with agar for the culture of pathogenic bacteria, especially streptococci and pneumococci; with the addition of the antibiotics penicillin and streptomycin, or chloramphenicol and cycloheximide, it is used as a selective medium for the isolation of fungi.

Braun's c., Endo agar.

brilliant green a., a selective medium containing yeast extract, peptone, sodium chloride, lactose, saccharose, agar, and brilliant green, for the detection of *Salmonella* in foods.

brilliant green-bile a., a selective differential culture medium containing peptone, lactose, bile salts, decolorized fuchsin, and brilliant green, for the culture of coliform bacteria from water and food samples.

bromcresol purple desoxycholate (BCP-D) a., a selective differential microbial culture medium containing lactose and sucrose, bromcresol purple as an indicator, and desoxycholate as an inhibitor; used for the isolation of *Shigella* and *Salmonella*.

Brucella a., a culture medium containing pancreatic digest of casein, peptic digest of animal tissue, yeast autolysate, and dextrose, for the isolation of *Brucella* from blood, dairy products, and foods according to the APHA standard methods.

buffered desoxycholate glucose (BDG) b., a liquid culture medium inhibitory to gram-positive bacteria, used as a presumptive medium for the detection of gram-negative enteric bacilli in water and food specimens.

carbohydrate b., a plain broth or a peptone solution that contains only one carbohydrate.

Cary-Blair transport m., an agar medium containing thioglycollate, phosphate, and sodium chloride, for the collection of clinical specimens containing *Shigella*, *Salmonella*, or *Pasteurella*.

Casman b., a liquid culture medium containing beef extract, peptones, nicotinamide, dextrose, *p*-aminobenzoic acid, and corn starch enriched with 5 per cent sterile defibrinated rabbit blood, used for the isolation of *Hemophilus* species, especially *H. vaginalis*.

Chapman-Stone a., a culture medium containing peptone, yeast extract, gelatin, and mannitol, made selective for staphylococci by high content of sodium chloride (5.5 per cent); used for the isolation of food-poisoning staphylococci.

charcoal a., a beef heart infusion-peptone culture medium con-

taining soluble starch, yeast extract, and Norit (charcoal), for stock culture maintenance and vaccine production of *Bordetella pertussis*.

chlamydospore a., an inorganic salt medium containing polysaccharide, biotin, and trypan blue, for the identification of *Candida albicans* by favoring the formation of chlamydospores which are stained blue by the dye.

chocolate c., nutrient bouillon or agar to which fresh blood has been added and which is then heated, the red blood changing to a chocolate brown color; used for growing the influenza organism.

Clark and Lubs c., MR-VP broth.

Clauberg's a., a culture medium consisting of ox or sheep serum (coagulated) with glycerol and potassium tellurite.

clostrisel a., a culture medium containing peptones, dextrose, cystine, thioglycollate, formaldehyde sulfoxylate, neomycin, and azide, used as a highly selective medium for the isolation of pathogenic clostridia.

coagulase-mannitol a., a brain-heart infusion/tryptic soy agar containing mannitol and bromcresol purple, enriched with 10 per cent sterile human plasma for the culture of pathogenic staphylococci; coagulase-positive, mannitol-fermenting strains show an opaque yellow zone around the colonies, and coagulase-negative, mannitol-positive strains show a clear yellow zone.

corn meal a., an inorganic salt culture medium containing corn meal, used for the identification of *Candida albicans* by favoring the production of chlamydospores. With dextrose added, it is used for cultivation of fungi, but not for chlamydospore production.

Corper's c., a culture medium for tubercle bacilli consisting of glycerolated pieces of potato that have been soaked in crystal violet solution.

Craig's c. (for intestinal protozoa), a mixture of sterile human or rabbit serum and Locke's solution.

cystine-heart a., beef heart infusion containing peptone, dextrose, L-cystine, and agar, used in diagnostic bacteriology, especially for the cultivation of *Pasteurella tularensis*.

Czapek-Dox a., an inorganic salt-sucrose-nitrate medium, used either as broth or solidified with agar for the cultivation of fungi; called also *Czapek-Dox c.*

decarboxylase c., a liquid culture medium containing beef extract, peptone, and acid-base indicator (cresol red and/or bromcresol purple) to which is added an amino acid (commonly lysine, arginine, or ornithine), for the determination of the amino acid decarboxylase activity as a differential character of bacteria, especially Enterobacteriaceae.

deoxycholate-citrate m., one of the most widely used mediums for isolation of *Salmonella* and dysentery bacilli, containing meat infusion 1000 ml., peptone 10 gm., agar 20 gm., lactose 10 gm., sodium citrate 20.6 gm., sodium deoxycholate 5 gm., lead chloride (0.35% aqueous) 1 ml., ferric ammonium citrate 2 gm., and neutral red (1% aqueous) 2 ml.

deoxycholate citrate lactose saccharose (DCLS) a., a selective differential medium containing sodium thiosulfate and neutral red as the indicator, used for the isolation of gram-negative enteric bacilli. Gram-positive bacteria and coliforms are inhibited, *Shigella* and *Salmonella* appearing as colorless or slightly pink translucent colonies.

dextrose a., a culture medium containing beef extract, peptone, dextrose, sodium chloride, and agar.

dextrose starch a., a culture medium containing peptone, dextrose, soluble starch, and gelatin, for the cultivation of gonococci, meningococci, and other bacteria which do not ferment starch.

Dieudonné's c., an alkaline blood agar used for the isolation of the cholera vibrio.

differential c., a medium, usually solid, whose composition is designed to show physiological characteristics by typical colonial morphology.

Dorsett's egg c., a culture medium consisting of whole eggs in isotonic salt solution and glycerol, solidified by coagulated egg, for the nonselective culture of tubercle bacilli; called also *egg c.*

Dubos' c., albumin b.

Durham's c., inosite-free b.

egg c., 1. Dorsett egg c. 2. (Lubenau) Dorsett's egg medium with added glycerin. 3. (Petroff) a meat juice prepared by extracting chopped beef with glycerin solution and filtering, to which is added whole eggs, well mixed, and gentian violet.

egg albumin c., 1. (inspissated) a mixture of egg white, distilled water, sodium hydroxide, and glucose; filtered and coagulated in an inclined position. 2. (Tarchanoff and Kolesnikoff) unbroken eggs are placed in dekanormal sodium hydroxide for ten days, the shell removed and the contents cut into slices, washed in running water two hours, placed in Petri dishes, and sterilized.

egg-meat c. (Rettger), a medium prepared from ground lean meat and egg whites, heated separately, but mixed before tubing, with calcium carbonate added to stabilize the reaction; anaerobes may be grown in this mixture without anaerobic precautions.

Eijkman lactose b., a culture medium containing peptone and lactose, for the identification of coliform bacteria in water when incubated at 45.5° C. according to the APHA standard method.

Eisenberg's milk-rice c., see *milk-rice c.*

EMB a., eosin-methylene blue a.

Emerson a., a culture medium containing beef extract, yeast extract, peptone, and dextrose (cycloheximide may be added), for the culture of fungi, especially actinomycetes and streptomycetes, producing

TABLE OF CULTURE MEDIA (Continued)

antibiotic substances. A fluid form (broth) is prepared by substituting meat peptone for beef extract.

Endo a., an agar culture medium containing lactose and decolorized fuchsin as an indicator of aldehyde production during the fermentation of lactose; used as a differential medium for the culture of enteric bacilli. Lactose-fermenting coliform bacterial colonies appear red, and nonlactose-ferments uncolored or pink. With the addition of chlortetracycline-HCl, 100 µg. per milliliter, the medium is selective for the isolation of *Candida albicans*. Called also *fuchsin agar*, *fuchsin-sulfite agar*, and *Braun's c*.

enriched c., one to which the nutrients, such as blood, serum, dextrose, or peptone, have been added.

eosin-methylene blue (EMB) a., a differential culture medium containing peptone, lactose, sucrose, eosin Y, and methylene blue, used especially for the isolation of *Shigella*.

eosin-methylthionine chloride c., eosin-methylene blue agar.

esculin c., a medium containing esculin and iron citrate on which the colon bacillus produces a black colony.

ethyl violet azide b., a culture medium containing peptone, dextrose, sodium azide, and ethyl violet, used as a highly selective medium for the culture of enterococci, especially in water examination.

extract a., FDA m.

FDA m., a culture medium containing beef extract and peptic digest of animal tissue, used in the solid (agar) form for the maintenance of standard cultures and in the liquid (broth) form for nonfastidious bacteria used in phenol coefficient and similar tests; called also *extract agar*.

Fildes c., see under *enrichment*.

fish b., a nutritive broth in which fish water is used in place of meat extract.

Fletcher m., a liquid culture medium containing peptone, and beef extract enriched with 20 per cent fresh pooled rabbit serum, for the isolation, cultivation, and maintenance of *Leptospira*; medium 92 of the APHA Diagnostic Procedures and Reagents.

Forget-Fredette a., a selective culture medium containing Trypticase soy broth and sodium azide, used for the isolation of spore-forming and nonspore-forming obligate anaerobic bacteria.

formate ricinoleate m., a culture medium containing sodium formate, sodium ricinoleate, lactose, and peptone, for the detection of coliform bacteria in milk, water, etc., according to APHA standard methods.

Fränkel and Voges' asparagin c., see *asparagin c.*, def. 1.

fuchsin a., **fuchsin sulfite a.**, Endo agar.

gelatin a., nutrient bouillon solidified with gelatin and agar.

gelatin c., one in which gelatin is used as the solidifying agent.

glucose-formate b., nutrient broth containing glucose and sodium formate; called also *Kitasato's b*.

glycerin b., nutrient broth containing glycerin.

glycerinated potato c., potato culture medium in which the wedges of potato have been soaked, and in which the cotton pads at the bottom are moistened with a 25 per cent solution of glycerin.

glycerin-potato b., a cold water extract of grated potatoes containing glycerin.

haricot b., an extract of kidney beans with salt and cane sugar.

Hershbell's c., malt extract solution.

hormone c., a bacteriological culture medium made without filtration; it is thought that the filter material removes by adsorption or by some other process constituents which enhance the nutritive value of the medium.

Hoyle's m., a chocolate agar-tellurite medium used for cultivation of diphtheria bacillus.

indicator c., 1. a differential culture medium designed to reflect or accentuate physiological characteristics of a bacterium by characteristic colonial morphology. 2. a culture medium containing carbohydrate and an acid-base indicator.

infusion m., a bacterial culture medium containing infusion of fresh meat (commonly veal or beef), peptone, and sodium chloride, used as a liquid medium (broth) or solidified with agar, for the culture of more fastidious bacteria, and as a base for media enriched with blood, serum, ascitic fluid, etc.

inosite-free b., nutrient bouillon in which *Escherichia coli* or some other sugar-fermenting organism has grown and thus removed all sugars; it is then clarified and sterilized. Called also *Durham's c*.

iron b., nutrient broth containing ferric tartrate or ferric lactate.

Jordan tartrate c., phenol red medium with sodium potassium tartrate added.

Kendall's c., a culture medium prepared from animal or human small intestine, previously extracted with alcohol and benzol, and therefore relatively protein-rich and peptone-free.

KF streptococcal m., a bacterial culture medium containing peptone, yeast extract, sodium glycerophosphate, maltose, lactose, and sodium azide, which may be used in liquid form or solidified with agar for the culture of fecal streptococci.

Kitasato's b., glucose-formate b.

Kligler iron a., a selective differential bacterial culture medium containing peptone, lactose, dextrose, ferric ammonium citrate, sodium thiosulfate, and phenol red as an indicator, for the differentiation of enteric bacilli.

Koser citrate b., an inorganic salt medium containing sodium citrate, for testing for the utilization of citrate by enteric bacilli.

Krumwiede triple sugar a., a differential bacterial culture medium containing dextrose, lactose, and sucrose with phenol red as an indicator, used in the differentiation and identification of enteric bacilli on the basis of their ability to ferment the contained sugars.

Kulp c., tomato juice a.

lactose-litmus b., nutrient broth containing lactose and sufficient litmus to color it a deep purple.

lauryl sulfate b., a selective enrichment culture medium containing peptone, sodium lauryl sulfate, and lactose, for the detection of coliform bacteria according to the APHA standard methods.

lead b., nutrient broth containing lead acetate.

Les c., Boeck and Drbohlav's c.

Levine's EMB a., **Levine's eosin-methylene blue a.**, a differential culture medium containing peptone, lactose, eosin Y, and methylene blue, for the isolation of enteric bacilli according to APHA and USP standard methods.

Li-Rivers c., Tyrode's solution containing minced chick embryo for the cultivation of filtrable viruses and toxoplasmas.

litmus-milk c., milk culture medium containing sufficient litmus solution to give it a deep lavender color.

litmus-whey c., see under *gelatin*.

Littman a., a culture medium containing peptone, oxgall, dextrose, crystal violet, and streptomycin, for the isolation of fungi; streptomycin is omitted for the culture of *Nocardia*.

Loeffler m., a culture medium consisting of infusion broth enriched by the addition of beef serum and whole egg and solidified by coagulation of serum and egg, used for the isolation of diphtheria bacilli.

Löwenstein's c., a culture medium containing monopotassium phosphate, sodium citrate, magnesium sulfate, asparagin, glycerin, starch, egg yolk, and Congo red or malachite green, for culturing tubercle bacilli in blood.

Löwenstein-Jensen c., a modified Löwenstein culture medium containing asparagine, glycerol, malachite green as an inhibitor, and whole egg, for the culture of tubercle bacilli; the medium is solidified by the heat coagulation of the egg.

L.S.U. m., a lactose-saccharose-urea agar buffered medium, containing a triple indicator system, designed for the isolation of *Salmonella* and *Shigella* by incubation from feces directly and from enrichment broths.

MacConkey a., a selective differential culture medium containing peptone, lactose, bile salts, neutral red, and crystal violet, for the isolation of coliform bacteria; called also *MacConkey's bile salt a*.

MacConkey b., a culture medium containing peptone, oxgall, lactose, and bromocresol purple, used in the presumptive test for the presence of coliform bacteria in water.

malachite green b., nutrient broth with malachite green.

malt a., a solution of malt extract solidified with agar, for the culture of yeasts and molds.

malt extract a., a culture medium containing maltose, dextrin, glycerol, and peptone, for the cultivation of yeasts and molds.

malt extract b., a nutritive medium made by dissolving powdered malt extract in water; adjusting the reaction to plus 1.5 to phenolphthalein and heating in the autoclave for fifteen minutes, filtering through paper and sterilizing.

mannitol salt a., a selective medium containing peptone, mannitol, and 7.5 per cent sodium chloride, with phenol red as an indicator, for the isolation of pathogenic staphylococci.

Martin's b., a preparation of peptone from digested pig stomach and cattle or rabbit serum.

meat extract m., one prepared with commercial meat extract.

meat infusion m., infusion m.

membrane filter m., any of a variety of liquid culture media used for the isolation of bacteria by the membrane filter method.

milk c., milk, usually in test tubes, free from cream, and sterilized for use as a culture medium.

milk-rice c., a mixture of nutrient broth and milk solidified with rice powder, used for growing chromogenic bacteria. Called also *Eisenberg's milk-rice c.* or *Soyka's*.

mineral salts a., a medium containing ammonium nitrate, monopotassium phosphate, dipotassium phosphate, magnesium sulfate, ferrous sulfate, and dried agar, for the culture of *Chaetomium globosum* and *Aspergillus niger*.

Monsur's a., a selective differential tellurite-containing agar medium used for the isolation of *V. cholerae*.

motility test m., a culture medium containing beef extract and peptone, partially solidified by the inclusion of 0.4 per cent agar, used for the detection of motility of enteric bacilli in stab culture.

MR-VP b., a broth culture medium containing peptone, dextrose, and phosphate, for the culture and differentiation of coliform bacteria for the methyl red and Voges-Proskauer tests according to the APHA standard methods; called also *Clark and Lub c*.

Mueller-Hinton a., a solid beef-infusion culture medium containing starch and agar, used for the primary isolation of *Neisseria*. A broth medium is prepared by omitting the agar.

Mycoplasma a., a beef heart infusion medium enriched with horse serum and yeast extract which may be made selective by the inclusion of penicillin and thallium acetate, for the isolation of *Mycoplasma*.

Naegeli's c., see under *solution*.

Neill's m., a chocolate agar-tellurite medium used in Great Britain.

TABLE OF CULTURE MEDIA (Continued)

neomycin assay a., a culture medium containing beef extract, yeast extract, peptone, pancreatic digest of casein, and dextrose, for the assay of the neomycin content of pharmaceutical preparations according to FDA and USP requirements; called also *antibiotic c. 11*.

neutral red c., glucose agar containing neutral red.

NIH agar m., a culture medium containing pancreatic digest of casein, yeast extract, dextrose, and cystine, specified in the requirements for sterility testing by the National Institutes of Health; called also *sterility test c.*

nitrate b., nutrient broth containing sodium nitrate, for testing for the bacterial reduction of nitrate to nitrite.

N.N.N. c., a medium containing agar, salt, and rabbit blood, for growing *Leishmania donovani*.

Noguchi's c., an enriched culture medium containing sterile fresh rabbit kidney tissue, for the culture of spirochetes.

nutrient c., a bacterial culture medium containing beef extract, peptone, and sodium chloride, used as a liquid medium (nutrient broth) or solidified with agar (nutrient agar, plain agar) for the culture of nonfastidious organisms.

nystatin assay a., a culture medium containing beef extract, yeast extract, peptone, and dextrose, for the assay of the mycostatic activity of pharmaceutical preparations according to FDA and USP requirements; called also *antibiotic c. 12*.

oleic a. (Dubos), an agar medium containing peptone, asparagine, and inorganic salts to which is added oleic acid complex containing 0.05 per cent oleic acid in 5 per cent serum albumin fraction V. The albumin may be replaced with normal beef serum. Used for the culture of tubercle bacilli and other mycobacteria.

Omeliensky's nutritive c., a synthetic medium containing potassium phosphate, magnesium sulfate, ammonium sulfate, sodium chloride, and precipitated chalk; for growing cellulose-fermenting organisms.

Pai's c., a medium for the cultivation of diphtheria bacilli.

Parietti's b., nutrient broth containing small amounts of a mixture of hydrochloric acid and phenol solution.

Park and Williams' chocolate c., chocolate c.

Pasteur's c., see under *solution*.

peptone water c., peptone water.

Petragnani c., a culture medium containing milk, potato flour, potato, whole egg and egg yolk, and malachite green, for the culture of tubercle bacilli; the medium is solidified by heat coagulation of the egg.

Petroff's synthetic c., a synthetic medium for growing the tubercle bacillus.

Petruschky's c., litmus whey.

phenol red m., a culture medium containing peptone and phenol red, which may be used in liquid (broth) or solid (agar) form, containing a test sugar, commonly dextrose, lactose, maltose, mannitol, sucrose, etc., used for testing fermentation reactions; with added sodium potassium tartrate (tartrate c.), it may be used for the tartrate reaction of *Salmonella*.

phenylalanine a., a culture medium containing yeast extract and DL-phenylalanine, for the differentiation of enteric bacilli on the basis of the production of phenylpyruvic acid, which is tested for with ferric chloride.

Pike streptococcal b., a liquid selective enrichment medium containing peptones, yeast extract, dextrose, and sodium azide and crystal violet as inhibitory agents, for the isolation of β -hemolytic streptococci.

polymyxin test a's, culture medium containing peptones and dextrose in the base agar, and polysorbate 80 in the seed agar, used in the cylinder plate assay method of polymyxin B according to FDA and USP methods. The base agar is antibiotic culture medium 9, and the seed agar antibiotic culture medium 10.

potato blood a., Bordet-Gengou a.

potato dextrose a., a culture medium containing potato infusion and dextrose, for the culture of yeasts and molds.

proof a., Sabouraud a.

Proskauer-Beck m., a nonselective liquid medium containing asparagine and citrate, for the culture of tubercle bacilli for metabolic and related studies.

protein-free c., a synthetic medium containing calcium chloride, magnesium sulfate, monopotassium acid phosphate, potassium aspartate, sodium chloride, ammonium lactate, and glycerin; called also *Ushinsky's c.*

rice extract a., an extract of white rice solidified with agar, for the identification of *Candida albicans* by favoring the production of chlamydospores.

Robertson's c., a beef heart infusion medium.

Rogosa SL m., a selective culture medium containing tryptose, yeast extract, dextrose, arabinose, sucrose, acetate, citrate, and sorbitan mono-oleate, which may be used in either liquid form or solidified with agar for the culture of lactobacilli.

Rosenow's veal-brain b., a mixture of nutrient bouillon, glucose, and Andrade's indicator, with a few small pieces of crushed calf brain and a few small pieces of crushed marble, autoclaved at 10 pounds.

rosolic acid-peptone c., Dunham's solution containing alcoholic solution of rosolic acid.

Russell's double sugar a., a culture medium containing beef extract, dextrose, lactose, sodium chloride, phenol red, and agar; used to differentiate gram-negative enteric bacilli.

Sabouraud a., a culture medium containing agar, peptone, and dextrose or maltose, pH 5.6, used for the cultivation of fungi; called also *proof a.*

saccharose-mannitol a., nutrient agar containing saccharose, D-mannitol, peptone, beef extract, and phenol red, pH 7.5; used to differentiate enteric bacteria.

Salmonella-Shigella (SS) a., a selective differential culture medium containing beef extract, peptone, lactose, bile salts, sodium and ferric citrates, thiosulfate neutral red, and brilliant green, used for the primary isolation of enteric bacilli, especially *Salmonella* and *Shigella*.

seed a., a culture medium containing peptone, pancreatic digest of casein, yeast extract, beef extract, and dextrose, used for the cylinder plate method of antibiotic assay according to the FDA and USP methods; called also *antibiotic c. 1*. Adjusted to a high pH, it is known as *neomycin assay agar* (q.v.).

selective c., a liquid or solid culture medium that contains inhibitory substances (dyes, tellurite, bile salts, etc.), which allow the growth of the desired microorganism while inhibiting the growth of contaminants.

selenite b., a differential and selective culture medium.

selenite-cystine b., a liquid enrichment medium containing tryptone, lactose, cystine, and sodium acid selenite, for the detection of *Salmonella* in foods, according to FDA and APHA methods.

semisolid c., 1. a culture medium containing 0.5 per cent agar to give it a semisolid consistency; see *motility test medium*. 2. a culture medium containing agar or gelatin that is liquid in the warm state and solid when cooled.

serum b., a mixture of horse serum and nutrient broth.

silicate jelly c., a synthetic medium containing ammonium sulfate, ammonium phosphate, calcium chloride, potassium phosphate, and sodium carbonate, solidified with silicic acid; for the growth of nitrogen-fixing bacteria.

Simmons' citrate a., an inorganic salt medium containing sodium citrate and bromthymol blue, for the differentiation of enteric bacilli on the basis of citrate utilization.

Snyder a., a culture medium containing peptone, dextrose, and bromcresol green, pH 4.8, used for lactobacillus counts as an indicator of dental caries activity.

Soyka's milk-rice c., see *milk-rice c.*

spirit blue a., a culture medium containing tryptone, yeast extract, and spirit blue, to which is added an emulsion of an appropriate lipid for the culture and study of lipolytic microorganisms; colonies of lipolytic bacteria develop a deep blue color beneath and surrounding the colony.

Spirolate b., a culture medium containing peptone, yeast extract, dextrose, thioglycollate, and cysteine, enriched with 10 per cent rabbit or bovine serum, for the mass culture of the Reiter treponeme.

standard methods a., a culture medium containing pancreatic digest of casein, yeast extract, and dextrose, for bacterial counts of milk, etc., according to APHA standard methods.

sterility test b., a culture medium containing pancreatic digest of casein, yeast extract, dextrose, and thioglycollate and cystine, used as an alternative to thioglycollate medium for sterility testing according to NIH and USP methods.

sterility test c., NIH a.

streptomycin assay a. with yeast extract, a culture medium containing beef extract, yeast extract, and peptone, for the assay of streptomycin in accordance with the requirements of FDA and USP; called also *antibiotic c. 5*.

Stuart b., a culture medium containing inorganic salts, asparagine, and thiamine, enriched with rabbit serum containing hemoglobin, and used for the isolation and culture of *Leptospira*.

sugar b., a nutrient or infusion broth containing a sugar and bromthymol blue or bromcresol purple, for the determination of the fermentation characteristics of bacteria.

sulfite a., a culture medium containing peptone and sodium sulfite, for the detection of sulfide-producing thermophilic bacteria in foods according to APHA standard methods.

sulfite polymyxin sulfadiazine (SPS) a., a culture medium containing peptone, yeast extract, iron citrate, sodium sulfite, polymyxin, and sulfadiazine, used as a moderately selective medium for the isolation of *Clostridium welchii* (*perfringens*) from foods.

tartrate c., see *phenol red c.*

TB charcoal a., an agar medium containing yeast extract, peptone, asparagine, citrate, dextrose, oleic acid, charcoal, and ethyl violet, for the culture of tubercle bacilli.

TCBS a., thiosulfate citrate bile salts sucrose a.

tellurite a., a culture medium containing peptones, dextrose, and sodium tellurite, for the primary culture of diphtheria bacilli.

tellurite glycine a., a culture medium containing peptone, yeast extract, mannitol, lithium chloride, and glycine, for the isolation of coagulase-positive staphylococci.

tetrathionate b., a selective enrichment medium containing yeast extract, tryptose, dextrose, mannitol, desoxycholate and brilliant green as inhibitory agents, and sodium thiosulfate, which is converted to tetrathionate by the addition of iodine immediately prior to use; for the isolation of *Salmonella* and related bacteria.

tetrathionate enrichment b., a nutritive enrichment broth.

thiosulfate citrate bile salts sucrose (TCBS) a., a selective medium containing peptone, yeast extract, citrate, thiosulfate,

TABLE OF CULTURE MEDIA (Concluded)

oxgall, sodium cholate, and sucrose, for the primary isolation of *Vibrio cholerae*.

Tindale's m., a base composed of proteose-peptone, sodium chloride, and agar to which is added as enrichment of bovine serum, sodium hydroxide, L-cystine, sodium thiosulfate, and potassium tellurite; used to detect *Corynebacterium diphtheriae*, which form grayish-black colonies surrounded by a black halo.

Todd-Hewitt b., a culture medium containing beef heart infusion, peptone, and dextrose, for the production of streptococcal hemolysis.

tomato juice a., a culture medium containing tomato juice, peptone, and peptonized milk, for the cultivation of lactobacilli; called also *Kulp's c.*

triple sugar iron a., a culture medium containing peptone, lactose, sucrose, dextrose, ferrous ammonium sulfate, sodium thiosulfate, and phenol red, for the differentiation of enteric bacilli.

Trudeau m., an egg yolk-potato medium.

urea a., a culture medium containing peptone, dextrose, urea, and phenol red, for the differentiation of enteric bacilli on the basis of urease activity.

urease test b., a phosphate-buffered culture medium containing yeast extract, urea, and phenol red, used to determine urease activity in the differentiation of *Proteus* from other enteric bacilli.

Uschinsky's c., see *asparagin c.*, def. 2, and *protein-free c.*

cumidine (ku'mī-din). chemical name: 4-amino-1-isopropylbenzene. A liquid base, $C_9H_7 \cdot C_6H_4 \cdot NH_2$, derived from cumic acid.

cu. mm. cubic millimeter.

cumulative (ku'mu-la'tiv) [L. *cumulus* heap] increasing by successive additions, the total being greater than the expected sum of its parts.

cumuli (ku'mu-li) [L.] plural of *cumulus*.

cumulus (ku'mu-lus), pl. *cu'muli* [L.] a little mound. **c. ooph'orous** [NA], **ovarian c.**, **c. ova'ricus**, a solid mass of follicular cells surrounding the ovum in the side of a developing vesicular ovarian follicle; called also *discus oophorus*, *ovigerus*, or *proligerus*; and *germ* or *germ-bearing hillock*.

cuneate (ku'ne-āt) [L. *cuneus* wedge] wedge-shaped.

cunei (ku'ne-i) [L.] plural of *cuneus*.

cuneiform (ku-ne'i-form) [L. *cuneus* wedge + *forma* form] shaped like a wedge.

cuneihysterectomy (ku'ne-i-his'ter-ek'to-me) [L. *cuneus* wedge + *hysterectomy*] (*obs.*) the excision of a wedge-shaped piece from the uterine tissue for the correction of antelexion.

cuneocuboid (ku'ne-o-ku'boid) pertaining to the cuneiform and cuboid bones.

cuneonavicular (ku'ne-o-nah-vik'u-lar) pertaining to the cuneiform and navicular bones.

cuneoscapoid (ku'ne-o-skaf'oid) cuneonavicular.

cuneus (ku'ne-us), pl. *cu'nei* [L. "wedge"] a wedge-shaped lobule of the occipital lobe of the cerebrum on its medial aspect, between the parietooccipital and calcarine sulci.

cuniculi (ku-nik'u-li) [L.] plural of *cuniculus*.

cuniculus (ku-nik'u-lus), pl. *cunic'uli* [L. "rabbit," "rabbit-burrow"] the burrow of an itch mite, *Sarcoptes scabiei*, in the skin.

Cunila (ku-ni'lah) a genus of labiate plants. *C. origanoides* (L.) Butt., of North America (dittany), is the source of a diuretic and diaphoretic tea used by American Indians and early settlers.

cunnilinctus (kun'i-link'tus) cunnilingus.

cunnilinguism (kun'i-ling'gwizm) the practice of cunnilingus.

cunnilingus (kun'i-ling'gus) [L. *cunns* vulva + *lingere* to lick] oral stimulation of the female genitalia.

cunns (kun'us) [L.] pudendum femininum.

CuO cupric oxide.

Cu₂O cuprous oxide.

cuorin (ku'o-rin) a mono-aminodiphosphatide lipid compound isolated from the heart muscle.

cup (kup) 1. a cupping glass. 2. a cup-shaped part or structure.

Diogenes c., poculum Diogenis. **dry c.**, a cupping glass applied to the intact skin in order to induce a flow of blood to the area. **glaucomatous c.**, a form of ocular disk depression peculiar to glaucoma. **Montgomery's c's** (*obs.*), the dilated canals of the tubular glands of the uterus. **ocular c.**, caliculus ophthalmicus. **ophthalmic c.**, caliculus ophthalmicus. **optic c.**, 1. physiologic cup. 2. caliculus ophthalmicus. **physiologic c.**, a depression in the center of the optic disk; called also *excavatio papillae nervi optici* [NA] and *optic c.* **wet c.**, a cupping glass applied to the incised skin in order to abstract blood.

cupola (ku'po-lah) cupula.

cupped (kupt) hollowed out like a cup.

cupping (kup'ing) 1. the application of a cupping glass. 2. the formation of a cup-shaped depression. **pathologic c.**, depression of the optic disk due to disease.

cuprammonia (ku'prah-mo'ne-ah) Schweitzer's reagent.

veal infusion c., see *infusion m.*

Venkatraman-Ramikrishnan m., a sea-salt-containing medium used as a transport medium for *Vibrio cholerae*.

wheat b., a nutritive medium made from wheat flour, magnesium sulfate, potassium nitrate, and glucose, in water.

Wilson-Blair c., an agar culture medium containing beef extract, peptone, dextrose, brilliant green, and bismuth sulfite, for the primary isolation of the typhoid bacillus; called also *bismuth sulfite agar*.

Winogradsky's c., 1. for growing nitrifying organisms: potassium phosphate, magnesium sulfate, calcium chloride, sodium chloride, and ammonium sulfate, in water. 2. for growing nitrosifying organisms: ammonium sulfate, potassium sulfate, and basic magnesium carbonate.

wort a., a solid medium containing malt extract, peptone, maltose, dextrin, and glycerol, used in the cultivation of yeasts.

wort b., the fluid form of wort agar, prepared by omitting the agar.

yeast autolysate c., a solution prepared by incubating yeast in water, kept sterile with chloroform, filtered, and solidified with agar.

zein a., an inorganic salt medium containing the extractives of zein, used for the identification of *Candida albicans* by favoring the production of chlamydospores.

cupremia (ku-pre'me-ah) [L. *cuprum* copper + Gr. *haima* blood + *-ia*] the presence of copper in the blood.

cupric (ku'prik) containing copper in its divalent form (>Cu), and yielding divalent ions (Cu⁺⁺) in aqueous solution. For cupric compounds, see under the salt, e.g., sulfate.

Cuprimine (kup'ri-mēn) trademark for a preparation of penicillamine.

cuprimyxin (kup'ri-mik'sin) chemical name: bis(6-methoxy-1-phenazinol-5,10-dioxido-O',O'')copper; a veterinary antibacterial and antifungal, $C_{28}H_{18}CuN_4O_8$.

cupriuria (ku'pre-u're-ah) the presence of copper in the urine.

cuprous (ku'prus) containing copper in its monovalent form (Cu⁺).

cupruresis (ku'proo-re'sis) [L. *cuprum* copper + Gr. *ourēsis* a making water] the urinary excretion of copper.

cupruretic (ku'proo-ret'ik) [L. *cuprum* copper + Gr. *ourētikos* promoting urine] pertaining to or promoting the urinary excretion of copper.

cupula (ku'pu-lah), pl. *cu'pulae* [L.] a small inverted cup or dome-shaped cap over some structure. **c. of ampullary crest**, *c. cristae ampullaris*. **c. of cochlea**, *c. coch'leae* [NA], the rounded or dome-shaped apex of the spiral cochlear duct. **c. cris'tae ampulla'ris** [NA], a cap of viscid, gelatinous fluid over the crista of the ampulla of the ear; in fixed material this cap stains slightly and is thus differentiated from the rest of the ampullar fluid. Called also *c. of ampullary crest*. **c. of pleura**, *c. pleu'rae* [NA], the domelike roof of the pleural cavity on either side, extending up through the superior aperture of the thorax.

cupulae (ku'pu-le) [L.] plural of *cupula*.

cupulogram (ku'pu-lo-gram") the record, in the form of a tracing, made during cupulometry.

cupulolithiasis (ku'pu-lo-li-thi'ah-sis) the presence of calculi in the cupula of the posterior semicircular duct, a cause of benign paroxysmal positional vertigo.

cupulometry (ku'pu-lom'e-tre) a method of testing vestibular function in which subjects are accelerated and decelerated in a rotational chair and the duration of postrotational vertigo and nystagmus are plotted against angular deceleration.

curage (ku-rahzh') [Fr.] curettage, especially when a finger, rather a curet, is used.

curare (koo-rah're) [South American] a term applied to a wide variety of highly toxic extracts from numerous botanical sources, including various species of *Strychnos*; used originally as arrow poisons in South America. A form extracted from *Chondodendron tomentosum* has been used for the reduction of spasms in tetanus and in shock treatments, in plastic muscular rigidity, spastic paralysis, and similar conditions, and also as an adjunct to general anesthesia. Cf. *tubocurarine*.

curaremetic (koo-rah're-mi-met'ik) having an action similar to that of curare, or producing similar effects.

curari (koo-rah're) curare.

curariform (ku-ra'ri-form) resembling curare.

curarization (ku'rar-i-za'shun) administration of curare until the physiologic effect of the drug is produced.

curative (kūr'ah-tiv) [L. *curare* to take care of] tending to overcome disease and promote recovery.

curb (kurb) a thickening of the metatarsocalcaneal ligament of the horse, causing a swelling at the back of the hock joint and resulting in lameness.

curcumin (kur'ku-min) an orange-yellow, crystalline substance, $C_{21}H_{20}O_6$, which is the coloring principle of turmeric.

curd (kurd) the coagulum of milk, consisting mainly of casein. **alum c.**, a coagulum formed by agitating milk containing a piece of alum. **alum c. of Riverius**, a coagulum prepared with white of an egg and drachm of alum.

cure (kür) [L. *curatio*, from *cura* care] 1. the course of treatment of any disease, or of a special case. 2. the successful treatment of a disease or wound. 3. a system of treating diseases. 4. a medicine effective in treating a disease. **Banting c.**, see under *treatment*. **diet c.**, treatment by the systematic regulation of the diet. **economic c.**, cure of a disease which, while not complete, is sufficient to restore the patient to his wage-earning capacity. **faith c.**, an ancient form of psychotherapy: cure by belief or faith as produced by faith-healers, and shamans. **gold c.** (obs.), Keeley c. **grape c.**, the use of an exclusive diet of grapes; called also *ampelotherapy* and *botryotherapy*. **hunger c.**, the treatment of disease by severe fasting; limotherapy. **Karell's c.**, see under *treatment*. **Keeley c.** (obs.), a proprietary method of treatment for the alcohol and opium habits; called also *gold c.* **liman c.**, a method of treatment that was practiced at Odessa, consisting of bathing in the water of "limans," or sheets of water that have been isolated from the sea and converted into salt lakes: used in cases of scrofula, rickets, chronic rheumatism, and chronic skin diseases. **milk c.**, an exclusive diet of milk as a means of treatment. **mind c.**, psychotherapy. **potato c.**, treatment of foreign bodies in the alimentary canal by ingesting mashed potatoes. **radical c.**, 1. a complete and permanent cure. 2. a treatment involving extensive surgery. **rest c.**, Weir Mitchell treatment. **starvation c.**, the treatment of a disease by a diet markedly restricted in calories. **thirst c.**, treatment by restricting the intake of fluids. **water c.**, hydrotherapy. **whey c.**, treatment by drinking whey. **work c.**, the treatment of neurasthenia by systematically arranged work.

curet (ku-ret') [Fr. *curette* scraper] 1. an instrument for removing material from the uterine cavity. 2. to remove growths or other material from the wall of a cavity or other surface with a spoon-shaped instrument. **Hartmann's c.**, an instrument for removing adenoids.

curettage (ku'rě-tahzh') [Fr.] the removal of growths or other material from the wall of a cavity or other surface, as with a curet; called also *curettement*. **medical c.**, the induction of bleeding from the endometrium by administration and withdrawal of any progestational agent. **periapical c.**, removal with a curet of diseased periapical tissue without excision of the root tip. **suction c.**, vacuum c. **vacuum c.**, removal of the uterine contents, after dilatation, by means of a hollow curet introduced into the uterus, through which suction is applied. Called also *suction c.*, *vacuum aspiration*, and *vacuum extraction*.

curette (ku-ret') [Fr.] curet.

curettement (ku-ret'ment) curettage. **physiologic c.**, enzymatic débridement.

curie (ku're) [Marie Sklodowska Curie, Polish chemist in Paris, 1867-1934, the discoverer of radium, and Pierre Curie, 1859-1906, co-winners, with A. H. Becquerel, of the Nobel prize in physics for 1903, for studies on spontaneous radioactivity; Mme. Curie also received the Nobel prize in chemistry in 1911 for discovery and isolation of radium] a unit of radioactivity, defined as the quantity of any radioactive nuclide in which the number of disintegrations per second is 3.700×10^{10} . Abbreviated *c* and *Ci*.

Curie's law, therapy (ku'rez) [Pierre Curie, French scientist, 1859-1906] see under *law* and *therapy*.

curiegram (ku're-gram) a print made by radium emanation on a sensitized plate.

curie-hour (ku're-owr') a unit of dose equivalent to that obtained by exposure for one hour to radioactive material disintegrating at the rate of 3.7×10^{10} atoms per second. Abbreviated *c-hr*.

curietherapy (ku're-ther'ah-pe) originally, radium or radon therapy; but now applied to therapy given by emanations from any radioactive source.

curing (kür'ing) a method or process of preparing for use, as by aging, heating, etc. **denture c.**, the process by which the denture-base materials are hardened to the form of a denture in a denture mold.

curioscopy (ku're-os'ko-pe) the detection and mapping of objects by means of the nuclear radiations coming from them.

curium (ku're-um) [Pierre and Marie Curie] the chemical element of atomic number 96, atomic weight 247, symbol *Cm*, obtained by cyclotron bombardment of uranium and plutonium.

curling (kür'ling) shaped like a curl or coil, as the appearance of the esophagus in diffuse esophageal spasm.

Curling's ulcer (kür'lingz) [Thomas Blizard Curling, English physician, 1811-1888] see under *ulcer*.

current (kür'ent) [L. *currrens* running] 1. anything that flows. 2. the stream of electricity that moves along a conductor. An electric current is due to a difference of potential between two points, this difference being measured in volts. The volume of flow depends on the difference of potential and the resistance to be overcome and is measured in amperes. The quantity of current is

measured in coulombs. **abnervial c.**, an electric current passing from a nerve to and through a muscle. **action c.**, the current generated in a cell membrane of a nerve or muscle by the action potential; it serves to depolarize adjacent membrane areas beyond the threshold, thus initiating a repetition of the action potential process along the nerve fiber. Called also *nerve-action c.* **alternating c.**, a current that periodically flows in opposite directions. Abbreviated *A.C.* **ascending c.**, centripetal c. **axial c.**, the central colored part of the blood current. **centrifugal c.**, an electric current in the body with the positive pole near the nerve center and the negative at the periphery; called also *descending c.* **centripetal c.**, an electric current passing through the body with the positive electrode on the nerve or at the periphery and the negative near the nerve center: called also *ascending c.* **coagulating c.**, an electric current applied by a needle, ball, or other type of electrode to coagulate tissue. **compensating c.**, an electric current for neutralizing the intensity of a muscle current. **d'Arsonval c.**, a high-frequency, low-voltage current of comparatively high amperage. See also *high-frequency c.* **demarcation c.**, c. of injury. **descending c.**, centrifugal c. **De Watteville c.**, a combined galvanic and faradic current. **direct c.**, a current that flows in one direction only. When used medically it is called the galvanic current; this current has distinct and important polarity and marked secondary chemical effects. **electric c.**, the flow of electricity through a conductor. **electrotonic c.**, a current induced in the sheath of a nerve by a current passing through the conducting part of that nerve, or by an action potential in an adjacent nerve. **fulguration c.**, high-frequency current used in destruction of superficial skin lesions. **galvanic c.**, a steady direct current. **high-frequency c.**, an alternating current having a frequency of interruption or change of direction sufficiently high so that tetanic contractions are not set up when it is passed through living contractile tissues; see *d'Arsonval c.* **induced c.**, electricity in a circuit generated by proximity to another current, i.e., by induction. **c. of injury**, the current flowing between pathologically depolarized areas of excitable tissue (as of the heart) and the normally polarized areas, the injury tissue being negative with respect to the normal tissue. Called also *demarcation c.* **Leduc c.**, an interrupted direct current, each pulse of which is approximately of the same current strength and same duration; formerly used as a general anesthetic agent. **Morton's c.** (obs.), a type of alternating high-frequency current produced by a static machine; called also *static induced c.* **nerve-action c.**, action c. **Oudin c.**, a high-frequency current of higher voltage than the high-frequency currents used for ordinary diathermy treatment. **saturation c.**, the maximum current across an x-ray tube which utilizes for the production of x-rays all the electrons available at the cathode. **static induced c.**, Morton's c. **surgical c.**, an electric current used to achieve surgical dissection or fulguration. **Tesla's c.** (obs.), a high-frequency current of higher voltage than that of the high-frequency currents used for ordinary diathermy treatment, but not so high as that of the Oudin current.

curricula (kur-rik'u-lah) [L.] plural of *curriculum*.

curriculum (kur-rik'u-lum), pl. *curric'ula* [L.] a regular and established course of study.

Curschmann's disease, mask, spiral (koorsh'manz) [Heinrich Curschmann, physician in Leipzig, 1846-1910] see *perihyperplasia chronica hyperplastica*, and see under *mask* and *spiral*.

curse (kurs) an infliction thought to be invoked by a malevolent spirit. **Ondine's c.**, impairment of automatic control of respiration, sometimes due to encephalitis, with voluntary control remaining intact.

Curtius' syndrome (kur'ti-us) [Friedrich Curtius, German internist, born 1896] see under *syndrome*.

curtometer (kur-tom'ě-ter) (obs.) cyrtometer.

curvatura (kur'vah-tu'rah), pl. *curvatu'rae* [L.] [NA] a nonangular deviation from a straight course in a line or surface. **c. ventric'uli ma'jor** [NA], greater curvature of stomach: the left or lateral and inferior border of the stomach, marking the inferior junction of the anterior and posterior surfaces. **c. ventric'uli mi'nor** [NA], lesser curvature of stomach: the right or medial border of the stomach, marking the superior junction of the anterior and posterior surfaces.

curvature (kur'vah-tür) [L. *curvatura*] deviation from a rectilinear direction. **gingival c.**, the curved line following the crest of the gingiva where it is attached to the tooth. **greater c. of stomach**, *curvatura ventriculi major*. **lesser c. of stomach**, *curvatura ventriculi minor*. **occlusal c.**, curve of occlusion; see under *curve*. **Pott's c.**, abnormal posterior curvature of the vertebral column caused by tuberculous caries. **spinal c.**, deviation of the spine from its normal direction or position; see *kyphosis*, *lordosis*, *scoliosis*.

curve (kurv) [L. *curvum*] a nonangular deviation from a straight course in a line or surface. **alignment c.**, the dental curve determined by a line passing through the center of the teeth and paralleling the dental arch. **anti-Monson c.**, reverse c. **audibility c.**, a plotting of the relationship between frequency and the intensity of sound waves necessary to elicit a sensation. **Barnes's c.**, the segment of a circle whose center is the promon-

tory of the sacrum, the concavity being directed dorsally. **buccal c.**, the portion of the curve of occlusion from the mesial surface of the first premolar to the distal surface of the third molar. **c. of Carus**, the normal axis of the pelvic outlet; called also *circle of Carus*. **compensating c.**, the anteroposterior and lateral curvature in the alignment of the occlusal surfaces and incisal edges of artificial teeth, which is used to develop balanced occlusion. **Damoiseau's c.**, Ellis' line. **dental c.**, c. of occlusion. **dissociation c.**, oxygen, oxygen-hemoglobin dissociation c. **dose-effect c.**, **dose-response c.**, a curve indicating the relationship between dose of radiation and the degree of a particular biological effect produced. **dromedary c.**, a temperature or other curve showing two phases of elevation separated by a phase of depression. **dye-dilution c.**, a graph representing the concentration of a fixed dose of a dye (as in the systemic circulation) at specific time intervals; used in studies of cardiac output. **c. of Ellis and Garland**, Ellis' line. **frequency c.**, a curve representing graphically the probabilities of different numbers of recurrences of an event; called also *probability c.* **Garland's c.**, Ellis' line. **gaussian c.**, normal curve of distribution. **growth c.**, the curve obtained by plotting increase in size or numbers against the elapsed time, as a measure of the growth of a child, or the multiplication of microorganisms. **Harrison's c.**, see under *groove*. **inverted-U c. of arousal**, a curve which plots the effects of arousal on a given individual; studies of such curves show that the capacity of sensory stimulation to guide behavior is poor when arousal is very low or very high. **isodose c's**, diagrams delimiting body areas receiving equal quantities of radiation in radiotherapy. **labial c.**, that portion of the curve of occlusion between the distal surfaces of the two canine teeth in the dental arch. **logistic c.**, in biometry, an S-shaped curve to describe the growth of a population in an area of fixed limits. **Monson c.**, a curve of occlusion conforming to a segment of the surface of a sphere 8 inches in diameter, with its center in the region of the glabella. **muscle c.**, myogram. **normal c. of distribution**, the symmetrical bell-shaped curve that is usually produced by plotting a single variable. **c. of occlusion**, a curved line determined by the occlusal surfaces and incisal edges of the existing teeth, when viewed from the lateral aspect; called also *dental curve*, *occlusal curvature*, and *Spee's curve*. **oxygen dissociation c.**, **oxygen-hemoglobin dissociation c.**, **oxyhemoglobin dissociation c.**, a graphic curve representing the normal variation in the amount of oxygen which combines with hemoglobin as a function of the partial pressures of oxygen and carbon dioxide. The dissociation curve is said to shift to the right when less than a normal amount of oxygen is taken up by the blood at a given PO_2 , and to shift to the left when more than a normal amount is taken up. Factors influencing the shape of the curve include changes in the blood pH, PCO_2 , and temperature, the presence of carbon monoxide, alterations in the constituents of the erythrocytes, and certain disease states. **Price-Jones c.**, a graphic curve representing the variation in the size of the red blood corpuscles. **probability c.**, frequency c. **pulse c.**, sphygmogram. **reverse c.**, a curve of occlusion which is convex upward. **Spee's c.**, c. of occlusion. **temperature c.**, a graphic tracing showing variations in body temperature. **tension c's**, lines observed in the arrangement of the cancellous tissue of bones, depending on the directions of tension exerted on the bones. **visibility c.**, a plotting of the relationship between wavelength and the intensity of light necessary to elicit a sensation. **Wunderlich's c.**, the typical variation shown by the temperature in a patient with typhoid fever.

cuscamidine (kus-kam'i-din) a cinchona alkaloid.

cuscamine (kus-kam'in) a cinchona alkaloid.

cuscohygrine (kus-ko-hi'grin) an alkaloid, $C_{13}H_{24}ON_2$, from cusco leaves; called also *bellardine*.

Cushing's disease, law, syndrome, etc. (koosh'ingz) [Harvey Williams Cushing, Boston surgeon, 1869-1939] see under *disease, law, operation, phenomenon, and syndrome*.

Cushing's suture (koosh'ingz) [Hayward W. Cushing, Boston surgeon, 1854-1934] see under *suture*.

cushingoid (koosh'ing-oid) resembling Cushing's syndrome; said of signs and symptoms.

cushion (koosh'un) a fleshy, padlike anatomical structure. **coronary c.**, see under *band*. **digital c.**, a wedge-shaped mass of white and elastic fibers, containing fat and cartilage, overlying the frog of a horse's foot. **endocardial c's**, elevations on the atrioventricular canal of the embryonic heart, which later fuse with the free edge of the septum primum to separate the right and left atria. **c. of epiglottis**, 1. petiolus epiglottidis. 2. tuberculum epiglotticum. **eustachian c.**, c. of *eustachian orifice*, torus tubarius. **intimal c's**, longitudinal thickenings of the intima of certain arteries, e.g., the penile arteries, formed by prominent local concentrations of smooth muscle fibers; they serve functionally as valves, controlling blood flow by occluding the lumen of the artery. **Passavant's c.**, see under *bar*. **plantar c.**, a wedge-shaped mass of elastic tissue overlying the frog of a horse's foot. **sucking c.**, corpus adiposum buccae.

cuscohygrine (kus'ko-hi'grin) cuscohygrine.

cuspid (kusp) [L. *cuspid* point] a tapering projection; especially (a) one of the triangular segments of a cardiac valve (see under *cuspid*), or (b) a notably pointed or rounded eminence making up a divisional part of the masticating surface of a tooth, usually designated according to its position in relation to the axial surfaces of the tooth. Called also *cuspid dentis* [NA] and *tuberculum* (pl. *tubercula*) *coronae dentis*. Those of the maxillary first molar are: mesiobuccal, mesiolingual, distobuccal, and distolingual. **aortic c.**, cuspid anterior valvae atrioventricularis sinistrae. **Carabelli c.**, a fifth, or supplemental, cusp, sometimes found lingual to the mesiolingual cusp of the maxillary first molar tooth; called also *Carabelli's tubercle*. **semilunar c.**, any of the semilunar segments of the aortic valve (having posterior, right, and left cusps) or the pulmonary valve (having anterior, right, and left cusps); called also *valvula semilunaris*.

cuspid (kusp'id) 1. having one cusp or point. 2. a canine tooth.

cuspidate (kus'pi-dät) [L. *cuspidatus*] having a cusp or cusps.

cuspides (kus'pi-déz) [L.] plural of *cuspid*.

cuspid (kus'pis), pl. *cuspides* [L.] 1. a tapering projection or structure, applied especially to one of the triangular segments of a cardiac valve. 2. a cusp of a tooth. **c. ante'rior val'vae atrioventricularis dex'trae** [NA], the anterior of the cusps of the right atrioventricular valve; called also *c. anterior valvulae tricuspidalis*. **c. ante'rior val'vae atrioventricularis sinis'trae** [NA], the anterior of the cusps of the left atrioventricular valve; called also *c. anterior valvulae bicuspidalis* and *aortic cusp*. **c. ante'rior val'vulae bicuspidalis**, c. anterior valvae atrioventricularis sinistrae. **c. ante'rior val'vulae tricuspidalis**, c. anterior valvae atrioventricularis dextrae. **c. den'tis** [NA], a notably pointed or rounded eminence of the masticating surface of a tooth; see *cuspid*. **c. media'lis val'vulae tricuspidalis**, c. septalis valvae atrioventricularis dextrae. **c. poste'rior val'vae atrioventricularis dex'trae** [NA], the posterior of the cusps of the right atrioventricular valve; called also *c. posterior valvulae tricuspidalis*. **c. poste'rior val'vae atrioventricularis sinis'trae** [NA], the posterior of the cusps of the left atrioventricular valve; called also *c. posterior valvulae bicuspidalis*. **c. poste'rior val'vulae bicuspidalis**, c. posterior valvae atrioventricularis sinistrae. **c. poste'rior val'vulae tricuspidalis**, c. posterior valvae atrioventricularis dextrae. **c. septa'lis val'vae atrioventricularis dex'trae** [NA], the cusp of the right atrioventricular valve which is attached to the membranous interventricular septum; called also *c. medialis valvulae tricuspidalis*.

cutaneous (ku-ta'ne-us) [L. *cutis* skin] pertaining to the skin.

cutdown (kut'down) creation of a small, incised opening, especially over a vein (venous cutdown), to facilitate venipuncture and permit the passage of a needle or cannula for the withdrawal of blood or administration of fluids.

Cuterebra (ku-ter-e'brah) a genus of botflies of the family Oestridae (often included in the family Cuterebridae), whose larvae commonly infest rodents.

Cuterebridae (ku'te-reb'ri-de) a family of New World batflies (order Diptera), the larvae of which parasitize various mammals, including man.

cuticle (ku'te-kl) [L. *cuticula*, from *cutis* skin] 1. a layer of more or less solid substance which covers the free surface of an epithelial cell. 2. eponychium (def. 1). **dental c.**, cuticula dentis. **enamel c.**, cuticula dentis. **keratose c.**, the outer surface layer of the pigment cells of the eye. **c. of root sheath**, a layer of cells lining the hair follicles.

cuticula (ku-tik'u-lah), pl. *cuticulae* [L. "little skin"] 1. a horny secreted layer. 2. (obs.) epidermis. **c. den'tis** [NA], the dental cuticle: the calcified epithelial remnants on the enamel of a tooth following the complete formation of the enamel; called also *enamel cuticle* and *Nasmyth's membrane*.

cuticulae (ku-tik'u-le) [L.] plural of *cuticula*.

cuticularization (ku-tik'u-lar-i-za'shun) the growth of new skin over a wound; epithelialization.

cuticulin (ku-tik'u-lin) a lipoprotein containing a large amount of fatty material, which is a constituent of the epicuticle and procuticle of certain arthropods and crustaceans.

cuticulum (ku-tik'u-lum) cuticula. **Flechsigs' c.**, a layer of flat cells on the external surface of the neuroglia.

cutidure (ku'ti-dür) coronary band.

cutiduris (ku'ti-du'ris) coronary band.

cutin (ku'tin) [L. *cutis* skin] 1. a waxy substance which, combined with cellulose, forms the cuticle of plants. 2. a preparation of the gut of the ox used as a substitute for catgut and silk and as a dressing for wounds.

cutinization (ku'tin-i-za'shun) the operation of lining a cavity, such as a fistulous cavity in bone, with skin.

cutireaction (ku'tä-re-ak'shun) [L. *cutis* skin + *reaction*] an inflammatory or irritative reaction on the skin, occurring in certain infectious diseases, on the application to or injection into the skin of a preparation of the organism causing the disease. Such reactions occur in glanders, leprosy, syphilis, tinea, tuberculosis, typhoid fever, etc. Called also *cutaneous reaction*, and *dermoreaction*. See the following reactions or tests: *Deehan's typhoid*

reaction, Dick test, Lautier's test, Lignière's test, Moro's reaction, Noguchi's luetin reaction, pallidin reaction, Pirquet's reaction, Schick test, typhoidin test. **differential c.**, cutaneous inoculation at one and the same time of old tuberculin, a filtrate of human tubercle bacilli, and a filtrate of bovine tubercle bacilli in order to determine whether the patient is tuberculous or not, and if he is, whether the infection is human or bovine. **von Pirquet's c.**, Pirquet reaction.

cutis (ku'tis) [L.] [NA] the skin: the outer protective covering of the body, consisting of the epidermis and the corium, or dermis, and resting upon the subcutaneous tissues. **c. anseri/na** [L. "goose skin"], a transitory localized change in the skin surface caused by elevation of the hair follicles as a result of contraction of the arrectores pilorum muscles, a reflection of sympathetic nerve discharge. Called also *gooseflesh*. **c. elas'tica**, Ehlers-Danlos syndrome. **c. hyperelas'tica**, Ehlers-Danlos syndrome. **c. lax'a**, a congenital hereditary disorder in which the skin and subcutaneous tissues hypertrophy, the skin hanging in folds as a result; it is usually transmitted as an autosomal recessive trait, but a dominant mode of inheritance has been reported. Called also *chalazodermia*, *c. pendula*, and *dermatolysis*. **c. marmora'ta**, a transitory mottling of the skin sometimes occurring on exposure of the skin to cold. Cf. *livedo reticularis*. **c. pen'dula** [L. "hanging skin"], *c. laxa*. **c. pen'silis**, *c. laxa*. **c. rhomboida'lis nu'chae**, a thickened and furrowed condition of skin exposed for many years to the sun, especially on the back of the neck. **c. ver'ticis gyra'ta**, enlargement and thickening of the skin of the scalp, which lies in folds resembling gyri and sulci of the brain.

cuvette (ku-vet') [Fr. dim. of *cuve* vat or tub] a glass container, generally possessing well-defined characteristics with regard to dimensions (particularly thickness) and optical properties, and generally used to examine colored and colorless solutions free of turbidity, but also used to examine the light scattering of turbid suspensions, such as bacterial suspensions. Its area of usefulness is determined to a large extent by the chemical composition of the glass: a *silica cuvette* is used for examination of materials in the ultraviolet region of the spectrum; a *Pyrex cuvette* is used for examination of materials in the visible range.

Cuvier's canal, duct (sinus) (koo've-üz') [Georges Léopold Chrétien Frédéric Dagobert, Baron de la Cuvier, French naturalist, 1769-1832] see *ductus venosus*, and see under *duct*.

CV cardiovascular.

C.V. abbreviation for *L. cras ves'pere*, tomorrow evening, and *L. conjuga'ta ve'ra*, true conjugate diameter of the pelvic inlet.

CVA costovertebral angle; cerebrovascular accident; cardiovascular accident.

C.V.D. color-vision-deviant (showing anomalies of color vision), or color vision deviate (an individual showing anomalies of color vision).

C.V.O. abbreviation for *L. conjuga'ta ve'ra obstet'rica*, obstetric conjugate diameter of the pelvic inlet.

CVP central venous pressure.

CVS cardiovascular system.

Cwt. hundredweight.

Cx. cervix; convex.

Cy symbol for *cyanogen*.

cyan- see *ciano-*.

cyanamide (si-an'ah-mid) 1. carbamic acid nitril, $\text{CN} \cdot \text{NH}_2$ or $\text{NH} \cdot \text{C} \cdot \text{NH}$, the anhydride of urea. 2. calcium cyanamide.

cyanate (si'ah-nät) a salt of cyanic acid which contains the radical CNO.

cyanhematin (si'an-hem'ah-tin) a compound of cyanogen and hematin.

cyanhemoglobin (si'an-he'mo-glo'bin) a compound formed in the blood by the action of hydrocyanic acid on hemoglobin; it gives the blood a bright red color.

cyanide (si'ah-nid) any binary compound of cyanogen; the term is often used alone to mean hydrogen cyanide (see under *hydrogen*). **mercuric c.**, a colorless, very poisonous salt, $\text{Hg}(\text{CN})_2$.

cyanin (si'ah-nin) a coumarin glycoside, $\text{C}_{27}\text{H}_{30}\text{O}_{16}$; its aglycon is cyanidin, and it is used as an indicator with a pH of 7 to 8.

cyanmethemoglobin (si'an-met'he-mo-glo'bin) a crystalline substance formed by the action of hydrocyanic acid on methemoglobin in the cold or on oxyhemoglobin at the body temperature: the pigment most widely employed in clinical hemoglobinometry.

cyanmetmyoglobin (si'an-met-mi'o-glo'bin) a compound formed from metmyoglobin by addition of the cyanide ion to yield reduction to the ferrous state.

ciano-, cyan- (si'ah-no; si'an) [Gr. *kyanos* blue] a combining form denoting blue.

cianoalcohol (si'ah-no-al'ko-hol) cyanohydrin.

Cyanobacteria (si'ah-no-bak-tēr'e-ah) Cyanophyceae.

cyanocobalamin (si'ah-no-bal'ah-min) a water-soluble hematopoietic vitamin (vitamin B_{12}), $\text{C}_{63}\text{H}_{88}\text{CoN}_{14}\text{O}_{14}\text{P}$, found in the liver, fish meal, eggs, and other natural products, or produced from cultures of *Streptomyces griseus*, which combines with

intrinsic factor for intestinal absorption and which is needed for maturation of erythrocytes. Absence of intrinsic factor leads to malabsorption of cyanocobalamin and results in pernicious anemia. The official preparation, prepared in accordance with USP specifications, is used in the prophylaxis and treatment of pernicious anemia and other macrocytic anemias, usually administered intramuscularly or subcutaneously. Called also *antipernicious anemia factor*, *extrinsic factor*, and *LLD factor*. See also *Castle's factor*, under *factor*. **radioactive c.**, cyanocobalamin in which a portion of the molecules contain cobalt of mass number 57 (^{57}Co), 58 (^{58}Co), or 60 (^{60}Co), used as a diagnostic aid in pernicious anemia.

cyanocrystallin (si'ah-no-kris'tal-lin) a blue coloring matter from the integument of decapods.

cyanofom (si-an'o-form) a crystalline substance, $\text{CH}(\text{CN})_3$, formed by the action of potassium cyanide on chloroform.

cyanogen (si-an'o-jen) [*ciano-* + Gr. *gennan* to produce] the radical $\text{CN}-$; also NCCN (dicyanogen dicyan, ethanedinitrile), the latter an exceedingly poisonous gas. Symbol *Cy*. **c. bromide**, a highly toxic lacrimatory war gas, BrCN . **c. chloride**, a gas, ClCN , used for fumigating houses, ships, etc. It is as lethal for rats and other vermin as hydrocyanic acid, but less dangerous to man, as it causes lacrimation.

cyanogenesis (si'ah-no-jen'ě-sis) [*ciano-* + Gr. *genesis* production] the formation or production of cyanogen or hydrocyanic acid.

cyanogenetic (si'ah-no-jě-net'ik) producing cyanogen or hydrocyanic acid.

cyanohydrin (si'ah-no-hi'drin) a compound formed by the addition of hydrocyanic acid to the aldehyde or ketone group; called also *cianoalcohol*.

cyanolabe (si'ah-no-lāb') [*ciano-* + Gr. *lambanein* to take] name proposed for the pigment in retinal cones that is more sensitive to the blue range of the spectrum than are the other retinal pigments. Cf. *chlorolabe* and *erythrolabe*.

cyanophil (si-an'o-fil) 1. cyanophilous. 2. a cell or other histologic element readily stainable with blue.

cyanophilous (si'ah-noff'i-lus) [*ciano-* + Gr. *philein* to love] stainable with blue dyes.

cyanophoric (si'ah-no-för'ik) yielding hydrocyanic acid; e.g., the glycoside amygdalin yields HCN on hydrolysis.

cyanophose (si'ah-no-fōz) [*ciano-* + Gr. *phōs* light] a blue phase.

Cyanophyceae (si'ah-no-fi'se-e) [*ciano-* + Gr. *phykos* seaweed] in some systems of classification, a division of the kingdom Procaryotae that includes the blue-green algae (blue-green bacteria), which are unicellular or filamentous microorganisms that are immobile or move by gliding, and usually reproduce by fission. They are photosynthetic and fix nitrogen in both soil and aquatic environments, and are often used as indicators of eutrophication of lakes and streams. Called also *Cyanobacteria* and *Schizophyceae*.

cyanopia (si'ah-no'pe-ah) cyanopsia.

cyanopsia (si'ah-nop'se-ah) [*ciano-* + Gr. *opsis* vision + *-ia*] a visual defect in which all objects appear to have a blue tinge.

cyanopsin (si'ah-nop'sin) [*ciano-* + Gr. *opsis* vision] a visual pigment of bluish tint found in the retinal cones of some animals and important for vision.

cyanose (si'ah-nōs') [Fr.] cyanosis. **c. tardive'**, tardive cyanosis.

cyanosid (si'ah-nōsd) cyanotic.

cyanosis (si'ah-no'sis) [Gr. *kyanos* blue] a bluish discoloration, applied especially to such discoloration of skin and mucous membranes due to excessive concentration of reduced hemoglobin in the blood. **autotoxic c.**, enterogenous c. **c. bul'bi**, 1. congenital violet flecks in the sclera (Liebisch). 2. bluish discoloration of the white of the eye in cyanosis (Hirschfeld). **central c.**, cyanosis produced as a result of arterial unsaturation, the aortic blood carrying reduced hemoglobin. **enterogenous c.**, a syndrome due to absorption of nitrites and sulfides from the intestine, principally marked by methemoglobinemia and/or sulfhemoglobinemia associated with cyanosis. It is accompanied by severe enteritis, abdominal pain, constipation or diarrhea, headache, dyspnea, dizziness, syncope, anemia, and, occasionally, digital clubbing and indicanuria. Called also *Stokvis' disease*, *Stokvis-Talma syndrome*, *van den Bergh's disease*, and *autotoxic cyanosis*. **false c.**, cyanosis due to the presence of pigment and not to deficient oxygenation of the blood. **hereditary methemoglobinemic c.**, cyanosis caused by a structural variant in the hemoglobin molecule, i.e., one of the M hemoglobins, or by a deficiency of NADH-methemoglobin diaphorase, inherited as an autosomal recessive trait. **c. lie'nis**, passive congestion of the spleen. **peripheral c.**, cyanosis produced as a result of an excessive amount of reduced hemoglobin in the venous blood, caused by extensive oxygen extraction at the capillary level. **pulmonary c.**, central cyanosis caused by poor oxygenation of the blood in the lungs. **c. ret'inae**, distinct cyanosis of the retina, observable in some cases of cyanotic congenital heart disease, patent ductus arteriosus, and other congenital cardiac anomalies.

CHANGES IN MENSTRUAL CYCLE IN HUMAN FEMALE

Solid lines indicate course of events when ovum is not fertilized; dotted lines indicate course of events when fertilization occurs. Actions of hormones of pituitary and ovary in regulating the cycle are indicated by arrows. (Villeg.)

shunt c., central cyanosis caused by mixing of unoxygenated blood with the arterial blood in the heart or great vessels. **tardive c.**, cyanosis in congenital heart disease which appears only after cardiac failure has developed; called also *cyanose tardive*.

cyanotic (si-ah-not'ik) pertaining to or characterized by cyanosis.

Cyantín (si-an'tin) trademark for a preparation of nitrofurantoin.

cyanuria (si'ah-nu're-ah) the passage of blue urine.

cyanurín (si'ah-nu'rin) [cyan- + Gr. *ouron* urine] indigo blue found in the urine on the addition of a mineral acid to it.

Cyath. abbreviation for L. *cyathus*, a glassful.

cybernetics (si'ber-net'iks) [Gr. *kybernētēs* helmsman] the science of the processes of communication and control in the animal and in the machine.

cycasin (si'kah-sin) a toxic principle, methylazoxymethanol β -glucoside, $C_8H_{16}N_2O_7$, from the seeds of *Cycas revoluta* Thumb. and *C. circinalis* L., (Cycadaceae), native to Guam; it is neoplastic to the liver, kidneys, intestine, and lungs.

cyclacillin (si'klah-sil'in) chemical name: 6-(1-aminocyclohexanecarboxamido)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo-[3.2.0]heptane-2-carboxylic acid; an antibacterial agent, $C_{15}H_{23}N_3O_4S$, effective against a wide range of gram-negative and gram-positive organisms.

Cyclaine (si'klān) trademark for preparations of hexylcaine hydrochloride.

cyclamate (si'klah-māt) any salt of cyclamic acid. Cyclamate calcium and cyclamate sodium were once used widely as non-nutritive sweeteners, but because of an association with bladder tumors in animals they were banned as food additives in the United States in 1969.

Cyclamen (sik'lah-men) [L.] a genus of primulaceous plants. *C. europaeum* L., has an acrid, cathartic root, and is listed as a poisonous plant by European references, although it is a fairly common house plant in the United States.

cyclamin (sik'lah-min) a glycoside, $C_{20}H_{34}O_{10}$, from *Cyclamen europaeum*; it is strongly purgative and emetic.

Cyclamycin (si'klah-mi'sin) trademark for a preparation of troleandomycin.

cyclandelate (si-klan'dē-lāt) chemical name: α -hydroxybenzeneacetic acid 3,3,5-trimethylcyclohexyl ester. An antispasmodic, $C_{17}H_{24}O_3$, with a direct effect on vascular smooth muscle, occurring as a white to pale yellow, crystalline powder; used as a vasodilator mainly in peripheral vascular diseases, administered orally.

cyclarthrodial (sik'lar-thro'de-al) pertaining to a cyclarthrosis.

cyclarthrosis (sik'lar-thro'sis) [Gr. *kyklos* circle + *arthrosis*] a joint that permits rotation.

cyclase (si'klās) an enzyme that catalyzes the formation of a cyclic phosphodiester. **adenyl c.**, **adenylate c.**, see under *adenyl*.

cyclazocine (si'klah-zo'sēn) chemical name: 3-(cyclopropylmethyl)-1,2,3,4,5,6-hexahydro-6,11-dimethyl-2,6-methano-benzazocin-8-ol. A narcotic antagonist, $C_{18}H_{25}NO$, which has been used as an analgesic and in the treatment of narcotic dependence.

cycle (si'kl) [Gr. *kyklos* circle] a round or succession of observable phenomena, recurring usually at regular intervals and in the same sequence. **aberrant c.**, one that shows variation in the interval or the sequence of events. **anovulatory c.**, a sexual cycle in which no ovum is discharged. **asexual c.**, generation by budding or division of the parent organism. **biliary c.**, Schiff's biliary c. **Calvin c.**, a dark reaction occurring in photosynthesis in plants in which carbon dioxide is affixed to a five-carbon sugar molecule and subsequently reduced to form other sugars. **carbon c.**, the steps by which carbon (in the form of carbon dioxide) is extracted from the atmosphere by living organisms and ultimately returned to the atmosphere. It comprises a series of interconversions of carbon compounds beginning with the production of carbohydrates by plants during photosynthesis, proceeding through animal consumption, and ending and beginning again in the decomposition of the animal or plant or in the exhalation of carbon dioxide by animals. **cardiac c.**, a complete cardiac movement or heart beat. The period from the beginning of one heart beat to the beginning of the next; the systolic and diastolic movement, with the interval between them. **cell c.**, the cycle of biochemical and morphological events occurring in a reproducing cell population; it consists of: the *S phase*, occurring toward the end of interphase, in which DNA is synthesized; the *G₂ phase*, a relatively quiescent period; the *M phase*, consisting of the four phases of mitosis; and the *G₁ phase* of interphase, which lasts until the *S phase* of the next cycle. **chewing c.**, masticating c. **citric acid c.**, tricarboxylic acid c. **Cori c.**, the cycle in carbohydrate metabolism in which muscle glycogen is converted to lactate (glycolysis) during muscle activity and is carried by the blood to the liver, where it is converted to glucose (gluconeogenesis); the glucose is then carried by the blood to muscle, where it is converted to muscle glycogen. Called also *glucose-lactate c.* **cytoplasmic c.**, that stage in the life of a parasite during which it lives in cytoplasm of the cells of the host. **Embden-Meyerhof c.**, see under *pathway*. **endogenous c.**, that portion of the life of a parasite which is spent within the body of its host. **estrous c.**, the recurring periods of heat, or estrus, in the adult female of most mammals and the correlated changes in the reproductive tract from one period to the next. See also *metestrus*, *diestrus*, and *proestrus*. **exogenous c.**, that part of the life of a parasite which is spent outside the body of its definitive host. **forced c.**, a cardiac cycle that is interrupted by a forced beat. **gastric c.**, rhythmic alterations in the shape of the stomach due to peristaltic waves.

TRICARBOXYLIC ACID (KREBS) CYCLE

Diagrammatic representation of reactions by which carbon chains of sugars, fatty acids, and amino acids are metabolized to yield carbon dioxide, water, and high-energy phosphate bonds. Key to enzymes (circled numbers): 1 = pyruvate dehydrogenase. 2 = citrate synthase. 3 = aconitrate dehydrogenase. 4 = isocitric dehydrogenase. 5 = α -ketoglutarate dehydrogenase. 6 = succinyl-CoA synthetase. 7 = succinate dehydrogenase. 8 = fumarate hydratase (fumarase). 9 = malate dehydrogenase. (Mazur and Harrow.)

genesial c., the reproductive period of a woman's life. **glucose-lactate c.**, Cori c. **glyoxylate c.**, a metabolic pathway by which certain microorganisms and plants convert fat to carbohydrate, the enzymes of which are contained in microbodies known as *glyoxosomes*; it is a modification of the tricarboxylic acid cycle but differs in that two auxiliary enzymes (isocitrate and malate synthetase) are used and two molecules of acetyl coenzyme A instead of one are required. **Golgi's c.**, that cycle in the life of a plasmodium which is passed in human blood. Cf. Ross's c. **gonotrophic c.**, the interval in the life of an insect between the time of feeding to deposition of the ova. **hair c.**, the successive phases in the production of hair, from initiation of its growth to its loss from the follicle, consisting of anagen, catagen, and telogen. **Hodgkin c.**, a regenerative, circular sequence of events between depolarization and permeability to sodium occurring in excitable cells: depolarization increases permeability to sodium, thus increasing the entry of sodium (Na^+) into the cell, and the increased concentration of Na^+ further depolarizes the membrane. **intranuclear c.**, that stage in the life of a microorganism during which it lives in the nuclei of the cells of the host. **isohydric c.**, the series of chemical reactions in the erythrocyte, in which the uptake of CO_2 and the release of O_2 is accomplished without the production of an excess of hydrogen ions (H^+). **Krebs' c.**, tricarboxylic acid c. **Krebs-Henseleit c.**, urea c. **life c.**, the successive events in the life history of an organism; for example, the entire life of a protozoan blood parasite, including the endogenous and exogenous cycles. **mammary c.**, the rhythmic growth of mammary glands after menarche occurring in coordination with the ovarian cycle. **masticating c.**, a complete course of movement of the mandible performed in mastication of food, from midline position back to the midline. Called also *chewing c.* **menstrual c.**, the period of the regularly recurring physiologic changes in the endometrium, occurring during the reproductive period of human females and a few primates, culminating in partial shedding of the endometrium and some bleeding per vagina (menstruation); see illustration. **mosquito c.**, that period of the life of a malarial parasite that is spent in the body of the mosquito host. **nitrogen c.**, the steps by which nitrogen is extracted from the nitrates of soil and water, incorporated as amino acids and proteins in living organisms, and ultimately reconverted to nitrates: (1) conversion of nitrogen to nitrates by bacteria; (2) the extraction of the nitrates by plants and the building of amino acids and proteins by adding an amino group to the carbon compounds produced in photosynthesis; (3) the ingestion of plants by animals, and (4) the return of nitrogen to the soil in animal excretions or on the death and decomposition of plants and animals. **oogenetic c.**, ovarian c. **ornithine c.**, urea c. **ovarian c.**, the sequence of physiologic changes in the ovary, including development and rupture of the follicle, discharge of the ovum, and corpus luteum formation and regression; called also *oogenetic c.* **pregnancy c.**, cycle of physiologic changes in reproductive organs during pregnancy. **reproductive c.**, the cycle of physiologic changes occurring in the reproductive organs, from the time of fertilization of the ovum through gestation and parturition. **restored c.**, a cardiac cycle following a returning cycle and taking up the normal rhythm. **returning c.**, a cardiac cycle that begins with an extrasystole. **Ross's c.**, that cycle in the development of a plasmodium which is passed in the mosquito. Cf. Golgi's c. **Schiff's biliary c.**, the cycle in which bile salts in the bile are absorbed by the intestinal villi and are then conveyed back to the liver, where they are used over again; see also *enteroheptic circulation*, under *circulation*. **schizogenic c.**, **schizogenous c.**, the asexual cycle in protozoa during which growth and segmentation occur. **sex c.**, **sexual c.**, 1. the physiologic changes recurring regularly in the genital organs of female mammals when pregnancy does not supervene. 2. the period of sexual reproduction in an organism that also reproduces asexually. **sporogenic c.**, **sporogenous c.**, the sexual cycle in protozoa that is usually passed in another host, often an insect. **tricarboxylic acid c.**, the cyclic metabolic mechanism by which the complete oxidation of the acetyl moiety of acetyl-coenzyme A is effected; see *diagram*. Called also *Krebs' c.* and *citric acid c.* **urea c.**, a cyclic series of reactions that produce urea, a major route for removal of the ammonia produced in the metabolism of amino acids in the liver and kidney; arginine is hydrolyzed (catalyzed by arginase) to ornithine and urea in the soluble cytoplasm, the ornithine then being converted to citrulline in the mitochondria by the addition of the carbamyl group from carbamyl phosphate, and subsequently to arginine by the transfer of nitrogen from aspartate. The arginine is again hydrolyzed to ornithine and urea, and so on. Called also *ornithine c.* and *Krebs-Henseleit c.* **uterine c.**, the phenomena occurring in the endometrium during the estrous or menstrual cycle, preparing it for implantation of the blastocyst. **vaginal c.**, the rhythmic alteration occurring in the epithelial lining of the vagina in conjunction with the ovarian cycle.

cyclectomy (sik-lek'to-me) [Gr. *kyklos* circle, ciliary body + *ek-tomē* excision] 1. excision of a piece of the ciliary body. 2. excision of a portion of the ciliary border of the eyelid.

cyclencephalus (sik'len-sef'ah-lus) [Gr. *kyklos* circle + *enke-*

phalos brain] a monster with the cerebral hemispheres blended into one.

cyclic (sik'klik, sik'lik) [Gr. *kyklikos*] pertaining to or occurring in a cycle or cycles; the term is applied to chemical compounds that contain a ring of atoms in the nucleus. See *closed chain*, under *chain*.

cyclicotomy (sik'le-kot'o-me) cyclotomy.

cyclindole (si-klin'döl) chemical name: 2,3,4,9-tetrahydro-*N,N*-dimethyl-1*H*-carbazol-3-amine; an antidepressant, $\text{C}_{14}\text{H}_{18}\text{N}_2$.

cyclitis (sik-li'tis) [Gr. *kyklos* ciliary body + *-itis*] inflammation of the ciliary body. **heterochromic c.**, chronic cyclitis producing difference in the color of the two irides, the inflamed eye having the lighter iris. **plastic c.**, cyclitis with exudation of fibrinous matter into the anterior chamber. **pure c.**, inflammation of the ciliary body without involvement of the iris. **purulent c.**, suppuration in the ciliary body. **serous c.**, simple inflammation of the ciliary body.

cyclizine (sik'kli-zēn) [USP] chemical name: 1-(diphenylmethyl)-4-methylpiperazine. An antihistaminic, $\text{C}_{18}\text{H}_{22}\text{N}_2$, occurring as a white, or creamy white, crystalline powder; used in the form of the lactate salt as an antiemetic and antinauseant, especially for the prevention and relief of motion sickness, administered intramuscularly. **c. hydrochloride** [USP], the monohydrochloride salt of cyclizine, $\text{C}_{18}\text{H}_{22}\text{N}_2 \cdot \text{HCl}$, occurring as a white, crystalline powder or small, colorless crystals, having the same actions and uses as the base; administered orally. **c. lactate**, see *cyclizine*.

cyclo- (sik'klo) [Gr. *kyklos* circle] a combining form denoting round or recurring; see *cyclic*. Often used with particular reference to the eye, or to the ciliary body of the eye.

cycloanemization (sik'klo-an'ē-mi-za'shun) Kettesy's name for his procedure of obstructing the long ciliary arteries in the surgical treatment of glaucoma.

cyclobarbitol (sik'klo-bar'bi-tal) chemical name: 5-(1-cyclohexen-1-yl)-5-ethylbarbituric acid. A short-acting barbiturate, $\text{C}_{12}\text{H}_{18}\text{N}_2\text{O}_3$, mainly used as a hypnotic; administered orally. **c. calcium**, the calcium salt of cyclobarbitol, $\text{C}_{24}\text{H}_{30}\text{CaN}_4\text{O}_6$, having actions and uses similar to those of the base; administered orally.

cyclobenzazole (sik'klo-ben'dah-zöl) chemical name: [5-(cyclopropylcarbonyl)-1*H*-benzimidazol-2-yl]carbamic acid methyl ester; an anthelmintic, $\text{C}_{13}\text{H}_{13}\text{N}_3\text{O}_3$.

cyclobenzaprine hydrochloride (sik'klo-ben'zah-prēn) [USP] chemical name: 3-(5*H*-dibenzo[*a,d*]cyclohepten-5-ylidene)-*N,N*-dimethyl-1-propanamine hydrochloride; a muscle relaxant, $\text{C}_{20}\text{H}_{21}\text{N} \cdot \text{HCl}$.

cyclocephalus (sik'klo-sef'ah-lus) [*cyclo-* + Gr. *kephalē* head] a cyclops.

cyclokeratitis (sik'klo-ser'ah-ti'tis) cyclokeratitis.

cyclochoroiditis (sik'klo-ko'roid-i'tis) [*cyclo-* + *choroid*] inflammation of the choroid and ciliary body.

cyclocryotherapy (sik'klo-kri'o-ther'ah-pe) freezing of the ciliary body; done in the treatment of glaucoma.

cyclocumaryl (sik'klo-ko'o'mah-röl) chemical name: 3,4-dihydro-2-methoxy-2-methyl-4-phenyl-2*H*,5*H*-pyrano[3,2-*c*][1]benzopyran-5-one; an anticoagulant, $\text{C}_{20}\text{H}_{18}\text{O}_4$.

cyclodamia (sik'klo-da'me-ah) [*cyclo-* + Gr. *damnaō* I subdue] subdued or suppressed accommodation of the eyes.

cyclodialysis (sik'klo-di-al'i-sis) [*cyclo-* + Gr. *dialysis* dissolution] the operative formation of a communication between the anterior chamber of the eye and the suprachoroidal space; done in the treatment of glaucoma.

cyclodiathermy (sik'klo-di'ah-ther'me) destruction of a portion of the ciliary body by diathermy; employed as therapy in cases of glaucoma.

cycloduction (sik'klo-duk'shun) [*cyclo-* + *duction*] the duction of the eyeball produced by the oblique muscle.

cycloelectrolysis (sik'klo-e'lek-trol'i-sis) destruction of the ciliary body by passage of an electric current.

cyclogeny (si-kloj'ē-ne) [*cyclo-* + Gr. *gennan* to produce] the developmental cycle of a microorganism.

cyclogram (sik'klo-gram) a graph or chart of the visual field made with the cycloscope (1st def.).

cycloguanide embonate (si-klo-gwan'id) cycloguanil pamoate.

cycloguanil pamoate (si-klo-gwan'il) chemical name: 1-(4-chlorophenyl)-1,6-dihydro-6,6-dimethyl-1,3,5-triazine-2,4-diamine. A metabolite of the antimalarial drug proguanil, $\text{C}_{18}\text{H}_{14}\text{Cl}_2\text{N}_6\text{O}_6$, and itself having potent antimalarial effects. Called also *c. embonate* and *cycloguanide embonate*.

Cyclogyl (sik'klo-jil) trademark for a preparation of cyclopentolate hydrochloride.

cyclohexanehexol (sik'klo-heks'ān-heks'öl) inositol.

cyclohexanol (sik'klo-hek'sah-nol) the monohydroxy derivative of the saturated six-carbon-ring hydrocarbon cyclohexane.

cycloheximide (sik'klo-heks'i-mid) chemical name: 3-[2-(3,5-di-

methyl-2-oxocyclohexyl)-2-hydroxyethyl]glutarimide. An antibiotic substance, $C_{15}H_{23}NO_4$, isolated from *Streptomyces griseus*, and used as an agricultural fungicide and in selective media for fungi. It inhibits most saprophytic fungi, while allowing dermatophytes and most systemic fungi to grow, and inhibits nuclear division of karyotic organisms but has no effect on prokaryotic cells (bacteria).

cycloid (si/'kloid) 1. containing a ring of atoms; said of organic chemical compounds. 2. cyclothymic. 3. cyclothyme.

cycloisomerase (si/'klo-i-som'er-ās) an enzyme that catalyzes intramolecular lyase reactions.

cyclokeratitis (si/'klo-ker-ah-ti'tis) [*cyclo-* + *keratitis*] inflammation of the cornea and ciliary body; called also *Dalrymple's disease*.

cyclo-ligase (si/'klo-li'gās) an enzyme that catalyzes the formation of carbon-nitrogen, C—N bonds, and the breakdown of a pyrophosphate bond, as of ATP.

cyclomastopathy (si/'klo-mas-top'ah-the) [*cyclo-* + *Gr. mastos* breast + *pathos* disease] an affection of the mammae, presenting excessive connective tissue overgrowth or epithelial proliferation or both in response to growth stimuli or as a manifestation of abnormal involution following normal response. Cf. *eccyclomastoma*.

cyclomethycaine sulfate (si/'klo-meth'i-kān) [USP] chemical name: 4-(cyclohexyloxy)benzoic acid 3-(2-methyl-1-piperidinyloxy)propyl ester sulfate (1:1). A local anesthetic, $C_{22}H_{33}NO_3 \cdot H_2SO_4$, occurring as a white, crystalline powder; applied topically to relieve burning, itching, and pain originating in the rectal, vaginal, urethral, or nasal mucous membranes or associated with skin lesions, and also used to facilitate various diagnostic procedures, such as bronchoscopy, sigmoidoscopy, tracheal intubation, etc.

cyclopentamine hydrochloride (si/'klo-pen'tah-mēn) [USP] chemical name: *N,N*-dimethylcyclopentaneethanamine hydrochloride. An adrenergic, $C_9H_{19}N \cdot HCl$, occurring as a white, crystalline powder; used as a vasoconstrictor to reduce nasal congestion, applied topically to the nasal mucous membranes.

cyclopentane (si/'klo-pen'tān) a hydrocarbon, C_5H_{10} , in which all five carbon atoms are in a single ring.

cyclopentenophenanthrene (si/'klo-pen-tēn'o-fē-nan'thrēn) a polycyclic nucleus present in sterols, bile acids, sex hormones, cardiac poisons, and saponins.

cyclopenthiiazide (si/'klo-pen-thi'ah-zid) chemical name: 6-chloro-3-(cyclopentylmethyl)-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. An orally effective diuretic, $C_{13}H_{18}ClN_3O_4S_2$, used in the treatment of edema associated with various disorders and in hypertension.

cyclopentolate hydrochloride (si/'klo-pen'to-lāt) [USP] chemical name: 2-dimethylaminoethyl-1-hydroxy- α -phenylcyclopentaneacetate hydrochloride. An anticholinergic, $C_{17}H_{25}NO_3 \cdot HCl$, occurring as a white, crystalline powder; used to produce cycloplegia and mydriasis by instillation into the eye.

cyclophenazine hydrochloride (si/'klo-fen'ah-zēn) chemical name: 10-[3-(4-cyclopropyl-1-piperazinyl)propyl]-2-(trifluoromethyl)phenothiazine dihydrochloride; a tranquilizer, $C_{23}H_{26}F_3N_2S \cdot 2HCl$.

cyclophoria (si/'klo-fō're-ah) heterophoria in which there is deviation of the eye from the anteroposterior axis in the absence of visual fusional stimuli. See *exocyclophoria* and *incyclophoria*. Cf. *cyclotropia*. **accommodative c.**, cyclophoria due to oblique astigmatism. **minus c.**, negative c., incyclophoria. **plus c.**, positive c., exocyclophoria.

cyclophorometer (si/'klo-fō-rom'ē-ter) an instrument for measuring cyclophoria.

cyclophosphamide (si/'klo-fos'fah-mid) [USP] chemical name: *N,N*-bis (2-chloroethyl) tetrahydro-2*H*-1,3,2-oxazaphosphorin-2-amine 2-oxide monohydrate. A cytotoxic alkylating agent derived from mechlorethanamine hydrochloride (nitrogen mustard), $C_7H_{16}Cl_2N_2O_2P \cdot H_2O$, occurring as a white, crystalline powder, used as an antineoplastic in the treatment of many types of malignancies, including Hodgkin's disease, leukemias, multiple myeloma, ovarian sarcoma, and lymphosarcoma; usually administered orally or intravenously. Also used as an immunosuppressant.

cyclophrenia (si/'klo-frē'ne-ah) (obs.) cyclothymia.

Cyclophyllidea (si/'klo-fil-lid'e-ah) an order of tapeworms of the subclass Cestoda, class Cestoidea, comprising seven families that are habitually or accidentally parasitic in man: Taeniidae, Hymenolepididae, Dilepididae, Davaineidae, Anoplocephalidae, Linstowiidae, and Mesocostoidae.

cyclopia (si-'klo-pe-ah) [*Gr. kyklos* circle + *ōpo* eye + *-ia*] a developmental anomaly characterized by a single orbit, with the globe absent or rudimentary, apparently normal, or duplicated, and the nose absent or present as a tubular appendage located above the orbit.

cyclopin (si/'klo-pin) a proteinaceous constituent of *Penicillium cyclopium* that has been shown to inhibit the multiplication of representative members of group A and B arboviruses.

cycloplegia (si/'klo-ple'je-ah) [*cyclo-* + *Gr. plēgē* stroke] paralysis of the ciliary muscle; paralysis of accommodation.

cycloplegic (si/'klo-ple'jik) 1. pertaining to, characterized by, or causing cycloplegia. 2. an agent that causes cycloplegia.

cyclopropane (si/'klo-pro'pān) a colorless, inflammable and explosive gas, C_3H_8 , with characteristic odor and pungent taste; used by inhalation as a general anesthetic.

Cyclops (si/'klops) a genus of minute crustaceans species of which are hosts to *Dracunculus* and *Diphyllbothrium*.

cyclops (si/'klops) [*Gr. kyklōps* one of a race of one-eyed giants] a monster exhibiting cyclopia; called also *cyclocephalus*. **c. hypogna'thus**, a modified cyclops, lacking the typical proboscis, with ears abnormally low, rudimentary mandible, and tiny orifice of the buccal cavity.

cyclopterin (si-'klop'ter-in) a protamine derived from the spermatozoa of the lump-sucker, *Cyclopterus lumpus*.

cycloscope (si/'klo-skōp) [*cyclo-* + *Gr. skopein* to examine] a form of perimeter for mapping the visual fields.

cyclose (si/'klōs) any of a class of carbohydrates which are polyhydroxy cyclohexanes; they include inositol and phytol.

cycloserine (si/'klo-ser'ēn) [USP] chemical name: (R)-4-amino-3-isoxazolidinone. A broad-spectrum antibiotic, $C_5H_8N_2O_3$, with tuberculostatic activity, produced by growth of *Streptomyces orchidaceus* or obtained by synthesis, occurring as a white to pale yellow, crystalline powder; effective against many gram-negative and gram-positive bacteria, it is used in the treatment of tuberculosis, pulmonary and extrapulmonary, and sometimes in urinary tract infections due to susceptible pathogens, administered orally.

cyclosis (si-'klo'sis) [*Gr. kyklōsis* a surrounding, enclosing] movement of the cytoplasm within a cell, without deformation of the cell wall; called also *cytoplasmic* or *protoplasmic streaming*.

cyclospasm (si/'klo-spazm) spasm of accommodation of the eyes.

Cyclospasmol (si/'klo-spaz'mol) trademark for preparations of cyclandelate.

cyclostat (si/'klō-stat) a cylinder of glass in which an experimental animal is rotated about its vertical axis.

cyclostate (si/'klo-tāt) USAN contraction for 4-methylbicyclo-[2.2.2]oct-2-ene-1-carboxylate.

cyclotherapy (si/'klo-ther'ah-pe) [*cyclo-* + *Gr. therapeia* treatment] use of the bicycle in treatment.

cyclothiazide (si/'klo-thi'ah-zid) [USP] chemical name: 3-bicyclo[2.2.1]hept-5-en-2-yl-6-chloro-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. An orally effective diuretic, $C_{14}H_{16}ClN_3O_4S_2$, occurring as a white to nearly white powder; used in the treatment of edema associated with various conditions and in hypertension.

cyclothyme (si/'klo-thim) an individual with a cyclothymic personality or exhibiting cyclothymia; called also *cycloid*, *cyclothymiac*, and *cyclothymic*.

cyclothymia (si/'klo-thim'e-ah) [*cyclo-* + *Gr. thymos* spirit] 1. cyclothymic personality. 2. a condition characterized by a predisposition to alternating moods of elation and mild depression.

cyclothymiac (si/'klo-thim'e-ak) cyclothyme.

cyclothymic (si/'klo-thi'mik) 1. of or pertaining to a cyclothymic personality. 2. of, pertaining to, or characterized by cyclothymia. 3. cyclothyme. Called also *cycloid*.

cyclothymosis (si/'klo-thi-mo'sis) (obs.) any mental disease of the cyclothymic and manic-depressive group (Southard).

cyclotol (si/'klo-tol) a polyhydroxy cyclohexane, such as inositol.

cyclotome (si/'klo-tōm) a cutting instrument for use in cyclotomy or other operations upon the eye.

cyclotomy (si-'klot'o-me) [*cyclo-* + *Gr. temnein* to cut] division of or incision of the ciliary muscle.

cyclotron (si/'klo-tron) an apparatus for accelerating protons or deuterons to high energies by a combination of a constant magnet and an oscillating electric field.

cyclotropia (si/'klo-tro'pe-ah) [*cyclo-* + *Gr. tropos* a turning] a form of strabismus (q.v.) in which there is permanent deviation of an eye around the anteroposterior axis even in the presence of visual fusional stimuli, resulting in diplopia. Cf. *cyclophoria*. **minus c.**, negative c., incyclotropia. **plus c.**, positive c., exocyclotropia.

cycrimine hydrochloride (si/'krī-mīn) [USP] chemical name: α -cyclopentyl- α -phenyl-1-piperidinepropanol hydrochloride. An anticholinergic, $C_{19}H_{25}NO \cdot HCl$, occurring as a white solid; used in the treatment of parkinsonism, administered orally.

cyema (si-'e'mah) [*Gr. kyēma* embryo] the product of conception during all its stages.

cyemology (si/'e-mol'o-je) embryology.

cyesedema (si/'e-sē-de'mah) [*Gr. kyēsis* conception + *edema*] (obs.) a peculiar bloating of the body, especially of the face, sometimes seen in pregnant women.

cyesiognosis (si-'e'se-og-no'sis) [*Gr. kyēsis* conception + *gnōsis* knowledge] (obs.) diagnosis of pregnancy.

cyesiology (si-e'le-ol'o-je) [Gr. *kyēsis* conception + *-logy*] (obs.) the sum of knowledge regarding pregnancy.

cyesis (si-e'sis) [Gr. *kyēsis*] pregnancy.

cyestein (si-es'te-in) a skinlike formation sometimes seen on the surface of urine of a pregnant woman.

cysthein (si-es'the-in) cyestein.

cyl. cylinder; cylindrical lens.

cylicotomy (sil'e-kot'o-me) [Gr. *kylix* cup + *tomē* a cutting] surgical division of the ciliary muscle.

cylinder (sil'in-der) [Gr. *kylindros* a roller] a solid body shaped like a column, especially a cylindrical cast or cylindrical lens.

Bence Jones c's, cylindrical gelatinous bodies forming the contents of the seminal vesicles; called also *Jones c's*, and *Lallemant's*, *Lallemant-Trousseau*, or *Trousseau-Lallemant bodies*.

crossed c's, two cylindrical lenses at right angles to each other. **Külz's c.**, coma cast. **Leydig's c's**, bundles of muscular fibers separated by partitions of protoplasm. **Ruffini's c's**, Ruffini's corpuscles. **terminal c's**, brushes of Ruffini. **urinary c.**, a urinary cast.

cylindrarthrosis (sil'in-drar-thro'sis) [*cylinder* + Gr. *arthrōsis* joint] a joint in which the articular surfaces are cylindrical, as in the proximal radioulnar joint or the odontoid process and atlas.

cylindraxile (sil'in-drak'sil) an axon, def. 2.

cylindrical (si-lin'dri-k'l) pertaining to or shaped like a cylinder.

cylindriform (si-lin'dri-form) cylindrical.

cylindrocellular (sil'in-dro-sel'u-lar) composed of or containing cylindrical cells.

cylindrodendrite (sil'in-dro-den'drit) a collateral branch of an axon.

Cylindrogloea (si-lin'dro-gle'ah) a genus of microorganisms of the family Chlorobacteriaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as small ovoid to rod-shaped cells, forming cylindrical aggregates about a filamentous, colorless bacterium. The type species is *C. bacterifera*.

cylindroid (sil'in-droid) [Gr. *kylindroeidēs* cylindrical] 1. resembling, or shaped like a cylinder. 2. a cast in the urine, of various origins and of various forms, generally resembling hyaline casts, but differing from the latter in that they taper to a slender tail which is often twisted or curled upon itself; called also *mucous* or *spurious (tube) cast*.

Cylindroids.

cylindroma (sil'in-dro'mah) 1. adenoid cystic carcinoma. 2. cutaneous or dermal cylindroma, a benign tumor of the skin consisting of cylindrical masses of epithelial cells surrounded by a thick band of hyaline material, believed to be related to, or derived from the hair follicle or the sweat glands; the microscopic appearance resembles that of adenoid cystic carcinoma. It occurs in a nonhereditary form, manifested by a solitary lesion, usually on the scalp and face, and in a dominantly inherited form, manifested by numerous lesions of various sizes on the scalp, sometimes covering the scalp completely (*turban tumors*).

cylindromatous (sil'in-drom'ah-tus) pertaining to or of the nature of cylindroma.

cylindrosarcoma (si-lin'dro-sar-ko'mah) (obs.) a tumor containing both cylindromatous and sarcomatous elements.

Cylindrothorax (si-lin'dro-tho'raks) a genus of beetles. **C. melanocephala**, a blister beetle of Africa that secretes cantharidin, which if rubbed into the skin causes a severe dermatitis.

cylindruria (sil'in-droo're-ah) [Gr. *kylindros* cylinder + *ouron* urine + *-ia*] the presence of tube casts in the urine.

cylite (si'lit) benzyl bromide.

cylosis (sil-lo'sis) [Gr. *kyllōsis*] clubfoot or similar deformity of the foot or leg.

cylosoma (sil'lo-so'mah) [Gr. *kyllōs* lame + *sōma* body] a monster with lower lateral abdominal eventration and absence or imperfect development of the lower limb on the side having the eventration.

cylosomus (sil'lo-so'mus) cylosoma.

cymarose (si'mah-rōs) a rare sugar, 2,6-deoxy-3-methoxyaldohexose, $\text{CH}_2(\text{CHOH})_2\text{CH}(\text{OCH}_3)\text{CH}_2\text{CHO}$, from hydrolysis of various strophanthin glycosides.

cymba (sim'bah), pl. *cym'bae* [L.; Gr. *kymbē*] a boat-shaped structure. **c. con'chae auric'ulae** [NA], the upper part of the concha of the auricle.

cymbiform (sim'bī-form) [L. *cymba* boat + L. *forma* form] boat-shaped; scaphoid.

cymbo- (sim'bo) [L. *cymba*, Gr. *kymbē*, boat] a combining form denoting boat-shaped.

cymbocephalia (sim'bo-se-fa'le-ah) scaphocephaly.

cymbocephalic (sim'bo-se-fal'ik) [*cymbo-* + *kephalē* head] scaphocephalic.

cymbocephalous (sim'bo-sef'ah-lus) scaphocephalic.

cymbocephaly (sim'bo-sef'ah-le) scaphocephaly.

cyme (sim) a form of inflorescence composed of a flat-topped cluster of blossoms.

cymograph (si'mo-graf) kymograph.

cyn- see *cyno-*.

cynanche (si-nan'ke) [*cyn-* + Gr. *anchein* to choke] severe sore throat with threatened suffocation. **c. malig'na**, a gangrenous or putrid sore throat, often diphtheritic or scarlatinal. **c. tonsilla'ris**, peritonsillar abscess.

cynanthropy (si-nan'thro-pe) [*cyn-* + Gr. *anthrōpos* man] delusion in which the patient considers himself a dog or behaves like a dog.

cynarase (si'nar-ās) an enzyme derived from the plant *Cynara*.

cynic (sin'ik) [Gr. *kynikos*] see *risus sardonius*.

cyno-, cyn- [Gr. *kyōn* dog] a combining form denoting relationship to a dog, or doglike.

cyncephalic (si'no-se-fal'ik) [*cyno-* + Gr. *kephalē* head] having a head shaped like that of a dog.

cynodont (si'no-dont) [*cyno-* + Gr. *odous* tooth] a canine tooth.

cynomolgus (sin-o-mol'gus) a monkey of the genus *Macaca*, especially *M. irus*, used in laboratory research.

Cynomyia (si'no-mi'yah) a genus of blue-bottle flies that deposit their ova in decaying meat and in wounds.

Cynomys (si'no-mis) a genus of prairie dogs species of which harbor plague-transmitting fleas.

cynophobia (si'no-fo-be-ah) [*cyno-* + Gr. *phobein* to be affrighted by + *ia*] morbid fear of dogs.

cynorexia (si'no-rek'se-ah) [*cyno-* + Gr. *orexis* appetite] morbidly excessive hunger; bulimia.

cyogenic (si'o-jen'ik) [Gr. *kyos* fetus + *gennan* to produce] producing pregnancy.

Cyon's experiment, nerve (se'onz) [Elie de Cyon (Il'ia Fad-deevich Tsion), a Russian physiologist, 1842-1912] see under *experiment* and *nerve*.

cyonin (si'o-nin) [Gr. *kyos* fetus] a general term for gonad-stimulating hormones of placental origin.

cyophoria (si'o-fo're-ah) [Gr. *kyos* fetus + *phoros* bearing] pregnancy.

cyophoric (si'o-for'ik) pertaining to pregnancy.

cyophorin (si-of'o-rin) (obs.) kyestein.

cyopin (si'o-pin) [Gr. *kyanos* blue + *pyon* pus] the substance responsible for the color of blue pus.

cyotrophy (si-ot'ro-fe) [Gr. *kyos* fetus + *trophē* nutrition] nutrition of the fetus.

Cyperus (si-pe'rus) [L.; Gr. *kypeiros* rush] a genus of grasslike sedges or rushes. See *adruē*.

cypho- (si'fo) for words beginning thus, see those beginning *kypho-*.

cyphonate (sip'e-o-nāt) USAN contraction for cyclopentanepropionate.

cyprothrin (si'po-thrin) chemical name: 3,3-dimethylcyano-(3-phenoxyphenyl) methyl ester spiro[cyclopropane-1,1'-(1*H*-indene)-2-carboxylic acid; a veterinary anthelmintic, $\text{C}_{28}\text{H}_{23}\text{NO}_3$.

cyprazepam (si-prah'zē-pam) chemical name: 7-chloro-2-[(cyclopropylmethyl) amino]-5-phenyl-3*H*-1,4-benzodiazepine 4-oxide; a tranquilizer, $\text{C}_{19}\text{H}_{18}\text{ClN}_2\text{O}$.

cypridology (sip're-dol'o-je) [Gr. *kypris* love, passion + *-logy*] venereology.

cypridopathy (sip're-dop'ah-the) [Gr. *kypris* love, passion + *pathos* disease] a venereal disease.

cyprinin (sip'rī-nin) a toxic substance derived from the milt of the carp, *Cyprinus carpio*.

cyproheptadine hydrochloride (si'pro-hep'tah-dēn) [USP] chemical name: 4-(5*H*-dibenzo[*a,d*]cyclohepten-5-ylidene)-1-methylpiperidine hydrochloride sesquihydrate. A serotonin and histamine antagonist with anticholinergic and sedative properties, $\text{C}_{21}\text{H}_{21}\text{N} \cdot \text{HCl} \cdot 1\frac{1}{2}\text{H}_2\text{O}$, occurring as a white to slightly yellow, crystalline powder; used as an antihistaminic for relief of symptoms of allergy and as an antipruritic for relief of itching associated with various skin disorders, administered orally.

cyproquinat (si-pro-kwin'āt) chemical name: 6,7-bis(cyclopropylmethoxy)-4-hydroxy-3-quinolinecarboxylic acid ethyl ester; a coccidiostat for poultry, $\text{C}_{20}\text{H}_{23}\text{NO}_5$.

cyproterone acetate (si-pro'ter-ōn) chemical name: 6-chloro-1β,2β-dihydro-17-hydroxy-3'*H*-cyclopropa[1,2]pregna-1,4,6-triene-3,20-dione acetate. A synthetic antiandrogenic steroid, C_{24} -

H_2SO_4 , which has been used in the treatment of male sexual disorders.

cyrtograph (sir'to-graf) [Gr. *kyrtos* bent + *graphein* to write] a cyrtometer that registers the movements of the chest wall.

cyrtometer (sir-tom'6-ter) [Gr. *kyrtos* bent + *metron* measure] a device for use in measuring the curves and curved surfaces of the body.

cyrtosis (sir-to'sis) [Gr. *kyrtōsis*] 1. kyphosis. 2. distortion of the bones.

Cys cysteine.

Cys-Cys cystine.

cyst (sist) [Gr. *kystis* sac, bladder] 1. any closed cavity or sac, normal or abnormal, lined by epithelium, and especially one that contains a liquid or semisolid material. 2. a stage in the life cycle of certain parasites, during which they are enclosed within a protective wall; see, for example, *hydatid c.* and *multilocular c.* **adventitious c.**, a cyst formed about a foreign body or an exudate; called also *false c.* **allantoic c.**, urachal c. **alveolar c's**, dilatations of pulmonary alveoli, which may fuse by breakdown of their septa to form large air cysts (pneumatocoles). **alveolar hydatid c.**, a hydatid cyst formed by the larvae of the tapeworm *Echinococcus multilocularis*; see *hydatid disease*, *alveolar*, under *disease*. **amniotic c.**, cystlike processes containing amniotic fluid resulting from adhesion of amniotic folds. **aneurysmal bone c.**, a solitary lesion of bone that typically causes a bulging of the overlying cortex bearing some resemblance to the sacular protrusion of the aortic wall in aortic aneurysm. **angioblastic c.**, an ingrowth of the mesenchymal tissue having blood-forming power in an embryo. **apical c.**, an epithelium-lined cyst in the bone at the apex of a tooth with an infected or devitalized pulp. **apoplectic c.**, a cyst formed in a part by extravasation of blood. **arachnoid c.**, a fluid-filled cyst between the layers of the leptomeninges, lined with arachnoid membrane, most commonly occurring in the sylvian fissure; called also *leptomeningeal c.* **atheromatous c.**, keratin cyst, called also *sebaceous cyst*. **Baker's c.**, a swelling behind the knee, caused by escape of synovial fluid which has become enclosed in a sac of membrane; popliteal bursitis; synovial cyst of the popliteal space. **Blessig's c's**, cystic spaces that frequently appear at the periphery of the retina close to the ora serrata without significant effect on vision; called also *Blessig's lacunae*, *Blessig's spaces*, *cystoid degeneration*, and *Iwanoff's c's*. **blood c.**, a cyst containing extravasated blood. **blue dome c.**, a benign retention cyst of the breast containing straw-colored fluid that shows a blue color when unopened; see *cystic disease of breast*, under *disease*. **Boyer's c.**, a painless and gradual enlargement of the subhyoid bursa. **branchial c.**, **branchial cleft c.**, **branchiogenetic c.**, **branchiogenic c.**, a cyst arising in the lateral aspect of the neck, from epithelial remnants of a branchial cleft, usually located between the second and third branchial arches. **bronchial c's**, **bronchogenic c.** **bronchogenic c.**, a spherical cyst of bronchial origin lined with bronchial epithelium which may contain secretory elements, generally found in the mediastinum or the lung. It may contain air, and if communication with the trachea or a bronchus exists, may periodically evacuate fluid contents into the air passages, resulting in attacks of voluminous expectoration. Infection will lead to mediastinal or pulmonary abscess. Called also *bronchial c.* **bronchopulmonary c.**, **bronchogenic cyst of the lung. **bursal c.**, a cyst derived from a serous bursa. **butter c.**, 1. a necrotic mass in a lipoma. 2. a retention cyst of the mammary gland filled with the products of the alteration of milk, such as butyric acid. **cervical c.**, a branchial or thyroglossal cyst. **chocolate c.**, one having dark, syrupy contents, resulting from collection of hemosiderin following local hemorrhage, such as sometimes occurs after mastectomy or in the ovary in ovarian endometriosis; called also *endometrial c.* and *Sampson's c.* **choledochal c.**, a congenital cystic dilatation of the common bile duct which may cause pain in the right upper quadrant, jaundice, fever, or vomiting, or be asymptomatic. **choledochus c.**, a dilatation of the lower end of the common bile duct, usually recognized during childhood. **chyle c.**, an abnormal sac of the mesentery containing chyle. **ciliated epithelial c.**, a cyst lined with ciliated epithelium; they occur in the gastrointestinal tract (enterocystoma), in the hair, thorax, lung, and genital organs. **colloid c.**, a cyst that contains jelly-like material, particularly in the third ventricle. **compound c.**, multilocular c. **corpus luteum c.**, a cyst of the ovary formed by a serous accumulation developed from a corpus luteum. **craniobuccal c.**, a cyst of Rathke's pouch. **craniopharyngeal duct c.**, cysts originating in the vestiges of the craniopharyngeal duct; they are closely related to craniopharyngiomas. **cutaneous c.**, **cuticular c.**, a cyst of the skin. **daughter c.**, a small parasitic cyst developed from the wall of a larger one, as from the hydatid cyst of the tapeworm *Echinococcus granulosus*; called also *secondary c.* **dental c.**, one derived from some portion of the odontogenic apparatus. **dentigerous c.**, an odontogenic cyst surrounding the coronal portion of a tooth and originating after the crown is completely formed. **dermoid c.**, a teratoma, usually benign, representing a disorder of embryologic development, characterized by the presence of mature**

ectodermal elements, consisting of a fibrous wall lined with stratified epithelium, and containing a keratinous material and hair and sometimes other elements, such as bone, tooth, and nerve tissue; they are most often found in the ovary, but also commonly occur in the skin of the head and neck. Called also *benign cystic teratoma*, *cystic teratoma*, *mature teratoma*, and *dermoid*. See also *malignant teratoma*. **dilatation c.**, a cyst formed by dilation of a previously existing cavity. **distention c.**, a collection of watery fluid in a normal, but distended cavity. **echinococcus c.**, **hydatid c.** **endometrial c.**, a chocolate cyst, particularly in the ovary, lined with endometrium. **endothelial c.**, a cyst whose sac has an endothelial lining. **enteric c.**, **enterogenous c.**, a cyst of the intestine arising or developing from some fold or pouch along the intestinal tract. **ependymal c.**, a circumscribed dilatation of some part of the ependyma. **epidermal c.**, **epidermal inclusion c.**, **epidermoid c.**, an epithelial cyst of the skin due to proliferation of surface epidermal cells within the corium, arising from occluded pilosebaceous follicles and containing a laminated, cheesy, odoriferous keratinous material. Called also *sebaceous c.* and *wen*. See also *pilar c.* **epithelial c.**, 1. any cyst lined by keratinizing stratified squamous epithelium, found most often in the skin, and including epidermal, pilar, and dermoid cysts, milia, and steatomas. 2. epidermal c. **eruption c.**, a dentigerous cyst that causes a clinically evident bulging of the overlying alveolar ridge. **extravasation c.**, a cyst formed by hemorrhage into the tissues. **exudation c.**, a cyst formed by an exudate collected in a closed cavity. **false c.**, an adventitious cyst. **fissural c.**, one arising along a line of fusion of the various embryonic processes; according to location, those of the oral region are classified as median palatal, median anterior maxillary, globulomaxillary, and nasopalatal. **follicular c.**, one due to the occlusion of the duct of a follicle or small gland; especially a cyst formed by the enlargement of a graafian follicle as a result of accumulated transudate. **ganglionic c.**, subchondral c. **Gartner's c.**, **gartnerian c.**, a cystic tumor developed from Gartner's duct (ductus epoophori longitudinalis [NA]). **gas c.**, a small cyst filled with gas, of bacterial origin. **globulomaxillary c.**, a cyst occurring within the maxilla at the junction of the globular portion of the medial nasal process and the maxillary process, usually between the lateral incisor and the canine tooth. **granddaughter c.**, a cyst sometimes seen within a daughter cyst (q.v.). **hemorrhagic c.**, an encapsulated mass of extravasated blood. **hydatid c.**, the larval cyst stage of the tapeworms *Echinococcus granulosus*, and *E. multilocularis*, which contains daughter cysts, each of which contains many scoleces; called also *echinococcus c.* and *hydatid*. See *hydatid disease*, *unilocular*, under *disease*. **implantation c.**, a cyst formed from a piece of skin that has become implanted into the deep tissues. **incisive canal c.**, median anterior maxillary c. **inclusion c.**, one formed by the inclusion of a small portion of epithelium or mesothelium within connective tissue. **intraepithelial c's**, round or oval cavities which develop in the epithelium of the ureter, bladder, and urethra and contain a peculiar colloid substance. **intraluminal c's**, duplications of the bowel, or retention cysts, which are an infrequent cause of intrinsic obstruction in the newborn. **intrapituitary c's**, Rathke's c's. **involution c.**, mammary duct ectasia. **iodine c.**, see *Iodamoeba buetschlii*. **Iwanoff's c's**, *Blessig's c's*. **keratinizing c.**, **keratinous c.**, any cyst containing keratinous material; see *epithelial c.* **lacteal c.**, a cyst of the breast due to obstruction of a lactiferous duct; called also *milk c.* **lateral c.**, a periodontal cyst along the lateral surface of the root of a tooth. **leptomeningeal c.**, **arachnoid c.** **lutein c.**, a cyst of the ovary developed from a corpus luteum. **median anterior maxillary c.**, a cyst in or near the incisive canal, arising from proliferation of epithelial remnants of the nasopalatine duct; called also *incisive canal c.* and *nasopalatine duct c.* **median mandibular c.**, a very rare cyst occurring in the midline of mandible, of disputed origin. **median palatal c.**, one located in the midline of the hard palate, between the lateral palatal processes. **meibomian c.**, a cyst of the meibomian gland, sometimes applied to a chalazion. **mesenteric c.**, a congenital thin-walled cyst of the abdomen between the leaves of the mesentery, which may be of wolffian or lymphatic duct origin; as it enlarges, it may cause colicky pain and intestinal obstruction. **milk c.**, **lacteal c.** **morgagnian c.**, **hydatid of Morgagni**. **mother c.**, a cyst enclosing other cysts, as in the cyst stage of *Echinococcus granulosus*. **mucous c.**, a retention cyst that contains mucus. **multilocular c.**, a cyst containing several loculi or spaces; a hydatid cyst composed of many small irregular cavities, which may contain scoleces but generally little fluid, and which tend to enlarge by budding since they have a poorly developed hyaline cuticle, as in *Echinococcus multilocularis*; called also *alveolar c.* **myxoid c.**, a nodular lesion usually overlying a distal interphalangeal finger joint in the dorsolateral or dorsomesial position, consisting of focal mucinous degeneration of the collagen of the dermis; not a true cyst, lacking an epithelial wall, it does not communicate with the underlying synovial space. Called also *synovial c.* and *synovial ganglion*. **Naboth's c's**, **nabothian c's**, Naboth's follicles. **nasopalveolar c.**, a fissural cyst arising outside the bones at the junction of the globular

portion of the medial nasal process, the lateral nasal process, and the maxillary process, sometimes secondarily involving the maxilla; called also *nasolabial c.* **nasolabial c.**, nasolabial c. **nasopalatine duct c.**, median anterior maxillary c. **neurotic c.**, a cyst containing necrotic matter. **neural c.**, a cyst or cystlike structure occurring in the central nervous system, as a soapbuds cyst or a porencephalic cyst. **neurenteric c.**, a cyst of the posterior mediastinum containing tissues from the nervous system and other organs, and connecting with the spinal dura mater. **nevoid c.**, an abnormal cyst with vascular walls. **odontogenic c.**, any cyst derived from odontogenic epithelium and therefore found exclusively in the jaws; primordial, dentigerous, and periodontal cysts fall into this classification. **oil c.**, a cyst containing oily matter, due to fatty degeneration of the epithelial lining. **omental c's**, cysts similar in all respects to mesenteric ones except that they are confined to the omentum. **oophoritic c.**, a cyst of the ovary proper. **osseous hydatid c's**, hydatid cysts formed by the larvae of *Echinococcus granulosus* and occurring in bone, which may become weakened and eroded by the exuberant growth. **pancreatic c.**, a retention cyst of the pancreatic duct; called also *pancreatic ranula*. Cf. *pancreatic pseudocyst*. **paranephric c.**, a cyst of the fatty tissue surrounding the kidney. **parapyelitic c's**, apparently congenital cysts of uncertain etiology occurring in the kidney sinus, usually in a small cluster, and causing pelvic compression and local deformity, with pain, hematuria, infection, and pyuria. **parasitic c.**, a cyst formed by the larva of a parasite, such as a hydatid cyst. **parent c.**, a mother cyst. **parovarian c.**, a cyst of the epoophoron. **pearl c.**, a cyst or a solid mass of epithelial cells in the iris caused by implantation of an eyelash, cotton, or other foreign particle. **pericardial c.**, a benign tumor containing clear fluid, almost always located immediately adjacent to the pericardium; such cysts must be differentiated from the more serious mediastinal tumors. **periodontal c.**, a cyst occurring adjacent to a tooth root, either apical or lateral. **periodontal c.**, **apical**, **radicular c.** **pilar c.**, an epithelial cyst clinically indistinguishable from an epidermal cyst, almost always found on the scalp, and arising from the outer root sheath of the hair follicle. Called also *sebaceous c.*, *tricholemmal c.*, and *wen*. **piliferous c.**, **pilonidal c.**, a hair-containing sacrococcygeal dermoid cyst or sinus which often opens at a postanal dimple. Cf. *coccygeal sinus*, under *sinus*. **placental c.**, a grayish white, disklike cyst of the placenta, resulting from degeneration of trophoblastic cells. **porencephalic c.**, a cyst occurring in the brain substance in porencephaly. **preauricular c.**, **congenital**, a cyst resulting from imperfect fusion of the first and second branchial arches in formation of the auricle, communicating with a pitlike depression just in front of the helix and above the tragus (ear pit). **primordial c.**, a rare type of odontogenic cyst developing before calcified enamel or dentin is formed, and found in place of a tooth. **proliferous c.** (*obs.*), multilocular c. **proligerous c.** (*obs.*), cystadenocarcinoma. **pseudomucinous c.**, see under *cystadenoma*. **psorospermal c's**, sarcosporidian cysts. **pyelogenic renal c.**, calyceal diverticulum. **radicular c.**, an epithelium-lined sac, which may contain cholesterol, at the apex of a tooth; called also *apical periodontal c.*, *radiculodental c.*, and *root c.* **radiculodental c.**, **radicular c.** **Rathke's c's**, groups of epithelial cells forming small colloid-filled cysts in the pars intermedia of the pituitary gland. **residual c.**, a cyst in the maxilla or mandible which remains or forms after the tooth with which it was once associated has been removed. **retention c.**, one caused by retention of glandular secretion. **root c.**, **radicular c.** **Sampson's c.**, chocolate c. **sanguineous c.**, a cyst containing blood. **sarcosporidian c's**, cylindrical cysts containing banana-shaped spores of the parasites, found in the muscles of those infected with the protozoan *Sarcocystis*, and which may become large enough to be grossly visible. Called also *sarcocysts*, *Miescher's tubules*, and *Rainey's corpuscles*. **sebaceous c.**, 1. epidermal c. 2. pilar c. **secondary c.**, a daughter cyst. **secretory c.**, a cyst produced by retention of the normal secretion of a gland. **seminal c.**, a cyst containing semen. **serous c.**, a cyst containing a thin liquid or serum. **soap c.**, a collection of yellow fatty matter encysted in the breast. **soapbuds c's**, cysts that stud the cerebral cortex in cryptococcosis. **solitary bone c.**, a pathologic bone space in the metaphyses of long bones of growing children; of disputed origin, it may be either empty or filled with fluid and have a delicate connective tissue lining. **springwater c.**, pericardial c. **sterile c.**, a true hydatid cyst that fails to produce brood capsules; called also *acephalocyst*. **subchondral c.**, a bone cyst within the fused epiphysis beneath the articular plate; it is lined with a membrane (probably modified synovia) which contains a mucinous material. Called also *ganglionic c.* **sublingual c.**, **ranula**. **subsynovial c.**, one caused by the distention of a synovial follicle. **suprasellar c.**, craniopharyngioma. **synovial c.**, myxoid c. **tarry c.**, 1. a corpus luteum cyst resulting from hemorrhage into a corpus luteum. 2. a bloody cyst resulting from endometriosis. **tarsal c.**, a cyst in the tarsus of the lid, sometimes applied to a chalazion. **thecal c.**, distention of a sheath of a tendon. **theca-lutein c.**, a cyst of the ovary in which the lutein cells lining the cystic cavity are theca interna cells. **thymic c's**, rare unilocular or multilocu-

lar cysts of the upper anterior mediastinum containing tissue resembling that of the thymus; they are congenital in origin. **thyroglossal c.**, **thyrolingual c.**, a cyst in the neck caused by persistence of portions of, or by lack of closure of, the primitive thyroglossal duct. **Tornwaldt's c.**, bursa pharyngea. **trichilemmal c.**, pilar c. **true c.**, any cyst that is not a normal structure and not formed by the dilatation of a passage or cavity. **tubular c.**, tubulocyst. **umbilical c.**, vitellointestinal c. **unicameral c.**, unilocular c. **unicameral bone c.**, solitary bone c. **unilocular c.**, a cyst containing but one cavity. Cf. *multilocular c.* **urachal c.**, a form of cystic dilatation of the urachus; called also *allontoic c.* **urinary c.**, a cyst containing urine. **vitelline c.**, a congenital cyst lined with ciliated epithelium occurring along the gastrointestinal canal; the remains of the omphalomesenteric duct. Called also *enterocystoma*. **vitellointestinal c.**, a cystlike tumor at the umbilicus, caused by persistence of a portion of the umbilical duct; called also *umbilical c.* **wolffian c.**, a cyst of the broad ligaments of the uterus, regarded as developed from vestiges of the wolffian body (mesonephros).

cyst- see *cysto-*.

cystadenocarcinoma (sis-tad'e-no-kar'si-no'mah) carcinoma and cystadenoma.

cystadenoma (sis'tad-e-no'mah) [*cyst-* + *adenoma*] adenoma associated with cystoma. **c. adamantinum**, ameloblastoma. **mucinous c.**, a multilocular tumor produced by the epithelial cells of the ovary and having mucin-filled cavities; the great majority of these tumors are benign. **papillary c.**, any tumor producing patterns which are both papillary and cystic. **papillary c. lymphomatosum**, papillary adenocystoma lymphomatosum. **c. par'tim sim'plex par'tim papillif'erum** (*obs.*), papillary cystadenoma. **pseudomucinous c.**, mucinous c.; so called because the cavity contents were thought to be pseudomucin. **serous c.**, a cystic tumor of the ovary, containing thin, clear, yellow serous fluid and varying amounts of solid tissue, with a malignant potential several times greater than that of mucinous cystadenoma.

cystadenosarcoma (sis-tad'e-no-sar-ko'mah) (*obs.*) cystadenoma blended with sarcoma.

cystalgia (sis-tal'je-ah) [*cyst-* + *-algia*] pain in the bladder.

cystathionase (sis'tah-thi'o-nās) cystathionine γ-lyase. **β-c.**, cystathionine β-lyase. **γ-c.**, cystathionine γ-lyase.

cystathionine (sis'tah-thi'o-nin) an unsymmetrical thio-ether of homocysteine and serine, $\text{COOH} \cdot \text{CH}(\text{NH}_2) \cdot \text{CH}_2 \cdot \text{CH}_2 \cdot \text{S} \cdot \text{CH}_2 \cdot \text{CH}(\text{NH}_2) \cdot \text{COOH}$, which serves as an intermediate in the transfer of a sulfur atom from methionine to cysteine. **c. β-lyase**, a pyridoxal-phosphate enzyme that catalyzes the hydrolysis of cystathionine to pyruvate, ammonia, and homocysteine. Called also *β-cystathionase*. **c. γ-lyase**, a pyridoxal-phosphate enzyme that catalyzes the hydrolysis of cystathionine to cysteine, ammonia, and 2-oxobutyrate. It also catalyzes the conversion of (a) homoserine to 2-oxobutyrate, H_2O , and ammonia, (b) cystine to thiocysteine, pyruvate, and ammonia, and (c) cysteine to pyruvate ammonia, and hydrogen sulfide. Called also *cystathionase* and *γ-cystathionase*.

cystathioninuria (sis'tah-thi'o-nin-u're-ah) a hereditary disorder of cystathionine metabolism marked by increased concentrations of cystathionine in the urine, due to deficiency of γ-cystathionase; mental retardation is associated in some instances.

cystatrophia (sis'tah-tro'fe-ah) [*cyst-* + Gr. *atrophia* atrophy] atrophy of the bladder.

cystauchenitis (sis'taw-kē-ni'tis) [*cyst* + Gr. *auchēn* neck + *-itis*] inflammation of the neck of the bladder.

cystauchenotomy (sis'taw-kē-not'o-me) [*cyst* + Gr. *auchēn* neck + *tomē* cut] surgical incision of the neck of the bladder.

cystauxe (sis'tauk-se) enlargement of the bladder.

cystectasia, cystectasy (sis-tek-ta'ze-ah; sis-tek'tah-se) [*cyst* + Gr. *ektasis* dilatation] slitting of the membranous portion of the urethra and dilatation of the neck of the bladder for the extraction of stone.

cystectomy (sis-tek'to-me) [*cyst-* + Gr. *ektomē* excision] 1. excision of a cyst. 2. excision of the bladder (*complete* or *total c.*) or resection of the bladder (*partial c.*).

cysteine (sis-te'in) chemical name: 2-amino-3-mercaptopropionic acid. A sulfur-containing amino acid produced by the enzymatic or acid hydrolysis of proteins. It is easily oxidized to cystine, is sometimes found in the urine, and has limited detoxification properties. Called also *thioaminopropionic acid*. **c. hydrochloride**, a compound suggested for the treatment of cutaneous ulcers.

cystelcosis (sis'tel-ko'sis) [*cyst-* + Gr. *helkōsis* ulceration] ulceration of the bladder.

cystencephalus (sis'ten-seff'ah-lus) [*cyst* + Gr. *enkephalos* brain] a monster with a membranous sac in place of a brain.

cystendesis (sis'ten-de'sis) [*cyst* + Gr. *endesis* suturation] suture of a wound of the gallbladder or of the urinary bladder.

cysterethism (sis-ter'e-thizim) [*cyst* + Gr. *erethismos* irritation] irritability of the bladder.

cysthypersarcosis (sis-ti-'per-sar-ko'sis) [cyst- + Gr. *hyper* over + *sarkōsis* growth of flesh] a thickening of the muscular coat of the bladder.

cysti- see *cysto-*.

cystic (sis'tik) [Gr. *kystis* bladder] 1. pertaining to a cyst. 2. pertaining to the urinary bladder or to the gallbladder.

cysticeri (sis'ti-ser'si) plural of *cysticerus*.

cysticeroid (sis'ti-ser'koid) a form of larval tapeworm resembling *Cysticerus*, but having the cyst small, almost devoid of fluid, and provided with a caudal appendage, as in *Hymenolepis*.

cysticercosis (sis'ti-ser-ko'sis) infection with *cysticeri*. In man, it is an infection with the larval forms (*Cysticercus cellulosae*) of *Taenia solium*, which penetrate the intestinal wall and invade such tissues as the subcutaneous tissue, brain, eye, muscle, heart, liver, lung, and peritoneum. Brain involvement may result in epilepsy, increased intracranial pressure, etc.

Cysticercus (sis'ti-ser'kus) [Gr. *kystis* bladder + *herkos* tail] a former genus of larval forms of tapeworms, with such species names as *C. acanthro'trias*, *C. bo'vis* (beef tapeworm), *C. cellulo'sae* (pork tapeworm), *C. fasciola'ris*, *C. o'vis*, and *C. tenuicollis*. *C. bo'vis*, the larva of *Taenia saginata*. *C. cellulo'sae*, the larva of *Taenia solium*; see also *cysticercosis*. *C. o'vis*, the larva of *Taenia ovis*. *C. tenuicollis*, the larva of *Taenia hydatigena*.

cysticercus (sis'ti-ser'kus), pl *cysticer'ci*. a larval form of tapeworm, consisting of a single scolex enclosed in a bladder-like cyst; cf. *hydatid cyst*, under *cyst*.

cysticolithectomy (sis'ti-ko'li-thek'to-me) [Gr. *kystis* bladder + *lithos* stone + *ektomē* excision] removal of a stone from the cystic duct.

cysticolithotripsy (sis'ti-ko-lith'o-trip-se) crushing of a calculus within the cystic duct.

cysticorrhaphy (sis'ti-ko-r'ah-fe) [*cystic duct* + *rhaphe* suture] suture or repair of the cystic duct.

cysticotomy (sis'ti-ko'to-me) [*cystic duct* + Gr. *tomē* a cutting] incision into the cystic duct.

cystides (sis'ti-dēz) plural of *cystis*.

cystido- see *cysto-*.

cystidoceliotomy (sis'ti-do-se'le-ot'o-me) cystidolaparotomy.

cystidolaparotomy (sis'ti-do-lap'ah-rot'o-me) [*cystido-* + *laparotomy*] incision of the bladder through the abdominal wall; called also *cystidoceliotomy*.

cystidotrachelotomy (sis'ti-do-tra-kel-ot'o-me) [*cystido-* + Gr. *trachelos* neck + *tomē* a cutting] incision of the neck of the bladder.

cystifellotomy (sis'ti-fel-lot'o-me) [*cysti-* + L. *fel* bile + Gr. *tomē* a cutting] cholecystotomy.

cystiferous (sis-tif'er-us) cystigerous.

cystiform (sis'ti-form) [*cysti-* + L. *forma* form] having the form or appearance of a cyst.

cystigerous (sis-tij'er-us) [*cysti-* + L. *gerere* to bear] containing cysts.

cystine (sis'tēn, sis'tin) chemical name: 3,3'-dithiobis (2-amino-propanoic acid). An amino acid, $[S \cdot CH_2 \cdot CH(NH_2) \cdot COOH]_2$, produced by the digestion or acid hydrolysis of proteins. It is sometimes found in the urine and in the kidneys in the form of minute hexagonal crystals, frequently forming a cystine calculus in the bladder. Cystine is the chief sulfur-containing compound of the protein molecule, and is readily reduced to two molecules of cysteine (hence, also called *dicysteine*).

cystinemia (sis'ti-ne'me-ah) [*cystine* + Gr. *haima* blood + *-ia*] presence of cystine in the blood.

cystinosis (sis'ti-no'sis) [*cystine* + *-osis*] a hereditary disorder of childhood, usually appearing after 6 months of age, marked by osteomalacia, aminoaciduria, phosphaturia, and deposition of cystine throughout the tissues of the body, including the liver, bone marrow, spleen, and cornea. As the most common cause of Fanconi's syndrome (def. 2), cystinosis is associated with proximal renal tubular dysfunction and with stunting of growth, vitamin D-resistant rickets, acidosis, and corneal opacities. Called also *cystine storage disease* and *Lignac-Fanconi s.*

cystinuria (sis'ti-nu're-ah) [*cystine* + *urine*] a hereditary condition of persistent excessive urinary excretion of cystine and three other dibasic amino acids: lysine, ornithine, and arginine; it is due to impairment of renal transport in tubular reabsorption of these amino acids. The predominant clinical manifestation is the formation of urinary cystine calculi.

cystinuric (sis'ti-nu'rik) pertaining to or affected with cystinuria.

cystirrhagia (sis'ti-ra'je-ah) cystorrhagia.

cystirrhoea (sis'ti-re'ah) cystorrhoea.

cystis (sis'tis), pl. *cys'tides* [Gr. *kystis*] a pouch or sac; a cyst. *c. fel'lea*, gallbladder.

cystistaxis (sis'ti-stak'sis) [*cysti-* + Gr. *staxis* dripping] oozing of blood from the mucous membrane into the bladder.

cystitis (sis-ti'tis) inflammation of the urinary bladder. **aller-**

gic c., cystitis resulting from some unusual hypersensitivity, characterized by a large number of mononuclear leukocytes and eosinophils in the bladder mucosa and musculature, and in the urinary sediment. **bacterial c.**, bacterial infection of the bladder. **catarrhal c., acute**, cystitis resulting from injury, irritation by foreign bodies, gonorrhea, etc., and marked by burning in the bladder, pain in the urethra, and painful micturition. **c. col'li**, inflammation involving the neck of the bladder.

croupous c., diphtheritic c. **cystic c., c. cys'tica**, cystitis with the formation of multiple submucosal cysts in the bladder wall. **diphtheritic c.**, cystitis due to infection by *Corynebacterium diphtheriae*, and characterized by the formation of a false membrane; called also *croupous c.* **c. emphysemato'sa**, an unusual inflammation of the bladder, characterized by the presence of gas-filled vesicles and cysts in the bladder mucosa and musculature. **eosinophilic c.**, cystitis characterized by the presence of large numbers of eosinophils in the urinary sediment. **exfoliative c.**, cystitis with sloughing of the bladder mucosa.

c. follicula'ris, cystitis in which the mucosa of the bladder is studded with nodules containing lymph follicles. **c. glandula'ris**, cystitis in which the mucosa contains mucin-secreting glands, observed more frequently in cases of exstrophy of the bladder, and sometimes leading to malignant degeneration.

incrusted c., an intense cystitis characterized by deposition of phosphatic or other inorganic salts on the chronically inflamed bladder wall, generally at the site of ulcerations, granulations, or tumors. **interstitial c., chronic**, a condition of the bladder occurring predominantly in women, with an inflammatory lesion, usually in the vertex, and involving the entire thickness of the wall, appearing as a small patch of brownish red mucosa, surrounded by a network of radiating vessels. The lesions, known as Fenwick-Hunner or Hunner ulcers, may heal superficially, and are notoriously difficult to detect. Typically, there is urinary frequency and pain on bladder filling and at the end of micturition.

Called also *panmural c.*, *submucous c.*, and *panmural fibrosis of the bladder*. **mechanical c.**, cystitis resulting from irritation by a vesical calculus, manipulation, or a foreign body in the bladder. **panmural c., interstitial c., chronic**. **c. papillomato'sa**, cystitis characterized by the presence of papillomatous growths on the inflamed mucous membrane. **c. seni'lis femina'rum**, a chronic cystitis occurring in elderly women, marked by abnormal frequency of micturition, with tenesmus and burning. **submucous c., interstitial c., chronic**.

cystitome (sis'ti-tōm) [*cysti-* + Gr. *temnein* to cut] an instrument for opening the capsule of the lens of the eye; called also *kibisitome*.

cystitomy (sis-tit'o-me) [*cysti-* + Gr. *tomē* a cut] the surgical division of the capsule of the lens; capsulotomy.

cysto-, cyst-, cysti-, cystido- [Gr. *kystis*, *kystides* a sac or bladder] combining form denoting a relationship to a sac, cyst, or bladder, most frequently used in reference to the urinary bladder.

cystoadenoma (sis'to-ad'e-no'mah) cystadenoma.

cystoblast (sis'to-blast) [*cysto-* + Gr. *blastos* germ] the layer of cells that lines the amniotic cavity of the early embryo on the side of the enveloping layer.

cystocarcinoma (sis'to-kar'si-no'mah) carcinoma associated with cysts.

cystoceles (sis'to-sēl) [*cysto-* + Gr. *kēlē* hernia] hernial protrusion of the urinary bladder through the vaginal wall; called also *cystic hernia*.

cystochrome (sis'to-krōm) [*cysto-* + Gr. *chrōma* color] a mixture of indigo carmine and methenamine; used by intramuscular or intravenous injection for the indigo carmine test of renal function.

cystochromoscopy (sis'to-kro-mos'ko-pe) chromocystoscopy.

cystocolostomy (sis'to-ko-los'to-me) [*cysto-* + *colostomy*] the surgical creation of a permanent passage from the bladder to the colon.

- Cysto-Conray** (sis''to-to-kon'ra) trademark for preparations of iothalamate meglumine.
- cystodiaphanoscopy** (sis''to-di''ah-fah-nos'ko-pe) [*cysto-* + *diaphanoscopy*] examination within, or transillumination of, the urinary bladder by means of a diaphanoscope.
- cystoduodenostomy** (sis''to-du-od''ē-nos'to-me) internal drainage of an adjacent cyst into the duodenum.
- cystodynia** (sis''to-din'e-ah) [*cysto-* + *Gr. odyne* pain] pain in the urinary bladder.
- cystoelytroplasty** (sis''to-e-lit'ro-plas'te) [*cysto-* + *Gr. elytron* sheath + *plassein* to form] surgical repair of vesicovaginal injuries.
- cystoenterocele** (sis''to-en'ter-o-sēl) hernia of a portion of the bladder and of the intestine.
- cystoepiplocele** (sis''to-e-pip'lo-sēl) hernia of a portion of the bladder and of the omentum.
- cystoepithelioma** (sis''to-ep''i-the'le-o'mah) a tumor containing cystic and epitheliomatous elements.
- cystofibroma** (sis''to-fi-bro'mah) [L.] fibroma containing cysts.
- cystogastrostomy** (sis''to-gas-tros'to-me) surgical anastomosis of an adjacent cyst to the stomach.
- Cystografin** (sis''to-graf'in) trademark for a preparation of diatrizoate meglumine.
- cystogram** (sis''to-gram) a roentgenogram of the bladder.
- cystography** (sis-tog'rah-fe) [*cysto-* + *Gr. graphein* to write] roentgenography of the bladder after injection of the organ with opaque solution. **delayed c.**, cystography in which film exposures are made at varying intervals up to 30 minutes or longer; useful in the study of urinary reflux. **voiding c.**, radiography of the bladder while the patient is urinating.
- cystoid** (sis'toid) [*cysto-* + *Gr. eidos* form] 1. resembling a cyst. 2. a cystlike, circumscribed collection of softened material, differing from a true cyst in having no enclosing capsule.
- cystojejunostomy** (sis''to-je-ju-nos'to-me) surgical anastomosis of an adjacent cyst to the jejunum.
- cystolith** (sis''to-lith) [*cysto-* + *Gr. lithos* stone] a vesical calculus.
- cystolithectomy** (sis''to-li-thek'to-me) [*cysto-* + *Gr. lithos* stone + *ektomē* excision] the removal of a calculus by cutting into the urinary bladder. The term has been used erroneously for excision of a gallstone from the gallbladder.
- cystolithiasis** (sis''to-li-thi'ah-sis) [*cysto-* + *Gr. lithos* stone] the development of calculi in the urinary bladder.
- cystolithic** (sis''to-lith'ik) pertaining to vesical calculi.
- cystolithotomy** (sis''to-li-thot'o-me) cystolithectomy.
- cystolutein** (sis''to-lu'te-in) [*cysto-* + *L. luteus* yellow] a yellow pigment from certain ovarian cysts.
- cystoma** (sis-to'mah) [*cysto-* + *-oma*] a tumor containing cysts of neoplastic origin; a cystic tumor. **myxoid c.** (*obs.*), mucinous cystadenoma. **c. sero'sum sim'plex**, simple cyst of the ovary.
- cystomatitis** (sis''to-mah-ti'tis) inflammation of one or more of the cysts of a cystoma.
- cystomatous** (sis-to'mah-tus) relating to or containing cystoma.
- cystometer** (sis-tom'ē-ter) [*cysto-* + *Gr. metron* measure] an instrument for studying the neuromuscular mechanism of the bladder by means of measurements of pressure and capacity.
- cystometrogram** (sis''to-met'ro-gram) the tracing recorded by cystometrography.
- cystometrography** (sis''to-mē-trog'rah-fe) the graphic recording of the pressure exerted at varying degrees of filling of the urinary bladder.
- cystometry** (sis-tom'ē-tre) the study of bladder efficiency by means of the cystometer.
- Cystomonas** (sis-tom'o-nas) *Bodo*.
- cystomorphous** (sis''to-mor'fus) [*cysto-* + *Gr. morphē* form] shaped like a cyst or bladder.
- cystomyoma** (sis''to-mi-o'mah) (*obs.*) myoma with cystic degeneration.
- cystomyxoadenoma** (sis''to-mik'so-ad''e-no'mah) (*obs.*) adenomyoma with cystic degeneration.
- cystomyxoma** (sis''to-mik-so'mah) (*obs.*) mucinous cystadenoma.
- cystonephrosis** (sis''to-nēfro'sis) [*cysto-* + *Gr. nephros* kidney] cystiform dilatation or enlargement of the kidney.
- cystoneuralgia** (sis''to-nu-ral'je-ah) [*cysto-* + *neuralgia*] neuralgia of the bladder.
- cystoparalysis** (sis''to-pah-ral'i-sis) cystoplegia.
- cystopexy** (sis''to-pek'se) [*cysto-* + *Gr. pēxis* fixation] fixation of the bladder to the abdominal wall in the treatment of cystocele; vesicofixation.
- cystophorous** (sis-tof'o-rus) [*cysto-* + *Gr. phoros* bearing] containing cysts.
- cystophotography** (sis''to-to-tog'rah-fe) the photographing of the inside of the bladder.
- cystophthisis** (sis-tof'thi-sis) [*cysto-* + *Gr. phthisis* consumption] tuberculosis of the bladder.
- cystoplasty** (sis''to-plas'te) [*cysto-* + *Gr. plassein* to mold] any plastic or reconstructive operation on the bladder. **augmentation c.**, enlargement of the bladder by grafting to it a detached segment of intestine (ileum, cecum, or sigmoid).
- cystoplegia** (sis''to-ple'je-ah) [*cysto-* + *Gr. plēgē* stroke] paralysis of the bladder; called also *cystoparalysis*.
- cystoproctostomy** (sis''to-prok-tos'to-me) [*cysto-* + *Gr. proktos* rectum + *stomoun* to provide with an opening, or mouth] the surgical creation of a communication between the urinary bladder and rectum; called also *cystorectostomy*.
- cystoptosis** (sis''top-to'sis) [*cysto-* + *Gr. ptōsis* a falling] prolapse of a part of the inner coat of the bladder into the urethra.
- cystopyelitis** (sis''to-pi-e-li'tis) inflammation involving both the urinary bladder and the pelvis of the kidney.
- cystopyelography** (sis''to-pi'ē-log'rah-fe) roentgenography of the urinary bladder and the pelvis of the kidney.
- cystopyelonephritis** (sis''to-pi'ē-lo-ne-fri'tis) [*cysto-* + *Gr. pyelos* pelvis + *nephros* kidney + *-itis*] combined cystitis and pyelonephritis.
- cystoradiography** (sis''to-ra'de-og'rah-fe) [*cysto-* + *radiography*] radiography of the bladder.
- cystorectostomy** (sis''to-rek-tos'to-me) cystoproctostomy.
- cystorrhagia** (sis''to-ra'je-ah) [*cysto-* + *Gr. rhēg-nynai* to burst forth] hemorrhage from the bladder.
- cystorrhaphy** (sis-tor'ah-fe) [*cysto-* + *Gr. raphē* suture] the operation of suturing the bladder.
- cystorrhea** (sis''to-re'ah) [*cysto-* + *Gr. rhoia* flow] catarrh of the bladder.
- cystosarcoma** (sis''to-sar-ko'mah) a variant of mammary fibroadenoma, usually of large size, with an unusually cellular, sarcoma-like stroma; it is locally aggressive, and sometimes metastasizes. Called also *c. phylloides* and *c. phylloides*.
- cystoschisis** (sis-tos'ki-sis) [*cysto-* + *Gr. schisis* fissure] fissure of the bladder.
- cystoscirrhus** (sis''to-skir'us) [*cysto-* + *Gr. skirrhus* scirrhus] (*obs.*) infiltrating scirrhus carcinoma of the urinary bladder.
- cystosclerosis** (sis''to-skle-ro'sis) a cyst that has undergone sclerosis or fibrosis.
- cystoscope** (sis'to-skōp') [*cysto-* + *Gr. skopein* to examine] an endoscope for visual examination of the bladder.
- cystoscopic** (sis''to-skop'ik) pertaining to cystoscopy, or performed with the cystoscope.
- cystoscopy** (sis-tos'ko-pe) direct visual examination of the urinary tract with a cystoscope. **air c.**, cystoscopy in which the bladder is distended with air. **water c.**, cystoscopy in which the bladder is distended with water.
- cystose** (sis'tōs) resembling or containing a cyst or cysts.
- cystospasm** (sis'to-spazm) [*cysto-* + *Gr. spasmos* spasm] spasm of the bladder.
- Cystospaz** (sis'to-spaz) trademark for preparations of hyoscynamine.
- cystospermittis** (sis''to-sper-mi'tis) [*cysto-* + *Gr. sperma* semen] inflammation of a seminal vesicle.
- cystostaxis** (sis''to-stak'sis) cystistaxis.
- cystostomy** (sis-tos'to-me) [*cysto-* + *Gr. stoma* opening] the formation of an opening into the bladder. **tubeless c.**, suprapubic cystostomy in which a fistula of combined skin and bladder flap is created to enable the collection of urine in a reservoir without using a cystostomy tube.
- cystotome** (sis'to-tōm) [*cysto-* + *Gr. tomē* a cutting] 1. an instrument for incising the bladder. 2. cystitome.
- cystotomy** (sis-tot'o-me) surgical incision of the urinary bladder; vesicotomy. **suprapubic c.**, the operation of cutting into the bladder by an incision just above the pubic symphysis.
- cystotrachelotomy** (sis''to-tra'kel-ot'o-me) [*cysto-* + *Gr. trachelōs* neck + *tomē* a cut] surgical incision of the neck of the bladder.
- cystoureteritis** (sis''to-u-re'ter-i'tis) inflammation involving the urinary bladder and ureters.
- cystoureterogram** (sis''to-u-re'ter-o-gram) a roentgenogram of the urinary bladder and ureters.
- cystoureteropyelitis** (sis''to-u-re'ter-o-pi'ē-li'tis) inflammation involving the urinary bladder, ureter, and pelvis of the kidney.
- cystoureteropyelonephritis** (sis''to-u-re'ter-o-pi'ē-lo-ne-fri'tis) combined inflammation of the bladder, ureter, and pelvis and pyramids of the kidney.
- cystourethritis** (sis''to-u-re'thri'tis) inflammation of the bladder and urethra.
- cystourethrocele** (sis''to-u-re'thro-sēl) prolapse of the female urethra and bladder.

cystourethrogram (sis''to-u-re''thro-gram) a roentgenogram of the urinary bladder and urethra.

cystourethrography (sis''to-u-re''throg''rah-fe) roentgenography of the urinary bladder and urethra. **chain c.**, that in which a sterile beaded metal chain is introduced via a modified catheter into the bladder and urethra; used in evaluating anatomical relationships of the bladder and urethra. **voiding c.**, cystourethrography in which radiographs are made before, during, and after voiding.

cystourethroscope (sis''to-u-re''thro-sköp'') an instrument for examining the bladder and posterior urethra.

cystous (sis''tus) cystose.

cyt- see *cyto-*.

cytapheresis (sit''ah-fē-re''sis) [*cyt-* + Gr. *aphairesis* removal] a procedure in which cells of one or more kinds (leukocytes, platelets, etc.) are separated from whole blood and retained, the plasma and other formed elements being retransfused into the donor; it includes leukapheresis and thrombocytapheresis.

cytarabine (si-tār''ah-bēn) [USP] chemical name: 4-amino-1-β-D-arabinofuranosyl-2(1*H*)-pyrimidinone. A synthetic nucleoside of cytosine and arabinose isomeric with cytidine, C₁₀H₁₃N₅O₆, which inhibits DNA synthesis and hence has cytotoxic and antiviral properties and which occurs as a white to off-white, crystalline powder; used as an antineoplastic, primarily for induction of remission in acute granulocytic leukemia and secondarily for the acute leukemias of adults and children, administered intravenously and subcutaneously. It has also been used in the treatment of herpesvirus infections. Called also *arabinosylcytosine*, *ara-C*, and *cytosine arabinoside*. **c. hydrochloride**, the hydrochloride of cytarabine, an antiviral agent.

cytarme (sit-ar''me) [Gr. *kytos* cell + *armē* union] the flattening of rounded blastomeres at the conclusion of cleavage.

cytase (si''tās) [Gr. *kytos* hollow vessel + *-ase*] 1. Metchnikoff's term for the complement regarded as an enzyme; see also *alexin*. 2. an enzyme occurring in the seeds of various plants, having the power of making soluble the material of the cell wall.

cytaster (si''tas-ter) [Gr. *kytos* hollow vessel + *astēr* star] aster.

-cyte (sit) [Gr. *kytos* hollow vessel, anything that contains or covers] a word termination denoting a cell, the type of which is designated by the root to which it is affixed, as *elliptocyte*, *erythrocyte*, *leukocyte*, etc.

Cytellin (si-tel''in) trademark for a preparation of sitosterols.

cythemolysis (si''thē-mol''i-sis) hemolysis.

cytheromania (sith''er-o-ma''ne-ah) [Gr. *Kythereia* Venus + *mania* madness] nymphomania.

cytidine (si''ti-dēn) a nucleoside from nucleic acid; on hydrolysis it yields cytosine and ribose. **c. triphosphate (CTP)**, an energy-rich nucleotide that provides energy in the biosynthesis of certain cellular constituents.

cytisine (sit''i-sin) [Gr. *kytisos* laburnum] a highly toxic alkaloid, C₁₁H₁₄N₂O, from *Cytisus laburnum*, the laburnum tree of Europe, and others of the same genus; formerly used as an antiemetic and antitussive. Called also *baptitoxine*, *laburnine*, *sophorine*, and *ulexine*. See also *cytisism*.

cytism (sit''i-sizm) poisoning by *Cytisus laburnum*, the laburnum tree of Europe, characterized by burning in the mouth and pharynx, thirst, nausea, vomiting, diarrhea, prostration, and irregular pulse; sometimes accompanied by aphasia, visual disturbances, delirium, and unconsciousness. Death from respiratory paralysis may occur.

Cytisus (sit''i-sus) a genus of leguminous trees of Europe, northern Africa, and southern Asia. *C. scoparius* (L.) Link., or scotch broom, is the source of scoparin and scoparius. Called also *Sarothamnus*.

cyto-, cyt- [Gr. *kytos* hollow vessel; anything that contains or covers] a combining form denoting relationship to a cell.

cytoanalyzer (si''to-an''ah-li''zer) an electronic optical apparatus for the detection of malignant cells in smears.

cytoarchitectonic (si''to-ar''ki-tek-ton''ik) pertaining to cellular structure or the arrangement of cells in a tissue.

cytoarchitectural (si''to-ar''ki-tek''tu-ral) cytoarchitectonic.

cytoarchitecture (si''to-ar''ki-tek''tūr) the organization of cells in the structure of an organ or tissue, especially that in the cerebral cortex.

cytobiology (si''to-bi-ol''o-je) [*cyto-* + *biology*] the biology of cells.

cytobiotaxis (si''to-bi-o-tak''sis) [*cyto-* + Gr. *bios* life + *taxis* arrangement] cytocleisis.

cytoblast (si''to-blast) [*cyto-* + Gr. *blastos* germ] Schleiden's name for the cell nucleus.

cytoblastema (si''to-blas-te''mah) [*cyto-* + *blastema*] Schleiden's name for the mother liquid from which cells were said to form.

cytocentrum (si''to-sen''trum) [*cyto-* + Gr. *kentron* center] centrosome.

cytocerastic (si''to-se-ras''tik) cytokerastic.

cytochalasin (si''to-kal''ah-sin) any of a group of fungal metabolites that affect the motility of polymorphonuclear leukocytes. **c. B**, a cytochalasin that causes the disappearance of cytoplasmic microfilaments and inhibits certain cellular processes, e.g., cytokinesis.

cytochemism (si''to-kem''izm) [*cyto-* + *chemism*] chemical activity of cells.

cytochemistry (si''to-kem''is-tre) [*cyto-* + *chemistry*] the identification and localization of the different chemical compounds and their activities within the cell.

cytochrome (si''to-krōm) [*cyto-* + Gr. *chrōma* color] 1. any of a class of hemoproteins whose principal biologic function is electron transport by virtue of a reversible valency change of its heme iron; cytochromes, which are widely distributed in animal and plant tissues, are distinguished according to their prosthetic group as *a*, *b*, *c*, and *d*. 2. a neuron having an ill-developed cell body, in which the stained nucleus appears to be completely surrounded, and does not exceed in size the nucleus of a leukocyte. **c. aa₃**, *c. c* oxidase. **c. b₅ reductase**, a flavoprotein that transfers electrons from NADPH (or NADH) to cytochrome *b₅*, as in the liver microsomal desaturation of fatty acids. **c. c oxidase**, a copper-containing cytochrome of the *a* type which receives electrons from cytochrome *c* and transfers them to oxygen, enabling the oxygen to combine with hydrogen ions to form water. Called also *c. aa₃*.

cytochylema (si''to-ki-le''mah) [*cyto-* + Gr. *chylos* juice] hyaloplasm, def. 1.

cytotoxic (si''to-si''dal) destructive to cells.

cytocide (si''to-sid) [*cyto-* + L. *caedere* to kill] an agent that destroys cells.

cytocinesis (si''to-si-ne''sis) cytokinesis.

cytoclasis (si-tok''lah-sis) [*cyto-* + Gr. *klasis* a breaking] the destruction of cells.

cytotoxic (si''to-klas''tik) pertaining to, characterized by, or causing cytoclasis.

cytocleisis (si''to-kle''sis) [*cyto-* + Gr. *klēsis* a call] a form of energy, totally unrelated to electricity, light, heat, or sound, which is generated by living tissues; the vital principle in all living tissues (M. Kelly). The term was first introduced in 1923 by Frederic Wood Jones, who defined it as the influence of body cells on other body cells; the "call of cell to cell." Called also *cytobiotaxis*.

cytocletic (si''to-klet''ik) pertaining to cytocleisis.

cytoctony (si-tok''to-ne) [*cyto-* + Gr. *ktonos* murder] the killing of cells; specifically the killing by viruses of cells in culture.

cytocyst (si''to-sist) [*cyto-* + Gr. *kystis* sac] (*obs.*) a cystlike structure enclosing a mass of merozoites, being the remains of the host cell in which the merozoites were formed; seen in malaria.

cytode (si''tōd) [*cyto-* + Gr. *eidōs* form] a non-nucleated cell or cell element.

cytodendrite (si''to-den''drit) [*cyto-* + *dendrite*] dendrite.

cytodema (si''to-dez''mah) [*cyto-* + Gr. *desma* band] the lamellar or bridgelike tissues binding animal cells together (Studnicka).

cytodiagnosis (si''to-di''ag-no''sis) [*cyto-* + *diagnosis*] diagnosis of disease based on the examination of cells. **exfoliative c.**, the examination of cells that have desquamated from the external or internal surfaces of the body as a means of detecting cancer.

cytodiagnostic (si''to-di''ag-nos''tik) pertaining to or subserving cytodiagnosis.

cytodieresis (si''to-di-er''ē-sis) [*cyto-* + Gr. *diarēsis* division] cell division, i.e., meiosis or mitosis.

cytodifferentiation (si''to-dif''er-en''she-a''shun) the development of specialized structures and functions in embryonic cells.

cytodistal (si''to-dis''tal) [*cyto-* + *distal*] denoting that part of an axon remote from the cell of origin.

cytoflav (si''to-flav) a phosphoric acid ester of riboflavin, found in the liver and in the heart.

cytoflavin (si''to-fla''vin) a flavin that was first isolated from heart muscle; it is the phosphoric acid ester of riboflavin.

cytogene (si''to-jēn) [*cyto-* + *gene*] a self-perpetuating cytoplasmic particle that traces its origin to the genes of the nucleus.

cytogenesis (si''to-jen''ē-sis) [*cyto-* + Gr. *genesis* origin] the origin and development of cells.

cytogenetical (si''to-jē-net''ē-kal) pertaining to cytogenetics.

cytogeneticist (si''to-je-net''i-sist) a specialist in cytogenetics.

cytogenetics (si''to-jē-net''iks) the branch of genetics devoted to study of the cellular constituents concerned in heredity, that is, the chromosomes. **clinical c.**, the scientific study of the relationship between chromosomal aberrations and pathological conditions.

cytogenic (si-to-jen''ik) 1. pertaining to cytogenesis. 2. forming or producing cells.

cytogenous (si-toj''ē-nus) [*cyto-* + Gr. *gennan* to produce] producing cells.

cytogeny (si-toj''ē-ne) 1. cytogenesis. 2. cell lineage.

cytoglomerator (si''to-glom''er-a''tor) an apparatus for processing blood before freezing it for storage, and after thawing it.

cytoglucopenia (si''to-gloo''ko-pe'ne-ah) cytoglycopenia.

cytoglycopenia (si''to-gli''ko-pe'ne-ah) [cyto- + glucose + Gr. *penia* poverty] deficient glucose content of body or blood cells.

cytology (si-tog'ŷ-ne) [cyto- + Gr. *gonos* seed] cytogenic reproduction.

cytohistogenesis (si''to-his''to-jen'ē-sis) [cyto- + Gr. *histos* web + *genesis* formation] the development of the structure of cells.

cytohistologic (si''to-his''to-loj'ik) involving both cytologic and histologic methods.

cytohistology (si''to-his-tol'o-je) the combination of cytologic and histologic methods.

cytohormone (si''to-hor'mōn) [cyto- + *hormone*] a cell hormone.

cytohyaloplasm (si''to-hi'ah-lo-plazm'') [cyto- + Gr. *hyalos* crystal + *plasma* plasm] the clear substance of cytoplasm.

cytohydrolist (si''to-hi'dro-list) [cyto- + *hydrolis*] an enzyme that breaks up the cell wall by hydrolysis.

cytoid (si'toid) [cyto- + Gr. *eidos* form] resembling a cell.

cyto-inhibition (si''to-in''hi-bish'un) [cyto- + L. *inhibere* to restrain] the action of phagocytic cells in protecting bacteria or viruses which they have ingested from lysis or chemical destruction by chemotherapeutic agents.

cytokalipenia (si''to-kal'i-pe'ne-ah) [cyto- + L. *kalium* potassium + Gr. *penia* poverty] deficient potassium content of body or blood cells.

cytokerastic (si''to-kē-ras'tik) [cyto- + Gr. *kerastos* mixed] pertaining to the development of cells from a lower to a higher order.

cytokinesis (si''to-ki-ne'sis) [cyto- + Gr. *kinēsis* motion] the changes that take place in the cytoplasm during cell division; division of the cytoplasm, a process synchronized in eukaryotic cells with nuclear division (mitosis).

cytokinin (si''to-ki'nin) any of a class of phytohormones (N⁹-substituted adenines) whose principal functions are the induction of cell division (cytokinesis) and the regulation of differentiation of tissue (organogenesis).

cytolist (si'to-list) cytolysin.

cytologic (si'to-loj'ik) pertaining to cytology.

cytologist (si-tol'o-jist) a specialist in cytology.

cytology (si-tol'o-je) [cyto- + *-logy*] the study of cells, their origin, structure, function, and pathology. **aspiration biopsy c. (ABC)**, the microscopic study of cells obtained from superficial or internal lesions by suction through a fine needle. **exfoliative c.**, microscopic examination of cells desquamated from a body surface or lesion as a means of detecting malignancy and microbiologic changes, to measure hormonal levels, etc. Such cells may be obtained by such procedures as aspiration, washing, smear, and scraping, and the technique may be applied to vaginal secretions, sputum, urine, abdominal fluid, prostatic secretion, etc.

cytolymph (si'to-limf) [cyto- + *lymph*] hyaloplasm, def. 1.

cytolysate (si-tol'i-sāt) a preparation of lysed cells. **blood c.**, hemolysate.

cytolysin (si-tol'i-sin) a substance or antibody that produces dissolution of cells. Cytolysins that have a specific action for certain cells are named accordingly, as *hemolysins*, etc.

cytolysis (si-tol'i-sis) [cyto- + Gr. *lysis* dissolution] the dissolution or destruction of cells. **immune c.**, cell lysis produced by antibody with the participation of complement.

cytolysosome (si''to-li'so-sōm) autophagosome.

cytolytic (si''to-lit'ik) pertaining to, characterized by, or causing cytolysis.

cytoma (si'to-mah) [cyto- + *-oma*] a cell tumor, as a sarcoma.

cytomachia (si''to-mak'e-ah) [cyto- + Gr. *machē* fight] the struggle between bacteria and the protective cells of the body.

cytomegaloviruria (si''to-meg'ah-lo-vi-roo're-ah) presence in the urine of cytomegaloviruses.

cytomegalovirus (si''to-meg'ah-lo-vi'rus) one of a group of highly host-specific herpesviruses that infect man, monkeys, or rodents, with the production of unique large cells bearing intranuclear inclusions. Also termed *salivary gland virus*. The virus specific for man causes cytomegalic inclusion disease, and it has been associated with a syndrome resembling infectious mononucleosis.

Cytomel (si'to-mel) trademark for a preparation of liothyronine sodium.

cytomere (si'to-mēr) [cyto- + Gr. *meros* part] 1. one of the bodies formed in coccidian reproduction by division of the trophozoite, each cytomere becoming the center of merozoite formation. 2. that part of the sperm which is composed of cytoplasm; called also *chondriomere* and *plastomere*.

cytometaplasia (si''to-met'ah-pla'ze-ah) [cyto- + Gr. *metaplasia* change] alteration in the form or function of a cell.

cytometer (si-tom'ē-ter) [cyto- + Gr. *metron* measure] a device for counting blood cells, as a hemocytometer.

cytometry (si-tom'ē-tre) the counting of blood cells; blood counting.

cytomitome (si''to-mi'tōm) [cyto- + Gr. *mitos* thread] a fibril or fibrillary structure in the cytoplasm.

cytomorphology (si''to-mor-fol'o-je) the morphology of cells.

cytomorphosis (si''to-mor-fō'sis) [cyto- + Gr. *morphōsis* a shaping] the series of changes through which cells go in the process of formation, development, senescence, etc.

cytomycosis (si''to-mi-ko'sis) [cyto- + Gr. *mykēs* fungus] former term for disseminated histoplasmosis with hepatosplenomegaly, anemia, leukopenia, and fatal outcome.

cyton (si'ton) the cell body of a neuron.

cytonecrosis (si''to-nē-kro'sis) death of individual cells.

cytopathic (si''to-path'ik) pertaining to or characterized by pathological changes in cells.

cytopathogenesis (si''to-path'o-jen'ē-sis) the production of pathological changes in cells.

cytopathogenetic (si''to-path'o-jē-net'ik) pertaining to or characterized by cytopathogenesis.

cytopathogenic (si''to-path'o-jen'ik) capable of producing pathological changes in cells.

cytopathogenicity (si''to-path'o-jē-nis'i-te) the quality of being capable of producing pathological changes in cells.

cytopathologic, cytopathological (si''to-path'o-loj'ik; si''to-path'o-loj'i-kal) relating to cytopathology; denoting the changes in cells in disease.

cytopathologist (si''to-pah-thol'o-jist) an expert in the study of cells in disease; a cellular pathologist.

cytopathology (si''to-pah-thol'o-je) [cyto- + Gr. *pathos* disease + *-logy*] the study of cells in disease; cellular pathology.

cytopenia (si''to-pe'ne-ah) [cyto- + Gr. *penia* poverty] deficiency in the cellular elements of the blood.

Cytophaga (si-tof'ah-gah) [cyto- + Gr. *phagein* to eat] a genus of schizomycetes (family Cytophagaceae), species of which dissolve vegetable fiber and hydrolyze cellulose.

Cytophagaceae (si''to-fah-ga'se-e) a family of Schizomycetes, order Myxobacterales, made up of saprophytic soil microorganisms, many of which decompose cellulose; it includes a single genus, *Cytophaga*.

cytophagocytosis (si''to-fag'o-si-to'sis) cytophagy.

cytophagous (si-tof'ah-gus) [cyto- + Gr. *phagein* to eat] devouring or consuming cells; said of phagocytes.

cytophagy (si-tof'ah-je) the ingestion of cells by phagocytes.

cytopharynx (si''to-far'inks) the depression in the body of certain flagellates and ciliates through which food matter is received.

cytopherometric (si''to-fer'o-met'rik) see under *tests*.

cytophil (si'to-fil) an element or substance that has an affinity for cells.

cytophilic (si-to-fil'ik) [cyto- + Gr. *philein* to love] having an affinity for cells, as cytophilic antibodies.

cytophotometer (si''to-to-fom'ē-ter) a photometer for measuring localization of organic compounds within cells by measuring the light intensity through selected stained areas of cytoplasm.

cytophotometric (si''to-to-fom'ē-ter) pertaining to or accomplished by cytophotometry.

cytophotometry (si''to-to-fom'ē-tre) the study of organic compounds within cells by means of the cytophotometer. Called also *microfluorometry*.

cytophyllactic (si''to-fi-lak'tik) pertaining to cytophyllaxis.

cytophyllaxis (si''to-fi-lak'sis) [cyto- + Gr. *phyllaxis* a guarding] 1. the protection of cells. 2. increase of cellular activity.

cytophyletic (si''to-fi-let'ik) [cyto- + Gr. *phylē* a tribe] pertaining to the genealogy of cells.

cytophysics (si''to-fiz'iks) the physics of cell activity.

cytophysiology (si''to-fiz-e-ol'o-je) [cyto- + *physiology*] the physiology of the cell.

cytopigment (si'to-pig'ment) any pigment found in cells.

cytopipette (si''to-pi-pet') a pipette for taking cytological smears.

cytoplasm (si'to-plazm'') [cyto- + Gr. *plasma* plasm] the protoplasm of a cell exclusive of that of the nucleus; it consists of a continuous aqueous solution (cytosol) and the organelles and inclusions suspended in it (phaneroplasm), and is the site of most of the chemical activities of the cell. Cf. *nucleoplasm*.

cytoplasmic (si''to-plaz'mik) pertaining to or contained in the cytoplasm.

cytoplast (si'to-plast) a cell from which the nucleus has been removed and which remains viable for a time.

cytoproximal (si''to-prok'si-mal) [cyto- + *proximal*] denoting that part of an axon nearer to the cell of origin.

cytoreticulum (si''to-rē-tik'u-lum) [cyto- + L. *retic'ulum* network] spongioplasm.

cytorrhcytes (si''to-rik'tēz) [cyto- + Gr. *oryssein* to dig] cell inclusions, found in various diseases, which may be specific protozoan pathogens, or they may be manifestations of cell reactions to the parasite of the disease, or they may be degenerations caused by the disease. See *Siegel's organism*, under *organism*.

Cytosar (si'to-sar) trademark for preparations of cytarabine.

cytoscapy (si-tos'ko-pe) [cyto- + Gr. *skopein* to examine] examination of cells.

cytosiderin (si'to-sid'er-in) intracellular pigment due probably to derangement of iron metabolism.

cytosine (si'to-sen) a base, oxaminopyrimidine, $C_4H_5N_3O$, a component of nucleic acid. **c. arabinoside**, cytarabine. **5-hydroxymethyl c.**, a pyrimidine that replaces cytosine in the DNA of certain coliphages.

cytoskeletal (si'to-skel'ē-tal) of or pertaining to the cytoskeleton.

cytoskeleton (si'to-skel'ē-ton) a conspicuous internal reinforcement in the cytoplasm of a cell, consisting of tonofibrils, terminal web, or other microfilaments.

cytosol (si'to-sol) the liquid medium of the cytoplasm, i.e., cytoplasm minus organelles and nonmembranous insoluble components.

cytosolic (si'to-sol'ik) pertaining to or contained in the cytosol.

cytosome (si'to-sōm) [cyto- + Gr. *sōma* body] 1. the body of a cell apart from its nucleus. 2. multilamellar body.

cytospongium (si'to-spon'je-um) [cyto- + Gr. *spongos* sponge] spongioplasm.

cytost (si'tost) [Gr. *kytos* hollow vessel] a specific toxin given off from a cell as a result of injury to it; a specific agent given off from broken-down tissue.

cytostasis (si-tos'tah-sis) [cyto- + Gr. *stasis* halt] the closure of capillaries by white blood corpuscles in the early stages of inflammation.

cytostatic (si'to-stat'ik) [cyto- + Gr. *statikos* bringing to a stand-still] 1. suppressing the growth and multiplication of cells. 2. an agent that suppresses cell growth and multiplication.

cytostome (si'to-stōm) [cyto- + Gr. *stoma* mouth] the cell mouth; the aperture through which food enters certain protozoa.

cytostromatic (si'to-stro-mat'ik) [cyto- + *stroma*] pertaining to the stroma of a cell.

cytotactic (si'to-tak'tik) pertaining to cytotoxicity.

cytotaxigen (si'to-taks'j-en) a substance that mediates chemotaxis of cells indirectly by inducing cytotoxicity formation; thus antigen-antibody complexes are cytotoxicogenic because when added to serum they fix complement, resulting in the liberation of chemotactic factors derived from complement.

cytotaxin (si'to-taks'in) a substance that directly mediates the chemotaxis of cells.

cytotaxis (si-to-tak'sis) [cyto- + Gr. *taxis* arrangement] the movement and arrangement of cells with respect to a specific source of stimulation.

cytotherapy (si'to-ther'ah-pe) [cyto- + Gr. *therapeia* treatment]

1. treatment by the administration of animal cells. 2. the therapeutic use of a cytolytic or cytotoxic serum.

cytothesis (si-toth'ē-sis) [cyto- + Gr. *thesis* placing] the restitution of injured cells to their normal condition.

cytotoxic (si'to-tok'sik) pertaining to, resulting from, or having the action of a cytotoxin.

cytotoxicity (si'to-tok-sis'ī-te) the quality of being capable of producing a specific toxic action upon cells of special organs.

cytotoxicosis (si'to-tok'se-ko'sis) a condition produced by a cytotoxin or by poisoning cells.

cytotoxin (si'to-tok'sin) [cyto- + *toxin*] a toxin or antibody that has a specific toxic action upon cells of special organs; cytotoxins are named according to the special variety of cell for which they are specific, as *nephrotoxin*.

cytotrochin (si'to-tro'kin) [cyto- + Gr. *trochia* track] that element of a tropic substance that carries the active element to the cell.

cytotrophoblast (si'to-trof'o-blast) [cyto- + Gr. *trophē* nutrition + *blastos* germ] the cellular (inner) layer of the trophoblast; called also *Langhans' layer*.

cytotropic (si'to-trop'ik) [cyto- + Gr. *tropos* a turning] attracting cells; possessing an affinity for cells; said especially of the antibodies responsible for immediate-type allergic reactions. See also under *antibody*.

cytotropism (si-tot'ro-pizm) 1. cell movement in response to external stimulation. 2. the tendency of viruses, bacteria, drugs, etc. to exert their effect upon certain cells of the body.

Cytozan (si-tok'san) trademark for preparations of cyclophosphamide.

cytozoic (si'to-zo'ik) living within or attached to cells; said of parasites.

cyttarrhagia (sit'ah-ra'je-ah) [Gr. *kyttaros* cell of a honey-comb + *rhēgnynai* to burst forth] alveolar hemorrhage.

cytula (sit'u-lah) the impregnated ovum.

cytuloplasm (sit'u-lo-plazm') the combined ovoplasm and spermoplasm in a cytula.

cyturia (si-tu're-ah) [Gr. *kytos* hollow vessel + *ouron* urine + *-ia*] the presence of cells of any sort in the urine.

Czermak's spaces (lines) (chār'mahks) [Johann Nepomuk Czermak, Bohemian physician, 1828-1873] spatia interglobularia.

Czerny's anemia (chār'nēz) [Adalbert Czerny, German pediatrician, 1863-1941] see under *anemia*.

Czerny's suture (chār'nēz) [Vincenz Czerny, surgeon in Heidelberg, 1842-1916] see under *suture*.

Czerny-Lembert suture (char'ne-lah-bar') [Vincenz Czerny; Antoine Lembert, French surgeon, 1802-1851] see under *suture*.

D

D symbol for *deuterium*.

D. 1. abbreviation for *L., dosis*, dose; *da*, give; *detur*, let it be given; *dexter*, right; also for *deciduous*, *density*, *died*, *didymium*, *dioptr*, *distal*, *dorsal* (in vertebral formulas), and *duration*. 2. a symbol for the unit of vitamin D potency.

D₃₇ the dose necessary to reduce the surviving fraction, as of cells, to e^{-1} or 0.37, where the biological activity declines exponentially as a function of dose.

D- (de) chemical prefix (small capital) which specifies that the substance corresponds in configuration to the standard substance D-glyceraldehyde, that is, belongs to the same configurational family. In carbohydrate nomenclature, the symbol refers to the configurational family of the *highest numbered* asymmetric carbon atom, as in D-glucose. In amino acid nomenclature, under rules adopted in 1947, the symbol refers to the configurational family to which the *lowest numbered* asymmetric carbon atom, i.e., the 2-carbon atom or α -carbon atom, belongs, as in D-threonine. Opposed to L-.

D_g- (de-sub-je) see D-; this chemical prefix (with the subscript *g*) is occasionally used to emphasize that the rules of carbohydrate nomenclature are being employed, as in D_g-glucosaminic acid. The subscript refers to the standard substance glyceraldehyde. Opposed to L_g-.

D_s- (de-sub-es) see D-; this chemical prefix (with the subscript *s*) is used where needed in amino acid nomenclature to avoid possible confusion with carbohydrate nomenclature, as in D_s-threonine. The subscript refers to the standard substance serine. Opposed to L_s-.

d- (de-) 1. chemical abbreviation for *dextro-* (i.e., right or clockwise), with reference to the direction in which the plane of polarized light is rotated when passed through a solution of the

substance or through the substance itself if a liquid: opposed to *l-* (levo-). 2. a prefix used with one of the additional symbols (+) or (-), especially in amino acid nomenclature in the literature from 1923 until 1947 or a little later, with reference to the configurational family to which the 2-carbon or α -carbon atom of the amino acid belongs, the actual direction of the rotation in a specified solvent being indicated by the plus or minus sign, as in *d*(-)-alanine; opposed to *l*(+)- or *l*(-), as in *l*(+)-alanine or *l*(-)-cystine. Now replaced by D-.

δ , Δ the fourth letter of the Greek alphabet; see *delta*.

D.A. developmental age.

d'Abano, Pietro see *Peter of Abano*.

Dabney's grip (dab'nēz) [William Cecil Dabney, American physician, 1849-1894] epidemic pleurodynia.

Daboia (dah-boi'ah) a genus of snakes. **D. russel'li**, Russell's viper (*Vipera russelli*).

D and C *dilation and curettage* (dilation of the cervix and curettage of the uterus).

d'Acosta see *Acosta*.

DaCosta's disease, syndrome [Jacob Mendes DaCosta, American physician, 1833-1900] see *misplaced gout* and *neurocirculatory asthenia*.

dacry- see *dacryo-*.

dacryadenalgia (dak're-ad-ē-nal'je-ah) dacryoadenalgia.

dacryadenitis (dak're-ad-ē-ni'tis) dacryoadenitis.

dacryadenoscirrhosis (dak're-ad-ē-no-skir'us) [dacry- + Gr. *adēn* gland + *skirrhos* scirrhous] (*obs.*) scirrhous carcinoma of a lacrimal gland.

dacryagogatresia (dak're-ah-gog'ah-tre'ze-ah) [dacry- + Gr.

- agōgos* leading + *atresia*] atresia, imperforation, or closure of a lacrimal duct.
- dacryagogic** (dak're-ah-goj'ik) 1. inducing a flow of tears; dacryogenic. 2. serving as a duct for the secretion of the lacrimal glands.
- dacryagogue** (dak're-ah-gog') [*dacry-* + Gr. *agōgos* leading] 1. an agent that induces a flow of tears. 2. a lacrimal duct.
- dacrycystalgia** (dak're-sis-tal'je-ah) dacryocystalgia.
- dacrycystitis** (dak're-sis-ti'tis) dacryocystitis.
- dacryelcosis** (dak're-el-ko'sis) dacryohelcosis.
- dacryo-, dacry-** [Gr. *dakryon* tear] a combining form denoting relationship to tears.
- dacryoadenalgia** (dak're-o-ad'ē-nal'je-ah) [*dacryo-* + Gr. *adēn* gland + *algos* pain + *-ia*] pain in a lacrimal gland.
- dacryoadenectomy** (dak're-o-ad'ē-nek'to-me) excision of a lacrimal gland.
- dacryoadenitis** (dak're-o-ad'ē-ni'tis) inflammation of a lacrimal gland.
- dacryoblennorrhea** (dak're-o-blen'o-re'ah) [*dacryo-* + Gr. *blennos* mucus + *rhein* to flow] mucous discharge from the lacrimal ducts, as in chronic dacryocystitis.
- dacryocanaliculitis** (dak're-o-kan'ah-lik'u-li'tis) inflammation of the lacrimal ducts.
- dacryocele** (dak're-o-sēl') dacryocystocele.
- dacryocyst** (dak're-o-sist') [*dacryo-* + Gr. *kystis* sac] the lacrimal sac.
- dacryocystalgia** (dak're-o-sis-tal'je-ah) pain in a lacrimal sac.
- dacryocystectasia** (dak're-o-sis'tek-ta'ze-ah) [*dacryocyst* + Gr. *ektasis* dilatation + *-ia*] dilatation of the lacrimal sac.
- dacryocystectomy** (dak're-o-sis-tek'to-me) [*dacryocyst* + Gr. *ektomē* excision] excision of the wall of the lacrimal sac.
- dacryocystitis** (dak're-o-sis'tis) the lacrimal sac.
- dacryocystitis** (dak're-o-sis-ti'tis) inflammation of the lacrimal sac.
- dacryocystitome** (dak're-o-sis'ti-tōm) [*dacryocyst* + Gr. *temnein* to cut] an instrument for incising strictures of the lacrimal duct.
- dacryocystoblennorrhea** (dak're-o-sis'to-blen'o-re'ah) a chronic catarrhal inflammation of the lacrimal sac, with constriction of the lacrimal duct.
- dacryocystocele** (dak're-o-sis'to-sēl') [*dacryocyst* + Gr. *kēlē* hernia] hernial protrusion of the lacrimal sac; called also *dacryocele*.
- dacryocystoptosis** (dak're-o-sis'top-to'sis) [*dacryocyst* + Gr. *ptōsis* fall] prolapse or downward displacement of the lacrimal sac.
- dacryocystorhinostenosis** (dak're-o-sis'to-ri'no-stē-no'sis) narrowing of the duct leading from the lacrimal sac to the nasal cavity.
- dacryocystorhinostomy** (dak're-o-sis'to-ri-nos'to-me) [*dacryocyst* + Gr. *rhis* nose + *stomion* to provide with an opening, or mouth] surgical creation of a communication between the lacrimal sac and the nasal cavity; called also *dacryorhinocystotomy* and *Toti's operation*.
- dacryocystorhinotomy** (dak're-o-sis'to-ri-not'o-me) passage of a probe through the lacrimal sac into the nasal cavity.
- dacryocystostenosis** (dak're-o-sis'to-stē-no'sis) narrowing of the lacrimal sac.
- dacryocystostomy** (dak're-o-sis-tos'to-me) [*dacryocyst* + Gr. *stomion* to provide with an opening, or mouth] surgical creation of a new opening into the lacrimal sac.
- dacryocystosyringotomy** (dak're-o-sis'to-sir'in-got'o-me) [*dacryocyst* + Gr. *syrinx* tube + *tomē* a cutting] incision of the lacrimal sac and duct.
- dacryocystotome** (dak're-o-sis'to-tōm) an instrument for incising the lacrimal sac.
- dacryocystotomy** (dak're-o-sis-tot'o-me) incision of the lacrimal sac; called also *Ammon's operation*.
- dacryogenic** (dak're-o-jen'ik) promoting the secretion of tears.
- dacryohelcosis** (dak're-o-hel-ko'sis) [*dacryo-* + Gr. *helkōsis* ulceration] ulceration of the lacrimal sac or lacrimal duct.
- dacryohemorrhea** (dak're-o-hem'o-re'ah) [*dacryo-* + Gr. *haima* blood + *rhein* to flow] the discharge of tears mixed with blood.
- dacryolith** (dak're-o-lith') [*dacryo-* + Gr. *lithos* stone] a concretion in the lacrimal sac or duct.
- dacryolithiasis** (dak're-o-li-thi'ah-sis) [*dacryo-* + *lithiasis*] the presence of calculi in the lacrimal sac or duct.
- dacryoma** (dak're-o-mah) a tumor-like swelling caused by obstruction of the lacrimal duct.
- dacryon** (dak're-on) [Gr. *dakryon* tear] a cranial point at the juncture of the lacrimal and frontal bones, and the maxilla.
- dacryops** (dak're-ops) [*dacry-* + Gr. *ōps* eye] 1. a watery state of the eye. 2. distention of a lacrimal duct by contained fluid.
- dacryopyorrhea** (dak're-o-pi'o-re'ah) [*dacryo-* + Gr. *pyon* pus + *rhein* to flow] the discharge of tears mixed with pus.
- dacryopyosis** (dak're-o-pi-o'sis) [*dacryo-* + Gr. *pyōsis* suppuration] suppuration of the lacrimal sac and duct.
- dacryorhinocystotomy** (dak're-o-ri'no-sis-tot'o-me) dacryocystorhinotomy.
- dacryorrhea** (dak're-o-re'ah) [*dacryo-* + Gr. *rhein* to flow] an overabundant flow of tears.
- dacryoscintigraphy** (dak're-o-sin-tig'rah-fe) scintigraphy of the lacrimal ducts.
- dacryosinusitis** (dak're-o-si'nus-i'tis) inflammation of the lacrimal duct and ethmoid sinus.
- dacryosolenitis** (dak're-o-so-lē-ni'tis) [*dacryo-* + Gr. *sōlēn* duct + *-itis*] inflammation of a lacrimal duct.
- dacryostenosis** (dak're-o-stē-no'sis) [*dacryo-* + Gr. *stenōsis* a narrowing] stricture or narrowing of a lacrimal duct.
- dacryosyrinx** (dak're-o-sir'inks) [*dacryo-* + Gr. *syrinx* tube] 1. a lacrimal duct (canaliculus lacrimalis [NA]). 2. a lacrimal fistula. 3. a syringe for irrigating the lacrimal ducts.
- Dactil** (dak'til) trademark for preparations of piperiodolate hydrochloride.
- dactinomycin** (dak'ti-no-mi'sin) [USP] a highly toxic antibiotic, C₂₂H₃₈N₁₀O₈, of the actinomycin group, actinomycin D, occurring as a bright red, crystalline powder; used as an antineoplastic in the palliative treatment of Wilms' tumor, rhabdomyosarcoma, and testicular and uterine carcinoma, administered intravenously.
- dactyl** (dak'til) [Gr. *daktylos* a finger] a digit; a finger or toe.
- dactyl-** see *dactylo-*.
- dactylate** (dak'tī-lāt) possessing finger-like processes.
- dactyledema** (dak'til-ē-de'mah) edema or swelling of the fingers or toes.
- dactylon** (dak-til'e-on) (*obs.*) webbing together or union of fingers.
- dactylitis** (dak'tī-li'tis) [*dactyl-* + *-itis*] inflammation of a finger or toe. **d. strumo'sa**, **d. tuberculosa**. **d. syphilit'ica**, syphilitic periostitis of a finger or toe. **d. tuberculo'sa**, tuberculous inflammation of a finger or toe; called also *d. strumosa*.
- dactylium** (dak'til'e-um) (*obs.*) dactylon.
- dactylo-, dactyl-** [Gr. *daktylos* a finger] a combining form denoting relationship to a digit, usually referring to a finger but sometimes to the toes.
- dactylocampsodynia** (dak'tī-lo-kamp'so-din'e-ah) [*dactylo-* + Gr. *kampsis* bend + *odynē* pain] painful flexure of the fingers.
- dactylogram** (dak'til'o-gram) [*dactylo-* + Gr. *gramma* mark] a fingerprint taken for purposes of identification.
- dactylography** (dak'tī-log'rah-fe) [*dactylo-* + Gr. *graphein* to write] the study of fingerprints.
- dactylogryposis** (dak'tī-lo-gri-po'sis) [*dactylo-* + Gr. *grypōsis* a hooking] a permanent curving of the fingers.
- dactylology** (dak'til-ol'o-je) [*dactylo-* + Gr. *logos* discourse] use of movements of the hands and fingers as a means of communication between individuals; called also *cheirology* and *dactylophasia*.
- dactylolysis** (dak'tī-lol'i-sis) [*dactylo-* + Gr. *lysis* a loosening] 1. surgical correction of syndactyly. 2. loss or amputation of a digit. **d. spontan'ea**, the spontaneous loss of fingers and toes, as in aninism or in leprosy.
- dactylomegaly** (dak'tī-lo-meg'ah-le) [*dactylo-* + Gr. *megaleia* largeness] abnormally large fingers or toes.
- dactylophasia** (dak'tī-lo-fa'ze-ah) [*dactylo-* + Gr. *phasis* speech] dactylography.
- dactyloscopy** (dak'tī-los'ko-pe) [*dactylo-* + Gr. *skopein* to examine] examination of fingerprints for purposes of identification.
- dactylospasm** (dak'tī-lo-spazm) [*dactylo-* + Gr. *spasmos* spasm] spasm or cramp of a finger or toe.
- dactylosymphysis** (dak'tī-lo-sim'fi-sis) [*dactylo-* + *sympphysis*] (*obs.*) a growing together of fingers or toes; syndactyly.
- dactylus** (dak'tī-lus) [Gr. *daktylos* finger] a digit; a finger or toe.
- DADDS** diacetyl diaminodiphenylsulfone; see *acedapnone*.
- Dagenan** (dag'ē-nan) trademark for sulfapyridine.
- D.A.H.** disordered action of the heart. See *neurocirculatory asthenia*, under *asthenia*.
- dahlia** (dahl'yah) the term for certain unspecified mixtures of methylated and ethylated pararosanilins and rosanilins; C.I.42530. Sometimes used as a basic dye for violet staining. Called also *Hofmann's* or *iodine violet*. **d. B.**, see *gentian violet*, under *violet*.
- dahlin** (dah'lin) inulin.
- dahlite** (dahl'it) a complex salt, CaCO₃·2Ca₃(PO₄)₂, formerly believed to be the principal inorganic constituent of bone and teeth.
- Dakin's fluid (antiseptic solution)** (da'kinz) [Henry Drysdale Dakin, New York chemist, 1880-1952] diluted sodium hypochlorite solution.
- Dakin-Carrel method** (da'kin-kar-el') [Henry Drysdale Dakin;

Alexis Carrel, French surgeon, 1873–1944] see *Carrel treatment*, under *treatment*.

dakinization (da'kin-i-za'shun) (obs.) treatment with Dakin's fluid.

dakryon (dak're-on) dacryon.

Dale's reaction (phenomenon) (dāl) [Sir Henry Hallett Dale, British physiologist and pharmacologist, 1875–1968; co-winner in 1936, with Otto Loewi, of the Nobel prize for medicine and physiology, for their work on the chemical transmission of nerve impulses] see under *reaction*.

daledalin tosylate (dah-lē'dah-lin) chemical name: 3-methyl-3-[3-(methylamino)propyl]-1-phenylindoline mono-*p*-toluenesulfonate; an antidepressant, $C_{19}H_{24}N_2 \cdot C_7H_6O_3S$.

Dalmane (dal'mān) trademark for a preparation of flurazepam hydrochloride.

Dalrymple's disease, sign (dal'rim-pelz) [John Dalrymple, an English oculist, 1804–1852] see *cyclokeratitis*, and see under *sign*.

dalton (dawl'ton) [John Dalton, English chemist and physicist, 1766–1844; the founder of the atomic theory] an arbitrary unit of mass, being $\frac{1}{12}$ the mass of the nuclide of carbon-12, equivalent to 1.657×10^{-24} gm. Called also *atomic mass unit*.

Dalton's law (dawl'tonz) [John Dalton] see under *law*.

Dalton-Henry law (dawl'ton hen're) [John Dalton; Joseph Henry, American physicist, 1797–1878] see under *law*.

daltonism (dawl'ton-izm) [John Dalton] a name applied to defective perception of red and green.

Dam (dam), Carl Peter Henrik. A Danish biochemist, born 1895; co-winner in 1943, with Edward Adelbert Doisy, of the Nobel prize for medicine and physiology, for the discovery of vitamin K.

dam (dam) a thin sheet of latex rubber used to isolate teeth from the fluids of the mouth during dental therapy; also used occasionally in surgical procedures to separate certain tissues or structures. Often called *rubber dam*. **rubber d.**, see *dam*.

Damalinia (dam'ah-lin'e-ah) a genus of parasitic insects of the order Mallophaga, the biting lice; several species were formerly classified in the genus *Trichodectes*. *D. bo'vis* infests cattle, *D. cap're* the goat, *D. e'qui* and *D. pilo'sus* the horse, and *D. herm'si* and *D. o'vis* infest sheep.

damiana (dah'me-ah'nah) the leaves of *Turnera aphrodisiaca* (*T. diffusa*) and *Haplopappus discoideus*, Mexican plants; said to be tonic, analeptic, diuretic, and aphrodisiac. Called also *turnera*.

dammar (dam'ar) a transparent resin of *Dammara orientalis*, *D. alba*, *Hopea micrantha*, *H. splendida*, *Shorea* spp., and other trees; used in varnishes, as a mounting medium in microscopy, and for the preservation of animal and vegetable specimens.

dämmerschlaf (dem'er-shlaf) [Ger.] twilight sleep.

Damoiseau's curve, sign (dam-wah-zōz') [Louis Hyacinthe Céléste Damoiseau, French physician, 1815–1890] see *Ellis's line*, under *line*.

damp (damp) foul air or noxious gas(es) in a mine. **after-d.**, a gaseous mixture formed in a mine by the explosion of fire damp or dust; it contains nitrogen, carbon dioxide, and usually carbon monoxide. **black d.**, **choke d.**, a nonrespirable atmosphere sometimes formed in a mine by the gradual absorption of the oxygen and the giving off of carbon dioxide by the coal. **cold d.**, foggy vapor charged with carbon dioxide. **fire d.**, light explosive hydrocarbon gases, chiefly methane, CH_4 , found in coal mines. **white d.**, carbon monoxide.

damping (damp'ing) the steady diminution of the amplitude of vibration of a specific form of energy, as of electricity or sound waves.

Dana's operation (da'nahz) [Charles Loomis Dana, neurologist in New York, 1852–1935] see under *operation*.

danazol (dah'nah-zōl) [USP] chemical name: 17 α -pregna-2,4-dien-20-yno[2,3-*d*]isoxazol-17-ol. An anterior pituitary suppressant, $C_{22}H_{27}NO_2$, which has been used in the treatment of endometriosis, gynecomastia, fibrocystic mastitis, precocious puberty, and pubertal breast hypertrophy.

dance (dans) movement of a rhythmic, or of an unusual or exaggerated type. **brachial d.**, writhing of tortuous brachial arteries under the skin, sometimes observed in elderly arteriosclerotic patients. **hilar d.**, striking abnormal pulsation of hilar vessels. **hilus d.**, marked pulsations of the hilus shadows of both lungs on roentgen examination; seen in pulmonic regurgitation. **St. Anthony's d.**, **St. Guy's d.**, **St. John's d.**, **St. Vitus' d.**, Sydenham's chorea. **St. Vitus' d. of the voice**, stuttering.

Dancel's treatment (dah-selz') [Jean François Dancel, French physician, born 1804] see under *treatment*.

D and C dilation and curettage (dilation of the cervix and curettage of the uterus).

dander (dan'der) small scales from the hair or feathers of animals, which may be the cause of allergy in sensitive persons.

dandruff (dan'druf) 1. dry scaly material desquamated from the scalp; the term is applied to that normally desquamated from the epidermis of the scalp as well as to the excessive scaly material

associated with disease, as in seborrheic dermatitis. 2. seborrheic dermatitis of the scalp; called also *pityriasis sicca*.

Dandy-Walker syndrome (deformity) (dan'de-wok'er) [Walter Edward Dandy, American surgeon, 1886–1946; Arthur Earl Walker, American surgeon, born 1907] see under *syndrome*.

daniell (dan'yel) [John Frederick Daniell, English scientist, 1790–1845] a unit of electromotive force equal to 1.124 volts.

Danilone (dan'i-lōn) trademark for a preparation of phenindione.

Danlos' syndrome (disease) (dan'los) [Henri Alexandre Danlos, French dermatologist, 1844–1912] Ehlers-Danlos syndrome.

DANS 1-dimethylaminonaphthalene-5-sulphonyl chloride. A fluorochrome that gives an apple green fluorescence in ultraviolet light resembling fluorescein isothiocyanate. It is employed in immunofluorescence studies of tissues and cells.

danthron (dan'thron) [USP] chemical name: 1,8-dihydroxy-9,10-anthracenedione. A cathartic, $C_{14}H_8O_4$, occurring as an orange, crystalline powder; administered orally.

dantrolene sodium (dan'tro-lēn) chemical name: 1-[[[5-(4-nitrophenyl)-2-furanyl]methylene]amino]-2,4-imidazolidinedione sodium salt tetrahydrate. A skeletal muscle relaxant, $C_{14}H_9N_4NaO_6$, used as an antispasmodic in conditions such as stroke, multiple sclerosis, and cerebral palsy.

Danysz's phenomenon (effect) (dan'ēz) [Jan Danysz, Polish pathologist in Paris, 1860–1928] see under *phenomenon*.

Daphne (daf'ne) [Gr. *daphnē* bay tree] a genus of trees and shrubs. *D. gnidium* and *D. mezereum* L. (Thymelaeaceae), the principal medicinal species, are vesicatory and purgative. Toxic glycosides have caused the plant *D. mezereum* to be listed as poisonous; its attractive berries have poisoned children and livestock. See *mezereum*.

daphnetin (daf-ne'tin) the aglycon of daphnin, $C_9H_6O_4$, 7,8-dihydroxycoumarin.

Daphnia (daf'ne-ah) a genus of fresh-water crustaceans, called water fleas, often used in biological research.

daphnin (daf'nin) glycoside, $C_{15}H_{16}O_9 + 2H_2O$, from *Daphne mezereum*; 7,8-dihydroxycoumarin-7- β -D-glucoside.

daphnism (daf'nizm) poisoning by species of *Daphne*.

dapsone (dap'sōn) [USP] chemical name: 4,4'-sulfonylbisbenzenamine. An antibacterial, $C_{12}H_{12}N_2O_2S$, occurring as a white or creamy white, crystalline powder. It is the parent compound of a group of sulfonamide-like sulfones, including acedapsone, acetosulfone sodium, glucosulfone sodium, sulfoxone sodium, and solapsone. Dapsone and its derivatives are bacteriostatic for a broad spectrum of gram-negative and gram-positive organisms, including *Mycobacterium tuberculosis* and *M. leprae*, and have suppressive action on *Plasmodium falciparum*. Dapsone is used as a leprostatic, especially in tuberculoid and lepromatous leprosy, as a dermatitis herpetiformis suppressant, and in the prophylaxis of falciparum malaria; administered orally. Called also *diaminodiphenylsulfone* or *DDS*.

Daranide (dar'ah-nid) trademark for a preparation of dichlorophenamide.

Daraprim (dar'ah-prim) trademark for a preparation of pyrimethamine.

Darbid (dar'bid) trademark for a preparation of isopropamide iodide.

Dar es Salaam bacterium (dahr es sah-lahm') [*Dar es Salaam*, East Africa, where it was isolated in 1922] see under *bacterium*.

Dare's method (dārz) [Arthur Dare, Philadelphia physician, born 1868] see under *method*.

Daricon (dar'i-kon) trademark for a preparation of oxyphenyclimine hydrochloride.

Darier's disease (dar'e-āz) [Ferdinand Jean Darier, French dermatologist, 1856–1938] keratosis follicularis.

Darkshevich's fibers, nucleus (ganglion) (dark-sha'vich-ez) [Liverij Osipovich Darkshevich, Russian neurologist, 1858–1925] see under *fiber* and *nucleus*.

Darling's disease (dar'lingz) [Samuel Taylor Darling, American physician, 1872–1925] histoplasmosis.

darmous (dahr'moos) North African name for fluorine poisoning.

darnel (dar'nel) a rye grass, *Lolium temulentum* L. (Gram.), the seeds of which contain a narcotic poison. Ingestion of flour contaminated with darnel may produce vertigo, staggering, vomiting, visual disturbances, burning pain in the mouth, and prostration.

d'arsonvalism, d'arsonvalization (dar'sonval'izm, dar'-son-val'i-za'shun) [A. d'Arsonval, French physicist, 1851–1940] (obs.) a high-frequency treatment: the therapeutic use of high-frequency damped electromagnetic oscillations of relatively high voltage and low current.

Dartal (dar'tal) trademark for a preparation of thiopropazate dihydrochloride.

dartoic (dar-to'ik) of the nature of a dartos; having a slow, involuntary contractility like that of the dartos.

dartoid (dar'toid) resembling the dartos.

dartos (dar'tos) [Gr. "flayed"] tunica dartos.

dartre (dartr) [Fr.] a term formerly applied to various skin disorders, especially the herpetic (vesicular) or eczematous, having a common cause.

dartrous (dar'trus) 1. of, pertaining to, or resembling the dartos. 2. pertaining to dartre.

Darvon (dar'von) trademark for a preparation of propoxyphene hydrochloride.

darwinism (dar'wī-nizm) [Charles Robert Darwin, English naturalist, 1809-1882] the theory of evolution according to which higher organisms have been developed from lower ones through the influence of natural selection.

dasymeter (das-im'ē-ter) an instrument for measuring the density of a gas.

Dasypus (das'e-pus) [Gr. *dasypous* a rough foot] a genus of tropical armadillos, species of which are reservoirs of *Trypanosoma cruzi*, including *D. novemcincta*, the nine-banded armadillo.

data (da'tah) [L., plural of *datum*] the material or collection of facts on which a discussion or an inference is based.

Datura (da-tu'rah) a genus of solanaceous plants, the most famous of which is *D. stramonium* L. Its chief constituents are hyoscyamine and scopolamine, which give the herb anticholinergic properties. The powdered leaf is also incorporated into "asthma powders," which are burned as is or in cigarettes for asthma relief; the smoke carries the alkaloids to the bronchi, causing their relaxation. In large doses, asthma powders may induce intoxication with visual disturbances. **D. me'tel**, a source of scopolamine.

daturine (da-tu'rin) hyoscyamine.

daturism (da-tu'rizm) poisoning caused by plants of the genus *Datura*, which contain several solanaceous alkaloids of the tropane configuration; principal among these are atropine, hyoscyamine, and hyoscine (scopolamine).

Daubenton's angle, line, plane (do-bon-tonz') [Louis Jean Marie Daubenton, French physician and naturalist, 1716-1800] see under *angle, line, and plane*.

dauernarkose (dow'er-nar-kōs) [Ger.] prolonged sleep.

dauerschlaf (dow'er-shlaf) [Ger.] prolonged sleep.

daughter (daw'ter) 1. decay product; see under *product*. 2. arising from cell division, as a daughter cell.

daunomycin (daw-no-mī'sin) daunorubicin.

daunorubicin (daw'no-ru'bī-sin) chemical name: (8*S*-cis)-8-acetyl-10-[(3-amino-2,3,6-trideoxy-α-L-lyxo-hexopyranosyl)oxy]-7,8,9,10-tetrahydro-6,8,11-trihydroxy-1-methoxy-5,12-naphthacenedione. An antibiotic with antineoplastic, immunosuppressive, and antibacterial properties, C₂₇H₂₉NO₁₀, isolated from *Streptomyces peucetius*. Called also *daunomycin* and *rubidomycin*. **d. hydrochloride**, the hydrochloride salt of daunorubicin, C₂₇H₂₉NO₁₀·HCl, having the same actions as the base; it has been used investigatively in the treatment of acute myelogenous and acute lymphocytic leukemia.

Davainea (da-va'ne-ah) [Casimir Joseph Davaine, French physician, 1812-1882] a genus of tapeworms of the family Davaineidae. **D. proglottina**, a species found in fowls.

Davaineidae (da-va-ne'i-de) a family of relatively small tapeworms of the order Cyclophyllidae, subclass Cestoda, which parasitize mammals and birds. *Davainea* and *Raillietina* are medically important genera.

David's disease (dah-vidz') 1. [Jean Pierre David, French surgeon, 1737-1784] tuberculosis of the spine. 2. [W. David, German physician, born 1890] see under *disease*, def. 2.

Davidoff's (Davidov's) cells (da'vid-ofs) [M. von Davidoff, histologist in Munich, d. 1904] Paneth's cells.

Davidsohn's sign (da'vid-sōnz) [Hermann Davidsohn, Prussian physician, 1842-1911] see under *sign*.

Daviel's operation, spoon (dav-e-elz') [Jacques Daviel, French oculist, 1696-1762, the originator of the modern treatment of cataract by extraction of the lens] see under *operation* and *spoon*.

Davis graft (da'vis) [John Staige Davis, American surgeon, 1872-1946] a pinch graft.

Davy's test (da'vēz) [Edmund William Davy, Irish physician, 1826-1899] see under *tests*.

Dawbarn's sign [Robert Hugh Mackay Dawbarn, New York surgeon, 1860-1915] see under *sign*.

Day's test (dāz) [Richard Hance Day, American physician, 1813-1892] see under *tests*.

dazadrol maleate (da'zah-drōl) chemical name: α-(4-chlorophenyl)-α-(4,5-dihydro-1*H*-imidazol-2-yl)-2-pyridine methanol(Z)-2-butenedioate (1:1) (salt); an antidepressant, C₁₈H₁₄ClN₃O·C₄H₄O₄.

dB, db decibel.

DBA dibenzanthracene.

DBE (*obs.*) a synthetic estrogen, (C₂H₅·O·C₆H₄)₂C·C(Br)·C₆H₅.

DBI trademark for preparations of phenformin hydrochloride.

D.C. direct current; Doctor of Chiropractic.

D & C dilatation and curettage (dilatation of the cervix and curettage of the uterus).

DCA desoxycorticosterone acetate.

D.Cc. double concave.

D.C.F. *direct centrifugal flotation*; see *Lane method*, under *method*.

D.C.H. Diploma in Child Health.

DCI dichloroisoproterenol.

D.C.O.G. Diploma of the College of Obstetricians and Gynecologists (British).

D.Cx. double convex.

d.d. abbreviation for *L. de'tur ad*, "let it be given to."

DDS diaminodiphenylsulfone; see *dapsone*.

D.D.S. Doctor of Dental Surgery.

D.D.Sc. Doctor of Dental Science.

DDT chlorophenothane.

de- Latin prefix often signifying down or from; it is sometimes negative or privative, and frequently intensive.

deacetyllanatoside C (de-as'ē-tīl-lah-nat'o-sīd) deslanoside.

deacidification (de'ah-sīd'i-fi-ka'shun) the act or art of correcting or destroying acidity or of neutralizing an acid.

deactivation (de'ak-tī-va'shun) the process of making or becoming inactive, as the removal or loss of radioactivity from a previously radioactive material.

deacylase (de-as'il-ās) a hydrolase that catalyzes the removal of an acyl group. **acetyl-CoA d.**, acetyl-CoA hydrolase. **acyl-lysine d.**, a hydrolase that catalyzes the hydrolysis of ε-N-acyl-L-lysine to a fatty acid ion and L-lysine.

dead (ded) 1. destitute of life; see also *death*. 2. numb.

deaf (def) lacking the sense of hearing or having profound hearing loss.

deafferentate (de-af'er-en-tāt') to eliminate or interrupt afferent nerve impulses, as by destruction of the afferent pathway.

deafferentation (de-af'er-en-ta'shun) the elimination or interruption of afferent nerve impulses, as by destruction of the afferent pathway.

deaf-mute (def-mūt') an individual who is unable to hear or speak; it has been demonstrated that deaf individuals thought to be mute can learn to speak.

deaf-mutism (def-mūt'izm) the absence both of the sense of hearing and of the faculty of speech.

deafness (def'nes) lack of the sense of hearing, or profound hearing loss. Moderate loss of hearing is often called *hearing loss*. See also *hearing loss*, under *H. Alexander's d.*, see under *hearing loss*. **apoplectiform d.**, Meniere's disease in which the hearing impairment is sudden in onset and fluctuates, and ultimately severe and permanent deafness may occur. **bass d.**, deafness to certain low tones. **boilermakers' d.**, that caused by working in places where the noise level is extremely high. **central d.**, deafness due to causes in the auditory pathways or in the auditory center. **conduction d.**, see under *hearing loss*. **cortical d.**, deafness due to a lesion of cortical brain substance. **functional d.**, apparent deafness without organic lesion. **hysterical d.**, that which may appear or disappear in a hysterical patient without discoverable cause. **labyrinthine d.**, that which is due to disease of the labyrinth. **malarial d.**, that which occurs as a result of malarial poisoning. **Michel's d.**, congenital deafness due to total lack of development of the inner ear. **midbrain d.**, deafness dependent on injury of the fillet tract of the tegmentum. **Mondini's d.**, congenital deafness due to dysgenesis of the organ of Corti, with partial aplasia of the bony and membranous labyrinth and a resultant flattened cochlea. **music d.**, inability to recognize musical notes; amusia. **nerve d., neural d.**, that which is due to a lesion of the auditory nerve or the central neural pathways. **organic d.**, deafness due to defect in the ear or auditory apparatus. **pagetoid d.**, that occurring in osteitis deformans (Paget's disease) of the bones of the skull. **paradoxical d.**, see under *hearing loss*. **perceptive d.**, sensorineural d. **postlingual d.**, deafness acquired after the development of speech. **prelingual d.**, deafness acquired before the development of speech. **Scheibe's d.**, congenital deafness due to aplasia of the saccule and cochlear duct. **sensorineural d.**, deafness due to a lesion in the sensory mechanism (cochlea) of the ear or to a lesion in the acoustic nerve or the central neural pathways or to a combination of such lesions. See also *Rinne test*, under *tests*. **tone d.**, sensory amusia. **toxic d.**, deafness caused by the effect of poisons. **vascular d.**, that due to disease of blood vessels of the inner ear. **word d.**, a form of receptive aphasia in which sounds are heard, but convey no meaning to the mind, due to disease of the auditory center of the brain; called also *acoustic* or *auditory aphasia*, *aphemesthesia*, *auditory amnesia*, and *logokophsis*.

dealbation (de'al-ba'shun) bleaching.

dealcoholization (de-al'ko-hol-i-za'shun) the removal of alcohol from an object or substance.

deallergization (de-al'er-ji-za'shun) the desensitization of an allergic individual to any particular allergen.

deamidase (de-am'i-dās) an enzyme that splits amides to form carboxylic acid plus ammonia.

deamidation (de-am'i-da'shun) deamidization.

deamidization (de-am'i-di-za'shun) liberation of the ammonia from an amide.

deaminase (de-am'i-nās) an enzyme that causes deamination, or the removal of the amino group from organic compounds. **adenosine d.**, an enzyme that catalyzes the change of adenosine to inosine and ammonia. **adenylic acid d.**, an enzyme that catalyzes the change of adenylic acid into inosine 5-phosphoric acid and ammonia. **cytidine d.**, an enzyme that catalyzes the change of cytidine into uridine and ammonia. **guanine d.**, guanine aminohydrolase: an enzyme that catalyzes the hydrolysis of guanine into xanthine and ammonia; called also *guanase*. **guanosine d.**, an enzyme that catalyzes the change of guanosine into xanthosine and ammonia. **guanylic acid d.**, an enzyme that catalyzes the change of guanylic acid into xanthylic acid and ammonia.

deamination (de-am'i-na'shun) removal of the amino group, $-NH_2$, from a compound.

deaminization (de-am'i-ni-za'shun) deamination.

Deaner (de'ner) trademark for a preparation of deanol acetamidobenzoate.

deanol acetamidobenzoate (de'ah-nol as'et-am'i-do-ben'zo-āt) chemical name: 4-(acetyl amino)benzoic acid compounded with 2-(dimethylamino)ethanol (1:1). A cerebral stimulant with parasympathomimetic activity, $C_{13}H_{20}N_2O_4$, occurring as a white or nearly white, crystalline powder; used as an antidepressant in the treatment of certain behavior and/or learning disorders in children.

deaquation (de'ah-kwa'shun) [L. *de* from + *aqua* water] removal of water from anything; dehydration.

Dearg. pil. (obs.) abbreviation for L. *deargen'tur pil'ulae*, let the pills be silvered.

dearterialization (de'ar-te're-al-i-za'shun) (obs.) 1. the conversion of arterial into venous blood. 2. interruption of the supply of oxygenated blood to a part or organ.

dearticulation (de'ar-tik'u-la'shun) dislocation of a joint.

death (deth) the cessation of life; permanent cessation of all vital bodily functions. For legal and medical purposes, the following definition of death has been proposed—the irreversible cessation of all of the following: (1) total cerebral function, (2) spontaneous function of the respiratory system, and (3) spontaneous function of the circulatory system. **apparent d.**, a state of complete interruption of bodily processes from which the patient can be resuscitated. **black d.**, former name for bubonic plague. **brain d.**, irreversible brain damage as manifested by absolute unresponsiveness to all stimuli, absence of all spontaneous muscle activity, including respiration, shivering, etc., and an isoelectric electroencephogram for 30 minutes, all in the absence of hypothermia or intoxication by central nervous system depressants. Called also *irreversible coma*. **cell d.**, complete degeneration or necrosis of cells. **cot d.**, **crib d.**, sudden infant death syndrome; see under *syndrome*. **fetal d.**, stillbirth; death in utero; failure of the product of conception to show evidence of respiration, heart beat, or definite movement of a voluntary muscle after expulsion from the uterus, with no possibility of resuscitation. **fetal d., early**, fetal death occurring during the first 20 weeks of gestation. **fetal d., intermediate**, fetal death occurring during the twenty-first to twenty-eighth weeks of gestation. **fetal d., late**, fetal death occurring after 28 weeks of gestation. **functional d.**, total, permanent destruction of the central nervous system, with vital functions being sustained by artificial means. **genetic d.**, 1. failure of a given gene or genotype to be transmitted to progeny because of the death or sterility of the bearer of the gene or genotype. 2. failure of any organism to survive owing to its genetic makeup. **liver d.**, death due to failure of hepatic function. **local d.**, death of a part of the body. **molecular d.**, caries, catatasis, or the last stage of a catabolic process. **somatic d.**, cessation of all vital cellular activity. **voodoo d.**, a phenomenon seen among many primitive peoples in which the affected individual dies after transgressing a taboo or becoming convinced that he is bewitched.

Deaur. pil. (obs.) abbreviation for L. *deaur'en'tur pil'ulae*, let the pills be gilded.

Deaver's incision (de'verz) [John Blair Deaver, American surgeon, 1855–1931] see under *incision*.

debanding (de-band'ing) the removal of fixed orthodontic appliances.

Debaryomyces (de'bar-e-o-mi'sēz) a genus of ascomycetous fungi of the family Saccharomycetaceae. **D. hansenii**, a species which changes sugars into oxalic acid; called also *Saccharomyces hansenii*. **D. hom'inis**, **D. neoformans**, former name for *Cryptococcus neoformans*.

debility (de-bil'i-te) lack or loss of strength.

débouchement (da-bōōsh-maw') [Fr.] an opening out.

Debrisan (dē-bri'san) trademark for dextranomer.

Débove's disease, membrane, treatment (dē-bōvz') [Georges Maurice Débove, French physician, 1845–1920] see *splenomegaly*, and see under *membrane* and *treatment*.

débride (da-brēd) to remove foreign material and contaminated or devitalized tissue, usually by sharp dissection.

débridement (da-brēd'maw) [Fr.] the removal of foreign material and devitalized or contaminated tissue from or adjacent to a traumatic or infected lesion until surrounding healthy tissue is exposed. Cf. *épluchage*. **enzymatic d.**, removal of fibrinous or purulent exudate by application of a nontoxic and nonirritating enzyme which is capable of lysing fibrin, denatured collagen, and elastin, but does not destroy normal tissue. **surgical d.**, débridement by mechanical methods, usually sharp dissection.

debris (dē-bre') [Fr.] accumulated fragments; rubbish. In dentistry, soft foreign matter loosely attached to the surface of a tooth. **word d.**, sounds made by an aphasic patient in attempting to talk.

Debrisan (dē-bri'san) trademark for dextranomer.

debrisoquin sulfate (deb-ris'o-kwin) chemical name: 3,4-dihydro-2(1H)-isoquinolinecarboxamidinium sulfate; an antihypertensive agent, $C_{10}H_{13}N_3 \cdot \frac{1}{2}H_2SO_4$.

Deb. spis. abbreviation for L. *deb'ita spissitu'dine*, of the proper consistency.

debt (det) something owed. **oxygen d.**, the extra oxygen that must be used in the oxidative energy processes after a period of strenuous exercise to reconvert lactic acid to glucose, and decomposed ATP and creatine phosphate to their original states.

Dec. abbreviation for L. *decan'ta*, pour off.

deca- [Gr. *deka* ten] a combining form designating ten; used in naming units of measurement to indicate a quantity 10 times the unit designated by the root with which it is combined.

decacurie (dek'ah-ku're) a unit of radioactivity, being ten curies.

Decaderm (dek'ah-derm) trademark for a preparation of dexamethasone.

Decadron (dek'ah-dron) trademark for preparations of dexamethasone.

Deca-Durabolin (de'ka-dur-ab'o-lin) trademark for a preparation of nandrolone decanoate.

decagram (dek'ah-gram) [*deca-* + *gram*] ten grams, or 154.32 grains troy.

decalcification (de'kal-si-fi-ka'shun) 1. the loss of calcium salts from a bone or tooth. 2. the process of removing calcareous matter.

decalfify (de-ka'l'si-fi) [L. *de* priv. + *calx* lime] to deprive of calcium salts.

decaliter (dek'ah-le'ter) [*deca-* + *liter*] ten liters, or 610.28 cubic inches.

decameter (dek'ah-me'ter) [*deca-* + *meter*] ten meters.

decamethonium (dek'ah-mē-tho'ne-um) chemical name: *N,N,N,N,N,N*-hexamethyl-1,10-decanediaminium. A bisquaternary ammonium compound, $C_{16}H_{38}N_2$, structurally analogous to tubocurarine. **d. bromide** [USP], the bromide salt of decamethonium, $C_{16}H_{38}Br_2N_2$, occurring as a white crystalline powder; used as a skeletal muscle relaxant during surgical anesthesia, to aid endotracheal intubation, in obstetrics, and in electroconvulsive therapy, administered intravenously. **d. iodide**, the iodide salt of decamethonium, $C_{16}H_{38}I_2N_2$, which has been used for the same purposes as the bromide salt.

decane (dek'ān) a hydrocarbon, $C_{10}H_{22}$, from paraffin.

decanulation (de-kan'u-la'shun) removal of a cannula, especially of a tracheostomy cannula.

decanormal (dek'ah-nor'mal) [*deca-* + *normal*] having ten times the strength of normal; said of solutions.

decantation (de'kan-ta'shun) [*de-* + L. *canthus* tire of a wheel] the pouring of a clear supernatant liquid from a sediment.

decapeptide (dek'ah-pep'tid) a peptide containing ten amino acids.

decapitation (de-kap'i-ta'shun) [*de-* + L. *caput* head] the removal of the head, as of an animal, a fetus, or a bone; beheading.

decapitator (de-kap'i-ta'tor) an instrument for removing the head of a fetus in embryotomy.

Decapoda (de-kah-po'dah) [Gr. *deka* ten + *pous* foot] an order of *Crustacea*, including the crabs, lobsters, shrimps, etc., which have five pairs of legs upon the thorax.

Decapryn (dek'kal-prin) trademark for preparations of doxylamine succinate.

decapsulation (de-kap'su-la'shun) removal of the capsule, especially of the renal capsule.

decarbazine (dah-kar'bah-zēn) chemical name: 5-(3,3-dimethyl-1-triazenyl)-1H-imidazole-4-carboxamide. A synthetic antineoplastic, $C_8H_{10}N_6O_3$, used in the treatment of metastatic malignant

melanoma, Hodgkin's disease, soft-tissue sarcoma, and neuroblastoma, administered intravenously. Abbreviated DTIC.

decarbonization (de-kar'bon-i-za'shun) (obs.) the removal of carbon from the blood in the lungs by the substitution of oxygen for carbon dioxide.

decarboxylase (de'kar-bok'si-lās) any of the lyase class of enzymes that catalyze the removal of carbon dioxide from the carboxyl group of alpha keto acids. **acetoacetate d.**, acetoacetate carboxy-lyase: an enzyme that catalyzes the removal of carbon dioxide from acetoacetate to form acetone. **acetolactate d.**, an enzyme that catalyzes the removal of carbon dioxide from acetolactate to form acetoin.

decarboxylation (de'kar-bok'si-la'shun) removal of the carboxyl group.

decavitamin (dek'ah-vi'tah-min) [USP] a combination of vitamins in capsular or tablet form, each of which contains vitamins A and D, ascorbic acid, calcium pantothenate, cyanocobalamin, folic acid, niacinamide, pyridoxine hydrochloride, riboflavin, thiamine hydrochloride, and a suitable form of alpha tocopherol.

decay (de-ka') [*de* + *L. cadere* to fall] 1. the gradual decomposition of dead organic matter. 2. the process or stage of decline, as in aging. **beta d.**, disintegration of the nucleus of an unstable radionuclide in which the mass number is unchanged, but the atomic number is increased or decreased by 1, as result of emission of a negatively or positively charged (beta) particle and a neutrino. **radioactive d.**, disintegration of the nucleus of an unstable nuclide by the spontaneous emission of charged particles and/or photons; called also *radioactive disintegration*.

deceit (de-sēt) misrepresentation; deception. **facial d.**, in psychology, misrepresentation, in terms of facial expressiveness, of one's true emotional state; see also *falsifying*, *modulating*, and *qualifying*.

deceleration (de-sel'er-a'shun) decrease in speed or rate.

decentered (de-sen'terd) denoting a lens in which the visual axis does not pass through the optical center of the lens.

decentration (de'sen-tra'shun) [*de* + *L. centrum* center] the act or process of removing from a center.

deceration (de'se-ra'shun) [*de* + *L. cera* wax] the removal of paraffin from a tissue section prepared for the microscope.

decerebellation (de-ser'ē-bel-la'shun) removal of the cerebellum.

decerebrate (de-ser'ē-brāt) 1. to eliminate cerebral function by transecting the brain stem between the superior colliculi and the vestibular nuclei or by ligating the common carotid arteries and the basilar artery at the center of the pons. 2. an animal so prepared. 3. a person with brain damage resulting in neurologic signs similar to those of a decerebrated animal. See also *decerebrate rigidity*, under *rigidity*.

decerebration (de'ser-ē-bra'shun) [*de* + *cerebrum*] the act of decerebrating.

decerebrize (de-ser'ē-brīz) to decerebrate (def. 1).

dechloridation (de-klo'rī-da'shun) the removal of chloride, or salt.

dechlorination (de-klo'rī-na'shun) dechloridation.

dechlorurant (de-klo'roo-rant) an agent that causes dechloruration.

dechloruration (de-klo'roo-ra'shun) diminution of excretion of chlorates in the urine.

decholesterinization (de'ko-les'ter-in-i-za'shun) decholesterolization.

decholesterolization (de'ko-les'ter-ol-i-za'shun) extraction of cholesterol from the blood.

Decholin (de'ko-lin) trademark for preparations of dehydrocholic acid.

deci- [*L. decem* ten] a combining form designating one-tenth; used in naming units of measurement to indicate one-tenth of the unit designated by the root with which it is combined (10^{-1}).

decibel (des'i-bel) a unit used to express the ratio of two powers, usually electric or acoustic powers, equal to one-tenth the common logarithm of the ratio of the powers. One decibel is equal approximately to the smallest difference in acoustic power that the human ear can detect. Abbreviated dB and db. See also *bel*.

decidua (de-sid'u-ah) [*L.*, from *deciduus* falling off] the endometrium of the pregnant uterus, all of which, except the deepest layer, is shed at parturition. Called also *membranae deciduae* [NA], *caduca*, *decidual* or *deciduous membrane*, and *tunica decidua*. **basal d.**, **d. basalis** [NA], the portion of the decidua directly underlying the chorionic vesicle and attached to the myometrium; called also *d. serotina* and *membrana serotina*. **capsular d.**, **d. capsularis** [NA], the portion of the decidua directly overlying the chorionic vesicle and facing the uterine cavity; called also *reflex d.* and *d. reflexa*. **menstrual d.**, **d. menstrua**, the hyperemic mucosa of the uterus that is shed during the menstrual period. **parietal d.**, **d. parietalis** [NA], the portion of the decidua lining the uterus elsewhere than at the site of attachment of the chorionic vesicle; called also *d. vera*. **reflex d.**, **d. reflexa**, **d. capsularis**. **d. serotina**, **d. basalis**. **d. subchoria**, the maternal component of the tissue

comprising the closing ring of Winkler-Waldeyer. **true d.**, **d. parietalis**. **d. tuberosa papulo**, a cast of the uterine cavity expelled at abortion. **d. vera**, **d. parietalis**.

decidual (de-sid'u-al) pertaining to the decidua.

deciduate (de-sid'u-āt) characterized by shedding.

deciduation (de-sid'u-a'shun) the shedding of the decidua.

deciduitis (de-sid'u-i'tis) a bacterial disease leading to alterations in the decidua.

deciduoma (de-sid'u-o'mah) [*decidua* + *-oma*] an intrauterine mass containing decidual cells. **Loeb's d.**, a tumor-like structure resembling the maternal placenta, produced in the uteri of guinea pigs by the action of progesterone. **d. malignum**, **choriocarcinoma**.

deciduomatosis (de-sid'u-o-mah-to'sis) formation of decidual tissue in the nonpregnant state.

deciduosisarcoma (de-sid'u-o-sar-ko'mah) (obs.) choriocarcinoma.

deciduosis (de-sid'u-o'sis) the presence of decidual tissue or of tissue resembling the endometrium of pregnancy in an ectopic site.

deciduous (de-sid'u-us) [*L. deciduus*, from *decidere* to fall off] falling off or shed at maturity; the term is used to designate the teeth of the first dentition in animals and man.

decigram (des'i-gram) the tenth part of a gram; 1.544 grains.

deciliter (des'i-le'ter) one tenth of a liter, equal to 6.1028 cubic inches.

decimeter (des'i-me'ter) one tenth of a meter, equal to 3.937 linear inches.

decinem (des'i-nem) (obs.) Pirquet's term for one tenth of a nem or the nutritive value of 1 decigram of milk; abbreviated dn.

decinormal (des'i-nor'mal) [*L. decimus* tenth + *norma* rule] having one tenth of the normal strength.

decipara (des'i-par'ah) [*L. decem* ten + *parere* to produce] a woman who has had ten pregnancies which resulted in viable offspring; also written Para X.

decision (de-siz'un) a judgment, conclusion, or verdict. **Durham d.**, see under *rule*.

deckplatte (dek'plah-tē) [Ger.] roof plate; see under *plate*.

declination (dek'li-na'shun) [*L. declinare* to decline] deviation from a normally vertical position, as rotation of the eye about its anteroposterior axis so that its vertical meridian lies to the temporal (*positive d.*) or to the nasal side (*negative d.*) of its proper position.

declinator (dek'li-na'tor) an instrument by which parts (as the meninges of the brain) are held aside during an operation.

decline (de-klin) 1. the period or stage of the abatement of a disease or paroxysm. 2. a gradual deterioration or wasting away of the physical and mental faculties.

declive (de-kliv') [Fr. *déclive*; *L. declivis*] [NA] the part of the vermis of the cerebellum just caudal to the primary fissure; called also *d. monticuli cerebelli*.

declivis (de-kli'vis) [*L.*] declive.

Declomycin (dek'lo-mi'sin) trademark for preparations of demeclocycline.

decoagulant (de'ko-ag'u-lant) 1. reducing the amount of existing coagulants or procoagulants in the blood. 2. a substance which inhibits coagulation of blood by reducing the amount of existing coagulants or procoagulants.

Decoct. abbreviation for *L. decoctum*, a decoction.

decoction (de-kok'shun) [*L. decoctum*, from *de* down + *coquere* to boil] 1. the act or process of boiling. 2. a medicine or other substance prepared by boiling. Called also *apozem*. **d. of the woods**, Zittmann's decoction. **Zimmermann's d.**, a cathartic decoction of rhubarb, potassium bitartrate, barley, water, and syrup. **Zittmann's d.**, a decoction of sarsaparilla, calomel, cinabar, alum, senna, licorice, anise seed, and fennel.

decoctum (de-kok'tum) [*L.*] a decoction.

decollation (de'kol-la'shun) [*de* + *L. collum* neck] decapitation, or beheading; removal of the head, chiefly of the fetus in difficult labor.

decoloration (de-kul'or-a'shun) 1. removal of color; bleaching. 2. lack or loss of color.

decolorize (de-kul'or-iz) to free from color; to bleach.

decompensation (de'kom-pen-sa'shun) 1. failure of compensation; cardiac decompensation is marked by dyspnea, venous engorgement, and edema. 2. in psychiatry, failure of defense mechanisms resulting in progressive personality disintegration.

decomplementize (de-kom'ple-men'tiz) to remove complement from.

decomposition (de'kom-po-zish'un) [*de* + *L. componere* to put together] the separation of compound bodies into their constituent principles by whatever process. **anaerobic d.**, the breakdown of organic compounds in the absence of oxygen. In animals, the process is known as *glycolysis*; in plants and microorganisms, *fermentation*. **d. of movement**, lack of coordination characterized by irregularity in the successive flexion

and extension of joints in performing a movement with the limb.

decompression (de'kom-presh'un) the removal of pressure, particularly the slow lessening of pressure on deep-sea divers and caisson workers to prevent the onset of bends, and the reduction of pressure on persons as they ascend to great heights. See also under *sickness*. **abdominal d.**, the removal of pressure from the abdomen during the first stage of labor. **cardiac d.**, d. of heart. **cerebral d.**, removal of a flap of the skull and incision of the dura mater for the purpose of relieving intracranial pressure. **explosive d.**, decompression more rapid than that corresponding to a rate of ascent greater than 5000 feet per minute. **d. of heart**, pericardiotomy with evacuation of a hematoma; called also *d. of pericardium*. **Heyns' d.**, a method of abdominal decompression using a partial vacuum. **nerve d.**, relief of pressure on a nerve by surgical removal of the constricting fibrous or bony tissue. **d. of pericardium**, d. of heart. **d. of rectum**, proctostomy for imperforate anus. **d. of spinal cord**, relief of pressure on the spinal cord by means of surgery; the pressure may be due to hematoma, bone fragments, etc. **subtemporal d.**, cerebral decompression after removal of a portion of the temporal bone.

deconditioning (de'kon-dish'un-ing) a change in cardiovascular function after prolonged periods of weightlessness, probably related to a shift of a quantity of blood from the lower limbs to the thorax, resulting in reflex diuresis and a reduction of blood volume.

decongestant (de'kon-jes'tant) 1. tending to reduce congestion or swelling. 2. an agent that reduces congestion or swelling.

decongestive (de'kon-jes'tiv) reducing congestion.

decontamination (de'kon-tam-i-na'shun) the freeing of a person or an object of some contaminating substance such as war gas, radioactive material, etc.

decoquinat (de-ko-kwin'āt) chemical name: 6-(decyloxy)-7-ethoxy-4-hydroxy-3-quinolinecarboxylic acid ethyl ester, a coccidiostat effective against the sporozoan *Eimeria*, $C_{24}H_{35}NO_5$; used in poultry.

decortication (de'kor-tī-ka'shun) [*de-* + L. *cortex* bark] 1. the removal of bark, hull, husk, or shell from a plant, seed, or root, as in pharmacy. 2. removal of portions of the cortical substance of a structure or organ, as of the brain, kidney, lung, etc. **arterial d.**, periarterial sympathectomy. **chemical d.**, **enzymatic d.**, removal of cortical substance by chemical agents or enzymes. **d. of lung**, removal of the visceral pleura to permit the lung to expand. **renal d.**, removal of the capsule of the kidney; decapsulation of the kidney.

decrement (dek're-ment) [L. *decrementum*] 1. subtraction, or decrease; the amount by which a quantity or value is decreased. 2. the stage of decline of a disease; see *stadium decrementi*.

decrepitate (de-krep'i-tāt) 1. to roast or calcine certain substances (salt, crystals, etc.) until crackling occurs, or until crackling ends. 2. to explode with a crackling noise upon heating, owing to the release of entrapped water as steam.

decrepitation (de-krep'i-ta'shun) the explosion or crackling of certain substances (salt, crystals, etc.) upon heating.

decrudescence (de'kroo-des'ens) diminution or abatement of the intensity of symptoms.

decrustation (de'krus-ta'shun) the detachment of a crust.

detaflur (dek'tah-floor) chemical name: 9-octadecenylamine hydrofluoride; a dental caries prophylactic, $C_{18}H_{35}N \cdot HF$.

Decub. abbreviation for L. *decubitus*, lying down.

decubation (de'ku-ba'shun) [*de-* + L. *cubare* to lie down] the period in the course of an infectious disease from the disappearance of the symptoms to complete recovery and the end of the infectious period. Cf. *incubation*.

decubital (de-ku'bi-tal) pertaining to decubitus (decubitus ulcer).

decubitus (de-ku'bi-tus), pl. *decubitus* [L. "a lying down"] 1. an act of lying down; also the position assumed in lying down. 2. decubitus ulcer; see under *ulcer*. **d. acu'tus**, a severe decubitus ulcer on a paralyzed side in hemiplegia. **Andral's d.**, decubitus on the sound side; a position assumed in the early stages of pleurisy. **dorsal d.**, lying in the supine position. **lateral d.**, lying on the side, as for radiologic examinations; designated right lateral decubitus when the subject lies on his right side and left lateral decubitus when on his left side. **ventral d.**, lying on the stomach.

decumbin (de-kum'bin) a toxic substance obtained from *Penicillium decumbens*, which causes respiratory distress and hemorrhage; the oral LD_{50} for rats is about 275 mg./kg.

decurent (de-kur'ent) [L. *decurrere* to run down] extending or moving from above downward.

decussate (de-kus'āt) [L. *decussare* to cross in the form of an X] 1. to cross or intersect in the form of the letter X. 2. crossing in the form of the letter X.

decussatio (de'kus-sa'she-o), pl. *decussatio'nes* [L.] [NA] decussation; [NA] a general term for the intercrossing of fellow parts or structures in the form of an X. See also *chiasma* and *commissura*. **d. bra'chii conjuncti'vi**, d. pedunculorum cerebellarium su-

periorum. **d. lemnis'ci**, **d. lemnisco'rum** [NA], decussation of lemniscus; the region at the caudal end of the medulla oblongata in which the fibers from the nucleus cuneatus and the nucleus gracilis on each side intersect as they cross the midline before ascending as the medial lemniscus. Called also *d. sensoria* [NA alternative] and *decussation of fillet*. **d. moto'ria**, NA alternative for *d. pyramidum*. **d. nervo'rum trochlea'rium** [NA], decussation of trochlear nerves; the crossing of the fibers of the trochlear nerves in the superior medullary velum. **d. pedunculo'rum cerebella'rium superio'rum** [NA], decussation of superior cerebellar peduncles; the crossing of the fibers of the superior cerebellar peduncles within the tegmentum of the mesencephalon. Called also *d. brachii conjunctivi*. **d. pyram'idum** [NA], pyramidal decussation: the anterior part of the lower medulla oblongata in which most of the fibers of each pyramid intersect as they cross the midline and descend as the lateral corticospinal tracts. Called also *d. motoria* [NA alternative], *decussation of pyramids*, and *motor decussation*. **d. senso'ria**, NA alternative for *d. lemniscorum*. **decussatio'nes tegmen'ti** [NA], **decussatio'nes tegmento'rum**, decussations of tegmentum: crossing fibers in the midbrain, including the ventral tegmental decussation of the rubrospinal and rubroreticular tracts, and the dorsal tegmental decussation of the tectospinal tract. Called also *tegmental decussations*.

decussation (de'kus-sa'shun) a crossing over; see *decussatio*. **d. of fillet**, decussatio lemniscorum. **Forel's d.**, the ventral tegmental decussation of the rubrospinal and rubroreticular tracts in the mesencephalon. **fountain d. of Meynert**, the dorsal tegmental decussation of the tectospinal tract in the mesencephalon. **d. of lemniscus**, decussatio lemniscorum. **motor d.**, decussatio pyramidum. **optic d.**, **d. of optic nerves** (*obs.*), chiasma opticum. **pyramidal d.**, **d. of pyramids**, decussatio pyramidum. **d. of superior cerebellar peduncles**, decussatio pedunculorum cerebellarium superiorum. **tegmental d's**, **d's of tegmentum**, decussationes tegmenti. **d. of trochlear nerves**, decussatio nervorum trochlearium.

decussationes (de'kus-sa'she-o'nēz) [L.] plural of *decussatio*.

decussorium (de'kus-so're-um) an instrument for depressing the dura mater in trephining.

dedentition (de'den-tish'un) [*de-* + L. *dens* tooth] the shedding or loss of teeth.

dedifferentiation (de-dif'er-en'she-a'shun) anaplasia.

de d. in d. abbreviation for L. *de die in di'em*, from day to day.

dedolation (ded'o-la'shun) 1. a sensation as if the limbs had been bruised. 2. the removal of a thin piece of skin by an oblique cut.

de Duve (dē dööv'), Christian Rene. Belgian biochemist in U.S., born 1917; co-winner, with Albert Claude and George E. Palade, of Nobel prize in medicine or physiology for 1974, for his work in development of cell fractionation and discovery of lysosomes.

deemanate (de-em'ah-nāt) to deprive of the property of giving off radioactive emanations.

Deen's test (dēnz) [Izaak Abrahamszoon van Deen, Dutch physiologist, 1804-1869] see under *tests*.

deep (dēp) situated far beneath the surface; not superficial.

de-epicardialization (de'ep-i-kar'dī-al-i-za'shun) a surgical procedure for the relief of intractable angina pectoris, in which epicardial tissue is destroyed by phenolization or the application of other caustic agents to promote the development of collateral circulation.

Deetjen's bodies (dāt'yenz) [Hermann Deetjen, German physician, 1867-1915] blood platelets.

DEF an expression of dental caries experience in deciduous teeth, *D* representing the number of teeth indicated for filling; *E* the number indicated for extraction; *F* the number of filled teeth.

defatigation (de-fat'i-ga'shun) overstrain or fatigue of muscular or nervous tissue.

defatted (de-fat'ed) deprived of fat, as a food.

defaunate (de-fawn'āt) [*de-* + L. *fauna* animal life] to remove or destroy an animal population; sometimes applied to removal of hookworms from the intestinal tract, delousing, etc.

defecation (def'e-ka'shun) [L. *defaecare* to deprive of dregs] 1. the removal of impurities, as chemical defecation. 2. the evacuation of fecal material from the rectum. **fragmentary d.**, the evacuation of small pieces of feces.

defect (de'fekt) an imperfection, failure, or absence. **acquired d.**, an imperfection arising secondarily, after birth. **aortic septal d.**, a congenital anomaly in which there is abnormal communication between the ascending aorta and pulmonary artery just above the semilunar valves; called also *aorticopulmonary fenestration*, *aorticopulmonary septal d.*, and *aorticopulmonary window*. **aorticopulmonary septal d.**, aortic septal d. **atrial septal d's**, **atrioseptal d's**, congenital cardiac anomalies in which there is persistent patency of the atrial septum due to failure of fusion between either the septum secundum or the septum primum and the endocardial cushions. In *ostium secundum defect* there is a rim of septum all around the defect. In *ostium*

primum defect, which is an incomplete form of atrioventricularis communis, there is no septum at the base of the defect, between the mitral and tricuspid valves; it is usually associated with a cleft mitral cusp and occasionally with a cleft tricuspid valve. **birth d.**, congenital d. **congenital d.**, birth defect; a structural or chemical imperfection present at birth. **cortical d.**, a benign, symptomless, circumscribed rarefaction of cortical bone, detected radiographically; called also *subperiosteal cortical d.* **ectodermal d.**, congenital, a rare hereditary condition affecting chiefly males and marked by a smooth glossy skin, total absence of sweat glands, abnormality of the teeth, and defective hair formation. Saddle nose, prominent frontal bones, large chin, and thick lips are characteristic. It is transmitted as an X-linked trait, and possibly as an autosomal recessive in rare instances. Called also *anhidrotic ectodermal dysplasia* and *Christ-Siemens or Christ-Siemens-Touraine syndrome*. Cf. *hidrotic ectodermal dysplasia*. **endocardial cushion d's**, a spectrum of septal defects resulting from imperfect fusion of the endocardial cushions, and ranging from persistent ostium primum to persistent common atrioventricular canal; see *atrial septal d's* and *atrioventricularis communis*. **filling d.**, any localized defect in the contour of the stomach, duodenum, or intestine, as seen in the roentgenogram after a barium enema, due to a lesion of the wall projecting into the lumen or to an object in the lumen. **neural-tube d.**, a developmental anomaly resulting in anencephaly or spina bifida. **ostium primum d.**, see *atrial septal d.* **ostium secundum d.**, see *atrial septal d.* **retention d.**, a defect in the power of recalling or remembering names, numbers, or events. **salt-losing d.**, see under *syndrome*. **septal d.**, a defect in one of the cardiac septa, resulting in an abnormal communication between the opposite chambers of the heart. **subperiosteal cortical d.**, cortical d. **ventricular septal d.**, a congenital cardiac anomaly in which there is persistent patency of the ventricular septum in either the muscular or fibrous portions, most often due to failure of the bulbar septum to completely close the interventricular foramen.

defective (de-fek'tiv) 1. imperfect. 2. a person lacking in some physical, mental, or moral quality.

defeminization (de-fem'i-ni-za'shun) loss of female sexual characteristics.

defense (de-fens') behavior directed to the protection of the individual from injury. **character d.**, any character trait, e.g., a mannerism, attitude, or affectation, which serves as a defense mechanism. **insanity d.**, a legal concept that a person cannot be convicted of a crime if he lacked criminal responsibility by reason of insanity at the time of commission. See *M'Naghten rule* and *Durham rule*, under *rule*, and *American Law Institute Formulation*, under *formulation*. **muscular d.**, the muscular tension and rigidity which accompanies a localized inflammation (as in appendicitis) or passage of a kidney stone. **ur d.**, see *ur-defense*.

deferens (def'er-enz) [L.] deferent; see *ductus deferens*.

deferent (def'er-ent) [L. *deferens* carrying away] conveying anything away, as from a center.

deferentectomy (def'er-en-tek'to-me) surgical removal of a ductus deferens.

deferential (def'er-en'shal) pertaining to the ductus deferens.

deferentitis (def'er-en-ti'tis) inflammation of the ductus deferens.

deferoxamine (dē-fer-oks'ah-mēn) chemical name: *N'*[[5-[[4-[[5-(acetylhydroxyamino) pentyl] amino]-1,4-dioxobutyl] hydroxy-amino]pentyl]-*N*-(5-aminopentyl)-*N*-hydroxybutanediamide. A chelating agent, isolated from *Streptomyces pilosus*, $C_{25}H_{48}N_6O_8$, which binds with iron to form a soluble complex. Called also *desferrioxamine*. **d. hydrochloride**, the hydrochloride salt of deferoxamine, $C_{25}H_{48}N_6O_8 \cdot HCl$. **d. mesylate**, [USP], the water-soluble mesylate salt of deferoxamine, $C_{25}H_{48}N_6O_8 \cdot CH_3SO_3H$, occurring as a white to off-white powder, having the same actions as the base; used as an antidote to iron poisoning, usually administered by intramuscular injection or by intravenous infusion. *Sterile deferoxamine mesylate*, prepared in conformance with USP specifications, is suitable for parenteral use.

defervescence (def'er-ves'ens) [L. *defervescere* to cease boiling] the period of abatement of fever.

defervescent (def'er-ves'ent) 1. causing reduction of fever. 2. an agent that acts to reduce fever.

defibrillation (de-fib'ri-la'shun) termination of atrial or ventricular fibrillation, usually by electroshock. 2. separation of the fibers of a tissue by blunt dissection.

defibrillator (de-fib'ri-la'tor) [*de* + *fibrillation*] an electronic apparatus used to counteract atrial or ventricular fibrillation by the application of brief electroshock to the heart, directly or through electrodes placed on the chest wall.

defibrinated (de-fi'brī-nāt'ed) deprived of fibrin.

defibrination (de-fi'brī-na'shun) removal of fibrin from the blood; see also under *syndrome*.

deficiency (de-fish'en-se) a lack or defect. **17-hydroxylase d.**, see under *syndrome*. **kappa-chain d.**, deficiency in immunoglobulin molecules with kappa light chains. **mental d.**,

see under *retardation*. **oxygen d.**, anoxemia; hypoxia. **thymus-dependent d.**, a defect in cell-mediated immunity with relatively intact humoral immunity, due to aplasia or dysplasia of the thymus and the resultant lack of T(thymus-dependent)-lymphocytes, as in Nezelof's syndrome and DiGeorge's syndrome. **thymus-independent d.**, a defect in the proliferation of B(thymus-independent)-lymphocytes, including agammaglobulinemia and dysgammaglobulinemia. **vitamin d.**, see specific vitamins.

deficit (def'i-sit) a lack or deficiency. **oxygen d.**, see *anoxia*, *anoxemia*, and *hypoxia*. **pulse d.**, the difference between the heart rate and the pulse rate in atrial fibrillation, resulting from failure of some of the ventricular contractions to produce peripheral pulse waves.

Definate (def'i-nāt) trademark for a preparation of docusate sodium.

definition (def'i-nish'un) the clear determination of the limits of anything, as of a disease process or a microscopical image. See also *resolution*, *def. 2*.

definitive (de-fin'i-tiv) established with certainty. In embryology, denoting acquisition of final differentiation or character. In parasitology, denoting the host in which a parasite reaches the sexual stage.

deflection (de-flek'shun) a turning aside; in psychoanalysis, an unconscious diversion of ideas from conscious attention.

defloration (def'lo-ra'shun) [L. *defloratio*] the rupturing of the hymen in sexual intercourse, in vaginal examination, or by sexual manipulation.

deflorescence (def'lo-res'ens) the disappearance of the eruption in any exanthematous disease.

defluvium (de-floo've-um) [L.] defluxio. **postpartum d.**, loss of hair by the mother after delivery. **d. unguium**, onychomadesis.

defluxio (de-fluk'se-o) [L.] 1. a flowing down. 2. a disappearance.

defluxion (de-fluk'shun) [L. *defluxio*] 1. a sudden disappearance. 2. a copious discharge, as of catarrhal fluid. 3. a falling out, as of the hair.

deformability (de-form'ah-bil'i-te) the ability of cells, such as erythrocytes, to change shape as they pass through narrow spaces, such as the microvasculature.

deformation (de'for-ma'shun) 1. deformity, especially an alteration in shape and/or structure of a previously normally formed part. 2. the process of adapting in shape or form, as the change in shape of erythrocytes as they pass through capillaries.

deforming (de-form'ing) causing or producing deformity.

deformity (de-for'mi-te) distortion of any part or general disfigurement of the body; malformation. **Akerlund d.**, a deformity of the duodenal cap in the radiograph in duodenal ulcer, consisting of an indentation (incisura) in addition to the niche. **Arnold-Chiari d.**, a congenital anomaly in which the cerebellum and medulla oblongata, which is elongated and flattened, protrude down into the spinal canal through the foramen magnum; it may be associated with many other defects, including spina bifida occulta and meningocele. Called also *Arnold-Chiari malformation* or *syndrome*. **boutonnière d.**, a deformity of the finger characterized by flexion of the proximal interphalangeal joint and hyperextension of the distal joint; called also *buttonhole d.* **buttonhole d.**, 1. boutonnière d. 2. see *buttonhole mitral stenosis*, under *stenosis*. **crossbar d.**, the stiffening of a segment of the lesser curvature of the stomach, usually due to the healing of a deep penetrating ulcer. **Dandy-Walker d.**, see under *syndrome*. **funnel d.**, a funnel-shaped mitral orifice occurring as a result of fusion and shortening of the chordae tendineae. **gun stock d.**, cubitus varus. **Ilfeld-Holder d.**, prominent scapula with difficulty in raising the arm. **lobster-claw d.**, a developmental anomaly characterized by an abnormal cleft between the central metacarpal bones, the soft tissues of the digits being fused into two masses, one on either side of the cleft. **Madelung's d.**, radial deviation of the hand secondary to overgrowth of the distal ulna or shortening of the radius; called also *carpus curvus*. **recurvatum d.**, a deformity of the proximal interphalangeal joint in which the joint extends when pressure is exerted between the thumb and middle finger. **reduction d.**, congenital absence of a portion or all of a body part, especially the limbs. **rock-bottom d.**, see under *foot* (def. 1). **rolled edge d.**, a highly characteristic deformity of the aortic valve cusps caused by syphilis. **seal-fin d.**, ulnar deviation of the fingers in rheumatoid arthritis. **silver fork d.**, the peculiar deformity seen in Colles' fracture; see illustration under *fracture*. Called also *Velpeau's deformity*. **Sprengel's d.**, congenital elevation of the scapula, due to failure of descent of the scapula to its normal thoracic position during fetal life. **swan-neck d.**, a finger deformity in which the proximal interphalangeal joint is hyperextended and the distal interphalangeal joint is flexed. **ulnar drift d.**, a deformity occurring when the proximal phalanx dislocates toward the volar aspect of the metacarpal head and at the same time deviates to the ulnar side of the hand. **Velpeau's d.**, silver fork deformity. **Volkman's d.**, see under *disease*.

defundation (de'fun-da'shun) [*de-* + *L. fundus*] excision of the fundus of the uterus along with the uterine tubes; called also *defundectomy*.

defundectomy (de'fun-dek'to-me) defundation.

Deg. degeneration; degree.

degassing (de-gas'ing) 1. removal of a gas from a person or an object. 2. treatment of a person or an object subjected to the fumes of gas. 3. in dentistry, the heating of gold in a flame to drive off any contaminating gases and increase its cohesive properties.

degeneracy (de-jen'er-ah-se) a state characterized by deterioration of the powers of body and mind; called also *Nordan's disease* or *nordanism*.

degenerate 1. (de-jen'er-ät) to change from a higher to a lower type or form. 2. (de-jen'er-it) characterized by degeneration. 3. (de-jen'er-it) a person whose moral or physical state is below the normal.

degeneratio (de-jen'er-a'she-o) [*L.*] degeneration. **d. mi'cans**, glistening degeneration.

degeneration (de-jen'er-a'shun) [*L. degeneratio*] deterioration; change from a higher to a lower form; especially change of tissue to a lower or less functionally active form. When there is chemical change of the tissue itself, it is *true degeneration*; when the change consists in the deposit of abnormal matter in the tissues, it is *infiltration*. Called also *retrogression*. **Abercrombie's d.**, amyloid d. **adipose d.**, fatty d. **adiposogenital d.**, adiposogenital dystrophy. **albuminoid d.**, albuminous d., cloudy swelling; see under *swelling*. **amyloid d.**, degeneration with the deposit of lardacein in the tissues; it indicates impairment of nutritive function, and is seen in wasting diseases. Also known as *Abercrombie's d.* or *syndrome*. **Virchow's d.**, *bacony d.*, *cellulose d.*, *hyaloid d.*, *lardaceous d.*, and *waxy d.* **angiolithic d.**, one characterized by mineral deposits and hyaline changes in the coats of the vessels. **Armanni-Ehrlich's d.**, hyaline degeneration of the epithelial cells of Henle's loops; seen in diabetes. **ascending d.**, wallerian degeneration affecting centripetal nerve fibers and progressing toward the brain or spinal cord. **atheromatous d.**, atheroma (def. 2). **axonal d.**, the reaction of a nerve cell to injury to its axon; it consists of central chromatolysis and eccentricity of the nucleus. **bacony d.**, amyloid d. **basic d.**, **basophilic d.**, basophilia, def. 1. **black d. of brain**, a fungous disease caused by species of *Cladosporium*, especially *C. tricoidea*, which is named for the most apparent pathological sign. On tissue section of the brain, multiseptate, brown distorted hyphae are seen. **blastophthoric d.**, blastophthoria. **calcareous d.**, degeneration with infiltration of calcareous materials into the tissues; called also *earthy d.* **caseous d.**, caseation, def. 2. **cellulose d.**, amyloid d. **cerebromacular d.**, **cerebroretinal d.**, degeneration of brain cells and of the macula retinae, as in Tay-Sachs disease. **cheesy d.**, caseation, def. 2. **chitinous d.**, amyloid d. **colloid d.**, the assumption by the tissues of a gumlike or gelatinous character; called also *gelatiniform d.* **colloid d. of choroid**, Tay's choroiditis. **comma d.**, progressive degeneration of the nervous matter of the comma tract (interfascicular fasciculus). **congenital macular d.**, a hereditary form of macular degeneration transmitted as an autosomal dominant trait, and characterized by the presence of a cystlike lesion that in the early stages resembles egg yolk; called also *vitelliform d. of Best*. **corticostriatal-spinal d.**, Creutzfeldt-Jakob syndrome. **crenation d.**, a condition in which the cells of the corium become irregular and toothed; it is seen in granuloma fungoides. **Crooke's hyaline d.**, degeneration of basophils of the pituitary gland, in which they lose their specific granulations and the cytoplasm becomes progressively hyalinized; a constant finding in Cushing's syndrome, but also occurring in Addison's disease. **cystic d.**, degeneration with the formation of cysts. **cystoid d.**, Blessig's cysts. **descending d.**, wallerian degeneration extending peripherally along nerve fibers. **disciform macular d.**, a form of macular degeneration occurring in persons over 40 years of age, in which sclerosis involving the macula and retina is produced by hemorrhages between Bruch's membrane and the pigment epithelium; called also *senile macular exudative choroiditis*, *senile disciform d.*, and *Kuhnt-Junius disease*. **Doyme's familial colloid d.**, **Doyme's honeycomb d.**, see under *choroiditis*. **dystrophic d.**, degeneration arising from defective or faulty nutrition. **earthy d.**, calcareous d. **elastoid d.**, amyloid degeneration of the elastic tissue of arteries. **familial colloid d.**, Doyme's familial honeycombed choroiditis. **fascicular d.**, degeneration of paralyzed muscles due to lesion in the motor ganglion cells of the central tube of gray matter of the cord. **fatty d.**, deposit of fat globules in a tissue; called also *adipose d.* **fibrinous d.**, necrosis with deposit of fibrin within the cells of the tissue. **fibroid d.**, degeneration into fibrous tissue. **fibrous d.**, fibrosis. **gelatiniform d.**, colloid d. **glassy d.**, a peculiar change occurring in the heart muscle and other muscles in fevers. **glistening d.**, degeneration of glia tissue characterized by the formation of glistening masses; called also *degeneratio micans* and *Rosenthal's d.* **glycogenic d.**, a form of degeneration in which abnormal amounts of glycogen accumulate in the cells, as in glycogenosis. **Gombault's d.**,

progressive hypertrophic interstitial neuropathy. **granulovascular d.**, a condition in which the ganglion cells become filled with vacuoles containing condensed granules of protoplasm. **gray d.**, degeneration of the white substance of the spinal cord, in which it loses myelin and assumes a gray color. **hematohyaloid d.**, a form of hyaline degeneration of thrombi due to conglutination of the red cells or blood platelets. **hemoglobinemic d.**, an archaic term applied to accumulation of hemoglobin in the center of the erythrocyte. **hepatolenticular d.**, a rare progressive disease, inherited as an autosomal recessive trait, and due to a defect in the metabolism of copper; a pigmented ring (Kayser-Fleischer ring) at the outer margin of the cornea is pathognomonic. The disease is characterized by degenerative changes in the brain, especially the basal ganglia, and by cirrhosis of the liver, splenomegaly, involuntary movements, tremor, muscular rigidity, spastic contractures, psychic disturbances, dysphagia, and increasing weakness and emaciation. Called also *familial hepatitis*, *hepatolenticular disease*, *lenticular d.*, *progressive lenticular d.*, *Strümpell-Westphal pseudosclerosis*, *Westphal-Strümpell disease* or *pseudosclerosis*, and especially *Wilson's degeneration*, *disease*, or *syndrome*. **Holmes's d.**, primary progressive cerebellar d. **Horn's d.**, degeneration with nuclear proliferation in striated muscles. **hyaline d.**, a regressive cellular change in which the cytoplasm take on a homogeneous glassy eosinophilic appearance. Also used loosely to describe the histologic appearance of tissues. Called also *vitreous d.* and *hyalinosis*. **hyaloid d.**, amyloid d. **hydropic d.**, a variety in which the epithelial cells absorb much water. **lardaceous d.**, amyloid d. **lattice d. of retina**, a frequently bilateral, usually benign asymptomatic condition, characterized by patches of fine gray or white lines that intersect at irregular intervals in the peripheral retina, usually associated with numerous, round, punched-out areas of retinal thinning or retinal holes. **lenticular d.**, hepatolenticular d. **lipoidal d.**, a condition somewhat resembling fatty degeneration or infiltration but in which the extraneous material is lipid. **macular d.**, degenerative changes in the macula retinae. **Mönckeberg's d.**, see under *arteriosclerosis*. **mucinoid d.**, a term used to include both mucoid and colloid degeneration; called also *mucinous d.* and *myelinic d.* **mucinous d.**, mucous d. **mucoid d.**, degeneration accompanied by deposit of myelin and lecithin in the cells. **mucous d.**, a form in which mucus accumulates in epithelial tissues. **myelinic d.**, mucoid d. **myxomatous d.**, degeneration in which mucus accumulates in connective tissues. **Nissl d.**, degeneration of a nerve cell after division of the nerve fiber supplying it. **olivopontocerebellar d.**, familial cerebellar degeneration occurring in the young or middle aged, characterized by extensive atrophy of the middle cerebellar peduncles and of the ventral surface of the pons, with loss of myelin in the white matter of the cerebellum and of cells in the olivary nuclei, the nuclei pontis, and the Purkinje and granular cell layers of the cerebellum. **pallidal d.**, degeneration of the globus pallidus. **parenchymatous d.**, cloudy swelling. **Paschutin's d.**, the degeneration peculiar to diabetes. **pigmental d.**, **pigmentary d.**, that in which cells of affected tissue become abnormally pigmented. **polypoid d.**, the development, on a mucous membrane, of polypoid growths. **primary progressive cerebellar d.**, a familial disease marked by motor disorders and due to cerebellar degeneration, occurring in adults between the ages of thirty and forty and progressing slowly to a fatal termination; called also *Holmes' d.* **progressive lenticular d.**, hepatolenticular d. **Quain's d.**, fibrous degeneration of the muscles of the heart. **red d.**, degeneration of a uterine leiomyoma during pregnancy, marked by the formation of soft red areas due to necrosis and edema. **retrograde d.**, axon reaction. **rim d.**, degeneration of the spinal cord affecting the periphery only. **Rosenthal's d.**, glistening d. **sclerotic d.**, a variety of hyaline degeneration affecting connective tissue, especially the intima of arteries. **secondary d.**, wallerian d. **senile d.**, the widespread degenerative changes, principally fibroid and atheromatous, that occur in old age. **senile disciform d.**, disciform macular d. **spongy d. of central nervous system**, **spongy d. of white matter**, a rare hereditary form of leukodystrophy, transmitted as an autosomal recessive trait, characterized by early onset, widespread demyelination and vacuolation of the cerebral white matter that gives rise to a spongy appearance, severe mental retardation, megaloccephaly, atony of the neck muscles, spasticity of the arms and legs, and blindness, with death usually occurring at about 18 months of age. Called also *Canavan's disease*. **subacute combined d. of spinal cord**, degeneration of both the posterior and lateral columns of the spinal cord caused by vitamin B₁₂ deficiency; a progressive disease, most often affecting persons over forty years of age, it is usually associated with pernicious anemia. The symptoms include paresthesias, ataxia, unsteadiness of gait, and sometimes emotional disorders. Called also *Lichtheim's disease* or *syndrome*, *Putnam-Dana syndrome*, and *posterolateral sclerosis*. **trabecular d.**, a change in the walls of the bronchi, which become thin and wasted in respect to the muscular and mucous elements, while the stroma is increased in volume. **transneuronal d.**, atrophy of certain neurons after interruption of afferent axons or death of other neurons to which they send their efferent output. **traumatic**

d., degeneration of a divided nerve up to the nearest-node of Ranvier. **Türck's d.**, secondary parenchymatous degeneration of nerve tracts of the cord. **uratic d.**, degeneration marked by the deposit of urates or uric acid. **vacuolar d.**, the formation of vacuoles in the cells of a tissue. **Virchow's d.**, amyloid d. **vitelliform d. of Best**, vitelliform macular d., congenital macular degeneration in which the lesions have a "fried-egg" appearance. **vitreous d.**, hyaline d. **wallerian d.**, fatty degeneration of a nerve fiber which has been severed from its nutritive centers; called also *secondary d.* **waxy d.**, amyloid d. **Wilson's d.**, hepatolenticular d. **Zenker's d.**, necrosis and hyaline degeneration of striated muscle; called also *Zenker's necrosis*.

degenerative (de-jen'er-a-tiv) of or pertaining to degeneration. **degenitalize** (de-gen'i-tal-iz) in psychoanalysis, to remove the genital aspects of an affect.

degerm (de-germ') disinfect.

degloving (de-gluv'ing) intra-oral surgical exposure of the bony mandibular chin; it can be performed in the posterior region if necessary.

Deglut. abbreviation for *L. deglutia'tur*, let it be swallowed.

deglutible (de-gloo'ti-bl) capable of being swallowed.

deglutition (deg'loo-tish'un) [*L. deglutitio*] the act of swallowing.

deglutitive (de-gloo'ti-tiv) deglutitory.

deglutitory (de-gloo'ti-to're) pertaining to or promoting deglutition.

degradation (deg-rah-da'shun) the reduction of a chemical compound to one less complex, as by splitting off one or more groups.

degranulation (de-gran'u-la'shun) the process of losing granules; said of certain granular cells.

degree (de-gre') 1. a grade or rank awarded scholars by a college or university. 2. a unit of measure of temperature. 3. a unit of measure of arcs and angles. **prism d.**, centrad, def. 2.

degrowth (de'grōth) decrease in the mass of living matter because of use of the proteins of the protoplasm to produce energy by the organism.

degustation (de'gus-ta'shun) [*L. degustatio*] the act or function of tasting.

dehab (de'hahb) surra.

dehematize (de-hem'ah-tiz) [*de- + Gr. haima* blood] to deprive of blood.

dehemoglobinize (de'hem-o-glo'bi-niz) to remove hemoglobin from the red blood corpuscles.

dehepatized (de-hep'ah-tizd) having the liver removed.

Dehio's test (da'he-ōz) [Karl Konstantinovich *Dehio*, Russian physician, 1851-1927] see under tests.

dehiscence (de-his'ens) [*L. dehiscere* to gape] a splitting open. **root d.**, the absence of all or a portion of the bony covering of the buccal or lingual aspect of the root of a tooth. **d. of uterus**, occult rupture of the uterus following cesarean section. **wound d.**, separation of the layers of a surgical wound; it may be partial and superficial only, or complete with total disruption. **Zuckermandl's d's**, small gaps occasionally seen in the papyraceous layer of the ethmoid bone.

dehumanization (de-hu'man-i-za'shun) [*de- + L. humanus* human] loss of the qualities of humanity, as in some severe psychotic conditions.

dehumidifier (de'hu-mid'i-fi'er) an apparatus by which the content of moisture in the air is reduced.

dehydrant (de-hi'drant) 1. reducing hydration. 2. an agent that removes or reduces body water.

dehydrase (de-hi'drās) a term formerly applied to both the dehydrogenases and the dehydratases.

dehydratase (de-hi'drah-tās) any lyase (hydro-lyase) that catalyzes the removal of H₂O, leaving double bonds (or adding groups to double bonds).

dehydrate (de-hi'drāt) to remove water from (a compound, the body, etc.).

dehydration (de'hi-dra'shun) [*L. de* away + *Gr. hydōr* water] 1. removal of water from a substance. 2. the condition that results from excessive loss of body water. Called also *anhydration*, *deaquation*, and *hypohydration*. **absolute d.**, water content below the normal or below a standard amount. **hypernatremic d.**, a condition in which electrolyte losses are disproportionately smaller than water losses. **relative d.**, dehydration resulting from increased osmotic pressure of the body fluids. **voluntary d.**, that resulting when thirst does not stimulate sufficient replacement of water loss.

dehydroandrosterone (de-hi'dro-an-dros'ter-ōn) former name for dehydroepiandrosterone.

dehydrobilirubin (de-hi'dro-bil-i-ru'bin) biliverdin.

dehydrocholaneresis (de-hi'dro-ko'lan-er'ē-sis) increase in the output of dehydrocholic acid in the bile.

dehydrocholate (de-hi'dro-ko'lāt) a salt of dehydrocholic acid.

dehydrocholesterol (de-hi'dro-ko-les'ter-ol) a sterol found in the skin which, when properly irradiated, forms vitamin D. **7-d., activated**, cholecalciferol.

11-dehydrocorticosterone (de-hi'dro-kor-tī-kos'ter-ōn) chemical name: 21-hydroxypregn-4-ene-3,11,20-trione. A steroid, C₂₁H₂₈O₄, from the adrenal cortex, which has a slight effect on protein and carbohydrate metabolism. Also produced synthetically, it is used like cortisone as a glucocorticoid and as an antiallergic agent. Called also *Kendall's compound A*.

dehydrocorydaline (de-hi'dro-kō-rid'ah-lin) a yellowish crystalline alkaloid, C₂₂H₂₅O₄N, from the roots of species of *Corydalis*.

dehydroepiandrosterone (de-hi'dro-ep'i-an-dros'ter-ōn) an androgen, C₁₉H₂₈O₂, occurring in normal human urine and synthesized from cholesterol; abbreviated DHA. Called also *dehydroisandrosterone* and, formerly, *dehydroandrosterone*.

dehydrogenase (de-hi'dro-jen-ās) an enzyme which mobilizes the hydrogen of a substrate so that it can pass to a hydrogen acceptor. Cf. *coenzyme*. Dehydrogenases are variously designated according to their specific activity, or the substrate acted upon. **acetaldehyde d.**, a flavoprotein that catalyzes the conversion of acetaldehyde to acetic acid and H₂O₂. **acetoin d.**, acetoin: NAD oxidoreductase. An enzyme that catalyzes the conversion of acetoin and nicotinamide-adenine dinucleotide (NAD) to diacetyl and reduced nicotinamide-adenine dinucleotide. **aerobic d.**, one that transfers hydrogen directly to oxygen. **alcohol d.**, one that catalyzes the dehydrogenation of ethyl alcohol to acetaldehyde. **anaerobic d.**, one that is linked with a carrier. **beta-hydroxybutyric d.**, one that catalyzes the dehydrogenation of beta-hydroxybutyric acid to acetoacetic acid. **fatty acid d.**, one that catalyzes the removal of hydrogen from higher fatty acids. **formic d.**, an enzyme that catalyzes the change of formic acid into carbon dioxide and hydrogen. **glucose d.**, an enzyme that catalyzes the oxidation of glucose to gluconic acid. **glucose-6-phosphate d. (G6PD)**, an enzyme of the pentose phosphate pathway which, with NADP⁺ as coenzyme, catalyzes the dehydrogenation of glucose-6-phosphate to 6-phosphogluconolactone. Called also *Robison ester d.* and *Zwischenferment*. **glutamate d.**, glutamic acid d. **glutamic acid d.**, an enzyme that catalyzes the change of glutamic acid into ketoglutaric acid and ammonia. **glycerolphosphate d.**, an enzyme that catalyzes the oxidation of glycerolphosphate into phosphoglyceric acid. **hexose d.**, an enzyme that catalyzes the oxidation of hexose to hexonic acid. **lactate d.**, (LDH), an enzyme that catalyzes the interconversion of lactate and pyruvate. It is widespread in tissues and is particularly abundant in kidney, skeletal muscle, liver, and myocardium. It appears in elevated concentrations when these tissues are injured. **malate d.**, one that catalyzes the dehydrogenation of malic acid to oxaloacetic acid. **pyruvic d.**, an enzyme complex that catalyzes the oxidation of pyruvic acid. **Robison ester d.**, glucose-6-phosphate d. **succinic d.**, one that catalyzes the change of succinic acid into fumaric acid. **xanthine d.**, an enzyme that catalyzes the oxidation of xanthine to uric acid.

dehydrogenate (de-hi'dro-jen-āt) to remove hydrogen from.

dehydrogenation (de-hi'dro-jen-a'shun) indirect oxidation due to removal of hydrogen by the reaction of a hydrogen acceptor.

dehydroisandrosterone (de-hi'dro-i'so-an-dros'ter-ōn) dehydroepiandrosterone.

dehydromorphine (de-hi'dro-mor'fin) pseudomorphine.

dehydropeptidase (de-hi'dro-pep'ti-dās) aminoacylase.

dehydroretinal (de-hi'dro-ret'i-nal) the aldehyde of dehydroretinol, derived from the visual pigment porphyropsin, found in fresh-water fishes and certain vertebrates and amphibians. Its metabolic role is analogous to that of rhodopsin in other animals. Called also *retinal₂*.

dehydroretinol (de-hi'dro-ret'i-nol) vitamin A₂, the form, C₂₀H₂₈O, of vitamin A found in the retina and liver of fresh-water fishes and certain invertebrates and amphibians; it differs from retinol (vitamin A₁) in having one more conjugated double bond and has approximately one-third the biological activity of retinol. Called also *retinol₂*.

dehypnotize (de-hip'no-tiz) to arouse from the hypnotic state.

deiodination (de-i'o-din-a'shun) the loss or removal of iodine from a compound.

deionization (de-i'on-i-za'shun) the production of a mineral-free state by the removal of ions, especially by use of ion-exchange resins.

deiteral (di'ter-al) pertaining to Deiters' nucleus.

Deiters' cells, etc. (di'terz) [Otto Friedrich Carl *Deiters*, German anatomist, 1834-1863] see under *cell*, *frame*, *nucleus*, *phalanx*, *process*, and *tract*.

djà entendu (da-zhah' on'ton-doo') [Fr. "already heard"] the feeling that one has heard or perceived something previously although it is in fact new to one's experience.

djà éprouvé (da-zhah' a'proo-va') [Fr. "already tested"] a feeling that something a person has never engaged in has been done.

déjà fait (da-zhah' fa) [Fr. "already done"] a feeling that what is happening has happened before.

déjà pensé (da-zhah' pon-sa') [Fr. "already thought"] a feeling that one has thought the same thoughts before.

déjà raconté (da-zhah' rak'on-ta') [Fr. "already told"] a feeling that one's forgotten experience has been told to him by someone else.

déjà vécu (da-zhah' va-koo') [Fr. "already lived"] an illusory feeling that a new experience has been previously encountered.

déjà voulu (da-zhah' voo-loo') [Fr. "already desired"] a feeling that one has entertained the same desires before.

déjà vu (da-zhah' voo') [Fr. "already seen"] an illusion in which a new situation is incorrectly viewed as a repetition of a previous situation.

dejecta (de-jek'tah) excrement.

dejection (de-jek'shun) [L. *dejectio*] 1. a mental state marked by depression and melancholy. 2. discharge of feces; defecation. 3. excrement; feces.

Dejerine's disease, etc. (deh'zher-ēnz') [Joseph Jules *Dejerine*, French neurologist, 1849–1917] see under *disease*, *sign*, *syndrome*, and *type*.

Dejerine-Klumpke paralysis, syndrome (deh'zher-ēn' klump'ke) [Augusta *Dejerine-Klumpke*, French neurologist, 1859–1927] Klumpke's paralysis.

Dejerine-Landouzy dystrophy (type) (deh'zher-ēn' landoo'ze) [J. J. *Dejerine*; Louis Théophile Joseph *Landouzy*, French physician, 1845–1917] see *Landouzy-Dejerine dystrophy*, under *dystrophy*.

Dejerine-Lichtheim phenomenon (deh'zher-en' lict'him) [J. J. *Dejerine*; Ludwig *Lichtheim*, German physician, 1845–1928] Lichtheim sign.

Dejerine-Roussy syndrome (deh'zher-ēn' roo-se') [J. J. *Dejerine*; Gustav *Roussy*, French pathologist, 1874–1948] thalamic syndrome.

Dejerine-Sottas atrophy, disease, syndrome (deh'zher-ēn' sot'tahz) [J. J. *Dejerine*; Jules *Sottas*, French neurologist, born 1866] progressive hypertrophic interstitial neuropathy.

deka- (dek'ah) [Gr. *deka* ten] a combining form meaning ten; for words beginning thus, see also those beginning *deca-*.

dekanem (dek'ah-nem) [(obs.) ten nems; abbreviated Dn.]

delacrimation (de-lak'rī-ma'shun) [L. *de* from + *lacrima* tear] excessive and abnormal flow of tears.

delactation (de'lak-ta'shun) 1. weaning. 2. the cessation of lactation.

Delafield's fluid, hematoxylin (del'ah-fēldz) [Francis *Delafield*, pathologist in New York, 1841–1915] see under *fluid*, and see *Table of Stains*.

Delalutin (del'ah-lu'tin) trademark for a preparation of hydroxyprogesterone caproate.

delamination (de'lām-i-na'shun) [L. *de* apart + *lamina* plate] separation into layers, as the separation of blastoderm into epiblast and hypoblast during chick embryo development.

Delatestryl (del'ah-tes'tril) trademark for a preparation of testosterone enanthate.

Delbet's sign (del-bāz') [Pierre *Delbet*, French surgeon, 1861–1925] see under *sign*.

de-lead (de-led') to remove lead from a tissue, as from the bones in lead poisoning by the administration of edetate disodium calcium.

Delestrogen (del-es'tro-jen) trademark for a preparation of estradiol valerate.

deleterious (del'ē-te're-us) [Gr. *dēlēterios*] hurtful; injurious.

deletion (de-le'shun) removal; in genetics, a loss of genetic material from a chromosome. **antigenic d.**, loss or masking of antigenic determinants in daughter cells of cells whose parent tissue normally carries them; it may result from neoplastic or other mutational change in the parent tissue or may be due to loss or repression of genetic material from the cell.

delimitation (de-lim'i-ta'shun) [*de-* + L. *limitare* to limit] 1. the process of limiting or of becoming limited. 2. ascertainment of the limits and extent of some diseased tissue or process, or the spread of a disease in a host or a community.

delinquency (de-lin'kwen-se) antisocial, illegal or criminal conduct.

delinquent (de-lin'kwent) 1. characterized by antisocial, illegal, or criminal conduct. 2. an individual whose conduct is antisocial, illegal, or criminal, especially a minor exhibiting such behavior (**juvenile d.**).

deliquescent (del'ē-kwes'ent) [L. *deliquescent* to grow moist] the condition of becoming moist or liquefied as a result of the absorption of water from the air.

deliquescent (del'ē-kwes'ent) having a tendency to form an aqueous solution or become liquid by the absorption of moisture from the air.

délire (da-lēr') [Fr.] delirium; frenzy. **d. de toucher** (da-lēr'

duh-too-sha'), an unreasonable and irresistible impulse to handle or to feel various objects.

deliria (de-lir'i-ah) plural of *delirium*.

deliriant (de-lir'i-ant) 1. capable of producing delirium. 2. a drug which may produce delirium. 3. a delirious person.

delirifacient (de-lir'i-fa'she-ent) [L. *delirium* + *facere* to make] 1. capable of causing delirium. 2. a drug which may produce delirium.

delirious (de-lir'i-us) suffering from delirium.

delirium (de-lir'i-um), pl. *deliria* [*de-* + L. *lira* furrow or track; i.e., "off the track"] a mental disturbance marked by illusions, hallucinations, short unsystematized delusions, cerebral excitement, physical restlessness and incoherence, and having a comparatively short course. Delirium usually reflects a toxic state. **active d.**, delirium accompanied by maniacal movements. **acute d.**, a suddenly appearing and severe delirium lasting only a short time. **afebrile d.**, delirium not attended by, nor occurring in the course of, fever. **d. alcohol'icum**, d. tremens. **Bell's d.**, (obs.), acute d. **chronic alcoholic d.**, Korsakoff's psychosis. **d. cor'dis**, atrial fibrillation. **exhaustion d.**, delirium due to strain or exhaustion from metabolic or nutritional disturbance; called also *infection exhaustion psychosis*. **febrile d.**, the delirium of fever. **low d.**, delirium marked by confusion of ideas and slowness of mental action rather than by excitement. **macromaniacal d.** (obs.), macroptic d. **macroptic d.** (obs.), a psychosensory disturbance in which the patient believes that his body or limbs, or both, have assumed enormous proportions. **micromaniacal d.** (obs.), microptic d. **microptic d.** (obs.), a psychosensory disturbance in which the patient believes that his body or limbs, or both, have assumed minute proportions. **oneiric d.**, oneirism. **d. schizophrenoi'des**, delirium accompanied by reactions typical of schizophrenia. **senile d.**, a syndrome occurring in old age, usually of acute onset, and characterized by disorientation, restlessness, insomnia, hallucinations, and aimless wandering, sometimes associated with senile psychosis. **d. si'ne delir'io** [L. "delirium without delirium"], delirium tremens without hallucinations and mental distress, but with all the physical symptoms present. **specific febrile d.**, febrile d. **toxic d.**, delirium caused by poisons. **traumatic d.**, that which follows severe head injury; superficially the patient is alert, but there is marked disorientation, memory defect, and confabulation. **d. tre'mens**, an acute mental disturbance marked by delirium with trembling and great excitement, and attended by anxiety, mental distress, sweating, gastrointestinal symptoms, and precordial pain. It is one of the forms of alcoholic psychosis and is ordinarily seen following withdrawal from heavy alcohol intake, but may occur despite continued drinking. It is also seen in opium addiction. Called also *d. alcoholicum*.

delitescence (del'i'tes'ens) [L. *delitescere* to lie hidden] 1. sudden disappearance of symptoms or of objective signs of a disease or of a lesion. 2. the period of latency or incubation of a poison or morbid agent.

deliver (de-liv'er) 1. to aid in the process of childbirth. 2. to remove, as the fetus or placenta, or the lens of the eye.

delivery (de-liv'er-e) 1. expulsion or extraction of the child and the after-birth; see also *labor*. 2. removal of a part, as the lens of the eye. **abdominal d.**, delivery of an infant through an incision made into the intact uterus through the abdominal wall. **breech d.**, delivery of an infant in breech presentation; see *breech extraction*, under *extraction*. **forceps d.**, extraction of the child from the maternal passages by application of forceps to the child's head, without injury to the child or to the mother. **forceps d., high**, forceps delivery in which the forceps is applied to the head before engagement has taken place. **forceps d., low**, forceps delivery in which the forceps is applied when the scalp is or has been visible at the introitus without separating the labia, the skull has reached the pelvic floor, and the sagittal suture is in the anteroposterior diameter of the pelvis; called also *outlet forceps d.* **forceps d., outlet**, forceps d., low. **midforceps d.**, the application of forceps when the fetal head is engaged, but the conditions for outlet (low) forceps delivery have not been met; any forceps delivery requiring artificial rotation. **postmature d.**, delivery of a postmature infant. **postmortem d.**, birth of a child after the death of the mother. **premature d.**, birth of a premature infant. **spontaneous d.**, birth of an infant without any aid from an attendant. **vaginal d.**, delivery of an infant through the normal openings of the uterus and vagina.

dell (del') a slight depression or dimple.

delle (del'eh) the clear area in the center of a stained erythrocyte.

dellen (del'en) saucer-shaped excavations at the periphery of the cornea, usually on the temporal side, probably caused by insufficiency of the limbal circulation; called also *Fuchs' dimples*.

delling (del'ing) the formation of a slight depression; dimpling.

delmadinone acetate (del-mad'i-nōn) chemical name: 17-(acetyloxy)-6-chloro-pregna-1,4,6-triene-3,20-dione. A progestin, antiandrogen, and antiestrogen, C₂₂H₂₇ClO₄, used in veterinary medicine.

delomorphic (del'ō-mor'fik) delomorphous.

delomorphous (del'ō-mor'fus) [Gr. *dēlos* evident + *morphē* form] having definitely formed and well-defined limits, as a cell or tissue.

Delore's method (da-lor'z') [Xavier Delore, French physician, 1828-1916] see under *method*.

Delorme's operation (dē-lormz') [Edmond Delorme, Paris surgeon, 1847-1929] see under *operation*.

delousing (de-lows'ing) the freeing from lice; destruction of lice.

Delpech's abscess (del-pesh'ez) [Jacques Mathieu Delpech, French surgeon, 1777-1832] see under *abscess*.

Delphian node (*Delphi*, a town of ancient Greece, the location of the sanctuary and (Delphian) oracle of Apollo) see under *node*.

delphine (del'fin) delphinine.

delphinine (del'fi-nin) a poisonous alkaloid, $C_{23}H_{45}NO_8$, from the seeds of *Delphinium staphisagria*; formerly used for the most part externally to relieve pain in neuralgia, rheumatism, and paralysis. Called also *delphine*.

Delphinium (del-fin'e-um) [L.] a genus of ranunculaceous plants, including *D. consolida*, or larkspur, the seeds of which are diuretic, emmenagogue, and poisonous. The seeds of *D. staphisagria*, or stavesacre, were used for destroying lice. See *staphisagria*.

delphinoidine (del'fi-noid'in) an alkaloid from the seeds of *Delphinium staphisagria*.

delphisine (del'fi-sin) an alkaloid, isomeric with delphinine, from seeds of *Delphinium staphisagria*.

delta (del'tah) [Gr. letter *delta* δ, Δ] 1. a triangular space. 2. the fourth letter of the Greek alphabet; see *alpha*. **Galton's d.**, a triangular arrangement of the lines of a fingerprint near the base. **d. mesoscap'ulae**, the triangular area at the root of the spine of the scapula.

Delta-Cortef (del'tah kor'tef) trademark for a preparation of prednisolone.

deltacortisone (del'tah-kor'ti-sōn) prednisone.

Deltalin (del'tah-lin) trademark for a preparation of synthetic vitamin D₂.

Deltasone (del'tah-sōn) trademark for a preparation of prednisone.

deltoid (del'toid) [L. *deltoides* triangular] triangular in outline, as the deltoid muscle.

Deltra (del'trah) trademark for prednisone.

de lunatico inquirendo (de lu-nat'i-ko in-kwī-ren'do) [L.] a commission, board, inquisition, or jury appointed by a court for the investigation of the mental condition of a person whose sanity has been disputed.

delusion (de-lu'zhun) [L. *delusio*, from *de* from + *ludus* a game] a false personal belief based on incorrect inference about external reality and firmly maintained in spite of incontrovertible and obvious proof or evidence to the contrary; it is not a belief that is accepted by other members of the person's culture or subculture (i.e., it is not an article of religious faith). Cf. *illusion*. **depressive d.**, delusion in which the patient experiences feelings of uneasiness, unworthiness, and futility. **expansive d.**, a pathologically unreasonable belief in one's own greatness, goodness, or power, encountered in the manic form of manic-depressive psychosis. **d. of grandeur**, delusional conviction of one's own importance, power, wealth, etc., as in megalomania, dementia paralytica, and paranoid schizophrenia. **d. of negation**, the delusion that some part of the body is missing or that the world has ceased to exist. **nihilistic d.**, a delusion which denies the existence of something or everything. **d. of persecution**, a morbid belief on the part of a patient that he is being mistreated, slandered, and injured by secret enemies, as in paranoia and paranoid schizophrenia. **d. of reference**, idea of reference. **somatic d.**, a delusion that there is some alteration in a bodily organ or its function. **systematized d.**, a delusion formulated in a logical manner; a delusion which has a logical structure, especially characteristic of true paranoia. **unsystematized d.**, a delusion made up of disconnected parts.

delusional (de-lu'zhun-al) pertaining to or characterized by delusions.

Delvalin (del'vi-nal) trademark for preparations of vinbarbital.

Demansia (de-man'si-ah) a genus of venomous elapid snakes, including the brown snake of Australia and New Guinea. See table accompanying *snake*.

demarcation (de-mar-ka'shun) [L. *demarcare* to limit] the marking off or ascertainment of boundaries. **surface d.**, any dividing line apparent on the surface of a solid body, such as the boundary between living and necrotic tissue.

Demarquay's sign (dem-ar-kāz') [Jean Nicholas Demarquay, a French surgeon, 1811-1875] see under *sign*.

demasculinization (de-mas'ku-lin-i-za'shun) the loss of normal male characters, with testicular atrophy and involution of the prostate.

Dematiaceae (de-mat'i-a'se-e) a family of imperfect fungi of the order Moniliales, producing simple conidiophores, and having dark brown or black conidia, spores, or hyphae. It includes the

genera *Acremoniella*, *Arthrographis*, *Auerobasidium*, *Alternaria*, *Chalara*, *Cladosporium*, *Dematium*, *Fonsecaea*, *Madurella*, and *Phialophora*.

dematiaceous (de-mat'i-a'shus) of or pertaining to a fungus of the family Dematiaceae.

Dematium (de-ma'she-um) a genus of soil and wood-rotting dematiaceous fungi, species of which have been reported to be isolated from human lesions, but are of questionable significance.

deme (dēm) [Gk. *dēmos* common people] a population of very similar organisms interbreeding in nature and occupying a circumscribed area; called also *genetic population*.

demecarium bromide (dem'e-ka're-um) [USP] chemical name: 3,3'-[1,10-decanediylbis(methylimino)carbonyloxy]bis[*N,N,N*-trimethylbenzenaminium]dibromide. A potent, long-acting cholinesterase inhibitor, $C_{22}H_{22}Br_2N_4O_4$, occurring as a white or slightly yellow, crystalline powder; applied topically to the conjunctiva in the treatment of glaucoma and convergent strabismus.

demeclocycline (dem'e-klo-si'klēn) [USP] chemical name: 7-chloro-4*S*-(dimethylamino)-1,4*a*, 4*a*, 5, 5*a*, 6*B*, 11, 12*a*-octahydro-3,6,10,12,12*a*-pentahydroxy-1,11-dioxo-2-naphthacenecarboxamide. A broad-spectrum oral antibiotic of the tetracycline group, $C_{21}H_{21}ClN_2O_6$, produced by a mutant strain of *Streptomyces aureofaciens* or semisynthetically, occurring as a yellow, crystalline powder. It also inhibits the effect of antidiuretic hormone on the renal tubules. Called also *demethylchlortetracycline*. **d. hydrochloride** [USP], the monohydrochloride salt of demeclocycline, $C_{21}H_{21}ClN_2O_6 \cdot HCl$, occurring as a yellow, crystalline powder; administered orally. It is also used as a diuretic.

dement (de-ment') a person affected with dementia, i.e., one who has lost mental faculties once possessed (used often in contrast with *ament*).

demented (de-ment'ed) deprived of reason, mentally deteriorated.

dementia (de-men'she-ah) [*de* + *L. mens* mind] organic loss of intellectual function; called also *aphrenia*, *aphronesia*, and *athymia*. **Alzheimer's d.**, presenile d. **Binswanger d.**, a form of presenile dementia caused by demyelination of the subcortical white matter of the brain accompanying sclerotic changes in the blood vessels supplying it; called also *encephalitis subcorticalis chronica*. **dialysis d.**, a progressive encephalopathy marked by dysarthria with nominal aphasia, dementia, myoclonic jerking, grand mal seizures, and psychosis, occurring in persons undergoing chronic hemodialysis, and probably due to high levels of aluminum in the water used in the dialysis fluid. **epileptic d.**, see under *psychosis*. **d. myoclon'ica**, mental deterioration occurring in paramyoclonus multiplex. **paralytic d.**, **d. paralyt'ica**, a chronic syphilitic meningoencephalitis, characterized by degeneration of the cortical neurons, progressive dementia, and a generalized paralysis which, if untreated, is ultimately fatal. Called also *general paresis*, *general paralysis of the insane*, *paretic dementia*, *cerebral tabes*, and *syphilitic meningoencephalitis*. **d. paranoi'des**, paranoid schizophrenia. **paretic d.**, dementia paralytica. **d. prae'cox**, in the U.S., an obsolescent term for schizophrenia; commonly used in Europe to denote process schizophrenia as opposed to reactive schizophrenia. **d. praeseni'lis**, **presenile d.**, dementia of unknown etiology beginning at middle age and characterized by cortical atrophy and secondary ventricular dilatation; called also *Alzheimer's disease*, *dementia*, or *sclerosis*. **primary d.**, dementia occurring independently of any other form of psychosis. **d. pugilis'tica**, cerebral concussion caused by repeated blows to the head, as in a boxer. **secondary d.**, dementia following and due to some other form of psychosis. **semantic d.**, inability to experience values and meaning in life. **senile d.**, senile psychosis. **tabetic d.**, that which sometimes follows tabes dorsalis. **terminal d.**, dementia coming on as a final result of nervous or mental disease. **toxic d.**, that which is due to excessive use of some poison.

Demerol (dem'er-ol) trademark for preparations of meperidine (pethidine) hydrochloride.

demethylation (de'meth-i-la'shun) the removal of a methyl group, $-CH_3$, from a compound.

demethylchlortetracycline (de-meth'il-klōr'tet-rah-si'klēn) demeclocycline.

demi- [Fr. *demi*; L. *demidius* half] a prefix signifying half.

demibain (dem'e-bān) [Fr.] sitz bath.

demifacet (dem'e-fas'et) a small plane surface on either of two bones which both articulate with a third bone. **inferior d.** for head of rib, fovea costalis inferior. **superior d.** for head of rib, fovea costalis superior.

demigauntlet (dem-e-gawnt'let) a form of bandage for the hand and fingers.

demilune (dem'e-lūn) 1. a half moon, or crescent. 2. crescentic; crescent shaped. **d's of Adamkiewicz**, crescent-shaped cells beneath the neurilemma of medullated nerve fibers. **d's of Giannuzzi**, **d's of Heidenhain**, crescents of Giannuzzi.

demimonstrosity (dem'e-mon-stros'i-te) malformation of a part which does not prevent the exercise of its function.

demineralization (de-min'er-al-i-za'shun) excessive elimina-

tion of mineral or inorganic salts, as in pulmonary tuberculosis, cancer, and osteomalacia.

demipenniform (dem'e-pen'i-form) feather-shaped as to one of the two margins; said of certain muscles.

Democritus (de-mok'ri-tus) of **Abdera** (5th century B.C.) a Greek philosopher who was the first to state that everything in nature, including the body and the soul, is made up of atoms of different sizes and shapes, the movements of which are the cause of life and mental activity.

demodectic (dem-o-dek'tik) pertaining to, or caused by, *Demodex*. See also *mange*.

Demodex (dem'o-deks) [Gr. *dēmos* fat + *dēx* worm] a genus of mites or acarids which cause follicular mange. **D. ca'nis**, the

Demodex folliculorum (x 100) (Brumpt).

cause of follicular mange in dogs. **D. e'qui**, a species causing mange in horses. **D. folliculo'rum**, the hair follicle mite: a species found in hair follicles of man, and in sebaceous secretions, especially of the face and nose; called also *Acarus folliculorum*, *face mite*, and *follicle mite*.

Demodicidae (dem'o-dik'i-de) a family of minute follicular mites (order Acarina) that parasitize the skin of various mammals, including man.

demodicidosis (dem'o-dis'i-do'sis) infestation with *Demodex*.

demodicosis (dem'o-dī-ko'sis) 1. demodectic mange. 2. demodicidosis.

demogram (de'mo-gram) a graphic representation, in grid form, of the population of a given area according to the time period and the age and sex of the individuals comprising it.

demography (de-mog'rah-fe) [Gr. *dēmos* people + *graphein* to write] the study of mankind collectively; especially of their geographical distribution and physical environment. **dynamic d.**, collective physiology of communities, with statistics of births, marriages, deaths, etc. **static d.**, collective anatomy of communities and study of their environment.

demoniac (de-mo'ne-ak) 1. frenzied. 2. a lunatic.

demonology (de'mon-ol'o-je) [*demon* + *-logy*] the earlier approach to problems of mental disorder, by which evil spirits were believed to possess the patient and exorcisms constituted the treatment.

demonomania (de'mon-o-ma'ne-ah) [Gr. *daimōn* demon + *mania* madness] monomania in which the patient considers himself possessed of devils; called also *demonopathy*.

demonopathy (de'mon-op'ah-the) demonomania.

demonophobia (de'mon-o-fo'be-ah) [Gr. *daimōn* demon + *phobēin* to be affrighted by + *ia*] morbid fear of demons.

demonstrator (dem'on-strā'tor) [L.] an instructor who teaches individuals or small groups by using dissections or other aids.

De Morgan's spots (de-mor'gan) [Campbell *De Morgan*, English physician, 1811-1876] cherry angiomas.

demorphinization (de-mor'fin-i-za'shun) the gradual depriving of one addicted to morphine of the drug until the addiction is cured.

Demours' membrane (da-moorz') [Pierre *Demours*, French ophthalmologist, 1702-1795] lamina limitans posterior corneae.

demoxepam (dem-oks'ē-pam) chemical name: 7-chloro-1,3-dihydro-5-phenyl-2H-1,4-benzodiazepin-2-one 4-oxide. A minor tranquilizer, C₁₅H₁₁ClN₂O₂, which is an active metabolite of chlorthalidoxepoxide.

demucosation (de'mu-ko-sa'shun) removal of the mucous membrane from a part.

demulcent (de-mul'sent) 1. soothing; bland; allaying the irritation of inflamed or abraded surfaces. 2. a soothing, mucilaginous, or oily medicine or application. Called also *lenitive*.

de Musset see *Musset*.

de Mussy's point (sign) (dū-mis-sēz) [Noel François Odon Guéneau de Mussy, French physician, 1813-1885] see under *point*.

demustardization (de-mus'tard-i-za'shun) 1. removal of mustard gas from a person. 2. treatment of a person subjected to the fumes of mustard gas.

demutization (de'mu-ti-za'shun) [*de-* + *L. mutus* mute] the teaching of the deaf to communicate by lip reading or by dactylography.

demyelinate (de-mi'ē-lin-āt) to destroy or remove the myelin sheath of a nerve or nerves.

demyelination (de-mi'ē-li-na'shun) destruction, removal, or loss of the myelin sheath of a nerve or nerves.

demyelination (de-mi'ē-lin-i-za'shun) demyelination.

denarcotize (de-nar'ko-tīz) to deprive of a narcotic drug in the process of treating addiction.

denasality (de'na-zal'i-te) hyponasality.

denatality (de'na-tal'i-te) decrease in the number of births in proportion to the population.

denatonium benzoate (de-nah-to'nī-um) [NF] chemical name: *N*-[2-[(2,6-dimethylphenyl)amino]-2-oxoethyl]-*N,N*-diethylbenzenemethanaminium benzoate. An alcohol denaturant, C₂₈H₃₄N₂O₃, occurring as a white, crystalline powder; used as a pharmaceutical aid.

denaturant (de-na'chur-ant) a denaturing agent.

denaturation (de-na'chur-a'shun) the destruction of the usual nature of a substance, as the addition of methanol or acetone to alcohol to render it unfit for drinking, or the change in the physical properties of proteins caused by heat or certain chemicals. **protein d.**, disruption of the configuration (tertiary structure) of a protein, as by heat, change in pH, or other physical or chemical means, resulting in alteration of the physical properties and loss of biological activity of the protein.

denatured (de-na'türd) having undergone denaturation.

dendr-, dendro- [Gr. *dendron* tree] a combining form denoting a relationship to a tree or treelike structure.

dendraxo (den-drak'son) [Gr. *dendron* tree + *axon*] a nerve cell whose axon breaks up into terminal filaments almost immediately after leaving the cell. Cf. *inaxon*.

dendric (den'drik) dendritic.

dendriceptor (den'dri-sep'tor) one of the sensitive points at the ends of the branching processes of a dendrite, capable of being stimulated by the axon endings of other neurons.

Dendrid (den'drid) trademark for a preparation of idoxuridine.

dendriform (den'dri-form) branched, or tree-shaped.

dendrite (den'drit) [Gr. *dendron* tree] one of the threadlike extensions of the cytoplasm of a neuron (q.v.); in unipolar and bipolar neurons, they resemble axons structurally, but typically, as in multipolar neurons, they branch into treelike processes. Dendrites comprise most of the receptive surface of a neuron. Called also *cytodendrite*, *dendron*, *neurodendrite*, and *neurodendron*. Cf. *axon* (def. 2), *collateral* (def. 2), and *telodendron*.

dendritic (den-drit'ik) 1. branched like a tree. 2. pertaining to or possessing dendrites.

dendro- see *dendr-*.

dendroarcheology (den'dro-ar'ke-ol'o-ge) dendrochronology.

Dendroaspis (den-dro-as'pis) a genus of extremely venomous elapid snakes of Africa, including the deadly mamba, which are related to cobras but do not have a dilatable hood. See table accompanying *snake*.

Dendrochium (den-dro-ke'um) a genus of imperfect fungi (family Stilbaceae, order Moniliales), including *D. toxicum*, the etiologic agent of dendrodochtiotoxicosis in the U.S.S.R.

dendrochronology (den'dro-kron-ol'o-ge) determination of the age of a tree by observation of the annual growth rings in the trunk.

dendrodendritic (den'dro-den-drit'ik) referring to a synapse between dendrites of two neurons.

dendrodochtiotoxicosis (den-dro'do-ke-o-tok'sī-ko'sis) an intoxication reported within the U.S.S.R. caused by the fungus *Dendrodochium toxicum*. Mycotoxications of this type are especially common in horses, but may affect humans as well.

dendroid (den'droid) [Dr. *dendron* tree + *eidos* form] branching like a tree or shrub.

dendron (den'dron) [Gr.] a dendrite.

dendrophagocytosis (den'dro-fag'o-si-to'sis) the absorption by microglia cells of broken portions of degenerating astrocytes.

denervate (de-ner'vāt) to deprive of a nerve supply.

denervation (de'ner-va'shun) resection of or removal of the nerves to an organ or part.

dengue (deng'e; Spanish, *dān-ga*) [Sp.] an infectious, eruptive, febrile disease, marked by severe pains in the head, eyes, muscles, and joints, sore throat, catarrhal symptoms, and sometimes a cutaneous eruption and painful swellings of the parts. The disease comes on suddenly after an incubation period of from three to six days. The symptoms increase in severity for two or three days, then decrease somewhat, only to increase again on the fourth or fifth day, at which time the eruption appears. Dengue occurs epidemically and sporadically in India, Japan, the South Pacific, the Caribbean, and northern South America. It is caused by a virus, and is transmitted by the bite of the mosquitoes urban *Aedes aegypti*, sylvan *A. albopictus*, and urbosylvan *A. polynesiensis*. **hemorrhagic d.**, dengue with hemorrhagic manifestations; the attack rate is highest in young children. Called also *Philippine hemorrhagic fever*, *Southeast Asian hemorrhagic fever*, and *Thai hemorrhagic fever*.

denial (dē-nī'al) a defense mechanism in which the existence of intolerable actions, ideas, wishes, impulses and affects are unconsciously denied.

denicotinized (de-nik'o-tin-īzd) deprived of nicotine.

denidation (den'i-da'shun) [*de-* + *L. nidus* nest] degeneration and expulsion of the uterine mucous membrane (endometrium) in the menstrual cycle.

Denigès's test (den-î-zhāz') [Georges Denigès, French chemist, 1859-1951] see under *tests*.

Denis' method (den-'is) [Wiley Glover Denis, American biochemist, born 1879] see under *method*.

Denisonia (den-î-so-nî-ah) a genus of very venomous elapid snakes, including *D. superba*, the copperhead of Australia, Tasmania, and the Solomons. See table accompanying *snake*.

denitrification (de-nî-'trî-fi-ka'shun) the setting free of gaseous nitrogen from nitrates and nitrites, as by certain soil bacteria, which results in deprivation of nitrogen for plant growth.

denitrifier (de-nî-'trî-fi-'er) a bacterium that causes denitrification.

denitrify (de-nî-'trî-fi) to remove nitrogen from any substance; see *denitrification*.

denitrogenation (de-nî-'tro-jě-na'shun) removal of the dissolved nitrogen from the body, as a preventive of caisson disease, aeroembolism, etc.

Denman's spontaneous evolution (version, method) (den-'manz) [Thomas Denman, English obstetrician, 1733-1815] see under *evolution*.

denofungin (de-'no-fun-'jin) an antibiotic substance produced by a variant of *Streptomyces hygroscopicus*, which has antifungal and antibacterial properties.

Denonvilliers' aponeurosis, fascia, operation (den-aw-vēl-yāz') [Charles Pierre Denonvilliers, surgeon in Paris, 1808-1872] see *septum rectovesicale*, and see under *fascia* and *operation*.

dens (dens), pl. *den'tes* [L.] a tooth or toothlike structure; [NA] a general term for a tooth or the teeth (dentes), the small bone-like structures of the jaws, serving in mastication of food and production of certain sounds in speech. See also *tooth*. **den'tes acus'tici** [NA], elevations along the free surface and margin of the labium limbi vestibulare; called also *auditory teeth of Huschke* and *hair teeth*. **den'tes acu'ti**, the incisor teeth (dentes incisivi [NA]). **d. ax'is** [NA], tooth of axis: the toothlike process that projects from the superior surface of the body of the axis, ascending to articulate with the atlas; called also *d. epistrophei*, *odontoid bone*, *odontoid apophysis*, *odontoid process of axis*, and *tooth of epistropheus*. **den'tes cani'ni** [NA], the canine teeth: the four teeth, one on either side in each jaw, immediately lateral to the lateral incisors; called also *cuspsids* or *cuspid teeth*, and *cynodonts*. **dentes de Chiaie**, teeth having mottled enamel; dental fluorosis. **den'tes decid'ui** [NA], the deciduous teeth: the teeth of the first dentition; called also *milk teeth*, *primary teeth*, and *temporary teeth*. **d. epistro'phei**, *d. axis*. **den'tes incisi'vi** [NA], incisor teeth: the four front teeth of each jaw, called also *dentes acuti* and *primary teeth*. **d. in den'te**, a malformed tooth resulting from invagination of the crown before it is calcified; so named because severe invagination of enamel and dentin gives the appearance of a "tooth within a tooth." Called also *d. invaginatus*. **d. invagina'tus**, dens in dente. **den'tes mola'res** [NA], molar teeth: the grinders, or double teeth, situated in the back part of either jaw, having the largest and most efficient chewing surfaces. **den'tes permanen'tes** [NA], permanent teeth: the teeth of the second dentition. **den'tes premola'res** [NA], premolar teeth: the two permanent teeth on either side of each jaw, between the canine teeth and the molars, called also *bicuspsids*, or *bicuspid teeth*. **d. sapien'tiae**, *d. serotinus*. **d. seroti'nus** [NA], the aftermost tooth on each side of each jaw, being the last of the molar teeth to appear; called also *d. sapientiae*, *third molar*, and *wisdom tooth*.

densimeter (den-sim-'ē-ter) [L. *densus* dense + *metron*] densitometer.

densitometer (den-'sî-tom-'ē-ter) 1. an apparatus for determining the density of a liquid. 2. an instrument for determining the degree of darkening of developed photographic or x-ray film by means of a photocell which measures light transmission through a given area of the film. Called also *densimeter*. **gas d.**, an apparatus for measuring specific gravity of a gas. **ultrasonic d.**, an apparatus for determining the thickness or density of a substance or structure as measured by the time required for an ultrasonic signal directed at it to reach a receiver.

dersitometry (den-'sî-tom-'ē-tre) determination of variations in density by comparison with that of another material, or with a certain standard.

density (den-'sî-te) [L. *densitas*] 1. the quality of being compact or dense. 2. the quantity of matter in a given space based on the ratio of mass to volume. 3. the quantity of electricity in a given area or in a given volume or in a given time. 4. the degree of darkening of exposed and processed photographic or x-ray film, expressed as the logarithm of the capacity of a given area of the film. **arciiform d.**, a trough-shaped body separating the synaptic ribbon and the membrane of the cone pedicle or of the rod spherule in the retina. **background d.**, in radiography, the density of a processed film due to factors other than the radiation exposure received through the recorded objects or structures, e.g., inherent (film) density, scatter radiation, or fogging. **inherent d.**, the density of a processed film due to inherent factors such as the density of the film base, emulsion gelatin, etc. **ionization d.**, the number of ion pairs per unit volume.

densography (den-sog-'rah-fe) the exact determination of the contrast densities in a roentgen negative by a photoelectric cell.

dent-, denta- see *dento-*.

dentagra (den-tag-'rah, den-'tah-grah) [*dent-* + Gr. *agra* seizure] 1. a forceps or key for extracting teeth. 2. odontalgia.

dental (den-'tal) [L. *dentalis*] 1. pertaining to a tooth or teeth. 2. a letter or sound made by or in part by the front teeth.

dentalgia (den-tal-'je-ah) odontalgia.

dentaphone (den-'tah-fōn) [*denta-* + Gr. *phōne* sound] an instrument by means of which persons with hearing loss are enabled to hear sounds propagated through the medium of the teeth.

dentata (den-ta-'tah) the second cervical vertebra or axis, so called from its toothlike process.

dentate (den-'tāt) [L. *dentatus*] having teeth or projections like saw teeth on the edges.

dentatohalamic (den-ta-'to-thah-lam-'ik) pertaining to or connecting the dentate nucleus and the thalamus.

dentatum (den-ta-'tum) [L. "toothed"] the nucleus dentatus.

dentes (den-'tēz) [L.] plural of *dens*.

denti- see *dento-*.

dentia (den-'she-ah) [L.] a condition relating to development or eruption of the teeth. Used also as a combining form, denoting relationship to the teeth. **d. prae'cox**, premature eruption of the teeth; the presence of teeth in the mouth at birth. **d. tar'da**, delayed eruption of the teeth, beyond the usual time for their appearance.

dentibuccal (den-ti-buk-'al) pertaining to the teeth and cheek.

denticle (den-'tî-kl) [L. *denticulus* a little tooth] 1. a small toothlike process. 2. a relatively large body of calcified substance in the pulp chamber of a tooth. **adherent d.**, **attached d.**, a calcified formation in a pulp chamber partially fused with the dentin. **embedded d.**, **interstitial d.**, **false d.**, a calcified formation in the pulp chamber of a tooth that does not show the structure of true dentin. **free d.**, a calcified formation in a tooth completely surrounded by the dental pulp. **interstitial d.**, a calcified formation within a tooth, completely surrounded by dentin. **true d.**, a calcified formation in the pulp chamber of a tooth that consists of dentin and shows traces of dentinal tubules and odontoblasts.

denticulated (den-tik-'u-lāt-'ed) [L. *denticulatus*] having minute teeth.

dentification (den-'tî-fi-ka'shun) the formation of tooth substance.

dentiform (den-'tî-form) shaped like a tooth.

dentifrice (den-'tî-fris) [L. *dentifricium*] a preparation composed of an inorganic abrasive, detergent, humectant, binder, and flavoring agent, intended to clean and polish the teeth; it may contain a therapeutic agent, such as fluoride, to inhibit dental caries.

dentigerous (den-tij-'er-us) [*denti-* + L. *gerere* to carry] bearing teeth.

dentilabial (den-'tî-la'be-al) [*denti-* + L. *labium* lip] pertaining to the teeth and lips.

dentilingual (den-'tî-ling-'gwal) [*denti-* + L. *lingua* tongue] pertaining to the teeth and tongue.

dentimeter (den-tim-'ē-ter) [*denti-* + Gr. *metron* measure] an instrument for measuring teeth.

dentin (den-'tin) [L. *dens* tooth] the chief substance or tissue of the teeth, which surrounds the tooth pulp and is covered by enamel on the crown and by cementum on the roots of the teeth. Called also *dentinum* [NA] and *substantia eburnea dentis*. Similar to bone, but harder and denser, it consists of a solid organic substratum, infiltrated with lime salts. Dentin is permeated by numerous branching spiral canaliculi or tubules which contain processes of the connective tissue cells (odontoblasts) that line the pulp cavity. Sometimes spelled *dentine*. Called also *substantia dentalis propria*, *proper substance of tooth*, *ivory*, *ebur dentis*, *membrana eboris* of Kölliker, and *ivory membrane*. **adventitious d.**, secondary d. **circumpulpar d.**, the inner portion of the dentin, adjacent to the pulp chamber, consisting of thinner fibrils. **cover d.**, the peripheral portion of the dentin, adjacent to the enamel or cementum, consisting of coarser fibers than the circumpulpar dentin; called also *mantle d.* **hereditary opalescent d.**, the brown opalescent-appearing dentin observed in dentinogenesis imperfecta. **interglobular d.**, imperfectly calcified dentinal matrix situated between the calcified globules near the periphery of the dentin. **intermediate d.**, the soft matrix of the predentin. **irregular d.**, secondary d. **mantle d.**, cover d. **opalescent d.**, dentin giving an unusual translucent or opalescent appearance to the teeth, as in dentinogenesis imperfecta. **primary d.**, the dentin formed before the eruption of a tooth. **reparative d.**, dentin produced in response to strong pulp irritation such as may be associated with caries invasion or injurious operative procedures; it has no tubular pattern and often demonstrates cellular inclusions. **sclerotic d.**, transparent d. **secondary d.**, new dentin formed in response to stimuli associated with the normal aging process or with pathological conditions such as caries or injury, or cavity prepara-

- tion; such dentin is highly irregular in nature. Called also *adventitious d.* and *irregular d.* **sensitive d.**, dentin that is highly sensitive owing to distal irritation of the dental tubules. **tertiary d.**, reparative d. **transparent d.**, dentin in which some dental tubules have become sclerotic or calcified (dental sclerosis), producing the appearance of translucency; called also *sclerotic d.*
- dental** (den'tī-nal) pertaining to dentin.
- dentalgia** (den'tī-nal/jē-ah) (*obs.*) pain in the dentin.
- dentine** (den'tēn) dentin.
- dentinification** (den-tin'fī-fi-ka'shun) (*obs.*) dentinogenesis.
- dentinoblast** (den'tī-no-blast) [*dentin* + Gr. *blastos* germ] a cell that forms dentin.
- dentinoblastoma** (den'tī-no-blas-to'mah) dentinoma.
- dentinogenesis** (den'tī-no-jen'ē-sis) [*dentin* + Gr. *genesis* formation] the formation of dentin. **d. imperfecta**, a hereditary condition characterized by defective formation and calcification of the dentin, giving the teeth a brown or blue opalescent appearance; it is transmitted as an autosomal dominant trait. Called also *odontogenesis imperfecta*.
- dentinogenic** (den'tī-no-jen'k) forming or producing dentin.
- dentinoid** (den'tī-noid) 1. resembling dentin. 2. (*obs.*) dentinoma. 3. preentin.
- dentinoma** (den'tī-no'mah) a tumor of odontogenic origin, consisting mainly of dentin.
- dentinostoid** (den'tin-os'te-oid) a tumor composed of or containing dentin and bone.
- dentinum** (den-ti'num) [NA] dentin: the chief substance or tissue of the teeth. See *dentin*.
- dentiparous** (den-tip'ah-rus) bearing teeth.
- dentist** (den'tist) a person who has received a degree in dentistry and is authorized to practice dentistry.
- dentistry** (den'tis-tre) 1. that department of the healing arts which is concerned with the teeth, oral cavity, and associated structures, including the diagnosis and treatment of their diseases and the restoration of defective and missing tissue. 2. the work done by dentists, such as the creation of restorations, crowns, and bridges, and surgical procedures performed in and about the oral cavity. 3. the practice of the dental profession collectively. Called also *odontology*. **cosmetic d.**, **esthetic d.**, that aspect of dental practice concerned with the repair and restoration of carious, broken, or defective teeth in such a manner as to improve their appearance. **forensic d.**, dental jurisprudence. **geriatric d.**, gerodontics. **operative d.**, that phase of dentistry concerned with restoration of parts of the teeth that are defective through disease, trauma, or abnormal development to a state of normal function, health, and esthetics. **pediatric d.**, pedodontics. **preventive d.**, that phase of dentistry concerned with maintenance of a normal masticating mechanism by fortifying the oral cavity against damage and disease. **prosthetic d.**, prosthodontics. **psychosomatic d.**, that phase of dentistry which considers the mind-body relationship.
- dentition** (den-tish'un) [L. *dentitio*] the teeth in the dental arch; ordinarily used to designate the natural teeth in position in their alveoli. **artificial d.**, an artificial substitute for the natural dentition; see *denture*. **deciduous d.**, the teeth which erupt first and are later replaced by the permanent teeth or dentition; called also *primary d.* **delayed d.**, retarded dentition. **mixed d.**, the complement of teeth in the jaws after eruption of some of the permanent teeth, before all of the deciduous teeth are shed; called also *transitional d.* **natural d.**, the natural teeth in the dental arch, considered collectively; it may comprise deciduous or permanent teeth, or a mixture of the two, present at one time. **permanent d.**, the teeth which erupt and take their places after the deciduous teeth are lost; called also *secondary d.* **precocious d.**, abnormally accelerated appearance of the deciduous or permanent teeth. **prededeciduous d.**, cornified epithelial structures found in the mouth before the eruption of the true deciduous teeth. **primary d.**, deciduous d. **retarded d.**, abnormally delayed appearance of the deciduous or permanent teeth; called also *delayed d.* **secondary d.**, permanent d. **transitional d.**, mixed d.
- dento-, dent-, denta-, denti-** [L. *dens* tooth] a combining form denoting relationship to a tooth or to the teeth. Cf. *odonto-*.
- dentoalveolar** (den'to-al-ve'o-lar) pertaining to a tooth and its alveolus.
- dentoalveolitis** (den'to-al've-o-li'tis) periodontal disease.
- dentofacial** (den'to-fa'shal) of or pertaining to the teeth and alveolar process and the face.
- dentography** (den-tog'rah-fe) odontography.
- dentoid** (den'toid) odontoid.
- dentoidin** (den-toi'din) the organic or albuminous ground substance of a tooth.
- dentolegal** (den'to-le'gal) pertaining to dental jurisprudence.
- dentoliva** (den'to-li'vah) [*dento-* + L. *oliva* olive] (*obs.*) the olivary nucleus.
- dentoma** (den-to'mah) dentinoma.
- dentomechanical** (den'to-mē-kan'i-k'l) pertaining to the mechanics or to the biomechanics of dentistry.
- dentonomy** (den-ton'o-me) odontonomy.
- dentosurgical** (den'to-sur'jī-k'l) pertaining to or used in dentistry and surgery.
- dentotropic** (den'to-trop'ik) turning toward or having an affinity for tissues composing the teeth.
- dentulous** (den'tu-lus) possessing natural teeth.
- denture** (den'chur) [Fr.; L. *dens* tooth] an entire set of natural or artificial teeth; ordinarily used to designate an artificial replacement for missing natural teeth and adjacent tissues. **acrylic resin d.**, a denture made of acrylic resin. **basal surface d.**, impression surface. **clasp d.**, a removable partial denture which is retained and stabilized by means of clasps. **complete d.**, an appliance replacing all the teeth of one jaw, as well as associated structures of the jaw; called also *full d.* **continuous gum d.** (*obs.*), a dental substitute in which the teeth are implanted in tinted base material fused to a platinum base. **duplicate d.**, a second denture intended to be a copy of the first denture. **full d.**, complete d. **immediate d.**, **immediate-insertion d.**, an artificial denture made before all the teeth are extracted, and placed immediately after the final extraction. **implant d.**, a denture constructed with a metal framework (substructure) which is embedded within the underlying soft tissues, in contact with the bone, giving stability to and retaining the teeth and overlying material (superstructure) of the appliance. **interim d.**, a denture to be used for a short interval of time for reasons of esthetics, mastication, occlusal support, convenience, or to condition the patient to the acceptance of an artificial substitute for missing natural teeth until more definite prosthetic dental treatment can be provided. **overlay d.**, a complete denture supported both by soft tissue (mucosa) and by a few remaining natural teeth that have been altered, as by insertion of a long or short coping, to permit the denture to fit over them; called also *overdenture*. **partial d.**, a prosthetic appliance replacing one or more missing teeth in one jaw, and receiving its support and retention from the underlying tissues and/or some or all of the remaining teeth. **partial d., distal extension**, a removable partial denture that is retained by natural teeth at one end of the base segments only, a portion of the functional load being carried by the residual ridge. **partial d., fixed**, an appliance for replacement of one or more natural teeth, supported by natural teeth or roots to which it is permanently attached, so that it is not readily removed by patient or dentist; called also *fixed bridge*. **partial d., removable**, an appliance for the replacement of one or more natural teeth, so constructed that it may readily be removed and replaced in the mouth; called also *removable bridge*. **partial d., unilateral**, an appliance for the replacement of one or more natural teeth all on the same side of the jaw. **permanent d.**, a term applied to a denture that is constructed and inserted after the oral tissues have healed and the condition of the alveolar ridges has become fairly stabilized. **provisional d.**, an interim denture used for the purpose of conditioning the patient to the acceptance of an artificial substitute for missing natural teeth. **temporary d.**, interim d. **transitional d.**, a partial denture which is to serve as a temporary prosthesis and to which teeth will be added as more teeth are lost and which will be replaced after postextraction tissue changes have occurred; it may become an interim denture when all of the teeth have been removed from the dental arch. **trial d.**, a denture fabricated for placement in the patient's mouth for verification of its esthetic qualities, the making of records, or other procedures before the final denture is completed.
- Denucé's ligament** (den-u-sāz') [Jean Henri Maurice Denucé, French surgeon, 1859-1924] see under *ligament*.
- denucleated** (de-nu'kle-āt'ed) deprived of the nucleus; called also *anucleated*.
- denudation** (den'u-da'shun) [L. *denudare* to make bare] the act of laying bare; removal of the epithelial covering from any surface, by surgery, trauma, or pathologic change.
- denutrition** (de'nu-trish'un) a withdrawal or failure of the nutritive processes, with consequent atrophy and degeneration.
- Denys' tuberculin** (den-ēs') [Joseph Denys, Belgian bacteriologist (Louvain), died 1932] tuberculin bouillon filtrate.
- deodorant** (de-o'der-ant) [L. *de* from + *odorare* to perfume] 1. removing undersirable or offensive odors. 2. a substance that masks offensive odors. Called also *antibromic*.
- deodorize** (de-o'der-iz) [L. *de* from + *odor* odor] to neutralize or absorb odor.
- deodorizer** (de-o'der-iz-er) a deodorizing agent.
- deolepsy** (de-o-lep'se) [L. *deus* god + Gr. *lēpsis* seizure] belief that one is possessed by a god.
- deontology** (de'on-to'l'o-je) [Gr. *deonta* things that ought to be done + *-logy*] the science of professional duties and etiquette.
- deopillant** (de-op'i-lant) removing obstructions.
- deopilation** (de-op'i-la'shun) [L. *de* away + *opillatio* obstruction] the removal of obstructions.
- deorsumduction** (de-or'sum-duk'shun) [L. *deorsum* downward + *ducere* to lead] the turning down of a part, as of the eyes.

deorsumvergence (de-or/'sum-ver'jens) a downward movement, especially of the eyes.

deorsumversion (de-or/'sum-ver'zhun) [*L. deorsum* downward + *vertere* to turn] an act of turning or directing downward, especially the simultaneous and equal downward turning of both eyes.

deossification (de-os/'fi-ka'shun) [*L. de* from + *os* bone + *facere* to make] loss of or removal of the mineral elements of bone.

deoxidation (de-ok/'si-da'shun) [*L. de* from + *oxygen*] the removal of oxygen from a chemical compound.

deoxidize (de-ok/'si-diz) to deprive of chemically combined oxygen.

deoxy- (de-ok/'se) a prefix used in naming chemical compounds, to designate a compound containing one less atom of oxygen than the reference substance. For words beginning thus see also those beginning *desoxy-*.

deoxycholaneresis (de-ok/'se-ko/'lan-er/'ë-sis) increase in the output of deoxycholic acid in the bile.

deoxycorticosterone (de-ok/'se-kor/'te-kos'ter-ôn) desoxycorticosterone.

deoxygenation (de-ok/'si-jen-a'shun) the act of depriving of oxygen.

2-deoxy-D-glucose (de-ok/'se-gloo/'kôs) an antimetabolite of glucose that has antiviral properties by virtue of its inhibition of the glycosylation of glycoproteins and glycolipids; radioactive 2-deoxyglucose is also used to determine the rate of energy metabolism in cells, since cells (e.g., neurons) adjust their rate of glucose (or 2-deoxyglucose) uptake to fill their metabolic needs.

deoxyhemoglobin (de-ok/'se-he/'mo-glo'bin) hemoglobin not combined with oxygen, formed when oxyhemoglobin releases its oxygen; called also *deoxygenated* or *reduced hemoglobin*.

deoxyribonuclease (de-ok/'se-ri/'bo-nu/'kle-äs) [*deoxyribonucleic acid* + *-ase*] an enzyme which catalyzes the hydrolysis (depolymerization) of deoxyribonucleic acid (DNA). See also *dornase*.

deoxyribonucleoprotein (de-ok/'se-ri/'bo-nu/'kle-o-pro'te-in) a nucleoprotein in which the nucleic acid sugar is D-2-deoxyribose.

deoxyribonucleoside (de-ok/'se-ri/'bo-nu/'kle-o-sid) a nucleoside having a purine or pyrimidine base bonded to deoxyribose.

deoxyribonucleotide (de-ok/'se-ri/'bo-nu/'kle-o-tid) a nucleotide consisting of a purine or a pyrimidine base bonded to deoxyribose, which in turn is bound to a phosphate group.

deoxyribose (de-ok/'se-ri/'bôs) an aldopentose, $\text{CH}_2\text{OH}-(\text{CHOH})_2\cdot\text{CH}_2\cdot\text{CHO}$, found in deoxyribonucleic acids (DNA), deoxyribonucleotides, and deoxyribonucleosides.

Dep. abbreviation for *L. depuratus*, purified.

depancreatize (de-pan/'kre-ah-tiz) to remove the pancreas.

dependence (de-pend/'ens) the psychophysical state of an addict in which the usual or increasing doses of the drug are required to prevent the onset of withdrawal symptoms.

dependency (de-pen/'den-se) the quality of being dependent.

depepsinized (de-pep/'sin-izd) deprived of pepsin; peptically inactivated; said of gastric juice.

depersonalization (de-per/'sun-al-i-za'shun) alteration in the perception of the self so that the usual sense of one's own reality is temporarily lost or changed. It may be a manifestation of depersonalization neurosis or another mental illness. It can occur also in normal persons but is then mild and without significant impairment.

dephosphorylation (de-fos/'for-i-la'shun) [*de-* + *phosphorylation*] removal of the trivalent PO_3 group from organic molecules.

depigmentation (de-'pig-men-ta'shun) the removal of pigment, generally of melanin; frequently used to mean hypopigmentation.

depilate (dep/'i-lât) [*L. de* away + *pilus* hair] to remove the hair from.

depilation (dep/'i-la'shun) epilation.

depilatory (de-pil/'ah-to-re) [*L. de* from + *pilus* hair] 1. having the power to remove the hair. 2. an agent for removing or destroying the hair. **Martin's d.**, a soft mass containing calcium hydrosulfide, prepared from 2 parts slaked lime and 3 parts water, by passing into the mixture hydrogen sulfide as long as it is absorbed.

deplasmolysis (de-'plaz-mol/'i-sis) return to the initial volume, after plasmolysis, of the protoplasm of a cell in hypertonic solution.

deplasmolyze (de-'plaz/'mo-liz) to undergo deplasmolysis.

deplete (de-plêt/' [L. *deplere* to empty] to empty; to unload; to cause depletion.

depletion (de-plê'shun) [*L. deplere* to empty] 1. the act or process of emptying; removal of a fluid, as the blood. 2. exhausted state which results from excessive loss of blood. **plasma d.**, plasmapheresis.

depolarization (de-po/'lar-i-za'shun) the process or act of neutralizing polarity. In neurophysiology, the reversal of the resting potential in excitable cell membranes when stimulated, i.e., the

tendency of the cell membrane potential to become positive with respect to the potential outside the cell.

depolarize (de-po/'lar-iz) [*L. de* from + *polus* pole] to reduce toward a nonpolarized condition; to deprive of polarity. See *depolarization*.

depolarizer (de-po/'lar-iz'er) 1. a chemical agent placed in a galvanic cell for preventing the accumulation of gas upon either of the plates. 2. a substance that reduces the voltage across a biological membrane. 3. a muscle relaxant that produces striated muscle paralysis by altering the electrical state of the muscle receptor, thus blocking muscle response to nerve impulse.

depolymerization (de-pol/'ë-mer-i-za'shun) the conversion of a compound into one of smaller molecular weight and different physical properties without changing the percentage relationships of the elements composing it.

depolymerize (de-pol/'ë-mer-iz) to cause to undergo depolymerization.

Depo-Provera (dep/'o-pro-ver'ah) trademark for a preparation of medroxyprogesterone acetate for intramuscular injection.

deposit (de-poz/'it) [*L. de* down + *ponere* to place] 1. sediment or dregs. 2. extraneous inorganic matter collected in the tissues or in a viscus or cavity. 3. in dentistry, hard or soft material adherent to the surface of a tooth.

depot (de/'po, dep/'o) [Fr. *dépôt* from *L. depositum*] a body area in which a substance, e.g., a drug, can be accumulated, deposited, or stored and from which it can be distributed. **fat d.**, a site in the body in which large quantities of fat are stored, as in adipose tissue.

Depo-Testosterone (de/'po-tes-tos'ter-ôn) trademark for a sustained-action preparation of testosterone.

depravation (dep/'rah-va'shun) [*L. depravare* to vitiate; *de* down + *pravus* bad] deterioration; a change for the worse.

depraved (de-präv'd') vitiated or perverted.

deprementia (dep/'re-men'she-ah) (*obs.*) a psychosis marked by depression, impairment of memory, etc.

depressant (de-pres'ant) 1. diminishing functional activity. 2. an agent that reduces functional activity and the vital energies in general by producing muscular relaxation and diaphoresis. **cardiac d.**, an agent that depresses the rate or force of contraction of the heart.

depressed (de-prest') carried below the normal level; associated with depression.

depression (de-presh'un) [*L. depressio; de* down + *premere* to press] 1. a hollow or depressed area; downward or inward displacement. 2. a lowering or decrease of functional activity. 3. a psychiatric syndrome consisting of dejected mood, psychomotor retardation, insomnia, and weight loss, sometimes associated with guilt feelings and somatic preoccupations, often of delusional proportions. **agitated d.**, psychotic depression accompanied by more or less constant activity. Called also *melancholia agitata*. **anacletic d.**, impairment of an infant's physical, social, and intellectual development which sometimes follows a sudden separation from the mothering person for long periods of time; called also *hospitalism*. **atrial d.** (*obs.*), great lowering in the sphgmographic tracing of the venous pulse, representing the diastole of the right atrium. **aversion d.** (*obs.*), depression characterized by aversion to the facts of the illness and to the medical attention which it involves. **d. of cataract**, couching. **congenital chondrosternal d.**, a congenital, deep, funnel-shaped depression in the anterior chest wall. **groove d.**, a depression of the parietal or frontal bones of a newborn due to compression against the maternal symphysis pubis or sacral promontory during delivery; normal contour is usually regained spontaneously. **involutional d.**, see under *melancholia*. **otic d.**, auditory pit. **pacchionian d's**, granular foveolae. **postdormital d.**, mental depression following awakening from sleep. **precordial d.**, epigastric fossa, def. 1. **pterygoid d.**, pterygoid fovea. **radial d.**, radial fossa of humerus. **reactive d.**, depression caused by some external situation, and relieved when that situation is removed. **retarded d.**, the depressive phase of manic-depressive psychosis. **situational d.**, reactive d. **supratrochlear d.**, a slight depression on the anterior surface of the femur, above the trochlea. **systolic d.** (*obs.*), a falling of the precordial region of the chest observed during the systole. **ventricular d.**, that part of the venous pulse tracing which lies between the ventricular and atrial waves.

depressive (de-pres'iv) causing depression.

depressomotor (de-pres/'o-mo'tor) [*L. deprimere* to press down + *motor* mover] 1. retarding or abating motion. 2. an agent which lessens or depresses motor activity.

depressor (de-pres'or) [*L.*] that which depresses, as a muscle, agent, instrument, or apparatus which depresses, or an afferent nerve whose stimulation causes a fall of blood pressure. **d. an'guli o'ris**, see *Table of Musculi*. **d. epiglott'idis**, a portion of the thyroepiglottic muscle which depresses the epiglottis. **d. la'bii inferio'ris**, see *Table of Musculi*. **tongue d.**, an instrument for pressing the tongue against the floor of the mouth.

deprimens oculi (dep/'re-menz ok'u-le) [*L.*] musculus rectus inferior bulbi.

deprivation (dep-ri-va'shun) [L. *de* from + *privare* to remove] loss or absence of parts, organs, powers, or things that are needed. **emotional d.**, deprivation of adequate and appropriate interpersonal and/or environmental experience, usually in the early development years. **sensory d.**, deprivation of usual external stimuli and the opportunity for perception.

deprostil (dē-pros'til) chemical name: 15-hydroxy-15-methyl-9-oxoprostano-1-oic acid; a prostaglandin that inhibits gastric secretion, $C_{21}H_{38}O_4$.

deproteinization (de-pro'te-in-i-za'shun) removal of protein.

depside (dep'sid) one of a class of compounds which are products of the condensation of two or more molecules of the hydroxyacids of benzene, e.g., tannic acid.

depth (depth) an expression of the distance separating the upper and lower surfaces of an object. **focal d.**, the measure of the power of a lens to yield clear images of objects at different distances from it.

depula (dep'u-lah) [L., from Gr. *depos* goblet] in zoology, the developing egg in the stage succeeding the blastula and preceding the gastrula.

depurant (dep'u-rant) 1. cleansing or purifying. 2. an agent that cleanses or purifies.

depurate (dep'u-rāt) [L. *depurare* to purify] to cleanse, refine, or purify.

depurative (dep'u-ra'tiv) tending to purify or cleanse; called also *pellant*.

depurator (dep'u-ra'tor) 1. an agent that cleanses or purifies. 2. (obs.) a vacuum-producing apparatus for stimulating the excretory function of the skin.

der- (der) [Gr. *derē* neck] combining form denoting relationship to the neck.

deradelphus (der'ah-del'fus) [*der-* + Gr. *adelphos* brother] a monster made up of twins fused at or near the navel, and having only one head.

deranencephalia (der-an'en-sē-fa'le-ah) [*der-* + *an* neg. + Gr. *enkephalos* brain] monstrosity marked by defect of the brain and upper part of the spinal cord.

derangement (de-rānj'ment) 1. mental disorder. 2. disarrangement of a part or organ. **Hey's internal d.**, partial dislocation of the knee, marked by great pain and spasm of the muscles.

Dercum's disease (der'kumz) [Francis Xavier *Dercum*, American physician, 1856–1931] adiposis dolorosa.

derealization (de-re'al-i-za'shun) a mental state characterized by a peculiar change in awareness of the external world, creating a feeling of unreality.

dereism (de're-izm) [L. *de* away + *res* thing] mental activity in which fantasy runs on unhampered by logic and experience.

dereistic (de're-is'tik) pertaining to or characterized by dereism.

derencephalocoele (der'en-sē-fal'o-sēl) [*der-* + Gr. *enkephalos* brain + *kēlē* hernia] protrusion of the brain substance through a slit in one or more of the cervical vertebrae.

derencephalus (der'en-sēf'ah-lus) [*der-* + Gr. *enkephalos* brain] a monster with rudimentary skull bones and bifid cervical vertebrae, the brain resting in the bifurcation.

derepression (de're-presh'un) 1. elevation of the level of an enzyme above the normal, either by lowering of the corepressor concentration or by a mutation that decreases the formation of aporepressor or the response to the complete repressor. 2. in genetic theory, the inhibition of the repressor substance produced by the regulator genes with the result that the operator gene is free to initiate the process of polypeptide formation; called also *gene d.* Cf. repression, def. 3. **gene d.**, *derepression*, def. 2.

dericin (der'i-sin) a light-colored oil derived from castor oil and used as a vehicle for menthol; called also *florizine*.

derism (de'rizm) dereism.

derivant (der'i-vant) derivative.

derivation (der'i-va'shun) [L. *derivatio*, from *derivare* to draw off] 1. the origin or source of a substance. 2. a lead in electrocardiography. 3. (obs.) the process or act of drawing off, as the withdrawal of blood, or the removal of a disease process from one part of the body to another part.

derivative (de-riv'ah-tiv) 1. producing or causing a derivation. 2. a chemical substance derived from another substance either directly or by modification or partial substitution. 3. an agent which withdraws blood from the seat of a disease.

derma (der'mah) [Gr.] the skin, usually with special reference to the dermis or corium.

derma- see *dermato-*.

dermabrader (der-mah-brād'er) any device used for dermabrasion.

dermabrasion (der-mah-bra'shun) planing of the skin done by mechanical means, e.g., sandpaper, wire brushes, etc. See *planing*.

Dermacentor (der'mah-sen'tor) [*derma-* + Gr. *kentein* to prick, stab] a genus of ticks which are important as transmitters of

disease. **D. albipic'tus**, a species of brown ticks widely distributed in the United States, parasitic on cattle, horses, deer, elk, and moose. Called also *winter tick*. **D. anderso'ni**, a reddish

Dermacentor andersoni (Chandler).

brown tick which is responsible for transmitting Rocky Mountain spotted fever, Colorado tick fever, and tularemia to man and for causing tick paralysis. Its hosts include deer, elk, antelope, grizzly bear, porcupine, prairie dog, and various species of rabbits. Called also *D. venustus*, *Rocky Mountain wood tick*, and *mountain wood tick*. **D. hal'li**, a yellow-brown tick found on peccaries in Texas. **D. hun'teri**, a brown tick found on Rocky Mountain sheep in southwestern United States, particularly in southwestern Arizona. **D. margina'tus**, a species that is the vector of a type of tick-borne hemorrhagic fever in Siberia. **D. ni'tens**, *Anocentor nitans*. **D. nuttal'lii**, a tick which transmits Siberian tick typhus. **D. occidenta'lis**, a brown tick found widely distributed along the west coast of the United States, from southwestern Oregon to southern California, the principal hosts being the cow, horse, deer, dog, and man; called also *Pacific coast dog tick*. **D. parumaper'tus**, a reddish brown tick which is found widely distributed in the southwestern United States, found on deer and coyotes, and abundant on various species of rabbits. **D. reticula'tus**, a tick which attacks sheep and oxen, occurring in Europe, Asia, and America; a vector of canine babesiosis in southern Europe. **D. sylva'rum**, a tick which transmits Siberian tick typhus. **D. varia'bilis**, a dark brown tick found along the California coast and widely distributed east of the Rocky Mountains, the dog being the principal host of the adults, which are found also on cattle, horses, rabbits, and man; it is the principal vector of Rocky Mountain spotted fever in the central and eastern United States. Called also *American dog tick* and *dog tick*. **D. venus'tus**, *D. andersoni*.

Dermacentroxenus (der'mah-sen'trok-se'nus) [*Dermacentor* + Gr. *xenos* a guest-friend] a genus name formerly given microorganisms parasitic in ticks, now included in the genus *Rickettsia*; later used as the name of a subgenus including the species *R. a'kari*, *R. australis*, *R. cono'rii*, *R. rickettsii*, and *R. siberica*. **D. a'kari**, *Rickettsia akari*. **D. australis**, *Rickettsia australis*. **D. cono'ri**, *Rickettsia conorii*. **D. orienta'lis**, *Rickettsia tsutsugamushi*. **D. pijspe'ri**, *Rickettsia conorii*. **D. rickettsi**, *Rickettsia rickettsii*. **D. siber'icus**, a name proposed for the tick-borne agent causing tick typhus in Siberia, thought to be identical with *Rickettsia conorii*. **D. ty'phi**, *Rickettsia typhi*.

dermad (der'mad) toward the integument.

dermal (der'mal) of or pertaining to the skin.

dermamiasis (der'mah-mi-i'ah-sis) [*derma-* + Gr. *myia* fly] dermatomyiasis.

Dermanyssidae (der'mah-nis'i-de) a family of mites (order Acarina) parasitizing mammals, reptiles, and birds, whose bite may cause a painful dermatitis in man; *Dermanyssus* is the type genus.

Dermanyssus (der'mah-nis'sus) [*derma-* + Gr. *nyssēin* to prick] a genus of mites of the family Dermanyssidae. **D. galli'nae**, the bird mite, poultry (chicken or fowl) mite, or chicken louse, which sometimes infests man.

dermaskelton (der'mah-skel'ē-ton) exoskeleton.

dermat- see *dermato-*.

dermatergosis (der'mat-er-go'sis) [*dermat-* + Gr. *ergon* work] any occupational disease or lesion of the skin.

dermatic (der-mat'ik) dermal.

dermatitides (der'mah-tit'i-dēz) plural of *dermatitis*.

dermatitis (der'mah-ti'tis), pl. *dermatit'ides* [*dermato-* + *-itis*] inflammation of the skin. **actinic d.**, dermatitis resulting from exposure to actinic radiation, such as that from the sun, ultraviolet waves, or x or gamma radiation. **allergic d.**, 1. any inflammation of the skin believed to be due to allergy. 2. atopic d. **ammonia d.**, a form of diaper dermatitis that has been attributed to irritation of the skin due to the ammonia decomposition products of urine. **ancylostome d.** (obs.), ground itch. **d. artefac'ta**, a condition of the skin characterized by lesions that are self-inflicted by the patient, as by heat, chemicals, or other physical or mechanical means. **ashy d.**, erythema dyschromicum perstans. **atopic d.**, a chronic pruritic eruption occurring in adolescents and adults, of unknown

etiology although allergic, hereditary, and psychogenic factors appear to be involved. The lesions occur chiefly on the flexural surfaces of the knees and elbows, but may involve other areas, and are marked by lichenification, excoriations, and crusting. In infants and young children the condition is sometimes called *infantile eczema* or (in Britain) *Besnier's prurigo*. Called also *allergic d.*, *flexural eczema*, and *disseminated neurodermatitis*. **berlock d.**, **berloque d.**, phototoxic dermatitis, typically on the neck, face, and breast, occurring as drop-shaped or quadrilateral patches or streaks, induced by sequential exposure to perfume and other toilet articles and then to sunlight. Called also *perfume d.* **bhiwanol d.**, **dhobie itch**. **brown-tail moth d.**, a cutaneous irritation produced by the hairs of the brown-tail moth, *Euproctis chrysorrhoea*; called also *brown-tail rash*. **brucella d.**, dermatitis occurring in veterinarians and stockmen who come in contact with cows affected with infectious abortion (brucellosis). **d. calor'ica**, inflammation of the skin due to heat or cold; cf. *erythema abigne*. **caterpillar d.**, a transient but sometimes painful dermatitis caused by contact with caterpillars, with resultant penetration of the skin by their hairs (setae). **contact d.**, 1. an acute allergic inflammation of the skin caused by contact with various substances of a chemical, animal, or vegetable nature to which delayed hypersensitivity has been acquired; when severe, it is called *d. venenata*. 2. primary-irritant (nonallergic) d. **contagious pustular d.**, see *contagious acne*, under *acne* and see *orf*. **cosmetic d.**, allergic contact dermatitis caused by some ingredient in a cosmetic preparation. **dhobie mark d.**, **dhobie itch**. **diaper d.**, dermatitis localized to the area in contact with the diaper in infants, the folds of skin being spared. The manifestations vary from diffuse erythema to nodular lesions. Called also *Jacquet's d.* or *erythema*, *napkin erythema*, *napkin-area d.*, and *gluteal erythema*. **d. dysmenorrhoe'ica**, a roseacea-like eruption on the cheeks of women, recurring during or just before painful menstrual periods. **d. escharot'ica**, see *primary irritant d.* **d. exfoliat'iva**, exfoliative d. **d. exfoliat'iva neonato'rum**, exfoliative dermatitis supervening in bullous impetigo of the newborn; it may be identical to toxic epidermal necrolysis. Both conditions may be caused by staphylococci of phage group two, although a toxic drug reaction is also suspected in the etiology of toxic epidermal necrolysis. Called also *Ritter's disease*. **exfoliative d.**, a skin disorder evolving from any of several preceding skin disorders, such as drug eruption or psoriasis, and characterized by virtually universal erythema with desquamation, scaling, itching, and loss of hair. **exudative discoid and lichenoid d.**, a disease seen in older men, characterized by itching oval or disk-shaped plaques, which later becomes a widespread dermatitis, followed by oozing and lichenification. **d. gangreno'sa infan'tum**, a condition of unknown etiology occurring in infants and marked by bullous or pustular eruption followed by disseminated gangrene of the skin; not infrequently confused with *ecthyma gangrenosum*. **d. gestatio'nis**, herpes gestationis. **grass d.**, meadow d. **halowax d.**, chloracne. **d. hemostat'ica**, stasis dermatitis. **d. herpeticor'mis**, chronic dermatitis marked by grouped, symmetrical, erythematous, papular, vesicular, eczematous, or bullous lesions occurring in successive crops in varied combinations, accompanied by burning and itching; a granular deposition of IgA around the lesion occurs in almost every case. Called also *Duhring's disease*. Cf. *herpes gestationis*. **d. hiema'lis**, dermatitis coming on with cold weather; cf. *pruritus hiemalis*. **d. hypostat'ica**, stasis dermatitis. **industrial d.**, contact dermatitis, sometimes of the primary-irritant type, but usually of the delayed hypersensitivity type, caused by material handled by the patient in the course of his employment; called also *occupational d.* **d. infectio'sa eczematoid'es**, **infectious eczematoid d.**, a pustular eczematoid eruption frequently following or occurring coincidentally with some pyogenic process. **insect d.**, dermatitis caused by the irritant hairs of certain insects, especially moths and caterpillars. **io-moth d.**, dermatitis caused by the irritant hairs of the larva of *Automeris io*. **Jacquet's d.**, **diaper d.** **d. lichenoid'es chron'ica atroph'icans** (*obs.*), lichen sclerosus et atrophicus. **livedoid d.**, a condition due to temporary or prolonged local ischemia resulting from accidental arterial obliteration from intragluteal administration of medications, marked by severe local pain, swelling, livedoid changes, and local increase in temperature; fever, tachycardia, dyspnea, and albuminuria also occur, and gangrene may supervene. **marine d.**, swimmer's itch occurring in persons wading or swimming in salt water; called also *seabather's eruption*. **meadow d.**, **meadow-grass d.**, phototoxic dermatitis marked by an eruption of vesicles and bullae arranged in streaks and bizarre configurations, caused by exposure to sunlight after contact with meadow grass, usually *Agrimonia eupatoria*. Called also *grass d.* and *d. striata pratensis bullosa*. **d. medicamento'sa**, drug eruption. **d. micropapulo'sa erythemato'sa hyperidrot'ica na'si** (*obs.*), granulosis rubra nasi. **molluscum d.**, a dermatitis ranging from very mild to moderately severe, of unknown cause, occasionally seen in association with molluscum contagiosum. **napkin area d.**, **diaper d.** **occupational d.**, dermatitis caused by material employed in the patient's occupation; called also *industrial d.* **onion mite d.**, dermatitis af-

fecting handlers of decaying onions, caused by the onion mite, *Acarus rhyzoglypticus hyacinthi*. **d. papilla'ris capilli'tii**, keloidal folliculitis. **d. pediculo'des ventrico'sus**, grain itch. **perfume d.**, berlock d. **perioral d.**, a papular, sometimes pustular, dermatitis of unknown etiology, confined to the nasolabial fold areas, upper lip, and chin, and occurring almost exclusively in women between the ages of 20 and 35. **photo-contact d.**, allergic contact dermatitis caused by the action of sunlight on skin sensitized by contact with a substance capable of causing this reaction, such as a halogenated salicylanilide, sandalwood oil, or hexachlorophene. **phototoxic d.**, erythema followed by hyperpigmentation of sun-exposed areas of the skin, resulting from sequential exposure to agents containing photosensitizing substances, such as coal tar and certain perfumes, drugs, or plants containing psoralens, and then to sunlight. **pigmented purpuric lichenoid d.**, dermatitis of the extremities, especially the legs, characterized by papules which become purpuric or pigmented. **poison ivy d.**, **poison oak d.**, **poison sumac d.**, see *rhus d.* **precancerous d.**, Bowen's disease. **primary irritant d.**, skin inflammation induced by a substance acting as an irritant rather than as a sensitizer or allergen, so that all persons are affected similarly on initial contact. When severe, it is called also *d. escharotica*, or *chemical burn*. **purpuric pigmented lichenoid d.**, pigmented purpuric lichenoid d. **radiation d.**, radiodermatitis. **rat-mite d.**, dermatitis resulting from the bite of *Ornithonyssus bacoti*. **d. re'pens**, acrodermatitis continua. **rhus d.**, allergic contact dermatitis due to exposure to plants of the genus *Rhus* (*Toxicodendron*) (poison ivy, poison oak, poison sumac), which contain urushiol, a potent skin-sensitizing agent. **roentgen-ray d.**, radiodermatitis. **sabra d.**, a dermatitis somewhat resembling scabies, affecting those who handle the fruit of cacti (sabra or prickly pear) and Indian figs in Israel; thought to be due to the penetration of minute thorns or hairs into the skin. **schistosome d.**, swimmer's itch. **seborrheic d.**, **d. seborrheica**, a chronic inflammatory disease of the skin of unknown etiology, characterized by moderate erythema, dry, moist, or greasy scaling, and yellow crusted patches on various areas, including the mid-parts of the face, ears, supraorbital regions, umbilicus, genitalia, and especially the scalp, where it is manifested by small patches of scales that progress to involve the entire scalp, with exfoliation of an excessive amount of dry scales (dandruff). The condition is usually accompanied by itching. Called also *eczema seborrheicum*, *seborrheic eczema*, and *seborrhea*. **d. skiagraph'ica**, radiodermatitis. **stasis d.**, an often chronic, usually eczematous dermatitis, which initially involves the inner aspect of the lower leg just above the internal malleolus and which later may involve the entire lower leg or portions thereof, characterized by edema, pigmentation, and commonly ulceration; it is due to venous insufficiency. Called also *d. hemostatica*, *d. hypostatica*, and *stasis eczema*. **straw-mat d.** (*obs.*), grain itch. **d. stria'ta praten'sis bullo'sa**, meadow d. **swimmer's d.**, swimmer's itch. **uncinaria d.**, ground itch. **vanilla d.**, dermatitis from handling vanilla beans. **d. vegetans**, a chronic, benign, vegetative pyoderma having histologic features of pemphigus vulgaris, and marked by the growth of fungating masses on eczematous areas, which may be bordered by pustules and vesicles; it is probably due to a superimposed staphylococcal infection. Called also *benign pemphigus vegetans*, *Hallopeau type of pemphigus vegetans*, *pyoderma vegetans*, *pyoderma verrucosum*, and *pyodermatitis vegetans*. Cf. *pemphigus vegetans*. **d. venena'ta**, see *contact d.* **verminous d.**, **stephanofilariasis**. **d. verruco'sa** (*obs.*), chromomycosis. **vesicular d.**, a sometimes fatal disease, believed to be eczematous in nature, affecting young poultry that range over unbroken prairie sod, marked by the formation of blisters and scabs on the feet and legs; called also *sod disease*. **weeping d.**, **eczema**. **x-ray d.**, radiodermatitis.

dermato-, **derma-**, **dermat-**, **dermo-** [Gr. *derma*, *dermatos* skin] combining forms denoting relationship to the skin.

dermatoarthritis (der'mah-to-ar-thri'tis) skin disease associated with arthritis. **lipid d.**, **lipoid d.**, multicentric reticulohistiocytosis.

dermatoautoplasty (der'mah-to-aw'to-plas'te) [*dermato-* + Gr. *autos* self + *plassein* to mold] the grafting on denuded areas of skin taken from some other portion of the patient's own body.

Dermatobia (der'mah-to-be-ah) [*dermato-* + Gr. *bios* life] a genus of botflies of the family Oestridae. **D. hom'inis**, the hu-

Dermatobia.

man botfly of South America whose larvae (called ver macaque or ver moyocuil) are parasitic in the skin of man, mammals and birds; the eggs are deposited by the female on the bodies of mosquitoes, flies or ticks and by them transported to the host.

dermatobiasis (der-'mah-to-bi'ah-sis) the presence of *Dermatobia* in the body.

dermatocandidiasis (der-'mah-to-kan-'dī-di'ah-sis) cutaneous candidiasis.

dermatocoele (der-'mah-to-sēl') [*dermato-* + Gr. *kēlē* hernia] cutis laxa.

dermatochalasis, dermatochalazia (der-'mah-to-kal'ah-sis; der-'mah-to-kal-ah'zi-ah) [*dermato-* + Gr. *chalasthai* to become slack] cutis laxa.

dermatconjunctivitis (der-'mah-to-kon-junk-'tī-vi'tis) inflammation of the conjunctiva and of the skin around the eyes.

dermatodysplasia (der-'mah-to-dis-pla'ze-ah) a condition characterized by abnormal development of the skin.

dermatofibroma (der-'mah-to-fi-bro'mah) a fibrous tumor-like nodule of the dermis. **d. protuberans**, a large-sized molluscum growth that tends to recur after incision; called also *dermatofibrosarcoma protuberans*.

dermatofibrosarcoma (der-'mah-to-fi'bro-sar-ko'mah) a fibrosarcoma of the skin. **d. protuberans**, dermatofibroma protuberans.

dermatofibrosis (der-'mah-to-fi-bro'sis) a condition characterized by fibrotic changes in the skin. **d. lenticularis disseminata**, a hereditary condition of the skin associated with osteopoiikilosis and marked by the presence of papular fibromas over the back, arms, and thighs. Called also *Buschke-Ollendorff syndrome*.

dermatogen (der-mat'o-jen) a skin antigen that may be associated with any skin disease.

dermatoglyphics (der-'mah-to-glif'iks) [*dermato-* + Gr. *glyphein* to carve] the study of the patterns of ridges of the skin of the fingers, palms, toes, and soles; of interest in anthropology and law enforcement as a means of establishing identity and in medicine, both clinically and as a genetic indicator, particularly of chromosomal abnormalities.

dermatograph (der-mat'o-graf) [*dermato-* + Gr. *graphein* to write] (*obs.*) 1. an instrument for marking or writing on the skin, as in marking the boundaries of the body. 2. dermatograph.

dermatographia (der-'mah-to-graf'e-ah) dermatographism.

dermatographic (der-'mah-to-grof'ik) pertaining to or characterized by dermatographism.

dermatographism (der-'mah-tog'rah-fizm) urticaria due to physical allergy, in which moderately firm stroking or scratching of the skin with a dull instrument produces a pale, raised welt or wheal, with a red flare on each side; see also *white d.* and *black d.* **black d.**, black or greenish streaking of the skin caused by deposit of fine metallic particles abraded from jewelry by various dusting powders. **white d.**, linear blanching of (usually erythematous) skin of persons with atopic dermatitis in response to firm stroking with a blunt instrument.

dermatoheteroplasty (der-'mah-to-het'er-o-plas'te) [*dermato-* + Gr. *heteros* other + *plassein* to form] the grafting of skin derived from an individual of another species.

dermatoid (der-'mah-toid) [*dermato-* + Gr. *eidos* form] (*obs.*) dermoid, *def.* 1.

dermatologic, dermatological (der-'mah-to-loj'ik, der-'mah-to-loj'i-kal) pertaining to dermatology; of or affecting the skin.

dermatologist (der-'mah-to-l'o-jist) a physician who limits his practice to the diagnosis and treatment of skin disorders.

dermatology (der-'mah-to-l'o-je) the medical specialty concerned with the diagnosis and treatment of diseases of the skin.

dermatolysis (der-'mah-to-l'i-sis) [*dermato-* + Gr. *lysis* loosening] cutis laxa. **d. palpebrae**, rum, blepharochalasis.

dermatome (der-'mah-tōm) [*derma-* + Gr. *temnein* to cut] 1. an instrument for cutting thin skin slices for skin grafts. 2. the area of skin supplied with afferent nerve fibers by a single posterior spinal root; called also *dermatomic area*. 3. the lateral portion of a mesodermal somite; the cutis plate. **Brown d.**, an electric dermatome, the first to be developed, for cutting thick-split skin grafts; it enables the surgeon to rapidly remove long strips of skin. **Castroviejo d.**, an electric dermatome used for cutting mucous membrane grafts for the treatment of eyelid and socket deformities and as an adjunct in the removal of tattoos after the initial excision has been done using either the Brown or Padgett dermatomes. It has a tiny cutting head with special blades and skims to control the thickness of the cut. **Padgett d.**, an instrument for cutting thin- or thick-split skin grafts which enables the surgeon to cut a sheet of skin of any size up to 4 × 7½ inches and of any desired thickness. **Reese d.**, an instrument for cutting split-skin grafts of 0.008 to 0.034 inch in thickness. **Stryker d.**, an electric dermatome similar to and having the same uses as the Brown dermatome.

dermatomegaly (der-'mah-to-meg'ah-le) cutis laxa.

dermatomere (der-'mah-to-mēr') [*dermato-* + Gr. *meros* part] any segment or metamere of the embryonic integument.

dermatomic (der-'mah-tom'ik) pertaining to a dermatome.

dermatomyces (der-'mah-to-mi'sēz) dermatophyte.

dermatomycin (der-'mah-to-mi'sin) any of several antigens

derived from fungi and used in the diagnosis, prophylaxis, and treatment of dermatomycosis.

dermatomycosis (der-'mah-to-mi-ko'sis) [*dermato-* + Gr. *mykes* fungus] a superficial infection of the skin or its appendages by fungi. The term includes dermatophytosis and the various clinical forms of tinea, as well as deep fungous infections.

dermatomyiasis (der-'mah-to-mi-i'ah-sis) infestation of the skin by flies or fly maggots.

dermatomyoma (der-'mah-to-mi-o'mah) [*dermato-* + *myoma*] a dermal leiomyoma.

dermatomyositis (der-'mah-to-mi'o-si'tis) [*dermato-* + Gr. *mys* muscle + *-itis*] a nonsuppurative inflammation of the skin, subcutaneous tissue, and muscles, with necrosis of muscle fibers; one of the so-called collagen or connective tissue diseases. There is underlying cancer in as many as 50 per cent of adult cases. When the skin lesions are absent, it is known as *polymyositis*.

dermatoneurology (der-'mah-to-nu-ro'l'o-je) [*dermato-* + Gr. *neuron* nerve + *-logy*] the study of the nerves of the skin in health and disease.

dermato-ophthalmitis (der-'mah-to-off'thal-mi'tis) inflammation of the skin and of the eye, including the conjunctiva, cornea, etc.

dermatopathic (der-'mah-to-path'ik) pertaining or attributable to disease of the skin, as dermatopathic lymphadenopathy.

dermatopathology (der-'mah-to-pah-thol'o-je) microscopic anatomic pathology of the skin.

dermatopathy (der-'mah-top'ah-the) [*dermato-* + Gr. *pathos* disease] dermatopathy.

Dermatophagoides (der-'mah-tof'ah-goi'dēs) a genus of sarcoptiform mites, usually found on the skin of chickens. **D. pteronyssinus**, the house dust mite, which acts as an antigen and produces an allergic asthmatic reaction in atopic persons. **D. scheremetewskyi**, a species that attacks man and causes a mange-like inflammation.

dermatopharmacology (der-'mah-to-fahr'mah-kol'o-je) pharmacology as applied to dermatologic disorders.

dermatophiliasis (der-'mah-to-fi-li'ah-sis) 1. tungiasis. 2. dermatophilosis.

dermatophilosis (der-'mah-to-fi-lo'sis) an actinomycotic disease caused by *Dermatophilus congolense*, affecting cattle, sheep, horses, goats, deer, and sometimes man. In man, it is characterized by nonpainful pustules on the hands and arms; the lesions break down and form shallow red ulcers which regress spontaneously, leaving some scarring. In sheep, it is characterized by exudative red scaling lesions that form pyramidal masses and is known as *lumpy wool*, *strawberry rot foot*, and formerly *streptotricosis*.

Dermatophilus (der-'mah-tof'i-lus) 1. *Tunga*. 2. a genus of pathogenic actinomycetes. **D. congolensis**, the etiologic agent of dermatophilosis. **D. penetrans** *Tunga penetrans*, or chigoe.

dermatophylaxis (der-'mah-to-fi-lak'sis) [*dermato-* + Gr. *phylaxis* a guarding] (*obs.*) protection against skin infection; protection of the skin against infection.

dermatophyte (der-'mah-to-fit') [*dermato-* + Gr. *phyton* plant] a fungus parasitic upon the skin; the term embraces the imperfect fungi of the genera *Microsporum*, *Epidermophyton*, and *Trichophyton*. Called also *cutaneous fungus* and *dermatomyces*.

dermatophytid (der-'mah-tof'i-tid) a secondary skin eruption which is an expression of hypersensitivity to a dermatophyte, especially *Epidermophyton*, infection, occurring on an area far from the site of infection; called also *epidermophytid* and *mycid*.

dermatophytosis (der-'mah-to-fi-to'sis) a fungous infection of the skin, or infection caused by a dermatophyte; often used specifically to designate such an infection of the skin of the feet (tinea pedis). Called also *dermatomycosis* and *epidermomycosis*.

dermatoplastic (der-'mah-to-plas'tik) pertaining to dermatoplasty.

dermatoplasty (der-'mah-to-plas'te) [*dermato-* + Gr. *plassein* to form] a plastic operation on the skin; operative replacement of destroyed or lost skin.

dermatopolyneuritis (der-'mah-to-pol'e-nu-ri'tis) acrodynia.

dermatorrhagia (der-'mah-to-ra'je-ah) discharge of blood into or from the skin. **d. parasitica**, a disease of the skin of horses, asses, and mules in Europe and Asia, marked by hard elevations formed by accumulations of blood between the layers of the skin, and caused by the presence of a parasitic filarial worm, *Parafilaria multipapillosa*. Called also *summer bleeding*.

dermatorrhesis (der-'mah-to-rek'sis) [*dermato-* + Gr. *rhēsis* a breaking] rupture of the skin capillaries, as in Ehlers-Danlos syndrome.

dermatosclerosis (der-'mah-to-skle-ro'sis) [*dermato-* + Gr. *sklērosis* hardening.] scleroderma.

dermatoses (der-'mah-to'sēz) plural of *dermatosis*.

dermatosis (der-'mah-to'sis), pl. *dermatoses* [*dermat-* + *-osis*] any skin disease, especially one not characterized by inflammation. **acute febrile neutrophilic d.**, a rare condition usually affecting women, characterized by a nonpruritic eruption of

painful, raised, partly confluent, red nodules or plaques, 0.5 to 4 cm. broad, primarily on the arms; associated with acute high fever and moderate neutrophil leukocytosis, it may persist for several months. Called also *Sweet's syndrome*. **angioneurotic d.** (obs.), angioneurotic edema. **ashy d. of Ramirez**, erythema dyschromicum perstans. **Bowen's precancerous d.**, Bowen's disease. **chick nutritional d.**, a disease of chicks due to a deficiency of pantothenic acid, marked by eruptions on the head and feet. **d. cinicien'ta**, erythema dyschromicum perstans. **d. cine'rea per'stans**, erythema dyschromicum perstans. **industrial d.**, occupational dermatitis. **lichenoid d.**, a skin disease characterized by the appearance of small, firm, discrete papules. **d. papulo'sa ni'gra**, a variety of seborrheic keratosis observed principally in Negroes, with multiple miliary pigmented papules usually on the upper lateral aspect of the cheek, but sometimes occurring more widely on the face and neck. **precancerous d.**, any skin condition in which the lesions, such as warts, moles, or other excrescences, are likely to undergo malignant degeneration. **progressive pigmentary d.**, a slowly progressive purpuric and pigmentary disease of the skin affecting chiefly the shins, ankles, and dorsum of the feet; called also *Schamberg's d.* or *disecse*. **Schamberg's d.**, progressive pigmentary d. **stasis d.**, see under *dermatitis*. **subcorneal pustular d.**, a chronic, superficial, pustular disorder with a chronic relapsing course, resembling dermatitis herpetiformis, and chiefly affecting women in middle life, with sterile pustular blebs beneath the horny layer of the epidermis on the trunk and in the major skin folds. Called also *Sneddon-Wilkinson disease*. **Unna's d.** (obs.), seborrheic dermatitis. **d. veg'e-tans**, a hereditary disease of young pigs characterized by raised skin lesions, abnormalities of the hooves, and pneumonia.

dermatosome (der'mah-to-sōm') [*dermato-* + *Gr. sōma* body] a thickening on each spindle fiber in the equatorial region during mitosis.

dermatosparaxis (der'mah-to-spah-rak'sis) [*dermato-* + *Gr. sparaxis*, *sparagmos* a tearing] a disease of cattle and sheep in which the skin is fragile and very easily torn; it is related to the Ehlers-Danlos syndrome of humans, and evidence indicates that the defect may reside in an abnormally low activity of the enzyme procollagen peptidase.

dermatotherapy (der'mah-to-ther'ah-pe) [*dermato-* + *Gr. therapeia* treatment] treatment of the skin and its diseases.

dermatothlasia (der'mah-to-thla'ze-ah) [*dermato-* + *Gr. thlasia* bruising] (obs.) a morbid tendency to injure the skin by pinching and bruising.

dermatotome (der'mah-to-tōm) [*dermato-* + *Gr. temnein* to cut] dermatome, defs. 1 and 3.

dermatotropic (der'mah-to-trop'ik) [*dermato-* + *Gr. tropos*, turning toward or affecting] preferentially infecting, infesting, or affecting the skin; said of certain microorganisms.

dermatozoiiasis (der'mah-to-zo-i'ah-sis) dermatozoonosis.

dermatozoon (der'mah-to-zō'on) [*dermato-* + *Gr. zōon* animal] any animal parasite of the skin; an ectoparasite.

dermatozoonosis (der'mah-to-zō'o-no'sis) [*dermato-* + *Gr. zōon* animal + *nosos* disease] a skin disease caused by a dermatozoon; called also *dermatozoiiasis*.

dermenchysis (der-men'ki'sis) [*derma-* + *Gr. enchysis* pouring in] the hypodermic administration of medicines.

dermic (der'mik) dermal.

dermis (der'mis) NA alternative for the corium.

dermitis (der-mi'tis) [*derma-* + *-itis*] (obs.) dermatitis.

dermo- see *dermato-*.

dermoanergy (der'mo-an'er-je) lack of hypersensitivity response by skin to (administered) antigen; absence of immunologic (allergic) reactivity in skin.

dermoblast (der'mo-blast) [*dermo-* + *Gr. blastos* germ] that part of the mesoblast which develops into the true skin or corium.

dermochrome (der'mo-krōm) [*dermo-* + *Gr. chrōma* color] (obs.) a colored illustration of the skin or of a skin disease.

dermocyma (der'mo-si'mah) [*dermo-* + *Gr. kyma* fetus] a monstrosity in which one fetus is inclosed within another.

dermocymus (der'mo-si'mus) dermocyma.

dermoglyphics (der'mo-glif'iks) dermatoglyphics.

dermograph (der'mo-graf) (obs.) the elevated mark or wheal which appears on the skin in dermatographism.

dermographia (der'mo-graf'e-ah) [*dermo-* + *Gr. graphein* to write] dermatographism.

dermographic (der'mo-graf'ik) dermatographic.

dermographism (der-mog'rah-fizm) dermatographism.

dermohyrometer (der'mo-hi-grom'ē-ter) an instrument for measuring skin resistance without inducing a constant current into the skin.

dermoid (der'moid) [*derma-* + *Gr. eidos* form] 1. resembling the skin. 2. a dermoid cyst. **corneal d.**, a tumorous growth upon the cornea of animals; its surface contains hairs. **implantation d.**, a dermoid cyst resulting from an injury by which a portion of the epiblastic structure is driven into the body.

inclusion d., a dermoid cyst due to the inclusion of foreign tissue in the closure of a developmental cleft. **thyroid d.**, a dermoid cyst considered to arise from a retention cyst of the persistent thyroid duct or of the thyrolingual duct. **tubal d.**, a dermoid cyst of the oviduct.

dermoidectomy (der'moid-ek'to-me) [*dermoid* + *Gr. ektomē* excision] excision of a dermoid cyst.

dermolipoma (der'mo-li-po'mah) a congenital yellow fatty growth beneath the bulbar conjunctiva.

dermolysin (der-mol'i-sin) a substance, circulating in the blood, capable of dissolving the skin.

dermometer (der-mom'ē-ter) the instrument used in dermatometry.

dermometry (der-mom'ē-tre) [*dermo-* + *Gr. metron* measure] the measurement of areas of skin resistance to a passage of direct electric current; these areas will correspond to the areas of sensory loss.

dermomycosis (der'mo-mi-ko'sis) [*dermo-* + *Gr. mykēs* fungus] dermatophytosis.

dermomyotome (der'mo-mi'o-tōm) [*dermo-* + *myo-* + *-tome*] all but the sclerotome of a mesodermal somite; the primordium of skeletal muscle and, perhaps, of corium.

dermoneurotropic (der'mo-nu'ro-trop'ik) having an affinity for the skin and nervous tissue.

dermopathic (der'mo-path'ik) dermatopathic.

dermatopathy (der-mop'ah-the) [*dermo-* + *Gr. pathos* disease] any skin disorder. **diabetic d.**, any of several cutaneous manifestations of diabetes marked by papular, erosive, ulcerated, pigmented, macular, or cicatricial lesions of the shins, apparently occurring as a result of a specific angitis of small blood vessels; the term is sometimes broadened to include bullae in diabetics, especially bullae of the toes, feet, and ankles, and necrobiosis lipidica diabetorum. Called also *diabetid*.

dermophylaxis (der'mo-fi-lak'sis) dermatophylaxis.

dermophyte (der'mo-fit) dermatophyte.

dermoplasty (der'mo-plas'te) dermatoplasty.

dermoreaction (der'mo-re-ak'shun) cutireaction.

dermoskeleton (der'mo-skel'ē-ton) exoskeleton.

dermostosis (der'mos-to'sis) [*dermo-* + *Gr. osteon* bone] (obs.) osteomas of the skin.

dermosynovitis (der'mo-sin-o-vi'tis) [*dermo-* + *synovitis*] inflammation of skin overlying an inflamed bursa or tendon sheath.

dermotoxin (der'mo-tok'sin) a toxin of staphylococci which produces a necrotic area in the skin when injected.

dermotropic (der'mo-trop'ik) dermatotropic.

dermovaccine (der'mo-vak'sin) [*dermo-* + *vaccine*] vaccine virus maintained by dermal inoculations and prepared from scrapings of skin lesions; called also *dermovirus*.

dermovascular (der'mo-vas'ku-lar) [*dermo-* + *vas* vessel] pertaining to the blood vessels of the skin.

dermovirus (der'mo-vi'rus) dermovaccine.

derodidymus (der'o-did'i-mus) dicephalus.

Deronil (der'o-nil) trademark for a preparation of dexamethasone.

derrengradera (der'en-gah-da'rah) [Sp. "crooked"] murrina.

Derrien's test (dār'e-anz') [Eugène Derrien, French chemist, 1879-1931] see under *tests*.

derriengue (der'e-eng'geh) [Sp.] a paralytic form of rabies in cattle of South America (from Mexico to north of Argentina) causing severe economic losses; it is transmitted by vampire bats (*Desmodus rotundus*).

derris (der'is) a plant of the South Sea Islands; extracts of the leaves and dried root are used as insecticides. Cf. *rotenone*.

desalination (de'sal-i-na'shun) [L. *de* from + *sal* salt] the removal of salt from a substance.

desalivation (de'sal-i-va'shun) the depriving of saliva.

desanimania (des'an-i-ma'ne-ah) [L. *dis-* neg. + *animus* mind + *mania* madness] (obs.) amentia, or mindless insanity.

desaturase (de-sach'u-rās) any enzyme that catalyzes desaturation of a fatty acid.

desaturation (de-sach'er-a'shun) the process of introducing a double bond between carbon atoms of a fatty acid.

Desault's bandage (apparatus), sign (dē-sōz') [Pierre Joseph Desault, French surgeon, 1744-1795] see under *bandage* and *sign*.

Descemet's membrane (des-ē-māz') [Jean Descemet, French anatomist, 1732-1810] lamina limitans posterior corneae.

descemetitis (des'ē-mē-ti'tis) inflammation of Descemet's membrane.

descemetocoele (des'ē-met'o-sēl) [*Descemet's membrane* + *Gr. delē* hernia] herniation of Descemet's membrane.

descendens (de-sen'denz) [L.] [NA] a general term denoting a descending structure or part. **d. cervica'lis**, **d. cer'vicis**, the inferior root of the ansa cervicalis.

descending (de-send/'ing) [L. *descendere* to go down] extending downward.

descensus (de-sen/'sus), pl. *descen'sus* [L.] the process of descending or falling. **d. tes'tis** [NA], the descent of the testis from its fetal position in the abdominal cavity to the scrotum; it normally occurs during the last three months of fetal life and is essential to spermatogenesis. **d. u'teri**, prolapse of the uterus. **d. ventric'uli**, gastroparesis.

Deschamps' compressor, needle (da-shawz') [Joseph François Louis Deschamps, French surgeon, 1740-1824] see under *compressor* and *needle*.

desclonolone acetone (des-in/'o-lōn) chemical name: 9-fluoro-11 β ,16 α ,17-trihydroxypregna-1,4-diene-3,20-dione cyclic 16,17-acetal with acetone; a glucocorticoid, C₂₄H₃₄FO₆.

desensitization (de-sen/'si-ti-za'shun) 1. the prevention or reduction of immediate hypersensitivity reactions by administration of graded doses of allergen. 2. in behavior therapy, the treatment of phobias and related disorders by intentionally exposing the patient, in imagination or in real life, to emotionally distressing stimuli. Common forms of desensitization include flooding (q.v.), implosion (q.v.), and systematic desensitization (q.v.). **systematic d.**, a form of desensitization therapy in which the patient is taught to relax and is then exposed, in imagination, to the mildest or least anxiety-provoking stimuli first; as treatment progresses he is exposed progressively to stronger anxiety-provoking stimuli until he can tolerate the most extreme stimuli.

desensitize (de-sen/'si-tīz) 1. to deprive of sensation; paralysis of a sensory nerve by section or blocking. 2. to remove antibody from sensitized cells for the purpose of preventing allergy or anaphylaxis.

desequestration (de-'se-kwes-tra'shun) (obs.) the release of sequestered material, such as release into the general circulation of blood formerly withheld from it, by either physiological or mechanical means.

deserpidine (de-ser/'pī-dēn) chemical name: 17 α -methoxy-18 β -[(3,4,5-trimethoxybenzoyloxy)-3 β -20 α -yohimban-16 β -carboxylic acid methyl ester. An alkaloid of *Rauwolfia canescens*, C₃₂H₃₈N₂O₈, occurring as a white to light yellow, crystalline powder; used as an antihypertensive and tranquilizer, administered orally.

desexualize (de-seks/'u-al-iz') to deprive of sexual characters; to castrate.

Desferal (des/'fer-al) trademark for a preparation of deferoxamine mesylate.

desferrioxamine (des-fer/'e-oks'ah-mēn) deferoxamine.

deshydremia (des-'hi-dre'me-ah) [L. *de* from + Gr. *hydōr* water + *haima* blood + *-ia*] deficiency of the watery element of the blood.

desiccant (des/'i-kant) 1. promoting dryness; causing to dry up. 2. an agent that promotes dryness. Called also *exsiccant*.

desiccate (des/'i-kāt) [L. *desiccare* to dry up] to render thoroughly dry.

desiccation (des/'i-ka'shun) the act of drying up. **electric d.**, the treatment of a tumor or other disease by drying up the part by the application of a monopolar electric current (short spark) of high frequency and high tension.

desiccative (des/'i-ka'tiv) causing to dry up.

desiccator (des/'i-ka'tor) a closed vessel for containing apparatus or chemicals that are to be kept free from moisture.

desipramine hydrochloride (des-ip/'rah-mēn) [USP] chemical name: 10,11-dihydro-*N*-methyl-5*H*-dibenz[*b,f*]azepine-5-propanamine monohydrochloride. A metabolite of imipramine, C₁₈H₂₂N₂·HCl, occurring as a white to off-white, crystalline powder; used as an antidepressant, administered orally.

-desis [Gr. "binding"] a word termination indicating a binding or fusion, as in *pleurodesis*.

Desjardins' point (da/'zhar-danz') [Abel Desjardins, French surgeon] see under *point*.

deslanoside (des-lan/'o-sid) [USP] a digitalis glycoside, C₄₇H₇₄O₁₉, occurring as white crystals or as a white crystalline powder; used as a cardiotonic where digitalis is recommended, administered intramuscularly or intravenously. Called also *deacetyl-lanatoside C*.

desm- see *desmo-*.

desmalgia (des-mal/'je-ah) [*desmo-* + *-algia*] pain in a ligament; called also *desmodynia*.

desmectasis (des-mek/'tah-sis) [*desmo-* + Gr. *ektasis* stretching] the stretching of a ligament.

desmepithelium (des-'mep-i-the'le-um) [*desmo-* + *epithelium*] the endothelial lining of blood vessels, lymphatics, and synovial membranes.

desmid (des/'mid) unicellular, free-floating, aquatic algae characterized by symmetrical, curved, spiny or lacey bodies with a median constriction dividing the cell into two equal halves.

desmognathus (des-'me-o-nath'us) [Gr. *desmios* binding + *gnathos* jaw] a monster with a parasitic head attached to the jaw or neck; called also *dicephalus parasiticus*.

desmitis (des-mi'tis) [*desmo-* + *-itis*] inflammation of a ligament.

desmo-, desm- [Gr. *desmos* band, ligament] a combining form denoting relationship to a band, bond, or ligament.

Desmobacteriaceae (des'mo-bak-te're-a'se-e) a family of Schizomycetes in the Lehmann and Newmann outline classification of bacteria.

desmocranium (des'mo-kra'ne-um) [*desmo-* + *cranium*] the mass of mesoderm at the cranial end of the notochord in the early embryo, forming the earliest stage of the skull.

desmocyste (des'mo-sit) [*desmo-* + Gr. *kytos* hollow vessel] fibroblast.

desmocyoma (des'mo-si-to'mah) fibroma.

desmodynia (des'mo-din'e-ah) [*desmo-* + Gr. *odynē* pain] desmalgia.

desmogenous (des-moj/'ē-nus) [*desmo-* + Gr. *gennan* to produce] of ligamentous origin.

desmography (des-mog/'rah-fe) [*desmo-* + Gr. *graphein* to write] a description of the ligaments.

desmohemoblast (des'mo-hem'o-blast) [*desmo-* + Gr. *haima* blood + *blastos* germ] mesenchyme.

desmoid (des'moid) [*desmo-* + Gr. *eidōs* form] 1. a fibromatous tumor arising in the muscle sheath, usually of the abdominal wall, and closely resembling fibrosarcoma; desmoids are not encapsulated, are locally invasive, and rarely metastasize. Called also *desmoid tumor*. 2. fibrous or fibroid.

desmolase (des'mo-lās) an enzyme that catalyzes the addition or removal of some chemical group to or from a substrate without hydrolysis, oxidation, or reduction, the group being taken up from or liberated in the free state.

desmology (des-mol'o-je) [*desmo-* + *-logy*] 1. the study of ligaments, their structure and function. 2. the art of bandaging.

desmoma (des-mo'mah) [*desmo-* + *-oma*] desmoid tumor.

desmon (des'mon) [Gr. *desmos* band] see *amboceptor*.

desmoneoplasm (des'mo-ne'o-plazm) [*desmo-* + *neoplasm*] a connective tissue tumor (q.v.).

desmopathy (des-mop'ah-the) [*desmo-* + Gr. *pathos* disease] any disease of the ligaments.

desmopexia (des'mo-pek'se-ah) [*desmo-* + Gr. *pēxis* fixation] (obs.) the operation of suturing the round ligaments to the abdominal wall or to the vaginal wall for the correction of uterine displacement.

desmoplasia (des'mo-pla'ze-ah) the formation and development of fibrous tissue.

desmoplastic (des'mo-plas'tik) [*desmo-* + Gr. *plassein* to form] characterized by or causing the growth of fibrous tissue; producing or forming adhesions.

desmopressin (des'mo-pres'in) chemical name: 1-(3-mercaptopropionic acid)-8-*D*-argininevasopressin; a potent synthetic analogue of vasopressin used as an antidiuretic in diabetes insipidus.

desmopyknosis (des'mo-pik-no'sis) [*desmo-* + Gr. *pyknōsis* condensation] Dudley's operation of shortening the round ligaments by fastening them to an oval denuded area on the anterior vaginal wall.

desmorrhexis (des'mo-rek'sis) [*desmo-* + Gr. *rhēxis* rupture] rupture of a ligament.

desmosine (des'mo-sin) one of two unusual amino acids found in elastin, the other being isodesmosine.

desmosis (des-mo'sis) [*desmo-* + *-osis*] a disease of the connective tissue.

desmosome (des'mo-sōm) [*desmo-* + Gr. *sōma* body] a small, discrete, circular, dense body that forms the site of attachment between certain epithelial cells, especially those of stratified epithelium of the epidermis. It consists of local differentiations of the apposing cell membranes, with a dense cytoplasmic plaque underlying each membrane, toward which numerous tonofilaments converge; a dense lamina may occur within the intercellular gap. Called also *macula adherens*. See also *intercellular bridge*, under *bridge*. **half d.**, hemidesmosome.

desmosterol (des-mos'ter-ol) the immediate precursor of cholesterol in the biosynthetic pathway, 24-dehydrocholesterol; normally not present in the blood in amounts that can be detected by ordinary means.

desmotomy (des-mot'o-me) [*desmo-* + Gr. *tomē* a cutting] the cutting or division of ligaments.

desmotropism (des-mot'ro-pizm) tautomerism.

desoleolecithin (des-o'le-o-les'i-thin) one of the components, the other being oleic acid, into which lecithin is split by the action of cobra venom.

desomorphine (des'o-mor'fin) chemical name: 4,5a-epoxy-17-methylmorphinan-3-ol; a narcotic analgesic, C₁₇H₂₁NO₂.

desonide (des'o-nid) chemical name: 11 β ,21-dihydroxy-16 α ,17-[(1-methylethylidene)bis(oxy)]pregna-1,4-diene-3,20-dione. A synthetic corticosteroid, C₂₄H₃₆O₆, used as an anti-inflammatory in the treatment of steroid-responsive dermatoses, applied topically.

desorb (de-sorb) to remove a substance from the state of absorption or adsorption.

desorption (de-sorp'shun) the process or state of being desorbed.

desoximetason (des-ok'se-met'a-sōn) [USP] chemical name: 9-fluoro-11 β -21-dihydroxy-16 α -methylpregna-1,4-diene-3,20-dione. A corticosteroid, C₂₂H₂₉FO₄, having anti-inflammatory, antipruritic, and vasoconstrictive actions; applied topically for the relief of inflammatory manifestations of corticosteroid-responsive dermatoses.

desoxy- a prefix used in names of chemical compounds. See also words beginning *deoxy-*.

desoxycorticosterone (des-ok'se-kor'te-kos'ter-ōn) chemical name: 21-hydroxypregn-4-ene-3,20-dione. A mineralocorticoid, C₂₁H₃₀O₃, which has no glucocorticoid activity. It is secreted in small amounts by the human adrenal cortex. Called also *desoxycorticosterone* and *desoxycortone*. **d. acetate** [USP], an ester of desoxycorticosterone, C₂₃H₃₂O₄, occurring as a white or creamy white, crystalline powder; used for replacement therapy in adrenocortical insufficiency in Addison's disease and in the treatment of salt-losing adrenogenital syndrome, administered by intramuscular injection or by implantation of pellets subcutaneously. Called also *cortexone* and *desoxycortone acetate*. **d. pivalate** [USP], an ester of desoxycorticosterone, C₂₆H₃₆O₄, occurring as a white to creamy white, crystalline powder; used the same as the acetate ester, administered in a repository type of intramuscular injection. **d. trimethylacetate**, **d. pivalate**.

desoxycortone (des'ok-se-kōr'tōn) desoxycorticosterone. **d. acetate**, desoxycorticosterone acetate.

desoxyephedrine (des'ok-se-ef'ē-drin) methamphetamine.

desoxymorphine (des'ok-se-mor'fin) a product of the reduction of morphine.

Desoxyn (des-ok'sin) trademark for preparations of methamphetamine hydrochloride.

desoxyphenobarbital (des-ok'se-fe'no-bar'bī-tal) primidone.

desoxyribonuclease (des-ok'se-ri'bo-nu'kle-ās) deoxyribonuclease.

desoxyribose (des'ok-se-ri'bōs) deoxyribose.

desoxy-sugar (des-ok'se-shoog'ar) a sugar having one oxygen atom less than the parent monosaccharide.

despeciate (de-spe'se-āt) to undergo despeciation; to subject to (as by chemical treatment), or to undergo, loss of species antigenic characteristics.

despeciation (de-spe'se-a'shun) deviation from or loss of species characteristics.

despecification (de-spes'fi-fi-ka'shun) the process of reducing the antigenicity of heterologous antisera used therapeutically, by treating them with enzymes such as pepsin to remove the antigenic Fc regions of the immunoglobulin molecules. This leaves F(ab')₂ fragments which contain both antigen binding regions of each immunoglobulin molecule.

d'Espine's sign (des-pēnz') [Jean Henri Adolphe d'Espine, French physician, 1846-1930] see under *sign*.

despumat (des'pu-ma'shun) [L. *de* away + *spuma* froth] the removal of froth or scum from the surface of a liquid.

desquamation (des'kwah-ma'shun) [L. *de* from + *squama* scale] the shedding of epithelial elements, chiefly of the skin, in scales or small sheets; exfoliation. **furfuraceous d.**, desquamation in branlike scales. **lamellar d. of the newborn**, see under *exfoliation*.

desquamative (des-kwam'ah-tiv) pertaining to or characterized by desquamation.

desquamatory (des-kwam'ah-to-re) desquamative.

dest. abbreviation for L. *destil'la* distil, and *destilla'tus* distilled.

desthiobiotin (des'thi-o-bi'o-tin) biotin in which the sulfur has been replaced by two atoms of hydrogen. It is an analogue, CH₂·CH·NH·CO·NH·CH·CH₂·(CH₂)₄·COOH, of ascorbic acid which competitively inhibits the activity of the latter.

destil. abbreviation for L. *destil'la*, distil.

destructive (de-struk'tiv) characterized by or causing destruction.

desulphydrase (de'sulf-hi'drās) an enzyme that splits cysteine into hydrogen sulfide, ammonia, and pyruvic acid; called also *desulfurase*.

Desulfovibrio (de-sul'fo-vib're-o) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of actively motile, slightly curved rods of variable length, usually occurring singly but sometimes in short chains. It includes three species, *D. aestua'rii*, *D. desulfur'icans*, and *D. rubentschi'kii*.

desulfurase (de-sul'fu-rās) desulphydrase.

Det. abbreviation for L. *de'tur*, let it be given.

detachment (de-tach'ment) [Fr. *détacher* to unfasten; to separate] the condition of being unfastened, disconnected, or separated. **d. of retina**, **retinal d.**, a condition in which the inner layers of the retina (neural retina) are separated from the pigment epithelium.

detector (de-tek'tor) a device by which the presence of something, or the existence of a certain condition, is discovered. **lie d.**, polygraph. **radiation d.**, any device for converting radiant energy to a form more readily observable.

deterenol hydrochloride (dē-ter'ē-nōl) chemical name: (+)-4-hydroxy- α -[(1-methylethyl)amino]methyl] benzenemethanol hydrochloride; an adrenergic, C₁₁H₁₇NO₂·HCl, used in ophthalmology.

detergent (de-ter'jent) [L. *detergere* to cleanse] 1. purifying, cleansing. 2. an agent which purifies or cleanses.

determinant (de-ter'mī-nant) [L. *determinare* to bound, limit, or fix] a factor that establishes the nature of an entity or event. See also *biophore*. **antigenic d.**, the structural component of an antigen molecule that is responsible for specific interaction with antibody (immunoglobulin) molecules elicited by the same or a related antigen. Antigenic determinants consist of chemically active surface groupings of amino acids in globular proteins and sugar side chains in polysaccharides. Called also *antigenic determinant group*, or *epitope*. A small portion of the determinant group critical in establishing specificity is called the *immunodominant point*. Antibodies produced in response to immunization with a carrier protein to which specific chemical groups (haptens) have been introduced artificially by conjugation show reactive specificity for antigenic determinant groups that are frequently identical or nearly identical in structure to the hapten. **germ-cell d.**, **oosome**. **hidden d.**, an antigenic determinant located in an unexposed region of a molecule so that it is prevented from interacting with receptors on lymphocytes, or with antibody molecules, and is unable to induce an immune response. Such hidden determinants may appear following stereochemical alterations of molecular structure.

determination (de-ter'mī-na'shun) establishment of the exact nature of an entity or event. **embryonic d.**, the loss of pluripotency in any part of an embryo and its start on the way toward an unalterable fate. **sex d.**, the process by which the sex of an organism is fixed, associated, in man, with the presence or absence of the Y chromosome.

determiner (de-ter'min-er) determinant.

determinism (de-ter'min-izm) the theory that all phenomena are the result of antecedent conditions and that nothing occurs by chance. **psychic d.**, the theory that mental processes are always determined by motives.

dethyroidism (de-thi'roid-izm) a condition produced by abolition of the function of the thyroid gland.

dethyroidize (de-thi'roid-iz) to deprive of the function of the thyroid gland by chemical or surgical means.

Det. in dup., Det. in 2 plo. abbreviations for L. *de'tur in du'plo*, let twice as much be given.

detonation (de'to-na'shun) [L. *de* intensive + *tonare* to thunder] loudly explosive combustion.

detorsion (de-tor'shun) 1. the correction of a curvature or deformity; as the reduction of torsion of the testis. 2. a deficiency in a normal twisting as may occur in the early development of the heart.

detoxicate (de-tok'sī-kāt) detoxify.

detoxication (de-tok'sī-ka'shun) detoxification.

detoxification (de-tok'sī-fi-ka'shun) 1. reduction of the toxic properties of poisons. 2. treatment designed to free an addict from his drug habit. **metabolic d.**, reduction of the toxic properties of a substance by chemical changes induced in the body, producing a compound which is less poisonous or is more readily eliminated.

detoxify (de-tok'sī-fi) to remove the toxic quality of a substance.

Detre's reaction (det'erz) [László Detre, Hungarian physician, 1875-1939] differential cutireaction.

detrition (de-trish'un) [L. *de* away + *terere* to wear] a wearing away, as of the teeth, by friction.

detritivorous (de'tri-tiv'o-rus) subsisting on particulate matter (detritus), a mode of existence important in certain, such as aquatic, ecosystems.

detritus (de-tri'tus) [L., from *deterere* to rub away] particulate matter produced by or remaining after the wearing away or disintegration of a substance or tissue; designated as organic or nonorganic, depending on the nature of the original material. See also *biodetritus*.

detruncation (de'trun-ka'shun) [L. *de* off + *truncus* trunk] decapitation, or decollation; beheadal, chiefly of the fetus.

detrusor (de-tru'sor) [L. *detrudere* to push down] [NA] a general term for any body part that pushes down. **d. uri'nae**, collective term for the bundles of smooth muscle forming the muscular wall of the urinary bladder; they are arranged in a longitudinal and a circular layer and, on contraction, serve to expel the urine. Called also *detrusor muscle*.

D. et s. abbreviation for L. *de'tur et signe'tur*, let it be given and labeled.

detubation (de'tu-ba'shun) removal or withdrawal of a tube.

detumescence (de'tu-mes'ens) [L. *de* down + *tumescere* to swell] the subsidence of swelling, or turgor.

deutan (doo'tan) an individual exhibiting deuteranomalopia or deuteranopia, marked by derangement or loss of the red-green sensory mechanism but without noticeable shift or shortening of the spectrum or luminancy loss in the long-wave (red) end; includes those with the commoner and less severe types of color vision defect. Cf. *protan*.

deutencephalon (doo'ten-sef'ah-lon) [Gr. *deuteros* second + *enkephalos* brain] (*obs.*) diencephalon.

deuteranomalopia (doo'ter-ah-nom'ah-lo'pe-ah) [Gr. *deuteros* second + *anōmalos* irregular + *ōpē* sight + *-ia*] a problematic variant of normal color vision, in which none of the constituents for complete chromatic perception are lacking, but a greater than usual proportion of thallium green light to lithium red is required to match a fixed sodium yellow. The defect may be congenital or acquired, and occurs in different degrees of severity. Sometimes called "green weakness," and viewed as a transitional stage to "green blindness." Cf. the correlative terms *protanomalopia* and *tritanomalopia*.

deuteranomalopsia (doo'ter-ah-nom'ah-lop'se-ah) deuteranomalopia.

deuteranomalous (doo'ter-ah-nom'ah-lus) pertaining to or characterized by deuteranomaly (deuteranomalopia).

deuteranomaly (doo'ter-ah-nom'ah-le) deuteranomalopia.

deuteranope (doo'ter-ah-nōp') an individual exhibiting deuteranopia; a color deviant.

deuteranopia (doo'ter-ah-no'pe-ah) [Gr. *deuteros* second + *an-* neg. + *ōpē* sight + *-ia*] defective color vision of the dichromatic type, characterized by retention of the sensory mechanism for two hues only (blue and yellow) of the normal 4-primary quota, and lacking that for red and green and their derivatives, without loss of luminance or shift or shortening of the spectrum. Coined by von Kries (1897) to replace "green blindness." Cf. the correlative terms *protanopia*, *tritanopia*, and *tetartanopia*, in which the color vision deficiency is in the first, third, and fourth primary, respectively. Called also *aglaucopsia* or *aglaucopsia*.

deuteranopic (doo'ter-ah-nōp'ik) pertaining to or characterized by deuteranopia.

deuteranopsia (doo'ter-ah-nōp'se-ah) deuteranopia.

deuterate (du'ter-āt) to treat (combine) with deuterium.

deuteron (doo-te're-on) deuteron.

deuterium (du-te're-um) [Gr. *deuteros* second] the mass two isotope of hydrogen, symbol ^2H , or D . It is available as a gas or as heavy water and is used as a tracer or indicator in studying fat and amino acid metabolism; called also *heavy hydrogen* (see *hydrogen*). Cf. *protium* and *tritium*. **d. oxide**, heavy water; see under *water*.

deutero-, deuto- [Gr. *deuteros* second] combining form meaning second.

deuteroconidium (doo'ter-o-ko-nid'e-um) [*deutero-* + *conidium*] a reproductive element derived from a hemispore.

deutero-fat (doo'ter-o-fat) a fat containing deuterium.

deuterohematin (du'ter-o-hem'in) a derivative of hemin, $\text{C}_{30}\text{H}_{28}\text{O}_4\text{N}_4\text{FeCl}$.

deuterohemophilia (doo'ter-o-he'mo-fil'e-ah) a group of hemorrhagic disorders resembling classical hemophilia, due to coagulation factor deficiency or to the action of certain anticoagulants. See individual coagulation factors, under *factor*.

Deuteromyces (doo'ter-o-mi'zēz) Deuteromycetes.

Deuteromycetae (doo'ter-o-mi-se'te) Deuteromycetes.

deuteromycete (doo'ter-o-mi'sēt) any individual fungus of the Deuteromycetes; an imperfect fungus.

Deuteromycetes (doo'ter-o-mi-se'tēz) [*deutero-* + Gr. *mykēs* fungus] a class of the Eumycetes in which the perfect (sexual) stage is unknown; the Fungi Imperfecti. Called also *Deuteromyces* and *Deuteromycetae*.

deuteron (doo'ter-on) the nucleus of deuterium, or heavy hydrogen; deuterons are used as bombing particles for nuclear disintegration.

deuteropathic (doo'ter-o-path'ik) occurring secondarily to some other disease.

deuteropathy (doo'ter-op'ah-the) [*deutero-* + Gr. *pathos* disease] a disease that is secondary to another disease.

deuteropine (doo'ter-o-pin) an alkaloid, $\text{C}_{20}\text{H}_{21}\text{O}_3\text{N}$, from opium.

deuteroplasm (doo'ter-o-plazm') [*deutero-* + Gr. *plasma* something formed] the passive or inactive materials in protoplasm, especially reserve foodstuffs, such as yolk. Cf. *energid*.

deuteroporphyrin (doo'ter-o-por'fi-rin) a hemin-porphyrin derivative, $\text{C}_{30}\text{H}_{30}\text{O}_4\text{N}_4$.

deuterosome (doo'ter-o-sōm') [*deutero-* + Gr. *sōma* body] a cytoplasmic organelle of ciliating epithelial cells that plays a role in the formation of ciliary basal bodies, being the precursor of the procentriole.

deuterostome (doo'ter-o-stōm') an animal belonging to the Deuterostomia.

Deuterostomia (doo'ter-o-stōm'i-ah) [*deutero-* + Gr. *stoma* mouth + *-ia*] a series of the Eucoelomata, including the echinoderms, hemichordates, and chordates, in all of which the site of the blastopore is posterior—far from the mouth, which forms a new structure unrelated to the blastopore.

deuterotocia (doo'ter-o-to'se-ah) [*deutero-* + Gr. *tokos* birth] asexual reproduction in which the female produces offspring of both sexes.

deuterotoky (doo'ter-ot'o-ke) deuterotocia.

deuterotoxin (doo'ter-o-tok'sin) (*obs.*) the second of the three groups into which toxins may be divided on the basis of their affinity for antitoxin. It has less affinity for antitoxin than has prototoxin and more than has tritotoxin.

deuthyalosome (doo'thi-al'o-sōm) [Gr. *deuteros* second + *hyalos* glass + *sōma* body] the matured nucleus of an ovum.

deuto- see *deutero-*.

deutomerite (doo'to-me'rit) [*deuto-* + Gr. *meros* portion] the posterior portion of certain gregarine protozoa. Cf. *protomerite*.

deuton (doo'ton) deuteron.

deutonephron (doo'to-nef'ron) [*deuto-* + Gr. *nephros* kidney] mesonephros.

deutoplasm (doo'to-plazm) deuteroplasm.

deutoplasmolysis (doo'to-plaz-mol'fī-sis) destruction or disintegration of deutoplasm.

Deutschländer's disease (doich'len-derz) [Karl Ernst Wilhelm *Deutschländer*, surgeon in Hamburg, 1872–1942] 1. see under *disease*. 2. march foot.

devasation (de'vas-a'shun) [L. *de* away + *vas* vessel] (*obs.*) devascularization. **senile cortical d.**, interruption of the circulation to the cerebral cortex as a result of arteriosclerosis of the blood vessels.

devascularization (de-vas'ku-lar-i-za'shun) interruption of the circulation of blood to a part caused by obstruction or destruction of the blood vessels supplying it.

Devegan (dev'e-gan) trademark for a preparation of acetarsone.

development (de-vel'op-ment) the process of growth and differentiation. **arrested d.**, cessation of the development process at some stage prior to its normal completion. **cognitive d.**, the development of intelligence, conscious thought, and problem solving ability that begins in infancy. **mosaic d.**, the development of an embryo in a fixed, unalterable way, local regions being independent portions of a mosaic whole. **postnatal d.**, that which occurs after birth. **prenatal d.**, that which occurs before birth. **psychosexual d.**, 1. a general term for the developing sexuality of the individual as affected by biological, cultural, and emotional influences from prenatal life onward through the life cycle. 2. in psychoanalysis, libidinal maturation from infancy through adulthood (including the oral, anal, and genital stages). **psychosocial d.**, the development of the personality, including the acquisition of social attitudes and skills, from infancy through maturity. **regulative d.**, the development of an embryo, the determination of the various organs and parts being gradually attained through the action of inductors.

developmental (de-vel'op-men'tal) pertaining to development.

Deventer's diameter (de-ven'terz) [Hendrik van *Deventer*, Dutch obstetrician, 1651–1724] see *diameter obliqua pelvis*.

Devergie's attitude, disease (dev-er-zhēz') [Marie Guillaume Alphonse *Devergie*, French physician, 1798–1879] see under *attitude*, and see *pityriasis rubra pilaris*.

deviant (de've-ant) [L. *deviare* to turn aside] 1. varying from a determinable standard. 2. an individual with characteristics varying from what is considered normal, or standard. **color d.**, an individual whose color perception varies from the norm, usually lacking discrimination of a pair of primaries (red-green or blue-yellow); see *deuteranope*, *protanope*, and *tritanope*. **sex d.**, an individual exhibiting paraphilia; i.e., one whose sexual behavior varies from that normally considered socially or biologically acceptable. Called also *paraphiliac*.

deviation (de've-a'shun) [L. *deviare* to turn aside] a turning away from the regular standard or course. In ophthalmology, a tendency for the visual axes of the eyes to fall out of alignment due to muscular imbalance. **animal d.**, the attracting of zoophilous mosquitos from human beings by the proximity of animals preferred by the insects. **axis d.**, the direction of the mean QRS complex in the electrocardiogram; changes may be due to alteration in the anatomical position of the heart or to intraventricular conduction (ventricular preponderance). **complement d.**, inhibition of complement-mediated immune hemolysis in the presence of excess antibody. Called also *Neisser-Wechsberg phenomenon*. **conjugate d.**, deflection of two similar parts, as the eyes, in the same direction at the same time. **Her-ing-Hellebrand d.**, any deviation of the horopter from the circle. **immune d.**, modification of the immune response to an antigen by previous inoculation of the same antigen. **latent d.**, heterophoria. **manifest d.**, strabismus. **mini-**

mum d., the smallest deflection of a ray of light that can be produced by a given prism. **primary d.**, deviation of the visual axis of the squinting eye in strabismus when the sound eye fixates. **secondary d.**, deviation of the visual axis of the sound eye in strabismus when the squinting eye fixates. **sexual d.**, paraphilia. **skew d.**, downward and inward rotation of the eye on the side of the cerebellar lesion and upward and outward deviation on the opposite side. **squint d.**, squint angle; see under *angle*. **standard d.**, in standardized tests, a measure of deviations from a central value, determined as the square root of the average of the squares of all deviations from the mean; symbol σ . **strabismic d.**, deviation of the visual axis of an eye in strabismus. **d. to the left**, shift to the left. **d. to the right**, shift to the right.

device (dē-vis') something contrived for a specific purpose. **central-bearing d.**, a device that provides a central point of bearing, or support, between upper and lower occlusion rims, consisting of a contacting point attached to one occlusion rim and a plate that provides the surface on which the bearing point rests or moves. **central-bearing tracing d.**, a central-bearing device for making a tracing and/or for support between occlusion rims. **contraceptive d.**, one used to prevent conception, as a diaphragm or condom to prevent entrance of spermatozoa into the uterine cervix, or one inserted into the uterus (intrauterine contraceptive device) to prevent implantation of a fertilized ovum. **intrauterine d. (IUD)**, a coil, loop, T, or triangle of plastic or metallic substance inserted into the uterus to prevent conception. **left ventricular assist d.**, a circulatory support device consisting of a pump with afferent and efferent conduits attached to the left ventricular apex and the ascending aorta, respectively, each conduit containing a porcine valve to ensure unidirectional blood flow; the pump rests on the external chest wall and is connected to an external pneumatic power source and control circuit.

deviometer (de've-om'fē-ter) [deviation + Gr. *metron* measure] an instrument for measuring the amount of deviation in strabismus.

devisceration (de-vis'er-a'shun) [L. *de* away + *viscus* viscus] the removal of viscera. Cf. *evisceration*.

devitalization (de-vi'tal-i-za'shun) the deprivation of vitality or life, as of a tissue. **pulp d.**, the destruction of vitality of the pulp of a tooth.

devitalize (de-vi'tal-iz) [L. *de* from + *vita* life] to deprive of vitality or of life.

devolution (dev'o-lu'shun) [L. *de* down + *volvere* to roll] 1. the reverse of evolution. 2. catabolic change.

devolutive (dev'o-lu'tiv) characterized by devolution; specifically applied to a type of mental defect due to intercurrent destructive factors, based on the Jacksonian concept that the most recently (from the standpoint of evolution) acquired cerebral functions are the first to be impaired by states of ill health. Cf. *evolutive*.

devorative (dev'o-ra'tiv) [L. *devorare* to devour] (obs.) intended to be swallowed without chewing.

De Vries' theory (de-vrēz') [Hugo de Vries, botanist in Amsterdam, 1848-1935] see *theory of mutations*.

dewatered (de-wah'terd) having the water removed; a term applied to sludge from which the water has been removed by drying or pressing.

dewclaw (doo'klaw) a vestigial digit or claw in an animal.

dewlap (du'lap) a heavy fold of skin on the ventral aspect of the neck in animals.

deworming (de-werm'ing) the destruction and removal of worms from an infected individual.

dexamethasone (dek'sah-meth'ah-sōn) [USP] chemical name: 9-fluoro-11 β ,17,21-trihydroxy-16 α -methylpregna-1,4-diene-3,20-dione. A synthetic glucocorticoid, C₂₂H₂₉FO₅, occurring as a white to practically white, crystalline powder; used primarily as an anti-inflammatory in various conditions, including the collagen diseases and allergic states, administered orally or topically. It is also used in certain neoplastic diseases, soft tissue disorders, and hemolytic anemias, and is the basis of a screening test in the diagnosis of Cushing's syndrome. **d. acetate** [USP], an ester of dexamethasone, C₂₄H₃₁FO₆·H₂O, occurring as a clear, white to off-white, odorless powder, having actions and uses similar to those of the base. **d. sodium phosphate** [USP], an ester of dexamethasone, C₂₂H₂₈FN₂O₈P, occurring as a white or slightly yellow, crystalline powder, having actions and uses similar to those of the base; administered by intra-articular, soft tissue, intravenous or intramuscular injection, by inhalation, or applied topically to the skin and conjunctiva.

dexamisole (deks-am'i-sōl) chemical name: (R)-2,3,5,6-tetrahydro-6-phenyl-imidazo[2,1-b]thiazole; an antidepressant, C₁₁-H₁₂N₂S.

dexbrompheniramine (deks'brōm-fen-ir'ah-mēn) chemical name: γ -(4-bromophenyl)-N,N-dimethyl-2-pyridinepropanamine. The bromine analogue of dexchlorpheniramine, C₁₆H₁₉BrN₂, an antihistaminic drug. **d. maleate** [USP], the maleate salt of dexbrompheniramine, C₁₆H₁₉BrN₂·C₄H₄O₄, occurring as a white,

crystalline powder; administered orally for therapy and prophylaxis of conditions in which antihistamines may be effective.

dexchlorpheniramine (deks'klōr-fen-ir'ah-mēn) chemical name: γ -(4-chlorophenyl)-N,N-dimethyl-2-pyridinepropanamine. The dextrorotatory isomer of chlorpheniramine, C₁₆H₁₉ClN₂, an antihistaminic drug. **d. maleate** [USP], the maleate salt of dexchlorpheniramine, C₁₆H₁₉ClN₂·C₄H₄O₄, occurring as a white, crystalline powder; administered orally for therapy and prophylaxis of conditions in which antihistamines may be effective.

dexclamol hydrochloride (deks'klah-mōl) chemical name: (+)-2,3 α ,4,4 α ,8,9,13 β ,14-octahydro-3-(1-methyl ethyl)-1H-benzo[6,7]cyclohepta[1,2,3-de]pyrido[2,1-a]isoquinoline-3-ol hydrochloride; a sedative, C₂₄H₂₈NO·HCl.

Dexedrine (dek'sē-drēn) trademark for preparations of dextro-amphetamine sulfate.

dexetimide (dek-set'i-mid) chemical name: (S)-3-phenyl-1'-(phenylmethyl)-[3,4'-biperidine]-2,6-dione. An anticholinergic, C₂₃H₂₆N₂O₂, which has been tried as an antiparkinsonian agent.

deximafen (dek-sim'ah-fen) chemical name: (+)-2,3,5,6-tetrahydro-5-phenyl-1H-imidazo[1,2-a]imidazol; an antidepressant, C₁₁H₁₃N₃.

dexiocardia (dek'se-o-kar'de-ah) dextrocardia.

dexitropic (dek'se-ō-trop'ik) [Gr. *dexios* on the right + *tropos* a turning] wound in a spiral from left to right, as a shell.

dexivacaine (dek-siv'ah-kān) chemical name: (+)-1-methyl-2',6'-pipecoloxylidide; an anesthetic, C₁₅H₂₂N₂O.

Dexon (dek'son) trademark for a synthetic suture material, polyglycolic acid, a polymer that is completely absorbable and nonirritating.

Dexoval (dek'so-val) trademark for a preparation of methamphetamine hydrochloride.

dexpantenol (deks-pan'thē-nōl) chemical name: (R)-2,4-dihydroxy-N-(3-hydroxypropyl)-3,3-dimethylbutamide. The D(+) form of *panthenol* (pantothenyl alcohol), C₉H₁₉NO₄, the alcoholic analogue of pantothenic acid. It is claimed to be a precursor of coenzyme A, and is administered intravenously or intramuscularly to increase peristalsis in atony and paralysis of the lower intestine and orally to help relieve gas retention and abdominal distention in certain conditions. It is also applied topically to the skin to stimulate healing of the lesions of various dermatologic lesions such as burns, infected wounds, eczema, diaper rash, etc.

dexpropranolol hydrochloride (deks'-pro-pran'o-lōl) chemical name: 1-[(1-methylethyl)amino]-3-(1-naphthalenyloxy)-2-propanol hydrochloride. The dextrorotatory isomer of propranolol, C₁₆H₂₁NO₂·HCl, having cardiac depressant properties similar to those of the parent compound; used as an antiarrhythmic.

dexter (dek'ster) [L.] right; [NA] a term denoting the right-hand one of two similar structures, or the one situated on the right side of the body.

dextrad (deks'trad) toward the right side.

dextral (deks'tral) 1. right as opposed to left; right-handed. 2. a right-handed person.

dextrality (deks-tral'i-te) [L. *dexter* right] the preferential use, in voluntary motor acts, of the right member of the major paired organs of the body, as the right eye, hand, or foot.

dextran (dek'stran) a water-soluble polysaccharide of glucose (dextrose) produced by the action of *Leuconostoc mesenteroides* on sucrose; used as a plasma volume extender. Specific preparations are designated according to their average molecular weight divided by 1000, as *dextran 40*, *dextran 45*, and so on.

dextranomer (deks-tran'o-mer) a preparation of highly hydrophilic dextran polymers occurring as small beads, used in débridement of secreting wounds, such as venous stasis ulcers; the sterilized beads are poured over secreting wounds to absorb wound exudates and prevent crust formation.

dextranucrase (deks'tran-soo'krās) an enzyme that synthesizes dextran from sucrose.

dextrates (deks'trāts) a tablet binder and diluent, composed of a mixture of sugars (approximately 92 per cent dextrose monohydrate and 8 per cent high saccharides; dextrose equivalent is 95 to 97 per cent) resulting from the controlled enzymatic hydrolysis of starch.

dextraural (deks-trau'ral) [L. *dexter* right + *auris* ear] hearing better with the right ear than with the left.

dextriferron (deks'tri-fer'on) [NF] a complex of ferric hydroxide and partially hydrolyzed dextrin used in the treatment of iron-deficiency anemia.

dextrin (deks'trin) [L. *dexter* right] any one, or the mixture, of the intermediate products (C₆H₁₀O₅)_n, formed during the hydrolysis of starch, which are dextrorotatory, soluble in water, and precipitable by alcohol. Commercial dextrin or starch sugar is a white or yellowish powder, in aqueous solution forming mucilage. See *erythro-dextrin*.

dextrin-1,6-glucosidase (deks'trin-glu-ko'si-dās) dextrin 6-glucanohydrolase: an enzyme which catalyzes the hydrolysis of α -1-6-glucan links in dextrans containing short 1,6-linked side chains; called also *amylase-1,6-glucosidase* and *debranching enzyme*.

dextrinase (deks'trin-ās) an enzyme that catalyzes the conversion of starch into isomaltose.

dextrinate, dextrinize (deks'trin-āt; deks'trin-iz) to convert into dextrin.

dextrinose (deks'trin-ōs) isomaltose.

dextrinosis (deks'tri-no'sis) accumulation in the tissues of an abnormal polysaccharide. **limit d.**, glycogen storage disease, type III; see under *disease*.

dextrinuria (deks'trin-u're-ah) [*dextrin* + Gr. *ouron* urine + *-ia*] the presence of dextrin in the urine.

dextro- [L. *dexter* right] 1. a combining form denoting relationship to the right. 2. chemical prefix, for which the symbol (+) is frequently substituted, used to emphasize that the substance is the dextrorotatory enantiomorph, whether the configurational family is known or not. This practice avoids possible confusion with the occasional erroneous use of *d-* standing alone to designate the configurational family to which the substance belongs. Opposed to *levo-*.

dextroamphetamine (dek'stro-am-fet'ah-mēn) chemical name: (S)- α -methylbenzenethanamine. The dextrorotatory isomer of amphetamine, which has substantially more central nervous system stimulating effect than the levorotatory form (levamphetamine) or racemic forms of amphetamine. Abuse of this drug may lead to dependence; see *amphetamine*, def. 1. **d. phosphate** [USP], a white, crystalline powder, $C_9H_{13}N \cdot H_3PO_4$, having the same actions as the base, used chiefly for its central stimulant effects in the treatment of mental depression, psychopathic states, narcolepsy, hyperkinetic behavior disorders in children, and exogenous obesity; administered orally. **d. sulfate** [USP], a white, crystalline powder, $(C_9H_{13}N)_2 \cdot H_2SO_4$, having the same actions and uses as the phosphate salt; administered orally.

dextrocardia (deks'tro-kar'de-ah) location of the heart in the right hemithorax, with the apex pointing to the right, occurring with transposition (situs inversus) of the abdominal viscera, or without such transposition (*isolated d.*). **mirror-image d.**, location of the heart in the right side of the chest, the atria being transposed and the right ventricle lying anteriorly and to the left of the left ventricle, usually associated with complete situs inversus. **secondary d.**, displacement of the heart to the right as a result of disease of the pleura, diaphragm, or lungs.

dextrocardiogram (deks'tro-kar'de-o-gram) [L. *dexter* right + *cardiogram*] that part of the normal cardiogram which represents the action of the right side of the heart.

dextrocerebral (deks'tro-ser'e-bral) [L. *dexter* right + *cerebrum*] having the right hemisphere of the brain more active than the left.

dextroclination (deks'tro-klī-na'shun) [L. *dexter* right + L. *clinatus* leaning] rotation of the upper poles of the vertical meridians of the two eyes to the right; called also *dextrocycloclination* and *dextrotorsion*. Cf. *levoclination*.

dextrocompound (deks'tro-kom'pound) a dextrorotatory compound.

dextrocular (deks-trok'u-lar) right eyed; affected with dextroclarity.

dextroclarity (deks'trok-u-lar'i-te) [L. *dexter* right + *oculus* eye] the condition of having greater visual power in the right eye and, therefore, using it more than the left.

dextrocycloclination (deks'tro-si'klo-duk'shun) dextroclination.

dextroclination (deks'tro-duk'shun) [L. *dexter* right + *ducere* to draw] movement of either eye to the right.

dextrogastria (deks'tro-gas'tre-ah) [L. *dexter* right + Gr. *gaster* stomach] displacement of the stomach to the right, being simple displacement or situs inversus.

dextroglucose (deks'tro-glu'kōs) dextrose.

dextrogram (deks'tro-gram) [*dextro-* + Gr. *graphein* to record] an electrocardiographic tracing showing right axis deviation, indicative of right ventricular hypertrophy.

dextrogyral (deks'tro-ji'ral) [L. *dexter* right + *gyrare* to turn] dextrorotatory.

dextrogyration (deks'tro-ji-ra'shun) a turning to the right or motion to the right; said of movements of the eye and of the plane of polarization.

dextromanual (deks'tro-man'u-al) [L. *dexter* right + *manus* hand] right handed.

dextromenthol (deks'tro-men'thol) an oxidation product of menthol.

dextromethorphan hydrobromide (dek'stro-meth'or-fan) [USP] chemical name: 3-methoxy-17-methyl-9 α ,13 α ,14 α -morphinan hydrobromide monohydrate. An antitussive, $C_{18}H_{25}NO \cdot HBr \cdot H_2O$, occurring as practically white crystals or as a crystalline powder; administered orally.

dextropedal (deks-trop'ē-dal) [L. *dexter* right + *pes* foot] using the right leg in preference to the left.

dextroposition (deks'tro-po-zish'un) displacement to the right.

dextropropoxyphene (dek'stro-pro-pok'se-fēn) propoxyphene.

dextrorotary (deks'tro-ro'tah-re) dextrorotatory.

dextrorotatory (deks'tro-ro'tah-to-re) [L. *dexter* right + *rotare* to turn] turning the plane of polarization, or rays of light, to the right; called also *dextrogyral*.

dextrose (deks'trōs) chemical name: D-glucose monohydrate. A monosaccharide, $C_6H_{12}O_6 \cdot H_2O$, known as *glucose* (q.v.) in biochemistry and physiology. The official preparation [USP] is usually obtained by the hydrolysis of starch, and occurs as colorless crystals or as a white, crystalline or granular powder; it is used chiefly as a fluid and nutrient replenisher, usually administered by intravenous infusion. It is also used as a diuretic and alone or in combination with other agents for various other clinical purposes.

dextrosinistral (deks'tro-sin'is-tral) [L. *dexter* right + *sinister* left] extending from right to left. The term is also applied to a person naturally left-handed but trained to use the right hand in certain performances.

dextrosozone (deks'tro-so'zōn) glucosazone.

Dextrostix (dek'stro-stiks) trademark for a reagent strip designed for determination of blood-glucose levels with the use of fingertip venous blood.

dextrosuria (deks'tro-su're-ah) [*dextrose* + Gr. *ouron* urine + *-ia*] the presence of dextrose (d-glucose) in the urine; called also *glucosuria*.

dextrothyroxine sodium (deks'tro-thi-rok'sin) [USP] chemical name: O-(4-hydroxy-3,5-diiodophenyl)-3,5-diiodo-D-tyrosine monosodium salt hydrate. The sodium salt of the dextrorotatory isomer of thyroxine, $C_{15}H_{10}I_4NNaO_4 \cdot xH_2O$, occurring as a light yellow to buff-colored powder; used as an oral anticholesteremic, mainly to treat hypercholesteremia in euthyroid patients.

dextrotorsion (deks'tro-tor'shun) dextroclination.

dextrotropic (deks'tro-trop'ik) [L. *dexter* right + Gr. *tropos* a turning] turning to the right; see also *dextiotropic*.

dextroversion (deks'tro-ver'shun) [L. *dexter* right + *vertere* to turn] 1. version to the right side; especially movement of the eyes to the right. 2. location of the heart in the right hemithorax, the left ventricle remaining on the left as in the normal position, but lying anterior to the right ventricle.

dextroverted (deks'tro-vert'ed) turned to the right.

dezocine (dez'o-sēn) chemical name: (-)-13S*-amino-5,6,7,8-,9,10,11 α ,12-octahydro-5 α -methyl-5,11-methanobenzocyclodecen-3-ol; an analgesic, $C_{16}H_{23}NO$.

DFDT a powerful insecticide, difluoro-diphenyl-trichloroethane; called also *GIX*.

DFP diisopropyl fluorophosphate, see *isofluorophate*.

dg decigram.

DHA dehydroepiandrosterone.

D.H.E.45 trademark for dihydroergotamine.

d'Herelle phenomenon (dē-rel') [Felix Hubert d'Herelle of the Pasteur Institute, Paris, 1873-1949] see *Twort-d'Herelle phenomenon*, under *phenomenon*.

D.Hg., D.Hy. Doctor of Hygiene.

dhobie itch (do'be) [Hindu "laundryman"] see under *itch*.

dhurrin (du'rin) a cyanogenetic glycoside, $C_{14}H_{17}NO_7$, from sorghum which hydrolyzes into parahydroxy benzaldehyde, glucose, and hydrocyanic acid.

di- [Gr. *dis* twice, double] 1. a prefix meaning twice. 2. a variant spelling of *de*, *dia-*, and *dis-*.

dia- [Gr. *dia* through] a prefix meaning through, between, apart, across, or completely.

diabetes (di'ah-be'tēz) [Gr. *diabētēs* a syphon, from *dia* through + *bainein* to go] a general term referring to disorders characterized by excessive urine excretion (polyuria), as in diabetes mellitus and diabetes insipidus. When used alone, the term refers to diabetes mellitus. **adult-onset d.**, maturity-onset d. **d. albuminuricus**, diabetes with nephrotic syndrome. **alloxan d.**, a condition resembling diabetes, produced by the injection of 100-200 mg. of alloxan per kilogram of body weight. **artificial d.**, puncture or other type of experimental d. **brittle d.**, diabetes that is difficult to control, characterized by unexplained oscillation between hypoglycemia and acidosis. **bronze d., bronzed d.**, hemochromatosis. **chemical d.**, a mild abnormality of carbohydrate tolerance manifested by hyperinsulinemia or hyperglycemia only when the patient is subjected to stress loads of glucose; called also *latent d.* **experimental d.**, diabetes induced experimentally; artificial d. **gestational d.**, that in which onset or recognition of impaired glucose tolerance occurs during pregnancy. **gouty d.**, diabetes associated with the gouty diathesis. **growth-onset d., juvenile d.** **d. innocens**, a condition marked by the presence of glycosuria which is not associated with pancreatic disease. **d. inositolus**, diabetes in which the sugar of the urine is inositol; inosituria. **d. insipidus**, a metabolic disorder due to injury of the neurohypophyseal system, which results in a deficient quantity of antidiuretic hormone being released or produced, and thus in failure of

tubular reabsorption of water in the kidney. As a consequence, there is the passage of a large amount of urine of low specific gravity, and great thirst; it is often attended by voracious appetite, loss of strength, and emaciation. It may be inherited, acquired, or idiopathic. Another form occurs (nephrogenic diabetes insipidus) in which the renal tubules are refractory to the antidiuretic effect of vasopressin.

d. insipidus, nephrogenic, a rare congenital and familial form of diabetes insipidus, resulting from failure of the renal tubules to reabsorb water; there is excessive production of antidiuretic hormone but the tubules fail to respond to it. **insulin-deficient d.**, juvenile d. **juvenile d.**, **juvenile-onset d.**, severe diabetes mellitus, usually having an abrupt onset before the age of 25 and tending to be difficult to control and unstable ("brittle"); plasma insulin is often deficient and ketoacidosis occurs frequently, and oral hypoglycemics and diet are almost never effective, daily injections of insulin being required in almost all patients. Called also *growth-onset d.* and *ketosis-prone d.* **ketosis-prone d.**, juvenile d. **ketosis-resistant d.**, maturity-onset d. **Lancereaux's d.**, diabetes mellitus with marked emaciation. **latent d.**, chemical d. **lipotrophic d.**, diabetes characterized by deficiency or absence of fat storage in the body. **lipoplethoric d.**, maturity-onset d. **lipuric d.**, diabetes marked by the presence of fat in the urine. **masked d.**, obesity without glycosuria; at a later stage it passes into diabetes mellitus. **maturity-onset d.**, a mild, often asymptomatic, form of diabetes mellitus with onset usually after 40 years of age, most often in overweight persons; although pancreatic insulin reserve is diminished, it is almost always sufficient, except under stressful conditions, to prevent ketoacidosis, and dietary control and/or oral hypoglycemics are usually effective. Called also *adult-onset d.* and *ketosis-resistant d.* **d. mellitus**, a metabolic disorder in which the ability to oxidize carbohydrates is more or less completely lost, usually due to faulty pancreatic activity, especially of the islets of Langerhans, and consequent disturbance of normal insulin mechanism. This produces hyperglycemia with resulting glycosuria and polyuria giving symptoms of thirst, hunger, emaciation, and weakness and also imperfect combustion of fats with resulting acidosis, sometimes leading to dyspnea, lipemia, ketonuria, and finally coma. It is frequently associated with progressive disease of the small vessels (microangiopathy), particularly by affecting the eye (diabetic retinopathy) and kidney, and atherosclerosis, and there may also be pruritus and lowered resistance to pyogenic infections. Called also *Willis' disease*. See also *juvenile d.* and *maturity-onset d.* **Mosler's d.**, inosuria with polyuria. **neurogenous d.**, a form due to certain lesions of the brain. **overflow d.**, the loss of sugar into the urine when it is steadily administered intravenously in amounts greater than can be utilized by the body; dogs can thus utilize about 7 gm. per kilogram of body weight per hour. All above this passes into the urine. **overt d.**, diabetes manifested by symptoms, as opposed to chemical diabetes. **pancreatic d.**, d. mellitus. **phlorhizin d.**, a form produced by administering phlorhizin. **phosphate d.**, a genetically determined failure of renal tubular reabsorption of phosphates, resulting in osteomalacia; it is believed to be due to impairment of the ability to utilize vitamin D. **piqûre d.**, puncture d. **puncture d.**, a form produced by puncturing the floor of the fourth ventricle in the medulla oblongata; called also *piqûre d.* **renal d.**, diabetes thought to be dependent on defective renal function; renal glycosuria. **skin d.**, Urbach's term for the "syndrome of therapy-resistant, recurrent or chronic dermatosis, a high fasting skin sugar level together with a normal blood sugar curve, and pronounced improvement of the skin disease, as well as a drop in the high skin sugar level, on a low carbohydrate diet, sometimes combined with insulin." **steroid d.**, **steroidogenic d.**, diabetes induced by sustained administration of glucocorticoids. **subclinical d.**, a state characterized by an abnormal glucose-tolerance test but without any clinical signs of diabetes. **temporary d.**, a temporary state characterized by an abnormality shown on the glucose-tolerance test, which later becomes normal. **toxic d.**, diabetes due to poisoning.

diabetic (di'ah-bet'ik) 1. pertaining to or affected with diabetes. 2. a person affected with diabetes. See under *diabetes* for specific forms.

diabetid (di'ah-be'tid) diabetic dermatopathy.

diabetogenic (di'ah-bet'o-jen'ik) [*diabetes* + Gr. *gennan* to produce] producing diabetes.

diabetogenous (di'ah-be-toj'ē-nus) produced by diabetes.

diabetograph (di'ah-be-to-graf) [*diabetes* + Gr. *graphein* to write] an instrument used in urinalysis, with a graduated scale to show the proportion of glucose present.

diabetometer (di'ah-be-tom'ē-ter) [*diabetes* + Gr. *metron* measure] a polariscope for use in estimating the percentage of sugar in the urine.

Diabinese (di-ab'i-nēs) trademark for chlorpropamide.

diabolepsy (di-ab'o-lep'se) [L. *diabolus* devil + Gr. *lēpsis* taking hold, a seizure] (*obs.*) a state in which the subject believes he is possessed by a devil, or that he is endowed with supernatural powers.

diabrosis (di'ah-bro'sis) [*dia-* + Gr. *brōsis* eating] perforation resulting from a corrosive process; perforating ulceration.

diabrotic (di'ah-brot'ik) [Gr. *diabrotikos*] 1. ulcerative; caustic. 2. a corrosive or escharotic agent.

diacele (di'ah-sel) (*obs.*) the third ventricle of the cerebrum (ventriculus tertius cerebri [NA]).

diacetate (di-as'ē-tāt) any salt of acetoacetic acid.

diacetemia (di'as-ē-te'me-ah) [*diacetic acid* + Gr. *haima* blood + *-ia*] the presence of acetoacetic acid (diacetic acid) in the blood.

diaceticaciduria (di'ah-set'ik-as'ī-du're-ah) diaceturia.

diacetoneuria (di-as'ē-to-nu're-ah) diaceturia.

diaceturia (di'as-ē-tu're-ah) [*diacetic acid* + Gr. *ouron* urine + *-ia*] the excretion of acetoacetic acid (diacetic acid) in the urine; called also *acetoacetic aciduria*.

diacetyl (di-as'ē-til) a yellow liquid, 2,3-butane-dione, CH₃-COCOCH₃, having the odor of butter. **d. peroxide**, a compound, CH₃CO·O·O·CO·CH₃, used in solution as an antiseptic.

diacetylmorphine (di'ah-se'til-mor'fēn) heroin; a white, bitterish, crystalline powder, C₁₇H₁₇(O·OC·CH₃)₂·NO, the diacetic acid ester of morphine, formerly used as an analgesic and narcotic. Because it is highly addictive, the importation of heroin and its salts into the United States, as well as its use in medicine, is illegal. Called also *acetomorphine* and *dimorphine*. **d. hydrochloride**, a white, crystalline powder, C₁₇H₁₇(O·CO·CH₃)₂ON·HCl·H₂O. See *diacetylmorphine*.

Diachlorus (di-ah-klo'rus) a genus of tabanid flies of South America.

diachorema (di'ah-ko-re'mah) [Gr. *diachōrēma*] excrement; feces.

diachoresis (di-ah-ko-re'sis) defecation.

diachylon (di-ak'ī-lon) [*dia-* + Gr. *chylos* juice] a plaster consisting essentially of lead oleate mixed with small amounts of glycerin and oleic acid; used as an adhesive for excoriated surfaces and wounds.

diacid (di-as'id) [Gr. *dis* twice + *acid*] having two replaceable hydrogen atoms; a dibasic acid, having the acid activity of two molecules of a monobasic acid.

diacclasis (di-ak'lah-sis) [*dia-* + Gr. *klasis* fracture] osteoclasia.

diacblast (di'ah-klast) an instrument for perforating the fetal skull in craniotomy.

diacrinous (di-ak'ri-nus) [Gr. *diakrinein* to separate] giving off secretion directly, as from a filter; said of gland cells, as those of the kidney. Opposed to *ptyocrinous*.

diacrisis (di-ak'ri-sis) [Gr. *diakrisis* separation] 1. diagnosis. 2. a disease marked by a morbid state of the secretions. 3. a critical discharge or excretion.

diacritic (di-ah-krit'ik) [*dia-* + Gr. *krinein* to judge] distinguishing; diagnostic.

diactinic (di'ak-tin'ik) transmitting chemically active rays.

diactinism (di-ak'tin-izm) [*dia-* + Gr. *aktis* ray] the property of transmitting chemically active rays.

diad (di'ad) 1. (*obs.*) having a valency or combining power of two. 2. dyad.

diaderm (di'ah-derm) [*dia-* + Gr. *derma* skin] the blastoderm during that stage in which it consists of an ectoderm and an entoderm.

diadermic (di-ah-der'mik) 1. pertaining to the diaderm. 2. through the skin.

diadochocinesia (di-ad'ō-ko-si-ne'se-ah) diadochokinesia.

diadochocinetism (di-ad'ō-ko-si-net'ik) diadochokinetic.

diadochokinesia (di-ad'ō-ko-si-ne'se-ah) [Gr. *diadochos* succeeding + *kinēsis* motion] the function of arresting one motor impulse and substituting for it one that is diametrically opposite.

diadochokinesis (di-ad'ō-ko-si-ne'sis) diadochokinesia.

diadochokinetic (di-ad'ō-ko-si-net'ik) pertaining to diadochokinesia.

Diadol (di'ah-dol) trademark for a preparation of allobarbitol.

Diafen (di'ah-fen) trademark for a preparation of diphenylpyrrolone hydrochloride.

diagnose (di'ag-nōs) to make a diagnosis of; to recognize the nature of an attack of disease.

diagnosis (di'ag-no'sis) [*dia-* + Gr. *gnōsis* knowledge] 1. the art of distinguishing one disease from another. 2. the determination of the nature of a case of disease. **biological d.**, diagnosis by tests performed on animals, as by the Aschheim-Zondek test. **clinical d.**, diagnosis based on signs, symptoms, and laboratory findings during life. **cytologic d.**, cytologic diagnosis. **cytologic d.**, the diagnosis of disease, both benign and malignant, by study of exfoliated cells; called also *cytologic d.* **differential d.**, the determination of which one of two or more diseases or conditions a patient is suffering from, by systematically comparing and contrasting their clinical findings. **direct d.**, pathologic diagnosis by observing structural lesions or pathognomonic symptoms. **d. ex juvan'tibus**, diagnosis based on the results of treatment. **d. by exclusion**, recognition of a disease by excluding all other known diseases. **laboratory d.**, diagnosis based on the findings of various laboratory examinations or measurements. **niveau d.** [Fr. "level diagnosis"], localiza-

tion of the exact level of a lesion; as, for instance, of an intervertebral tumor. **pathologic d.**, diagnosis by observing the structural lesions present. **physical d.**, determination of disease by inspection, palpation, percussion, and auscultation. **provocative d.**, the induction of a condition for the purpose of diagnosis, as the induction of a fit in a doubtful case of epilepsy. **roentgen d.**, diagnosis made by means of roentgen rays. **serum d.**, diagnosis by means of the analysis of serums; immuno-diagnosis.

diagnostic (di'ag-nos'tik) pertaining to or subserving diagnosis; distinctive of or serving as a criterion of a disease, as signs and symptoms.

diagnosticate (di'ag-nos'te-kāt) diagnose.

diagnostician (di'ag-nos-tish'an) an expert in diagnosis.

diagnosics (di'ag-nos'tiks) the science and practice of diagnosis of disease.

diagnosticum (di'ag-nos'te-kum) a preparation used in tests and experiments. **Ficker's d.**, an emulsion of killed typhoid bacilli for use in the Gruber reaction.

diagram (di'ah-gram) a graphic representation, in simplest form, of an object or concept, made up of lines and lacking entirely any pictorial elements. **vector d.**, a diagram representing the direction and magnitude of electromotive forces of the heart for one entire cycle, based on analysis of the scalar electrocardiogram.

diagrammatic (di'ah-grah-mat'ik) pertaining to or of the nature of a diagram.

diagraph (di'ah-graf) [*dia-* + Gr. *graphein* to write] an instrument for recording outlines; used in craniometry, etc.

diakinesis (di'ah-ki-ne'sis) [*dia-* + Gr. *kinēsis* motion] the stage of first meiotic prophase in which the nucleolus and nuclear envelope disappear and the spindle fibers form.

Dial (di'al) trademark for a preparation of allobarbitol.

dial (di'al) [L. *dialis* daily, from *dies* day] a circular area with graduations around the circumference and a centrally fixed pointer for indicating values of time, pressure, etc. **astigmatic d.**, a diagram arranged like the face of a watch used to determine the presence and axis of astigmatism.

Dialister (di'ah-lis'ter) a genus of minute gram-negative rod-shaped bacteria found in the respiratory tract. They pass some bacteria-proof filters, and at one time *D. pneumosintes* was thought to be etiologically related to epidemic influenza.

diallyl (di-al'il) 1. any compound containing two allyl molecules. 2. a liquid unsaturated hydrocarbon, $\text{CH}_2\text{CH}=\text{CH}_2\cdot\text{CH}_2\cdot\text{CH}=\text{CH}_2$, having the odor of radishes. **d. sulfide**, allyl sulfide.

diallylbisnortoxiferin dichloride (di-al'il-bis-nor-tok'si-fer-in) alcuronium chloride.

Dialog (di'ah-log) trademark for a preparation of allobarbitol and acetaminophen.

Dialume (di'ah-loom) trademark for a preparation of dried aluminum hydroxide gel.

dialurate (di-al'u-rāt) a salt of dialuric acid.

dialysance (di'ah-li'sans) [*dialysis* + *-ance* suffix denoting action or process] the minute rate of net exchange of a substance between blood and bath fluid, per unit blood-bath concentration gradient; a parameter in artificial kidney kinetics (nonfiltration) functionally equivalent to the clearance of the natural kidney.

dialysate (di-al'i-sāt) the material that passes through the membrane in dialysis.

dialysis (di-al'i-sis) [*dia-* + Gr. *lysis* dissolution] the process of separating crystalloids and colloids in solution by the difference in their rates of diffusion through a semipermeable membrane: crystalloids pass through readily, colloids very slowly or not at all. See also *hemodialysis*. **Abderhalden's d.**, Abderhalden's reaction. **cross d.**, dialytic parabiosis. **equilibrium d.**, a technique employed to measure primary interaction of hapten and antibody. A container is employed in which two cells are separated by cellophane. Antibody is placed in one cell and hapten in the opposite one. The hapten will pass through the cellophane until, at equilibrium, an equivalent number of free hapten molecules is present in either cell on opposite sides of the membrane. In the cell containing antibody, additional hapten is present, combined with the antibody molecules. The use of radiolabeled hapten molecules permits calculation of the ratio of bound to free hapten, thus permitting determination of the association constant of hapten antibody reactions. **lymph d.**, removal of urea and other elements from lymph collected from the thoracic duct, treated outside the body, and later reinfused. **peritoneal d.**, dialysis through the peritoneum, the dialyzing solution being introduced into and removed from the peritoneal cavity as either a continuous or an intermittent procedure. **d. ret'inae**, a tear in the retina at the ora serrata.

dialyzable (di-ah-liz'ah-b'l) capable of dialysis or of passing through a membrane.

dialyzed (di'ah-lizd) separated or prepared by dialysis.

dialyzer (di'ah-liz'er) an apparatus for effecting dialysis; see *hemodialyzer*.

Diamanus (di'ah-ma'nus) a genus of fleas. **D. monta'nus**, a flea of rodents in the western United States which has been implicated in the transmission of sylvatic plague; formerly called *Ceratophyllus acustus*, *C. montanus*, and *Oropsylla montana*.

diameter (di-am'e-ter) the length of a straight line passing through the center of a circle and connecting opposite points on its circumference; hence the distance between two specified opposite points on the periphery of a structure such as the cranium or pelvis. **anteroposterior d.**, the distance between two points located on the anterior and posterior aspects, respectively, of the structure being measured; such as the true conjugate diameter of the pelvis, or the occipitofrontal diameter of the skull. **anterotransverse d.** (of the cranium), temporal d. **Baudelocque's d.**, external conjugate diameter. **biischial d.**, transverse diameter of pelvic outlet. **biparietal d.**, the distance between the two parietal eminences. **bisacromial d.**, the distance between the outermost points of the shoulder. **bisiliac d.**, the distance between the two most remote points of the iliac crests. **bispinous d.**, the distance between the opposite spines of the ischia. **bitemporal d.**, the distance between the two extremities of the coronal suture. **buccolingual d.**, the distance from the buccal to the lingual surface of a tooth crown at its widest point or greatest curvature. **cervicobregmatic d.**, the distance between the center of the anterior fontanel and the junction of the neck with the floor of the mouth. **coccygeopubic d.**, the distance from the tip of the coccyx to the under margin of the symphysis pubis. **conjugate d.**, the distance between two specified opposite points on the periphery of the pelvic inlet, usually used in reference to the true conjugate diameter. **conjugate d., anatomic**, the true conjugate diameter. **conjugate d., diagonal**, a diameter of the pelvic inlet: the distance from the posterior surface of the pubis to the tip of the sacral promontory; called also *conjugata diagonalis* and *diagonal conjugate*. **conjugate d., external**, the distance from the depression under the last lumbar spine to the upper margin of the pubis; called also *external conjugate* and *Baudelocque's d. or line*. **conjugate d., internal**, true conjugate d. **conjugate d., obstetric**, the shortest anteroposterior diameter of the pelvic inlet; the distance from a point 1 cm. below the top of the pubis to the tip of the sacral promontory, measuring 11 to 13 cm. in the normal pelvis. So called because it is intimately concerned in the process of labor. Called also *obstetric conjugate* and *conjugata vera obstetrica*. **conjugate d., true**, the anteroposterior diameter of the superior aperture of the minor pelvis (pelvic inlet), measured from the superior margin of the symphysis pubis to the sacrovertebral angle; called also *conjugata* [NA], *conjugata anatomica*, *conjugata vera*, *anatomic*, *internal*, or *true conjugate*, and *anatomic conjugate d.* **cranial d's**, distances measured between certain landmarks of the skull, such as the *biparietal d.*, *bitemporal d.*, *cervicobregmatic d.*, *frontomental d.*, *occipitofrontal d.*, *occipitomentale d.*, and *suboccipitobregmatic d.* **craniometric d.**, any line connecting two craniometric points of the same name. **extracanthic d.**, the distance between the lateral points of junction of the upper and lower eyelids of the two eyes. **frontomental d.**, the distance from the forehead to the chin. **fronto-occipital d.**, occipitofrontal d. **intercanthic d.**, the distance between the medial points of junction of the upper and lower eyelids of the two eyes. **intercrystal d.**, the distance between the middle points of the iliac crests. **intertuberal d.**, the distance between the sciatic notches. **longitudinal d., inferior**, the distance from the foramen cecum to the internal occipital protuberance. **mento-occipital d.**, occipitomentale d. **mentoparietal d.**, the distance from the chin to the vertex of the skull. **d. obli'qua pel'vis** [NA], **oblique diameter of pelvis**, the oblique diameter of the superior aperture of the minor pelvis, measured from one sacroiliac articulation to the iliopubic eminence of the other side. Designated right or left depending on the sacroiliac joint used for reference; the left is uniformly 0.5 cm. shorter than the right. **occipitofrontal d.**, the distance from the external occipital protuberance to the most prominent midpoint of the frontal bone; called also *fronto-occipital d.* **occipitomentale d.**, the distance from the external occipital protuberance to the most prominent midpoint of the chin; called also *mento-occipital d.* **parietal d.**, the distance between tuberosities of parietal bones; called also *posterotransverse d.* **pelvic d.**, any diameter of the pelvis. **posterotransverse d.**, parietal d. **pubosacral d.**, true conjugate d. **pubotuberosity d.**, the distance from the tuberosity of the ischium to a point on the superior ramus of the pubis which is located directly perpendicular to the tuberosity. **sacropubic d.**, the distance from the tip of the sacrum or coccyx to the lower margin of the symphysis pubis. **sagittal d.**, the distance from the glabella to the external occipital protuberance. **suboccipitobregmatic d.**, the distance from the lowest posterior point of the occiput to the center of the anterior fontanel. **temporal d.**, the distance between the tips of the alae magnae; called also *anterotransverse d.* **d. transversa pel'vis** [NA], transverse diameter of pelvis: the greatest distance from side to side of the superior aperture of the minor pelvis. **transverse d.**, the distance between two points located on the opposite sides of the body part being measured, such as the biparietal diameter of the head. **transverse d. of pelvis**, d. transversa pelvis. **transverse**

Diameters of pelvic inlet (see also pelvic planes) (Moloy).

d. of pelvic outlet, the distance between the medial surfaces of the ischial tuberosities (average length 11 cm.); called also *biischial d.* **vertebromammmary d.**, the anteroposterior diameter of the chest. **vertical d.**, the distance between two points situated on the upper and lower aspects of the structure being measured, such as the distance between the occipital foramen and the vertex of the skull.

diamide (di-am'id) [L. *di* two + *amide*] 1. a compound which contains two amido groups. 2. hydrazine.

diamidine (di-am'i-dēn) a compound that contains two amidine groups.

diamido- a prefix indicating the possession of two amido groups.

diamine (di'ah-mēn'; di'ah-min') [L. *di* two + *amine*] 1. a compound which contains two amino groups. 2. hydrazine sulfate, $N_2H_5HSO_4$, used as a germicide. **diethylene d.**, piperazine.

diaminoacridine (di-am'i-no-ak'rī-din) proflavine.

diaminodiphenylsulfone (di-am'i-no-di-fen'il-sul'fōn) dapsone. **diacetyl d.**, acedapsone.

diaminodiphosphate (di-am'i-no-di-fos'fah-tid') a phosphate containing two atoms of nitrogen and two of phosphorus to the molecule.

diaminomonophosphate (di-am'i-no-mon'o-fos'fah-tid') a phosphate containing two atoms of nitrogen and one of phosphorus to the molecule.

diaminuria (di-am'i-nū're-ah) the presence of diamines in the urine.

diamniotic (di'am-ne-ot'ik) having or developing within separate amniotic cavities, as diamniotic twins.

diamocaine cyclamate (di-ah'mo-kān) chemical name: 1-(2-anilinoethyl)-4-[2-(diethylamino)ethoxy]-4-phenylpiperidine; a local anesthetic, $C_{37}H_{63}N_5O_2S_2$.

diamonds (di'ah-munz) an urticarial form of swine erysipelas characterized by well-defined quadrangular or rhombic patches on the skin.

diamorphine (di'ah-mor'fēn) diacetylmorphine.

diamorphosis (di'ah-mor'fo'sis) (obs.) growth into normal shape.

Diamox (di'ah-moks) trademark for preparations of acetazolamide.

diamthazole dihydrochloride (di-am'thah-zōl) chemical name: 6-(2-diethylaminoethoxy)-2-dimethylaminobenzothiazole dihydrochloride. An antifungal agent, $C_{15}H_{25}Cl_2N_3OS$, effective against species of *Trichophyton* and *Microsporum* and *Candida albicans*; it has been used in the treatment of various forms of tinea, applied topically.

diamylene (di-am'i-lēn) dipentene.

Diana complex (di-an'ah) [in Roman mythology, the goddess of the moon, hunting, and chastity] see under *complex*.

Dianabol (di-an'ah-bol) trademark for methandrostenolone.

diandry (di-an'dre) [*di*-(1) + Gr. *anēr, andros* man] triploidy in which the extra haploid set is of paternal origin.

dianhydroantiarigenin (di'an-hi'dro-an'te-ar'i-jen'in) an aglycone, $C_{23}H_{28}O_8$, from antiarin.

dianoetic (di'ah-no-et'ik) [*dia-* + Gr. *nous* mind] pertaining to the intellectual functions, especially to reasoning.

diantebrachia (di'an-te-bra'ke-ah) a developmental anomaly characterized by duplication of a forearm.

diapamide (di-ap'ah-mīd) chemical name: 4-chloro-N-methyl-3-(methylsulfamoyl)benzamide; a diuretic and antihypertensive, $C_9H_{11}ClN_2O_3S$.

Diaparene (di-ap'ah-rēn) trademark for preparations of methylbenzethonium chloride.

diapause (di'a-pawz) [*dia-* + Gr. *pausis* pause] a state of inactivity and arrested development accompanied by greatly decreased metabolism, as in many eggs, insect pupae, and plant seeds; it is a mechanism for surviving adverse winter conditions.

diapedesis (di'ah-pē-de'sis) [*dia-* + Gr. *pēdan* to leap] the outward passage through intact vessel walls of corpuscular elements of the blood; called also *diaporesis* and *emigration*.

Diapedesis of leukocytes (Williams).

diapedetic (di'ah-pē-det'ik) pertaining to or characterized by diapedesis.

diaphane (di'ah-fān) [Gr. *diaphanēs* transparent] a minute electric lamp for use in transillumination.

diaphaneity (di'ah-fah-ne'i-te) transparency.

diaphanometer (di-af'ah-nom'ē-ter) [Gr. *diaphanēs* transparent + Gr. *metron* measure] an instrument for testing milk, urine, and other fluids by means of transmitted light.

diaphanometry (di-af'ah-nom'ē-tre) the measurement of the transparency of a fluid.

diaphanoscope (di-af'ah-no-skōp') [Gr. *diaphanēs* transparent + *skopein* to examine] an instrument for transilluminating a body cavity; called also *electrodiaphane* and *electrodiaphanoscope*.

diaphanoscopy (di-af'ah-nos'ko-pe) examination with the diaphanoscope; transillumination; called also *electrodiaphanoscopy*.

diaphanometric (di'ah-fē-met'rik) [*dia-* + Gr. *haphē* touch + *metron* measure] pertaining to the measurement of tactile sensibility.

diaphorase (di-af'o-rās) a flavoprotein that catalyzes the oxidation of nicotinamide-adenine dinucleotide (NAD) or nicotinamide-adenine dinucleotide phosphate (NADP).

diaphoresis (di'ah-fo-re'sis) [Gr. *diaphorēsis*] perspiration, especially profuse perspiration.

diaphoretic (di'ah-fo-ret'ik) [Gr. *diaphorētikos*] 1. pertaining to, characterized by, or promoting diaphoresis. 2. an agent that promotes diaphoresis.

diaphragm (di'ah-fram) 1. the musculomembranous partition separating the abdominal and thoracic cavities, and serving as a major inspiratory muscle; called also *diaphragma* [NA], *midriff*, and *diaphragmatic muscle*. 2. any separating membrane or structure. 3. a disk with one or more openings in it, or with an adjustable opening, mounted in relation to a lens or source of radiation by which part of the light or radiation may be excluded from the area. 4. a contraceptive device of molded rubber or other soft plastic material with a metal spring rim that is coated with a spermicidal agent; it is fitted over the cervix uteri prior to intercourse to prevent the entrance of spermatozoa by both mechanical and chemical means. Called also *contraceptive d.* and *vaginal d.* **accessory d.**, diaphragma urogenitale. **Akerlund d.**, a spiral type of diaphragm used in roentgenography. **Bucky d.**, **Bucky-Potter d.**, a diaphragm used in roentgenography to prevent the secondary rays from reaching the film, thereby securing better contrast and definition. **contraceptive d.**, see diaphragm, def. 4. **d. of mouth** musculus mylohyoideus. **optic d.**, the iris of the eye; so called because it regulates the amount of light entering the eye. **oral d.**, musculus mylohyoideus. **pelvic d.**, **d. of pelvis**, diaphragma pelvis. **polyarcuate d.**, one showing abnormal scalloping of margins on radiographic visualization. **Potter-Bucky d.**, Bucky d. **secondary d.**, diaphragma urogenitale. **d. of sella turcica**, diaphragma sellae. **urogenital d.**, diaphragma urogenitale. **vaginal d.**, see diaphragm (def. 4).

diaphragma (di'ah-frag'mah), pl. *diaphragmata* [Gr. "a partition-wall, barrier"] [NA] the diaphragm: the musculomembranous partition separating the abdominal and thoracic cavities, and serving as a major thoracic muscle. Called also *midriff* and *diaphragmatic muscle*. Also used in anatomical nomenclature in the names of other separating structures. **d. o'ris**, musculus mylohyoideus. **d. pel'vis** [NA], pelvic diaphragm: the portion of the floor of the pelvis formed by the coccygei and levatores ani muscles and their fasciae. **d. sel'lae** [NA], diaphragm of sella turcica: a ring-shaped fold of dura mater covering the sella turcica, and containing an aperture for passage of the infundibulum of the hypophysis. **d. urogenita'le** [NA], urogenital diaphragm: the musculomembranous layer superficial to the pelvic diaphragm, extending between the ischiopubic rami and surrounding the urogenital ducts. Called also *accessory* or *secondary diaphragm*, *Camper's ligament*, *deep fascia of perineum* or *deep perineal fascia*, and *fascia of urogenital trigone*.

diaphragmalgia (di'ah-frag-mal'je-ah) [*diaphragm* + Gr. *algos* pain + *-ia*] pain in the diaphragm.

diaphragmata (di'ah-frag'mah-tah) [Gr.] plural of *diaphragma*.

diaphragmatic (di'ah-frag-mat'ik) pertaining to or of the nature of a diaphragm.

diaphragmatitis (di'ah-frag'mah-ti'tis) diaphragmitis.

diaphragmatocele (di'ah-frag-mat'o-sēl) [*diaphragm* + Gr. *kēlē* hernia] diaphragmatic hernia.

diaphragmitis (di'ah-frag-mi'tis) inflammation of the diaphragm.

diaphragmodynia (di'ah-frag'mo-din'e-ah) [*diaphragm* + Gr. *odynē* pain] diaphragmalgia.

diaphysary (di-af'i-zār-e) diaphyseal.

diaphyseal (di'ah-fiz'e-al) pertaining to or affecting the shaft of a long bone (diaphysis).

diaphysectomy (di'ah-fiz-ek'to-me) [*diaphysis* + Gr. *ektomē* excision] excision of a portion of the shaft of a long bone.

diaphyses (di-af'i-sēz) [Gr.] plural of *diaphysis*.

diaphysial (di'ah-fiz'e-al) diaphyseal.

diaphysis (di-af'i-sis), pl. *diaphyses* [Gr. "the point of separation between stalk and branch"] 1. [NA] the elongated cylindrical portion (the shaft) of a long bone, between the ends or extremities (the epiphyses), which are usually articular and wider than the shaft; it consists of a tube of compact bone, enclosing the medullary (marrow) cavity. Called also *shaft*. 2. the portion of a long bone formed from a primary center of ossification.

diaphysitis (di'ah-fiz-i'tis) inflammation of a diaphysis.

tuberculous d., inflammation involving intermediate segments of the shafts of long bones, caused by the tubercle bacillus.

Diapid (di'ah-pid) trademark for a preparation of lyppressin.

diaporesis (di'ah-pi-re'sis) [Gr. *diaperein* to drive through] diapedesis.

diaplacental (di'ah-plah-sen'tal) through the placenta.

diaplasia (di-ap'lah-sis) [Gr.] the setting of a fracture or the reduction of a dislocation.

diaplastic (di'ah-plas'tik) pertaining to the setting of a fracture or the reduction of a dislocation.

diapophysis (di-ah-pof'i-sis) [*dia-* + Gr. *apophysis* outgrowth] the superior or articular part of a transverse process of a vertebra.

Diaptomus (di-ap'to-mus) a genus of copepod crustaceans, species of which act as hosts of the larvae of *Diphyllbothrium latum*.

diapyesis (di'ah-pi-e'sis) suppuration.

diapyetic (di'ah-pi-et'ik) promoting suppuration.

diarrhea (di'ah-re'ah) [*dia-* + Gr. *rhein* to flow] abnormal frequency and liquidity of fecal discharges. **d. ablactatorum** (*obs.*), a diarrhea of infants at the time they are weaned. **d. al'ba** (*obs.*), a disease of hot countries, affecting children especially; thought to be of filarial origin. **cachectic d.**, diarrhea associated with cachexia; it may be due to malabsorption, or both the diarrhea and the cachexia may be manifestations of an underlying disease, e.g., neoplasm. **choleraic d.**, acute diarrhea with serous stools, accompanied by circulatory collapse, thus resembling cholera. **chronic bacillary d.**, Johne's disease. **d. chylo'sa**, diarrhea in which the discharge consists of a yellowish white, mucopurulent substance that resembles chyle in gross appearance. **Cochin-China d.**, 1. sprue (def. 1). 2. strongyloidiasis. **colliquative d.**, profuse watery diarrhea, producing a state of dehydration, sometimes seen in the late stages of pulmonary tuberculosis. **congenital chloride d.**, familial chloride d. **crapulous d.**, that due to excess in eating or drinking. **critical d.**, diarrhea occurring at the crisis of a disease or producing a crisis. **dientameba d.**, a mild though chronic diarrhea caused by infection with *Dientamoeba fragilis*. **dysenteric d.**, diarrhea with mucous and bloody stools. **enteral d.**, diarrhea due to infection within the gastrointestinal tract. **epidemic d. of newborn**, a contagious diarrhea occurring in epidemics among newborn infants in hospitals; called also *neonatal d.* **familial chloride d.**, severe watery diarrhea with an excess of chloride in the stool, beginning in early infancy and marked by distended abdomen, lethargy, and retarded growth and mental development. It is accompanied by alkalosis and hypokalemia, and maternal hydramnios is often associated. The disorder is due to impairment of chloride-bicarbonate exchange in the lower bowel. Called also *congenital chloride d.* and *familial chloridorrhea*. **fermental d.**, fermentative d., diarrhea caused by fermentation due to microorganisms. **flagellate d.**, diarrhea marked by the presence of flagellate organisms (*Giardia*) in the stools. **gastrogenic d.**, diarrhea due to gastric disorder. **hill d.**, a chronic diarrhea peculiar to hot climates and occurring only at elevations of several thousand feet: named from the hill districts of India; it is considered by some to be identical with sprue. **infantile d.**, summer diarrhea. **inflammatory d.**, diarrhea in which there is an inflammation of the intestine due to bacterial action. **irritative d.**, diarrhea due to irritation of the intestine by improper food, poisons, purgatives, etc. **lienteric d.**, diarrhea with fluid stools containing undigested food. **mechanical d.**, diarrhea due to mechanical obstruction to the portal circulation, producing gastrointestinal hyperemia. **morning d.**, a condition marked by diarrhea in the morning only. **mucous d.**, a kind characterized by the presence of mucus in stools. **neonatal d.**, epidemic diarrhea of the newborn. **osmotic d.**, diarrhea resulting from the presence of osmotically active nonabsorbable solutes, e.g., magnesium sulfate, in the intestine. **d. pancreat'ica**, the diarrhea that accompanies parenchymatous degeneration or cystic disease of the pancreas. **pancreatogenous fatty d.**, a diarrhea in which the stools contain an excessive amount of fat due to dysfunction of the

pancreas. **paradoxical d.**, stercoral d. **parenteral d.**, diarrhea due to infections outside the gastrointestinal tract, such as tuberculosis, syphilis, etc. **putrefactive d.**, diarrhea due to putrefaction of the intestinal contents. **serous d.**, discharge of feces softened by copious serous fluid; called also *watery d.* **stercoral d.**, diarrhea accompanied by colic and following two or three days of constipation; called also *paradoxical d.* **summer d.**, acute diarrhea in children during great heat of summer; called also *infantile d.* **traveler's d.**, diarrhea occurring among travelers, particularly in those visiting tropical or subtropical areas where sanitation is suboptimal; it is currently considered to be due to infection with enteropathogenic *Escherichia coli*. In Mexico, it is also called *turista*. **trench d.**, a form of diarrhea and dysentery that occurred in troops in the trenches. **tropical d.**, see *sprue*; def. 1. **tubercular d.**, a variety of diarrhea peculiar to cases of tuberculosis. **tubular d.**, mucous colitis. **virus d.**, a specific infectious condition manifested by diarrhea in infants and by stomatitis and diarrhea in older children. **watery d.**, serous d. **white d.**, 1. a form in which the stools contain a thin, white mucus. 2. an infectious disease of young chickens marked by loss of appetite, dullness, and diarrhea, the discharges of which leave white lumps around the cloaca; it is caused by *Salmonella pullorum*. Called also *pullorum disease*.

diarrheal (di'ah-re'al) pertaining to or marked by diarrhea.

diarrheic (di'ah-re'ik) diarrheal.

diarrheogenic (di'ah-re'o-jen'ik) [*diarrhea* + Gr. *gennan* to produce] giving rise to diarrhea.

diarthric (di-ar'thrik) [*di-* + Gr. *arthron* a joint] pertaining to or affecting two different joints.

diarthrodial (di-ar-thro'di-al) of the nature of a diarthrosis.

diarthroses (di-ar-thro'sēz) plural of *diarthrosis*.

diarthrosis (di-ar-thro'sis), pl. *diarthroses* [Gr. *diarthrōsis* a movable articulation] *junctura synovialis*. **d. rotato'ria**, a joint characterized by mobility in a rotary direction.

diarticular (di-ar-tik'u-lar) diarthric.

diastasis (di-as'ki-sis) [*dia-* + Gr. *schizein* to split] the loss of function and electrical activity caused by cerebral lesions in areas which are remote from the lesion but which are neuronally connected to it; called also *Monakow's theory*.

diascope (di'ah-skōp) [*dia-* + Gr. *skopein* to examine] a glass or clear plastic plate, usually a flat blade or microscope slide, pressed against the skin to permit observation of changes produced in the underlying skin after the blood vessels are emptied and the skin is blanched.

diascopy (di-as'ko-pe) 1. examination with the diascope. 2. transillumination.

Diasone (di'ah-sōn) trademark for a preparation of sulfoxone sodium.

diasostic (di'ah-sos'tik) hygienic.

diaspironecrobiosis (di-as'pi-ro-nek'ro-bi-o'sis) [*dia-* + Gr. *speirein* to sow + *necrobiosis*] disseminated necrobiosis.

diaspironecrosis (di-as'pi-ro-ne-kro'sis) disseminated necrosis.

diastalsis (di'ah-stal'sis) [*dia-* + Gr. *stalsis* contraction] (*obs.*) a downward moving wave of contraction with a preceding wave of inhibition occurring in the digestive tube.

diastaltic (di'ah-stal'tik) (*obs.*) 1. pertaining to diastalsis. 2. performed reflexly; reflex.

diastase (di'ah-stās) [Gr. *diastasis* separation] a white, amorphous, soluble enzyme produced during the germination of seeds, and contained in malt; it converts starch into maltose and then into dextrose. **pancreatic d.**, see *amylase*. **taka d.**, see *Taka-Diastase*. **d. ve'ra**, pancreatin.

diastasic (di'as-ta'sik) diastatic.

diastasiometry (di'as-tah-sim'ē-tre) the estimation of the diastatic power (carbohydrase activity) of a substance.

diastasis (di-as'tah-sis) [Gr.] 1. a form of dislocation in which there is separation of two bones normally attached to each other without the existence of a true joint; as in separation of the pubic symphysis. Also, separation beyond the normal between associated bones, as between the ribs, or the ulna and radius. 2. diastasis cordis. Called also *divarication*. **d. cor'dis**, the rest period of the cardiac cycle, which occurs just before systole. **iris d.**, iridodiastasis. **d. rec'ti abdom'inis**, separation of the rectus muscles of the abdominal wall, sometimes occurring during pregnancy.

diastasuria (di'ah-stās-u're-ah) the presence of diastase in the urine.

diastatic (di'ah-stat'ik) 1. pertaining to diastase. 2. pertaining to diastasis.

diastem (di'ah-stem) diastema.

diastema (di'ah-ste'mah), pl. *diastem'ata* [Gr. *diastēma* an interval] [NA] a general term for a space or cleft. In dentistry, a space between two adjacent teeth in the same dental arch. In cytology, a narrow zone in the equatorial plane through which the cytosome divides in mitosis. **anterior d.**, a space between the

incisor teeth, generally one between the maxillary central incisors.

diastemata (di'ah-stem'ah-tah) pl. of *diastema*.

diastematocrania (di'ah-stem'ah-to-kra'ne-ah) [Gr. *diastēma* an interval + *kranion* cranium] congenital longitudinal fissure of the cranium.

diastematomyelia (di'ah-stem'ah-to-mi-e'le-ah) [Gr. *diastēma* an interval + *myelos* marrow] a congenital defect, often associated with spina bifida, in which the spinal cord is split into halves by a bony spicule or fibrous band, each half being surrounded by a dural sac.

diastematopyelia (di'ah-stem'ah-to-pi-e'le-ah) [Gr. *diastēma* an interval + *pyelos* pelvis] congenital median fissure of the pelvis.

diaster (di'as-ter) [*di*-two + Gr. *astēr* star] amphiasier.

diastereoisomer (di'ah-ster'e-o-i'so-mer) a compound exhibiting, or capable of exhibiting, diastereoisomerism.

diastereoisomeric (di'ah-ster'e-o-i'so-mer'ik) exhibiting diastereoisomerism.

diastereoisomerism (di'ah-ster'e-o-i'so-mer'izm) a special type of optical isomerism in which the respective molecules of the compounds do not, at any time, exhibit a mirror-image (or enantiomorphic) relationship to one another. For example, the relationship between either *dextro*- or *levo*-tartaric acid and *meso*-tartaric acid is called diastereoisomeric. Diastereoisomers, in contrast to enantiomorphs, differ in both physical and chemical properties.

Diastix (di'ah-stiks) trademark for a reagent strip designed for the quantitative determination of glucose in urine.

diastole (di-as'to-le) [Gr. *diastolē* a drawing asunder; expansion] the dilatation, or period of dilatation, of the heart, especially of the ventricles; it coincides with the interval between the second and the first heart sound.

diastolic (di'ah-stol'ik) of or pertaining to the diastole.

diastomyelia (di-as'to-mi-e'le-ah) diastematomyelia.

diastrophic (di'ah-strah'fik) [Gr. *diastrephein* distortion] bent or curved; said of structures, such as bones, deformed in such manner.

diataxia (di'ah-tak'se-ah) [*di*-two + *ataxia*] ataxia affecting both sides of the body. **cerebral d.**, **d. cerebra'lis infantilis**, infantile cerebral ataxic paralysis.

diathermal (di'ah-ther'mal) pertaining to diathermy; heated by high-frequency electromagnetic radiation.

diathermic (di'ah-ther'mik) pertaining to diathermy; permeable to high-frequency electromagnetic radiation.

diathermy (di'ah-ther'me) [*dia*- + Gr. *thermē* heat] heating of the body tissues due to their resistance to the passage of high-frequency electromagnetic radiation, electric currents, or ultrasonic waves. In *medical d.* (thermopenetration) the tissues are warmed but not damaged; in *surgical d.* (electrocoagulation) tissue is destroyed. **short wave d.**, the therapeutic heating of the body tissues by means of an oscillating electromagnetic field of high frequency; the frequency varies from 10 million to 100 million cycles per second and the wavelength from 30 to 3 meters. **ultrashort wave d.**, diathermy in which the wavelength used is less than 10 meters.

diathesis (di-ath'ē-sis) [Gr. "arrangement, disposition"] a constitution or condition of the body which makes the tissues react in special ways to certain extrinsic stimuli and thus tends to make the person more than usually susceptible to certain diseases. Cf. *constitution* (def. 1) and *type*. **aneurysmal d.**, propensity for the formation of multiple aneurysms. **asthenic d.**, a low state of general vitality. **bilious d.**, nonspecific gastrointestinal symptoms once attributed to disordered bile secretion or biliary tract disease. **contractural d.**, tendency to contractures having a hysterical basis. **cystic d.**, a tendency to the development of multiple cysts in an organ. **fibroplastic d.**, a tendency of the body to develop connective tissue in excess in response to trauma. **gouty d.**, predisposition to gout; status arthriticus. **hemorrhagic d.**, a predisposition to abnormal hemostasis. **hemorrhagic d. of newborn**, hemorrhagic disease of newborn. **inoplectic d.**, a bodily predisposition to embolism and thrombosis. **lupus d.**, a predisposition, probably genetic, to systemic lupus erythematosus. **neuropathic d.**, a congenital predisposition to nervous instability, a concept originated in 19th century French and German psychiatry; called also *psychopathic d.* **ossifying d.**, a tendency to the formation of bony deposits in the muscles. **oxalic d.**, one characterized by unusual amounts of oxalic acid in the urine; called also *Bird's disease*. **psychopathic d.**, neuropathic d. **spasmodic d.**, **spasmophilic d.**, spasmophilia; a condition of abnormal excitability of the peripheral motor nerves, tending to tetany and general convulsions. **uric acid d.**, a tendency to the collection of uric acid and urates in the tissues, resulting in gout, diabetes, etc.

diathetic (di'ah-thet'ik) of or pertaining to a diathesis.

diatom (di'ah-tom) any unicellular microscopical form of alga having a wall of silica and belonging to the family Diatomaceae.

Several species are toxic, causing the "red blooms" or "red tides." The skeletal siliceous remains of many others are mined from deposits and used as filtering and abrasive agents; see *infusorial earth*, under *earth*.

diatomaceous (di'ah-to-ma'shus) composed of diatoms; said of earth composed of the siliceous skeletons of diatoms. See *infusorial earth*, under *earth*.

diatomic (di'ah-tom'ik) [*di*- + *atom*] 1. made up of two atoms. 2. dibasic. 3. diatomaceous.

diatrizoate (di'ah-tri-zo'āt) any salt of diatrizoic acid. **d. meglumine** [USP], a radiopaque medium, (C₇H₁₇NO₈·C₁₁H₈I₃·N₂O₄), available in solution, consisting of diatrizoate meglumine in water for injection or of diatrizoic acid in water for injection, prepared with the aid of meglumine; used intra-arterially in angiocardiology, aortography, cerebral angiography, and peripheral arteriography, intravenously in angiocardiology, excretory urography, and venography, and unilaterally in retrograde pyelography. **d. sodium** [USP], a radiopaque medium, C₁₁H₈I₃N₂NaO₄, available in solution, consisting of diatrizoate sodium in water for injection or of diatrizoic acid in water for injection, prepared with the aid of sodium hydroxide; used in cholangiography, intravenously in excretory urography, hysterosalpingography, and unilaterally in retrograde pyelography.

diauchenos (di-awk'ē-nos) a dicephalic monster with two necks.

diauxic (di-awk'sik) pertaining to or characterized by diauxie; implying two periods of growth separated by a lag period.

diauxie (di-awk'se) [*di*- + Gr. *auxein* to increase in size] a phenomenon of bacterial growth in which an organism given a mixture of organic compounds first grows exclusively on one until that compound is exhausted, and then, after a lag during which it forms induced enzymes for utilizing the second compound, resumes growth on the latter.

diaveridine (di'ah-ver'i-dēn) chemical name: 5-[(3,4-dimethoxyphenyl)methyl]-2,4-pyrimidinediamine. An antiprotozoal and antibacterial, C₁₆H₁₃ClN₂O; used as a coccidiostat in poultry.

diaxon (di-ak'son) [*di*- + *axon*] a nerve cell having two axons or axis-cylinder processes.

diaxone (di-ak'sōn) diaxon.

diazepam (di-az'ē-pam) [USP] chemical name: 7-chloro-1,3-dihydro-1-methyl-5-phenyl-2H-1,4-benzodiazepin-2-one. One of the benzodiazepine tranquilizers, C₁₆H₁₃ClN₂O, occurring as an off-white to yellow, crystalline powder. It is administered orally, intravenously, or intramuscularly as a sedative, and is also used as a skeletal muscle relaxant, to produce anesthesia, as an anticonvulsant, and in the management of alcohol withdrawal symptoms and delirium tremens.

diazine (di-az'in) any compound containing a ring of four carbon and two nitrogen atoms.

diazo- (di-az'o) a prefix indicating possession of the group —N=N—.

diazobenzene (di-az'o-ben'zēn) a univalent organic radical, C₆H₅N₂.

diazoma (di'ah-zo'mah) [Gr. *diazōma* that which is put round] the diaphragm.

diazomethane (di-az'o-meth'ān) an extremely poisonous yellow gas, N₂CH₂, used in organic synthesis.

diazonal (di'ah-zo'nal) 1. situated across or bridging two zones. 2. pertaining to a diazone.

diazone (di'ah-zōn) one of the dark bands, alternating with white bands (*parazones*), formed by the layers of enamel prisms and seen in cross section of a tooth.

diazosulfobenzol (di-az'o-sul'fo-ben'zol) a substance which acts upon certain principles in the urine to form aniline colors.

diazotization (di-az'o-ti-za'shun) conversion into a diazo compound.

diazotize (di-az'o-tīz) to introduce the diazo group into a compound.

diazoxide (di-az-ok'sid) [USP] chemical name: 7-chloro-3-methyl-2H-1,2,4-benzothiadiazine. An antihypertensive, C₆H₇ClN₂O₂S, structurally related to chlorothiazide but having no diuretic properties, occurring as white or cream-colored crystals or crystalline powder; administered intravenously. Because it inhibits release of insulin, it is also administered orally in the treatment of hypoglycemia due to hyperinsulinism.

dibasic (di-bā'sik) [*di*- + Gr. *basis* base] containing two hydrogen atoms replaceable by bases, and thus yielding two series of salts, as H₂SO₄.

Dibenamine (di-ben'ah-mēn) trademark for a preparation of dibenzylchloroethamine.

dibenzanthracene (di-benz-an'thrasēn) an aromatic polycyclic hydrocarbon, C₂₂H₁₄, capable, when injected into the body, of producing epithelial tumors. Abbreviated DBA.

dibenz-dibutyl anthraquinol (di-benz'di-bu'til an'thrakwin'ol) a carcinogenic and estrogenic substance, 1,2,5,6-dibenz-9,10-di-n-butyl anthraquinol.

dibenzepin hydrochloride (di-benz'ē-pin) chemical name:

10-[2-(dimethylamino)ethyl]-5,10-dihydro-5-methyl-11*H*-dibenzo-
[*b,e*][1,4]diazepin-11-one monohydrochloride; a tricyclic antide-
pressant, $C_{18}H_{21}N_3O \cdot HCl$.

dibenzothiazine (di-ben/'zo-thi'ah-zēn) phenothiazine.

dibenzylchloroethamine (di'ben-zil-klor-eth'ah-mēn) chemi-
cal name: *N*-(2-chloroethyl)dibenzylamine. An alpha-adrenergic
blocking agent, $C_{16}H_{18}ClN$, which has been used in the treatment
of peripheral vascular disorders and in the diagnosis of pheochro-
mocytoma.

Dibenzyl (di-ben/'zī-lēn) trademark for a preparation of
phenoxybenzamine hydrochloride.

diblastula (di-blas'tu-lah) [*di-* + *blastula*] a blastula in which
the ectoderm and endoderm are both present.

dibothriocephaliasis (di-both're-o-sef'ah-li'ah-sis) diphyll-
bothriasis.

Dibothriocephalus (di-both're-o-sef'ah-lus) [*di-* + Gr. *bothrion*
pit + *kephalē* head] *Diphyllbothrium*.

dibrachia (di-bra'ke-ah) [*di-* + Gr. *brachion* arm] a develop-
mental anomaly characterized by duplication of an arm.

dibrachius (di-bra'ke-us) a twin monster having only two
arms.

dibromide (di-bro'mīd) any bromide which combines two
atoms of bromine with one of another element or radical.

dibromoketone (di-bro'mo-ke'tōn) methyl dibromoethyl ke-
tone, $CH_3COCHBrCH_2Br$, a war gas.

dibromsalan (di-brom'sah-lan) chemical name: 5-bromo-*N*-
(4-bromophenyl)-2-hydroxybenzamide. A disinfectant with anti-
bacterial and antifungal activities, $C_{13}H_9Br_2NO_2$, used mainly in
medicated soaps.

dibucaine (di'bu-kān) [USP] chemical name: 2-butoxy-*N*-(2-di-
ethylamino)ethyl-4-quinolinecarboxamide. A potent local anes-
thetic, $C_{20}H_{29}N_3O_2$, occurring as a white to off-white powder;
applied topically to the skin and mucous membranes. **d. hy-**
drochloride [USP], the monohydrochloride salt of dibucaine,
 $C_{20}H_{29}N_3O_2 \cdot HCl$, occurring as colorless or white to off-white
crystals or as a white to off-white, crystalline powder, having the
same actions as the base; administered in the form of an aerosol
spray to produce anesthesia of the skin and mucous membranes
or injected into the subarachnoid space to produce spinal anesthe-
sia.

Dibuline (di'bu-lēn) trademark for a preparation of dibutoline
sulfate.

dibutoline sulfate (di-bu'to-lēn) chemical name: bis[ethyl(2-
hydroxyethyl)dimethylammonium]sulfate bis(dibutylcarbamate).
A quaternary ammonium anticholinergic, $C_{30}H_{56}N_4O_6S$, used as a
cycloplegic and gastrointestinal antispasmodic, administered in-
tramuscularly or subcutaneously.

dibutyl (di-būt'il) a hydrocarbon, C_8H_{18} , occurring in mineral
oil.

DIC disseminated intravascular coagulation.

dicacodyl (di-kak'o-dil) cacodyl.

dicalcic (di-kal'sik) having in each molecule two atoms of cal-
cium.

dicalcium phosphate (di-kal'se-um fos'fāt) dibasic calcium
phosphate; see under *calcium*.

dicamphendion (di'kam-fen'de-on) a substance, $(C_{10}H_{14}O)_2$,
obtained by the action of metallic sodium upon bromocamphor,
dicamphor being produced at the same time.

dicamphor (di-kam'for) a principle in colorless needles, $(C_{10}H_{16}O)_2$,
produced at the same time and from the same materials
as dicamphendion.

dicarbonate (di-kar'bon-āt) bicarbonate.

dicelous (di-se'lus) [*di-* + Gr. *koilos* hollow] 1. hollowed on both
sides. 2. having two cavities. 3. amphilous.

dicentric (di-sen'trik) pertaining to, developing from, or having
two centers. In genetics, having two centromeres.

dicephalous (di-sef'ah-lus) having two heads.

dicephalus (di-sef'ah-lus) [*di-* + Gr. *kephalē* head] a monster
with two heads. **d. di'pus dibra'chius**, a monster with two
heads but only two feet and two arms. **d. di'pus tetrabra'-**
chius, a monster with only two legs, but with varying degrees of
fusion of the upper trunk, each component having a head and pair
of arms. **d. di'pus tribra'chius**, a monster with two heads,
two feet, but with a median third arm or arm rudiment. **d.**
dipy'gus, *anakatadidymus*. **d. parasit'icus**, *desmiog-*
nathus. **d. tri'pus tribra'chius**, a monster with a common
trunk, but with two heads, three arms, and three legs, the third
limbs being either rudimentary or complete.

dicephaly (di-sef'ah-le) a developmental anomaly character-
ized by the presence of two heads.

dicheilia (di-ki'le-ah) the appearance of a double lip, owing to
folding of the oral mucosa.

dicheiria (di-ki're-ah) [*di-* + Gr. *cheir* hand] a developmental
anomaly characterized by duplication of a hand.

dicheirus (di-ki'rus) an individual exhibiting dicheiria.

dichlordioxydiamidoarsenobenzol (di-klor'di-ok'se-di-
am'i-do-ar'sē-no-ben'zol) arspenamine.

dichlorhydrin (di'klor-hi'drin) a colorless fluid, $CH_2Cl \cdot$
 $CHOH \cdot CH_2Cl$, used as a solvent for resins and prepared by
heating anhydrous glycerin with sulfur monochloride.

dichloride (di-klo'rid) a combination of a base or a metal with
two atoms of chlorine.

dichlorisone (di-klor'i-sōn) chemical name: 9,11β-dichloro-
17,21-dihydroxy pregna-1,4-diene-3,20-dione. A glucocorticoid,
 $C_{21}H_{26}Cl_2O_4$, used in the treatment of steroid-responsive pruritic
or allergic inflammations, applied topically.

dichlorodiethyl sulfide (di-klo'ro-di-eth'il) chemical name:
bis(2-chloroethyl)sulfide. Mustard gas, $(CH_2ClCH_2)_2S$, a vesicant
gas once employed in war. It produces blistering and subsequent
sloughing of the skin with involvement of the eyes and respiratory
tract. Death results from bronchopneumonia. Called also *yellow*
cross and *yperite*.

dichlorodifluoromethane (di-klo'ro-di-floor'o-meth'ān)
[NF] a clear, colorless gas with a faint, ethereal odor, CCl_2F_2 ,
used as an aerosol propellant, and also as a refrigerant.

dichloroformoxime (di-klo'ro-for-mok'sim) a suffocating war
gas, $CCl_2 \cdot N \cdot OH$; called also *phosgene oxime*.

dichloroproteranol (di-klo'ro-i'so-pro-ter'ē-nol) chemical
name: 3,4-dichloro-α-(isopropylaminomethyl)benzyl alcohol. A
beta-adrenergic blocking agent, $C_{11}H_{15}Cl_2NO$, used in the treat-
ment of various cardiac disorders.

dichlorotetrafluoroethane (di-klo'ro-tet'rah-floor'o-eth'ān)
[NF] chemical name: 1,2-dichlorotetrafluoroethane. A clear,
colorless gas with a faint ethereal odor, $CCl_2F_2 \cdot CClF_2$, used as an
aerosol propellant.

dichlorophenamide (di'klor-fen'ah-mīd) [USP] chemical
name: 4,5-dichloro-1,3-benzenedisulfonamide. A carbonic anhy-
dase inhibitor, $C_6H_3Cl_2N_2O_4S_2$, occurring as a white or practi-
cally white, crystalline powder; used mainly to reduce intraocular
pressure in glaucoma, administered orally.

dichlorvos (di-klor'vos) chemical name: phosphoric acid 2,2-di-
chloroethenyl dimethyl ester; an organophorous insecticide and
anthelmintic, $C_4H_7Cl_2O_4P$.

dichogeny (di-koj'ē-ne) [Gr. *dicha* in two + *gennan* to produce]
development of tissues in different ways in accordance with
changes in conditions affecting them.

dichorial (di-ko're-al) dichorionic.

dichorionic (di'ko-re-on'ik) having two distinct chorions; said
of dizygotic twins.

dichotomization (di-kot'ō-mi-za'shun) dichotomy.

dichotomy (di-kot'o-me) [Gr. *dicha* in two + *tomē* a cutting]
the process or result of division into two parts.

dichroic (di-kro'ik) exhibiting dichroism.

dichroine (di-kro'ēn) an alkaloid from Ch'ang Shan, the root of
the shrub *Dichroa febrifuga* Lour. (Saxifragaceae), having three
isomeric forms α-, β-, and γ-dichroine.

dichroism (di'kro-izm) [*di-* + Gr. *chroa* color] the quality or
condition of presenting one color in reflected and another in
transmitted light.

dichromasy (di-kro'mah-se) dichromatism, def. 1.

dichromat (di'kro-mat) an individual exhibiting dichromatop-
sia.

dichromate (di-kro'māt) any salt containing the bivalent
 Cr_2O_7 radical.

dichromatic (di'kro-mat'ik) pertaining to or characterized by
dichromatism.

dichromatism (di-kro'mah-tism) 1. the quality of existing in
or exhibiting two different colors. 2. dichromatopsia.

dichromatopsia (di'kro-mah-top'se-ah) [*di-* + Gr. *chrōma* color
+ *opsis* vision + *-ia*] a condition characterized by inability to
perceive only two of the 160 colors discriminable by the normal
eye; usually a complementary blue and yellow or, rarely, a red and
green.

dichromic (di-kro'mik) pertaining to two colors.

dichromophil (di-kro'mo-fil) amphophilic; also, an amphi-
philic element.

dichromophilism (di'kro-moff'i-lizm) capacity for double
staining, that is, with both acid and basic dyes.

dichuchwa a type of nonvenereal syphilis found among the
Bantus.

dick (dik) a vesicant war gas, ethyldichlorarsine, $C_2H_5 \cdot AsCl_2$,
causing sneezing and pulmonary edema.

Dick serum, test (reaction), toxin (dik) [George Frederick
Dick, 1881-1967, and Gladys Rowena Henry Dick, 1881-1963,
American physicians] see under *serum* and *tests*, and see *ery-*
throgenic toxin, under *toxin*.

dicliditis (dik'li-di'tis) [Gr. *diklis* double door + *-itis*] (*obs*) in-
flammation of a valve, especially one of the heart valves.

diclidostosis (dik'lid-os-to'sis) [Gr. *diklis* double door + *osteon*
bone + *-osis*] ossification of the valves of the veins.

diclofenac sodium (di-klo'fen-ak) chemical name: 2-[(2,6-di-

chlorophenyl)amino]benzeneacetic acid monosodium salt. An analgesic, antipyretic, and anti-inflammatory, $C_{14}H_{10}Cl_2NNaO_2$, used in the treatment of rheumatic and other inflammatory disorders.

dicloralurea (di'klor-al'u-re'ah) chemical name: *N,N'*-bis-2,2-trichloro-1-hydroxyethylurea; a food additive for animal feed, $C_5H_6Cl_6N_2O_3$.

dicloxacin sodium (di-kloks'ah-sil'in) [USP] chemical name: [2*S*-(2*α*,5*α*,6*β*)-6[[3-(2,6-dichlorophenyl)-5-methyl-4-isoxazolyl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid monosodium salt monohydrate. A semisynthetic penicillinase-resistant penicillin, $C_{19}H_{16}Cl_2N_3NaO_5S \cdot H_2O$, occurring as a white to off-white, crystalline powder; used primarily in the treatment of infections due to penicillinase-resistant staphylococci, administered orally. It is also available as *sterile dicloxacin sodium* [USP].

Dicodid (di-ko'did) trademark for preparations of hydrocodone bitartrate.

dicoelous (di-se'lus) [*di-* + Gr. *koilos* hollow] 1. hollowed on each of two sides. 2. having two cavities.

dicophane (di'ko-fān) chlorophenothane.

dicoria (di-ko're-ah) [*di-* + Gr. *korē* pupil] doubleness of the pupil.

dicotyledon (di-kot'i-le'don) [Gr. *dis* twice + *kotylēdon* a cup-shaped hollow] a flowering plant with embryos having two seed leaves, or cotyledons.

dicoumarin (di-koo'mah-rin) dicumarol.

dicroceliasis (dik'ro-se-li'ah-sis) infection with *Dicrocoelium*.

Dicrocoelium (dik'ro-se'le-um) [Gr. *dikroos* forked + *koilia* bowel] a genus of trematodes. **D. dendriticum**, a lancet-shaped fluke infesting the liver of cattle and sheep in Europe, North and South America, and northern Africa; it has been found in the human biliary passages. **D. hos'pes**, a species found in the gallbladder of cattle in the Soudan. **D. lanceola'tum**, *D. dendriticum*. **D. macrosto'mum**, a species found in the gallbladder of guinea fowl in Egypt.

dicrotic (di-krot'ik) [Gr. *dikrotos* double beating] pertaining to or characterized by dicrotism, as the dicrotic notch.

dicrotism (di'krō-tizm) the quality of having two sphygmographic waves or elevations to one beat of the pulse.

Dictyocaulus (dik'te-o-kaw'lus) a genus of nematode parasites of the bronchial tree of horses, sheep, goats, deer, and cattle. **D. fila'ria**, a species that infects the bronchial tree of sheep, goats, and cattle, and causes hoose; called also *Strongylus filaria*. **D. vivipa'rus**, a species that infects the bronchial tree of cattle and deer, and causes hoose; called also *Strongylus micrurus*.

dictyokinesis (dik'te-o-ki-ne'sis) [Gr. *diktyon* net + *kinesis* movement] the migration and distribution of the dictyosomes to the daughter cells in mitosis.

dictyoma (dik'te-o'mah) [Gr. *diktyon* net (retina) + *-oma*] dictyoma.

dictyosome (dik'te-o-sōm) [Gr. *diktyon* net + *soma* body] a stack of membranous lamellae or cisternae with attached tubules and vesicles in the cytoplasm of various cells; see also *Golgi complex*, under *complex*.

dictyotene (dik'te-o-tēn) [Gr. *diktyon* net + *-tene*] the protracted stage resembling suspended prophase in which the primary oocyte persists from late fetal life until discharged from the ovary at or after puberty.

dicumarol (di-koo'mah-rin) [USP] chemical name: 3,3'-methylenebis[4-hydroxy-2*H*-1-benzopyran-2-one]. One of the coumarin anticoagulants, $C_{18}H_{12}O_6$, occurring as a white or creamy white, crystalline powder, originally isolated from spoiled sweet clover but now produced synthetically; it acts by inhibiting the hepatic synthesis of vitamin K-dependent coagulation factors (prothrombin, Factors II, VII, IX, and X); administered orally. It is the etiologic agent of the hemorrhagic disease in animals known as *sweet clover disease*. Called also *bishydroxycoumarin* and *dicoumarin*.

Dicurin (di-kur'in) trademark for a preparation of merethoxyl-line.

dicyclic (di-si'klik) pertaining to or having two cycles; in chemistry, having a molecular structure containing two rings.

dicyclomine hydrochloride (di-si'klo-mēn) [USP] chemical name: [bicyclohexyl]-1-carboxylic acid 2-(diethylamino)ethyl ester. An anticholinergic, $C_{18}H_{25}NO_2 \cdot HCl$, occurring as a fine, white, crystalline powder; used as an antispasmodic in the treatment of functional gastrointestinal disorders, administered orally or intramuscularly.

dicysteine (di'sis-te'in) cystine.

didactic (di-dak'tik) [Gr. *didaktikos*] conveying instruction by lectures and books rather than by practice.

didactylism (di-dak'til-izm) [*di-* + Gr. *daktylos* finger] the condition of having only two digits on a hand or foot.

didactylous (di-dak'ti-lus) having only two digits on a hand or foot.

didelphia (di-del'fe-ah) [*di-* + Gr. *delphys* uterus] the condition characterized by presence of a double uterus.

didelphic (di-del'fik) pertaining to or possessing a double uterus.

Didelphis (di-del'fis) [*di-* + Gr. *delphys* uterus] a genus of marsupials, the opossums, species of which are reservoirs of *Trypanosoma cruzi* in South America.

didermoma (di'der-mo'mah) bidermoma.

Didrex (di'dreks) trademark for a preparation of benzphetamine hydrochloride.

didymalgia (did'i-mal'je-ah) orchialgia.

didymitis (did'i-mi'tis) orchitis.

didymodynia (did'i-mo-din'e-ah) orchialgia.

didymous (did'i-mus) occurring in pairs.

didymus (did'i-mus) [Gr. *didymos* double, twofold, twain] a testis. Sometimes used as a word termination to designate a fetus with a duplication of parts or one consisting of conjoined symmetrical twins. See also *-pagus*.

die (di) a form to be used in the construction of something, as a positive reproduction of the form of a prepared tooth in a suitable hard substance, such as metal or a specially prepared artificial stone. See *counterdie*. **amalgam d.**, a model of a tooth in silver or copper amalgam, used for making an inlay or crown. **plated d.**, one formed by electroplating the surface of an impression with copper or silver. **stone d.**, a positive reproduction of a tooth or other structure, created in artificial stone, for use in making a dental prosthesis.

Dieb. alt. abbreviation for L. *die'bus alter'nis*, on alternate days.

Dieb. tert. abbreviation for L. *die'bus ter'tiis*, every third day.

diechoscope (di-ek'o-skōp) [*di-* + Gr. *ēchō* echo + *skopein* to examine] an instrument for the simultaneous perception of two different sounds in auscultation.

diecious (di-e'shus) [*di-* + Gr. *oikos* house] sexually distinct; denoting species in which male and female genitals do not occur in the same individual. In botany, having staminate and pistillate flowers on separate plants.

Dieffenbach's amputation, operation (de'fen-bahks) [Johann Friedrich *Dieffenbach*, Prussian surgeon, 1792-1847] see under *operation*.

dieldrin (di-el'drin) chemical name: 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-2,7:3,6-dimethanonaphth[2,3-b]oxirene. A chlorinated insecticide, $C_{12}H_8Cl_6O$, of particular value against the sheep tick *Melophagus ovinus*, and also used to control vectors of insect-borne diseases, especially mosquitoes. Inhalation, ingestion, or skin contact with dieldrin may cause poisoning.

dielectric (di'ē-lek'trik) transmitting electric effects by induction, but not by conduction. The term is applied to an insulating substance through or across which electric force is acting or may act, by induction without conduction.

dielectrolysis (di'e-lek-trol'i-sis) [Gr. *dia* through + *electrolysis*] electrolysis of a drug, the current being passed through a diseased portion of the body, so that the drug passes through the part.

diembryony (di-em'bre-on'e) [*di-* + *embryon* embryo] the production of two embryos from a single egg.

diencephalic (di'en-se-fal'ik) pertaining to the diencephalon.

diencephalohypophyseal (di'en-sef'ah-lo-hi'po-fiz'e-al) pertaining to the diencephalon and the pituitary gland.

diencephalon (di'en-sef'ah-lon) [*dia-* + Gr. *enkephalos* brain] 1. [NA] the posterior part of the prosencephalon, consisting of the hypothalamus and thalamus (including the epithalamus); the subthalamus is often recognized as a distinct division. Called also *betweenbrain* and *tween brain*. See Plate accompanying *brain*. See also *brain stem*, under *B*. 2. the posterior of the two brain vesicles formed by specialization of the prosencephalon in the developing embryo.

-diene a suffix used in chemistry to denote an unsaturated hydrocarbon containing two double bonds.

diener (de'ner) [Ger. "man-servant"] a man-of-all-work in a laboratory.

dienestrol (di'ēn-es'trol) [USP] chemical name: 4,4'-(1,2-diethylidene-1,2-ethanediylo)bisphenol. A synthetic estrogen, $C_{18}H_{18}O_2$, occurring as colorless, white, or practically white, needle-like crystals or as a white or practically white, crystalline powder; administered orally in the management of menopausal symptoms, in the treatment of functional uterine bleeding, as a postpartum antilactagogue, for palliative therapy in certain female breast cancers, and in the management of prostatic carcinoma, and applied locally in the treatment of postmenopausal and senile vulvovaginitis, atrophic vaginitis, pruritus vulvae due to atrophic changes in the vulval epithelium, dyspareunia associated with atrophic vaginal epithelium, and prior to plastic pelvic surgery in menopausal patients.

Dientamoeba (di'ent-ah-me'bah) a genus of small protozoa of the class Sarcodina, order Amoebida, commonly found in the colon and appendix of man; it possesses one or two vesicular nuclei with endosomes made up of several chromatin granules. **D. frag'i-**

lis, a possibly pathogenic species which has been associated with diarrhea; it is not known to cause ulceration of the bowel.

dieresis (di-er'esis) [Gr. *diaresis* a taking] 1. the division or separation of parts normally united. 2. in surgery, the operative separation of parts by incision, electrosurgery, or cautery.

diesophagus (di-e-sof'ah-gus) doubling of the esophagus.

diestrus (di-es'trus) diestrus.

diestrus (di-es'trus) a short period of sexual quiescence occurring between metestrus and proestrus in female mammals.

gestational d., the period of sexual inactivity occurring during gestation in female mammals. **lactational d.**, the period of sexual inactivity occurring during lactation in female mammals.

diet (di'et) [Gr. *diaita* way of living] the customary allowance of food and drink taken by any person from day to day, particularly one especially planned to meet specific requirements of the individual, and including or excluding certain items of food.

absolute d., fasting. **acid-ash d.**, a diet to produce acidification of the urine, consisting of meat, fish, eggs and cereals, with little fruit and vegetables and no cheese or milk; used in prophylaxis of some types of urolithiasis. **adequate d.**, one that enables an animal to grow, mature, and reproduce in a normal manner. Cf. *optimal d.* **alkali-ash d.**, a diet of fruit, vegetables, and milk with as little as possible of meat, fish, eggs, and cereals. **balanced d.**, one containing all the nutritive factors in proper proportion for adequate nutrition. **Banting d.**, see under *treatment*. **basal d.**, one which is just sufficient to meet the caloric requirements of basal metabolism. **basic d.**, a diet which contains a preponderant proportion of alkaline ash; used for some types of urinary calculus. **bland d.**, one that is free from any irritating or stimulating foods. **Coleman-Shaffer d.**, a diet once used in typhoid fever, composed of eggs, cream, cocoa, milk sugar, and bread and butter; it has a high carbohydrate ratio and is rich in protein. The food is administered in small quantities, but frequently. **diabetic d.**, a diet prescribed in the treatment of diabetes mellitus, usually limited in the amount of sugar or readily available carbohydrate. **elemental d.**, one consisting of a well-balanced, residue-free mixture of all essential and nonessential amino acids combined with simple sugars, electrolytes, trace elements, and vitamins. **elimination d.**, a procedure to identify food allergy in which foods are sequentially omitted in order to detect the one or ones responsible for symptoms. **Feingold d.**, a diet proposed for hyperactive children which excludes artificial colors, artificial flavors, preservatives, and salicylates. **Giordano-Giovanetti d.**, a low protein diet given to alleviate gastrointestinal symptoms of chronic renal failure. **gluten-free d.**, a diet deficient in the cereal protein gluten; used as a specific treatment for celiac disease (gluten enteropathy). **gouty d.**, one for mitigation of gout, restricting nitrogenous, especially high-purine foods, and substituting dairy products, with prohibition of wines and liquors. **high calorie d.**, one that furnishes more calories than needed for the maintenance of weight, often more than 3500-4000 calories per day. **high fat d.**, ketogenic d. **high fiber d.**, one relatively high in dietary fibers, which decreases bowel transit time and relieves constipation. **high protein d.**, one containing large amounts of protein, consisting largely of meats, fish, milk, legumes, and nuts. **Karell d.**, a diet for nephritis and cardiac conditions, consists of 800 ml. of milk per day; the milk diet, running from six days to a week, is amplified gradually by the use of eggs, dry toast, meat, rice, and vegetables. **Keith's low ionic d.**, a diet for chronic nephritis based on decrease in the water content, reduction of the amount of sodium, and the minimum water content kept constant from day to day. **Kempner's d.**, a diet consisting of only rice, fruit juices, and sugar, supplemented with vitamins and iron; for hypertension and chronic renal disease. **ketogenic d.**, one containing a large amount of fat with minimal amounts of protein and carbohydrate, the object of such a diet being to produce ketosis; called also *high fat d.* **light d.**, a simple mixed diet suitable for convalescents. **low calorie d.**, one containing fewer calories than needed for the maintenance of weight, e.g., less than 1200 calories per day for an adult. **low fat d.**, one containing limited amounts of fat. **low oxalate d.**, one with no potatoes, beans, or fiber vegetables, and no sweet fruit, tea, chocolate, or sweets; used for the prevention of oxalate stones in the urinary tract. **low purine d.**, one for mitigation of gout, omitting meat, fowl, and fish and substituting milk, eggs, cheese, and vegetable protein. **low residue d.**, a diet which gives the least possible fecal residue: such as gelatin, sucrose, dextrose, broth, hard-boiled egg, meat, liver, rice, and cottage cheese. **low salt d.**, a diet which contains very little sodium chloride; prescribed by some for hypertension and for edematous states. **Meulengracht d.**, a full-feeding diet for peptic ulcer. **Minot-Murphy d.**, see under *treatment*. **Moro-Heisler d.**, a diet of grated raw apple for diarrheal conditions in infants. **optimal d.**, a diet that produces the most desirable growth, the most successful reproduction, and the maintenance of the best possible health; Cf. *adequate d.* **Petrén's d.**, a diet once given to diabetics, consisting of extremely small amounts of protein and carbohydrate and very large amounts of fat, chiefly butter. **protein-sparing d.**, one consisting only of liquid proteins or liquid mixtures of proteins,

vitamins, and minerals, and containing no more than 600 calories; it is designed to maintain a favorable nitrogen balance. **provocative d.**, a diet designed to include the most common allergenic foods, from which they are eliminated one by one, as a means of determining the offending substances in cases of food allergy. **purine-free d.**, see *low-purine d.* **rachitic d.**, an inadequate diet which will bring about rickets in an experimental animal. The animal is kept in a room from which all daylight is excluded and the diet consists of whole wheat flour, 33 per cent; yellow maize, 33 per cent; wheat gluten, 15 per cent; gelatin powder, 15 per cent; calcium carbonate, 3 per cent; sodium chloride, 1 per cent; and tap water, ad libitum. **rice d.**, Kempner's d. **salt-free d.**, see *low-salt d.* **Schemm d.**, a low-sodium, neutral and acid-ash diet for patients with congestive heart failure. **Schmidt d.**, a daily diet consisting of 1.5 liters of milk, 100 gm. of zwieback, 2 eggs, 50 gm. of butter, 125 gm. of beef, 190 gm. of boiled potato, and gruel made from 80 gm. of oatmeal. It contains 102 gm. of protein, 111 gm. of fat, and 191 gm. of carbohydrate, supplying 2234 calories. It is used to facilitate examination of the stools in diarrhea of various causation. **Schmidt-Strassburger d.**, Schmidt d. **Sippy d.**, a diet for peptic ulcer and for conditions in which the patient is unable to take bulky foods. It consists of nothing but milk and cream for the first few days, with the addition of crackers, cereals, and eggs on the third day; the amounts increasing gradually until during the later days of the diet puréed vegetables are included. On the twenty-eighth day the patient is placed on the regular ward diet. **smooth d.**, one which avoids the use of foods containing roughage. **subsistence d.**, a diet on which one can just live. **Taylor's d.**, a preparation of white of egg, olive oil, and sugar, given when the urine is to be tested for chlorides. **Wilder's d.**, a low-potassium diet formerly used in Addison's disease.

dietary (di'et-ta're) a regular or systematic scheme of diet. **dietetic** (di'et-tet'ik) [Gr. *diatētikos*] pertaining to diet or proper food. **dietetics** (di'et-tet'iks) the science or study and regulation of the diet. **diethazine hydrochloride** (di-eth'ah-zēn) chemical name: *N,N*-diethyl-10*H*-phenothiazine-10-ethanamine hydrochloride. An anticholinergic, $C_{18}H_{23}ClN_2S$, which has been used as an antiparkinsonian agent. **diethylamine** (di'eth'il-am'in) a nonpoisonous liquid ptomaine, $NH(C_2H_5)_2$, from decaying fish and putrid sausages. **diethylcarbamazine citrate** (di-eth'il-kar-bam'ah-zēn) [USP] chemical name: *N,N*-diethyl-4-methyl-1-piperazinecarboxamide. An antifilarial agent, $C_{10}H_{21}N_3O \cdot C_6H_8O_7$, occurring as a white crystalline powder, highly effective against microfilariae of certain nematodes, such as *Wuchereria bancrofti*, *Loa loa*, and *Onchocerca volvulus*; administered orally. **diethylene diamine** (di-eth'il-ēn di-am'in) piperazine. **diethylmalonylurea** (di-eth'il-mal'o-nil-u-re'ah) (obs.) barbitol. **diethylpropion hydrochloride** (di-eth'il-pro'pe-on) [USP] chemical name: 2-(diethylamino)-1-phenyl-1-propanone hydrochloride. An adrenergic, $C_{13}H_{19}NO \cdot HCl$, structurally related to amphetamine, methamphetamine, and ephedrine, occurring as a white to off-white, fine crystalline powder; used as an anorexic, administered orally. **diethylstilbestrol** (di-eth'il-stil-bes'trol) [USP] chemical name: (*E*)-4,4'-(1,2-diethyl-1,2-ethenediyl)bis-phenol. A synthetic nonsteroidal estrogen, $C_{18}H_{20}O_2$, occurring as a white, crystalline powder, having estrogenic activity similar to but greater than that of estrone. It is used for many purposes, e.g., to relieve menopausal symptoms, to suppress lactation, in amenorrhea, dysmenorrhea, senile vaginitis, and pruritus vulvae, in the palliative treatment of female breast carcinoma, and to relieve the symptoms of prostatic carcinoma; administered orally, intravaginally, or intramuscularly. Formerly used to prevent threatened or habitual abortion and premature labor. Women who have been exposed *in utero* to diethylstilbestrol show characteristic changes in the cervix and vagina and are subject to an increased risk of vaginal or cervical carcinoma. Called also *estrostilben* and *stilbestrol*. **d. diphosphate** [USP], an ester of diethylstilbestrol, $C_{18}H_{22}O_8P_2$, occurring as an off-white, crystalline powder, having the same actions as the base; used in the treatment of prostatic carcinoma, administered intravenously. **d. dipropionate**, an ester of diethylstilbestrol, $C_{24}H_{32}O_8$, occurring as a white, crystalline powder, having actions and uses similar to those of the base; administered orally, intravaginally, or intramuscularly. **diethyltoluamide** (di-eth'il-tol-u'ah-mid) [USP] chemical name: *N,N*-diethyl-3-methylbenzamide. An arthropod repellent, $C_{12}H_{17}NO$, occurring as a colorless liquid; applied topically to the skin and to the clothing. **diethyltryptamine** (di-eth'il-trip'tah-min) chemical name: *N,N*-diethyltryptamine. A hallucinogenic substance closely related to dimethyltryptamine, but prepared synthetically. Abbreviated DET.

dietitian (di-ē-tish'an) a person trained in the scientific use of diet in health and disease.

Dietl's crisis (de'tlʒ) [Józef Dietl, physician in Cracow, 1804–1878] see under *crisis*.

dietotherapy (di'tē-to-ther'ah-pe) dietetic treatment.

dietotoxic (di'tē-to-tok'sik) having the quality of dietotoxicity.

dietotoxicity (di'tē-to-tok-sis'i-te) a quality in certain food substances which renders them toxic when used in an unbalanced diet.

Dieudonné's medium (agar, culture) (dyuh-don-āz') [Adolf Dieudonné, serologist in Munich, 1864–1945] see under *culture medium*.

Dieulafoy's aspirator, theory, triad (dyuh-lah-fwahz') [Georges Dieulafoy, physician in Paris, 1839–1911] see under *aspirator, theory, and triad*.

difenoxamide hydrochloride (di'fen-oks'ah-mīd) chemical name: 4-[(2,5-dioxo-1-pyrrolidinyl)oxy]carbonyl- α , α ,4-triphenyl-1-piperidinebutanenitrile monohydrochloride; an antiperistaltic, $C_{32}H_{31}N_5O_4 \cdot HCl$.

difenoxin (di'fen-oks'in) chemical name: 1-(3-cyano-3,3-diphenylpropyl)-4-phenylisonipicotic acid; an antiperistaltic, $C_{28}H_{28}N_2O_2$.

differential (dif'er-en'shal) [L. *differre* to carry apart] pertaining to a difference or differences.

differentiate (dif'er-en'she-āt) 1. to distinguish, on the bases of differences. 2. to develop specialized form, character, or function differing from that of surrounding cytoplasm, cells, or tissue or from the original type.

differentiation (dif'er-en'she-a'shun) 1. the distinguishing of one thing or disease from another. 2. the act or process of acquiring completely individual characters, as occurs in the progressive diversification of cells and tissues of the embryo. 3. increase in morphological or chemical heterogeneity. **correlative d.**, differentiation caused by factors outside the tissue itself, as by an inductor; called also *dependent d.* **dependent d.**, correlative d. **functional d.**, differentiation which results from the functioning of the tissue of a part. **invisible d.**, the development toward a fixed fate, through chemodifferentiation, by cells that show no visible signs of this determination. **regional d.**, the appearance of regional differences within a field of development. **self d.**, differentiation produced by factors solely within the tissue or part.

diffuence (dif'loo-ens) the act of becoming fluid or of flowing readily.

diffuent (dif'loo-ent) [L. *diffluere* to flow off] easily flowing away or dissolving; deliquescent; temporary.

diffraction (dī-frak'shun) [L. *dis* apart + *frangere* to break] the bending or breaking up into its component parts of a ray of light. **d. grating**, a strip of glass ruled closely with fine lines for use in the spectroscope. **x-ray d.**, a technique for studying the cell based on the diffraction of radiations when they encounter small obstacles; used especially in the study of inorganic and organic crystals, in which it is possible to determine the precise spatial relationships between the constituent atoms.

diffusate (dī-fu'zāt) material that has passed through a membrane.

diffuse (dī-fūs') [L. *dis* apart + *fundere* to pour] 1. not definitely limited or localized; widely distributed. 2. (dī-fūz') to pass through or to spread widely through a tissue or structure.

diffusible (dī-fūz'i-b'l) susceptible of becoming widely spread.

diffusiometer (dī-fu'ze-om'ē-ter) an apparatus for measuring the speed of diffusion.

diffusion (dī-fu'zhun) 1. the process of becoming diffused, or widely spread; the spontaneous movement of molecules or other particles in solution, owing to their random thermal motion, to reach a uniform concentration throughout the solvent, a process requiring no addition of energy to the system. 2. dialysis.

double d., an immunodiffusion test in which both antigen and antibody diffuse into a common area so that, if the antigen and antibody are interacting, they combine to form bands of precipitate. **exchange d.**, the process in which diffusion of a molecule across a membrane in one direction brings about diffusion of another molecule in the opposite direction. **facilitated d.**, diffusion across a cell membrane or other biological membrane in which the molecules to be transported form complexes with specific carriers in the membrane, are shuttled across the membrane by the complex, and then released on the other side. **free d.**, diffusion in which there is no obstacle such as a membrane. **gel d.**, a test in which antigen and antibody diffuse toward one another through a gel medium to form a precipitate. **impeded d.**, diffusion in which the rate is slowed down by the difficulty of passing through a membrane.

diflorasone diacetate (di-flor'ah-sōn) chemical name: 17,21-bis(acetyloxy)-6 α ,9-difluoro-11 β -hydroxy-16 β -methylpregna-1,4-diene-3,20-dione; a topical corticosteroid, $C_{28}H_{32}F_2O_7$, used as a cream or ointment in treatment of certain dermatoses.

diflunane hydrochloride (di-floo'ah-nēn) chemical name: 1-(2-anilinoethyl)-4-[4,4-bis(p-fluorophenyl)butyl] piperazine; a central nervous system stimulant, $C_{28}H_{33}F_2N_3 \cdot 3HCl$.

diflucortolone (di'floo-kor'to-lōn) chemical name: 6 α ,9-di-

fluoro-11 β ,21-dihydroxy-16 α -methylpregna-1,4-diene-3,20-dione; a glucocorticoid, $C_{22}H_{32}F_2O_4$. **d. pivalate**, the pivalate salt of diflucortolone, a glucocorticoid.

diflunolone sodium (di-floo'mī-dōn) chemical name: 3'-benzoyl-1,1-difluoromethanesulfonamide sodium salt; an anti-inflammatory agent, $C_{14}H_{10}F_2NNaO_3S$.

diflunisal (di-floo'nī-sil) chemical name: 2',4'-difluoro-4-hydroxy-[1,1'-biphenyl]-3-carboxylic acid; an anti-inflammatory, $C_{13}H_8F_2O_3$.

difluprednate (di-floo-pred'nāt) chemical name: 6 α ,9-difluoro-11 β ,17,21-trihydroxypregna-1,4-diene-3,20-dione 21-acetate 17-butyrate; an anti-inflammatory agent, $C_{27}H_{34}F_2O_7$.

difthalone (dif'tah-lōn) chemical name: phthalazino[2,3-b]phthalazine-5,12-(7H,14H)-dione; an anti-inflammatory, $C_{10}H_{12}N_2O_2$.

Dig. abbreviation for L. *digera*'tur, let it be digested.

digametic (di'gah-met'ik) 1. pertaining to or producing gametes or sex cells of two different types, female (ova) and male (spermatozoa). 2. heterogametic.

digestric (di-gas'trik) [*di* + Gr. *gaster* belly] 1. having two bellies. 2. musculus digestricus.

digenesis (di-jen'ē-sis) alternation of generation.

digenetic (di'jē-net'ik) [*di* + Gr. *genesis* generation] having two stages of multiplication, one sexual in the mature forms, the other asexual in the larval stages; said of flukes and many other parasites.

digestant (di-jes'tant) 1. assisting or stimulating digestion. 2. an agent that assists or stimulates digestion.

digestion (di-jest'yun) [L. *digestio*, from *dis* apart + *gerere* to carry] 1. the process or act of converting food into chemical substances that can be absorbed and assimilated. 2. the subjection of a body to prolonged heat and moisture, so as to disintegrate and soften it. **artificial d.**, that which is performed outside the body. **biliary d.**, the digestive effect of the bile upon food.

gastric d., that which is carried on in the stomach by aid of the gastric juice; called also *peptic d.* and *chymification*. **gastrointestinal d.**, the gastric and intestinal digestions together; called also *primary d.* **intercellular d.**, digestion carried on within an organ by secretions from the cells of the organ. **intestinal d.**, that which is carried on in the intestine. **intracellular d.**, digestion carried on within a single cell. **lipolytic d.**, the splitting of fat into fatty acid and glycerol. **pancreatic d.**, that which is performed by the pancreatic secretion. **parenteral d.**, digestion taking place somewhere else in the body than in the alimentary canal, as in the blood or under the skin. **peptic d.**, gastric d. **primary d.**, gastrointestinal d. **salivary d.**, the change of starch into maltose by the saliva. **sludge d.**, the biochemical process by which organic matter in sludge is gasified, liquefied, mineralized, or converted into more stable organic matter.

digestive (di-jes'tiv) 1. pertaining to digestion. 2. digestant.

digit (dij'it) [L. *digitus*] a finger or toe.

digital (dij'it-tal) 1. of, pertaining to, or performed with, a finger. 2. resembling the imprint of a finger. 3. pertaining to numerical methods or discrete variables.

digitalin (dij'it-tal'in) 1. true digitalin; a cardiac glycoside, $C_{36}H_{50}O_{14}$, from the seeds of *Digitalis purpurea*. 2. any of several mixtures of digitalis glycosides extracted from the leaves or seeds.

Digitaline Nativelle (dij'it-tal'en na'ti-vel') trademark for a preparation of digitoxin.

Digitalis (dij'it-ta'lis) [L. from *digitus* finger, because of the finger-like leaves of the corolla of its flowers] a genus of herbs. *D. purpurea* is the purple foxglove whose leaves furnish digitalis. *D. lanata* is a Balkan species which yields digoxin and lanatoside.

digitalis (dij'it-tal'is) 1. [USP] the dried leaf of *Digitalis purpurea*, the purple foxglove, the main systemic effects of which are manifested by an increase in the strength of the heart beat while decreasing its rate. When digitalis is prescribed *powdered digitalis* (see below) is to be dispensed. Called also *d. leaf*. 2. [NA] a general term for any finger-like structure. **d. leaf**, digitalis (def. 1). **powdered d.** [USP], **prepared d.**, the standardized preparation to be dispensed when digitalis is prescribed; principally used in the treatment of congestive heart failure but also used in other cardiac disorders, administered orally.

digitalization (dij'it-tal-i-za'shun) the administration of digitalis in a dosage schedule designed to produce and then maintain optimal therapeutic concentrations of its cardiotonic glycosides.

digitaloid (dij'it-tal-oid) resembling or related to digitalis.

digitalose (dij'it-tal-ōs) a hexose sugar, 6-desoxy-d-allose, $CH_2(CHOH)_3CH(O \cdot CH_3) \cdot CHO$, from digitalin.

digitate (dij'it-tāt) having several finger-like processes.

digitatio (dij'it-ta'she-o), pl. *digitatio'nes* [L.] a finger-like process. **digitatio'nes hippocamp'i**, see *pes hippocampi*.

digitation (dij'it-ta'shun) 1. a finger-like process, as of a muscle. 2. surgical creation of a functioning digit by making a cleft between two adjacent metacarpal bones, after amputation of some or all of the fingers.

digitationes (dij'i-ta'she-o'nez) [L.] plural of *digitatio*.

digit (dij'i-ti) [L.] plural of *digitus*.

digitiform (dij'i-ti-form) resembling a finger; finger-like.

digitigrade (dij'i-ti-grād'') [L. *digitus* finger or toe + *gradit* to walk] characterized by walking on the toes; applied to animals whose digits only touch the ground, the posterior part of the foot being more or less raised, such as horses and cattle. Cf. *plantigrade*.

digitogenin (dij'i-toj'ē-nin) a saponin, $C_{27}H_{44}O_5$, from *digitonin*.

digitonin (dij'i-to'nin) [USP] a saponin, $C_{55}H_{90}O_{29}$, from *Digitalis purpurea*, which possesses no cardiotonic action; used as a reagent to precipitate free cholesterol.

digitoplar (dij'i-to-plan'tar) [L. *digitus* finger or toe + *planta* sole] pertaining to the toes and the sole of the foot.

digitoxin (dij'i-tok'sin) [USP] chemical name: 3β-[(O-2,6-dideoxy-β-D-ribo-hexopyranosyl-(1→4)-O-2,6-dideoxy-β-D-ribo-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-ribo-hexopyranosyl)oxy]-14-hydroxy-card-5β-20(22)-enolide. A cardiac glycoside, $C_{41}H_{64}O_{13}$, obtained for *Digitalis purpurea*, *D. lanata*, and other *Digitalis* species, occurring as a white or pale buff, microcrystalline powder. It has actions and uses similar to those of digitalis, administered orally, intramuscularly, or intravenously.

digitoxose (dij'i-tok'sōs) a hexose sugar, $CH_3(CHOH)_3CH_2-CHO$, derived from several of the digitalis glycosides.

digitus (dij'i-tus), pl. *dig'iti* [L.] digit: a finger or a toe. **d. anula'ris** [NA], the fourth digit, or ring finger, of the hand. **d. hippocrat'icus**, clubbed finger. **d. I**, the first digit; NA alternative for *hallux* (great toe) and *pollex* (thumb). **d. II**, 1. [NA] the second digit of the foot. 2. NA alternative for *index* (finger). **d. III**, 1. [NA] the third digit of the foot. 2. NA alternative for *d. medius*. **d. IV**, 1. [NA] the fourth digit of the foot. 2. NA alternative for *d. anularis*. **d. mal'leus**, mallet finger. **dig'iti ma'nus** [NA], the digits of the hand; the fingers. **d. me'dius** [NA], the middle, or third, finger of the hand. **d. min'imus** [NA], the fifth digit of the hand or foot; the little finger (*d. minimus manus*) or toe (*d. minimus pedis*). **d. mor'tuus** [L. "dead finger"], a numb, mottled finger, as seen in acrocyanosis; called also *waxy* or *white finger*. **dig'iti pe'dis** [NA], the digits of the foot; the toes. **d. postmin'imus**, an appendage ranging from a small round mass of fat and connective tissue to a longer mass containing bones and with a nail at its distal end, attached by a small pedicle to the soft tissue covering the lateral surface of the little finger or toe. **d. recel'lens** (obs.), trigger finger. **d. V**, the fifth digit of the hand or foot; NA alternative for *d. minimus*. **d. val'gus**, deviation of a digit in the radial direction, or toward the digit of next higher number. **d. va'rus**, deviation of a digit in the ulnar direction, or toward the digit of next lower number.

diglossia (di-glos'e-ah) [*di-* + Gr. *glōssa* tongue] bifid tongue.

diglutathione (di-glu'tah-thi'ōn) an oxidized form of glutathione.

diglyceride (di-glis'er-id) a glyceride containing two fatty acid molecules in ester linkage.

dignathus (dig-na'thus) [*di-* + Gr. *gnathos* jaw] a monster with two lower jaws.

digoxin (di-goks'in) [USP] chemical name: 3β-[(O-2,6-dideoxy-β-D-ribo-hexopyranosyl-(1→4)-O-2,6-dideoxy-β-D-ribo-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-ribo-hexopyranosyl)oxy]-12β, 14-dihydroxy-card-5β-20(22)-enolide. A cardiotonic glycoside, $C_{41}H_{64}O_{14}$, obtained from the leaves of *Digitalis lanata*, occurring as clear to white crystals or white crystalline powder. It may be used for the same purposes as digitalis, administered orally, intramuscularly, or intravenously.

Digramma brauni (di-gram'ah braw'ni) a larval tapeworm belonging to the family Diphyllbothriidae, reported from man in Roumania; formerly called *Diplogonoporus brauni*.

digyny (di'jē-ne) [*di-*(1) + Gr. *gynē* woman] triploidy in which the extra haploid set is of maternal origin.

diheterozygote (di-het'er-o-zi'gōt) an individual heterozygous for two pairs of genes.

dihexyverine hydrochloride (di'heks-i-ver'ēn) chemical name: 2-piperidinoethyl ester of bicyclohexyl-1-carboxylic acid hydrochloride; an anticholinergic, $C_{26}H_{35}NO_2 \cdot HCl$, which has been used as an antispasmodic in uterine hypermotility and intestinal muscle spasm.

dihomocinchonine (di-ho'mo-sin'ko-nin) an alkaloid, $C_{38}H_{44}O_2N_4$, from cinchona.

dihybrid (di-hi'brid) the offspring of parents who differ in two characters.

dihydrate (di-hi'drāt) [*di-* + Gr. *hydōr* water] 1. any compound containing two hydroxyl groups. 2. any compound containing two molecules of water.

dihydrated (di-hi'drāt-ed) compounded with two molecules of water.

dihydric (di-hi'drik) having two hydrogen atoms in each molecule.

dihydrocholesterol (di-hi'dro-ko-les'ter-ol) cholestanol.

dihydrocodeine (di-hi'dro-ko'dēn) chemical name: 4,5α-epoxy-3-methoxy-17-methylmorphinan-6α-ol: a narcotic analgesic and antitussive, $C_{18}H_{23}NO_3$; called also *drocode*.

dihydrocodeinone bitartrate (di-hi'dro-ko'de-i'nōn) hydrocodone bitartrate.

dihydrocoenzyme I reduced nicotinamide adenine dinucleotide (NAD); see under *dinucleotide*.

dihydrocollidine (di-hi'dro-kol'i-din) an oily base, $C_8H_{11}NH_2$, from decaying flesh and fish; regarded as a ptomaine.

dihydrodiethylstilbestrol (di-hi'dro-di-eth'il-stil-bes'trol) hexestrol.

dihydroergocornine (di-hi'dro-er'go-kor'nin) an ergot derivative that has sympatholytic and adrenolytic properties.

dihydroergocristine (di-hi'dro-er'go-kris'tin) an ergot derivative that has sympatholytic and adrenolytic properties.

dihydroergocryptine (di-hi'dro-er'go-krip'tin) an ergot derivative that has sympatholytic and adrenolytic properties.

dihydroergotamine mesylate (di-hi'dro-er-got'ah-mēn) [USP] chemical name: 9-10-dihydro-12'-hydroxy-2'-methyl-5'-α-(phenylmethyl)-ergotaman-3',6',18-trione monomethanesulfonate. An antiadrenergic, $C_{34}H_{41}N_5O_6S$, produced by the catalytic hydrogenation of ergotamine; used as a vasoconstrictor in the treatment of migraine.

dihydrofolliculin (di-hi'dro-fol-lik'u-lin) estradiol.

dihydrol (di-hi'drol) the associated water molecule, $(H_2O)_2$.

dihydrolutidine (di-hi'dro-lu'ti-din) an oily, poisonous, caustic base, $C_7H_{11}N$, from rancid cod liver oil.

dihydromorphinone (di-hi'dro-mor'fi-nōn) hydromorphone hydrochloride.

dihydroporphyrin (di-hi'dro-por'fi-rin) the form of porphyrin that, together with iron, acts as the prosthetic heme group of cytochrome *d*.

dihydrostreptomycin (di-hi'dro-strep'to-mi'sin) an antibiotic substance, $C_{21}H_{41}N_7O_{12}$, produced by the hydrogenation of streptomycin; no longer used in medicine because of its toxicity.

dihydrotachysterol (di-hi'dro-tak-is'tē-rol) [USP] chemical name: 9,10-secoergosta-5,7,22-trien-3β-ol. A synthetic reduction product of tachysterol, $C_{28}H_{46}O$, occurring as colorless or white crystals, or white, crystalline powder; used as an antihypocalcemic agent in the treatment of hypocalcemic tetany, administered orally. Called also *A.T. 10*.

dihydrotestosterone (di-hi'dro-tes-tos'ter-ōn) 7β-hydroxy-5α-androstan-3-one (DHT), a powerful androgenic hormone, $C_{19}H_{30}O_2$, formed in peripheral tissue by the action of the enzyme 5α-reductase on testosterone; it is thought to be the essential androgen responsible for external virilization during embryogenesis, for development of most male secondary characteristics at puberty, and for adult male sexual function. A semisynthetic preparation is called *stanolone* (q.v.).

dihydrotheelin (di-hi'dro-the'ē-lin) estradiol.

dihydroxyacetone (di'hi-drok'se-as'ē-tōn) one of the trioses, the ketotriose, $CH_2OH \cdot CO \cdot CH_2OH$; formed by the oxidation of glycerin with nitric acid; used as a humectant. **d. phosphate**, a triosephosphate, $CH_2OH \cdot CO \cdot CH_2O \cdot PO(OH)_2$, which is produced in the splitting of fructose-1,6-diphosphate in glycolysis.

dihydroxyaluminum (di'hi-drok'se-ah-lu'mī-num) an aluminum compound having two hydroxyl groups in the molecule.

d. aminoacetate [USP], chemical name: (glycinato-*N,O*)dihydroxyaluminum. A basic aluminum salt of aminoacetic acid, $C_2H_5AlNO_4 \cdot xH_2O$, occurring as a white powder; used as a gastric antacid. Available in tablets and as a magma. Called also *aluminum aminoacetate*. **d. sodium carbonate** [USP], chemical name: [carbonato(2-)-*O,O'*]dihydroxy-aluminate(1-)-sodium hydrate. An aluminum salt of sodium carbonate, $CH_2AlNaO_5 \cdot xH_2O$, occurring as a fine, white powder; used as a gastric antacid in tablet form.

dihydroxycholecalciferol (di'hi-drok'se-ko'le-kal-sif'ē-rol) a group of active metabolites of cholecalciferol (vitamin D_3) numbered according to the carbon atom(s) on which a hydroxyl group is substituted. 1,25-Dihydroxycholecalciferol, synthesized in the kidney from 25-hydroxycholecalciferol, is the most active derivative; it increases intestinal absorption of calcium and phosphate, enhances bone resorption, and prevents rickets and, because of these activities at sites distant from the site of its synthesis, is considered to be a hormone. Called also *1,25-dihydroxyvitamin D₃*. Another form, *24,25-dihydroxycholecalciferol*, is almost inert.

dihydroxyestrin (di-hi'drok'se-es-trin) estradiol.

dihydroxyfluorane (di'hi-drok'se-floo'o-rān) fluorescein.

3,4-dihydroxyphenylalanine (di-hi-drok'se-fen'il-al'ah-nēn) dopa.

dihydroxyvitamin D₃ (di'hi-drok'se-vi'tah-min) see *dihydroxycholecalciferol*.

dihysteria (di'his-te're-ah) [*di-* + Gr. *hystera* uterus + *-ia*] the condition of having a double uterus.

diiodide (di-i'o-did) a combination of a base or a metal with two atoms of iodine.

diiodohydroxyquin (di'i-o'do-hi-drok'se-kwin) iodoquinol.

3,5-diiodothyronine (di'i-o'do-thi'ro-nēn) chemical name: 3-[4-(*p*-hydroxyphenoxy)-3,5-diiodophenyl] alanine. An organic iodine-containing compound, $C_{15}H_{13}I_2NO_4$, used in the manufacture of thyroxine.

diiodotyrosine (di'i-o'do-ti'ro-sēn) chemical name: 2-amino-3-(3,5-diiodo-4-hydroxyphenol)-propionic acid. A precursor of the thyroid hormone thyroxine; an organic iodine-containing compound liberated from thyroglobulin by hydrolysis, and thought to be formed by the iodination of moniodotyrosine. Called also *iodogorgoric acid*.

dikaryon (di-ka're-on) [di- + Gr. *karyon* kernel] a growth stage in the mycelium of fungi, especially Basidiomycetes, in which each cell has two haploid nuclei.

dikaryote (di-ka're-ōt) a cell having two haploid nuclei.

dikaryotic (di'kar-e-ōt'ik) pertaining to the dikaryon or to a dikaryote.

diketone (di-ke'tōn) a ketone containing two carbonyl groups.

diketopiperazine (di-ke'to-pi-per'ah-zin) a closed-ring compound produced by the condensation of two amino acids, the carboxyl group of each combining with the amino group of the other.

diktyoma (dik'te-o'mah) [Gr. *diktyon* net + *-oma*] a benign or malignant tumor of the ciliary epithelium with characteristics resembling those of embryonic retinal tissue.

dikwkwadi (dik'wak-wad'e) witkop.

dil. abbreviation for *L. dilue*, dilute or dissolve.

dilaceration (di-las'er-a'shun) [L. *dilaceratio*] a tearing apart, as of a cataract; see *discission*. In dentistry, a condition due to injury to a tooth during its developmental period and characterized by a crease or band at the junction of the crown and root, or by tortuous roots with abnormal curvatures.

Dilantin (di-lan'tin) trademark for preparations of phenytoin.

dilatancy (di-la'tan-se) an unusual behavior observed in cytoplasm (and in some physical systems) during which its viscosity and applied force both increase.

dilatant (di-la'tant) exhibiting dilatancy.

dilatation (dil-ah-ta'shun) 1. the condition, as of an orifice or tubular structure, of being dilated or stretched beyond the normal dimensions. 2. the act of dilating or stretching. **digital d.**, digital dilatation. **gastric d.**, d. of the stomach. **d. of the heart**, enlargement of the cavities of the heart, with thinning of its walls. **idiopathic d.**, dilatation of a vessel or other channel, especially of the pulmonary artery, not associated with any other abnormality. **post-stenotic d.**, dilatation of a vessel distal to a stenosed segment or valve, often seen in the pulmonary artery distal to valvular pulmonary stenosis. **prognathic d.**, **prognathion d.**, dilatation of the pyloric end of the stomach greater than that of the fundus, giving a protruding appearance in the roentgen-ray picture. **d. of the stomach**, distention of the stomach with retained secretions, food, and/or gas due to obstruction, ileus, or denervation; called also *gastric d.*

dilatator (dil'ah-ta'tor) [L.] that which dilates, as a muscle.

dilation (di-la'shun) 1. the action of dilating or stretching. 2. dilatation. **digital d.**, the expansion or stretching of a cavity or orifice by means of a finger.

dilator (di-la'tor) 1. [NA] a general term for a structure (muscle) that dilates. 2. an instrument used in enlarging an orifice or canal by stretching. **anal d.**, an instrument for dilating or stretching the anal sphincter. **Arnott's d.**, a distensible cylinder of oiled silk for urethral strictures. **Bailey d.**, an instrument designed especially for use in dilating the aortic valve in cardiac surgery. **Barnes's d.**, see under *bag*. **Einhorn's d.**, a metal dilator used to stretch the cardioesophageal region in cardiospasm. **Hegar's d's**, a series of bougies of varying sizes for dilating the ostium uteri. **Kollmann's d.**, a metallic, expandable urethral dilator. **laryngeal d.**, a bougie-like instrument which is used for distending a stenosed larynx. **Starck d.**, an expandable rubber-covered metal frame used to dilate the cardioesophageal region.

Dilaudid (di-law'did) trademark for preparations of hydromorphone hydrochloride.

dilecanus (di'lē-ka'nus) [di- + Gr. *lekanē* a dish] dipygus.

Dilepididae (dil'ē-pid'ī-de) a family of medium-sized or small tapeworms of the order Cyclophyllidae, subclass Cestoda, which parasitize mammals, birds, and snakes. The genus *Dipylidium* is of medical importance.

diltiazem hydrochloride (dil-ti'ah-zem) chemical name: (+)-*cis*-3-(acetyloxy)-5-[2-(dimethylamino)ethyl]-2,3-dihydro-2,4-methoxyphenyl-1,5-benzothiazepin-4(5*H*)one monohydrochloride. A coronary vasodilator, $C_{22}H_{24}N_2O_4S \cdot HCl$, used in the symptomatic treatment of angina of effort.

Diluc. abbreviation for *L. diluculo*, at daybreak.

diluent (dil'u-ent) [L. *diluere* to wash] 1. diluting. 2. an agent that dilutes or renders less potent or irritant.

dilut. abbreviation for *L. dilutus*, diluted.

dilution (di-lu'shun) 1. the art or process of diluting or the

state of being diluted. 2. a diluted or attenuated medicine. 3. in homeopathy, the diffusion of a given quantity of a medicinal agent in ten or one hundred times the same quantity of water. **doubling d.**, a serial dilution in which the dilution in each tube is double that of the preceding tube. **nitrogen d.**, the addition of nitrogen to inspired air to lower its oxygen tension, producing an alveolar oxygen tension equal to a desired oxygen pressure. **serial d.**, 1. the progressive dilution of a substance in a series of tubes in predetermined ratios. 2. a method of obtaining a pure bacterial culture by rapid transfer of an exceedingly small amount of material from one nutrient medium to a succeeding one of the same volume.

dim. abbreviation for *L. dimidius*, one half.

dimargarin (di-mar'gar-in) a glyceride having two molecules of margaric acid combined with a molecule of glycerin.

Dimastigamoeba (di-mas'tig-ah-me'bah) *Naegleria*.

dimetadane (di-mef'ah-dān) chemical name: *N,N*-dimethyl-3-phenyl-1-indanamine; an analgesic, $C_{17}H_{19}N$.

dimetilcon A (di'mē-fil'kon) chemical name: 2-hydroxyethyl methacrylate polymer with methyl methacrylate and ethylenebis-(oxyethylene)dimethacrylate; a contact lens material (hydrophilic), $(C_6H_{10}O_2)_x \cdot (C_5H_8O_2)_y \cdot (C_{14}H_{22}O_6)_z$.

dimethylne hydrochloride (di-mef'lēn) chemical name: 8-[(dimethylamino)methyl]-7-methoxy-3-methylflavone hydrochloride; a respiratory stimulant, $C_{26}H_{21}NO_3 \cdot HCl$.

dimelia (di-me'le-ah) [di- + Gr. *melos* limb] a developmental anomaly characterized by duplication of a limb.

dimelus (di-me'lus) a fetus exhibiting dimelia.

dimenhydrinate (di'men-hi'dri-nāt) [USP] chemical name: 8-chloro-3,7-dihydro-1,3-dimethyl-1*H*-purine-2,6-dione compound with 2-(diphenylmethoxy)-*N,N*-dimethylethanamine. An antiemetic, $C_{17}H_{21}NO \cdot C_7H_7ClN_4O_2$, occurring as a white, crystalline powder; used in the treatment of motion sickness and in other conditions in which nausea may be a feature, administered orally.

dimension (di-men'shun) a numerical expression, in appropriate units, of a linear measurement of an object, such as an organ or body part. **vertical d.**, the distance between two points, measured perpendicular to the horizontal. In prosthodontics, the distance between two arbitrarily selected points on the face, one above and one below the mouth, usually in the midline, measured with the jaws in centric occlusion (*occlusal vertical d.*) or in rest position (*rest vertical d.*).

dimer (di'mer) 1. a compound formed by combination of two identical simpler molecules. 2. a capsomer having two structural subunits. **thymine d.**, two adjacent thymine residues linked together by a covalent bond along a single polynucleotide of DNA, which may lead to inactivation of the DNA molecule. It results from exposure to ultraviolet radiation and may be reversed by photoreactivation.

dimercaprol (di'mer-kap'rol) [USP] chemical name: 2,3-dimercaptopropanol. A metal complexing agent, $C_3H_6OS_2$, occurring as a colorless or almost colorless liquid; used as an antidote to poisoning by arsenic, gold, and mercury, and sometimes other metals, administered intramuscularly. It has also been used in the treatment of hepatolenticular degeneration.

dimeric (di'mer-ik) exhibiting the characteristics of a dimer.

dimerous (dim'er-us) [di- + Gr. *meros* part] made up of two parts.

dimetallic (di'mē-tal'ik) containing two atoms or equivalents of a metallic element in the molecule.

Dimetane (di'mē-tān) trademark for preparations of brompheniramine maleate.

dimethicone (di-meth'ī-kōn) 1. a silicone oil consisting of dimethylsiloxane polymers with viscosities from 0.65 to 3,000,000 centistokes at 25° C. The term is used with a numeric suffix which indicates the approximate viscosity of the various grades in centistokes, e.g., the viscosity of dimethicone 200 in centistokes is 190 to 210. Dimethicones are used as ingredients of ointments and other preparations for topical application to protect the skin against water-soluble irritants. 2. simethicone. **activated d.**, simethicone. **d. 350**, a grade of dimethicone having a viscosity of approximately 350 in centistokes at 25° C; a prosthetic aid for soft tissues.

dimethindene maleate (di'meth-in'dēn) [USP] chemical name: *N,N*-dimethyl-3-[1-(2-pyridinyl)-1*H*-indene-2-ethanamine (Z)-2-butenedioate. An antihistaminic, $C_{20}H_{24}N_2 \cdot C_4H_4O_4$, occurring as a white to off-white, crystalline powder; administered orally.

dimethisoquin hydrochloride (di'mē-thi'so-kwin) [USP] chemical name: 2-[(3-butyl-1-isoquinolinyloxy)-*N,N*-dimethylethanamine monohydrochloride. A local anesthetic, $C_{17}H_{24}N_2O \cdot HCl$, occurring as a white to off-white, crystalline powder; applied topically to relieve pain, itching, and burning of the skin.

dimethisterone (di'meth-is'ter-ōn) chemical name: 17-hydroxy-6-methyl-17-(1-propynyl)androst-4-en-3-one monohydrate. An orally effective progestin, $C_{23}H_{32}O_2 \cdot H_2O$, occurring as a white, crystalline powder, having actions and uses similar to those of

progesterone; used alone or as the progestin component in combination with ethinyl estradiol as an oral contraceptive.

dimethoxanate hydrochloride (di'mě-thok'sī-nāt) chemical name: 10*H*-phenothiazine-10-carboxylic acid 2-[2-(dimethylamino)ethoxy]ethyl ester hydrochloride; an antitussive, $C_{19}H_{22}N_2O_3S \cdot HCl$.

2,5-dimethoxy-4-methylamphetamine (di'mě-thok'se-meth'il-am-fet'ah-mēn) a hallucinogenic compound derived from amphetamine; abbreviated DOM and popularly called STP.

3,4-dimethoxyphenylethylamine (di-mě-thok'se-fen'il-eth'il-am'in) a substance characteristically found in the urine of schizophrenics; abbreviated DMPE.

dimethylacetal (di-meth'il-as'ē-tal) a colorless, volatile liquid, ethylidene dimethyl ether, $CH_3 \cdot CH(OCH_3)_2$, formerly used as an inhalation anesthetic.

dimethylamine (di-meth'il-am'in) a gaseous and liquid ptomaine, $(CH_3)_2NH$, from decaying gelatin, decomposing yeast, rotten fish, etc.

p-dimethylaminoazobenzene (di-meth'il-am'fī-no-az'o-ben'zēn) a carcinogenic dye, $C_6H_5N_2C_6H_4 \cdot N(CH_3)_2$; used as an indicator in Töpfer's test for free hydrochloric acid in gastric juice. It has a pH range of 2.9 to 4, being red at 2.9 and yellow at 4. Called also *butter yellow*.

Dimethylane (di-meth'i-lān) trademark for a preparation of promoxolane.

dimethylarsine (di-meth'il-ar'sin) cacodyl hydride.

dimethylbenzene (di-meth'il-ben'zēn) xylene.

dimethyl carbate (di-meth'il kar'bāt) chemical name: *cis*-5-norbornene-2,3-dicarboxylic acid dimethyl ester; an insect repellent, $C_{11}H_{14}O_4$.

dimethylcarbinol (di-meth'il-kar'bi-nol) isopropyl alcohol.

dimethylethylpyrrole (di-meth'il-eth'il-pir'ol) a substituted pyrrole obtained from bilirubin.

dimethylguanidine (di-meth'il-guan'i-din) a ptomaine, $CH_3 \cdot NH \cdot C(NH) \cdot NH \cdot CH_3$, found in small amounts in the urine.

dimethylketone (di-meth'il-ke'ton) acetone.

dimethylphenanthrene (di-meth'il-fe-nan'thrēn) a carcinogenic and weakly estrogenic hydrocarbon.

dimethylphosphine (di-meth'il-fos'fēn) a phosphine extremely destructive to infusorial life, $(CH_3)_2PH$.

dimethyl phthalate (di-meth'il-thal'āt) chemical name: 1,2-benzenedicarboxylic acid dimethyl ester. A clear, colorless, oily liquid, $C_6H_4(COO \cdot CH_3)_2$, the normal methyl ester of phthalic acid; used as an insect repellent.

dimethyl sulfate (di-meth'il sul'fāt) an industrial poison and war gas, $(CH_3)_2SO_4$, causing nystagmus, convulsions, and death from pulmonary complications.

dimethyl sulfoxide (di-meth'il sul-fok'sid) chemical name: sulfinylbis(methane); an alkyl sulfoxide, C_2H_6OS , practically odorless in its purified form. As a highly polar organic liquid, it is a powerful solvent, dissolving most aromatic and unsaturated hydrocarbons, organic compounds, and many other substances. Its biologic activities include the ability to penetrate plant and animal tissues and to preserve living cells during freezing. It has been used investigatively as a topical analgesic and anti-inflammatory agent and as an agent to increase the penetrability of other substances. It is available as a 50 per cent solution for direct instillation into the bladder for treatment of interstitial cystitis. Abbreviated DMSO.

dimethyltryptamine (di-meth'il-trip'tah-mēn) chemical name: *N,N*-dimethyltryptamine. A hallucinogenic substance, $C_{12}H_{16}N_2$, derived from the apocynaceous plant *Prestonia amazonica* (Benth.) Macbride (*Haemadictyon amazonicum* Spruce and Benth.) which is native to parts of South America and the West Indies. Abbreviated DMT.

dimetria (di-me'tre-ah) [*di* + Gr. *mētra* womb] uterus duplex.

diminution (dim'i-nu'shun) reduction or decrease in size or substance.

Dimmer's keratitis (dim'erz) [Friedrich Dimmer, Austrian ophthalmologist, 1855–1926] keratitis nummularis.

Dimocillin (di-mo-sil'in) trademark for preparations of sodium methicillin.

dimorphic (di-mor'fik) dimorphous.

dimorphism (di-mor'fizim) [*di* + Gr. *morphē* form] the property of having or existing in two forms, as fungi that can grow as molds or yeasts. See also *dysmorphism*, def. 2. **physical d.**, the property of certain solids of existing in two crystalline or allotropic forms. **sexual d.**, 1. physical or behavioral differences associated with sex. 2. the condition of having some of the properties of both sexes, as in the early embryo and in some hermaphrodites.

dimorphobiotic (di-mor'fo-bi-ot'ik) [*di* + Gr. *morphē* form + *biōsis* life] showing alternation of generations and having a parasitic and a nonparasitic stage in the complete life history.

dimorphous (di-mor'fus) [*di* + Gr. *morphē* form] occurring in two distinct forms; having the property of dimorphism.

dimoxamine hydrochloride (di-mok'sah-mēn) chemical name: (*R*)- α -ethyl-2,5-dimethoxy-4-methylbenzene ethanamine hydrochloride; a memory adjuvant, $C_{13}H_{21}NO_2 \cdot HCl$.

dimoxyline phosphate (di-mok'sī-lēn) dioxyline phosphate.

dimple (dim'pl) a slight depression, as in the flesh of the cheek or chin. **Fuchs's d's**, dellen. **postanal d.**, coccygeal foveola. **sacrococcygeal d.**, sacral bald spot.

dimpling (dim'pling) the formation of slight depressions or dimples.

dineric (di-ner'ik) [*di* + Gr. *nēros* liquid] denoting a solution made up of two immiscible solvents with a single solute soluble in each.

dineuric (di-nu'rik) having two neurons or axons; said of nerve cells.

dinical (din'i-kl) [Gr. *dinos* whirl, giddiness] pertaining to dizziness; relieving dizziness.

dinitrate (di-ni'trāt) a compound of a base or a metal with two nitrate groups, as in lead dinitrate, $Pb(NO_3)_2$.

dinitrated (di-ni'trāt-ed) compounded with or containing two nitrate (NO_3) or nitro (NO_2) groups.

dinitroaminophenol (di-ni'tro-am'fī-no-fe'no) a phenol, $C_6H_2(NO_2)_2 \cdot OH$, found in the blood after poisoning with trinitrophenol, forming red granules, free or in the leukocytes. Called also *aminodinitrophenol* and *picramic acid*.

dinitrobenzene (di-ni'tro-ben'zēn) a poisonous substance, $C_6H_4(NO_2)_2$, whose fumes may cause breathlessness and final asphyxia.

dinitrocellulose (di-ni'tro-sel'u-lōs) pyroxylin.

dinitrochlorobenzene (di-ni'tro-klōr'o-ben'zēn) chemical name: 1-chloro-2,4-dinitrobenzene. A compound, $C_6H_3(NO_2)_2Cl$, derived by chlorination of nitrobenzene, used to apply sensitizing dosages to test the ability of an organism to develop delayed-contact allergic reactions (type IV or delayed hypersensitivity).

dinitrocresol (di-ni'tro-kre'sol) a poisonous cresol compound, $CH_3C_6H_2(NO_2)_2OH$, used as an insecticide. Dinitro-*o*-cresol has an effect similar to that of α -dinitrophenol.

dinitrofluorobenzene (di-ni'tro-floo'o-ro-ben'zēn) a substance that induces contact hypersensitivity following application to the skin. Employed to prepare hapten-carrier conjugates, it introduces 2,4-dinitrophenyl groups into substances whose molecules have free- NH_2 groups. Abbreviated DNFB.

dinitrogen (di-ni'tro-gen) containing two nitrogen atoms. **d. monoxide**, nitrous oxide.

dinitrophenol (di-ni'tro-fe'no) any one of six isomeric compounds, $C_6H_3(OH)(NO_2)_2$, used in making dyes. 2,4-Dinitrophenol was formerly suggested for administration in the treatment of myxedema and obesity, but it has been reported as a cause of agranulocytosis and cataracts, and is now used only as a reagent and indicator and frequently as a hapten.

dinitroresorcinol (di-ni'tro-re-sor'sin-ol) a green coal tar derivative, $C_6H_2(NO_2)_2(OH)_2$, used in preparing degenerated nerve tissue for study.

Dinobdella (di'nob-del'ah) a genus of leeches of the family Gnathobdellidae, species of which attack the larynx of cattle in India when swallowed in drinking water.

Dinoflagellata (di'no-flaj'ē-la'tah) [Gr. *dinos* whirl + *flagellum* whip] an order of minute, chiefly marine, plantlike protozoa of the class Phytomastigophora, subphylum Mastigophora, with two or more flagella in grooves, transverse and longitudinal, which cause the organism to rotate as it advances. They generally have a cellulose covering and numerous green, yellow, or brown chromatophores. Dinoflagellates may be present in seawater in vast numbers, causing a discoloration known as "red tide" or "red water," which may cause the death of many fish and various invertebrates. It includes the genera *Gonyaulax* and *Gymnodinium*.

dinoflagellate (di-no-flaj'ē-lāt) 1. of or pertaining to the order Dinoflagellata. 2. any individual of the order Dinoflagellata.

dinogunellin (di'no-gun'el-lin) the toxic lipoprotein found in the roe of the Japanese blenny *Stichaeus* (*Dinogunellus*) *grigorjewi*.

dinoprost (di'no-prōst) chemical name: (5*Z*,9*α*,11*α*,13*E*,15*S*)-9,11,15-trihydroxyprosta-5,13-dien-1-oic acid. A prostaglandin of the F type, $C_{20}H_{34}O_5$, the main action of which is to stimulate the myometrium to contract. Called also *prostaglandin F_{2α}*. **d. trometanol**, d. tromethamine. **d. tromethamine**, the tromethamine salt of dinoprost, $C_{20}H_{34}O_5 \cdot C_4H_{11}NO_3$, having the same actions as the base; used as an oxytocic for induction of labor, termination of pregnancy, missed abortion, fetal death, and hydatidiform mole. It is administered intravenously, extra-amniotically, or intra-amniotically. Called also *d. trometanol* and *prostaglandin F_{2α}*.

dinoprostone (di'no-prōst'ōn) chemical name: (5*Z*,11*α*,13*E*,15*S*)-11,15-dihydroxy-9-oxo-prosta-5,13-diene-1-oic. A prostaglandin of the E type, $C_{20}H_{32}O_5$, with oxytocic activity and uses similar to those of dinoprost; administered orally, intravenously, or extra-amniotically. Called also *prostaglandin E₂*.

D. in p. aeq. abbreviation for *L. div'ide in par'tes aequa'les*, divide into equal parts.

dinsed (din'sed) chemical name: *N-N'*-ethylenebis[3-nitrobenzenesulfonamide]. A coccidiostat for use in poultry, $C_{14}H_{14}N_4O_8S_2$.

dinucleotide (di-nu'kle-o-tid) one of the cleavage products into which a polynucleotide may be split; a dinucleotide itself may be split into two mononucleotides.

Diocles (di'ō-klēz) of **Carystus** (4th century B.C.) an eminent Greek physician and able anatomist who belonged to the Dogmatist school.

diocoale (di'ō-sēl) [*di-* + Gr. *kōilos* hollow] (*obs.*) the cavity of the diencephalon; the third ventricle of the cerebrum.

Diectophyma (di-ok'tō-fi'mah) a genus of nematodes of the superfamily Diectophymoidea. **D. rena'le**, the kidney worm, the largest nematode known, found commonly in dogs, cattle, horses, and other animals, but rarely in man; red in color and 35 cm. (males) to 103 cm. (females) in length, they are found usually in the pelvis of the kidney or free in the peritoneal cavity. The parasite is highly destructive to kidney tissue and may cause death. Called also *Eustrongylus gigas*.

Diectophymoidea (di-ok'tō-fi'moi'de-ah) a superfamily of aphasms, including the genus *Diectophyma*.

dietyl calcium sulfosuccinate (di'ok'til) docusate calcium.

dietyl sodium sulfosuccinate (di-ok'til) docusate sodium.

Diodon (di'ō-don) a genus of tetraodontiform fishes of the family Diodontidae; some species are poisonous when ingested.

Diodoquin (di'ō-do'kwīn) trademark for a preparation of iodoquinol.

Iododrast (di'ō-drast) trademark for a preparation of iodopyracet for injection.

diocious (di-e'shus) diecious.

diogenism (di-ōj'ē-nizm) [from *Diogenes*, a Greek philosopher of the 5th century B.C. noted for his contempt of the common aims and conditions of life] an effort or tendency to get rid of the refinements of civilization and to lead a life closer to nature.

diolamine (di-ol'ah-mēn) USAN contraction for diethanolamine.

Dioloxol (di'ō-lok'sol) trademark for a preparation of mephensetin.

Dionosil (di-on'ō-sil) trademark for preparations of propylidone.

diopsimeter (di'op-sim'ē-ter) [Gr. *diopsis* vision + *metron* measure] a device for measuring the field of vision.

dioptr (di-op'ter) [Gr. *dioptra* optical instrument for measuring angles] the refractive power of a lens with a focal distance of one meter; assumed as a unit of measurement for refractive power (Monoyer, Donders). **prism d.**, a unit of prismatic deviation; deflection of one centimeter at a distance of one meter.

dioptrimeter (di'op-tom'ē-ter) [*dioptric* + Gr. *metron* measure] an instrument for use in testing ocular refraction.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

dioptry (di'op-tom'ē-tre) the measurement of refraction and accommodation of the eye.

Dioscorea (di'os-ko're-ah) a genus of plants, the Mexican yams, family Dioscoreaceae. The dried rhizome of *D. villosa* L., which contains saponin and acrid resins, was once used for its diaphoretic, expectorant, and diuretic properties. Several species of *Dioscorea*, e.g., *D. villosa*, *D. floribunda*, and *D. tokoro*, are used as sources of diosgenin, an important saponin precursor in the synthesis of several medically important steroids, e.g., pregnenolone and progesterone. **D. mexica'na**, the source of botogenin.

Dioscorides (di'ō-skōr'ē-dēz) of **Anazarbos** (1st century A.D.) a noted botanist and pharmacologist whose encyclopedia of materia medica was widely used for centuries after his death. See also under *granule*.

diose (di'ōs) the simplest sugar, a monosaccharide containing two carbon atoms in the molecule: $CH_2OH-CHO$. Called also *glycolic aldehyde*.

diosgenin (di-os'jen-in) an aglycone of the saponin dioscin, $\Delta^5-20\beta_F, 22\alpha_F, 25\alpha_F$ -spirosten-3- β -ol; $C_{27}H_{42}O_3$. Obtained from several species of *Dioscorea*, it is a precursor in the synthesis of pregnenolone, progesterone, and other medically useful steroids.

diospyrobezoar (di'os-pi'ro-be'zōr) a bezoar made up of persimmon fibers.

diovulatory (di-ov'u-lah-to're) ordinarily discharging two ova in one ovarian cycle.

dioxane (di-ok'sān) diethylene dioxide, a clear fluid, used for dehydrating and clearing tissues preparatory to paraffin embedding; it is an industrial poison.

dioxide (di-ok'sid) 1. a binary compound containing two oxide ions, such as silicon dioxide, SiO_2 . 2. an oxide of a non-metal with a valence of four, such as sulfur dioxide, SO_2 .

dioxin (di-ok'sin) any of the heterocyclic hydrocarbons present as a trace contaminant in herbicides, especially the chlorinated dioxin 2,3,7,8-tetrachlorodibenzo-para-dioxin, thought to have oncogenic and teratogenic properties.

dioxybenzone (di-oks'i-ben'zōn) [USP] chemical name: (2-hydroxy-4-methoxyphenyl)(2-hydroxyphenyl)methanone. A sun-screening agent, $C_{14}H_{12}O_4$, occurring as an off-white to yellow powder; applied topically to the skin.

dioxygenase (di-ok'sē-jen'āse) an oxidative enzyme which catalyzes the incorporation of two atoms of oxygen into one molecule of substrate.

dioxyline phosphate (di-ok'sī-lēn) chemical name: 1-(4-ethoxy-3-methoxybenzyl)-6,7-dimethoxy-3-methylisoquinoline. A synthetic analogue of papaverine, $C_{22}H_{25}NO_4$, occurring as a white, crystalline powder; used as a vasodilator, mainly in the treatment of vascular spasm associated with acute myocardial infarction, angina of effort, peripheral vascular disease in which there is a vasospastic element, and peripheral and pulmonary embolism, administered orally. Called also *dimoxyline phosphate*.

Dipaxin (di-pak'sin) trademark for a preparation of diphenadione.

dipentene (di-pen'tēn) any terpene found in volatile oils; called also *diamylene*.

dipeptidase (di-pep'tī-dās) a peptidase which catalyzes the hydrolysis of the peptide linkage in a dipeptide.

dipeptide (di-pep'tid) a peptide which, on hydrolysis, yields two amino acids.

diperodon (di-per'ō-don) [USP] chemical name: 3-(1-piperidinyl)-1,2-propanediolbis(phenylcarbamate)(ester) monohydrate. A local anesthetic, $C_{22}H_{27}N_3O_4 \cdot H_2O$, occurring as a white to cream-colored powder; applied topically to the skin for abrasions, irritations, and pruritus and intrarectally for relief of discomfort associated with hemorrhoids. **d. hydrochloride**, the monohydrochloride salt of diperodon, $C_{22}H_{27}N_3O_4 \cdot HCl$, having the same actions and uses as the base.

Dipetalonema (di-pet'ah-lo-ne'mah) a genus of nematodes of the superfamily Filarioidea. **D. per'stans**, a filarial nematode up to 80 mm. long, found in the tropical regions of South America and Africa and in Panama, transmitted by the bites of small flies of the genus *Culicoides*. The adults inhabit the pleural and peritoneal tissues, while the larval forms (microfilariae) are found in the peripheral blood. Although considered to be non-pathogenic, they have been implicated as the cause of such symptoms as eosinophilia, abdominal and pectoral pain, enlargement of the spleen and liver, and fever followed by urticaria and edema of the lower limbs and scrotum. Called also *Acanthocheilonea perstans* and *Filaria perstans*. **D. recondi'tum**, a species found in the perirenal fat pad of dogs; called also *Filaria recondita*. **D. streptocer'ca**, a filarial worm found in man and chimpanzees in equatorial Africa, transmitted by the bite of small flies of the genus *Culicoides*. The microfilariae, which may be found in scarification smears, are sometimes confused with those of *Onchocerca volvulus*. It produces a pruritic rash resembling that of onchocerciasis. Called also *Acanthocheilonema streptoceria*.

dipetalonemiasis (di-pet'ah-lo-ne-mi'ah-sis) infection with the nematode *Dipetalonema perstans* or *D. streptocerca*.

diphallia (di-fal'e-ah) [*di-* + Gr. *phallos* penis] duplication of the penis.

diphallus (di'fal-lus) a double penis.

diphasic (di-fa'zik) [*di-* + Gr. *phasis* phase] occurring in two phases or stages. Cf. *monophasic* and *triphasic*.

diphebutol (di-feb'u-zol) phenylbutazone.

diphebutol methylsulfate (di-fe'mah-nil) [USP] chemical name: 4-(diphenylmethylene)-1,1-dimethylpiperidinium methyl sulfate. A quaternary ammonium anticholinergic, $C_{24}H_{27}NO_4S$, occurring as a white or nearly white, crystalline powder; used in the treatment of peptic ulcer, gastric hyperacidity, and hypermotility in gastritis and pylorospasm, and in the treatment of hyperhidrosis, administered orally.

diphenadione (di-fen'ah-di'ōn) [USP] chemical name: 2-(diphenylacetyl)-1*H*-indene-1,3-(2*H*)-dione. One of the indanedione anticoagulants, $C_{23}H_{16}O_3$, occurring as yellow crystals or as a yellow, crystalline powder; administered orally.

diphenhydramine hydrochloride (di'fen-hi'drah-mēn) [USP] chemical name: 2-(diphenylmethoxy)-*N,N*-dimethylethanamine hydrochloride. An antihistaminic, $C_{17}H_{21}NO \cdot HCl$, occurring as a white, crystalline powder; used in the symptomatic

management of allergic symptoms and also for its sedative, antiemetic, antitussive, local anesthetic, and anticholinergic (antispasmodic) effects, administered orally, intramuscularly, and intravenously.

diphenidol (di-fen'i-döl) chemical name: α, α -diphenyl-1-piperidinebutanol. An antiemetic, $C_{21}H_{27}NO$, used for the treatment of vertigo and to control nausea and vomiting; administered rectally. **d. hydrochloride**, the hydrochloride salt of diphenidol, $C_{21}H_{27}NO \cdot HCl$, having the same actions and uses as the base; administered orally or intramuscularly. **d. pamoate**, the pamoate salt of diphenidol, $(C_{21}H_{27}NO)_2 C_{22}H_{16}O_8$, having the same actions as the base.

diphenoxylate hydrochloride (di'fen-ok'si-lät) [USP] chemical name: 1-(3-cyano-3,3-diphenylpropyl)-4-phenyl-4-piperidinecarboxylic acid ethyl ester monohydrochloride. An antiperistaltic derived from meperidine, $C_{30}H_{32}N_2O_2 \cdot HCl$; used as an antidiarrheal, administered orally.

diphenyl (di-fe'nil) a colorless compound, $C_6H_5C_6H_5$, found in coal tar and used as fungistat in containers for shipping oranges. Called also *biphenyl*.

diphenylamine (di-fen'il-am'in) chemical name: *N*-phenylbenzeneamine. A compound, $(C_6H_5)_2NH$, used as a test for oxidizing agents, such as nitric acid and chlorine, and, in veterinary medicine, in the prevention and treatment of screw-worm infestation.

diphenylaminearsine chloride (di-fen'il-am'in-ar'sin klo'rid) a toxic smoke for war use, $NH(C_6H_5)_2AsCl$; called also *adamsite*.

diphenylamino-azo-benzene (di-fen'il-am'i-no-az'o-ben'zën) an indicator with a pH range of 1.2 to 2.1.

diphenylchlorarsine (di-fen'il-klor-ar'sin) sneezing gas, $(C_6H_5)_2AsCl$, a toxic smoke once used in war, causing sneezing, coughing, headache, salivation, and vomiting; called also *Clark I* and *DA*.

diphenylcyanarsine (di-fen'il-si'an-ar'sin) a lethal war gas, $(C_6H_5)_2AsCN$; called also *Clark II*.

diphenylhydantoin (di-fen'il-hi-dan'to-in) phenytoin.

diphenylpyraline hydrochloride (di-fen'il-pi'rah-lën) [USP] chemical name: 4-(diphenylmethoxy)-1-methylpiperidine hydrochloride. An antihistaminic, $C_{19}H_{23}NO \cdot HCl$, occurring as a white powder; used to relieve the symptoms of allergic reactions, administered orally.

diphonia (di-fō'ne-ah) [*di* + Gr. *phōnē* voice] a condition in which two different tones are produced in speaking; double voice.

diphosgene (di-fos'jën) a gas, $ClCOOCCl_3$, which is intensely irritating to the lungs, producing pulmonary edema.

2,3-diphosphoglycerate (di-fos'fo-glis'er-ät) 2,3-bisphosphoglycerate.

diphosphopyridine nucleotide (di-fos'fo-pir'i-dën) DPN; former name of nicotinamide-adenine dinucleotide (NAD).

diphosphothiamin (di-fos'fo-thi'ah-min) the coenzyme that is involved in the decarboxylation of α -keto acids.

diphtheria (dif-the're-ah) [Gr. *diphthera* membrane + *-ia*] an acute infectious disease caused by the toxigenic gram-positive bacillus *Corynebacterium diphtheriae*, affecting primarily the membranes of the nose, throat, or larynx, and characterized by the formation of a gray white pseudomembrane. It is attended by fever and pain of varying degree and, in the laryngeal form, by aphonia and respiratory obstruction. Myocarditis and cranial or peripheral neuritis are complications resulting from the effects of toxin released from the local site. A cutaneous form also occurs (see below). **avian d.**, fowlpox. **Bretonneau's d.**, diphtheria. **calf d.**, a contagious disease of young calves in which grayish patches form in the mouth and throat, caused by *Fusobacterium necrophorum*. Called also *necrotic laryngitis*. **cutaneous d.**, ulcerated skin lesions with raised margins, often involving underlying connective tissue and muscle as well; it is usually not accompanied by nasal or pharyngeal lesions. **false d.**, pseudodiphtheria. **faucial d.**, membranous pharyngitis with lesions limited to the tonsils, or involving the tonsils, tonsillar pillars, and soft palate. **fowl d.**, fowlpox. **gangrenous d.**, diphtheria attended with gangrene of the skin or mucous membrane, or both. **d. gra'vis**, malignant d. **laryngeal d.**, membranous croup. **laryngotracheal d.**, diphtheria in which the infection invades the larynx and trachea, with edema, congestion, and development of a pseudomembrane. **malignant d.**, an often fatal form beginning with rigors and marked by massive swelling in the neck (bull neck), tonsillar enlargement, and sometimes purpura. Called also *d. gravis*. **nasal d.**, diphtheria in which the infection is mainly in the nasal passages. **pharyngeal d.**, that which is especially manifested on the mucous membrane of the pharynx. **septic d.**, diphtheria rendered especially severe by secondary infection with pyogenic cocci. **surgical d.**, wound d. **umbilical d.**, diphtherial infection of the umbilical cord in the newborn. **wound d.**, formation of a false membrane on the surface of a wound.

diphtherial (dif-the're-al) pertaining to or derived from diphtheria.

diphtheric (dif-the'rik) diphtheritic.

diphtherin (dif'the-rin) 1. (*obs.*) diphtheria toxin. 2. a polyvalent diphtheritic antigen for use in anaphylactic skin test.

diphtheritic (dif'the-rit'ik) pertaining to or affected with diphtheria.

diphtheritis (dif'the-rit'is) diphtheria.

diphtheroid (dif'ther-oid) 1. resembling diphtheria or the diphtheria bacillus. 2. any member of *Corynebacterium* other than *C. diphtheriae*. 3. pseudodiphtheria. 4. former name for organisms now in the genus *Propionibacterium*.

diphtherotoxin (dif'thë-ro-tok'sin) see *diphtheria toxin*, under *toxin*.

diphthongia (dif-thon'je-ah) [*di* + Gr. *phthongos* sound] the production of double vocal sounds; called also *diplophonia*.

Diphylets (di'fi-let) trademark for a preparation dextroamphetamine sulfate.

diphyllobothriasis (di-fil'o-both-ri'ah-sis) the state of being infected with tapeworms of the genus *Diphyllobothrium*; formerly called *dibothriocephaliosis*.

Diphyllobothriidae (di-fil'o-both-re'i-de) a family of tapeworms of the order Pseudophyllidea, subclass Cestoda, which are parasitic in man and other fish-eating vertebrates. The genera *Diphyllobothrium*, *Diplogonoporus*, and *Spirometra* are of medical importance.

Diphyllobothrium (di-fil'o-both're-um) [*di* + Gr. *phyllon* leaf + *bothrion* pit] a genus of large tapeworms of the family *Diphyllobothriidae*, order Pseudophyllidea; formerly called *Bothriocephalus* and *Dibothriocephalus*. **D. corda'tum**, the heart-headed tapeworm; a small species found in dogs and in seals in Greenland and very rarely in man. **D. erina'cei**, a species found in the adult form in the dog and other carnivores; formerly called *D. mansoni*. **D. la'tum**, the broad tapeworm or fish tapeworm; a very large tapeworm found in the intestines of man and (somewhat smaller) in cats, dogs, mink, bears, and other fish-eating mammals. It may be $\frac{3}{4}$ inch wide and 30 feet long. The head is marked with two grooves or suckers (bothria). It has two intermediate hosts: the first a crustacean, the second a fish.

Diphyllobothrium latum: head, segments, and egg (de Rivas).

Infection in man, acquired by eating inadequately cooked fish, may result in a clinical and blood picture resembling that of pernicious anemia. Formerly called *D. taeniodes*. Called also *Dibothriocephalus latus*. **D. manso'ni**, *D. erina'cei*. **D. mansoni'ides**, a species whose migrating larvae (spargana) are one of the causes of sparganosis. **D. par'vum**, a species found in man in Tasmania, Japan, Rumania, Iran, and Minnesota; possibly identical with *D. latum*. **D. taenio'ides**, *D. latum*.

diphyodont (dif'i-o-dont') [*di* + Gr. *phyein* to produce + *odous* tooth] having two dentitions, a deciduous and a permanent.

dipipanone hydrochloride (di-pip'ah-nōn) chemical name: *dl*-4,4-diphenyl-6-piperidinoheptan-3-one hydrochloride. An analogue of methadone, $C_{24}H_{31}NO \cdot HCl$, occurring as a white, crystalline powder; used as an analgesic, administered subcutaneously, intramuscularly, and intravenously.

dipivefrin (di-piv'e-frin) chemical name: (+)-4-[1-hydroxy-2-(methylamino)ethyl]-1,2-phenylene ester 2,2-dimethylpropanoic acid; an ophthalmic adrenergic, $C_{18}H_{29}NO_5$.

diplacusia (dip'lah-ku'ze-ah) diplacusis.

diplacusis (dip'lah-ku'sis) [Gr. *diploous* double + *akousis* hearing] the perception of a single auditory stimulus as two sounds, as a result of a pathologic condition involving the cochlea; called also *double disharmonic hearing*. **binaural d.**, different perception of a single auditory stimulus by the two ears; the difference may be in tone (disharmonic d.) or in timing (echo d.). **d. binaura'lis dysharmon'ica**, disharmonic d. **d. binaura'lis echo'ica**, echo d. **disharmonic d.**, a form of diplacusis in which a given pure tone is heard differently in the two ears. **echo d.**, a form in which a sound of brief duration is heard in the one ear a fraction of a second later than in the other ear. **monaural d.**, *d. monaura'lis*, a form in which a pure tone is heard in the same ear as a split tone of two frequencies.

diplasmatic (di'plaz-mat'ik) [*di* + Gr. *plasma* something formed] containing substances besides protoplasm; said of cells.

diplegia (di-ple'je-ah) [*di* + Gr. *plēgē* stroke] paralysis affecting like parts on both sides of the body; bilateral paralysis. **atonic-astatic d.**, diplegia characterized by hypotonia instead of spasticity. **facial d.**, paralysis affecting both sides of the face. **facial p., congenital, Möbius syndrome, infantile**

d., birth palsy. **masticatory d.**, paralysis of all the muscles which take part in mastication. **spastic d.**, Little's disease.

diplegic (di-plej'jik) pertaining to or marked by diplegia.

diplo- (dip'lo) [Gr. *diploos* double] a combining form meaning double, twin, twofold, or twice.

diploalbuminuria (dip'lo-al-bu'mi-nu're-ah) [*diplo-* + *albumin-uria*] the presence of both physiologic and pathologic albuminuria.

diplobacilli (dip'lo-bah-sil'i) plural of *diplobacillus*.

diplobacillus (dip'lo-bah-sil'us), pl. *diplobacilli* [*diplo-* + *bacillus*] a short, rod-shaped organism occurring in pairs; diplobacterium. **Morax's d.**, *Hemophilus duplex*.

diplobacteria (dip'lo-bak-te're-ah) plural of *diplobacterium*.

diplobacterium (dip'lo-bak-te're-um), pl. *diplobacteria* [*diplo-* + *bacterium*] diplobacillus.

diploblastic (dip'lo-blas'tik) [*diplo-* + Gr. *blastos* germ] made up of two germ layers.

diplocardia (dip'lo-kar'de-ah) [*diplo-* + Gr. *kardia* heart] a condition in which the right and left heart are somewhat separated by a fissure.

diplocephalus (dip'lo-sef'ah-lus) dicephalus.

diplocephaly (dip'lo-sef'ah-le) dicephaly.

diplococcal (dip'lo-kok'al) pertaining to or caused by diplococci.

diplococci (dip'lo-kok'si) plural of *diplococcus*.

diplococcoid (dip'lo-kok'oid) 1. resembling diplococci. 2. an organism that resembles a diplococcus.

Diplococcus (dip'lo-kok'us) [*diplo-* + *coccus*] former name for a genus of the tribe Streptococceae, order Eubacteriales, the species of which have been assigned to other genera. **D. constellatus**, a microaerophilic or obligate anaerobe normally found in the mouth and intestinal tract. **D. magnus**, a microaerophilic or obligate anaerobe normally found in the mouth and intestinal tract. **D. morbillosus**, a microaerophilic or obligate anaerobe normally found in the mouth and intestinal tract. **D. mucosus**, a type of diplococcus considered by some to be a separate species, characterized by production of a heavily mucoid growth, and differentiable with difficulty from *Streptococcus mucosus*. **D. paleopneumoniae**, a species closely resembling *D. pneumoniae* except that it is an obligate anaerobe, occurring normally in the buccopharyngeal cavity and said to be highly pathogenic. **D. plagarum**, an obligate anaerobe found in septic wounds. **D. pneumoniae**, *Streptococcus pneumoniae*.

diplococcus (dip'lo-kok'us), pl. *diplococci*. 1. a spherical bacterium occurring predominantly in pairs as a consequence of incomplete separation following cell division in a single plane; the organism may also be lanceolate (pneumococcus) or coffee-bean-shaped (gonococcus). 2. an organism of the genus *Diplococcus*. **d. of Morax-Axenfeld**, *Hemophilus duplex*. **d. of Neisser**, *Neisseria gonorrhoeae*. **Weichselbaum's d.**, *Neisseria meningitidis*.

diplocoria (dip'lo-ko're-ah) [*diplo-* + Gr. *korē* pupil] double pupil.

Diplodia (dī-plō'de-ah) a genus of imperfect fungi producing the dry-rot or corn-stalk disease of corn.

diploidiatoxycosis (dip'lo-dī'ah-tok'si-ko'sis) a form of mycotoxicosis caused by fungi of the genus *Diplodia*.

Diplodinium (dip'lo-din'e-um) a genus of ciliate protozoa of the subclass Euciliata, species of which are parasitic in the stomachs of cattle.

diploë (dip'lo-e) [Gr. *diploë* fold] [NA] the loose osseous tissue between the two tables of the cranial bones.

diploetic (dip'lo-et'ik) of or pertaining to the diploë.

Diplogaster (dip'lo-gas'ter) [*diplo-* + Gr. *gaster* stomach] a genus of free-living coprozoic nematodes which may, in fecal examination, be confused with hookworms or *Strongyloides*.

diplogensis (dip'lo-jen'ē-sis) [*diplo-* + Gr. *genesis* production] the production of a double monster.

Diplogonoporus (dip'lo-go-nop'o-rus) [*diplo-* + Gr. *gonos* seed + *poros* passage] a genus of tapeworms of the family Diphylobothriidae, characterized by the possession of two sets of reproductive organs in each segment. **D. brauni**, former name for *Digramma brauni*. **D. gran/dis**, a common parasite of whales that has been found in man in Japan; it may be up to 10 meters long, and may cause diarrhea or constipation, and secondary anemia.

diplogram (dip'lo-gram) [*diplo-* + Gr. *gramma* a writing] a roentgenogram containing two exposures.

diploic (dip-lo'ik) 1. double. 2. diploetic.

diploid (dip'loid) [Gr. *diploos* twofold] 1. having two sets of chromosomes, as normally found in the somatic cells of higher organisms. Cf. *haploid* (def. 1). 2. an individual or cell having two full sets of homologous chromosomes. Symbol, 2N.

diploidy (dip'loi-de) the state of having two full sets of homologous chromosomes.

diplokaryon (dip'lo-kar'e-on) [*diplo-* + Gr. *karyon* nucleus] a nucleus which has twice the diploid number of chromosomes.

diplomate (dip'lo-māt) a person who has received a diploma or certificate. In medicine the term refers particularly to a holder of a certificate of the National Board of Medical Examiners or of one of the American Boards in the Specialties.

Diplomonadina (dip'lo-mon'ah-dī'nah) a suborder of flagellate protozoa of the order Polymastigida, having two nuclei and bilateral symmetry; it includes the genus *Giardia*. Formerly called *Diplozoa*.

diplomyelia (dip'lo-mi-e'le-ah) [*diplo-* + Gr. *myelos* marrow + *-ia*] lengthwise fissure and seeming doubleness of spinal cord.

diploon (dip'lon) [Gr. *diploos* double] deuteron.

diploonema (dip'lo-ne'mah) [*diplo-* + Gr. *nema* thread] the double chromosomes in the diplotene stage.

diploneuronal (dip'lo-nu'ral) [*diplo-* + Gr. *neuron* nerve] (obs.) having a double nerve supply.

diploont (dip'lo-nt) [Gr. *diploō* to double + *ōn* being] a diploid individual.

diplopagus (dip-lop'ah-gus) [Gr. *diploos* double + *pagos* a thing fixed] a double monster in which the component parts are equal to and the symmetrical equivalents of one another; called also *duplicitas symmetros*.

diplophase (dip'lo-fāz) that phase in the life history of certain organisms in which the nuclei are diploid.

diplophonia (dip'lo-fō'ne-ah) [*diplo-* + Gr. *phōnē* voice] diphthongia.

diplopia (dī-plō'pe-ah) [*diplo-* + Gr. *ōpē* sight + *-ia*] the perception of two images of a single object; called also *ambopia*, *double vision*, and *binocular polyopia*. **binocular d.**, the perception of a separate image of a single object by each of the two eyes. **crossed d.**, double vision in which the image belonging to the right eye is displaced to the left of the image belonging to the left eye, as occurs in exotropia (divergent squint). **direct d.**, double vision in which the image belonging to the right eye appears to the right of the image belonging to the left eye, as occurs in esotropia (convergent squint). **heteronymous d.**, crossed d. **homonymous d.**, direct d. **horizontal d.**, diplopia in which the images lie in the same horizontal plane, being either crossed or direct. **monocular d.**, the perception by the same eye of two images of a single object, due to double pupil, early cataract, irregular astigmatism, or displacement of the lens. **paradoxical d.**, crossed d. **torsional d.**, double vision in which the upper pole of the vertical axis of one image is inclined toward or away from that of the other. **vertical d.**, double vision in which one image appears to be above the other.

diplopiometer (dī-plō'pe-om'ē-ter) [*diplopia* + Gr. *metron* measure] an instrument for measuring diplopia.

Diplopoda (dī-plōp'o-dah) [*diplo-* + Gr. *pous* foot] a class of arthropods of the superclass Myriapoda, which comprises the millipedes.

Diplopylidium (dip'lo-pi-lid'e-um) a genus of small tape-worms of the family *Dilepididae*, species of which are parasites of birds and mammals.

diploscope (dip'lo-skōp) [*diplo-* + Gr. *skopein* to examine] an apparatus for the study of binocular vision.

diplosomatia (dip'lo-so-ma'she-ah) [*diplo-* + Gr. *sōma* body] a condition in which complete twins are joined at some part of their bodies.

diplosome (dip'lo-sōm) [*diplo-* + Gr. *sōma* body] the two centrioles of mammalian cells; called also *paired allosomes*.

diplotene (dip'lo-tēn) the stage of the first meiotic prophase, following the pachytene, in which the two chromosomes in each bivalent begin to repel one another and a split occurs between the chromosomes, which are then held together by regions where exchanges have taken place (chiasmata) during crossing over. See also *leptotene*, *pachytene* and *zygotene*.

diploteratology (dip'lo-ter'ah-tol'o-je) [*diplo-* + *teratology*] the sum of what is known regarding joined twin monstrosities.

Diplozoa (dip'lo-zo'ah) [*diplo-* + Gr. *zōon* animal] former name for *Diplomonadina*.

Dipluridae (dip-lu'ri-de) a family of spiders (suborder Orthognatha); two genera, *Atrax* and *Trechona*, have been shown to be harmful to man.

dipodia (di-po'de-ah) [*di-* + Gr. *pous* foot] a developmental anomaly characterized by duplication of a foot.

dipole (dī'pōl) 1. a molecule having charges of equal and opposite signs but in which the center of the positive charge does not coincide with that of the negative charge, a property which enables the molecule to be bound electrostatically by both positively and negatively charged groups. See *polar compounds*, under *compound*. 2. a pair of electric charges or magnetic poles separated by a short distance.

dipotassium phosphate (dī'po-tas'e-um fos'fāt) potassium phosphate.

dipping (dip'ing) palpation of the liver by a quick depressing movement of the fingers with the hand flat across the abdomen.

dippoldism (dip'ol-dizm) [Dippold, a German school teacher] flagellation, def. 2.

Diprosone (di-pro'sōn) trademark for preparations of beta-methasone dipropionate.

diprosopus (di-pros'o-pus) [*di-* + Gr. *prosōpon* face] a monster with a single trunk and normal limbs, but with varying degrees of duplication of the face. **d. tetrophthal'mus**, a monster hav-

Diprosopus (Gould and Pyle).

ing two fused faces, the median eye of each being fused into a common orbit.

diprotizoate (di'pro-tri'zo-āt) chemical name: 3,5-dipropionamido-2,4,6-triiodobenzoate; used as a contrast medium in roentgenography of the urinary tract.

dipsesis (dip-se'sis) [Gr. *dipsēsis* a thirst, longing] thirst.

dipsetic (dip-set'ik) [Gr. *dipsētikos* thirsty; provoking thirst] pertaining to, characterized by, or producing dipsesis.

dipsia (dip'se-ah) [Gr. *dipsa* thirst + *-ia*] thirst; often used as a word termination, denoting a condition relative to thirst, or the physiological state of the body leading to the ingestion of fluids.

dipsogen (dip'so-jen) [Gr. *dipsa* thirst + *gennan* to produce] an agent or measure that induces thirst and promotes the ingestion of fluids.

dipsogenic (dip-so-jen'ik) engendering thirst.

dipsomania (dip'so-ma'ne-ah) [Gr. *dipsa* thirst + *mania* madness] alcoholism.

dipsophobia (dip'so-fō-be-ah) [Gr. *dipsa* thirst + *phobein* to be affrighted by] morbid fear of alcoholic liquor.

dipsosis (dip-so'sis) [Gr. *dipsa* thirst + *-osis*] morbid thirst.

dipsotherapy (dip'so-ther'ah-pe) [Gr. *dipsa* thirst + *therapeia* treatment] treatment by strict limitation of the amount of water to be ingested.

dipstick (dip'stik) a strip of cellulose chemically impregnated to render it sensitive to protein, glucose, or other substances in the urine.

Diptera (dip'ter-ah) [Gr. *dipteros* two winged] an order of insects including the flies, gnats, and mosquitoes.

Dipterocarpus (dip'ter-o-kar'pus) [Gr. *dipteros* two winged + *karpos* fruit] a genus of trees from southern Asia, affording gurjun balsam.

dipterous (dip'ter-us) 1. having two wings. 2. pertaining to insects of the order Diptera.

dipus (di'pus) [*di-* + Gr. *pous* foot] a conjoined twin monster with only two feet.

dipygus (di-pi'gus) [*di-* + Gr. *pygē* rump] a monster with double pelvis. **d. parasit'icus**, gastrothoracopagus dipygus.

dipylidiasis (dip'i-li-di'ah-sis) infection with *Dipylidium caninum*.

Dipylidium (dip'i-lid'e-um) [Gr. *dipyllos* having two entrances] a genus of tapeworms of the family Dilepididae, found in cats and other small carnivores. **D. cani'num**, a common tapeworm of dogs and cats, the larval stage living in fleas (*Ctenocephalides canis*) and lice (*Trichodectes canis*) of dogs, as well as in *Pulex irritans*, which thus act as vectors; it has been found in man. Called also *Taenia elliptica*.

dipyridamole (di'pi-rid'ah-mōl) chemical name: 2,2',2''-(4,8-dipyridinopyrimido[5,4-d]pyrimidine-2,6-diyl)dinitrilo)tetraethanol. A coronary vasodilator, $C_{24}H_{40}N_8O_4$, occurring as a yellow, crystalline powder; administered orally.

dipyrrithione (di'pēr-i-thi-ōn) chemical name: 2,2'-dithiobispyridine 1,1'-dioxide; an antibacterial and antifungal, $C_{10}H_8N_2O_2S_2$.

dipyrone (di'pi-rōn) chemical name: [(2,3-dihydro-1,5-dimethyl-3-oxo-2-phenyl-1-H-pyrazol-4-yl)methylamino] methane-sulfonic acid sodium salt monohydrate. A pyrazole derivative, $C_{13}H_{18}N_4NaO_6S$, which is an effective analgesic and antipyretic, but is seldom used because of an association with cases of fatal agranulocytosis. Called also *methylmelubrine* and *noramidopyrine*.

direct (di-rekt') [L. *directus*] 1. straight; in a straight line. 2. performed immediately and without the intervention of subsidiary means.

director (di-rek'tor) [L. *dirigere* to direct] any person, thing, or device that guides or directs. **grooved d.**, a grooved instrument used to guide the direction and depth of a surgical incision.

dirhinic (di-ri'nik) pertaining to both nasal cavities.

dirigomotor (dir'i-go-mo'tor) [L. *dirigere* to direct + *motor* mover] controlling muscular activity.

Dirofilaria (di'ro-fi-la're-ah) a genus of filarial nematodes with very long filiform bodies and a striated cuticle. **D. immit'is**, the heartworm, a species found in the right heart and veins of the dog, wolf, and fox; it is of worldwide distribution in tropical and subtropical areas. Called also *Filaria immitis*. **D. magal'hae'si**, a species found in the heart of a child in Brazil; it is probably identical with *D. immitis*. **D. re'pens**, a species found in the subcutaneous connective tissues of dogs and occasionally of man.

dirofilariasis (di'ro-fil'ah-ri'ah-sis) infection with a parasite of the genus *Dirofilaria*.

Dir. prop. abbreviation for L. *directio'ne pro'pria*, with a proper direction.

dis- a prefix denoting (1) reversal or separation [L. *dis-* apart], or (2) duplication [Gr. *dis* twice, doubly].

disability (dis'ah-bil'i-te) 1. a lack of the ability to function normally, physically or mentally; incapacity. 2. anything that causes disability. 3. as defined by the federal government: "inability to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to last or has lasted for a continuous period of not less than 12 months." **developmental d.**, a substantial handicap having its onset before the age of 18 years and of indefinite duration, and attributable to mental retardation, autism (when found to be closely related to and requiring treatments similar to that of mental retardation), cerebral palsy, epilepsy, or other neuropathy.

disaccharidase (di-sak'ah-rī-dās') an enzyme that hydrolyzes disaccharides.

disaccharide (di-sak'ah-rid) any of a class of sugars that yield two monosaccharides on hydrolysis and have the general formula $C_n(H_2O)_{n-1}$ or $C_{12}H_{22}O_{11}$. They include sucrose, lactose, and maltose. Formerly called *biose*, *disaccharose*, and *hexabiose*. **reducing d's**, disaccharides that can reduce Fehling's solution or other reagents, owing to the presence of a functional aldehyde group.

disacchariduria (di-sak'ah-ri-du're-ah) presence of a disaccharide (lactose or sucrose) in the urine.

disaccharose (di-sak'ah-rōs) disaccharide.

disacidify (dis'ah-sid'i-fi) to remove an acid from, or to neutralize an acid in, a mixture.

disaggregation (dis'ag-re-ga'shun) failure of the hysterical mind to connect new sensations with each other.

disarticulation (dis'ar-tik'u-la'shun) [L. *dis-* apart + *articulus* joint] amputation or separation at a joint.

disassimilate (dis'ah-sim'i-lāt) dissimilate.

disassimilation (dis'ah-sim'i-la'shun) [*dis-* + *assimilation*] dissimulation.

disazo (dis-az'o) diazo-

disc (disk) [L. *discus*] disk.

disc- see *disco-*.

discharge (dis-charj') 1. a setting free, or liberation. 2. matter or force set free. 3. an excretion or substance evacuated. **brush d.**, in electrotherapeutics, the spark discharge from a static machine or an induction coil; because of its slight ability to penetrate solid matter it was confused with x-rays by early investigators. Called also *spark x-rays*. **disruptive d.**, the passing of a current through an insulating medium due to the breakdown of the medium under the electrostatic stress. **epileptic d.**, the pathophysiological events underlying epilepsy. **nervous d.**, **neural d.**, the propagated excitation produced by stimulation of a center in the nervous system. **systolic d.**, see *stroke volume*, under *volume*.

dischronation (dis'kro-na'shun) [L. *dis-* apart + Gr. *chronos* time] a dislocation in the consciousness of time.

disci (di'si) [L.] plural of *discus*.

disciform (dis'i-form) [L. *discus* disk + *forma* shape] in the form of a disk.

discission (dis-sizh'un) [L. *discissio*; *dis-* apart + *scindere* to cut] incision, or cutting into, as of a soft cataract. **d. of cataract**, the surgical rupturing of the capsule so that the aqueous humor may gain access to the lens of the eye. **d. of cervix uteri**, incisions on each side of the cervix uteri, formerly done for the relief of stenosis of the cervix. **posterior d.**, incision of the capsule of a cataract from behind.

discitis (dis-ki'tis) diskitis.

disclination (dis'kli-na'shun) [L. *dis-* apart + *clinatus* leaning] outward rotation of the upper pole of the vertical meridian of each eye; called also *abtorsion*. Cf. *conclination*.

disco-, disc- [L. *discus*; Gr. *diskos*] a combining form denoting

relationship to a disk, or disk-shaped. See also words beginning *disko-*.

discoblastic (dis/'ko-blas'tik) [*disco-* + Gr. *blastos* germ] pertaining to a discoblastula or to discoidal cleavage.

discoblastula (dis/'ko-blas'tu-lah) the specialized blastula formed by cleavage of a fertilized telolecithal ovum, consisting of a cellular cap—the germinal disk, or blastoderm—separated by the blastocoele from a floor of uncleaved yolk.

discogastrula (dis/'ko-gas'troo-lah) a modified, flattened gastrula formed by discoidal cleavage of a highly telolecithal ovum.

discogenetic (dis/'ko-jē-net'ik) discogenic.

discogenic (dis/'ko-jen'ik) [*disco-* + Gr. *gennan* to produce] caused by derangement of an intervertebral disk.

discogram (dis/'ko-gram) diskogram.

discography (dis-'kog/'rah-fe) diskography.

discoid (dis/'koid) [Gr. *diskos* disk + *eidos* form] 1. shaped like a disk. 2. a disklike medicated tablet. 3. a dental instrument with a disklike or circular blade, used for carving dental restorations.

discoidectomy (dis/'koid-ek'to-me) diskectomy.

Discomyces (dis/'ko-mi-sēz) [*disco-* + Gr. *mykēs* fungus] a name formerly given to certain organisms now included under *Streptomyces*.

Discomycetes (dis/'ko-mi-se'tēz) [*disco-* + Gr. *mykēs* fungus] a series of ascomycetous fungi of the subclass *Euscomycetidae*, including the order *Pezizales*; their fruiting body is an apothecium.

discopathy (dis-'kop/'ah-the) [*disco-* + Gr. *pathos* disease] disease of an intervertebral cartilage (disk). **traumatic d.**, rupture of an intervertebral disk due to physical trauma.

discophorous (dis-'kof/'ō-rus) [*disco-* + Gr. *phoros* bearing] possessing a disklike organ or part.

discoplacenta (dis/'ko-plah-sen'tah) a discoid placenta.

discord (dis/'kord) [L. *discordia*] a simultaneous assemblage of two or more inharmonious sounds.

discordance (dis-'kor'dans) in genetics, the occurrence of a given trait in only one member of a twin pair, as opposed to *concordance*.

discordant (dis-'kor'dant) exhibiting discordance.

discoria (dis-'ko're-ah) dyscoria.

discrepancy (dis-'krep/'an-se) disagreement or inconsistency. **tooth size d.**, lack of harmony of size of individual or groups of teeth when related to those within the same arch or the opposing arch.

discrete (dis-'krēt') [L. *discretus*; *discernere* to separate] made up of separated parts or characterized by lesions which do not become blended.

discus (dis/'kus), pl. *dis'ci* [L.; Gr. *diskos*] a circular or rounded flat plate; used as a general term in anatomical nomenclature to designate such a structure. Called also *disc* or *disk*. **d. articularis** [NA], the articular disk: a pad composed of fibrocartilage or dense fibrous tissue found in some synovial joints; it extends into the joint from a marginal attachment at the articular capsule and in some cases completely divides the joint cavity into two separate compartments. Called also *interarticular disk*. **d. articularis articulationis acromioclaviculae** [NA], articular disk of acromioclavicular articulation: a pad of fibrocartilage, sometimes present, commonly imperfect, within the articular cavity of the acromioclavicular joint. Called also *Weitbrecht's cartilage* and *meniscus of acromioclavicular joint*. **d. articularis articulationis mandibulae** [NA], articular disk of temporomandibular joint: a triangular pad of fibrocartilage, attached at its base to the radius and at its apex to the base of the styloid process of the ulna; it usually separates the articular cavity of the distal radioulnar joint from that of the radiocarpal joint. Called also *cartilago triquetra*, *meniscus of inferior radioulnar joint*, and *triquetal or triquetrous cartilage*. **d. articularis articulationis sternoclaviculae** [NA], articular disk of sternoclavicular articulation: a pad of fibrocartilage, the circumference of which is connected to the articular capsule of the sternoclavicular joint; it is attached superiorly to the clavicle and inferiorly to the first costal cartilage near its union with the sternum, and divides the joint cavity into two parts. Called also *meniscus of sternoclavicular joint*. **d. articularis articulationis temporomandibulae** [NA], articular disk of temporomandibular joint: a plate of fibrocartilage or fibrous tissue that divides the temporomandibular joint into two separate cavities; its circumference is connected to the articular capsule. Called also *d. articularis articulationis mandibularis* and *meniscus of temporomandibular joint*. **d. interpubicus** [NA], interpubic disk: a midline plate of fibrocartilage interposed between the symphyseal surfaces of the pubic bones, these surfaces being covered by a thin layer of hyaline cartilage; called also *lamina fibrocartilaginea interpubica*. **dis'ci intervertebrales** [NA], intervertebral disks: the 23 plates of fibrocartilage found, from the axis to the sacrum, between the bodies of adjacent vertebrae, each consisting of a fibrous ring (anulus fibrosus)

enclosing a pulpy center (nucleus pulposus); called also *fibrocartilagineae intervertebrales*, and *intervertebral cartilages*, *fibrocartilage*, or *ligaments*. **d. lentiformis** (*obs.*), subthalamic nucleus. **d. nervi optici** [NA], the optic disk: the intraocular portion of the optic nerve formed by fibers converging from the retina and appearing as a pink to white disk. Called also *d. opticus*, *nerve head*, *optic papilla*, and *papilla nervi optici*. **d. oophorus**, cumulus oophorus. **d. opticus**, d. nervi optici. **d. ovigerus**, d. proligerus, cumulus oophorus.

discussive (dis-'kus/iv) discutient.

discutient (dis-'ku'she-ent) [L. *discutere* to dissipate] 1. scattering; causing a disappearance. 2. a remedy which so acts. Called also *discussive*.

disdiacblast (dis-'di'ah-klast) [Gr. *dis* twice + *diaklan* to break through] any of the doubly refracting elements of the contractile substance of muscle.

disdiadochokinesia (dis-'di-ad''ō-ko-ki-ne'se-ah) dysdiadochokinesia.

disease (dī-'zēz') [Fr. *dès* from + *aise* ease] any deviation from or interruption of the normal structure of function of any part, organ, or system (or combination thereof) of the body that is manifested by a characteristic set of symptoms and signs and whose etiology, pathology, and prognosis may be known or unknown. **accumulation d.**, thesaurismosis. **Acosta's d.**, acute mountain sickness. **acute d.**, a disease characterized by a swift onset and short course. **acute demyelinating d.**, postinfection encephalitis. **Adams' d.**, **Adams-Stokes d.**, a condition caused by heart block and characterized by sudden attacks of unconsciousness, with or without convulsions; called also *Adams-Stokes syndrome* or *syncope*, *Stokes-Adams d.*, *syn-drome*, or *syncope*, *Morgagni-Adams-Stokes syndrome*, and *Stokes' syndrome*. See also *heart block*. **adaptation d.**, any metabolic disorder occurring as the result of adaptation or resistance to severe physical or psychologic stress. **Addison's d.**, a disease characterized by a bronzelike pigmentation of the skin, severe prostration, progressive anemia, low blood pressure, diarrhea, and digestive disturbance; it is due to disease (hypofunction) of the adrenal glands and, in the absence of replacement therapy (cortisol), is usually fatal. Called also *melasma suprarenale* and *bronzed disease or skin*. **adult celiac d.**, the adult form of celiac disease, or nontropical sprue. **airsac d.**, infectious sinusitis of turkeys. **akamushi d.**, scrub typhus. **Akureyri d.**, benign myalgic encephalomyelitis; named for a town in northern Iceland where more than 1000 cases occurred in 1948. **Albar-rán's d.**, colibacilluria. **Albers-Schönberg d.**, osteopetrosis. **Aleutian mink d.**, a chronic, progressive disease of mink, probably of viral origin, marked by inappetence, weight loss, lethargy, polydipsia, and hemorrhages. **Alexander's d.**, an infantile form of leukodystrophy, characterized histologically by the presence of eosinophilic material at the surface of the brain and around its blood vessels, resulting in brain enlargement. **alkali d.**, 1. botulism in ducks. 2. a disease of livestock; see *se-lenium poisoning*, under *poisoning*. **allogeneic d.**, graft-ver-sus-host reaction occurring in immunosuppressed animals receiving injections of allogeneic lymphocytes. **Almeida's d.**, South American blastomycosis. **Alper's d.**, poliodystrophia cerebri. **alpha-chain d.**, heavy chain disease characterized by a serum paraprotein composed of incomplete heavy chains without light chains of IgA. Free incomplete alpha chains appear in the serum and patients exhibit severe malabsorption syndrome with chronic diarrhea, steatorrhea, weight loss, hypocalcemia and lymphadenopathy; this is by far the most prevalent of the relatively rare heavy chain diseases. **altitude d.**, high-altitude sickness. **Alzheimer's d.**, presenile dementia. **Anders' d.**, adiposis tuberosa simplex. **Andersen's d.**, glycogen storage d. (type IV). **Andes d.**, chronic mountain sickness. **Andrews' d.** (*obs.*), pustular bacterid. **angiospasmotic d.** (*obs.*), a disease marked by spasms of various vessels of the body. **Apert's d.**, acrocephalosyndactylia. **Apert-Crouzon d.**, a hereditary disorder, transmitted as an autosomal dominant trait, consisting of the hand and foot malformations associated with Apert's syndrome (see *acrocephalosyndactyly*) together with the facial characteristics of Crouzon's disease (see *craniofacial dysostosis*, under *dysostosis*). Called also *acrocephalosyndactyly type II* and *Vogt's cephalodactyly*. **Aran-Duchenne d.**, spinal muscular atrophy. **arc-welders' d.**, siderosis (def. 1). **Armstrong's d.**, lymphocytic choriomeningitis. **atopic d.**, atopy. **Auf-recht's d.** (*obs.*), parenchymatous alterations in the liver and kidney in infectious jaundice. **Aujesky's d.**, pseudorabies. **Australian X d.**, an acute epidemic encephalitis of viral origin observed in Australia during the summer months between 1917 and 1926, which resembled Japanese B encephalitis both symptomatically and pathologically; the virus appeared to be a variant of Japanese B encephalitis virus, but the culture was lost before it could be identified. See also *Murray Valley encephalitis*, under *encephalitis*. **autoimmune d.**, any of a group of disorders in which tissue injury is associated with humoral or cell-mediated responses to the body's own constituents; they may be systemic (e.g., systemic lupus erythematosus) or organ specific (e.g., autoimmune thyroiditis). **aviators' d.**, high-altitude sickness. **Ayerza's d.**, a form of polycythemia vera marked by chronic

cyanosis, chronic dyspnea, chronic bronchitis, bronchiectasis, enlargement of liver and spleen, hyperplasia of bone marrow, and associated with sclerosis of the pulmonary artery. **Baas-trup's d.**, kissing spine. **Baelz's d.**, see *cheilitis glandularis*. **Ballingall's d.** (*obs.*), maduromycosis. **Balo's d.**, an atypical form of Schilder's disease in which the demyelination is arranged in concentric rings around a central circle; called also *encephalitis periaxialis concentrica* and *leukoencephalitis periaxialis concentrica*. **Bamberger's d.**, 1. saltatory spasm or tic of the lower extremities. 2. Concato's d. **Bamberger-Marie d.**, hypertrophic pulmonary osteoarthropathy. **Bamle d.**, epidemic pleurodynia. **Bang's d.**, infectious abortion in cattle caused by *Brucella abortus*. **Bannister's d.** (*obs.*), angioneurotic edema. **Banti's d.**, originally described as a primary disease of the spleen associated with splenomegaly and pancytopenia, but later considered secondary to portal hypertension; called also *congestive splenomegaly*, *Klemperer's d.*, and *splenic anemia*. **barbed-wire d.**, the condition seen in prisoners of war who fall victims of confinement in prison camps. **Barcoo d.**, desert sore. **Barlow's d.**, infantile scurvy. **barometer-maker's d.**, chronic mercurial poisoning in makers of barometers, due to the inhalation of the fumes of mercury. **Barraquer's d.**, lipodystrophia progressiva. **Barthélemy's d.** (*obs.*), papulonecrotic tuberculid. **Basedow's d.**, Graves' d. **Basel d.** (*obs.*), an epidemic form of keratosis follicularis occurring in Switzerland. **Bateman's d.** (*obs.*), molluscum contagiosum. **Batten's d.**, **Batten-Mayou d.**, the juvenile form of cerebral sphingolipidosis with pigmentation of the macula and pallor of the optic disk. **bauxite workers' d.**, bauxite pneumoconiosis. **Bayle's d.**, paralytic dementia. **Bazin's d.**, erythema induratum. **Beard's d.**, neurasthenia. **Beau's d.**, cardiac insufficiency. **Beauvais' d.**, rheumatoid arthritis. **Beck's d.**, a disease affecting young people in Siberia and marked by fatigue and swelling of the phalanges; later all the joints of the body become enlarged and normal growth is retarded. **Bekhterev's d.**, rheumatoid spondylitis. **Begbie's d.**, Graves' d. **Béguez César d.**, Chédiak-Higashi syndrome. **Behçet's d.**, see under *syndrome*. **Behr's d.**, degeneration of the macula retinae in adult life. **Beigel's d.** (*obs.*), piedra. **Bell's d.** (*obs.*), acute delirium. **Benson's d.**, asteroid hyalosis. **Berger's d.**, IgA glomerulonephritis. **Bergeron's d.**, see under *chorea*. **Berlin's d.**, commotio retinae. **Bernhardt's d.**, **Bernhardt-Roth d.**, meralgia paraesthetica. **Besnier-Boeck d.**, sarcoidosis. **Best's d.**, congenital macular degeneration. **Bettlach May d.**, a fatal disease affecting adult honeybees, principally in Switzerland, marked by paralysis with inability to fly, caused by ingestion of the pollen of certain buttercups, which contains a poisonous substance. **Biedl's d.**, see *Laurence-Moon-Biedl syndrome*, under *syndrome*. **Bielschowsky-Jan-sky d.**, the late infantile form of cerebral sphingolipidosis. **Biermer's d.**, pernicious anemia. **Biett's d.** (*obs.*), discoid lupus erythematosus. **Bilderbeck's d.**, acrodynia. **Bill-roth's d.**, 1. meningocele due to skull fracture and tearing of the arachnoid; called also *cephalohydrocele traumatica* and *spurious meningocele*. 2. lymphoma. **Binswanger's d.**, see under *dementia*. **Bird's d.**, oxalic diathesis. **black d.**, infectious necrotic hepatitis of sheep: a fatal disease of sheep, and occasionally of man, in the United States (in Montana) and in Australia (in New South Wales, Victoria, Tasmania), marked by necrotic areas in the liver; it is caused by *Clostridium novyi*. **blinding filarial d.**, onchocerciasis caused by *Onchocerca volvulus* (q.v.). **Blocc's d.**, astasia-abasia. **Bloodgood's d.**, cystic d. of breast. **Blount's d.**, osteochondrosis deformans tibiae. **blue d.**, 1. an old term for congenital heart disease; see *morbus caeruleus*. 2. Rocky Mountain spotted fever. **blue nose d.**, a disease of horses, apparently due to photosensitization following the ingestion of certain meadow plants, in which there is usually a blue discoloration of muzzle, sloughing of nonpigmented skin, and frequently intense excitement. **Boeck's d.**, sarcoidosis. **border d. of sheep**, a disease of unknown etiology and very high mortality that affects sheep on the English-Welsh border; it is manifested by an increase in the amount of hair in the fleece, slow growth, diminished stature, slight abnormality of head shape, and a slightly swaying gait. **Borna d.**, a fatal enzootic encephalitis of horses, cattle, and sheep, caused by a virus; called also *enzootic encephalitis of horses*, *equine encephalitis*, and *crazy d.* **Bornholm d.**, epidemic pleurodynia. **Bostock's d.**, hay fever. **bottom d.**, crotalism. **Bouchard's d.**, dilatation of the stomach from inefficiency of the gastric muscles. **Bouchet-Gsell d.**, swineherd's d. **Bouillaud's d.**, rheumatic endocarditis. **Bourneville's d.**, tuberous sclerosis. **Bouveret's d.**, paroxysmal tachycardia. **Bowen's d.**, intraepidermal squamous cell carcinoma, often occurring in multiple primary sites; called also *Bowen's precancerous dermatosis* and *precancerous dermatitis*. **Bradley's d.**, epidemic nausea and vomiting. **brancher glycogen storage d.**, glycogen storage d. (type IV). **Breda's d.**, yaws. **Breisky's d.**, kraurosis vulvae. **Bretonneau's d.**, diphtheria. **Bright's d.**, a broad descriptive term once used for kidney disease with proteinuria, usually glomerulonephritis. **Brill's d.**, a recrudescence of typhus occurring as long as 70 years after the initial acute episode of epidemic typhus. In the United States, it is seen

primarily in middle-aged or elderly immigrants from Russia, Poland, and neighboring countries. It is milder than the primary infection, owing to the persistence of specific antibody of the IgG class. Called also *Brill-Zinsser d.*, *benign typhus*, and *recrudescence typhus*. **Brill-Symmers d.**, giant follicular lymphoma. **Brill-Zinsser d.**, Brill's d. **Brinton's d.**, linitis plastica. **Brion-Kayser d.**, paratyphoid, def. 2. **brisket d.**, a disease resembling mountain sickness in man, affecting young cattle living at altitudes above 7600 feet; it is sometimes seen in sheep and has been produced experimentally in pigs. **broad-beta d.**, familial hyperlipoproteinemia (type III); so called because on electrophoresis the lipoproteins show a broad band of beta lipoproteins. **Brodie's d.**, 1. chronic synovitis, especially of the knee, with a pulpy degeneration of the parts affected. 2. hysterical pseudofracture of the spine. **bronzed d.**, Addison's d. **Brown-Séquard d.**, see under *syndrome*. **Brown-Symmers d.**, fatal acute serous encephalitis in children. **Bruck's d.**, a condition marked by deformity of bones, multiple fractures, ankylosis of joints, and atrophy of muscles. **Brush-field-Wyatt d.**, see under *syndrome*. **Budd's d.** (*obs.*), Budd's cirrhosis. **Budd-Chiari d.**, see under *syndrome*. **Buerger's d.**, thromboangiitis obliterans. **Buerger-Grütz d.**, idiopathic hyperlipemia. **buffalo d.**, 1. barbone. 2. buffalo encephalitis. **Buhl's d.**, an acute sepsis affecting newborn infants, marked by hemorrhages into the skin, mucous membranes, and navel attended with cyanosis and jaundice; there are also hemorrhages in the intestinal organs. **Bury's d.** (*obs.*), erythema elevatum diutinum. **Buschke's d.**, cryptococcosis. **bush d.**, a disease of sheep and cattle in certain parts of New Zealand, marked by progressive anemia; it is due to an iron or an iron and copper deficiency. **Busquet's d.**, exostoses on the dorsum of the foot due to osteoperiostitis of the metatarsal bones. **Buss d.**, a viral encephalomyelitis with pleuritis affecting cattle in the United States and Japan, marked by dullness, labored breathing, cough, diarrhea, staggering gait, and, sometimes, drooling of saliva and a discharge from the nose; called also *sporadic bovine encephalomyelitis*. **Busse-Buschke d.**, cryptococcosis. **Cacchi-Ricci d.**, sponge kidney. **Caffey's d.**, infantile cortical hyperostosis. **caisson d.**, decompression sickness. **California d.**, coccidioidomycosis. **caloric d.**, any disease due to exposure to high temperature. **Calvé-Perthes d.**, osteochondrosis of the caputular epiphysis of the femur. **Camurati-Engelmann d.**, diaphyseal dysplasia. **Canavan's d.**, spongy degeneration of the central nervous system; see under *degeneration*. **canine parvovirus d.**, an acute, often fatal gastroenteritis of dogs caused by a parvovirus related to the virus of feline panleukopenia or of mink enteritis. **Carrión's d.**, an infectious disease occurring in the valleys of the Andes Mountains in Peru, Chile, Bolivia, and Colombia. It appears in an acute febrile anemic stage (*Oroya fever*) followed in several weeks by a nodular skin eruption (*verruca peruana*). It is caused by *Bartonella bacilliformis*, which is transmitted by the sandfly, *Phlebotomus verrucarum*, but may also be transmitted by *P. noguchi*. Called also *bartonellosis* and *bartonellosis*. **Castellani's d.**, bronchospirochetosis. **cat-scratch d.**, see under *fever*. **Cavare's d.**, familial periodic paralysis. **Cazenave's d.**, pemphigus foliaceus. **celiac d.**, a malabsorption syndrome affecting both children and adults, precipitated by the ingestion of gluten-containing foods; its etiology is unknown but a hereditary factor has been implicated. Pathologically, the proximal intestinal mucosa loses its villous structure, surface epithelial cells exhibit degenerative changes, and the absorptive function of these cells is severely impaired. It is characterized by diarrhea in which the stools are bulky, frothy, fatty (steatorrhea), and fetid (occasionally, malabsorption may be associated with the passage of a singly bulky stool without diarrhea); abdominal distention; flatulence; weight loss; asthenia; deficiency of vitamins B, D, and K; and electrolyte depletion. Called also *gluten enteropathy* and *nontropical sprue*. In the infantile form the onset is insidious, and is marked by irritability, loss of appetite, weakness, extreme wasting, growth retardation, and celiac crisis. The adult form is marked by extreme lassitude, fatigue, difficulty in breathing, clubbing of the fingers, bone pain, cramping of the muscles, tetany, abdominal distention during the day, megacolon, tympanitis, and skin pigmentation. Until recently it was thought that the infantile form and the adult form were different entities, but it is now believed that they are the same. **central core d. of muscle**, a rare hereditary disease, transmitted as an autosomal dominant trait, in which severe hypotonia arrests motor development in infancy, but the course is benign and by school age affected children can walk; histologically, the diagnostic feature is a central core in each muscle fiber. **Chabert's d.**, blackleg. **Chagas' d.**, a form of trypanosomiasis that runs an acute course in children and a chronic course in adults. Widely distributed in Central and South America, it is caused by *Trypanosoma cruzi*, which is transmitted by *Panstrongylus megistus*, *P. infestans*, and other reduviid bugs. The acute disease is marked initially by an erythematous nodule (chagoma) at the site of inoculation and by regional lymphadenopathy; in later stages, after the organisms invade tissues via the circulation, it may be marked by myxedema and cardiac and neurologic symptoms. In the chronic phase, which occurs after a latent period

of years, the most important manifestation is heart disease (chagasic myocarditis) but neurological and gastrointestinal disorders (e.g., megacolon) also occur. Various animals, including armadillos, cats, bats, foxes, and guinea pigs, serve as reservoir hosts. Called also *South American trypanosomiasis*. **Chagas-Cruz d.**, Chagas' d. **Charcot's d.**, neuropathic arthropathy. **Charcot-Marie-Tooth d.**, progressive neuropathic (peroneal) muscular atrophy. **Charlouis' d.**, yaws. **Charrin's d.**, infection with *Pseudomonas aeruginosa*. **Chédiak-Higashi d.**, see under *syndrome*. **Cherchewski's (Cherchewski's) d.**, ileus of nervous origin. **Chester's d.**, xanthomatosis of the long bones with spontaneous fractures. **Chiari's d.**, Budd-Chiari syndrome. **Chiari-Frommel d.**, see under *syndrome*. **Chicago d.**, North American blastomycosis. **chignon d.** (*obs.*), piedra. **Christian's d.**, Hand-Schüller-Christian d. **Christian-Weber d.**, nodular nonsuppurative panniculitis. **Christmas d.**, hemophilia B. **chronic d.**, one which is slow in its progress and of long continuance. **chronic granulomatous d.**, chronic suppurative lymphadenitis, eczematoid dermatitis, hepatosplenomegaly, and chronic pulmonary disease associated with a genetically determined defect in the intracellular bactericidal function of leukocytes. **chronic obstructive pulmonary d. (COPD)**, any disorder, e.g., asthma, chronic bronchitis, and pulmonary emphysema, marked by persistent obstruction of bronchial air flow. **chronic respiratory d. of poultry**, a common respiratory disease of chickens caused by mycoplasma, and marked by distressed breathing, swelling of the face, and discharge from the nostrils; abbreviated C.R.D. **chylipoietic d. (obs.)**, one which affects the digestive organs. **Ciarrocchi's d. (obs.)**, erosio interdigitalis blastomycetica. **circling d.**, listeriosis. **climatic d.**, any disease thought to be produced by a change of climate. **coast d.**, a disease of domestic animals similar to enzootic marasmus (q.v.), occurring in Tasmania. **Coats' d.**, chronic progressive exudative retinopathy usually occurring in male children and young adults. **Cogan's d.**, see under *syndrome*. **collagen d.**, any of a group of diseases that, although clinically distinct and not necessarily related etiologically, have in common widespread pathologic changes in the connective tissue; they include lupus erythematosus, dermatomyositis, scleroderma, polyarteritis nodosa, thrombotic purpura, rheumatic fever, and rheumatoid arthritis. **comb d.**, favus of fowl. **combined immunodeficiency d.**, deficiency of lymphoid cells that mediate both humoral (B-lymphocytes) and cellular (T-lymphocytes) immunity. **combined system d.**, subacute combined degeneration of the spinal cord; see under *degeneration*. **communicable d.**, a disease the causative agent of which may pass or be carried from one person to another directly or indirectly. **complicating d.**, one which occurs in the course of some other disease as a complication. **compressed-air d.**, decompression sickness. **Concato's d.**, progressive malignant polyserositis with large effusions into the pericardium, pleura, and peritoneum. **Conor and Bruch's d.**, boutonneuse fever. **Conradi's d.**, dysplasia epiphysealis punctata. **constitutional d.**, one that involves a system of organs or one characterized by widespread symptoms. **contagious d.**, a disease that is communicable by contact with an individual suffering from it or with some secretion of such an individual, or with an object touched by him. Cf. *infectious d.* **Cooley's d.**, see *β -thalassemia*. **Cooper's d. (obs.)**, chronic cystic disease of the breast. **Corbus' d.**, gangrenous balanitis. **Cori's d.**, glycogen storage d. (type III). **cornstalk d.**, toxic encephalomalacia of dietary origin affecting horses. **corridor d.**, a disease resembling East Coast fever, affecting African buffalo and cattle, caused by the protozoan parasite *Theileria lawrencei*, which is transmitted by ticks. **Corrigan's d.**, aortic insufficiency; see also *insufficiency of the valves*. **Corvisart's d.**, 1. chronic hypertrophic myocarditis. 2. tetralogy of Fallot associated with right aortic arch. **Cotugno's d.**, sciatica. **covering d.**, dourine. **Cowden's d.**, a hereditary disease characterized by multiple ectodermal, mesodermal, and endodermal nevoid and neoplastic anomalies. Papules of the face and oral mucosa are the most characteristic lesion; other changes occur in the skin, in the thyroid (goiter, adenoma, carcinoma), the breast (fibrocystic disease), the gastrointestinal system, and the nervous system. Called also *multiple hamartoma syndrome*. **coxsackievirus A d.**, herpangina. **crazy d.**, Borna disease. **crazy chick d.**, 1. avian encephalomalacia. 2. avian encephalomyelitis. **creeping d.**, a condition marked by cutaneous lesions similar to those seen in larva migrans, but produced by nematodes of the genus *Gnathostoma*. **Creutzfeldt-Jakob d.**, a rare, usually fatal, transmissible spongiform viral encephalopathy, occurring in middle life, in which there is partial degeneration of the pyramidal and extrapyramidal systems accompanied by progressive dementia and sometimes wasting of the muscles, tremor, athetosis, and spastic dysarthria. Called also *Creutzfeldt-Jakob syndrome*, *Jakob's disease*, *Jakob-Creutzfeldt disease*, and *spastic pseudoparalysis*. **Crigler-Najjar d.**, see under *syndrome*. **Crocq's d. (obs.)**, acrocyanosis. **Crohn's d.**, a chronic granulomatous inflammatory disease of unknown etiology, involving any part of the gastrointestinal tract from mouth to anus, but commonly involving the terminal ileum with scarring and thickening of the bowel wall; it frequently leads to intestinal

obstruction and fistula and abscess formation and has a high rate of recurrence after treatment. Called also *regional enteritis* or *ileitis*. **Crouzon's d.**, craniofacial dysostosis. **Cruveilhier's d.**, 1. spinal muscular atrophy. 2. Cruveilhier's ulcer. **Cruz-Chagas d.**, Chagas' d. **Csillag's d. (obs.)**, lichen sclerosus et atrophicus. **Curschmann's d. (obs.)**, perihepatitis chronica plastica. **Cushing's d.**, Cushing's syndrome in which the hyperadrenocorticism is secondary to excessive pituitary secretion of adrenocorticotrophic hormone. **cystic d. of breast**, a form of mammary dysplasia with formation of cysts of various size containing a semitransparent, turbid fluid that imparts a brown to blue color (blue dome cyst) to the unopened cysts; considered to be due to abnormal hyperplasia of the ductal epithelium and dilatation of the ducts of the mammary gland, occurring as a result of an exaggeration and distortion of the cyclic breast changes that normally occur in the menstrual cycle. Called also *chronic cystic mastitis*, *fibrocystic disease*, *fibrocystic disease of breast*, and *Schimmelbusch's disease*. **cystic d. of lung**, a condition in which there are abnormally large air spaces in the lung parenchyma; the term is sometimes applied to cystic emphysema. Called also *pseudocysts of lung* and *pulmonary pseudocysts*. **cysticercus d.**, infection with larval forms (*Cysticercus cellulosae*) of *Taenia solium* (the pork tapeworm). **cystine d.**, cystine storage d., cystinosis. **cytomegalic inclusion d.**, an infection due to cytomegalovirus and marked by nuclear inclusion bodies in enlarged infected cells. In the congenital form, there is hepatosplenomegaly with cirrhosis, and microcephaly with mental or motor retardation. Acquired disease may cause a clinical state similar to infectious mononucleosis. When acquired by blood transfusion, postperfusion syndrome (q.v.) results. Called also *salivary gland disease*. **Czerny's d.**, periodic hydrarthrosis of the knee. **Daae's d.**, Daae-Finsen d., epidemic pleurodynia. **DaCosta's d.**, 1. misplaced gout. 2. neurocirculatory asthenia. **Dalrymple's d.**, cyclokeratitis. **dancing d.**, tarantism. **Danlos' d.**, Ehlers-Danlos syndrome. **Darier's d.**, keratosis follicularis. **Darling's d.**, histoplasmosis. **David's d.**, 1. [J. P. David.] tuberculosis of the spine. 2. [W. David.] an unexplained form of hemorrhagic disease in women, marked by severe bleeding from the gums and mucous membranes, attributed, without definite basis, to deficiency of ovarian hormone. **debrancher glycogen storage d.**, glycogen storage d. (type II). **deer fly d.**, tularemia. **deficiency d.**, a condition produced by dietary or metabolic deficiency; the term includes all diseases—e.g., kwashiorkor, beriberi, scurvy, pellagra, calcium deficiency, etc.—caused by an insufficient supply of the essential nutrients, i.e., protein (or amino acids), vitamins, and minerals. **degenerative joint d.**, osteoarthritis. **Degos' d.**, malignant papulosis. **Dejerine's d.**, Dejerine-Sottas d., progressive hypertrophic interstitial neuropathy. **demyelinating d.**, any condition characterized by destruction of myelin. **deprivation d.**, deficiency d. **de Quervain's d.**, painful tenosynovitis due to relative narrowness of the common tendon sheath of the abductor pollicis longus and the extensor pollicis brevis. **Dercum's d.**, adiposis dolorosa. **Deutschländer's d.**, 1. tumor of the metatarsal bones. 2. march foot (fracture). **Devergie's d. (obs.)**, pityriasis rubra pilaris. **Devic's d.**, neuromyelitis optica. **diamond-skin d.**, the urticarial and mildest form of swine erysipelas. **Di Guglielmo d.**, erythremic myelosis. **Dimitri's d.**, Sturge-Weber syndrome. **diverticular d.**, a general term embracing the prediverticular state, diverticulosis, and diverticulitis. **Döhle d.**, syphilitic aortitis. **Down's d.**, see under *syndrome*. **drug d.**, 1. a morbid condition due to long-continued use of a drug. 2. in homeopathy, the group of symptoms seen after the administration of a drug for the purpose of proving. **Dubin-Sprinz d.**, Dubin-Johnson syndrome. **Dubini's d.**, see under *chorea*. **Dubois' d.**, the development of multiple abscesses in the thymus gland in congenital syphilis. **Duchenne's d.**, 1. spinal muscular atrophy. 2. bulbar paralysis. 3. tabes dorsalis. **Duchenne-Aran d.**, spinal muscular atrophy. **Duchenne-Griesinger d.**, pseudohypertrophic muscular dystrophy. **Duhring's d.**, dermatitis herpetiformis. **Dukes' d.**, a febrile disease of childhood characterized by an exanthematous eruption, probably a mild form of scarlet fever; called also *fourth d.* **Duplay's d. (obs.)**, subacromial or subdeltoid bursitis; see *calcific tendinitis*, under *tendinitis*. **Dupré's d.**, meningism, def. 1. **Durand's d.**, a viral disease, characterized by headache and by upper respiratory, meningeal, and gastrointestinal symptoms. **Durand-Nicolas-Favre d.**, lymphogranuloma venereum. **Durante's d.**, osteogenesis imperfecta. **Duroziez's d.**, congenital mitral stenosis. **Dutton's d. (obs.)**, trypanosomiasis. **Eales's d.**, a condition marked by recurrent hemorrhages into the retina and vitreous, affecting mainly males in the second and third decades of life. **Ebstein's d.**, 1. hyaline degeneration and necrosis of the epithelial cells of the renal tubules; seen in diabetes. 2. see under *anomaly*. **echinococcus d.**, hydatid d. **Economo's d.**, lethargic encephalitis. **Eddowes' d.**, see under *syndrome*. **Edsall's d.**, heat cramp. **Ehlers-Danlos d.**, see under *syndrome*. **Eichstedt's d. (obs.)**, tinea versicolor. **elevator d.**, respiratory distress affecting persons who work in grain elevators. **endemic d.**, a disease which is at all times present in a small

number of persons in a particular region. **Engelmann's d.**, diaphyseal dysplasia. **Engel-Recklinghausen d.**, osteitis fibrosa cystica. **English d.**, rickets. **Engman's d. (obs.)**, infectious eczematoid dermatitis. **enzootic d.**, a disease which is at all times present in a small number of animals in a particular region. **eosinophilic endomyocardial d.**, Löf-
fler's endocarditis. **epidemic d.**, a disease which affects a large number of people in some particular region within a short period of time. **epizootic d.**, a disease which affects a large number of animals in some particular region within a short period of time. **Epstein's d.**, pseudodiphtheria. **Erb's d.**, progressive muscular dystrophy. **Erb-Charcot d.**, Erb's spastic paraplegia. **Erb-Goldflam d.**, myasthenia gravis. **Erb-Landouzy d.**, muscular dystrophy. **Eulenburg's d.**, myotonia congenita. **extrapyramidal d.**, any of a group of clinical disorders marked by abnormal involuntary movements, alterations in muscle tone, and postural disturbances and involving lesions of the extrapyramidal tract; it includes parkinsonism, chorea, athetosis, etc. **extensor process d.**, buttress foot. **Fabry's d.**, a rare hereditary sphingolipidosis in which glycolipids (chiefly ceramide trihexoside) are deposited in various tissues, especially the kidneys; it is marked by vasomotor disturbances, edema, enlargement of the heart, especially the left ventricle, and moderate hypertension; by urinary abnormalities (albuminuria, and some erythrocytes, leukocytes, and casts); and by cutaneous lesions (diffuse, purpuric, and nodular, or generalized angioma-tous). Muscles may also be affected, and there may be ocular involvement. The metabolic defect is deficiency of an α -galactosidase, transmitted as an X-linked recessive trait. Called also *angiokeratoma corporis diffusum* and *Fabry's syndrome*. **Fahr-Volhard d.**, malignant nephrosclerosis. **Fallot's d.**, tetralogy of Fallot. **Fanconi's d.**, see under *syndrome*. **Farber's d.**, one of the sphingolipidoses, a rare hereditary disorder of ceramide metabolism due to deficiency of the enzyme cerami-dase and marked by hoarseness, aphonia, and a brownish desqua-mating dermatitis beginning at about three months of age, followed by foam cell infiltration of bones and joints, resulting in deformations; granulomatous reaction in lymph nodes, heart, lung, and kidneys; and psychomotor retardation. It is transmitted as an autosomal recessive trait. **fat-deficiency d.**, a condi-tion characterized by cessation of growth and skin lesions that result when essential fatty acids (arachidonic and linoleic acid) are absent from the diet. **fatigue d.**, occupation neurosis. **Fau-chard's d.**, periodontitis. **Favre-Durand-Nicholas d.**, lymphogranuloma venereum. **Fede's d.**, Riga-Fede d. **Feer's d.**, acrodynia. **Fenwick's d.**, idiopathic atrophic gas-tritis, first described by Fenwick in a patient with pernicious anemia. **fibrocystic d.**, **fibrocystic d. of breast**, cystic d. of breast. **fibrocystic d. of the pancreas**, cystic fibrosis of the pancreas (q.v. under *fibrosis*). **Fiedler's d.**, leptospiral jaundice. **fifth d.**, erythema infectiosum. **fifth venereal d.**, lymphogranuloma venereum. **Filatov's d.**, infectious mononucleosis. **Filatov-Dukes d.**, Dukes' d. **file-cutters' d.**, lead poisoning from inhaling particles of lead which arise from the bed of lead used in file cutting. **finger and toe d.**, a dis-ease of cabbage and other cruciferous plants caused by *Plasmodi-ophora brassicae*; called also *root hernia*. **fish-handler's d. (obs.)**, erysipeloid. **fish-skin d. (obs.)**, ichthyosis. **fish-slime d.**, septicemia following a puncture wound made by the spine of a fish. **Flajani's d.**, exophthalmic goiter. **Fla-tau-Schilder d.**, Schilder's d. **flax-dresser's d.**, a pulmo-nary disorder seen in flax-dressers, and caused by inhaling particles of flax. **flecked retina d.**, a group of retinal disor-ders, including fundus flavimaculatus, fundus albipunctatus, drusen, and congenital macular degeneration, all suspected of being primary abnormalities of the retinal pigment epithelium. **Fleischner's d.**, osteochondritis affecting the middle phalanges of the hand. **flint d.**, chalcosis. **flake d.**, infection with flukes; see *Trematoda*. **focal d.**, one which is localized at one or more foci. **Fölling's d.**, phenylketonuria. **foot-and-mouth d.**, an acute, naturally occurring, extremely contagious viral disease of wild and domestic animals, chiefly cattle, pigs, sheep, goats, and other ruminants, and very rarely of man. It is marked by an eruption of vesicles on the lips, buccal cavity, pharynx, legs, and feet; sometimes the skin of the udder or teats is involved. Called also *hoof-and-mouth d.*; *aftosa*; *contagious, epizootic, or malignant aphthae*; *aphthous fever*; and *aphthobul-lous, epidemic, or epizootic stomatitis*. **Forbes' d.**, glycogen storage d. (type III). **Fordyce's d.**, 1. a developmental anomaly characterized by enlarged and ectopic sebaceous glands that appear as minute yellowish papules (Fordyce's spots or granules) on the oral mucosa. 2. Fox-Fordyce d. **Forster's d.**, see under *choroiditis*. **Fothergill's d.**, 1. scarlatina anginosa. 2. trigeminal neuralgia. **Fournier's d.**, fulminating gangrene of the scrotum. **fourth d.**, Dukes' d. **fourth venereal d.**, 1. specific gangrenous and ulcerative balanoposthitis; see under *balanoposthitis*. 2. granuloma inguinale. **Fox-Fordyce d.**, a persistent and recalcitrant itchy papular eruption, limited chiefly to the axillae and the pubes, due to inflammation of the apocrine sweat glands. **Francis' d.**, tularemia. **Frankl-Hoch-wart's d.**, polyneuritis cerebri menieriformis. **Frei's d.**, lymphogranuloma venereum. **Freiberg's d.**, osteochondrosis

of the head of the second metatarsal. **Friedländer's d.**, end-arteritis obliterans. **Friedreich's d.**, 1. paramyoclonus mul-tiplex. 2. Friedreich's ataxia. **fright d.**, canine hysteria; psy-chic disturbance in dogs marked by symptoms of fright and by hysterical barking and running. **Frommel's d.**, Chiari-From-mel syndrome. **functional d.**, a disease involving functions without tissue damage. **functional cardiovascular d.**, neurocirculatory asthenia. **Fürstner's d.**, pseudospastic pa-ralysis with tremor. **Gaisböck's d.**, stress polycythemia. **Gamna's d.**, a form of splenomegaly, with thickening of the splenic capsule and the presence of small brownish areas (Gamna nodules) which are usually surrounded by a hematogenous zone; ferruginous pigment is deposited in the splenic pulp. **Gam-storp's d.**, adynamia episodica hereditaria. **Gandy-Nanta d.**, siderotic splenomegaly. **gannister d.**, pneumoconiosis due to the inhalation of dust by workers in the manufacture of refractory brick or fire clay. **garapata d.**, relapsing fever. **Garré's d.**, sclerosing nonsuppurative osteomyelitis. **Gau-cher's d.**, a group of hereditary disorders of glucocerebroside metabolism characterized by the presence of Gaucher's cells in the marrow and by splenomegaly, hepatomegaly, and erosion of the cortices of the long bones and pelvis. The adult form is associated with moderate anemia and thrombocytopenia, and yellowish pigmentation of the skin. In the infantile form, there is, in addition, marked impairment of the central nervous system. The juvenile form is characterized by rapidly progressing systemic manifestations but moderate involvement of the central nervous system. The disorder is transmitted as an autosomal recessive and, possibly in some instances, as an autosomal dominant trait. Called also *Gaucher's splenomegaly*, *kerasin thesaurismosis*, and *cerebro-side lipidosis*. **Gee's d.**, **Gee-Herter d.**, **Gee-Herter-Heubner d.**, childhood celiac disease; nontropical sprue. **Gee-Thayson d.**, adult celiac disease; the adult form of non-tropical sprue. **genetotrophic d.**, inborn error of metabo-lism; see under *metabolism*. **Gensoul's d.**, Ludwig's angina. **Gerhardt's d.**, erythromelalgia. **Gerlier's d.**, a disease of the nerves and nerve centers attacking farm laborers and stablemen, and characterized by pain, paresis, vertigo, ptosis, and muscular contractions; called also *endemic paralytic vertigo*, *paralyzing vertigo*, and *Gerlier's syndrome*. **Gibert's d. (obs.)**, pityriasis rosea. **Gibney's d.**, see under *perispondylitis*. **Gierke's d.**, see *glycogen storage d. (type I)*. **Gilbert's d.**, a familial, benign elevation of unconjugated bilirubin levels without evidence of liver damage or hematologic abnormalities. Called also *constitutional hepatic dysfunction*, *familial cholemia*, *familial nonhemolytic jaundice*, and *Gilbert's cholemia or syndrome*. **Gilchrist's d.**, North American blastomycosis. **Gilles de la Tourette's d.**, see under *syndrome*. **Glanzmänn's d.**, see *thrombasthenia*. **Glasser's d.**, a disease mainly affecting pigs 5 to 14 weeks old, in which swelling of the hocks or knee joints, or both, is accompanied by fever, lameness, and a disinclination to move; if untreated, death usually results. It is caused by a strain of *Hemophilus influenzae*. **Glénard's d. (obs.)**, splachnopto-sis. **Glisson's d.**, rickets. **glycogen d.**, glycogen storage d. **glycogen storage d.**, a group of chronic, genetically deter-mined metabolic disorders of childhood. Called also *glycogen d.*, *glycogenosis*, *glycogenic thesaurismosis*, and *glycogenic hepatome-galy*. Many types have been recognized, including the following: In *type I*, a deficiency in glucose-6-phosphatase results in liver and kidney involvement, with hepatomegaly, hypoglycemia, hyperuricemia, and gout. Called also *Gierke's* (v. *Gierke's*) *d.* and *hepatorenal glycogenosis*. In *type II*, a defect in α -1,4-glucosidase (acid maltase) results in generalized glycogen accumulation, with cardiomegaly, cardiorespiratory failure, and death. Affected chil-dren appear imbecile and are hypotonic. Called also *cardiomega-lia glycogenica diffusa*, *generalized glycogenosis*, and *Pompe's d.* In *type III*, a rare defect in the debranching enzyme amylo-1,6-glucosidase affects the heart and liver, with hepatomegaly, hypoglycemia, acidosis, stunted growth, and doll facies. Called also *Forbes' d.* and *limit dextrinosis*. In *type IV*, a rare defect in the branching enzyme amylo-1:4, 1:6-transglucosidase results in hepa-tomegaly and splenomegaly, with progressive hepatic failure and death. Called also *amylopectinosis* and *Andersen's d.* In *type V*, a deficiency of muscle phosphorylase affects the skeletal muscles, with muscle cramps and a depressed blood lactate level during exercise. Called also *McArdle's d.* and *myophosphorylase deficiency glycogenosis*. In *type VI*, a deficiency of liver phosphorylase is manifested in the liver and leukocytes, with hepatomegaly, moderate hypoglycemia, mild acidosis, and growth retardation. Called also *Hers' d.* In *type VII*, a deficiency in phosphofructo-kinase affects muscle and erythrocytes, with temporary weakness and cramping of skeletal muscle after exercise. In *type VIII*, the enzyme deficiency is unknown but the liver and brain are affected, with hepatomegaly, truncal ataxia, and nystagmus; the neurologic deterioration progressing to hypertonia, spasticity, and death. In *type IX*, a deficiency in liver phosphorylase kinase results in marked hepatomegaly, which may disappear in early adulthood. In *type X*, a lack of activity of cyclic AMP-dependent kinase affects the liver and muscle, with mild clinical symptoms. **Gold-flam's d.**, **Goldflam-Erb d.**, myasthenia gravis. **Gold-stein's d.**, hereditary hemorrhagic telangiectasia. **Graefe's d.**, ophthalmoplegia progressiva. **graft-versus-host d.**,

graft-versus-host reaction. **grass d.**, a usually fatal disease of horses occurring after they have been put to graze on grass, usually between May and July; first seen in Scotland, it has spread to Wales, England, and Sweden. It is marked by dysphagia, severe diarrhea, dehydration, interrupted peristalsis, and priapism. Called also *grass sickness*. **Graves' d.**, a disorder of the thyroid of unknown etiology, occurring most often in women, and characterized by exophthalmos, enlarged pulsating thyroid gland, marked acceleration of the pulse rate, a tendency to profuse sweats, nervous symptoms (including fine muscular tremors, restlessness, and irritability), psychic disturbances, emaciation, and increased metabolic rate. Called also *Basedow's d.*, *Begbie's d.*, *cachexia exophthalmica*, *exophthalmic goiter*, *hyperthyroidism*, *Parry's d.*, *Stokes' d.*, *thyroid cachexia*, *thyrotoxicosis*, *tachycardia strumosa exophthalmica*, and *toxic goiter*. **greasy pig d.**, seborrhea of piglets, which is thought to be associated with a vitamin B deficiency. **Greenfield's d.**, see *metachromatic leukodystrophy*, under *leukodystrophy*. **Greenhow's d. (obs.)**, vagabonds' d. **Griesinger's d. (obs.)**, hookworm d. **grinder's d.**, pneumoconiosis of grinders. **Gross's d.**, encysted rectum; saccular dilatation of anal wall with retained inspissated feces. **di Guglielmo's d.**, acute erythremic myelosis. **guinea worm d.**, dracunculiasis. **Guinon's d.**, Gilles de la Tourette's syndrome. **Gull's d.**, atrophy of the thyroid with myxedema. **Günther's d.**, congenital erythropoietic porphyria. **H d.**, Hartnup d. **Habermann's d.**, pityriasis lichenoides et varioliformis acuta. **Haff d.**, a condition affecting fishermen of the Koenigsberg (Frisches) Haff, a lagoon joining the Baltic Sea. The men are suddenly seized with severe pain in the limbs, great weariness, and myoglobinuria. The disease is said to be the result of poisoning by arsine introduced into the Haff through the waste water of cellulose factories. Several epidemics occurred prior to World War II. **Haglund's d.**, bursitis in the region of the Achilles tendon. **Hagner's d.**, an obscure bone disease somewhat resembling acromegaly (Pierre Marie described this obscure bone disease in the two Hagner brothers). **Hailey-Hailey d.**, benign familial pemphigus. **Hall's d. (obs.)**, spurious hydrocephalus in children. **Hallervorden-Spatz d.**, see under *syndrome*. **Hamman's d.**, interstitial emphysema of the lungs due to spontaneous rupture of the alveoli. Called also *Hamman's syndrome*. **Hammond's d.**, athetosis. **Hand's d.**, Hand-Schüller-Christian d. **hand-foot-and-mouth d.**, a mild, highly infectious viral disease of children, characterized by vesicular lesions in the mouth and on the hands and feet. **Hand-Schüller-Christian d.**, a chronic idiopathic form of histiocytosis, sometimes with accumulation of cholesterol, characterized classically by the triad of: defects in the membranous bones, exophthalmos, and diabetes insipidus. In most cases this triad is not seen, but there is multiple-system, soft tissue, and bone involvement. Called also *chronic idiopathic xanthomatosis* and *cholesterol thesaurismosis*. **Hanot's d.**, 1. primary biliary cirrhosis. 2. secondary biliary cirrhosis. **Hansen's d.**, leprosy. **Hansen's d., benign**, the tuberculous type of leprosy. **Hansen's d., malignant**, the lepromatous type of leprosy. **d. of the Hapsburgs**, hemophilia. **Harada's d.**, see under *syndrome*. **hard pad d.**, hyperkeratosis of the footpads of young dogs, occurring in canine distemper. **Hartnup d.**, a condition characterized by hereditary pellagra-like skin rash, with transient cerebellar ataxia, constant renal aminoaciduria, and other bizarre biochemical abnormalities; the defect involves the intestinal and renal transport of neutral alpha-amino acids and is transmitted as an autosomal recessive trait. **Hashimoto's d.**, struma lymphomatosa. **heart d.**, any organic, mechanical, or functional abnormality of the heart; it may be valvular, myocardial, or neurogenic. **heartwater d.**, see *heartwater*. **heavy-chain d.**, a condition marked by the presence of heavy-chain subunits of immunoglobulins in the serum. In the IgG (γ -chain) form, symptoms include weakness, weight loss, lymphadenopathy, and recurrent bacterial infections. The IgA (α -chain) form occurs mostly in the Middle East and is marked by abdominal lymphoma and malabsorption syndrome. In the IgM (μ -chain) form, the spleen, liver, and abdominal lymph nodes are primarily involved and there are vacuolated plasma cells in the bone marrow and Bence Jones proteinuria. **Heberden's d.**, 1. rheumatism of the smaller joints, accompanied by nodules in or about the distal interphalangeal joints. 2. angina pectoris. **Heerfordt's d.**, uveoparotid fever. **Heine-Medin d.**, the major form of poliomyelitis, with involvement of the central nervous system and perhaps paralysis; see *poliomyelitis*. **Heller-Döhle d.**, syphilitic aortitis. **helminthic d.**, a disease caused by worms. **hemoglobin d.**, any of a group of heredity molecular diseases, characterized by the presence of various abnormal hemoglobins, e.g., hemoglobin C, D, E, H, or S, in the red blood cells, in which the homozygous form is manifested by hemolytic anemia. See also *sickle cell anemia*, under *anemia*, and see individual hemoglobins, under *hemoglobin*. **hemoglobin C-thalassemia d.**, a hereditary disorder involving simultaneous heterozygosity for hemoglobin C and thalassemia, manifested by mild hemolytic anemia and persistent splenomegaly; called also *hemoglobin C-thalassemia*. **hemoglobin E-thalassemia d.**, a hereditary condition involving simultaneous heterozygosity for hemoglobin E and thalassemia, manifested by mild hemolytic anemia and persistent

splenomegaly; called also *hemoglobin E-thalassemia*. **hemolytic d. of newborn**, erythroblastosis fetalis. **hemorrhagic d., epidemic**, epidemic hemorrhagic fever; see under *fever*. **hemorrhagic d. of the newborn**, a self-limited hemorrhagic disorder of the first days of life, caused by a deficiency of the vitamin K-dependent blood coagulation factors II, VII, IX, and X. **Henderson-Jones d.**, osteochondromatosis characterized by the presence of numerous cartilaginous foreign bodies in the joint cavity or in the bursa of a tendon sheath. **hepatolenticular d.**, see under *degeneration*. **hepatorenal glycogen storage d.**, glycogen storage d. (type I). **hereditary d.**, one that is transmitted genetically from parents to children. **heredoconstitutional d.**, an inherited pathologic condition which does not progress. **heredodegenerative d.**, a disease of the central nervous system characterized by specific loss of neural tissue due to hereditary influence. **Hers' d.**, glycogen storage d. (type VI). **Herter's d.**, **Herter-Heubner d.**, the infantile form of nontropical sprue. **Heubner's d.**, syphilitic endarteritis of the cerebral vessels; called also *Heubner's specific endarteritis*. **Hildenbrand's d.**, typhus. **hip-joint d.**, tuberculosis of the hip joint. **Hippel's d.**, see *von Hippel's d.* **Hippel-Lindau d.**, see *von Hippel-Lindau d.* **Hirschfeld's d.**, acute diabetes mellitus. **Hirschsprung's d.**, congenital megacolon. **His's d.**, **His-Werner d.**, trench fever. **hock d.**, perosis. **Hodara's d. (obs.)**, a kind of trichorrhexis nodosa seen in women in Istanbul. **Hodgkin's d.**, a malignant condition characterized by painless, progressive enlargement of the lymph nodes, spleen, and general lymphoid tissue; other symptoms may include anorexia, lassitude, weight loss, fever, pruritus, night sweats, and anemia. The characteristic histologic feature is presence of Reed-Sternberg cells. Hodgkin's disease is usually classified as: (1) diffuse, according to the number of lymphocyte and histiocytes (lymphocytes predominant; mixed cellularity; lymphocytes depleted) and (2) nodular sclerosing (marked by birefringent bands of collagen and the presence of the lacunar cells). The condition, which affects twice as many males as females and usually occurs between the ages of 15 and 34 or after 50, is considered by many to be neoplastic in origin, but neither an infectious origin nor an immune response to the development of Reed-Sternberg cells has been excluded. **Hodgson's d.**, an aneurysmal dilatation of the proximal part of the aorta, often accompanied by dilatation or hypertrophy of the heart. **Hoffa's d.**, traumatic proliferation of fatty tissue (solitary lipoma) in the knee joint (Albert Hoffa, 1904). **hoof-and-mouth d.**, foot-and-mouth d. **hookworm d.**, a condition due to infection with *Ancylostoma duodenale* or *Necator americanus*, nematode worms that closely resemble each other. (In dogs, the disease is caused by *Uncinaria stenocephala*.) The disease occurs in practically all tropical and subtropical countries, including the southern United States and the West Indies. In temperate regions, it may occur in mines and tunnels, where conditions of temperature and moisture resemble the tropics. The larvae of the parasite live in soil and gain entrance to the digestive tract indirectly by way of the skin of the feet or legs or directly with contaminated food or water. The percutaneous infection is followed by a transitory eruption known as "ground itch." From here the parasites are carried by the blood to the lungs, ascend the trachea, are swallowed, and settle in the small intestine, where they attach to the intestinal mucosa and ingest blood. Symptoms, which vary with diet and with severity of infection, may include abdominal pain, diarrhea, and colic or nausea. Anemia is seen only in moderate to severe infections or when other adverse nutritional factors operate in conjunction with the parasite-induced blood loss. **Horton's d.**, migrainous neuralgia. **Huchard's d.**, continued arterial hypertension, thought to be a cause of arteriosclerosis. **Hünemann's d.**, dysplasia epiphysealis punctata. **hunger d.**, **hungry d.**, excessive hunger accompanied by weakness and nervousness caused by hyperinsulinism. **Hunt's d.**, 1. dys-synergia cerebellaris myoclonica. 2. Ramsay Hunt syndrome, def. 1. **Huntington's d.**, see under *chorea*. **Hurler's d.**, see under *syndrome*. **Hutchinson's d.**, 1. prurigo estivalis. 2. angioana serpiginosum. 3. pompholyx. 4. Tay's choroiditis. **Hutchinson-Boeck d.**, sarcoidosis. **Hutchinson-Gilford d.**, progeria. **Hutinel's d.**, tuberculous pericarditis with cirrhosis of the liver in children. **hyaline membrane d.**, a disorder affecting newborn infants (usually premature) characterized pathologically by the development of a hyalin-like membrane lining the terminal respiratory passages. Extensive atelectasis is attributed to lack of surfactant. See *respiratory distress syndrome of newborn*, under *syndrome*. **hydatid d.**, an infection, usually of the liver, caused by larval forms (hydatid cysts) of tapeworms of the genus *Echinococcus*, and characterized by the development of expanding cysts. See *hydatid d., alveolar*, and *hydatid d., unilocular*. Called also *hydatidosis*, *echinococcus d.*, and *echinococcosis*. **hydatid d., alveolar**, infection with larval forms (hydatid cysts) of *Echinococcus multilocularis*, characterized by invasion and destruction of the host's tissues as the cysts undergo endogenous budding to form an aggregate of innumerable small cysts which honeycomb the affected organ (the liver in over 90 per cent of cases) and may metastasize. **hydatid d., unilocular**, infection with the larval forms (hydatid cysts) of *Echinococcus granulosus*, characterized by the formation of single or

multiple expanding cysts which are unilocular in nature; as the cysts expand they may give rise to symptoms of related space-occupying lesions in the tissues or organs affected. **hydrocephaloid d.**, a condition similar to hydrocephalus, but marked by depression of the fontanelles, due to diarrhea or some other wasting disease with dehydration. **Iceland d., Icelandic d.**, benign myalgic encephalomyelitis. **I-cell d.**, mucopolipidosis II. **idiopathic d.**, one not consequent upon any other disease, and of which the cause is unknown. **immune-complex d.**, 1. disease induced by the deposition of or association with antigen-antibody-complement complexes in the microvasculature of tissues, such as peripheral capillary glomerular basement membranes and mesangial areas of renal glomeruli. Fixation of complement component C3 by the complexes initiates inflammation. Called also *immune deposit disease*. 2. serum sickness. **inborn lysosomal d's**, lysosomal storage d. **inclusion d.**, any disease in which cell inclusions are found. **infantile celiac d.**, the infantile form of celiac disease, or nontropical sprue. **infectious d.**, a disease due to organisms ranging in size from viruses to parasitic worms; it may be contagious in origin, result from nosocomial organisms, or be due to endogenous microflora from the nose and throat, skin, or bowel. **inflammatory bowel d.**, a general term for those inflammatory diseases of the bowel of unknown etiology, including Crohn's disease and ulcerative colitis. **inherited d.**, one transmitted genetically, from parents to offspring. **insect-borne d's**, diseases caused by microorganisms which are transmitted by insects, the principal ones being dengue, encephalitis, filariasis, kala-azar, leishmaniasis, malaria, nagana, phlebotomias fever, plague, relapsing fever, Rocky Mountain spotted fever, surra, Texas fever, trypanosomiasis, tularemia, typhus, and yellow fever. **intercurrent d.**, a disease occurring during the course of another disease with which it has no connection. **interstitial d.**, one in which the stroma of an organ is mainly affected. **iron storage d.**, hemochromatosis. **Isambert's d.**, acute miliary tuberculosis of the larynx and pharynx. **island d.**, scrub typhus. **Isle of Wight d.**, paralysis of the muscles of flight in honey bees caused by the presence of the mite *Acarapis woodi* in the tracheae of the bees. **itch d.**, a dermatomycosis of horses probably caused by the mold *Microsporum canis*. **Jaffe-Lichtenstein d.**, cystic osteofibromatosis; a form of polyostotic fibrous dysplasia characterized by an enlarged medullary cavity with a thin cortex, which is filled with fibrous tissue (fibroma). **Jakob's d., Jakob-Creutzfeldt d.**, Creutzfeldt-Jakob syndrome. **Jaksch's d.**, anemia pseudoleukemica infantum. **Janet's d.**, psychasthenia. **Jansen's d.**, metaphyseal dysostosis. **Jensen's d.**, retinoblastoma. **Johne's d.**, a usually fatal form of chronic enteritis due to *Mycobacterium paratuberculosis*, chiefly affecting cattle but also sheep, goats, and deer. It remotely resembles a tuberculous infection, and is marked by intermittent or persistent diarrhea, progressive emaciation, anemia, and extreme weakness. Called also *chronic dysentery of cattle*, *bovine leprosy*, and *paratuberculosis*. **Johnson-Stevens d.**, see *Stevens-Johnson syndrome*. **Jourdain's d.**, suppurative inflammation of the gums and alveolar processes. **jumping d.**, Gilles de la Tourette's syndrome. **Jüngling's d.**, sarcoidosis. **juvenile Paget's d.**, hyperphosphatasia. **Kahlbaum's d.**, catatonic schizophrenia. **Kahler's d.**, multiple myeloma. **Kaiserstuhl d.**, a form of chronic arsenic poisoning that occurred in the Kaiserstuhl wine district of Germany. **Kalischer's d.**, Sturge-Weber syndrome. **Kaschin-Beck d.**, Kashin-Beck d. **Kashin-Beck d.**, a slowly progressive, chronic, disabling, degenerative disease of the peripheral joints and spine, which principally occurs in children and is endemic in eastern Siberia, northern China, and Korea. It is believed to be caused by the ingestion of cereal grains infected with *Fusarium sporotrichiella*. Called also *osteoarthritis deformans endemica*. **Katayama d.**, schistosomiasis japonica. **Kawasaki d.**, mucocutaneous lymph node syndrome. **Kayser's d.**, hepatolenticular degeneration. **Kedani d.**, scrub typhus. **Kempf's d.**, acute homosexual panic. **Kienböck's d.**, 1. slowly progressive osteochondrosis of the semilunar (carpal lunare) bone; it may affect other bones of the wrist. Called also *lunatomalacia*. 2. traumatic cavity formation in the spinal cord; called also *traumatic syringomyelia*. **Kimberley horse d.**, a disease of horses in the Kimberley district of northeastern Western Australia occurring during the wet season (January to April), due to grazing on *Crotalaria* spp. It is marked by cirrhosis of the liver, dullness, wasting, irritability, biting of other horses, gnawing fence posts, constant yawning, and muscular spasms leading to uncontrollable galloping, which gradually merges into aimless walking with a slow staggering gait and low stiff carriage of the head. Called also *walk-about d.* **Kimura's d.**, angiolymphoid hyperplasia. **kinky hair d.**, Menkes' syndrome. **Kinnier Wilson d.**, hepatolenticular degeneration. **Kirkland's d.**, an acute infection of the throat with regional lymphadenitis. **kissing d.**, popular term for infectious mononucleosis. **Klebs' d.**, glomerulonephritis. **Klemperer's d.**, Banti's d. **Klippel's d.**, arthritic general pseudoparalysis; see under *pseudoparalysis*. **knight's d.**, infection of the perianal region following a minute abrasion of the skin, so called historically because of the frequency of its occurrence in horsemen. **Koenig-**

Wichman d. (obs.), chronic bullous disease (pemphigus). **Köhler's bone d.**, 1. osteochondrosis of the tarsal navicular bone in children; called also *tarsal scaphoiditis*, *epiphysitis juvenilis*, *osteoarthritis juvenilis*, and *os naviculare pedis retardatum*. 2. a disease of the second metatarsal bone, with thickening of its shaft and changes about its articular head, characterized by pain in the second metatarsophalangeal joint on walking or standing. Called also *Köhler's second d.*, and *juvenile deforming metatarsophalangeal osteochondritis*. See also *osteochondrosis*. **Köhler's second d.**, Köhler's bone d., def. 2. **Köhler-Pellegrini-Stieda d.**, Pellegrini's d. **Kokka d.**, epidemic hemorrhagic fever. **Korsakoff's d.**, see under *psychosis*. **Koshevnikoff's (Koschewnikow's, Kozhevnikov's) d.**, epilepsia partialis continua. **Krabbe's d.**, a familial form of leukoencephalopathy in which a sphingolipid (ceramide galactoside) accumulates in the tissues owing to deficiency of β -galactosidase. It begins in infancy with irritability, fretfulness, and rigidity, followed by tonic seizures, convulsions, quadriplegia, blindness, deafness, dysphagia, and progressive mental deterioration. Pathologically, there is rapidly progressive cerebral demyelination and large globoid bodies (swollen with accumulated cerebroside) in the white substance. Called also *globoid*, *globoid cell*, and *Krabbe's leukodystrophy*. **Krishaber's d.**, a neurosis characterized by tachycardia, insomnia, lightheadedness or vertigo, and hyperesthesia; called also *cerebrocardiac syndrome*. **Kufs' d.**, the late juvenile form of cerebral sphingolipidosis. **Kugelberg-Welander d.**, a hereditary juvenile form of muscular atrophy, usually transmitted as an autosomal recessive trait, due to lesions of the anterior horns of the spinal cord. It is marked by onset in the first or second decade, principally between two and seventeen years, atrophy and weakness of the proximal muscles of the lower extremities and pelvic girdle, followed by involvement of the distal muscles and muscular twitchings. Cf. *Werdnig-Hoffman paralysis*. **Kuhnt-Junius d.**, disciform macular degeneration. **Kümmell's d.**, compression fracture of vertebra; a complex of symptoms coming on in a few weeks after spinal injury, and consisting of pain in the spine, intercostal neuralgia, motor disturbances of the legs, and a gibbus of the spine which is painful on pressure and easily reduced by extension; post-traumatic spondylitis. Called also *Kümmell-Verneuil d.* **Kümmell-Verneuil d.**, Kümmell's d. **Kussmaul's d.**, Kussmaul-Maier d., periarthritis nodosa. **Kyasanur Forest d.**, a highly fatal arboviral disease of monkeys in the Kyasanur Forest in India, communicable to man, in whom it produces hemorrhagic symptoms. **Kyrle's d.**, hyperkeratosis follicularis in cutem penetrans. **Laennec's d.**, 1. see under *cirrhosis*. 2. dissecting aneurysm. **Lafora's d.**, myoclonus epilepsys. **Lancereaux-Mathieu d.**, leptospiral jaundice. **Landouzy's d.**, leptospiral jaundice. **Landry's d.**, acute febrile polyneuritis. **Lane's d.**, chronic intestinal stasis; small bowel obstruction in chronic constipation. **Langdon-Down's d.**, Down's syndrome. **Larrey-Weil d.**, leptospiral jaundice. **Larsen's d.**, Larsen-Johansson d., a disease of the patella in which the x-ray shows an accessory center of ossification in the lower pole of the patella. **Laségue's d.**, persecution mania. **Lauber's d.**, fundus albipunctatus. **laughing d.**, kuru. **leaf-curl d.**, a viral disease of plants characterized by curling or crinkling of the leaves. **Leber's d.**, 1. Leber's optic atrophy; see under *atrophy*. 2. Leber's congenital amaurosis; see under *amaurosis*. **Legal's d.**, a disease affecting the pharyngotympanic region, and marked by headache and local inflammatory changes; called also *pharyngotympanic cephalalgia*. **Legg's d.**, Legg-Calvé d., Legg-Calvé-Perthes d., Legg-Calvé-Waldenström d., osteochondrosis of the capitular epiphysis of the femur; see *osteochondrosis*. **legionnaires' d.**, a highly fatal disease caused by a gram-negative bacillus (*Legionella pneumophila*), which is not spread by person-to-person contact and is characterized by high fever, gastrointestinal pain, headache, and pneumonia; there may also be involvement of the kidneys, liver, and nervous system. The etiologic agent was identified after an outbreak occurred in the summer of 1976 at an American Legion convention in Philadelphia, Pennsylvania. **Leiner's d.**, erythroderma desquamatum. **Leloir's d.** (obs.), discoid lupus erythematosus. **Lenegre's d.**, acquired complete heart block due to primary degeneration of the conduction system. **Leriche's d.**, post-traumatic osteoporosis. **Letterer-Siwe d.**, a nonlipid reticuloendotheliosis of early childhood, probably an autosomal recessive trait, characterized by a hemorrhagic tendency, eczematoid skin eruption, hepatosplenomegaly with lymph node enlargement, and progressive anemia. **Lev's d.**, acquired complete heart block due to sclerosis of the cardiac skeleton. **Lewandowsky-Lutz d.**, epidermodysplasia verruciformis. **Leyden's d.**, a form of periodic vomiting. **Libman-Sacks d.**, atypical verrucous endocarditis. **Lichtheim's d.**, subacute combined degeneration of the spinal cord; see under *degeneration*. **Lignac's d.**, Lignac-Fanconi d., Fanconi syndrome, def. 2. **Lindau's d.**, Lindau-von Hippel d., von Hippel-Lindau d. **Lipschütz's d.**, ulcer vulvae acutum. **Little's d.**, congenital spastic stiffness of the limbs, a form of cerebral spastic paralysis dating from birth and due to lack of development of the pyramidal tracts; it may be associated with various disorders, including birth trauma, fetal anoxia, or illness

of the mother during pregnancy. Clinically, it is characterized by muscular weakness, walking difficulties, and, usually, by convulsions, bilateral athetosis, and mental deficiency. Called also *spastic diplegia*. **Lobo's d.**, keloidal blastomycosis. **Lobstein's d.**, see *osteogenesis imperfecta*. **local d.**, a condition which originates in and remains confined to one part. **loco d.**, locoism. **Lorain's d.**, hypophyseal infantilism. **Lowe's d.**, oculocerebrorenal syndrome. **Luft's d.**, a hypermetabolic disorder of striated muscle caused by an abnormal quantity and type of mitochondria producing excessive cellular respiration; it is characterized by profuse perspiration, asthenia, progressive weakness, and an abnormally increased basal metabolic rate. **lumpy skin d.**, a highly infectious viral disease of cattle in Africa, which may result in permanent sterility or death, marked by the formation of nodules in the skin and sometimes in the mucous membranes. **lung fluke d.**, parasitic hemoptysis. **lunger d.**, pulmonary adenomatosis, def. 2. **Lutembacher's d.**, see under *syndrome*. **Lutz-Splendore-Almeida d.**, South American blastomycosis. **Lyell's d.**, toxic epidermal necrolysis. **lymphocystic d. of fish**, a disease of fish marked by the formation on the skin of spherical nodules caused by a virus. **lysosomal storage d.**, any of a group of storage diseases due to congenital absence of one of the lysosomal enzymes, leading to engorgement of lysosomes by material that the enzyme would normally degrade; the term includes the glycogenoses, sphingolipidoses, mucopolysaccharidoses, etc. Called also *inborn lysosomal d.* and *lysosomal enzymopathy*. **McArdle's d.**, glycogen storage d. (type V). **Mackenzie's d.**, x disease, def. 1. **MacLean-Maxwell d.**, a chronic condition of the calcaneus marked by enlargement of its posterior third and attended by pain on pressure. **Madelung's d.**, 1. see under *deformity*. 2. see under *neck*. **Magitot's d.**, osteoperiostitis of the alveoli of the teeth. **Maher's d.**, paracoccidiosis. **Majocchi's d.**, purpura annularis telangiectodes. **Malassez's d.**, cyst of the testis. **Malibu d.**, surfers' nodules. **Manson's d.**, see under *schistosomiasis*. **maple bark d.**, a granulomatous interstitial pneumonitis caused by inhalation of spores from *Cryptostroma corticale*, a mold found beneath the bark of maple logs. **maple syrup urine d.**, a genetotropic disease involving an enzyme defect in the metabolism of the branched chain amino acids, the plasma and urinary levels of the keto acids valine, leucine, and isoleucine being greatly increased. Clinical features include mental and physical retardation, feeding difficulties, and a characteristic odor of the urine, from which the disorder derives its name. It is transmitted as an autosomal recessive trait. Called also *branched-chain ketaciduria* or *ketoaminocidemia*. **Marburg d.**, **Marburg virus d.**, a severe, often fatal, viral disease first reported in Marburg, Germany, among laboratory workers exposed to African green monkeys. It is characterized by skin lesions, conjunctivitis, enteritis, hepatitis, encephalitis, and renal failure. **March's d.**, Graves' d. **Marchiafava-Bignami d.**, progressive degeneration of the corpus callosum characterized by progressive intellectual deterioration, emotional disturbances, confusion, hallucinations, tremor, rigidity, and convulsions. It is a very rare disorder affecting chiefly middle-aged male alcoholics, especially those who consume excessive amounts of crude red wine. **Marchiafava-Micheli d.**, paroxysmal nocturnal hemoglobinuria; see under *hemoglobinuria*. **Marek's d.**, a lymphoproliferative disease of chickens caused by a herpesvirus. Lymphoid cell infiltrations are most common in the peripheral nerves and gonads, but widespread infiltrations may also be found in any of the visceral organs, skin, muscle, and the iris of the eye. Perivascular cuffing of blood vessels in the brain and spinal cord frequently occurs. The location of the lesions dictates the clinical signs, such as paralysis, general depression, and blindness. It was once included in the avian leukosis complex. Called also, according to the symptoms manifested, *acute leukosis*, *fowl paralysis*, *ocular lymphomatosis*, *neural lymphomatosis*, *neurolymphomatosis gallinarum*, *range paralysis*, and *skin leukosis*. **margarine d.**, erythema multiforme due to an emulsifier in oleomargarine; it occurred as an explosive epidemic outbreak in Germany and Holland, thought at the time to be infectious in origin. **Marie's d.**, 1. acromegaly. 2. hypertrophic pulmonary osteoarthropathy. **Marie-Bamberger d.**, hypertrophic pulmonary osteoarthropathy. **Marie-Strümpell d.**, rheumatoid spondylitis. **Marie-Tooth d.**, progressive neuropathic (peroneal) muscular atrophy. **Marion's d.**, congenital obstruction of the posterior urethra due to pleural hypertrophy of the bladder neck or absence of the plexiform dilator fibers in the urinary tract. **Marsh's d.**, Graves' d. **Martin's d.**, periosteal arthritis of the foot from excessive walking. **mast cell d.**, urticaria pigmentosa. **Mathieu's d.**, leptospiroid jaundice. **Mauviel-Kuhn d.**, a form of cutis laxa in which slackness of the eyelids and ears occurs in childhood, followed by tracheomegaly and bronchomegaly. **Maxcy's d.**, a rickettsial infection endemic in the southeastern part of the United States. **M component d.**, any disease in which the M component appears; see under *component*. **Medin's d.**, see *poliomyelitis*. **Mediterranean d.**, see *β -thalassemia*. **medullary cystic d.**, familial juvenile nephronophthisis. **Meige's d.**, Milroy's d. **Meleda d.**, mal de Meleda. **Menetrier's d.**, giant hypertrophic gastritis. **Meniere's d.**,
